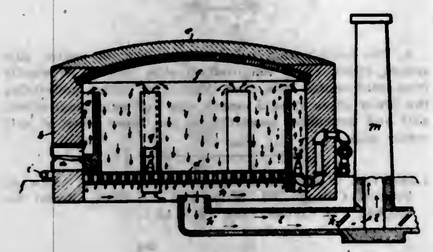
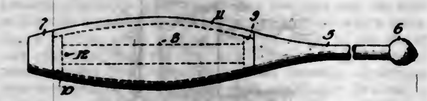
1,399,068. BALL-CAVITY BLOWER. MAX MILLER, New York, N. Y. Filed Dec. 7, 1920. Serial No. 429,021. 2 Claims. (Cl. 32—28.)

2. A ball cavity blower with a ball, long tube, perforations in this tube, a sliding or outer tube for opening or



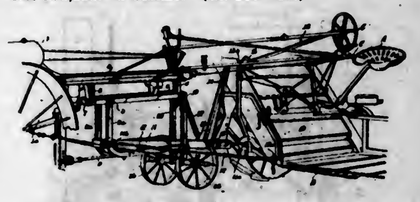
closing the holes in main tube, a mechanism to move the sliding member in either direction on the main tube, a slotted lever arm allowing connecting pin to move up or down to give clearance to the sliding member on the main tube.

1,399,069. AXLE. GEORGE F. MORGAN, New York, N. Y. Filed Apr. 15, 1921. Serial No. 461,492. 1 Claim. (Cl. 295—36.)



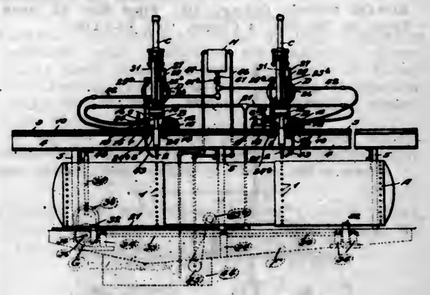
An axle for railway cars and the like having journal bearings and comprising a wheel fixed at one end of the axle, a collar fixed at the opposite end of the axle, a loosely mounted wheel journaled on the collar, the inner end of the collar being substantially coincident with the flange of the wheel, a second collar fixed on the axle and spaced apart from the first collar and affording bearing for an elongation of the hub of the loosely mounted wheel, and a flange on the hub engaged by the collars to prevent longitudinal movement of the loosely mounted wheel.

1,399,070. METHOD OF FIRING KILNS. FRANK MUNHOLLON, Cleveland, Ohio. Filed July 26, 1919. Serial No. 313,548. 6 Claims. (Cl. 25—151.)



1. The herein described method of firing kilns, which consists in causing the reverting circulation of the products of combustion by a gaseous stream under pressure, substantially as and for the purpose set forth.

1,399,071. INDIAN-CLUB. FRANK NOWAK, Chicago, Ill., assignor of one-third to Samuel N. Pond, Chicago, Ill. Filed Feb. 12, 1921. Serial No. 444,371. 3 Claims. (Cl. 46—68.)

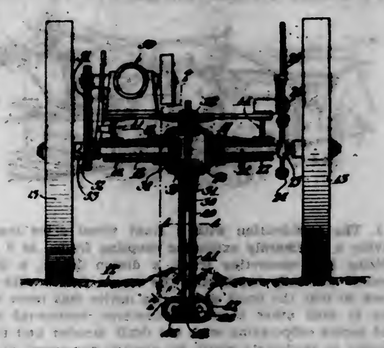


1. An Indian club having wooden handle and foot portions, an axial spindle connecting said handle and foot portions, and a hollow transversely resilient envelop or shell of sufficient thickness to maintain its form without internal support mounted at its ends upon the said handle and foot portions and encircling said spindle and forming the main body portion of the club.

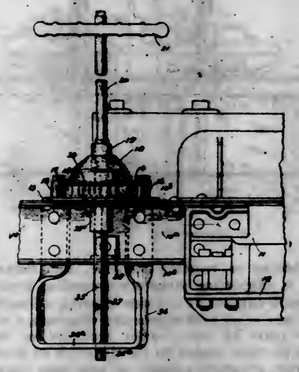
1,399,072. TRACTOR CONNECTION FOR AGRICULTURAL IMPLEMENTS. PETER J. O'CONNOR, Poughkeepsie, N. Y., assignor to Moline Plow Company, a Corporation of Illinois. Filed Jan. 31, 1919. Serial No. 274,223. 4 Claims. (Cl. 180—14.)

1. The combination with a front wheel drive tractor having a rearwardly extending coupling frame, of a stabilising and connecting truck, a drawn device, a draft member pivotally connecting the drawn device with the truck so that the truck and drawn device may move relative to each other about a transverse, horizontal axis, and means coöperating with the draft member and truck serving to resiliently resist an upward movement of the truck relative to the drawn device.

1,399,073. REAMING-MACHINE. FREDERICK O. PALMETER and SAMUEL B. CLAY, St. Louis, Mo., assignors to Heine Safety Boiler Company, St. Louis, Mo., a Corporation of Missouri. Filed July 29, 1919. Serial No. 314,041. 5 Claims. (Cl. 77—32.)



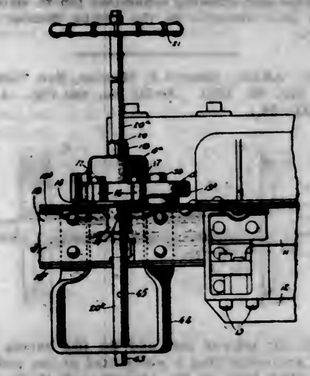
1. A boring or reaming machine, comprising a work support, a supporting structure extending longitudinally of said work support at one side of same, a longitudinally-movable carrier on said supporting structure, a reciprocating base plate on said carrier arranged to move in a direction at right angles to the direction of movement of said carrier, a spindle support on said base plate, a vertically-movable spindle in said support, an elevated cylinder on said spindle support arranged above the spindle and provided with a piston that raises and lowers said spindle, independent, manually-operable devices arranged at the front end of said spindle support for effecting the longitudinal movement of said carrier and for moving the base plate relatively to said carrier, and a valve operable from a point in proximity to said manually-operable devices for governing the admission of the medium used to operate the piston in said cylinder.



1,399,074. EARTH-AUGER. FRANK W. PERRY, Los Angeles, Calif. Filed Sept. 22, 1919. Serial No. 325,551. 5 Claims. (Cl. 55—106.)

3. A device for breaking up and loosening soil comprising a frame, wheels supporting said frame above the surface of the ground, a vertical shaft, means for supporting

said shaft in said frame so that said shaft may be swung about a horizontal axis at right angles to said shaft, means for so swinging said shaft, means for locking said shaft in any one of several positions about said horizontal axis so that said shaft may be secured in either a vertical or an inclined position, means for driving said shaft, and an earth auger swinging with said shaft and driven thereby, the axis of said auger being at an angle to the axis of said shaft.

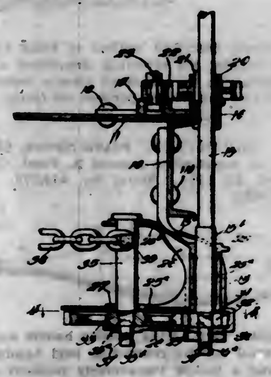


1,399,075. COMPOUND HAND-BRAKE MECHANISM. EDWARD POSSON, Chicago, Ill. Filed Nov. 25, 1918. Serial No. 263,999. 4 Claims. (Cl. 74—119.)

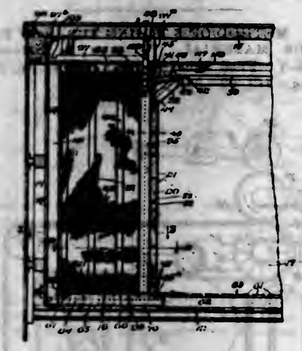
1. The combination in railway brake mechanism, of a horizontal supporting plate, a frame member carried by said plate, an upper brake mast journaled in said frame member, a ratchet wheel seated on said frame member and having a non-rotatable engagement with said mast, a collar secured to said mast and resting on said ratchet wheel, a lower mast extending downwardly from said plate, and gearing mechanism mounted above said plate for operatively connecting said brake masts.

1,399,076. COMPOUND HAND-BRAKE MECHANISM. EDWARD POSSON, Chicago, Ill. Filed Jan. 20, 1919. Serial No. 272,219. 9 Claims. (Cl. 74—119.)

1. The combination in railway brake mechanism, of a brake mast formed in sliding sections, gears mounted on the adjacent ends of said sections, an integrally formed gear member mounted on one side of said first-mentioned gears and meshing therewith, a ratchet wheel formed integrally with one of said gears, and a pawl adapted to engage said ratchet wheel.

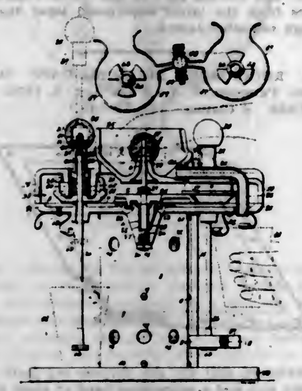


1,399,077. DRAFT-ARM CONSTRUCTION FOR RAILWAY-CARS. EDWARD POSSON, Chicago, Ill. Filed Dec. 26, 1919. Serial No. 347,380. 18 Claims. (Cl. 105—420.)



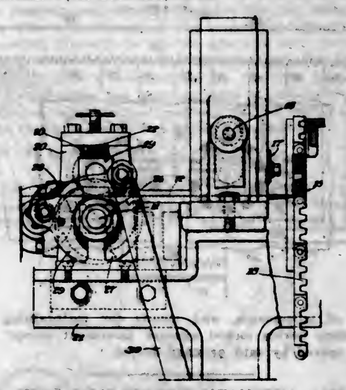
1. The combination in a railway car, of center sills spaced apart, other longitudinal sills located outwardly from said center sills, and draft arm plates underlying the lower edges of said center sills and said longitudinal sills and extending upwardly on the inner sides of said center sills.

1,399,078. COMPOUND BRAKE MECHANISM. EDWARD POSSON, Chicago, Ill. Filed Feb. 27, 1920. Serial No. 361,645. 11 Claims. (Cl. 74—112.)



1. In combination, a brake mast, a housing rotatably mounted with respect to said mast, and compound brake mechanism carried by said housing and connected to said mast.

1,399,079. REFRIGERATOR-CAR. EDWARD POSSON, Chicago, Ill. Filed Apr. 19, 1920. Serial No. 372,883. 23 Claims. (Cl. 105—376.)

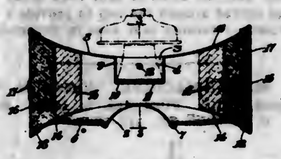


1. In a refrigerator car, an ice chamber having an ice supporting floor located normally in the plane of the floor of the car.

1,399,080. DRINK-MIXING MACHINE. HARRY B. ROSS, Denver, Colo., assignor of three-fourths to Harold A. Clarke, Denver, Colo. Filed Aug. 3, 1920. Serial No. 400,902. 18 Claims. (Cl. 259—131.)

1. In a soda mixing mechanism, a base, a housing, supporting columns on the base for the housing, a motor housing located on the base between the base and the first mentioned housing, an electric motor in said motor housing, a driving shaft coupled with the shaft of the motor and projecting into the first mentioned housing, a master friction drive cone mounted in said housing, a driving cone mounted on said driving shaft within the housing to engage the master cone, at least one spindle bearing carried by the housing, a friction drive cone having a hollow axle journaled in said bearing, an agitator spindle longitudinally movable in said hollow axle, a clutch device between said spindle and hollow axle for engaging the same when said agitator spindle is down, means for holding said driving shaft cone in frictional engagement with said master cone, substantially as shown and described.

1,399,081. MACHINE FOR MAKING CARD-MATCHES. HENRY A. RUSS, Barberton, Ohio, assignor to The Diamond Match Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 12, 1921. Serial No. 460,837. 3 Claims. (Cl. 144—51.)

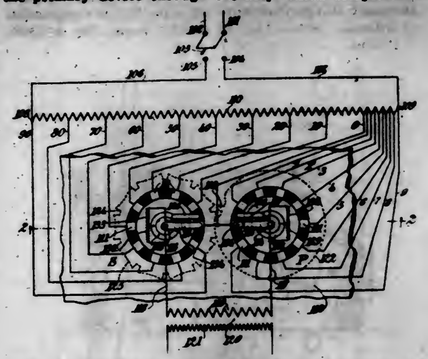


1. In a machine for making card matches, the combination with splint-cutting mechanism comprising complementary upper and lower bar dies to and between which the match-stock is delivered, of means in advance of said dies for progressively compressing the match stock in parallel paths in longitudinal alinement with the tops of the bars of the lower die.

1,399,082. QUATERNARY BASE OF THE CAMPHOR SERIES AND PROCESS OF MAKING SAME. HANS RUPE, Basel, Switzerland, assignor to Society of Chemical Industry in Basle, Basel, Switzerland. Filed Mar. 9, 1921. Serial No. 450,856. 3 Claims. (Cl. 23—24.)

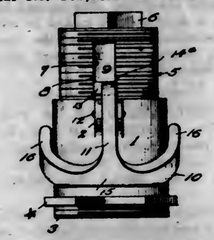
1. As new products, the herein described trialkylcamphormethylammonium haloids, which constitute colorless crystals, easily soluble in alcohol and in water.

1,399,083. TELEPHONE-MUFFLER. LOUIS S. SCHEB, New York, N. Y. Filed Apr. 21, 1921. Serial No. 463,100. 11 Claims. (Cl. 179—188.)



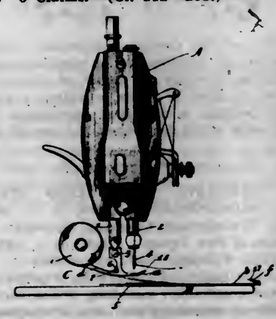
7. A device of the character described, comprising a member having an opening for a telephone mouthpiece, and an opening to which the mouth of the user may be applied, and an interior space providing a passage between said openings, with lateral extensions, the latter having side walls which flare outwardly toward their outer ends.

1,399,084. ELECTRIC CONTROLLING APPARATUS. JOHN L. SCHEARERHORN, Newark, N. J., assignor to American Transformer Company, Newark, N. J., a Corporation of New Jersey. Filed Aug. 2, 1920. Serial No. 400,725. 8 Claims. (Cl. 171—119.)



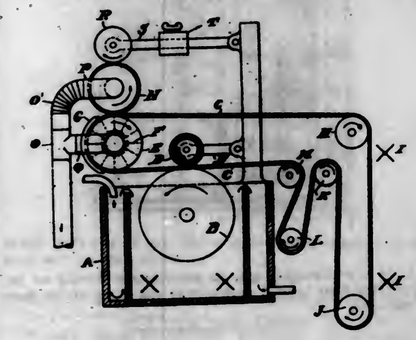
1. An electric controller comprising a primary switching device and a secondary switching device, each movable to a plurality of successive positions of varying controlling effect, said primary device being capable of repeating its cycle of movements, means for causing said secondary

device to advance one step at each advance movement of the primary device through the step which completes its



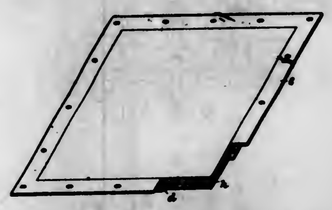
cycle of movements, and means for maintaining said secondary device locked against movement except when being moved by said primary device.

1,399,085. AUTOMATIC GREASE-PLUG LOCK. WILLIAM F. SCHMIDT, Green Bay, Wis. Filed Mar. 19, 1920. Serial No. 367,261. 1 Claim. (Cl. 184—48.)



A grease cup having a plug threaded therein, said plug having a ratchet groove therein, an inverted T-shaped pawl having its shank pivoted on said cup and a nose extending laterally from its free end for engagement with said groove, the head of said pawl being spaced from the cup, and the arms of said head being extended laterally and curved around the cup to provide a weighted end for normally retaining said nose in engagement with said notch.

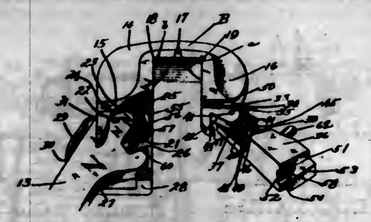
1,399,086. SEWING-MACHINE. MORRIS M. SCHRAGO, Los Angeles, Calif. Filed Apr. 5, 1919. Serial No. 287,683. 6 Claims. (Cl. 112—203.)



1. In a sewing machine, the combination with a presser foot, and needle mechanism, of a ribbon adapted to be extended so as to overlie work beneath and beyond the presser foot or be retracted toward the presser foot; means being provided for housing the ribbon when retracted; said means having a tension device tending to retract said ribbon.

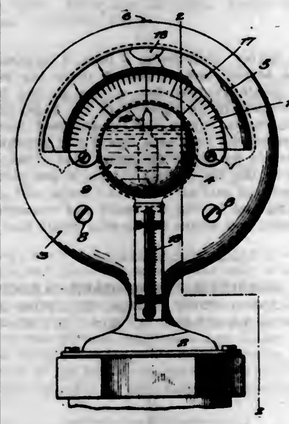
1,399,087. METHOD OF FORMING TUBES OF FELTED FIBROUS MATERIAL. WILLIAM R. SEIGLE, New York, N. Y. Filed June 28, 1920. Serial No. 392,372. 4 Claims. (Cl. 92—66.)

1. The method of forming tubes of fibrous material, which consists in forming a web of said fibrous material with water, extracting part of the water-content from said web, superposing successive layers of said web on each other, and forcing part of the water remaining in said layers from the latest superposed layer thereof to and through the other layers.



1,399,088. REINFORCED BUILDING UNIT. WILLIAM SEYMOUR, Paterson, N. J. Filed Aug. 9, 1920. Serial No. 402,083. 4 Claims. (Cl. 72—40.)

1. A reinforced unit for the purpose set forth including a plastic slab and a supporting band of sheet material extending around and lying throughout substantially its whole longtiudinal extent in adhering contact with the slab marginally thereof and being inwardly deflected as to a relatively great part of its longitudinal extent and forming outwardly a marginal undercut and inwardly an elongated ledge-support for the slab.

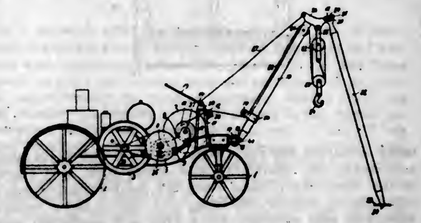


1,399,089. TOOL-WRENCH. HEWLET T. SMITH, Oxnard, Calif. Filed Nov. 18, 1920. Serial No. 424,807. 7 Claims. (Cl. 81—91.)

2. In a wrench, the combination with a lever, of a jaw member having one of its ends pivotally joined thereto, a closure member pivotally joined to the opposite end of the jaw member, and inter-engaging means on said members for locking said members together in stress distributing formation; said end of the jaw member which coöperates with the lever being recessed for reception of a portion of said lever, said lever being provided with a part adapted to bear against a lateral edge of said

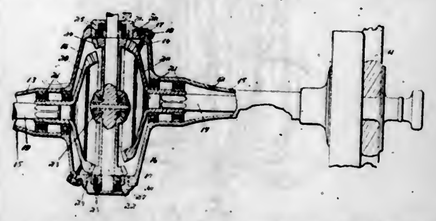
jaw member; said lever likewise being provided with a jaw member and there being a groove formed in said closure member for reception of said jaw member.

1,399,090. INCLINOMETER FOR AEROPLANES. NOAL W. SPENCER, Sioux Falls, S. D. Filed Aug. 13, 1920. Serial No. 403,349. 9 Claims. (Cl. 33—206.)



1. An inclinometer for aeroplanes, comprising a casing consisting of supplemental sections having registering central and relative concentric sight openings, an arcuate bubble indicator disposed in the concentric sight openings, a second indicator engaged in the central sight openings and an arcuate dial between and common to both indicators.

1,399,091. TABLE-TILTING MECHANISM. CHARLES E. THOMPSON, Denver, Colo., assignor to The Mine & Smelter Supply Company, Denver, Colo., a Corporation of Colorado. Filed May 15, 1919. Serial No. 297,198. 2 Claims. (Cl. 83—88.)

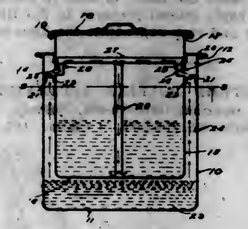


1. The combination with a main frame, a table or deck and rockers interposed between the two forming a movable support for the deck or table, of a draw-bar connected to the deck or table and to the rocker-bearings and having swivel connection with the head motion, adjusting means connected with the draw-bar for rocking the latter axially to tilt the deck or table to the desired inclination, said tilting mechanism comprising a tilting-arm secured to the draw-bar, a sliding-block having a pocket therein which receives and affords clearance for the tilting-arm as the table is reciprocated, and means for adjusting the sliding-block laterally to tilt the arm and rock the draw-bar, said means comprising a threaded rod, the threads of which turn in a threaded hole in the slide block, and when turned cause the latter to slide in one direction or the other to apply lateral pressure to the tilting-arm to tilt the latter and rock and adjust the draw-bar.

1,399,092. STUMP-PULLING APPARATUS. SVERRE THORESEN, Gaarder, Gardermoen, Norway. Filed Feb. 5, 1920. Serial No. 356,532. 1 Claim. (Cl. 254—166.)

The combination with a tractor, of a fork attached to the same, a cantaliver pivotally connected to the fork and mounted for horizontal and vertical oscillations, a head for the cantaliver, links pivotally connected to said head, support rods pivotally connected to said links and designed to have their lower ends engage the surface of the soil when a stump is being raised, said rods also being manually operable by the operator for shifting the head of the cantaliver from side to side, and hoisting mechanism supported by the tractor, cantaliver, and rods.

1,399,093. MOTOR-VEHICLE. JESSE G. VINCENT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 10, 1916. Serial No. 77,454. 24 Claims. (Cl. 74—56.)



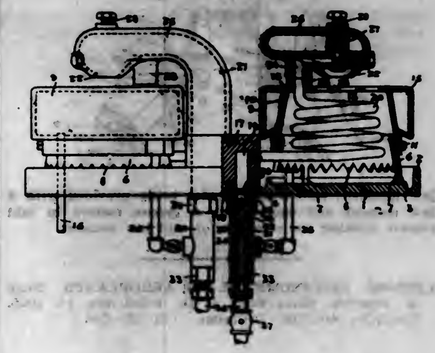
1. In a vehicle axle, the combination with driving and driven shafts, of a rigid casing having relatively fixed bearings therefor, said casing comprising symmetrical members diagonally joined together.

9. A driving axle casing comprising two members each having a tubular portion and an enlarged end, and means joining said enlarged ends with the axes of the tubular portions offset.

1,399,094. DOMESTIC COOKING VESSEL. GEORGE WILBER WATTS, Hot Springs, Ark. Filed Jan. 13, 1921. Serial No. 436,952. 4 Claims. (Cl. 53—2.)

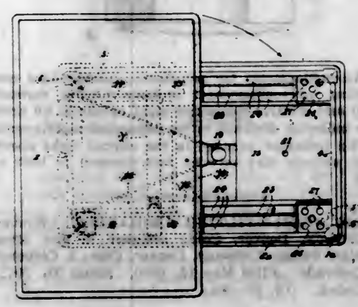
1. A steam cooker comprising an outer boiler adapted to contain water, a container arranged within said outer

boiler and defining therewith a steam space and having inlet ports communicating with said steam space, an annular flange fixed to the outer wall of said container and engaging the top of said outer boiler to seal the steam space and to support said inner boiler, interlocking means for maintaining said boilers in assembled relation including coacting angle brackets, elbows arranged in said



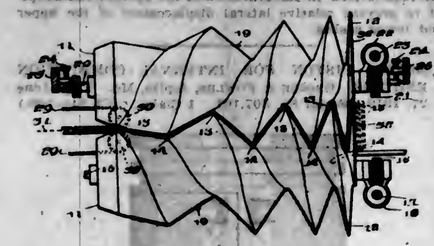
inner container and communicating with said steam ports, and means for conducting said steam from said elbows to the lower end of said container comprising horizontal pipes having sleeves embracing said elbows and a vertical depending pipe communicating with said horizontal pipes and having its delivery end disposed adjacent the bottom of said container.

1,399,095. VACUO-THERMIC-BODY-TREATMENT APPLIANCE. JEAN F. WEBB, Sr., New York, N. Y. Filed Dec. 2, 1919. Serial No. 341,902. 2 Claims. (Cl. 128—264.)



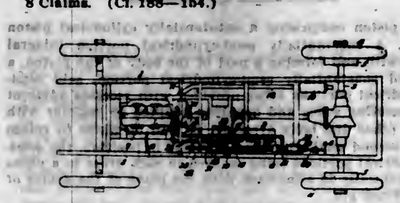
1. A vacuo-thermic appliance comprising a container of transparent heat resisting material, electric circulation wires embodied in the entire outside transparent shell of the said container, a circuit closure connected with the said container, the latter being provided with an open end adapted for being secured air tight against the human body, a source of electrical energy connected with the circuit closure and means attached to the container for effecting vacuum within the container, as desired.

1,399,096. OIL-BURNER. Elias Weaver, Toronto, Ontario, Canada. Filed July 29, 1920. Serial No. 399,704. 3 Claims. (Cl. 158—58.)



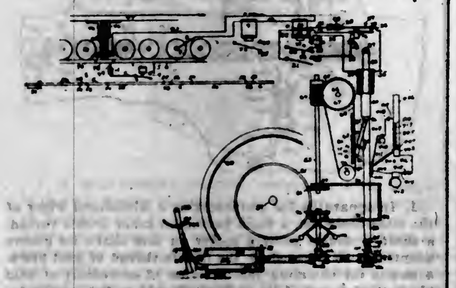
1. An oil burner, comprising, a base, a circular casing open at the bottom and supported above the base and having an opening in the top, a tube having its open lower end secured in an opening in the base, said tube extending upwardly beside said casing and having its upper end extending over said casing and provided with a convergent air nozzle in the under side arranged over the opening in the top of said casing, a gas nozzle supported centrally of said air nozzle, a tubular coil arranged in said casing and having its upper end connected with said gas nozzle, and means for feeding liquid fuel to said coil.

1,399,097. COMBINED PHONOGRAPH-CABINET AND TABLE. ANTON WILL, Chicago, Ill. Filed Jan. 15, 1921. Serial No. 437,495. 1 Claim. (Cl. 45—52.)



A combined phonograph cabinet and table comprising a table frame, having separate compartments therein with one of said compartments open at its lower side, and a table top hinged to said frame adapted to swing in a horizontal plane to expose one of the compartments, a phonograph horn having the inner end thereof extending into the exposed compartment and the outer end thereof extending into the other compartment and opening at the lower open end of said compartment.

1,399,098. FOLDING-MACHINE. CORNELIUS P. WIKSTROM, New Brunswick, N. J. Filed Oct. 7, 1920. Serial No. 415,865. 8 Claims. (Cl. 270—39.)

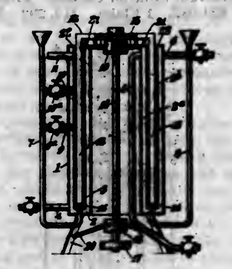


2. A folding mechanism which comprises a multiplicity of coöperating spiral rolls of graduated pitch, in contact with which a web of material to be folded may be passed, to cause the same to conform to their profile.

1,399,099. VACUUM-BRAKE. HARRY W. BARROWS, Omaha, Nebr. Filed Aug. 14, 1920. Serial No. 403,444. 8 Claims. (Cl. 188—154.)

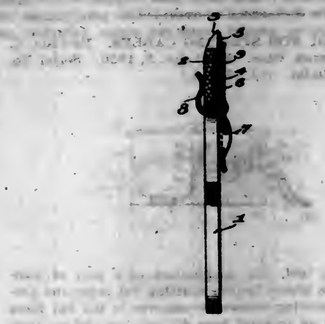
1. In an automobile provided with a clutch between the power unit and the drive wheels, and also provided with brakes, means for producing vacuum conditions, brake operating means responsive to the vacuum conditions, means for moving the clutch to the unclutched position also responsive to the vacuum conditions, and means under the control of an operator for utilizing the vacuum conditions with respect to the brake operating means and the clutch means either together or with respect to the brake means alone.

1,399,100. AUTOMATIC TRAIN-CONTROLLING DEVICE FOR PREVENTING COLLISIONS. ABRAM L. BOWER, Boyertown, Pa. Filed Feb. 24, 1913. Serial No. 750,275. 13 Claims. (Cl. 246—179.)



4. In a train controlling device, the combination of a train axle, a geared device connected thereto, a sprocket wheel connected to the geared device, a ladder chain supported by the sprocket wheel, a pawl and upright rod supported by the chain, a solenoid, a block controlled electric circuit for operating the solenoid, a core attached to the rod below the solenoid, a brake valve below the rod, the rod being adapted to open the brake valve and stop the train.

1,399,101. TOOL FOR SPLICING CABLES. NEWTON K. BOWMAN, Canton, Ohio. Filed Feb. 3, 1920. Serial No. 356,071. 1 Claim. (Cl. 153—1.)

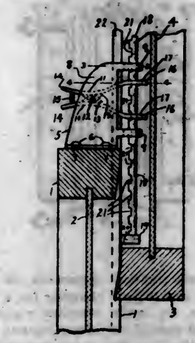


In a splicing tool, the combination of a pair of individual separable blocks having abutting flat faces and provided with registering transverse grooves in the flat faces thereof to form an integral base die member and an integral mating upper die member normally resting upon the base member to provide an anvil having a flat upper unobstructed anvil face extending from end to end of the latter member, the base die member being provided with centering pins upstanding from the flat face of such member at opposite sides of the groove therein and the upper die member being provided at opposite sides of its grooves with openings therethrough freely receiving said pins, the pins terminating short of the anvil face of the upper die member, and flexible means connecting the members, the base member being provided with an integral laterally projecting ear whereby said member may be secured to a support.

1,399,102. TREATING APPARATUS. CHARLES E. BURKE, Carneys Point, and GEORGE BARNHART, Woodstown, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Apr. 27, 1920. Serial No. 377,060. 18 Claims. (Cl. 23—3.)

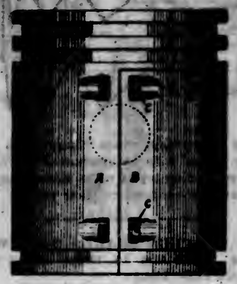
1. In a continuous treating apparatus, in combination, an outer receptacle providing a chamber for a temperature-controlling medium, an inner reaction receptacle in the outer receptacle and spaced therefrom, means for introducing reacting materials into the inner receptacle and comprising a pair of reacting-material-introduction conduits, and means for withdrawing reaction products from such receptacle, said two means, with respect to each other, communicating with the inner receptacle at points spaced therealong, and the said conduits of said introducing means both being spaced from said withdrawing means in the same direction longitudinally of said reaction receptacle, whereby a pair of reacting materials can enter by said conduits and flow together along such receptacle toward said withdrawing means.

1,399,103. HAIR-CUTTER. DAVID H. BUTLER, Edgewood, R. I., assignor to The Inlaid Company, Providence, R. I., a Corporation of Rhode Island. Filed May 3, 1920. Serial No. 378,847. 7 Claims. (Cl. 30—12.)



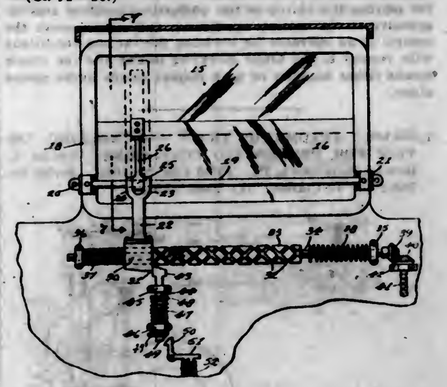
4. In a hair cutter, a handle having a head, a blade seated on one side of the head, a clamping device seated on the blade and engaged with the head and having a handle to move the device longitudinally of the first handle, the second handle engaging exteriorly over and with a side face of the first named handle, and means to hold the blade against movement longitudinally of the head.

1,399,104. DETONATING COMPOSITION. WILLARD C. COPE, Woodbury, N. J., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a Corporation of Delaware. Filed Jan. 8, 1918. Serial No. 210,821. 7 Claims. (Cl. 52—3.)



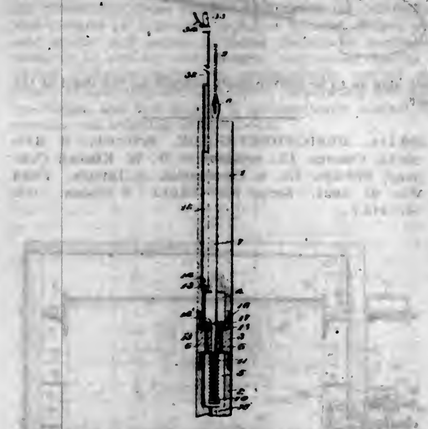
5. A detonating composition consisting of mercury fulminate and an oxid of lead.

1,399,105. SASH-FASTENER. GEORGE HENRY COBBS, Hamilton, Ontario, Canada, assignor of one-fourth to John Hagey, Brantford, Ontario, Canada, one-fourth to Harry Handel Blythe and one-fourth to Frank Herbert Secord, Hamilton, Ontario, Canada. Filed Nov. 1, 1920. Serial No. 421,082. 1 Claim. (Cl. 292—300.)



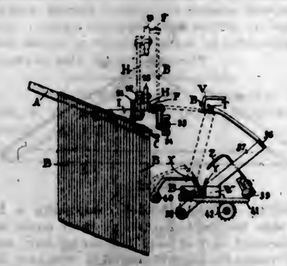
In a window, the combination with the upper and lower sashes thereof, of an upright notched rod carried by the upper sash and located within the plane of said sash, a bracket mounted upon the top edge of the lower sash, lugs formed integrally with the bracket and extending inwardly toward the upper sash, said lugs having bearing orifices through which the upright rod extends, a pair of locking fingers pivotally mounted intermediately of their length in the bracket and provided with orifices through which the upright rod extends, a spring normally separating the outer ends of the fingers, said fingers adapted to engage the notches in the rod for locking the two sashes in any desired partially open positions, the engagement between the lugs formed on the bracket and the upright rod adapted to prevent relative lateral displacement of the upper and lower sashes.

1,399,106. PISTON FOR INTERNAL-COMBUSTION ENGINES. GEORGE S. FOWLER, Joplin, Mo. Filed June 27, 1919. Serial No. 307,101. 1 Claim. (Cl. 74—108.)



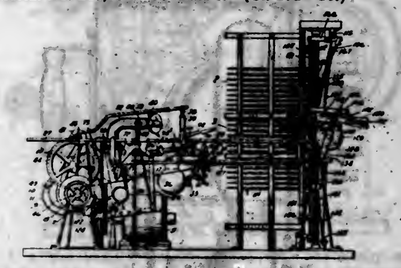
A piston comprising a substantially cylindrical piston head, a substantially semi-cylindrical portion integral therewith and forming a part of the body of the piston, a second substantially semi-cylindrical portion, said semi-cylindrical portions being provided with recesses adjacent the meeting edges and openings adapted to register with each other and bolts arranged in said openings to retain said second semi-cylindrical portions in position, the semi-cylindrical portions being secured to each other in a plane substantially in alinement with the plane of the center of the wrist pin.

1,399,107. WINDSHIELD-CLEANER. HENRYK FRANKOWSKI, Buffalo, and ADOLF HOFFMAN, Lackawanna, N. Y. Filed Feb. 19, 1921. Serial No. 446,446. 4 Claims. (Cl. 74—40.)



1. In apparatus for reciprocating a windshield wiper of the class described, a block having an inner double thread, a shaft, a double grooved socket on said shaft, its groove adapted to be engaged by the double thread of said block, a means for changing the direction of movement of said block at each end of its path along said socket, means for imparting a rotary movement to said shaft, and means for normally stopping the movement of said block but allowing a release of the same if the wiping of the windshield becomes necessary.

1,399,108. SELF-BAILING WELL-TOOL. LYLE GARRISON, St. Louis, Mo., assignor of one-half to Luna GARRISON SLOCUM, Washington, D. C. Filed July 21, 1920. Serial No. 397,843. 4 Claims. (Cl. 255—64.)



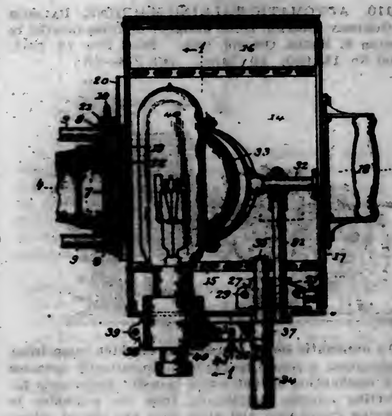
1. A device of the character described comprising a well tool provided with a pumping chamber and a valved conduit connecting said chamber with the base of said tool and with a point of discharge outside of the well, means for raising and lowering said tool, a spring interposed between said means and said tool, a valved piston connected to said means and reciprocable in said pumping chamber whereby on the raising and lowering of said tool, said piston draws the water and drill cuttings from adjacent the base of said tool and discharges the same outside of the well.

1,399,109. SKEIN FORMING AND BOXING MACHINE. CHARLES HUBER GSCHAUDT, Mulhouse, France, assignor to La Societe Anonyme "Dollfus-Mieg & Cie", Mulhouse, (Department of Haut-Rhin), France, a Corporation of France. Filed Mar. 31, 1921. Serial No. 457,340. 8 Claims. (Cl. 28—9.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A skein forming machine, comprising a bar adapted to carry a number of hanks to be treated, a lever adapted to oscillate and provided with a hook at its free end, means for lifting the hanks one by one from said bar and successively engaging each of them upon the hook of the said oscillating lever, a twisting spindle adapted to rotate around its axis and provided at its free end with a hook, means for imparting to the oscillating lever a semi-circular movement so as to pull the hank and stretch it between the hook of said lever and the hook of the twisting spindle, means for imparting to said spindle a movement of rotation around its axis so as to twist the hank between both hooks, a bar adapted to move across and above the twisted hank, means for imparting to the oscillating lever a semi-circular movement in the opposite direction, so as to fold the hank in half upon itself upon the cross bar acting as a guide, and to bring the end of the hank, carried by the hook of the lever, in front of the other end of the hank, carried by the hook of the twisting spindle, means for stripping the said first end from the lever hook onto the hook of the twisting spindle, so as to bring together both ends of the hank, and means for rotating the twisting spindle in a direction opposite to that of the first twisting operation, so as to twist together both halves of the hank folded one upon another.

1,399,110. AUTOMATIC TALKING-MACHINE. RALEIGH W. GODFREY, Oberlin, Ohio, assignor of three-fourths to Stanton S. Hobbs, Oberlin, Ohio. Filed Feb. 12, 1917. Serial No. 148,050. 30 Claims. (Cl. 274—10.)

1. An automatic sound reproducing machine comprising, in combination, a record magazine, automatically operated playing mechanism, an automatic transfer mechanism for transferring records individually from the magazine to the playing mechanism and after they are played return the same to the magazine, a motor for operating the playing mechanism, a motor for actuating the transfer mechanism, means automatically actuated by the transfer mechanism when a record is in position on the playing mechanism to stop the transfer motor and start the playing motor, means actuated automatically on completion of the playing of the record to stop the playing motor and start the transfer motor, and shiftable means arranged in one position to cause the transfer mechanism on its backward movement to continue the operation of the transfer motor to repeat the operation.



7. In an automatic sound reproducing machine, in combination, a record magazine, a playing mechanism, mechanism for automatically transferring a record from the magazine to the playing mechanism and returning it to the magazine, means for automatically moving the magazine step by step in either direction as the records are successively returned to it, and means for automatically reversing the direction of movement of the magazine when it reaches the end of its movement in either direction.

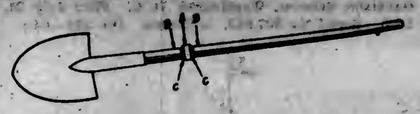
20. An automatic sound reproducing machine comprising, in combination, a record magazine, a playing mechanism, means for operating said playing mechanism, means reciprocating back and forth in the same plane for transferring a record from the magazine to the playing mechanism and returning it to the magazine, a power shaft, connecting therefrom to the transfer mechanism arranged to reciprocate the latter alternately in opposite directions, means actuated by the transfer mechanism arranged to stop the power shaft when the record is in position on the playing mechanism and start the playing mechanism, a movable sound reproducing device, and means actuated thereby when the playing of the record is finished arranged to stop the playing mechanism and start the power shaft.

29. In a sound reproducing machine, the combination of a supporting frame, a record magazine, a record sup-

port adjacent to the magazine, a rotatable driving shaft, a rotatable member, means operated by the driving shaft to automatically turn said member at certain predetermined intervals during the rotation of the driving shaft, and means operated by said member to first move the magazine in one direction to different positions to bring the records therein successively into registry with the record support and to thereafter move the magazine in the reverse direction to different positions to bring the records therein successively into registry with the record support.

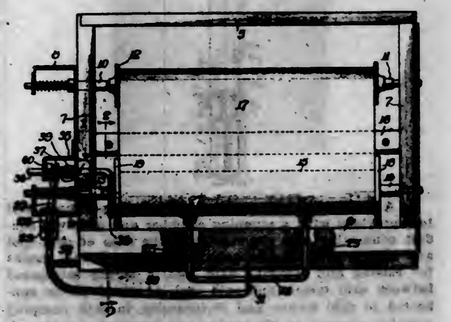
1,399,111. OPTICAL-PROJECTION LANTERN. JOSEPH GRANZ, Duluth, Minn. Filed Mar. 28, 1919. Serial No. 285,760. 8 Claims. (Cl. 240—44.)

1. A lamp house for optical projection apparatus having a bottom wall formed with an aperture, an attaching head mounted on said bottom wall, a lamp adapted for insertion through the apertured bottom wall aforesaid, a head carrying said lamp and adapted for engagement with the attaching head aforesaid, in a manner capable of lateral adjustment, an adjustable stop stem on said carrying head, and an abutment lug on the lamp house bottom wall and adapted for contact with the side of the carrying head.



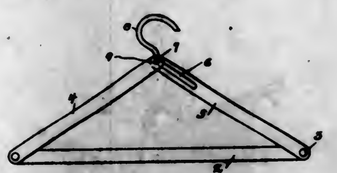
1,399,112. SWIVEL. FREDERICK G. GAUEN, Cincinnati, Ohio, assignor to The D. Gruen Sons & Company, Cincinnati, Ohio, a Corporation of Ohio. Filed June 26, 1920. Serial No. 391,978. 4 Claims. (Cl. 24—240.)

2. As a new article of manufacture the combination with a swivel clasp having a hook of an ornamental covering fixedly mounted upon the hook and adapted to substantially conceal the hook from one side.



1,399,113. HAND-OPERATED IMPLEMENT. HARRY S. HALL, Ellsworth, Me. Filed Sept. 27, 1920. Serial No. 413,084. 1 Claim. (Cl. 294—57.)

A handle for a manually operated implement such as a shovel or a hoe, characterized by the provision of an enlarged knob-like grip near the implement end of the handle and in fixed relation thereto, said grip being of

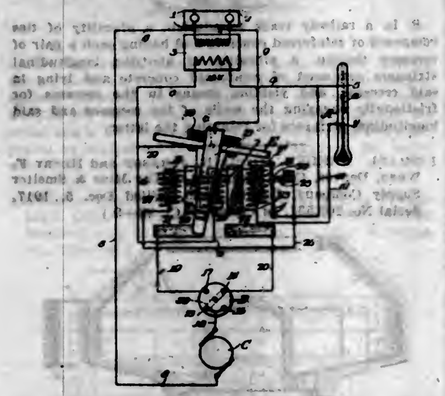


such size as to be conveniently covered by the hand of the user.

1,399,114. MUSIC-SHEET GUIDE. STILLWELL R. HARCOURT, Chicago, Ill., assignor to W. W. Kimball Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 21, 1921. Serial No. 453,913. 9 Claims. (Cl. 84—143.)

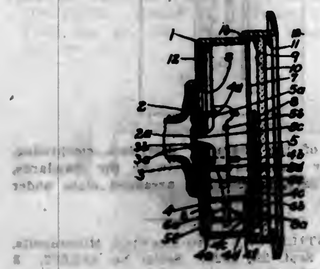
1. In a music sheet guide for player pianos and the like, the combination with a receiving spool having a movable head, of mechanism actuated by the portion of the music sheet roll on said receiving spool for pressing said movable head inwardly as the sheet is wound on said receiving spool.

1,399,115. FOLDING GARMENT-HOLDER. EUGENE DUGAL HARPER, Toronto, Ontario, Canada, assignor of one-half to Cecil George Clatworthy, Toronto, Ontario, Canada. Filed June 17, 1921. Serial No. 478,404. 3 Claims. (Cl. 211—13.)



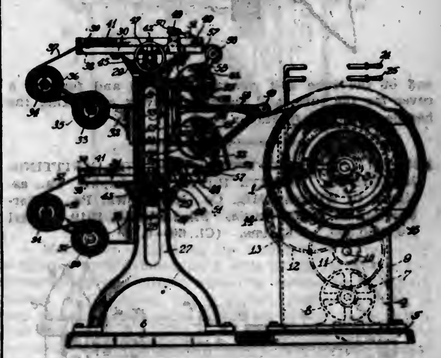
3. A folding garment holder comprising a horizontal bar; two side members pivoted at their outer ends, each to its associated end of said horizontal bar, and on the same side thereof; one of said side members being provided at its inner end with a longitudinal slot, and a hook provided with an eye held in said slot and in a hole formed in the inner end of the other said side members.

1,399,116. ELECTRICALLY-CONTROLLED SWITCH MECHANISM. WILLIAM GROVER HARTWIG, Chicago, Ill., assignor to Arthur Frantzen, Chicago, Ill. Filed July 9, 1917, Serial No. 179,557. Renewed Oct. 10, 1921. Serial No. 506,917. 7 Claims. (Cl. 172—268.)



1. In a system of electric motor control, in combination with the motor, an electro-magnetically operated switch

mechanism provided with contacts and connections to control the supply of current to said motor, energizing circuits for controlling the electromagnetic operation of said mechanism, devices operated by said mechanism to control said circuits, so that operation of said mechanism opens one circuit and closes another, and means for controlling said circuits to cause the operation of said devices and said motor, said means including electrically controlled contacts in one of said circuits, said motor having a switch operated thereby to automatically control the supply of operating current thereto, cooperating with said mechanism and said means to automatically control the starting and stopping of said motor.



2. In a system of electric motor control, in combination with the motor, an electro-magnetically operated switch mechanism provided with contacts and connections to control the supply of current to said motor, energizing circuits for controlling the electro-magnetic operation of said mechanism, devices operated by said mechanism to control said circuits, so that operation of said mechanism opens one circuit and closes another, and means for controlling said circuits to cause the operation of said devices and said motor, said means including electrically controlled contacts in one of said circuits, comprising a switch to connect said mechanism with said motor, said switch being operated by the motor itself to automatically stop the operation thereof, means to supply current of relatively high voltage through said switch to operate said motor, and means to supply current of relatively low voltage to operate said mechanism.

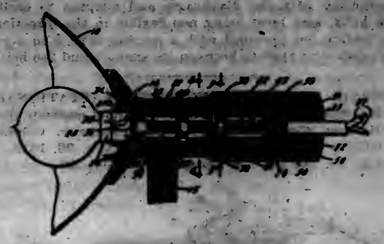
1,399,117. PRESSURE-GAGE. HERBERT HASTINGS, Brighton, N. Y. Filed June 3, 1919. Serial No. 301,472. 17 Claims. (Cl. 73—110.)

1. In a pressure indicating device, a case provided with a pressure chamber, a flexible diaphragm closing one end of said chamber, an indicator stem journaled in parts of the device and provided with a helix and an indicator, a lever pivotally supported in parts of the device and contacting with the diaphragm and adapted to oscillate the helix, said lever being non-flexible in the direction of its motion but provided with a portion flexible in a plane perpendicular thereto between its support and the helix.

1,399,118. TIRE-BUILDING MACHINE (STATIONARY.) WALTER H. HERMANN, Lancaster, Ohio, assignor to The Herman Tire Building Machine Company, Columbus, Ohio, a Corporation of Ohio. Filed Dec. 26, 1918. Serial No. 268,402. 4 Claims. (Cl. 154—10.)

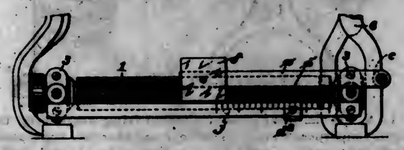
1. A tire building machine comprising stationary uprights, superposed guide tables carried thereby, superposed stock supporting means at the rear ends of said tables and over which the stock extends in lateral parallel planes, and a tension roller supported by said uprights adjacent the front ends of said tables and maintaining the stock taut.

1,399,119. MACHINE-GUN. LLOYD EARL HODGE, Glendora, Calif. Filed Sept. 26, 1919. Serial No. 328,612. 21 Claims. (Cl. 89—33.)



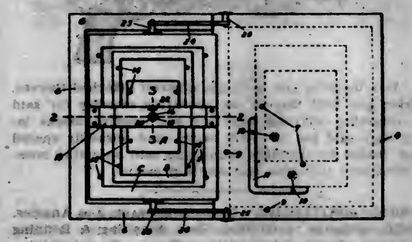
1. In a machine gun, a frame, a barrel attached thereto, a firing pin held therein, an operating member for said pin, rotatable cartridge injecting and ejecting means intermediate said pin and said barrel, and normally spaced clutch means for operably connecting said operating member with said injecting and ejecting means.

1,399,120. SPOTLIGHT. EARL H. HOWARD, Los Angeles, Calif., assignor to Gilfillan Bros. Smelting & Refining Company, Los Angeles, Calif., a Corporation of California. Filed Aug. 14, 1919. Serial No. 317,427. 6 Claims. (Cl. 178—328.)



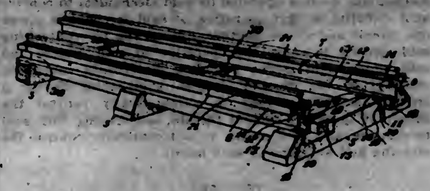
1. In a connector and switch device of the character described, a tube, relatively stationary blocks in the tube and spaced apart, connector members extending through the blocks and providing contacts on their adjacent faces, a rotatable contact block between the two stationary blocks, a connector member extending through the rotata-

ble block and providing contacts adapted to engage the stationary block contacts, a hollow handle fitting over one



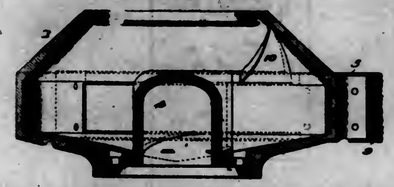
end of the tube and rotatable thereon and forming a cover for the tube, and means rotatively connecting the handle with the rotatable block.

1,399,121. TAKE-UP MECHANISM FOR KNITTING-MACHINES. KENNETH HOWIE, Philadelphia, Pa., assignor to Wildman Mfg. Co., Norristown, Pa., a Corporation of Pennsylvania. Filed Mar. 3, 1919. Serial No. 280,895. 5 Claims. (Cl. 66—9.)



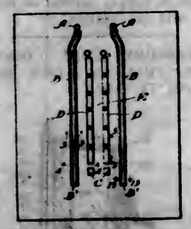
1. In combination in a takeup for knitting machines, a pair of takeup rolls, a movable support therefor, driving means for the takeup rolls including a clutch, a connection from the movable takeup support for controlling the clutch and adjustable gravitating means for exerting pressure to vary the driving action of the clutch according to the demands of the work, said adjustable gravitating means including a weight, a pivotally mounted beam carrying the weight and exerting pressure upon the movable takeup support and through it upon the driving clutch, said beam extending in a plane substantially parallel with the takeup rolls.

1,399,122. PRINTING-FRAME. CHARLES E. JACKSON, Minneapolis, Minn. Filed Mar. 8, 1921. Serial No. 450,689. 6 Claims. (Cl. 101—391.)



1. A device of the class described consisting of a base adapted to support a card on one side thereof, an ink pad on the other side of the base, means for slidably securing the pad to the base, a printing device adapted to rest on either of said sides, and means for connecting the device to the board so that the former will be caused to rest in similar positions on either side of the latter, as desired.

1,399,123. RAILWAY-RAIL SUPPORT. PETER JARNOWSKI, Chicago, Ill. Filed Sept. 10, 1921. Serial No. 499,730. 9 Claims. (Cl. 238—25.)



8. In a railway track foundation, a plurality of ties composed of reinforced concrete and having each a pair of recesses therein, a plurality of abutting longitudinal stringers composed of reinforced concrete and lying in said recesses, and yielding means in the recesses for frictionally engaging the walls of the recesses and said longitudinal stringers for retaining the latter.

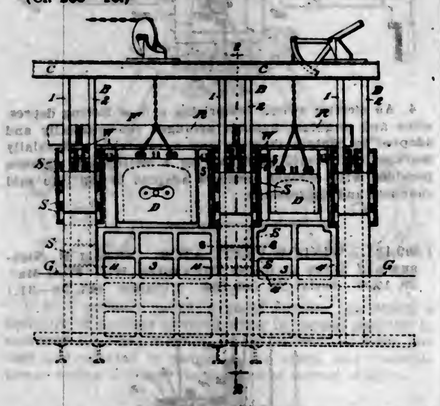
1,399,124. FEEDER. OSCAR H. JOHNSON and HENRY F. WEBB, Denver, Colo., assignors to The Mine & Smelter Supply Company, Denver, Colo. Filed Dec. 5, 1917. Serial No. 205,531. 4 Claims. (Cl. 83—9.)

1. A drum feeder the major portion of which is in a single casting, having openings at opposite ends and one in the periphery and provided with an integral, internal scoop and also provided internally with a wing which is flared out toward the receiving end opening of the drum and so arranged that it collects all of the material in the drum guiding and working it into the inside scoop and an external scoop detachably secured over the peripheral opening.

1,399,125. RESTAURANT-FIXTURE. PHILLIP D. JONES, Los Angeles, Calif., assignor of one-half to Clyde Van Hoose, Los Angeles, Calif. Filed Feb. 19, 1920. Serial No. 359,994. 19 Claims. (Cl. 186—1.)

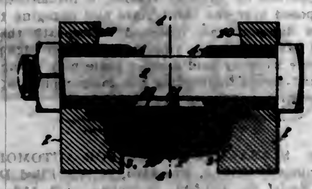
1. A fixture of the character described, comprising, standards, cover plates carried between the standards, and receptacle carrying brackets arranged close under the cover plates.

1,399,126. VENTILATOR. OTTO KRAWIEN, Minneapolis, Minn. Filed Sept. 29, 1920. Serial No. 413,537. 8 Claims. (Cl. 98—27.)



3. A device of the character described comprising a body member open at its ends, longitudinally extending

ribs formed inwardly of the body member, a reticulated casing disposed within the body member, said casing being positioned in spaced relation to the inner wall of the body member by said ribs to provide air passages, and a detachable air deflector and closure member for one end of the casing, whereby the air is directed exteriorly of the reticulated casing, said deflector being substantially

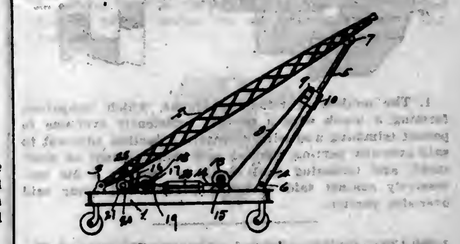


concavo-convex in cross section, said convex surface serving to deflect the air entering the casing, said concave surface extending toward the outlet end of the casing whereby air endeavoring to enter the casing through the outlet end is accumulated in the concave portion and withdrawn by suction of the air passing through the outlet end of the body member.

1,399,127. BUCKSTAY-SHOE. FRED E. KLING, Youngstown, Ohio. Filed June 19, 1920. Serial No. 390,256. Renewed Aug. 22, 1921. Serial No. 494,875. 6 Claims. (Cl. 263—46.)

1. In a furnace construction, the combination with the furnace wall, of a buckstay spaced from said wall and loosely carrying a series of wall contacting shoes each having a limited area of contact with the buckstay, and an extended area of contact with the wall.

1,399,128. APPARATUS FOR USE IN MAKING CUSHION-TIRES. HENRY M. LAMBERT, Portland, Oreg. Filed Aug. 22, 1921. Serial No. 494,257. 6 Claims. (Cl. 18—38.)



1. In apparatus for use in manufacturing cushion tires, a pair of side plates having rim receiving portions and opposing surfaces, short pins or lugs carried by each of said side plates and adapted to project into the area of the tire carcass those lugs on one side being opposite to those on the other side and spaced apart from the same, substantially as shown and for the purposes described.

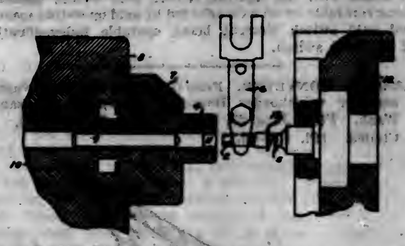
1,399,129. DIMMER-SWITCH. HENRY FRED LAUB, Logan, Utah. Filed Apr. 5, 1920. Serial No. 371,242. 6 Claims. (Cl. 219—48.)

1. Means for controlling the illumination afforded by a lighting circuit embodying a main switch for closing and interrupting said circuit, operating means for said main switch, a resistance, and a switch element bridging a gap in said circuit to be controlled by the main switch and operable for cutting more or less of said resistance in series with the lighting circuit, said switch element being rotatable on an axis afforded by said operating means and said switch element being operable independently of the main switch.

1,399,130. CONVEYER. FRED G. LEWIS, Spokane, Wash., assignor to Rhoades Harvester Company, Spokane, Wash. Filed June 23, 1919. Serial No. 306,046. 2 Claims. (Cl. 198—8.)

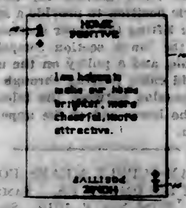
1. The combination with the pivoted boom and its portable base, of an adjustable leg comprising telescoping sections pivoted respectively to the boom and said base, means within the outer section for holding the inner section in eccentric position to provide a space in the outer section, means for lifting the upper section and permitting it to slide into the lower section comprising a winding mechanism, a cable, and a pulley on the upper end of the lower section, said cable passing through said space over said pulley and passing between the telescoping sections, and secured to the lower end of the upper section within the lower section.

1,399,131. STEAM-SUPPLY MEANS FOR CYLINDERS OF RAILWAY-LOCOMOTIVES. SAMUEL H. LEWIS, Richmond, Va. Filed Nov. 9, 1918. Serial No. 261,823. 1 Claim. (Cl. 121—137.)



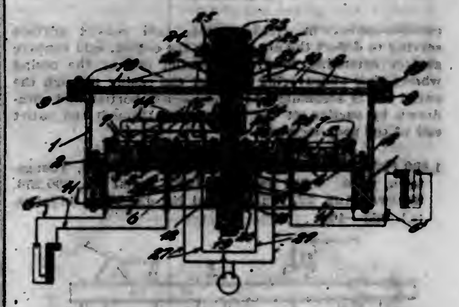
In apparatus of the character described, a conduit to supply steam to the cylinder or cylinders of a railway

locomotive, a valve casing arranged in said conduit, a valve in said casing to control the passage of steam through the conduit, a cylinder arranged near the valve, a sleeve in said cylinder forming a guide, a piston mounted to reciprocate within the cylinder having a stem reciprocable within said guide and connected with the valve to move it, a spring surrounding said stem and guide and en-



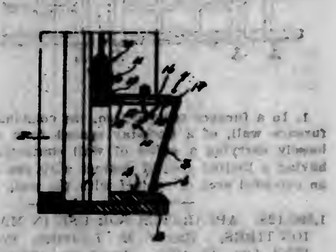
gaging the piston to oppose its movement in the direction in which said valve is opened, a nut mounted upon said sleeve and adjustable thereon to regulate the tension of the spring, and a control apparatus operated by a movable part of the locomotive and serving to supply fluid pressure to the cylinder in quantities varying directly with the speed of the locomotive.

1,899,132. METHOD OF TRIMMING BLANKS. Ransom W. Lindquist, Detroit, Mich., assignor to The Vitreon Company, Detroit, Mich., a Corporation of Michigan. Filed July 15, 1920. Serial No. 396,551. 12 Claims. (Cl. 10—20.)



1. The method of trimming blanks, which comprises, forming a blank with a portion sufficiently over-size to permit trimming and with a centering portion adjacent to said over-size portion, placing said blank against an abutment, and trimming said blank by moving a die successively against said centering portion and along said over-size portion.

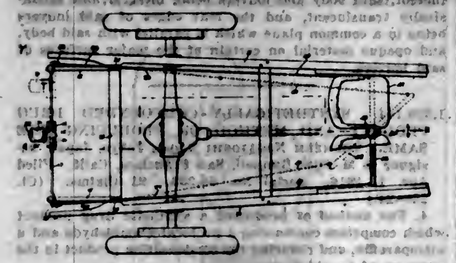
1,899,133. GAME. Emil L. Loeser, Watertown, Wis. Filed Feb. 24, 1920. Serial No. 361,060. 3 Claims. (Cl. 46—36.)



1. A game including a plurality of pairs of cards, one card of each pair having delineations thereon indicative of a destructive mental attitude and the other one of which pair having delineations thereon indicative of the opposite or a constructive mental attitude, the cards indicative of a destructive mental attitude when played being covered by a card indicative of a constructive mental attitude thus illustrating to the player how mental attitudes of one type or class may be counteracted by mental attitudes of the opposite type or class.

1,899,134. PYROMETER-SWITCH. Marcus T. Lothrop, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed Oct. 6, 1919. Serial No. 328,675. 11 Claims. (Cl. 73—32.)

4. An electric switch comprising a base having depressions and annular channels arranged concentrically and adapted to contain mercury and a rotatable and axially movable shaft, said shaft having a switch arm thereon provided with contact members adapted to dip into said channels and depressions.



1,899,135. WINDOW-VENTILATOR. Nicholas B. Nielsen and Elsie G. Brant, Milwaukee, Wis. Filed Mar. 29, 1920. Serial No. 369,758. 2 Claims. (Cl. 98—81.)

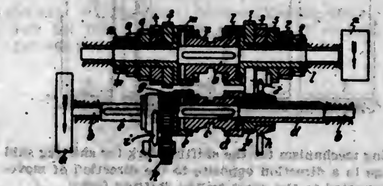
2. A ventilator including a pair of end frames, a front plate supported by the end frames, a foraminous cover plate disposed over the front plate and engaging the end frames, a damper plate disposed underneath the cover plate and having one edge hinged to the inner edge portion of the cover whereby said damper plate may swing downwardly, and means for holding the damper plate at different angles with respect to the cover plate.

1,899,136. SIGNALING DEVICE FOR AUTOMOBILES. Alexander McLaren, Brooklyn, N. Y. Filed Dec. 22, 1920. Serial No. 432,588. 4 Claims. (Cl. 116—50.)

1. In a signaling device for automobiles, a transverse guideway at the rear of the automobile, a carriage provided with rollers engaging the guideway, a lamp support carried by the carriage, a vertical shaft under the control

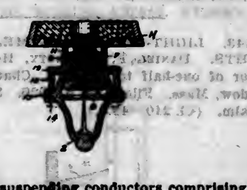
of the operator, cables secured to the carriage, and means for connecting the cables with the said shaft.

1,899,137. PRESSURE-GUARD FOR WOODWORKING-MACHINES. James D. McMichael, Rochester, N. Y., assignor to American Wood Working Machinery Company, Rochester, N. Y., a Corporation of Pennsylvania. Filed Mar. 3, 1921. Serial No. 449,329. 2 Claims. (Cl. 144—251.)



1. In a pressure guard, a guard member comprising a plurality of sections adapted when in normal position to surround a cutting member, one of the sections being pivoted and adapted to swing on the other, and yieldable means acting to retain the sections in normal relation.

1,899,138. SLEDGE-VELOCIPEDE. Prodromos Madjaroglou and Andreas Paulick, Dresden, Germany. Filed Aug. 16, 1918. Serial No. 250,258. 1 Claim. (Cl. 208—159.)

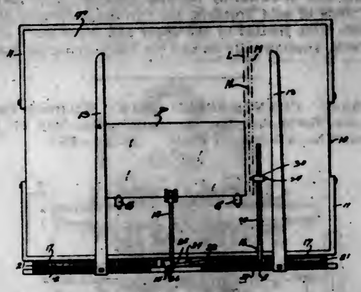


In a sledge-velocipede, the combination with the velocipede-pedals, of funnel-shaped brackets with open rear end fixed to the underside of said pedals and located to participate in the circular movement of the latter, and straight pickers pivotally mounted in said brackets so as to turn in a perpendicular plane thereto, and projecting in rearwardly and downwardly inclined direction from the open rear ends of said brackets, the turning-movement of said pickers being limited by the upper and lower walls of said brackets, substantially as and for the purpose set forth.

1,899,139. CHANGE-SPEED GEAR. Wilhelm Eduard Marx, Berlin-Spandau, Germany. Filed May 27, 1921. Serial No. 473,040. 1 Claim. (Cl. 74—58.)

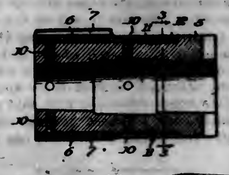
A combination change-speed gear, comprising, in combination two change speed gears arranged side by side and comprising each a set of co-axial stepped cog-wheels; a pair of axially displaceable cog-wheels arranged outside of said set, and meshing with each other, means to rotate one of these latter wheels, the other of them being adapted to transmit the rotary motion to any of the wheels of the said set; two parallel shafts, one carrying the two sets of wheels and the other the rotated wheels of the two pairs; hollow cones connected with these rotated wheels; a shiftable double cone arranged between them upon the respective shaft; hollow cones connected with said set of wheels; a shiftable double cone arranged between them upon the respective shaft; and means to shift any one of the double-cones.

1,899,140. CONDUCTOR-CLAMP. Samuel S. Mathers, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Apr. 6, 1921. Serial No. 459,974. 6 Claims. (Cl. 191—43.)



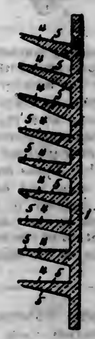
5. A device for suspending conductors comprising a pair of clamping members provided with means forming a recess, a rotatable supporting member mounted in the recess and engaging the clamping members to move the clamping members into engagement with the conductor, a holding member engaging the clamping members to hold the clamping members in a clamping position and having a hinging action therewith, rotating means engaging the supporting member to rotate the same and having means engaging means on the holding member to limit the longitudinal movement of the holding member and rotating means but permitting relative rotation of the holding member and rotating means and means on the supporting member to engage a hanger.

1,899,141. AUTOMATIC TYMPAN-GAGE. Jacob S. Merkins, Grand Junction, Colo. Filed Dec. 27, 1920. Serial No. 433,265. 16 Claims. (Cl. 101—414.)



2. The combination with a platen, shifting fork for shifting a sheet upon the platen, an actuating mechanism upon

the shifting fork, of a side gage against which the sheet is shifted by the shifting fork, and means actuated by the



actuating mechanism for the shifting fork for shifting said side gage in a direction opposite to the direction of movement imparted to the sheet by the shifting fork.

1,399,142. REAMER-HEAD. WILLIAM L. MILLER, Madison, Wis., assignor to Gisholt Machine Company, Madison, Wis., a Corporation of Wisconsin. Filed July 16, 1919. Serial No. 311,205. 2 Claims. (Cl. 77—72.)

1. A reamer head, comprising a one-piece body member formed with longitudinal channels and with an annular channel extending transversely of and intersecting the inner ends of said longitudinal channels, a ring completely filling said annular channel, and cutter blades in said longitudinal channels having square inner ends abutting against one side of said ring.

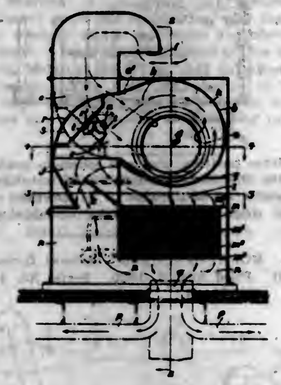
1,399,143. LIGHT-DEFLECTING MEANS FOR HEADLIGHTS. DANIEL F. MORIARTY, Holyoke, Mass., assignor of one-half to Frank A. Champlin, East Longmeadow, Mass. Filed Oct. 5, 1920. Serial No. 414,730. 1 Claim. (Cl. 240—48.4.)

As an improved article of manufacture, a device, of the class described, comprising a body and a plurality of approximately wedge-shaped louvers extending with varying inclinations upwardly and rearwardly from the back side thereof, said body and louvers being integral and intrinsically translucent, and the rear edges of said louvers being in a common plane which is parallel with said body, and opaque material on certain of the major surfaces of said louvers.

1,399,144. SYNTHETICALLY-COMPOUNDED DRUG PRODUCT AND METHOD OF PRODUCING THE SAME. WILHELM NAGAJOSHI NAGAI, Tokyo, Japan, assignor to M. Dick Bunnell, San Francisco, Calif. Filed Apr. 1, 1916. Serial No. 88,223. 21 Claims. (Cl. 23—24.)

4. The method of producing a synthetic drug product which comprises condensing a protocatechualdehyde and a nitroparaffin, and reducing the condensation product in the presence of an aldehyde.

1,399,145. DOOR-CHECKING DEVICE. JOHN O. NASLIN, Seattle, Wash. Filed May 31, 1921. Serial No. 474,016. 6 Claims. (Cl. 16—82.)

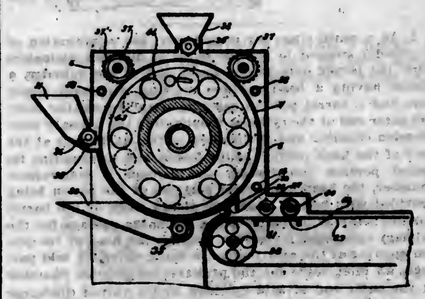


3. In a door check, a pivoted actuating member and a striker fixed thereon adapted to be actuated by a swinging part, a resilient check fixed to the swinging end of a pivoted strap movable with said member, normally suspended outside of the path of said part and adapted to be swung into its path, and means on said member adapted to engage said strap so as to swing said check into the path of said part only when the latter's movement is swift.

1,399,146. RADIATOR. RUDOLPH NAUJOKS, Los Angeles, Calif. Filed Apr. 17, 1919. Serial No. 290,736. 3 Claims. (Cl. 257—130.)

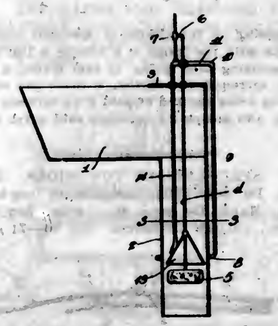
1. A radiator core comprising a plurality of water carrying elements each embodying two transversely corrugated walls, each of said walls being bent along a longitudinal medial line and the edges of said two walls being joined directly together to form thin front and rear edges for each element; the corrugations of the said two walls of each element being arranged in nesting relation so that the water course through the element is sinuous; adjacent elements of said radiator being assembled in opposing relation so that points of adjacent elements at the bends in their walls are in contact with each other, and the said adjacent elements being secured together by being secured at said points of contact.

1,399,147. HEATING, COOLING, AND VENTILATING APPARATUS. THOMAS NEILSON, London, England. Filed Jan. 17, 1920. Serial No. 352,228. 4 Claims. (Cl. 257—137.)



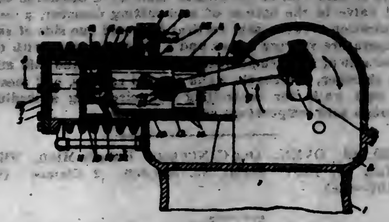
2. A heating, cooling and ventilating apparatus comprising an outer casing sub-divided in its upper part to form two chambers, a fan arranged in one chamber with the eye of the fan communicating with the other chamber, a diaphragm sub-dividing the lower part of said outer casing, a temperature varying means fixed beneath said diaphragm, a distributing duct below said temperature varying means, a communication from each of said chambers in the upper part of the outer casing, through said diaphragm and said temperature varying means to said distributing duct, and through said diaphragm direct to said distributing duct, a single regulating valve disposed to simultaneously control all of said communications, a communication for each of said chambers with the atmosphere, a control valve within each said chamber adapted to close either of its respective communications with atmosphere, or the communication with said temperature varying means, said control valves being connected for simultaneous movement and disposed so that one closes its respective communication to atmosphere while the other closes its respective communication to said temperature varying means.

1,399,148. HEATING, COOLING, OR VENTILATING APPARATUS. THOMAS NEILSON, London, England. Filed Feb. 10, 1920. Serial No. 357,733. 4 Claims. (Cl. 257—137.)



2. An apparatus of the type referred to having in combination a fresh air supply duct, a pivoted arcuate valve in said duct to form a conducting wall of said duct, a fan casing connected to said duct, with the eye of the fan toward said arcuate valve, and a casing comprising a vertical duct adjacent to and communicating with the fan casing, a temperature varying means, a mixing chamber below said temperature varying means, a wall of said vertical duct forming a wall of said mixing chamber, a hinged valve in said wall of the mixing chamber, a discharge control valve in the bottom of said mixing chamber, a communication between said vertical duct and one side of said temperature varying means and a communication with the other side of said temperature varying means and said mixing chamber, detachable walls to said casings, and means on said walls for controlling and circulating a medium through said temperature varying means.

1,399,149. OVEN. OLE C. NUUBSON, Duluth, Minn. Filed July 27, 1920. Serial No. 399,339. 2 Claims. (Cl. 107—60.)



1. In an oven, an outer casing, said casing having a housing formed at one end thereof, a rotary oven supported within the housing, means disposed within the rotary oven for heating the same, means for regulating the temperature within the rotary oven, means for rotating the rotary oven, a plurality of hoppers having communication with the interior of the housing, and disposed in spaced relation with each other, a feeding roll associated with each hopper for feeding material to the oven, means for removing material from the oven, and means for conveying the material to a point remote from the oven.

1,399,150. FUNNEL. MERLE E. OTT, Clear Lake, Iowa. Filed Sept. 11, 1920. Serial No. 409,548. 2 Claims. (Cl. 226—32.)

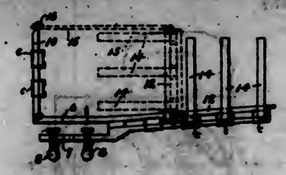
1. A funnel comprising a body having a spout attached thereto and provided with a shelf above the spout, a rod centrally located in the spout, a float member attached to the lower end of the rod, the upper end of the rod being inserted through the shelf and equipped with a slide member, a guide ring encircling the spout, a rod parallel with the spout and attached to the guide member, a plate supported on the upper end of the rod, the said slide member embracing the said plate.

1,399,151. AIR-COMPRESSOR. DUNCAN M. FORBES and HARLEY M. DUNLAP, Battle Creek, Mich. Filed June 16, 1919. Serial No. 304,227. 2 Claims. (Cl. 230—62.)

1. In a multi-stage air compressor, the combination of a cylinder stepped to provide bores of different diameters with the larger bore at the outer end of the cylinder, a piston having a head portion coacting with said larger bore and a barrel portion coacting with the smaller bore, the outer end of the cylinder constituting the primary compression chamber and the portion of the larger bore at the rear of the head portion of the piston and surrounding its barrel portion constituting the secondary compression chamber, the head and barrel portions of the piston being provided with piston rings, the piston rings of the barrel portion being at its inner end, a discharge passage for the primary compression chamber through the head of the piston opening at the rear thereof, a check valve for said passage, an inlet valve for the primary compression chamber at the outer end of said cylinder, and a valved discharge connection for said secondary compression chamber at the rear end thereof.

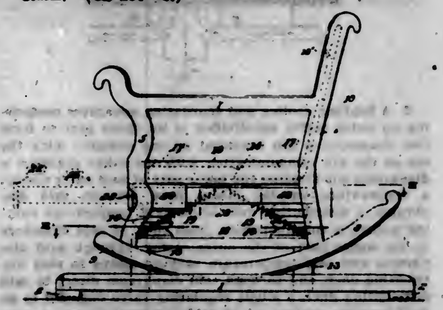
1,399,152. MEANS FOR LUBRICATING LEAF-SPRINGS. JAMES I. RICHEY, Cincinnati, Ohio. Filed Nov. 15, 1920. Serial No. 424,232. 5 Claims. (Cl. 267—60.)

1. A housing of the character specified comprising in combination with the frame of a vehicle, a leaf spring and clips for securing said spring to said frame, a casing arranged to surround the spring, a cover for said casing, said housing being secured by said clips between the spring and frame, and means for securing said cover and casing together.



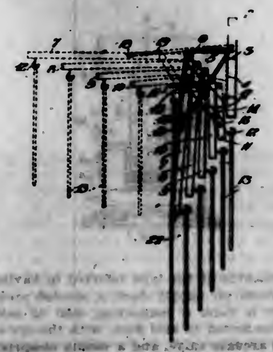
1,399,153. SPRING-INSOLE FOR SHOES. SAMUEL R. ROGERS, De Soto, Mo., assignor of one-half to C. Hohman Mahn, De Soto, Mo. Filed Jan. 24, 1921. Serial No. 439,390. 3 Claims. (Cl. 36—71.)

1. An insole comprising two plates hinged together at their rear ends, and yielding means interposed between said plates at points spaced from their rear ends.



1,399,154. LUGGAGE-CARRIER. GILBERT A. ROUSE, Hastings, Nebr. Filed Aug. 26, 1919. Serial No. 319,520. 6 Claims. (Cl. 224—39.)

1. A luggage carrier of the class described comprising a bottom section having means for attachment to the running board of a vehicle, a foldable section hingedly connected thereto and adapted to project in alinement with the bottom section when unfolded and to engage a



load in either position, and said members projecting laterally from the foldable section and arranged to prevent displacement of articles in a direction endwise of the carrier when in either extended or folded position.

1,399,155. ROCKING-CHAIR. ANTONI RUDNICKI, Chicago, Ill. Filed Aug. 3, 1920. Serial No. 400,985. 1 Claim. (Cl. 220—8.)

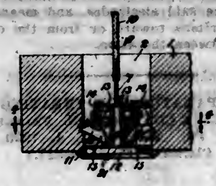
The combination with a rocking chair of a mounting base therefor, a platform supported on the mounting base including forward and rear upright standards and a rectangular plate upon said standards, an air bellows rigidly connected to the forward and rear ends of said plate in engagement with the chair bottom and spring tension means anchored to the four corners of said plate and the underneath center portion of said chair bottom for normally maintaining the chair in a level position.

1,399,156. FOLDING CLOTHESRACK. HENRY G. ROWEN, Rochester, N. Y., assignor of one-half to Charles L. Townsend, Rochester, N. Y. Filed Apr. 25, 1919. Serial No. 292,528. 6 Claims. (Cl. 45—118.)

6. In a folding clothes rack, the combination with a base board or support of a plurality of arms of progressively increasing length pivoted thereto in different horizontal and vertical planes for vertical swinging movement in the same plane, each provided with means for attaching a garment hanger thereto, the arm pivoted lowermost being the shortest; a connecting link pivoted to the upper and lower arms and coöperating with the intermediate arms whereby all of said arms are connected for joint movement, a latch engaging means on the uppermost pivoted arm, a latch pivoted to said base board above said uppermost pivoted arm and adapted to coöperate with said latch engaging means on said arm to hold all of said arms in a substantially horizontal or raised position.

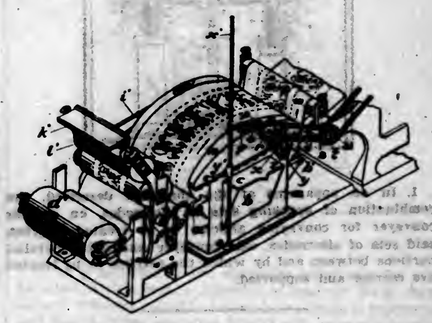
1,399,157. SILENCER FOR AUTOMOTIVE EQUIPMENT. INGEMAR K. RYSTEDT, Dayton, Ohio, assignor of one-half to A. D. Miller, Dayton, Ohio. Filed Oct. 30, 1920. Serial No. 420,792. 4 Claims. (Cl. 170—172.)

1. In a device of the character described, a hub, a central opening therein, a circumambient channel beyond said central opening, a supply channel in alidable engagement with the first named channel and communicating therewith so as to form a housed passage-way for the passage of fluid from the supply channel to the first named channel, a blade upon the hub and a passage-way therethrough, one end of which communicates with the first mentioned channel from which it receives the fluid and from the other end of which it is discharged into the open air.



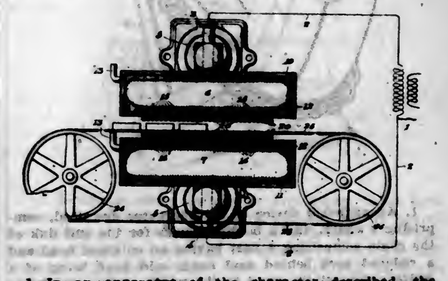
1,399,158. LOCK. SAMUEL SEGAL, New York, N. Y., assignor to Segal Metal Products Company, Inc., New York, N. Y., a Corporation of Delaware. Filed Sept. 3, 1920. Serial No. 407,846. 6 Claims. (Cl. 70—15.)

1. In a lock, a locking bolt, a keeper, a support for said keeper, means for rigidly fastening said keeper to said support, a strip connected to said keeper, a movable keeper plate adapted to interlock with said locking bolt and means independent of said rigid fastening means and passing through said keeper plate and connecting said keeper and strip and adapted to frictionally hold said keeper plate intermediate said keeper and strip and to permit an adjustment of the position of said keeper plate without movement of said keeper or a loosening thereof.



1,399,159. CYLINDER-LOCK. SAMUEL SEGAL, New York, N. Y., assignor to Segal Metal Products Company, Inc., New York, N. Y., a Corporation of Delaware. Filed Dec. 10, 1920. Serial No. 429,627. 19 Claims. (Cl. 70—46.)

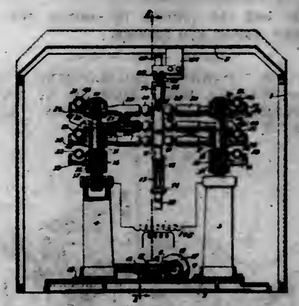
1. In a lock, the combination with a wall having an opening therein, of a cylinder associated with said wall and means engaging said cylinder and the wall of said



opening to lock the cylinder in position and to draw said cylinder within said opening.

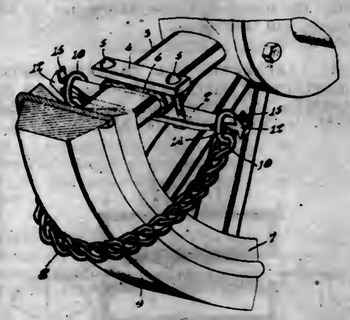
1,399,160. PARAFFINING-MACHINE. HENRI A. SEVIGNE, Winthrop, Mass. Filed Dec. 22, 1916, Serial No. 138,349. Renewed Sept. 30, 1920. Serial No. 413,899. 9 Claims. (Cl. 91—51.)

1. The combination with a machine having means for causing a web of paper to travel, of a trough, a roll in said trough, stationary convex plates situated closely adjacent said roll at opposite sides thereof, means for supplying the trough with wax, and means for heating said trough, roll, and plates.



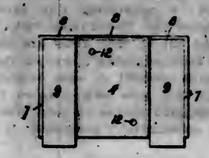
1,399,161. APPARATUS FOR TREATING ARTICLES BY DISRUPTIVE CONDUCTION. FRANKLIN S. SMITH, Philadelphia, Pa. Filed Mar. 27, 1919. Serial No. 285,485. 4 Claims. (Cl. 175—311.)

1. In an apparatus of the character described, the combination of a plurality of sets of elastors and electrodes supported in opposing relation with respect to each other, posts for supporting each set of elastors, means for connecting the opposing posts supporting the said elastors, means for simultaneously adjusting the said opposing posts toward or from each other, an endless conveyer or conveying articles to be treated between



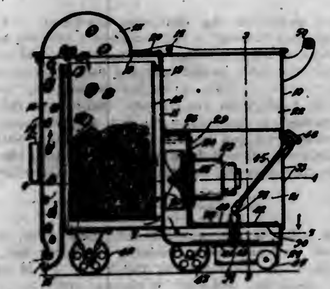
the said opposing sets of electrodes, said conveyer comprising portions which are arranged in parallel relation with respect to each other, said portions being situated intermediate the said electrodes, and means for moving one of said portions toward or from the other to vary the distance between the same.

1,399,162. APPARATUS FOR TREATING PRODUCTS BY DISRUPTIVE CONDUCTION. FRANKLIN S. SMITH, Philadelphia, Pa. Filed Sept. 4, 1920. Serial No. 408,356. 16 Claims. (Cl. 175—311.)



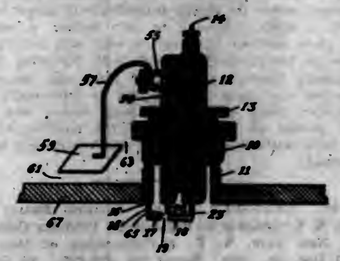
1. In an apparatus of the character described, the combination of opposing sets of electrodes, an endless conveyer for conveying articles to be treated between said sets of electrodes, said conveyer comprising parallel portions between and by which the articles to be treated are carried and supported.

1,399,163. ANTISKID DEVICE. GEORGE F. SNOW, Plymouth, Mass. Filed June 10, 1920. Serial No. 387,868. 2 Claims. (Cl. 152—2.)



1. An anti-skid device of the character described, comprising a chain, and a holding device for the end link of the chain comprising a part having an enlarged head and a reduced neck behind said head, said head being of a width substantially equal to the width of the opening in said link and of a length slightly less than the length of said opening and having a notch in one end thereof, whereby the end link of the chain may be passed over said head with the edge of said next adjacent link passing through said notch, and whereby said head prevents said link from passing thereover in any other relationship thereto.

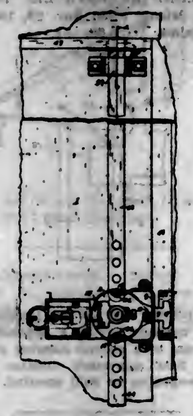
1,399,164. DOOR-BUFFER. HARRY N. SORENSON, Toledo, Ohio. Filed Apr. 18, 1921. Serial No. 462,199. 4 Claims. (Cl. 16—86.)



1. A door buffer having a socket member and a projecting member, the projecting member having a rigid block portion, a band looped around the nose of the block portion and having opposed yielding divergent leg portions spaced from the block and adapted to yieldingly coact with the opposed walls of the socket member when entering the same, and cushion blocks disposed between the rigid block and the yielding leg portions of the band.

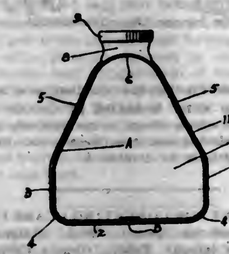
1,399,165. CLEANING APPARATUS. IRA H. SPENCER, West Hartford, Conn., assignor to The Spencer Turbine Company, Hartford, Conn., a Corporation of Connecticut. Filed Dec. 17, 1917. Serial No. 207,412. 8 Claims. (Cl. 15—60.)

3. A cleaning apparatus comprising a portably mounted case having an inlet mouth in proximity with the surface to be cleaned, and having a compartment therein, an exhaust chamber and outlets from said chamber, a device for creating flow of air located within the case, and valves rigidly connected to control flow of air through said compartment and through said outlets and to shut off flow of air through either or a plurality of said passages.



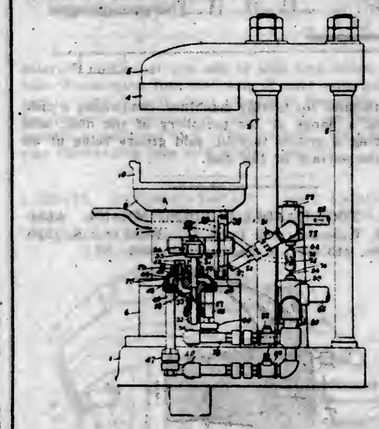
1,399,166. SPARK-PLUG FOR INTERNAL-COMBUSTION ENGINES. FRANKLIN WESLEY SPRINGER, Minneapolis, Minn. Filed Mar. 7, 1919. Serial No. 281,231. 2 Claims. (Cl. 123—169.)

1. A spark plug comprising an insulator and spark gap terminals forming an ignition spark gap, a metallic



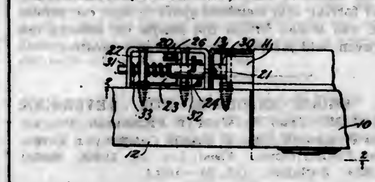
member carried by said insulator so as to form an igniting gap in conjunction with one of the spark gap terminals in close proximity to the spark gap, and means for varying the capacity of said member.

1,399,167. DOOR-FASTENING. PHILIP STEUERWALD, Milwaukee, Wis. Filed Jan. 28, 1918. Serial No. 214,191. 8 Claims. (Cl. 70—74.)



7. A door locking mechanism including the combination with the door, of a rotatable member pivotally connected with the inner face of the door and provided with a clamping arm, a relatively fixed door plate, stops on the door plate and rotatable member respectively, adapted for mutual engagement when the clamping arm is in clamping position, said arm projecting beyond the margin of the door for engagement with a bearing member, locking bars pivoted to the rotatable member, and projecting upwardly and downwardly therefrom respectively, and slotted keepers on the lintel and sill of the door frame adapted to receive the working ends of said bars, said working end portions of the bars being oblique to the axes of the body portions and provided with obliquely inclined flat surfaces extending to their extremities and adapted to engage with a wedging action upon the margins of the keeper slots to draw the door to a fully closed position simultaneously with the movement of said arm upon its bearing member.

1,399,168. LIQUID-CONTAINING CAN. WILLIAM J. TOWLE, St. Paul, Minn. Filed Dec. 9, 1920. Serial No. 429,534. 5 Claims. (Cl. 220—1.)



5. A can or container having a body formed of a flat bottom portion, lower vertical side walls, upper inclined side walls, a curved top uniting the upper portions of said upper side walls, said parts being formed of a single sheet of material with its ends united by a joint extending lengthwise of said bottom portion, end walls secured to said bottom portion and surrounded at their meeting edges with the side walls by a protecting rib substantially as described.

1,399,169. MACHINE FOR FORMING OIL-CAKES. RUSSELL A. TRACE, Dayton, Ohio, assignor to Buckeye Iron and Brass Works, Dayton, Ohio, a Corporation of Ohio. Filed Aug. 9, 1919. Serial No. 316,368. 20 Claims. (Cl. 138—17.)

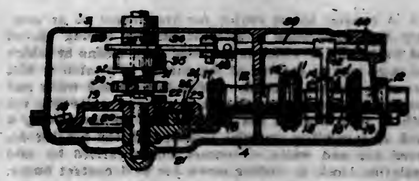
1. In a machine of the character described, the combination, with a ram, a plurality of separate force chambers of different capacity adapted to coöperate separately and jointly in the operation of said ram, means to conduct liquid to said chambers and to coöperate therewith for the purpose set forth, an inlet valve operable to admit liquid under pressure to one of said chambers whereby the ram will be operated with an initial force, and a valve operable to admit liquid to another of said chambers whereby the pressure in said chambers will act jointly in the first chamber to further operate the ram with increased force.

1,399,170. BURGLAR-ALARM. PAUL V. VANDEVELDE, Corona, N. Y. Filed Jan. 14, 1920. Serial No. 351,406. 3 Claims. (Cl. 200—55.)

1. A burglar alarm switch for attachment to an ordinary lock comprising a metallic bracket having spaced end walls, one of which is provided with means by which the same may be secured at the outside of a latch or bolt casing, a plunger slidingly guided in said end walls and adapted to project through one of the end walls into the path of movement of the latch or bolt in the casing, a block of insulating material mounted on the bracket between the end walls, a contact finger carried by said insulating block, a binding screw for said contact finger, a transverse pin on the plunger and projecting into the plane of the contact finger, a spring engaged between one of the end walls of the bracket and a shoulder on the

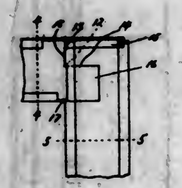
plunger to thrust the plunger over and carry the transverse pin into engagement with the contact finger and a binding screw on the metallic bracket for carrying current to the plunger slidably supported thereby.

1,399,171. TURNTABLE FOR TALKING-MACHINES. ANTHONY VASSELLI, Newark, N. J., assignor, by mesne assignments, to General Phonograph Corporation, New York, N. Y., a Corporation of New York. Filed Oct. 9, 1919. Serial No. 329,480. 6 Claims. (Cl. 274—39.)



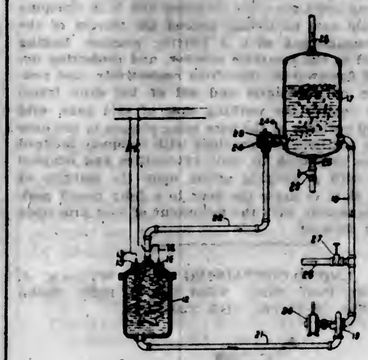
1. A turn-table for talking machines, comprising a disk, there being a flange at the periphery of the disk, said flange having a groove therein, said groove being at an angle to the surface of the disk.

1,399,172. TOOL-HANDLE-HOLDING MEANS. ALEXANDER S. VAUGHAN, Oak Park, Ill. Filed Oct. 8, 1920. Serial No. 415,492. 3 Claims. (Cl. 306—33.)



1. The combination of a tool head having a handle-eye therein, a handle extending into said eye, a pair of rigid substantially non-tapering pressure-transmitting members extending into a hole in the handle from the end thereof at the eye with their outer ends substantially flush with the end of the handle, said hole originally substantially corresponding to the shape of the pressure-transmitting members when inserted in the hole and providing a seat at the bottom of the hole for holding said members against further substantial movement into the handle, a wedge between said members adapted to move lawardly relative to them for forcing said members apart to bind the handle in the eye, and means within the handle for holding the wedge between said members in its binding position.

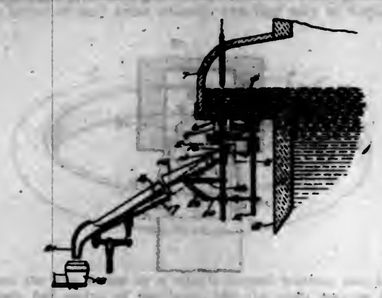
1,399,173. SHOCK-ABSORBER FOR REVERSING MECHANISM. FRED W. WAPPAT, Pittsburgh, Pa., assignor to Pittsburgh Gage & Supply Company, a Corporation of Pennsylvania. Filed Apr. 26, 1919. Serial No. 292,854. 3 Claims. (Cl. 64—100.)



3. A shock absorbing means for reversing mechanism comprising a shaft, a gear loosely mounted thereon and provided with a radial web and peripheral flange forming an annular recess, a pocket in said recess, an arm rigidly mounted on said shaft, a pin on said arm, a spiral spring attached at its inner end and coiled around said pin on an axis parallel to that of said gear and seated in the pocket, the said arm lying adjacent the gear and partially housed in the said recess.

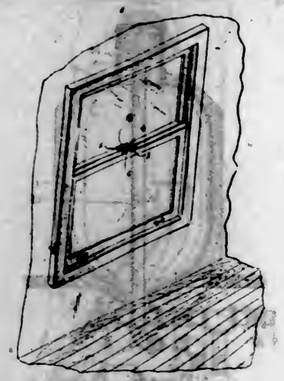
1,399,174. MOLDED RECEPTACLE. DANIEL D. WESSELS, Detroit, Mich. Filed Nov. 29, 1920. Serial No. 427,029. 6 Claims. (Cl. 68—31.)

1. In a metallic rim for molded receptacles, the combination with a member having a depending flange with an opening therein, of a second member extending transversely to said first mentioned member and having a tongue slidably engaging in said opening.



1,399,175. ELECTRICAL BOILER. WILLIAM MONROE WHITE, Milwaukee, Wis. Filed Dec. 28, 1919. Serial No. 346,865. 7 Claims. (Cl. 219—39.)

1. In an electrical boiler, the combination of a container within which the water is heated by electric current, a container within which steam is maintained, and means for forcibly circulating water between them, for the purpose and substantially as described.



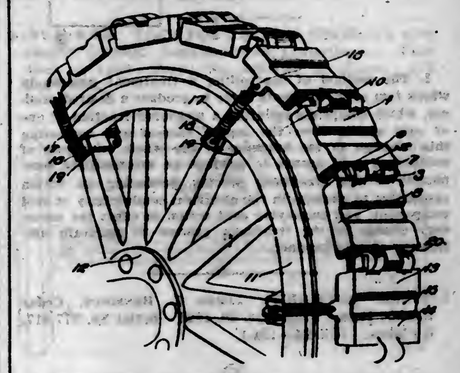
1,399,176. MEANS FOR CONVEYING GLASS TO MOLDS. JAMES WHITTEMORE, Detroit, Mich., assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Aug. 23, 1918. Serial No. 251,067. 7 Claims. (Cl. 49—55.)

5. The combination with means for supplying charges of molten glass, of an inclined trough or chute to which the glass is delivered, means for swinging the lower end of the trough up and down to different discharge positions,

and means for conveying the glass from said discharge positions to different mold positions.

1,399,177. WINDOW-LOCK. IGNACY WIERNIKOWSKI, New York, N. Y., assignor of forty-five per cent. to Henry Molenda, Olite, Mont. Filed Mar. 5, 1921. Serial No. 449,822. 1 Claim. (Cl. 292—218.)

A device of the class described comprising a pair of base members adapted to be secured to adjacent window frames, a bolt rotatably mounted on one of said members, a substantially T-shaped member rigid with the other of said members, the end of said bolt being forked, said forked end being engageable with said second member, the other end of said bolt being enlarged and having a compartment therein, a stem slidably mounted in said enlarged end and lying within said compartment, a head on said stem outside said enlarged end, a collar rigid to said stem near the lower end thereof, the lower end of said stem extending beyond said bolt, a spring normally urging said lower end of said stem out of said compartment, and recesses in said first-mentioned base member, adapted to receive said end of said stem.



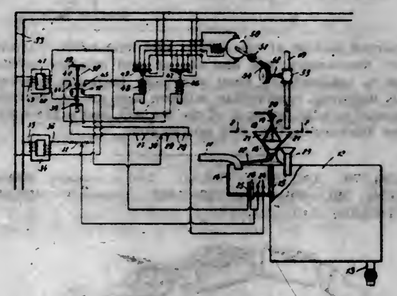
1,399,178. GAS-BURNER. AARON H. WOLFF, New York, N. Y. Filed Mar. 7, 1919. Serial No. 281,137. 2 Claims. (Cl. 158—110.)

1. A gas burner embodying therein a casing forming a mixing and distributing chamber, a plurality of short tubes communicating with and projecting from the top of said casing, a plurality of tubes extending vertically through said casing, beyond the top thereof and within said short tubes, being coterminous therewith, whereby an elongated jet opening is formed between each of said long and each of said short tubes, said long tubes opening to atmosphere below said casing, said casing having an

enlarged portion at one side of said long tubes, a mixing tube discharging into one end of said enlarged portion and in substantially axial alinement therewith, whereby the incoming combustible mixture has an unobstructed passage to adjacent each of the burners, and a gas supply pipe discharging into said mixing tube.

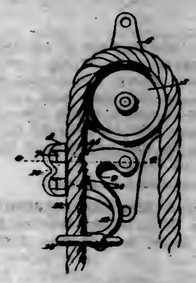
1,399,179. ANTISKID-TREAD. LOUIS ANGELO, Kansas City, Mo. Filed Mar. 17, 1921. Serial No. 453,017. 1 Claim. (Cl. 152—4.)

As a new article of manufacture, an antiskid chain link comprising a rectangular block having a rectangular flat face with a transverse groove and having straight tire-engaging flanges on its side edges and provided with a recess at one end and a tongue at the other, the recessed portion and the tongue projecting beyond the ends of the flanges of the block, the link consisting of cast metal, all the parts of which are integral.



1,399,180. CORE FOR TIRE-CASINGS. FRED L. BAILEY and JOHN H. LA GRANT, Wichita, Kans. Filed Mar. 14, 1921. Serial No. 452,088. 2 Claims. (Cl. 152—5.)

2. A core for tire casings comprising a longitudinally extending fabric strap having ends arranged so as to permit of joining when brought together in manner specified, fabric layers in parallelism with said fabric



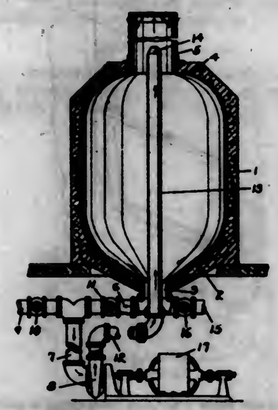
bolt and separated therefrom but united therewith by vulcanized rubber elements integral therewith and alternating wrappings of fabric and wire surrounding the aforementioned strap and fabric elements, the whole being vulcanized within rubber as a unit mass.

1,399,181. AUTOMATIC CONTROL OF REACTIONS. PERRY HADWICK BASCOM, Roundbrook, N. J., assignor to The Dorr Company, a Corporation of Delaware. Filed Dec. 26, 1919. Serial No. 347,645. 12 Claims. (Cl. 23—3.)

1. The method of controlling a treatment process in which two or more agents enter to produce a desired product, which comprises isolating a measured fraction of one of said agents from the supply thereof and subjecting this fraction to the influence of the whole or a part of another of said agents to produce an intermediate component of the treatment process, producing an action responsive to changes in the electrical conductivity of said component, and employing said action to effect the necessary change in the treatment process to maintain uniformity of said product.

1,399,182. ROPE-GRIP. JAMES Z. BENEDICT, Cedar Rapids, Iowa. Filed Apr. 28, 1920. Serial No. 377,417. 6 Claims. (Cl. 24—134.)

3. A rope-grip, comprising a cheek-plate, an attached, adjustable abutment, and an oppositely disposed, pivoted dog, having eccentrically disposed gripping teeth, and in advance thereof a hump or swell, projecting radially farther than the first gripping tooth, to lock the dog when past the dead center.

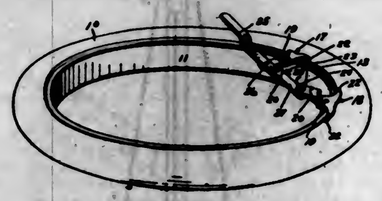


1,399,183. TENON-ANCHOR. EDGAR B. BICKER, St. Louis, Mo. Filed Apr. 12, 1920. Serial No. 373,319. 1 Claim. (Cl. 20—92.)

A tenon anchor, constructed of a single piece of material, and comprising legs having points for embedding in the tenon, a bridge having shoulders for engagement with the tenon, during the seating in the mortise, a plurality of flanges carried by the bridge each having a point for embedding in the mortise, there being a bend in the bridge

between said legs for projecting the points of said flanges laterally to embed in the mortise, and said flanges arranged to embed in the end of the tenon upon a seating of the tenon in the mortise.

1,399,184. PAPER-STOCK-TREATING MACHINE. MILTON C. J. BILLINGHAM, Kalamazoo, Mich. Filed Sept. 1, 1920. Serial No. 407,467. 3 Claims. (Cl. 92—20.)



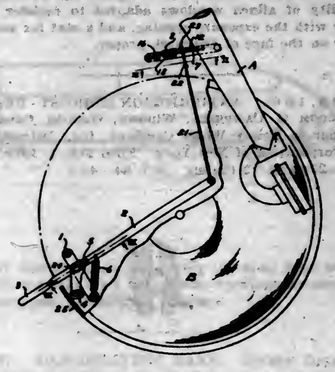
1. In a stock treating machine, the combination of a cylindrical tank disposed vertically and having a concave bottom with a central discharge, a standpipe mounted centrally on said tank and open thereto at its lower end, a pump having its intake connected to said tank discharge, and a discharge pipe for said pump disposed vertically of said tank through said discharge thereof and projecting into said standpipe, the relative capacities of said pipes being such that the stream of stock discharged from the pump discharge pipe impinges with the stock descending within said standpipe.

1,399,185. RIM CONTRACTOR AND EXPANDER. JULIUS BJORNSEN, Watertown, S. D., assignor to Bjornsen Manufacturing Company, Watertown, S. D., a Corporation of South Dakota. Filed Feb. 5, 1920. Serial No. 356,381. 3 Claims. (Cl. 157—1.)

1. A rim breaking tool comprising a pair of grapples, each comprising a head and an arm pivoted thereto and having opposing lateral legs and end faces providing a

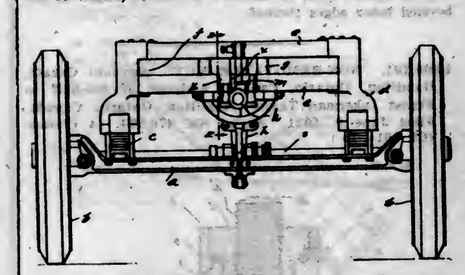
laterally open unobstructed space to receive a rim flange, and a lever pivoted intermediately to one of said arms and a rigid link pivoted to the end of said lever and to the other of said arms whereby the tool may be imposed

upon the rim flange by a simple lateral motion, and by a single full swing of the lever, the rim ends may be first separated, then relatively displaced radially and then circumferentially by the operation only of the elements named.



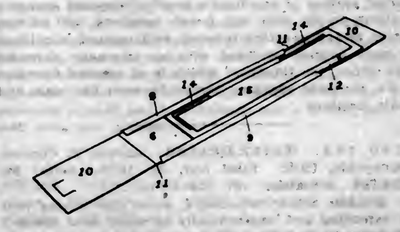
1,399,186. AUTOMATIC STOP FOR PHONOGRAPHS. ALEXANDER F. BRUNY, West Bend, Wis. Filed Oct. 15, 1919. Serial No. 330,718. 5 Claims. (Cl. 192—116.)

1. In a phonograph, the combination with the motor-board and swiveled tone-arm thereof, of a pivoted vibratory lever mounted on the motor-board, a vertically reciprocating plunger adapted at its lower end to brake upon a moving part of the subjacent motor, said plunger being mounted in an opening in the motor-board adjacent said vibratory lever and adapted to be engaged by said lever and thereby supported in its elevated inoperative position, a spring for normally maintaining said vibratory lever in engaged position with the said plunger, a strike-arm frictionally pivoted upon and carried by the tone-arm, and means positioned upon the motor-board adjacent the beginning of travel of the tone-arm and in the path of the striker-arm for deflecting or resetting the latter after its contact with and operation of the vibratory lever.



1,399,187. PHONOGRAPH-BRAKE. ALEXANDER F. BRUNY, Plymouth, Wis. Filed Nov. 15, 1920. Serial No. 424,316. 24 Claims. (Cl. 192—116.)

1. In combination, a movable element, a movable brake for said element, means movable and associated with said brake, gripping means frictionally engageable with said movable means to hold said brake in one position, and



means for releasing said gripping means to permit movement of said brake to another position.

1,399,188. LOCK FOR TRAILER STEERING AND DRAFT GEARS. ORRA E. BYRON, Louisville, Ky. Filed Dec. 10, 1920. Serial No. 429,656. 5 Claims. (Cl. 280—33.5.)

3. In a trailer, the combination of a chassis frame provided with a bolt recess, a draw bar arranged to swing with respect to the chassis frame and also provided with a bolt recess, a steering arm provided with a pair of independently sliding bolts provided with spring means tending to shoot them into the bolt recess of the chassis frame and the draw bar, and selective means by which one or both bolts may be withdrawn from the bolt recess and held in such withdrawn position.

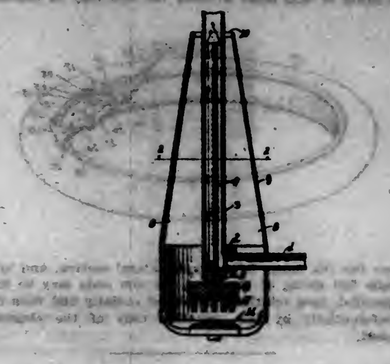
1,399,189. PHOTOGRAPHIC MASK. CHARLES H. CADY, Omaha, Nebr. Filed Oct. 19, 1920. Serial No. 418,062. 2 Claims. (Cl. 95—79.)

1. A photographic mask comprising a backing sheet having a longitudinal guideway and an exposure opening,

which is adapted to accommodate in succession a plurality of negative plates adjustable in the openings of mask proper adapted to slide in the guideway and having a plurality of aligned windows adapted to register successively with the exposure opening, and a seat for sensitized paper on the face of the mask proper.

1,399,190. ANTIFRICTION THRUST-BEARING. Malcom G. Campbell, Windsor, Ontario, Canada, assignor to Kelsey Wheel Company, Inc., Detroit, Mich., a Corporation of New York. Filed Feb. 1, 1919. Serial No. 274,422. 2 Claims. (Cl. 64—49.)

1. A thrust bearing, comprising parallelly arranged race members having complementary annular grooves in their adjacent faces, the inner edges of said race members being beveled, a series of balls arranged in the grooves between said race members, and a split ring of resilient material having a groove formed along its entire outer face and adapted to be sprung into engagement with said race members so as to embrace the entire length of the beveled inner edges thereof.



1,399,191. NON-REMOVABLE NUT. Antonio Casali, Hamilton, Ontario, Canada, assignor of one-half to Ernest Inkerman Tayler, Hamilton, Ontario, Canada. Filed June 9, 1921. Serial No. 476,274. 4 Claims. (Cl. 151—15.)

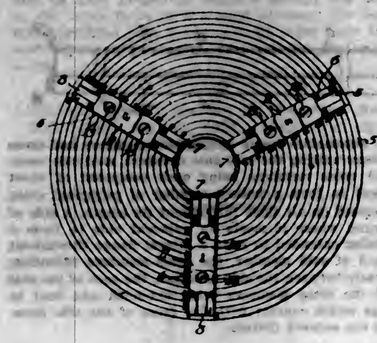
1. A nut comprising a male and a female member, a portion of the outer peripheral surface of the male member having threaded engagement with a portion of the infernal surface of the female member, opposed engaging shoulders on the male and female members, anti-friction bearing means co-acting between said opposed shoulders, the male member provided with an internally threaded axial orifice, the thread of which is of opposed direction to the aforesaid engaging thread between the male and female members.

1,399,192. WATER-HEATER. Alfred N. Clough, Sunnyvale, Calif. Filed Apr. 28, 1920. Serial No. 376,781. 4 Claims. (Cl. 122—367.)

1. A water heater including a water pipe having radially extending and longitudinally arranged heat conducting vanes mounted upon the exterior thereof, a heat conducting rod of less diameter than said pipe axially mounted therein and projecting therefrom, an open ended conical member supported on said vanes, and means for

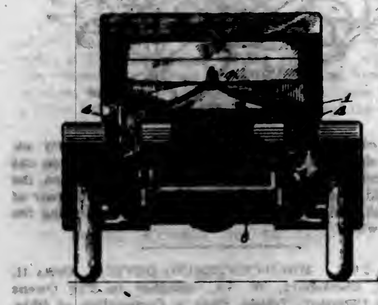
heating the projecting portions of said rod, the inclosing pipe, and said vanes.

1,399,193. FLY-SWATTER. Clyde Grover Cox, Lawrence, Kans. Filed Aug. 27, 1920. Serial No. 406,811. 6 Claims. (Cl. 200—7.)



4. In combination with a closure frame and a closure therefor, a swatter pivoted to the closure and extending across the space between the closure and the frame and over the frame in the closed position of the closure, and means for swinging the swatter outwardly and against the closure.

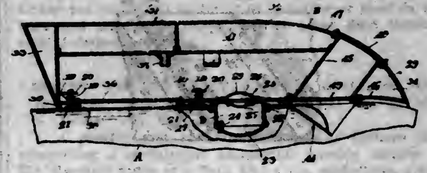
1,399,194. UNIVERSALLY-ADJUSTABLE WORK OR TOOL HOLDER. Ira L. Cole, Madison, Wis., assignor to Gisholt Machine Company, Madison, Wis., a Corporation of Wisconsin. Filed Apr. 28, 1921. Serial No. 463,862. 1 Claim. (Cl. 279—123.)



In an appliance of the character described, the combination of a carrier, a plurality of concentrically grouped radially arranged bases slidable endwise on said carrier and formed with alternating elevations and depressions which are located at different distances from the center or faces of the group on the several bases respectively, and a corresponding plurality of members removably attached to said bases and formed with alternating depressions and elevations intermitting with the elevations and depressions

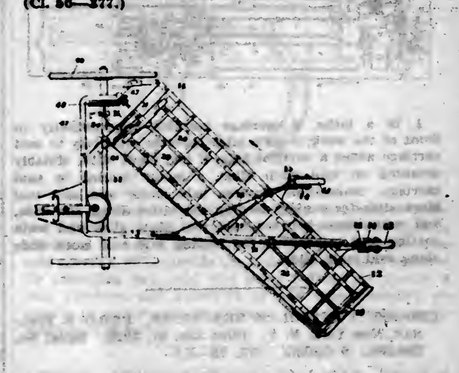
of said bases and located on the several members at different distances from the inner ends thereof; the distances differences being measured by a fraction of the space

between the centers of adjacent elevations or depressions whose numerator is 1 and whose denominator is a numeral corresponding to the number of said bases or members.



1,399,195. HEADLIGHT FOR AUTOMOBILES OR OTHER VEHICLES. Paul R. Collier, Philadelphia, Pa. Filed Jan. 6, 1921. Serial No. 435,328. 1 Claim. (Cl. 240—61.)

A headlight for a vehicle, a shaft on the vehicle adapted to have said headlight mounted rotatably thereon, a lever mounted on and operative in the vehicle, and means intermediate of said lever and headlight adapted to change the angularity of the latter, said headlight having a hub the latter being mounted on said shaft and having its bore provided with a segmental slot, and said shaft having on its side an angularly extending member adapted to freely enter said slot, the terminals of the latter forming spaced apart shoulders with either of which said angularly extending member may abut whereby the rotary movement of the headlight may be limited in either of the different angular positions in which it may be set.



1,399,196. SUBMARINE RESCUE CRAFT. Albert John Collins, Amherst, Nova Scotia, Canada. Filed Mar. 10, 1921. Serial No. 451,141. 4 Claims. (Cl. 114—16.7.)

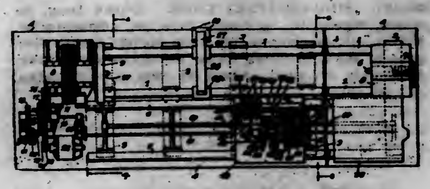
1. In combination with a submarine, a water tight rescue craft releasably engaged with the submarine, a connecting member between the craft and submarine adapted to permit the passage of passengers from the submarine to

the craft, having means for closing the same from within the craft, the said craft having side openings for oarsmen and cover plates covering the openings.

1,399,197. SIDE-DELIVERY RAKE. Joseph Dain, deceased, Moline, Ill., by Joseph Dain, Jr., administrator, Moline, Ill., assignor to The Dain Manufacturing Company of Iowa, Ottumwa, Iowa, a Corporation of Iowa. Filed July 10, 1919. Serial No. 309,867. 7 Claims. (Cl. 56—377.)

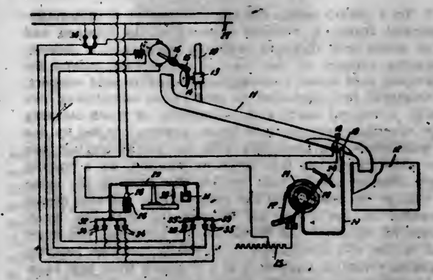
7. In a rotary rake, the combination of a diagonally-arranged frame, a wheeled support at its forward end with which said frame is pivotally connected, a ground-engaging support at the rear of said frame, means for adjusting said frame vertically relatively to said support, a rotatable reel journaled in said frame comprising two heads, a central shaft and a plurality of tooth-carrying bars extending between said heads, gearing carried by one of said heads and connected with the tooth-carrying bars for maintaining the rake-teeth in position, an adjusting lever connected with said gearing for turning the same to change the position of the rake-teeth, a movable device mounted on the frame for interlocking with the lever, means for rotating and independently adjusting the inner end of the reel comprising a vertically movable bearing, a pinion rotatably supported at a distance from said bearing, sliding and pivoted means interposed between and connected to said pinion and shaft, and a driving gear in mesh with said pinions.

1,399,198. ICE-LUG. Frank R. Danielson, Fairfield, Iowa. Filed Mar. 9, 1920. Serial No. 364,555. 2 Claims. (Cl. 301—44.)



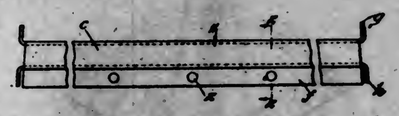
2. An ice lug including a body formed at its outer end portion with a hook to engage with a wheel cleat and provided at its inner end with a base disposed to rest

against a wheel rim supporting the lug and formed to coact with a fastening device securing the lug to the



wheel rim whereby said fastening device will relieve the client of shearing stress upon the lug.

1,399,199. LATHE. HERBERT S. HADDS, Philadelphia, Pa. Filed Feb. 24, 1920. Serial No. 360,621. 5 Claims. (Cl. 82—2.)

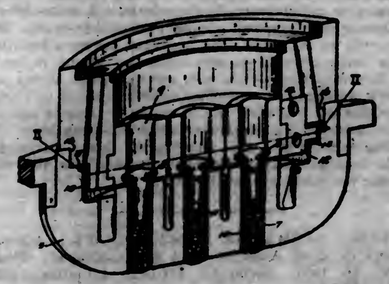


1. In a lathe, a carriage movable longitudinally in front of the work, a main slide movable relatively to said carriage about a vertical axis, a tool block slide, slidably mounted on said main slide, a motor carried by said carriage, connections between said motor and said tool block slide for rapidly feeding the latter along the slide, and connections between said tool block slide and main cutting feed mechanism for feeding said tool block slide along said main slide.

1,399,200. CONTROL OF REACTIONS. PHILIP E. EDELMAN, New York, N. Y. Filed Jan. 31, 1920. Serial No. 355,369. 9 Claims. (Cl. 23—3.)

1. The method of controlling a treatment process which comprises producing an action responsive to changes in the electrical conductivity of an appropriate component of the process, producing a second action responsive to changes in the temperature of said component, causing said second action to compensate said first action for changes in the electrical conductivity of said component occasioned by changes in the temperature thereof, and employing said first action thus compensated for temperature changes to effect the desired control of said process.

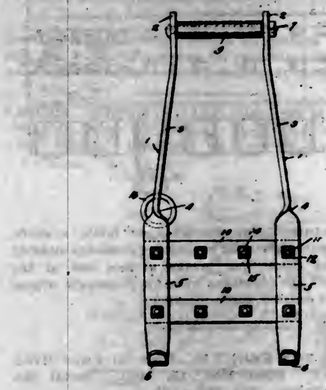
1,399,201. AUTOMOBILE FRAME MEMBER AND FRAME. STEPHEN L. FRENCH and STUART G. HAYES, Detroit, Mich., assignors to Hayes Motors, Detroit, Mich., a Corporation of Michigan. Filed Nov. 17, 1919. Serial No. 338,462. 5 Claims. (Cl. 280—106.)



1. An automobile frame having side members and cross tie members uniting the said side members, said side members and cross members being each composed of sheet metal bent to form a hollow member of polygonal cross section closed on all sides throughout its length, a side of the polygon where it meets an adjacent side to form a corner being extended to form a lateral flange throughout the length of said member, the cross members extending transversely between the side members, the ends of the side faces of the cross members being extended and bent to form lugs which contact with the faces of the side members and are secured thereto.

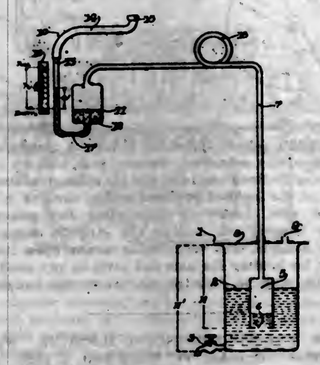
1,399,202. CULTIVATOR. JOHN M. FLEMING, Edmonton, Alberta, Canada. Filed Dec. 6, 1920. Serial No. 428,549. 4 Claims. (Cl. 55—1.)

1. A cultivator comprising a frame, transversely extending shafts having crank ends, a driving wheel on one of the crank ends of one shaft, a furrow wheel on the crank end of another shaft, a guide wheel at the rear of the frame, and means for rotating the shaft carrying the driving wheel.



1,399,203. MOLD-CENTERING DEVICE. OPHA H. FLINT, Clarksburg, W. Va., assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 7, 1920. Serial No. 349,873. 1 Claim. (Cl. 49—65.)

The combination of a neck mold comprising horizontally separable sections, a body mold comprising horizontally



separable sections arranged to be brought together and surround the neck mold, each of said molds being provided with a plurality of mold cavities arranged to register with those of the other mold, and locking plates removably mounted on the neck mold and comprising legs or keys projecting radially beyond the neck mold at the inner faces of the mold sections, the body mold being provided with keyways in its inner faces to receive said keys and thereby prevent relative rotation of the molds.

1,399,204. YOKE. ANDREW J. FORSYTHE, Russiaville, Ind. Filed Apr. 11, 1921. Serial No. 460,171. 2 Claims. (Cl. 119—138.)

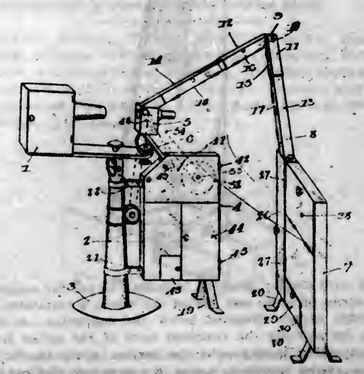
1. In a device of the class described, a frame made up of side bars having hook-shaped runners at their lower ends; a cross bar connecting the side bars, adjacent to the runners; prongs on the side bars and forming connections between the side bars and the cross bar; and a roller journaled between the upper ends of the side bars.

1,399,205. LEVEL-INDICATING APPARATUS. HERBERT H. FREY, Chicago, Ill.; Hannah H. Frey administratrix of said Herbert H. Frey, deceased. Filed May 10, 1918, Serial No. 233,743. Renewed Sept. 2, 1921. Serial No. 498,085. 8 Claims. (Cl. 73—54.)

2. In combination, a tank for liquid of specific gravity less than unity, a chamber having an opening adjacent its lower end and communicating with the liquid of the tank, a conduit communicating with the interior of the chamber, said conduit having a trap in the form of a U-shaped bend therein and liquid of a specific gravity of substantially 2 lying in said trap, said trap having indicating means for indicating in terms of quantity or level in the tank and means for forcing air or other fluid through said U-shaped bend.

1,399,206. POULTRY-GRIT. JOHN F. GALLAGHER, Chicago, Ill. Filed Sept. 29, 1919. Serial No. 327,271. 4 Claims. (Cl. 167—10.)

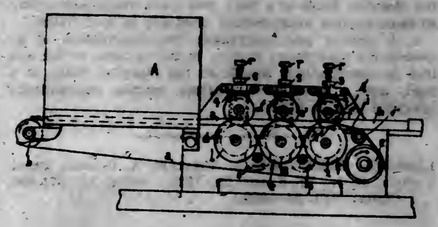
1. A poultry grit of granulated porous furnace slag comprising a constituent assimilable portion soluble in the digestive fluids of a fowl, and a non-assimilable gritty silicious portion substantially insoluble in said fluids.



4. A poultry grit comprising the combination of an assimilable constituent portion including lime, sulfur and iron in combinations soluble in the digestive fluids of a fowl, and a constituent silicious portion substantially insoluble in such fluids.

1,399,207. SPRING-RING. CHARLES A. GOODEY, Providence, R. I. Filed Apr. 20, 1920. Serial No. 375,390. 1 Claim. (Cl. 24—239.)

A spring ring comprising a tubular ring-shaped member having a portion removed to provide an opening thereinto, a bolt member slidable in said tube to close said opening, an operating projection on said bolt adjacent its extending end, said bolt being reduced to provide a stop shoulder, and a portion of said tube extending inwardly to engage said shoulder to limit the closing movement of said bolt.

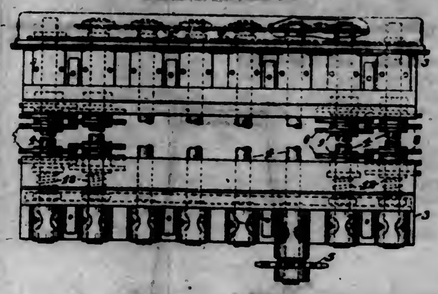


1,399,208. MOVING-PICTURE APPARATUS. FRANK H. GRABHORN, Milwaukee, Wis. Filed May 15, 1920. Serial No. 381,645. 5 Claims. (Cl. 88—17.)

1. A moving picture machine comprising a projecting apparatus, a film delivery apparatus, and a film receiving

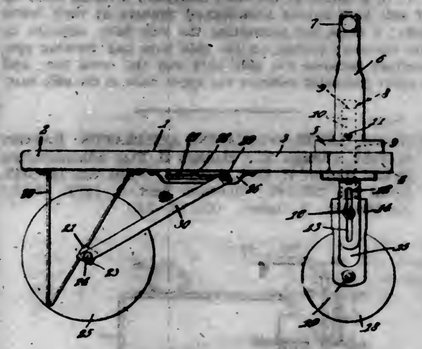
operation, said delivery and receiving apparatus having separated compartments through which the film passes and arranged to allow the temporary accumulation of a supply of film upon either side of the projecting apparatus.

1,399,209. CIGARETTE-MACHINE. MAX CLEMENS GRAHL, Dresden-Löbtau, Germany, assignor to Universelle Cigaretten-Maschinen-Industrie System Otto Bergströsser Aktiengesellschaft, Dresden-Löbtau, Germany. Filed Dec. 16, 1913. Serial No. 806,962. 1 Claim. (Cl. 131—43.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



A cigarette machine comprising a traveling band, means for feeding the tobacco onto said band, a series of grooved rollers disposed in pairs, traveling in the same direction as the band at their points of contact therewith and operative to shape said band around the tobacco and form it into a rod, a tube having a papered extension projected into the angle of the bight of the last pair of rollers, a concave guide adapted to hold said band in contact with said tapered extension, and a rotary grooved guide roller disposed under said band adjacent to said tube.

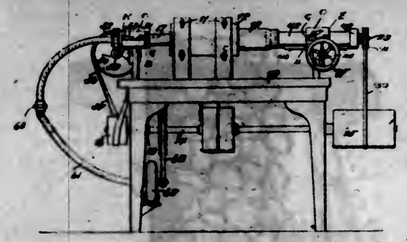
1,399,210. CARD-DISPLAY MECHANISM. JOSEPH GUMESS and ANTHONY SCHNEIDER, East Moline, Ill. Filed Mar. 23, 1921. Serial No. 454,621. 15 Claims. (Cl. 40—36.)



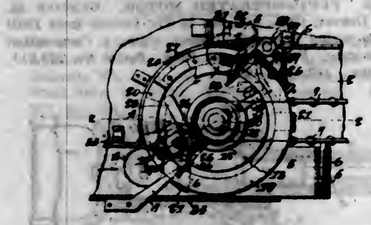
1. A card display machine including means for supporting a series of cards one behind the other, a vertically reciprocable carrier disposed below the supporting means, means for shifting the rearmost card of the series from the supporting means onto the carrier when the latter is in a raised position, means for lowering the carrier and card and simultaneously shifting the card on the carrier into a position at the front of the carrier and in a plane intersecting the front end of the supporting means, and means for then raising the carrier to a position where the card is in line with the supporting means and then shifting the card rearward onto the supporting means.

1,399,211. GRIZZLY-SCREEN. GEORGE HOLLINGSHEAD, Mayville, Wis. Filed Apr. 26, 1921. Serial No. 464,551. 5 Claims. (Cl. 83—93.)

1. In a structure of the character set forth, a shaft, a plurality of spaced material supporting elements slidably mounted in the shaft, and means at one end of the shaft and outside the screening area for yieldingly urging all the elements on said shaft together.



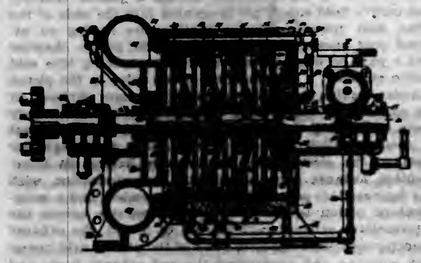
1,399,212. TOY VEHICLE. JOHN HICKMAN HYDE, Louisville, Ky. Filed Mar. 15, 1921. Serial No. 452,455. 3 Claims. (Cl. 208—165.)



1. A child's vehicle including a body, a front steering wheel adjustably connected thereto, rear hangers on the body having inclined portions, a cross strip straddling and slidable on the inclined portions of the hangers, a wheel supported axle carried by said strip and coöperating with the hangers for holding the strip in engagement with the hangers, and coöperating means upon the axle and body for holding the axle and strip in any position to which they may be adjusted relative to the hangers.

1,399,213. CYLINDER-GRINDING MACHINE. WILLIAM H. JOHNSON, Brandon, Vt. Filed Sept. 4, 1920. Serial No. 408,335. 8 Claims. (Cl. 51—43.)

1. In a device of the type described, a hollow bar, means for rotating the bar, means for shifting the bar longitudinally, a member rotatably mounted within the bar, an abrasive wheel carried by said member and having a portion thereof projecting through an opening formed in the side wall of the bar, means for rotating said rotatable element and means for creating suction at the opening.

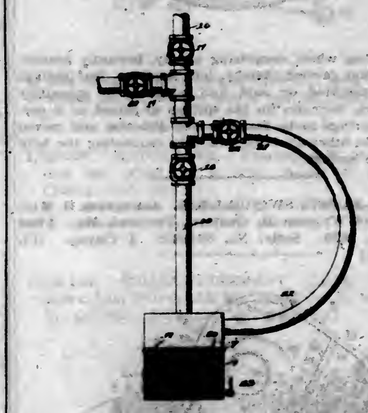


1,399,214. DEPTH-FILLED-GAGING MACHINE FOR CANS. JOHN KELLINGTON, Vancouver, British Columbia, Canada. Filed Jan. 22, 1920. Serial No. 353,231. 4 Claims. (Cl. 83—92.)

1. A means for separating from cans that are charged to a required depth all those that are charged above or below the required depth, said means comprising a table, means for conveying the cans on the table, means for gaging the depth of the material in the cans, and means for cutting out such cans as are above or below the desired depth of charge and means for operating all of said operative means.

1,399,215. STEAM-TURBINE. CHARLES V. KERR, Aurora, Ill., assignor to The American Well Works, Aurora, Ill., a Corporation of Illinois. Filed Sept. 1, 1917. Serial No. 189,520. 13 Claims. (Cl. 253—69.)

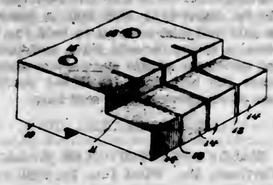
12. In an elastic fluid turbine, the combination of a series of annular sections, one or more nozzles constructed to convert pressure into velocity and arranged to deliver motive fluid radially inward to a like number of said sections wherein the pressure is lower than the critical pressure of said motive fluid, a governor valve, a governor valve case, having a discharge chamber, a conduit for motive fluid connecting the discharge chamber in said valve case with said nozzles, thereby putting the flow of motive fluid through said nozzles under control of the governor valve for said turbine by variation of initial fluid pressure.



1,399,216. PROCESS FOR TREATING POTASSIUM-BEARING SILICATES. EPHRAIM LEVITT, Westmount, Quebec, Canada. Filed Dec. 27, 1920. Serial No. 433,438. 11 Claims. (Cl. 23—22.)

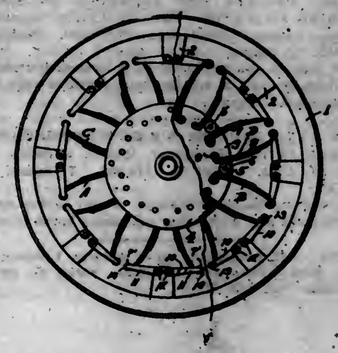
11. A step in the treatment of potassium bearing silicates which consists in treating such silicates with a flux containing boron trioxid.

1,399,217. PROCESS FOR DECOMPOSING CLAYS. EPHRAIM LEVITT, Westmount, Quebec, Canada. Filed June 11, 1921. Serial No. 476,898. 7 Claims. (Cl. 23—13.)



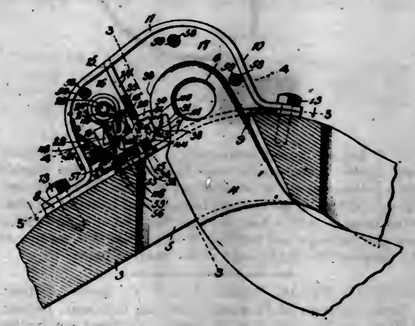
1. A step in the decomposition of clay which consists in treating the clay with a flux containing boron trioxid.

1,399,218. OIL-BURNER. ALVA ARTHUR LINDLEY, Spokane, Wash. Filed June 28, 1920. Serial No. 392,245. 5 Claims. (Cl. 158—73.)



1. A fuel oil burner comprising a relatively rectangular body having a sloping forward portion at the top thereof and a passage provided with a burner orifice having diverging side walls and an inclined bottom wall forming an elongated passage, and a hinged cover for said sloping portion over said passage and adapted to be regulated according to the temperature or pressure of the heating plant.

1,399,219. METAL TOOL. EVRAH C. LIPPS, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Original application filed Nov. 9, 1917, Serial No. 201,143. Divided and this application filed Jan. 22, 1920. Serial No. 353,350. 9 Claims. (Cl. 29—95.)



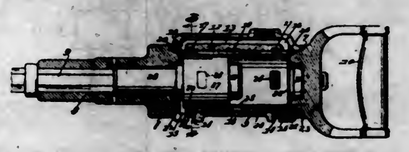
1. An article of manufacture comprising a machinery steel body having a seat at one end thereof with a transverse slot, and a piece of high speed steel on said seat extending across said slot and welded to said body.

1,399,220. SPRING-WHEEL. DANIEL J. MCCLUSKEY, Berkeley, Calif. Filed Nov. 24, 1919. Serial No. 340,121. 2 Claims. (Cl. 152—28.)

1. A spring wheel comprising a felly, inwardly projecting fixed lugs carried thereby, hub members, leaf springs pivotally mounted on said hub members in oppositely placed pairs, fulcrums for the springs so placed as to permit said springs to be flexed in one direction and moved freely in the other direction and links connecting the felly lugs to the springs.

1,399,221. SAFETY SWITCH-LOCK. ALEXANDER H. MACMINN and WILFORD H. GRAHAM, Portland, Me. Filed May 15, 1920. Serial No. 381,622. 5 Claims. (Cl. 70—128.)

2. In combination with a manipulating arm having a passage therethrough, a lock casing on said arm over said passage, a spring-actuated lock bolt in said casing, a hasp or staple to be engaged by said bolt, a plate pivotally mounted on said bolt and adapted to hold the bolt in its locked position, a spring for said plate, and means to permit sufficient movement of said plate independently of said bolt to release the bolt from its locked position before moving it out of engagement with said hasp.



1,399,222. WALL CONSTRUCTION OR WALL. JOHN H. MAGEE, Carthage, Mo. Filed June 11, 1919. Serial No. 303,344. 2 Claims. (Cl. 72—33.)

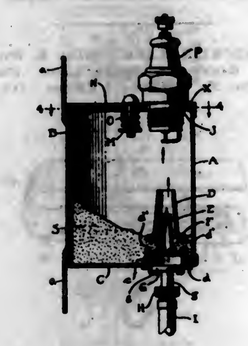
1. In a wall construction, a skeleton frame formed of two sets of laths, a filler of relatively large mineral aggregates arranged within the space between the two sets of laths, said aggregates having their surfaces coated with a cementitious material, the filler being of such size as to produce voids throughout the wall but being bonded at

the meeting edges of the aggregates, and an outer coating of cementitious material secured to the exposed surface of the laths, and engaging the surface of the filler.

1,399,223. FLUID-OPERATED MOTOR. GUSTAVE M. NELL, Denver, Colo., assignor to The Denver Rock Drill Manufacturing Company, Denver, Colo., a Corporation of Delaware. Filed Mar. 29, 1918. Serial No. 225,511. 8 Claims. (Cl. 121—29.)

1. In apparatus of the character set forth, the combination with a cylinder member, of a continuous sleeve valve movably mounted within the cylinder member, a piston reciprocating in the cylinder member, means controlled by the sleeve valve for supplying motive fluid to the piston for actuating it, means for maintaining pressure in opposite directions against the valve, and means controlled by the piston on its movement for increasing the fluid pressure alternately in opposite directions against the valve to shift the same.

8. In apparatus of the character set forth, the combination with a cylinder member having a piston chamber and motive fluid supply ports opening into the ends of the same, said cylinder member furthermore having an exhaust port opening into the ends of the piston chamber and a port between the end ports also opening into said piston chamber, a reciprocatory sleeve valve in the piston chamber having oppositely disposed pressure surfaces at its ends, said sleeve valve operating across the supply ports and having end exhaust ports movable into and out of communication with the exhaust ports of the cylinder member, the sleeve valve furthermore having an intermediate exhaust port in constant communication with the intermediate port of the cylinder member, and a reciprocatory piston in the sleeve valve movable across the intermediate exhaust port thereof to permit the exhaust therethrough from opposite sides of the piston, said piston also covering and uncovering the end exhaust ports and thereby building up pressure against the pressure surfaces of the sleeve valve to move the same in opposite directions.

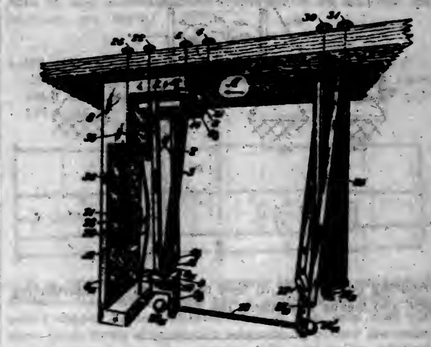


1,399,224. SELF-LOADING PISTOL. HEINRICH ORTGIES, Erfurt, Germany. Filed Apr. 1, 1919. Serial No. 286,815. 4 Claims. (Cl. 42—7.)

1. In a firearm, a frame including a hollow handle; a pair of side covers removably engaged with the handle, each cover having an internal recess formed in it; and

a locking bolt pivoted within the handle and having projecting portions engageable in said recesses.

1,399,225. DEVICE FOR CLEANING SPARK-PLUGS. AUGUSTE V. PELLET, Chicago, Ill., assignor to Pellet Magneto Co., Chicago, Ill., a Corporation of Illinois. Filed Mar. 18, 1920. Serial No. 366,880. 4 Claims. (Cl. 51—8.)

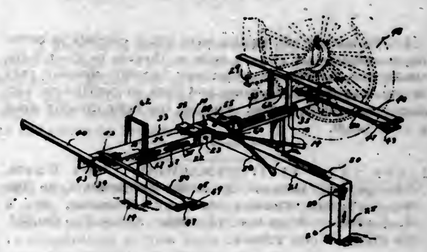


1. A spark plug cleaner comprising a receptacle, a granular abrasive material within said receptacle, a blast nozzle in said receptacle, means for introducing air under pressure into said nozzle, to cause a blast of air and abrasive material to be discharged therefrom, said receptacle having an opening disposed in line with the axis of said nozzle, and a movable plate carried by said receptacle, said plate provided with openings of a plurality of sizes adapted to be brought into registry with the aforesaid opening, substantially as described.

1,399,226. ELECTROTHERMAL RELAY. WILLIAM A. RHODES, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed May 14, 1919. Serial No. 297,068. 11 Claims. (Cl. 200—88.)

1. A time element translating device comprising a

resilient member fixed at its extremities and flexed in one direction, and a heat responsive device for causing flexure

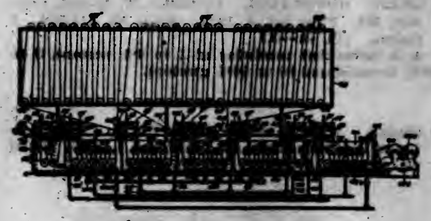


of said member in the reverse direction, said device comprising a hollow member and a heating device therein.

1,399,227. MOTOR-FUEL. FREDERICK W. ROHRS, Rosedale, Md. Filed Oct. 8, 1920. Serial No. 415,568. 2 Claims. (Cl. 44—9.)

1. A motor fuel consisting of 1 to 3% acetone, 8 to 15% kerosene and 80 to 90% gasolene.

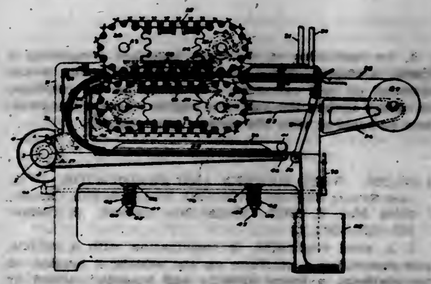
1,399,228. WHEEL-ALINEMENT GAGE. DAVID L. ROWE, East Parsonfield, Me. Filed Oct. 1, 1920. Serial No. 413,962. 5 Claims. (Cl. 33—180.)



1. An apparatus of the class described comprising a frame, carriages mounted upon the frame, indicating means mounted on said carriages, and means on the carriages to engage against the axle of a vehicle whereby the frame may be squared with the chassis of a vehicle.

1,399,229. WEED BURNER AND ERADICATOR. WILLARD STRAIT SEAVOSS, Briercrest, Saskatchewan, Canada. Filed Mar. 5, 1921. Serial No. 450,066. 3 Claims. (Cl. 126—271.2.)

1. A weed eradicator, in combination with a vehicle, and comprising a platform on the vehicle, a bracket on the platform, a frame slidably and hingedly carried by the bracket and a caster-wheel at the outer end of the frame, a fuel tank on the platform, a distributing pipe

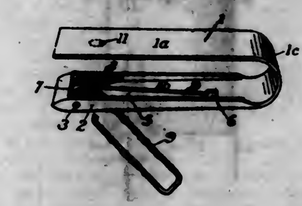


carried by the frame, a plurality of jets on the distributing pipe, pipe connections between the tank and the distributing pipe, means to feed the fuel to the distributing pipe and means to atomize the fuel.

1,399,230. PROCESS OF DYEING AND APPARATUS THEREFOR. BENJAMIN F. TOUCHSTONE, THOMAS H. GARDNER, JAMES A. BANGLE, DAVID M. SULLIVAN, and JOHN ERNEST HARDIN, Greensboro, N. C. Filed Sept. 8, 1920. Serial No. 408,896. 16 Claims. (Cl. 8—19.)

1. The method of treating warp which consists in reducing a complete set of yarn ends or threads to sheet form, conducting the sheet continuously through common yarn dyeing and treating means, and then in continuous pursuance to said treatment, winding the same directly upon a loom beam.

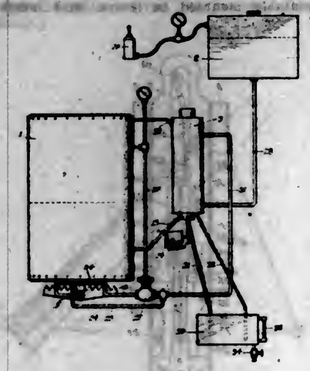
1,399,231. PLAITING-MACHINE. JOHN WHYTE, Chicago, Ill., assignor, by mesne assignments, to The Service Cloth Pleating Company, Evanston, Ill., a Corporation. Filed Dec. 13, 1920. Serial No. 430,837. 10 Claims. (Cl. 223—42.)



1. In a machine of the type described, the combination with a table, of a steaming device at one end of said table, through which a strip of cloth is adapted to pass, pressing means also supported by said table, a pair of superimposed endless elements, and means carried by said elements for plaiting said cloth after it leaves the steaming means and before it reaches the pressing means.

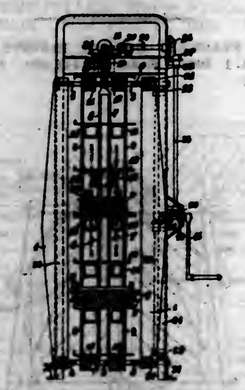
1,399,232. LIGHT-FIXTURE. ARTHUR H. WEISSMORFF, Chicago, Ill., assignor to Eugene A. Plass, Chicago, Ill. Filed Nov. 20, 1919. Serial No. 338,574. Renewed June 25, 1921. Serial No. 480,466. 8 Claims. (Cl. 240—115.)

1. The combination with a lamp-socket, of a shade having a flange, a lamp-socket support, and arms pivoted on said support, said arms having jaw-portions which lock said lamp socket to said lamp-socket support.



1,399,233. NECKTIE-CLASP. FRANK E. WILLIAMS and OLIVER S. BARNUM, Alhambra, Calif. Filed Jan. 9, 1920. Serial No. 350,228. 7 Claims. (Cl. 24—253.)

1. In a clasp of the character disclosed, a U-shaped body; a clasping element comprising a revoluble, yielding clasping member pivotally supported in one arm of said body; and means for retaining said yielding member in clasping relation with the inner side of the other arm of said U-shaped body; said clasping member comprising a material engaging tongue and a finger lever in yielding relation thereto by means of an interposed coil spring.

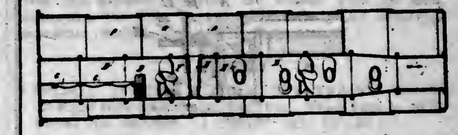


1,399,234. OIL-BURNING SYSTEM. WILLIAM H. WINSLOW, Chicago, Ill., assignor to Winslow Safety High-Pressure Boiler Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 12, 1918. Serial No. 249,372. 13 Claims. (Cl. 169—86.)

1. In combination, a vaporizing burner, a boiler, a supply tank for supplying liquid fuel under pressure, a vaporizing receptacle having steam heated surfaces heated by the steam from said boiler, the steam from said boiler being of sufficient temperature to vaporize and separate out the lighter and heavier constituents of the fuel, and

means for feeding the lighter constituents to said vaporizing burner.

1,399,235. MACHINE FOR PRESSING CIGARS. ROBERT WOSNITZA, Mannheim, Germany. Filed Sept. 2, 1916. Serial No. 118,298. 3 Claims. (Cl. 100—57.) (Granted under the provision of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

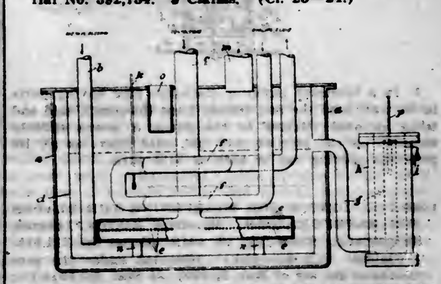


1. In a machine for pressing cigar packets of different sizes, the combination with the press table adapted to carry the press slides containing the cigars, of means to support said table on both sides, means to move said supporting means and thus said table vertically, pressing bars against which the packets of cigars are pressed when said press table is vertically moved, and means to adjust the position of said pressing bars according to the size of the packets of cigars before exerting the horizontal pressure, substantially as set forth.

2. In a machine for pressing cigar packets of different sizes, the combination with the press table adapted to carry the press slides containing the cigars, of means to support said table vertically, pressing bars against which the packets of cigars are pressed when said press table is vertically moved, and horizontally movable pressure rods carrying said pressing bars, substantially as, and for the purpose, set forth.

3. A machine for pressing cigar packets of different sizes, comprising in combination, a press table, the rods adapted to carry said press table, a screw spindle carrying said the rods, and a spur-wheel with screw threaded bore on said screw spindle, substantially as, and for the purpose, set forth.

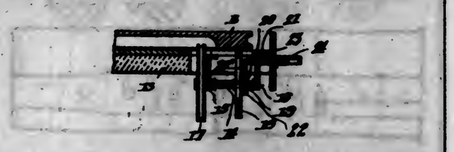
1,399,236. DEVICE FOR INCREASING BOILER EFFICIENCY. OKIYE YAMASHITA, Tokyo, Japan. Filed Sept. 11, 1919. Serial No. 323,198. 4 Claims. (Cl. 137—112.)



1. A device for use in a furnace tube of a cylindrical furnace, comprising a boss and a plurality of spiral propeller shaped blades mounted on said boss, said boss and each blade being structurally separate to permit the same to be inserted into the furnace tube and being adapted to be assembled within the furnace tube.

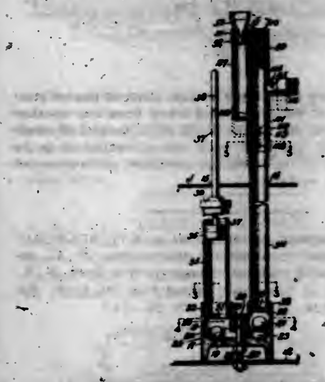
1,399,237. WEAVING-HEALD AND PROCESS FOR MANUFACTURING THE SAME. ALPHONS ZIPPEL, Lachen, Switzerland. Filed Mar. 31, 1921. Serial No. 457,479. 6 Claims. (Cl. 139—14.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A loom heald comprising a heald shaft of double steel wires the ends of which are bent away from one another and ears at either end of the heald shaft formed of small steel plates and provided with corresponding slots in which said ends of the wires are arranged and connected to the plates by soldering.



1,399,238. PROCESS OF MAKING ALKYL SULFURIC ACID. GEORGE P. ADAMSON, Huntington, N. Y., assignor to General Chemical Company, New York, N. Y., a Corporation of New York. Filed June 29, 1920. Serial No. 392,734. 9 Claims. (Cl. 23—24.)

1. The process of making alkyl sulfuric acid which comprises establishing a dominant bath of the desired



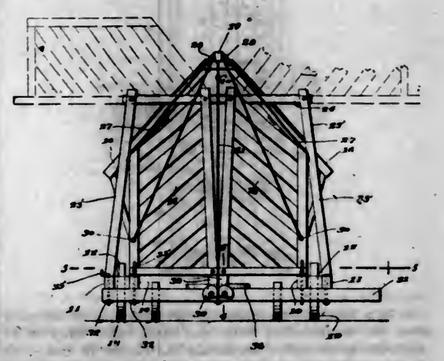
alkyl sulfuric acid, introducing to said bath alkyl alcohol, introducing sulfuric anhydrid, and withdrawing a part of the alkyl sulfuric acid while retaining a sufficient volume thereof to constitute a dominant bath within which to continue the described process.

1,399,239. DRIVING MECHANISM FOR TALKING-MACHINES. THOMAS ARMARY, Ottawa, Ontario, Canada. Filed Feb. 25, 1919. Serial No. 279,160. 1 Claim. (Cl. 74—26.)

In a talking machine, a motor plate having an aperture therein, a record turn table pivoted thereon, a pair of brackets, a shaft rotatably mounte don the brackets, and provided intermediate of the brackets with a square portion, a friction driving wheel slidably mounted on the square portion of the shaft and rotatable therewith and designed to engage the under side of the turn table, a flange formed on the hub of the friction driving wheel, a spindle having an axis parallel to that of the shaft, a downwardly extending arm formed integral with the spindle, a yoke carrier by the arm and engaging the flange, and a wheel projecting above the motor plate and having threaded engagement with the spindle, whereby the friction driving wheel is moved longitudinally on the shaft.

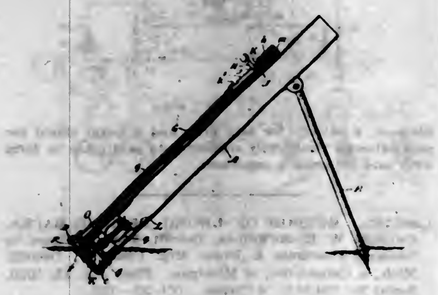
1,399,240. GREASE-PUMP. JOHN N. BAGLEY and WILLIAM M. DUTTON, Hastings, Nebr. Filed Jan. 23, 1920. Serial No. 353,523. 19 Claims. (Cl. 226—125.)

1. In a lubricant pump, a discharge pipe having ports in its wall near the end remote from the pump, said end being elevated relative to the pump, a sleeve slidably mounted on the pipe at said end, said sleeve in all its positions opening one or both of said ports.



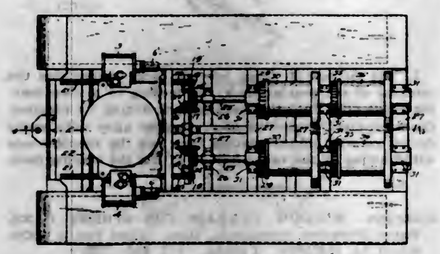
1,399,241. DEVICE FOR SHARPENING THE BLADES FOR SAFETY-RAZORS. WILHELM BARSCH, Lucerne, Switzerland. Filed July 18, 1919. Serial No. 311,715. 4 Claims. (Cl. 51—153.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A device for sharpening the blades of safety razors having two cutting edges comprising in combination a frame having races, a carriage slidably arranged in said frame, a sharpening body mounted in said frame and arranged obliquely in the path of the carriage, a blade-holder rotatably mounted in levers, said levers being



pivotally mounted on said carriage, springs acting on said levers, disks fixed to the blade-holder, said disks being pressed against races of the frame by said springs, and having flat portions at substantially right angles to the plane of the blade.

1,399,242. STACKER. OSCAR W. BENNETT, Colby, Kans. Filed Feb. 1, 1921. Serial No. 441,600. 1 Claim. (Cl. 180—20.)



A stacker comprising an open-bottomed housing within which the material of a stack is to be thrown, vertically and transversely moving pivotally mounted gates at the rear end of the housing, brackets carried by the rear of the housing, a transverse beam pivotally supported at one side of the rear end of the housing and arranged to be moved to extend across the housing, at times, and longitudinally at the side of the housing at times, means for retaining the beam releasably on the brackets, spaced means on the intermediate portion of the beam for the reception therebetween of the gates, and to hold the gates against horizontally outward movement, under outward pressure from the material within the housing.

1,399,243. TRENCH-MORTAR. AXEL G. BESSMAN, New York, N. Y., assignor to Ordnance Engineering Corporation, New York, N. Y., a Corporation of New Jersey. Filed Feb. 24, 1919. Serial No. 278,869. 11 Claims. (Cl. 89—1.)

11. A gun or mortar embodying a bore, a closed breech, a centrally disposed firing pin, and a trigger mechanism embodying a plunger for functioning the firing pin or locking said firing pin in fixed position at the option of the gunner.

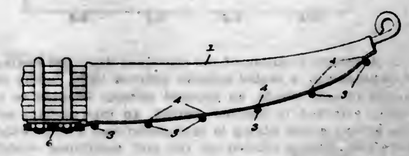
1,399,244. STUMP-PULLER. WAYNE WILLIAM BISSELL, Rochester, Minn. Filed June 30, 1920. Serial No. 392,934. 7 Claims. (Cl. 254—166.)

1. A stump pulling device comprising a vehicle, a plurality of drums carried thereby and disposed on axes parallel to the longitudinal axis of the vehicle, cables carried by said drums and adapted to be drawn out on opposite sides of the vehicle, and means for operating said drums to draw in said cables.

1,399,245. PROCESS OF PRODUCING TUNGSTIC OXID. WARREN F. BLEECKER, Boulder, Colo., assignor to The Tungsten Products Company, Boulder, Colo., a Corporation of Colorado. Filed June 9, 1920. Serial No. 387,670. 7 Claims. (Cl. 23—13.)

7. The herein described process of producing tungstic oxid consisting in stirring sodium tungstate with sulfuric acid, subjecting the mixture to heat and washing the product.

1,399,246. PROCESS FOR THE EXTRACTION OF VANADIUM, URANIUM, AND RADIUM FROM CERTAIN ORES. WARREN F. BLEECKER, Boulder, Colo., assignor to The Tungsten Products Company, Boulder, Colo., a Corporation of Colorado. Original application filed Oct. 2, 1919, Serial No. 327,955. Divided and this application filed June 9, 1920. Serial No. 387,671. 4 Claims. (Cl. 23—13.)

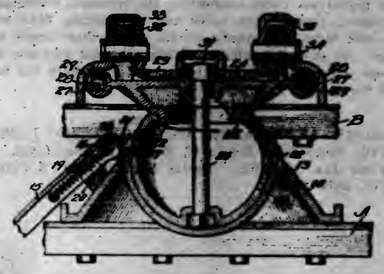


3. The process of extracting values from vanadium ores, consisting in mixing the ore with an alkali-metal carbonate and water, heating the mixture under pressure to a high temperature, separating the alkaline liquor from the product, treating the residue with an acid, separating the acid liquor by filtration, and removing vanadium carrying slimes from the residue.

1,399,247. INDESTRUCTIBLE TOY TRAIN. ROBERT EDWARD BLOOMFIELD, Bagdad, Fla. Filed June 8, 1920. Serial No. 387,809. 1 Claim. (Cl. 46—48.)

A movable toy consisting of a substantially solid rectangular body formed of a single piece of material having substantially flat sides provided with lower recesses and transverse bores connecting the recesses, wheel axles extending through the bores and terminating flush with the side faces, and wheels on the axles whose upper portions are disposed wholly within the said recesses and whose outer sides are wholly exposed flush with the body side faces.

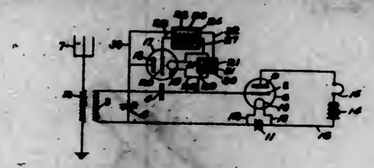
1,399,248. LUBRICATING AND PROTECTING JACKET FOR SPRINGS. EMILE E. BOUCHARD, Burlington, Vt. Filed Jan. 24, 1921. Serial No. 439,576. 3 Claims. (Cl. 267—37.)



3. A vehicle spring lubricating and protecting jacket comprising a sheet of flexible and moisture-proof material including a lubricating surface adapted to be wrapped rather snugly around the spring with its ends arranged in overlapping relationship, coiled springs having their ends bent to provide hooks, said springs being arranged transversely across the jacket and having their hooks engaged with the overlapped ends of said jackets to connect said ends together, but permit them to separate to accommodate the relative movements of the various spring leaves, and a resilient anchor for the inner end of the jacket, serving to prevent wrinkling of the latter and to prevent longitudinal slipping thereof.

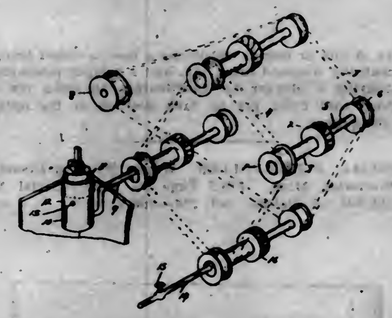
1,399,249. FISHING-TOOL. Charles Henry Brown, Ranger, Tex. Filed Sept. 13, 1920. Serial No. 409,971. 11 Claims. (Cl. 294—106.)

1. A fishing tool comprising a body, and a plurality of independently movable rods carried thereby and having gripping means.



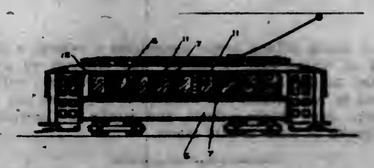
1,399,250. VEHICLE-COUPLING. Addi Benjamin Cadman, Beloit, Wis., assignor to Warner Manufacturing Company, South Beloit, Ill., a Corporation of Wisconsin. Filed July 10, 1918. Serial No. 244,222. 13 Claims. (Cl. 280—33.1.)

2. A vehicle coupling of the character described having, in combination, a socket member adapted to be rigidly attached to one vehicle, an opposed member adapted to be rigidly attached to another vehicle, an intermediate section having a ball fitting in said socket and withdrawable therefrom, means carried by the last mentioned vehicle for detachably locking the ball in the socket including a combined operating and locking hand lever, guide means allowing relative sliding movement between said opposed member and said intermediate section, spring means cushioning such sliding movements, and rollers coacting between said opposed member and said intermediate section for preventing binding or undue friction between these parts.



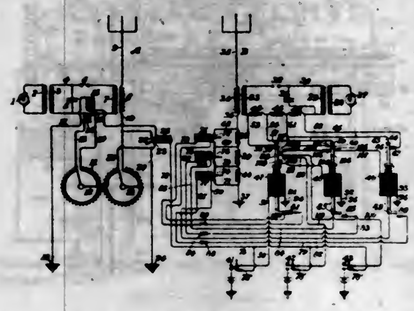
1,399,251. MEANS FOR CHANGING THE INTENSITY OF SIGNALS IN RADIODYNAMIC RECEIVING SYSTEMS. Ernest Leon Chaffee, Belmont, Mass. Filed July 31, 1917, Serial No. 183,880. Renewed Apr. 21, 1921. Serial No. 463,980. 11 Claims. (Cl. 250—20.)

1. Means for effecting a reduction of the intensity of strong signals produced through radiant energy without substantial reduction of the intensity of weak signals, said means including a highly evacuated electron tube inclosing a plate, grid and filament, a battery for said



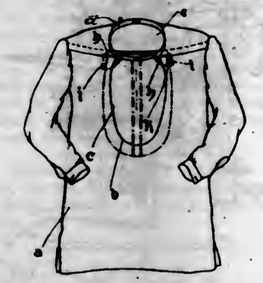
filament, a battery for said grid, and a metal shield for said batteries electrically connected to said plate to form with said batteries a condenser.

1,399,252. METHOD OF LINING BEARING-BACKS. Charles W. Eggenweiler, Detroit, Mich., assignor to General Aluminum & Brass Mfg. Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 15, 1920. Serial No. 374,012. 4 Claims. (Cl. 22—123.)



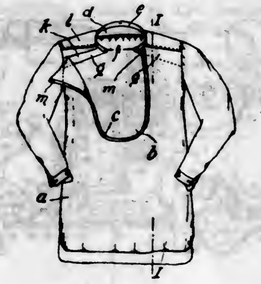
1. The method of lining bearing backs, comprising the rotating of the bearing back, the feeding of molten bearing-metal alloy into the bearing back during its rotation, the subsequent subjecting of the molten alloy with water during rotation of the bearing back and the simultaneous withdrawing of the vapor formed within the bearing back.

1,399,253. WINDOW-CURTAIN FOR STREET-CARS. Rocco Fabrizio, Springfield, Mass. Filed Feb. 4, 1920. Serial No. 356,100. 1 Claim. (Cl. 105—329.)



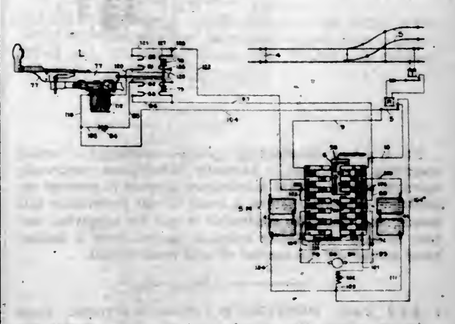
The combination with a passenger car constructed to provide an open side, a roller pivoted horizontally to the side of the car above the line of said opening, a roller adapted to engage the under side of said roller to prevent the same from sagging, a flexible fabric on said first mentioned roller adapted to be wound and unwound thereon and provided with a series of transparent reliable mottoes and means for holding said fabric downwardly so that said transparent sections will cover said opening.

1,399,254. SYSTEM OF RADIODYNAMIC CONTROL. John Hays Hammond, Jr., Gloucester, Mass. Filed June 30, 1917, Serial No. 177,867. Renewed Apr. 20, 1921. Serial No. 462,995. 12 Claims. (Cl. 250—17.)



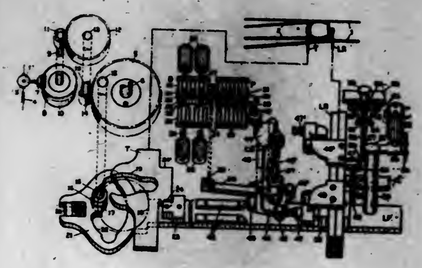
1. A system for the control of distant bodies by radiant energy comprising in combination, a central station including a closed oscillatory circuit and an open oscillatory circuit, each provided with a plurality of different inductance values that may be thrown into circuit and a corresponding plurality of local stations cooperatively associated with the central station and each having means whereby an inductance value characteristic of such local station may be thrown into each of said circuits.

1,399,255. SHIRT WITH REMOVABLE BOSOM. August Holste, Bielefeld, Germany. Filed Aug. 16, 1913. Serial No. 785,135. 1 Claim. (Cl. 2—41.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



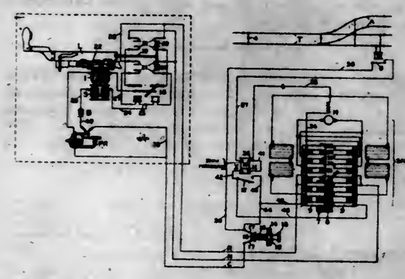
A shirt comprising a body provided with an open opening in its front and having a neck band extending inwardly beyond the edges of said opening, relatively small substantially rectangular interior flaps arranged at opposite sides of the front opening and fitted to the under side of the body and stitched at the neck band and at the outer edges, the inner portions of the flaps being extended into said opening and connected to the inwardly projecting ends of the neck band, the lower edges of the flaps being unconnected with the shirt, said flaps cooperating with the shirt front to form relatively small pockets at the upper front portions of the shirt and a removable bosom provided with a neck band and having its upper corners adjacent the neck band removably fitted in the pockets which have the outer stitched edges of the flaps arranged substantially contiguous to the removable bosom.

1,399,256. SHIRT. August Holste, Bielefeld, Germany. Filed Oct. 18, 1913. Serial No. 794,882. 3 Claims. (Cl. 2—41.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. A shirt comprising a body provided with an opening in its front and having a neck band open at its front, the opposite ends of the neck band extending inwardly over the edges of said opening in the front, flaps secured to the underside of the body at opposite sides of the front opening and having their inner edges extending into said front opening and connected to said inwardly projecting ends of the neck band, the lower edges of said flaps being unconnected with the shirt and the neck band and cooperating with the shirt front to form oppositely disposed pockets at the upper front portion of the shirt, and a removable bosom provided with a neck band portion and whose upper corners adjacent its neck band portion have removable fit in said pockets.

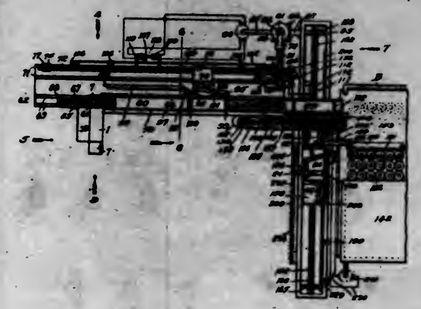
1,399,257. DETECTOR-LOCKING FOR POWER-INTERLOCKING SYSTEMS. Winthrop K. Howe, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y., a Corporation of New York. Filed May 15, 1919. Serial No. 297,344. 25 Claims. (Cl. 246—135.)



11. In a power interlocking system, a switch operating mechanism, means for at times preventing operation of said mechanism, and automatic means effective while the mechanism is operating to nullify the influence of the first mentioned means.

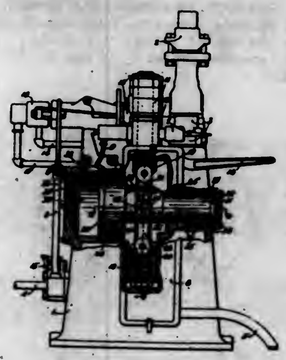
1,399,258. ELECTRIC LOCK FOR POWER-OPERATED SWITCH-MACHINES. WINTHROP K. HOWE, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y., a Corporation of New York. Filed Jan. 13, 1920. Serial No. 351,098. 50 Claims. (Cl. 246—160.)

18. In an interlocking system, a switch machine and an electric lock therefor, a track circuit, and separate manual and automatic means for controlling said lock, both acting to prevent the switch machine being operated by power while said track circuit is occupied.



1,399,259. INTERLOCKING SYSTEM. WINTHROP K. HOWE, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y., a Corporation of New York. Filed Jan. 21, 1920. Serial No. 352,944. 54 Claims. (Cl. 246—135.)

23. A power interlocking system comprising a switch operating mechanism, a normally deënergized electrically operable means at said mechanism adapted to prevent application of power thereto, a track circuit controlling said means, and manually controlled means for supplying current to said electrically operable means from a distant point subject to the control of said track circuit.

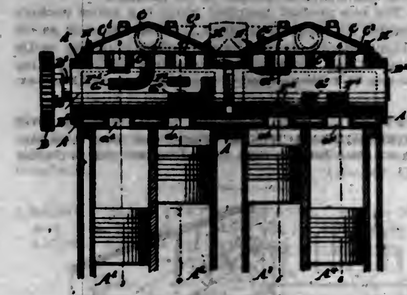


1,399,260. BOTTLE-CONVEYING MACHINE. JOHN JIMAS, Alton, Ill. Filed July 16, 1919. Serial No. 311,223. 8 Claims. (Cl. 198—64.)

1. A bottle conveying device comprising a vertically disposed intermittently movable carrier, a holder for receiving bottles, one at a time, neck first as they fall from a molding machine, means for transferring the bottles from said holder, bottom first, onto a second holder, means for actuating said second holder for depositing the bottles upon the carrier, an elevated bottle receiving platform at the upper end of said carrier and mechanism

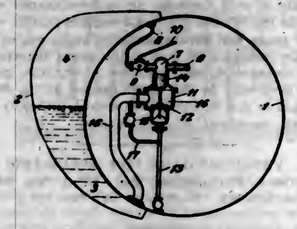
for transferring the bottles, one at a time, from the carrier to the bottle receiving platform as they reach the elevation of the platform.

1,399,261. CLAMPING MECHANISM. HARRY C. JOHANSEN, Chicago, Ill., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Nov. 13, 1918. Serial No. 262,294. 21 Claims. (Cl. 76—5.)



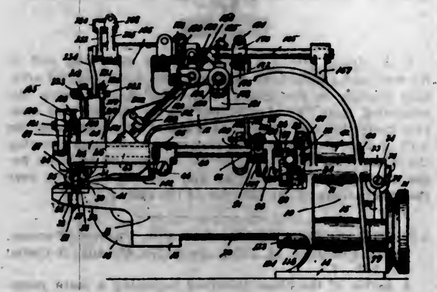
1. In combination, a frame, work clamping mechanism thereon including a toggle link, a link actuating member and a connection between said link and said member slidable in a direction transverse to the direction of movement of the member.

1,399,262. INTERNAL-COMBUSTION ENGINE. THEODORE W. KLOMAN, Park Ridge, N. J. Filed Nov. 6, 1920. Serial No. 422,170. 5 Claims. (Cl. 123—59.)



1. In an internal combustion engine, a plurality of cylinders set side by side each having a cylinder port, a rotatable hollow cylindrical valve having oppositely located inlet ports leading from the exterior to and communicating with the interior thereof in order to bathe such interior with intake gases and matching to said cylinder ports, arranged to receive fuel gas through one

of said inlet ports and cause such gas to flow diametrically and directly across the interior of said valve and



through the other of said inlet ports to one of said cylinder ports.

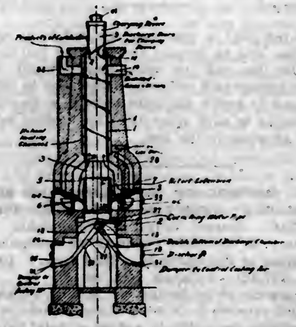
1,399,263. VALVED CONTROLLING APPARATUS FOR OUTBOARD-BALLAST AND FUEL-TANKS. FERDINAND LANTZ, Hamburg, Germany. Filed Feb. 20, 1920. Serial No. 360,181. 3 Claims. (Cl. 114—16.)

1. In an arrangement in vessels, especially submarine boats for the storage of fuel in outboard tanks a pipe system for filling and withdrawing the fuel into and from said tanks, a further pipe system for filling said tanks with sea water in proportion to the fuel drawn from the tanks, a valve-like structure connected to both said pipe systems and an automatically closing member in said valve structure through which only the filling water can enter into said fuel tanks.

1,399,264. FOLDING-MACHINE. WILLIAM F. LAUTENSCHLAGER, Cincinnati, Ohio, assignor to Lorens Muther, Newton, Mass. Filed May 31, 1919. Serial No. 300,862. 36 Claims. (Cl. 12—54.)

1. In a folding machine, the combination of means for feeding the material through the machine, means for turning over the edge to be folded, means for pressing the edge to be folded down upon the body-portion of the material and a work-support for holding the material being operated upon, said work-support being curved transversely to the line of feed beginning at the line of fold of the material.

1,399,265. WRENCH. OSCAR H. LAY, Seattle, Wash. Filed Mar. 24, 1921. Serial No. 455,135. 1 Claim. (Cl. 81—109.)



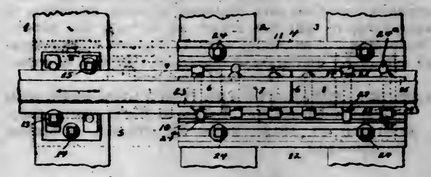
A wrench including a handle equipped with a jaw on one end, a jaw movably mounted on said handle and provided with an inclined toothed working face coöperable with the first jaw, said movable jaw having a portion of one of its ends extended and engageable with the other jaw and toothed to augment the gripping action of said jaws, and means extending through the movable jaw and handle to hold said movable jaw in a predetermined position.

1,399,266. PREPARATION FOR THE NEUTRALIZATION OF THE ACIDS AND THE PRECIPITATION OF SALTS CONTAINED IN WATERS. VICENTE GONZÁLEZ LORENZO, Habana, Cuba. Filed Dec. 7, 1920. Serial No. 428,935. 2 Claims. (Cl. 87—27.)

1. A solution for the neutralization of the acids and precipitation of the salts contained in water, consisting of approximately 430–450 grams of hydrate of sodium, 26–30 grams of sulfate of soda, 1½–2 grams of phosphate of soda and 1 centigram of tannin, to 1000 c. c. of water.

1,399,267. APPARATUS FOR DISTILLING FUEL AND BITUMINOUS ROCKS. GIUSEPPE MAGRI, Turin, Italy. Filed Jan. 21, 1919. Serial No. 272,333. 4 Claims. (Cl. 196—19.)

3. In a fuel distilling apparatus, furnaces, a distilling retort supported on the roof of said furnaces and open



at the bottom, said furnaces arranged to draft through said retort, an axial extension of said retort also open at its bottom, a cooling chamber into which said extension discharges, and means to supply quenching water within said chamber, said chamber arranged to be drafted through said retort.

1,399,268. TELEPHONE APPARATUS. FRITZ P. MANGSEMOM, Brooklyn, N. Y., assignor to Ultra Harphone Co., Inc., New York, N. Y., a Corporation of New York. Filed June 13, 1917. Serial No. 174,481. 1 Claim. (Cl. 179—108.)

A telephone instrument, comprising: a casing; a cap rotatable thereon; a diaphragm retained in said cap; a permanent magnet mounted in said casing, having pole pieces toward and away from which the said diaphragm is movable through rotation of the said cap, and a winding for said magnet; a lever mounted in said casing; and a flexible strip connected to said lever and to said casing for fulcruming the former on the latter, said lever having at one end an armature in proximity to the poles of said magnet and influenced thereby, and having its other end engaging said diaphragm but being unattached thereto.

1,399,269. RAIL-JOINT. ANDREW J. NEAFIE, Mountain Lakes, N. J. Filed Dec. 22, 1920. Serial No. 432,472. 6 Claims. (Cl. 238—210.)

1. In a rail-joint, a base-plate adapted to lie upon two adjacent ties and to support the abutting rail-ends with freedom for the rail to move longitudinally thereon, means for joining said rail-ends, spike-holes in said base-plate located to match the spike holes in a tie-plate, and means received in such spike holes for holding said base-plate and tie-plate to the ties.

1,399,270. METHOD OF PACKAGING AND SEALING PERISHABLE ARTICLES AND THE PRODUCT THEREOF. JOSEPH NUSBAUM, Philadelphia, Pa., assignor to P. B. Sharpless Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 7, 1920. Serial No. 387,224. 4 Claims. (Cl. 99—8.)

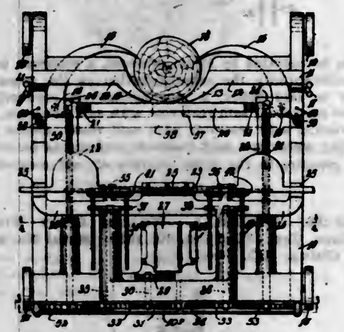
1. The process of packaging and sealing perishable articles, which consists in forming a closed package by completely inclosing the article in a sheet of metal foil, such as tin foil or aluminum foil, preparing a melted paraffin composition containing beeswax and resin, raising the temperature thereof to effect complete fluidity, and dipping the package therein to effect a sealing coating thereon throughout the entire exterior surface of the package.

4. The new product described which is a sealed package comprising an inclosing wrapper of metal foil such as tin or aluminum foil, having firmly adhering to the entire exterior of the inclosing foil wrapper a sealing coating consisting of a composition of paraffin, resin and beeswax.

1,399,271. BAND-CUTTER AND FEEDER FOR THRESHING-MACHINES. PETER ODA, near Arcanum, Ohio. Filed July 10, 1920. Serial No. 395,202. 4 Claims. (Cl. 130—1.)

1. In a threshing machine and in combination with the cylinder thereof, a grain feeder comprising a table extending laterally of said machine, an endless carrier operable thereover to receive the grain, an endless carrier operable in a lower plane and substantially at right angles to said table carrier, adapted to receive the grain therefrom and to convey the same to said cylinder, a rotatable guard arranged in proximity to the upper carrier at its discharge end and means for rotating said guard inversely to the direction of movement of said carrier.

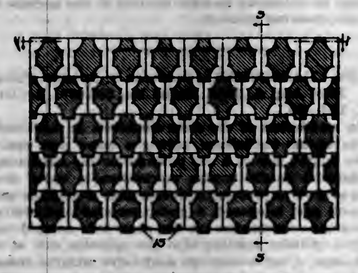
1,399,272. PRESSURE-GAGE FOR PNEUMATIC TIRES. FRANK OGLE, Philadelphia, Pa. Filed Jan. 26, 1920. Serial No. 354,069. 4 Claims. (Cl. 73—111.)



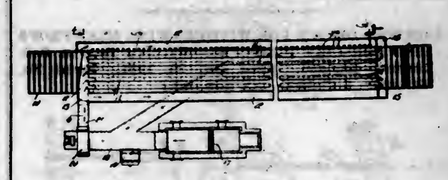
1. A casing having a longitudinally extending slot in its wall and graduations adjacent said slot, a spring-actuated plunger in the casing, a traveler in the casing disconnected from the plunger but seated thereon and movable therewith and adapted to frictionally engage with the wall of the casing about the slot and at all times covering the latter from the interior of the casing, and an index finger attached to said traveler and adapted to sweep over the graduations on the exterior of the casing.

1,399,273. DISPLAY-BOX. BAYCE B. PERROW, Tacoma, Wash. Filed Dec. 13, 1920. Serial No. 430,401. 1 Claim. (Cl. 217—7.)

A device of the class described including a main receptacle, a removable cover therefor, said cover being engaged over the bottom of the receptacle when the receptacle is in use, a plurality of individual receptacles arranged transversely within the main receptacle and disposed in parallel relation with respect to each other providing a continuous receptacle from one side wall of the main receptacle to the other, means for connecting the abutting side walls of the individual receptacles and means for connecting the individual receptacles to the side and end walls of the main receptacle.

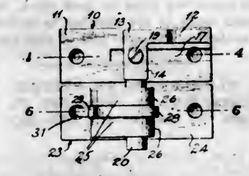


1,399,274. TREE-SAWING MACHINE. STEVEN RADIMAK, New York, N. Y. Filed Oct. 9, 1920. Serial No. 415,886. 2 Claims. (Cl. 143—68.)



2. In a power saw, a saw blade, a slide on which said saw blade is mounted, means for advancing said slide transversely to itself, means for reciprocating said slide to move the saw back and forth across the work, said means including mutilated gears adapted to alternately have operative relation to the slide, shafts fixed against longitudinal movement for rotating said gears, and means adapted to permit said gears to advance with the slide while maintaining rotative engagement with said shaft, said means including apertured disks fixed to said shafts, and rods fixed to said disks and passing freely through the apertures in said disks.

1,399,275. HEATING-WALL FOR COKE-OVENS AND THE LIKE. ARTHUR ROBERTS, Evanston, Ill., assignor to American Coke & Chemical Company, Chicago, Ill., a Corporation of Maine. Original application filed Sept. 15, 1916, Serial No. 120,351. Divided and this application filed Jan. 27, 1919. Serial No. 278,230. 5 Claims. (Cl. 72—15.5.)

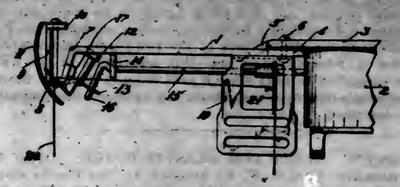


1. A coke oven heating wall comprising courses of blocks, the courses breaking joints with each other, each block having its four corners recessed to provide, in conjunction with the adjoining blocks a series of passages extending in sig-sag fashion between the blocks of the successive courses, and each block having in its lower central portion a downwardly projecting tongue entering into the space between the recesses of the two blocks immediately below it, whereby gases traveling lengthwise of the wall are compelled to pass around said tongues, and are therefore compelled to travel in sig-sag fashion, substantially as described.

1,399,276. DRIER FOR PLASTER-BOARD. DAVID E. ROBERTS, Buffalo, N. Y., assignor to The Beaver Company, a Corporation of Ohio. Filed Jan. 17, 1920. Serial No. 352,122. 9 Claims. (Cl. 34—12.)

1. A drier comprising a plurality of superposed conveying means for carrying sheet material therethrough, and a return-circuit heating system having a plurality of closed-circuit heat radiating conduits arranged adjacent the top and bottom of each of said conveying means.

1,399,277. WINDOW-FASTENER. FREDERICK THOMAS SCHNEIDER, New York, N. Y. Filed Mar. 3, 1920. Serial No. 363,052. 1 Claim. (Cl. 292—210.)

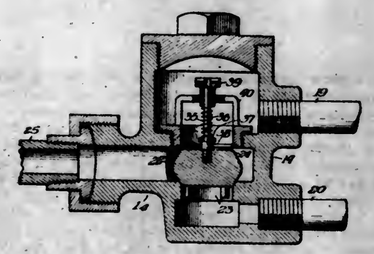


A window fastening comprising a plate having formed therein longitudinal transverse grooves, said plate being adapted to be secured to the upper sash of a window, a vertically pivoted latch bar carried by the plate and adapted to be yieldably held in either of said grooves, a keeper plate adapted to be secured to the lower sash of a window and having a transverse groove adapted to register with the transverse groove in the first mentioned plate, when the window is closed, spaced flanges adjacent opposite edges of said keeper plate, retaining fingers on said flanges adapted to partially extend over the bar when the latter is occupying the transverse groove in both plates, a keeper hook pivoted between the flanges and coöperating with the flanges and fingers in surrounding the bar to keep the latter in the transverse groove, a spring yieldably holding said hook in closed position and a thumb piece on said hook.

1,399,278. ARM FOR KNITTING-MACHINES. EDWARD H. STINES and WILBUR C. POTTER, New Brunswick, N. J. Filed Feb. 19, 1919. Serial No. 277,977. 4 Claims. (Cl. 66—7.)

1. The combination with a support for thread-controlled stop mechanism, of an arm having one end to be secured

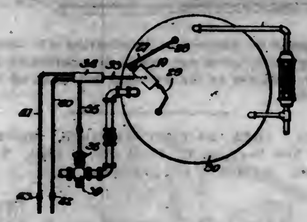
to the support, and having its opposite end bent to extend laterally, then longitudinally, then transversely, and then



reversely, to enable a thread guide to be secured to the arm at the points where said arm is bent longitudinally and reversely.

1,399,279. DEVICE FOR WITHDRAWING MINE-PROPS AND FOR-LIKE PURPOSES. WILLIAM TEMPLE, Bedlington, England. Filed Oct. 29, 1921. Serial No. 511,499. 3 Claims. (Cl. 254—68.)

1. In a device for withdrawing mine props and for like purposes, the combination of a bar, teeth on two sides thereof the pitch of the teeth on one side being a fractional part of the pitch of the teeth on the other side, a slotted block mounted on said bar, a spring pawl carried by said block engaging the closer-spaced teeth of said bar, an operating lever having a fulcrum pin engaging the wider-spaced teeth of said bar, a pivoted link connecting said operating lever to said block, to a chain for attaching said block to the member to be withdrawn and means for anchoring the rear end of said bar.



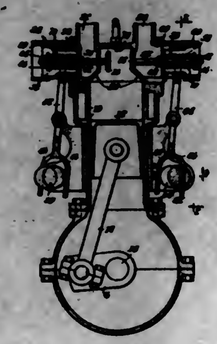
1,399,280. FLUID-PRESSURE SYSTEM. VINCENT V. VEENSCHOTEN, Erie, Pa. Filed Nov. 22, 1917. Serial No. 203,469. 12 Claims. (Cl. 103—91.)

1. The combination of two vessels, a fluid under pressure contained in each of said vessels, a device arranged to be operated by one of said fluids, and means for operating the said device by the other of said fluids when the difference between the pressures of the said fluids reaches a predetermined amount.

1,399,281. FEED-WATER REGULATOR. VINCENT V. VEENSCHOTEN, Erie, Pa. Filed Dec. 16, 1918. Serial No. 266,870. 2 Claims. (Cl. 122—451-2.)

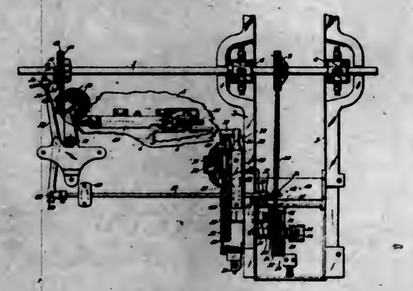
1. The combination of a boiler and a feed-water regulator, said regulator comprising a vessel adapted to contain water and mounted at an angle to the horizontal adjacent said boiler and at substantially the same elevation as the mean water-level in said boiler, a tube passing through said vessel and connected with said boiler above and below the mean water-level therein, a feed-water valve operatively connected with said boiler, a governor operatively connected with said valve and adapted to be operated by steam pressure, a reservoir mounted at substantially the same elevation as the mean water level in said boiler, a pipe operatively connecting the lower portion of said reservoir with said governor, a pipe connecting said reservoir with said vessel, means for admitting water into said reservoir, and means for relieving the pressure in the upper portion of said reservoir.

1,399,282. WINDMILL. WILLIAM HENRY WINSLETT, Nixon, Tex. Filed Oct. 19, 1920. Serial No. 417,908. 3 Claims. (Cl. 74—71.)



2. A balance device comprising a rectangular web, extensions formed on the corners of said web and angularly related and secured to a support, tension springs secured to said extensions adjacent the corners of the web, and an attaching member secured to the springs and to a reciprocating element.

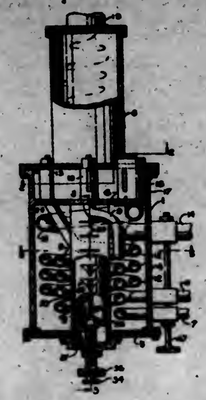
1,399,283. GAS-ENGINE. GOTTLIEB F. ZUCKER, Chicago, Ill. Filed Aug. 8, 1919. Serial No. 316,033. 2 Claims. (Cl. 123—90.)



1. In mechanism of the class described, in combination with an engine mechanism having a valve port controlling the engine side of a gas passage for the admission of fuel material to the engine mechanism, a valve firmly closing said valve port and reciprocatable to position where said valve port is opened, a piston member reciprocatable in the engine mechanism on the same axis as said valve and in a cylinder opening into the opposite side of said gas passage, a valve stem on said valve slidable through said piston, a positive stop on said valve stem intermediate of its length, engaged by said piston, detachable means

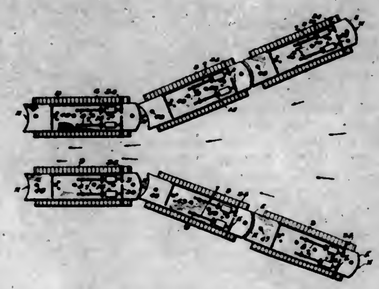
at the end of said valve stem which is away from the valve, also engageable by said piston, a spring carried by the

piston and engaging said last mentioned means on the end of the valve stem, and means for reciprocating said piston for the purposes set forth.



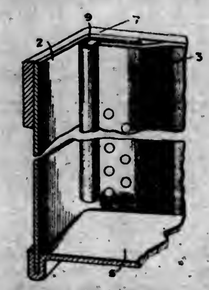
1,399,284. POWER-TABLE. EDWARD B. ALLEN, Newtown, Conn., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Oct. 21, 1919. Serial No. 332,285. 13 Claims. (Cl. 74—21.)

1. The combination with a machine having a plurality of shafts to be driven at different speeds, of a supporting table-top, a constantly running power-shaft journaled below said table-top, and means including a common controlling element for establishing or interrupting driving relation between said power and machine shafts.



1,399,285. GAS-GENERATOR. REUBEN B. AYRES, New York, N. Y. Filed July 3, 1920. Serial No. 393,851. 6 Claims. (Cl. 48—96.)

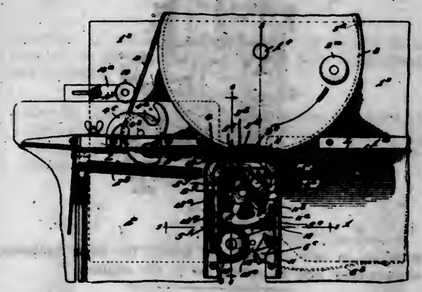
1. In an apparatus of the character described, in combination, a mixing chamber, said chamber comprising an inner cylinder and an outer cylinder with an opening therebetween, closing means extending the passage between the cylinder walls at one edge of said opening and means for introducing a hydro-carbon gas, steam, and air, under pressure into said chamber behind the said closing means whereby said elements are constrained to follow the passage between the cylinder walls until said opening is reached, said elements mixing and thoroughly com-



mingling in said passage and within the inner cylinder, whence they may be conducted to the engine.

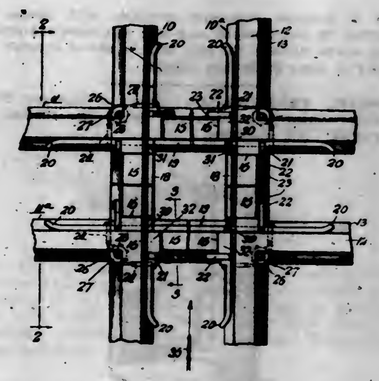
1,399,286. DREDGING SYSTEM. CARL J. BARR, St. Louis, Mo. Filed July 28, 1920. Serial No. 399,544. 22 Claims. (Cl. 61—2.)

1. A floatable dam unit provided with means for varying its displacement, and with self-contained propelling means whereby the unit may be moved through the water or along the bottom thereof.



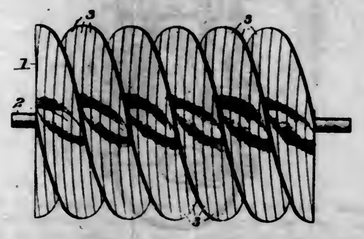
1,399,287. FREEZING-CAN. ANSON J. BENTLEY, Niles, Ohio. Filed May 16, 1921. Serial No. 469,883. 3 Claims. (Cl. 62—159.)

1. A freezing can for use in the manufacture of ice and having an air tube extending from the top of the can



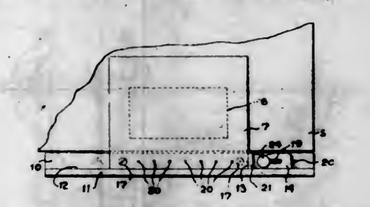
to a point adjacent the bottom of the can, the said tube comprising a strip of sheet metal folded longitudinally to provide an air conduit and an attaching fin extending the length of the tube, and being secured to the can by rivets passing through said fin.

1,399,288. MACHINE FOR POSTMARKING AND CANCELING LETTERS. WALTER H. BOWES, Greenwich, Conn. Filed Sept. 7, 1918. Serial No. 253,066. 21 Claims. (Cl. 101—239.)



1. In combination, means for feeding a letter; means for printing the letter; a stop adapted to prevent the passage of another letter past the printing means until the preceding letter has passed and the printing means is ready to again operate; gearing between the feeding means and the printing means whereby the latter is caused to make one rotation or operation during the time each letter should be fed therepast: and a cam operating in unison with the printing means, whereby said stop is moved into position for effective operation during the printing operation on a letter and released after the printing operation; and means for withdrawing the stop to permit the forwarding of the next letter to the printing means when the latter is ready to begin another operation.

1,399,289. RAILROAD-CROSSING. JOHN F. BRADY, Colorado Springs, Colo. Filed Mar. 3, 1920. Serial No. 362,970. 13 Claims. (Cl. 246—273.)

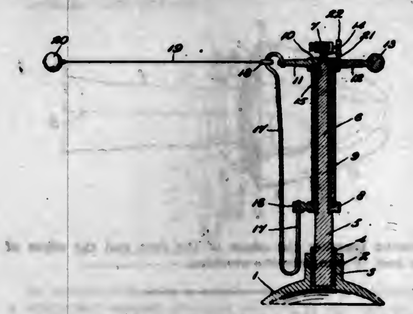


1. In a railroad crossing, the combination of intersecting rails, said rails each being provided with gaps adjacent the inner edges of the rail which it intersects, bridge blocks normally closing and having bearing in said gaps, means connecting said bridge blocks to the crossing, permitting said blocks to move out of said gaps, and means operated by a train approaching said crossing to actuate said bridge blocks to remove them from the gaps in the rails which the train crosses.

1,399,290. PROPELLER FOR AIRCRAFT. ALEXANDER BRULLE, New York, N. Y. Filed Nov. 16, 1920. Serial No. 424,458. 3 Claims. (Cl. 170—168.)

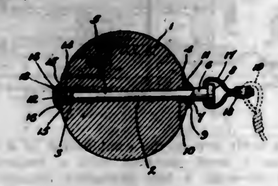
1. A spiral screw propeller composed of a plurality of similar sections each having a hub section and oppositely extending blade sections, said sections being secured together edge to edge to form the continuous spiral screw, and each section being bowed axially of the propeller from the hub portion to the ends of its blade-portions for the purpose specified.

1,399,291. PRINTING-PRESS GAGE. EDWARD A. CORBY, Brooklyn, N. Y., assignor to Tiffany & Co., New York, N. Y., a Corporation of New York. Filed Aug. 16, 1918. Serial No. 250,248. 2 Claims. (Cl. 101—413.)



1. A printing press gage comprising, in combination, a supporting member, an elongated gage member of angular cross-section, having a raised, longitudinally disposed guiding portion, means for attaching said elongated gage member to said supporting member, a slotted transverse gage member associated with said elongated gage member and adjustable longitudinally thereof, said transverse gage member having a raised portion coöperating with the raised portion of said elongated gage member and said elongated gage member having a plurality of threaded apertures therein, and a threaded adjusting member passing through the slot in the transverse gage member and selectively into any desired one of said threaded apertures, to maintain said transverse gage member in its adjusted position relatively to said elongated gage member.

1,399,292. CAPTIVE-BALL PRACTICE DEVICE. CHARLES F. CRAIG and HERSCHEL M. CONNOR, San Francisco, Calif., assignors to Craig Golfmeter Co., a Corporation of Delaware. Filed Dec. 8, 1919. Serial No. 343,365. 2 Claims. (Cl. 46—4.)

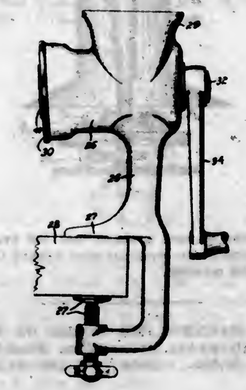


1. In a device of the class described the combination of a base; a stationary standard secured to said base; a rotatable member comprising a sleeve adapted to revolve about said standard; a rod member rigid with said sleeve, spaced therefrom, and extending from end to end of the

same; a slidable ring member movable on said rod member; a ball connected to said ring member; and means

for indicating the travel of said ball when struck; substantially as described.

1,399,293. PLAYING-BALL. CHARLES F. CRAIG and HERSCHEL M. CONNOR, San Francisco, Calif., assignors to Craig Golfmeter Co., a Corporation of Delaware. Filed Dec. 8, 1919. Serial No. 343,364. 2 Claims. (Cl. 46—4.)



1. In a device of the class described the combination of a ball provided with a diametrical bore; a pin provided with a shoulder passing through said bore; a washer member carried by said pin and coacting with said shoulder, said member being provided with a flange adapted to bite into the surface of said ball and support the same, and a nut adapted to prevent the withdrawal of said pin, substantially as described.

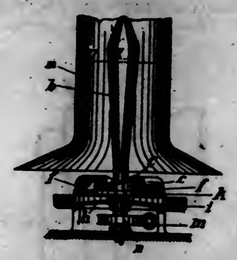
1,399,294. CONDENSER. GODFREY ENGEL, Sr., Brooklyn, N. Y., assignor to Buffalo Foundry & Machine Co., Buffalo, N. Y., a Corporation of New York. Filed Mar. 1, 1920. Serial No. 362,477. 15 Claims. (Cl. 261—114.)

1. In combination, a condenser shell and spray producing means within said shell and comprising an overflow chamber having a rotatable perforated bottom adjustable to vary the flow thereover and to vary the amount of overflow.

1,399,295. FOOD-CHOPPER. JOHN M. FEENEY, Bridgeport, Conn. Filed Apr. 25, 1921. Serial No. 464,270. 13 Claims. (Cl. 17—20.)

5. In a food chopper, a body having a circular discharge opening provided with a rabbet, a rotatable cutter seated in said rabbet and having a non-circular opening, and a shaft in said body having a non-circular portion received in the opening in said cutter and a shoulder engaging the outer face of said cutter.

1,399,296. EGG-BEATER. JOHN M. FEENEY, Bridgeport, Conn. Filed June 23, 1921. Serial No. 479,895. 9 Claims. (Cl. 259—132.)



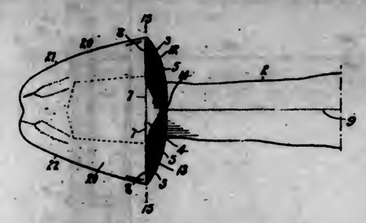
1. An implement of the character described comprising a frame, a fixed spindle, a removable spindle, said spindle being provided with intermeshing pinions, and a driving wheel engaging pinion of the fixed spindle.

1,399,297. SHAFT-FURNACE. CARL GIESECKE, Bad Harzburg, Germany. Filed Mar. 27, 1917. Serial No. 157,741. 10 Claims. (Cl. 259—43.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a device of the character set forth, the combination of a tubular member having a discharge opening at

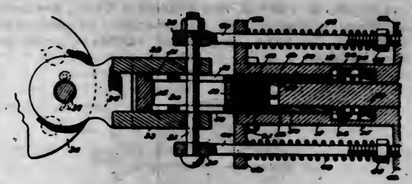
its lower end, and a core disposed within that part of the member through which sintered pieces are caused to pass and also extending through said discharge opening.

said core being of such a shape that the available member space increases in sectional area toward the discharge opening of the member.



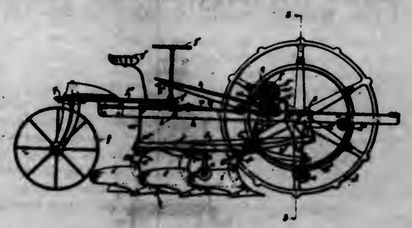
1,399,298. HARNESS FOR LOOMS OR THE LIKE. EDGAR F. HATHAWAY, Boston, Mass. Filed Nov. 4, 1915. Serial No. 59,562. 1 Claim. (Cl. 139—14.)

A heddle cord for holding the heddle eye of a loom harness embracing in its construction a cord looped through said eye and doubled back upon itself to form a closely assembled double strand, a fastening clip comprising a single piece of flexible sheet material wrapped completely around said double strand under sufficient pressure to embed the whole clip in the encircled portion of the double strand so as to afford no projection beyond the outer surface of the adjacent portions of the double strand, the free ends of said clip being laterally offset when so embedded to pass beyond each other circumferentially of the double strand thereby avoiding the overlapping of one end of the clip above the other, substantially as described.



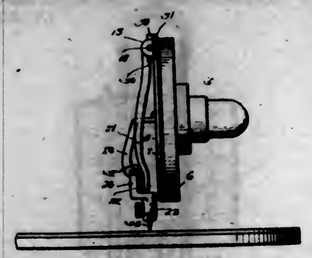
1,399,299. STOCKING. ALBERT B. HEINEN, Atlanta, Ga. Filed May 17, 1921. Serial No. 470,363. 5 Claims. (Cl. 66—4.)

1. The method of forming a stocking by knitting a seamless leg and heel, slitting the heel to permit the fabric to be extended in flat formation, and knitting a foot in flat formation to the heel and end of the leg and



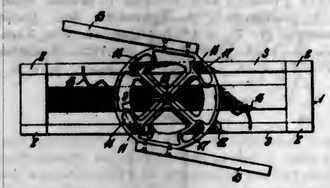
seaming together the edges of the foot and the edges of the heel to complete the stocking.

1,399,300. DRAFT DEVICE. EDWIN G. HINES, Drums, and CHARLES S. MYERS, Hazleton, Pa.; said Myers assignor to said Hines. Filed May 29, 1920. Serial No. 385,278. 14 Claims. (Cl. 213—67.)



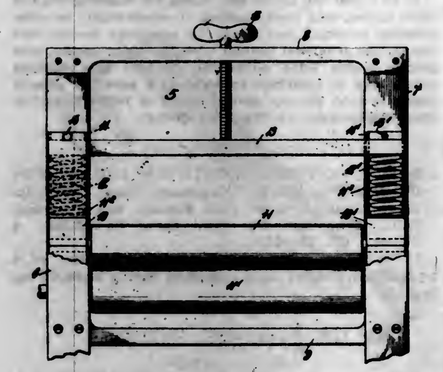
1. In a draft device, the combination of a body member having a head provided with a longitudinal slot closed at its ends, a bolt extending through said slot, means mounted on said bolt for connecting the same to a source of power, draft rods mounted on said body member and engaged by said bolt, springs providing a driving connection between said draft rods and said body member, means for coupling the body member to a device to be towed, and a releasing device slidably mounted upon said bolt and adapted to disconnect said coupling means.

1,399,301. TRACTOR-PLOW. JOHN HIST, Cleveland, Ohio. Filed June 21, 1917. Serial No. 176,182. 5 Claims. (Cl. 97—30.)



1. In a plow mechanism, the combination with a main power-imparting wheel of a gang plow connected rearwardly thereof, flexible elevating members associated with said gang plow, a gear wheel normally maintained out of mesh, an actuating gear upon the first-named wheel, a drum mechanism for controlling the flexible elevating members, and a knee-joint support for the drum and the gear wheel adapted alternatively to hold it in or out of engagement, whereby the gang plow may be lifted by the rotation of the first-named wheel, substantially as set forth.

1,399,302. SOUND-BOX. LEO LEULIER HUGHES, Washington, D. C. Filed Mar. 28, 1921. Serial No. 456,815. 1 Claim. (Cl. 274—35.)

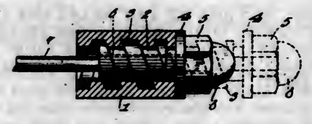


In combination with a sound box having a diaphragm, a stylus bar support pivotally secured at one end to the upper end of the sound box, the other end of said support being free, a stylus carrier and a stylus bar carried by the free end of said support, and means for rocking said support on its pivot.

1,399,303. WRINGER. BRUNSON S. MCCUTCHEN, Plainfield, N. J. Filed Sept. 20, 1920. Serial No. 411,547. 4 Claims. (Cl. 68—32.)

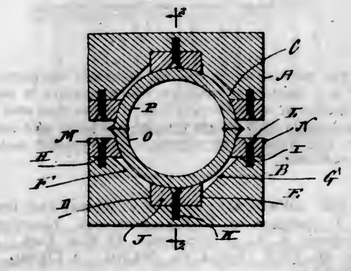
2. A clothes wringer comprising a frame having pressure rolls and pressure means therefor, a screw cooperating with said pressure means, rotatable means for carrying said screw, said means having slots therein arranged about its axis, projections on said frame adapted to operate in said slots and to lock said member to said frame when said member is rotated in one direction and to permit disengagement of said member when rotated in a counter direction.

1,399,304. WRINGER. BRUNSON S. MCCUTCHEN, Plainfield, N. J. Filed Oct. 8, 1920. Serial No. 415,496. 3 Claims. (Cl. 68—32.)



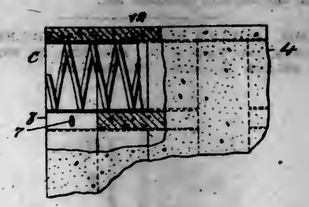
2. A clothes wringer comprising a frame having pressure rolls and bearing blocks therefor, spring housings bearing against the bearing blocks of one of said rolls, compressed coil springs in said housings, an equalizer bar slidable in and spanning said housings and bearing at each of its ends against one end of one of said springs, and a pressure screw passing through said frame and bearing against said equalizer bar.

1,399,305. HOLDER FOR TOILET ARTICLES. JULIUS MOLNAR, New York, N. Y. Filed Mar. 25, 1921. Serial No. 455,394. 1 Claim. (Cl. 248—63.)



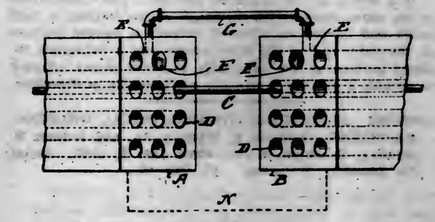
A holder for toilet articles comprising front and rear walls and bottom formed of a single blank, an inverted U-shaped element inserted between said walls to provide a horizontal pocket open at both ends, a rectangular tubular element inserted between said front and rear walls and forming a central pocket, the front wall element having integral flaps folded across upon the rear wall element to form side pockets.

1,399,306. DEVICE FOR USE WITH NAILS. GEORG MÜLLER, Wurttemberg, Germany. Filed July 30, 1914. Serial No. 854,210. 1 Claim. (Cl. 85—10.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



In a device of the character described, the combination of an outer sleeve with an inner sleeve forming a nail guide and having an external thread, a flanged portion at the outer end of the inner sleeve and a hexagonal reduced portion on the externally threaded sleeve adapted to provide a grip for a wrench, substantially as described.

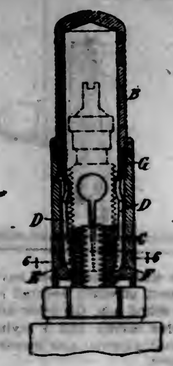
1,399,307. ELECTRODE FOR ELECTRICAL WELDING-MACHINES. THOMAS E. MURRAY, Jr., and JOSEPH B. MURRAY, Brooklyn, N. Y. Filed July 3, 1920. Serial No. 393,863. 3 Claims. (Cl. 219—6.)



1. An electrode for electrical welding machines, comprising a body portion having a longitudinal recess receiving one of the objects to be welded, and projections therein supporting said object.

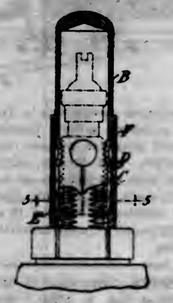
1,399,308. METHOD OF PRODUCING CONDUITS, &c. THOMAS E. MURRAY, Brooklyn, N. Y. Filed July 17, 1920. Serial No. 396,956. 2 Claims. (Cl. 25—126.)

1. The method of making progressively and in consecutive sections a conduit, which consists in, first, producing a helical wire coil; second, enveloping said coil in a wrapper of smooth flexible material; third, molding a wall of material in plastic state upon said wrapped coil as a core and allowing said material to harden; fourth, withdrawing said coil from its hardened envelop and supporting the same in contact with the end thereof with its longitudinal axis in prolongation of the axis of said envelop; fifth, applying to said withdrawn coil a wrapper of smooth flexible material; sixth, molding a wall of material in plastic state upon said last-named coil and allowing said material to harden in contact with the end of the wall of the conduit previously made, and seventh, withdrawing said coil and repeating the aforesaid steps until a conduit of desired length is obtained.



1,399,309. METHOD OF AND MEANS FOR COOLING ELECTRICAL CONDUCTORS WHEN INCLOSED IN CONDUITS OF CONCRETE OR THE LIKE. THOMAS E. MURRAY, Brooklyn, N. Y. Filed Jan. 28, 1921. Serial No. 440,821. 6 Claims. (Cl. 247—3.)

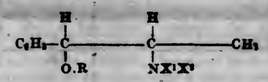
1. The method of cooling an electrical conductor disposed in a conduit of concrete, which consists in making said conduit of material pervious to liquid flow and causing said liquid to circulate through a duct in said conduit and to and through the portion of said conduit inclosing said conductor.



1,399,310. DUST-CAP. EUGENE V. MYERS, East Orange, N. J., assignor to A. Schrader's Son, Incorporated, Brooklyn, N. Y., a Corporation of New York. Filed Dec. 20, 1918. Serial No. 267,701. 9 Claims. (Cl. 152—12.)

1. A dust cap for tire valves or the like comprising a cap portion, movable members associated with said cap portion and provided with threads and a wedging member adapted to force said movable members inwardly, and a connection between said cap portion and said wedging member for moving the cap portion longitudinally of the

cap as the cap portion is rotated with relation to the wedging member.



1,399,311. DUST-CAP. EUGENE V. MYERS, East Orange, N. J., assignor to A. Schrader's Son, Incorporated, Brooklyn, N. Y., a Corporation of New York. Filed Dec. 20, 1918. Serial No. 267,702. 5 Claims. (Cl. 152—12.)

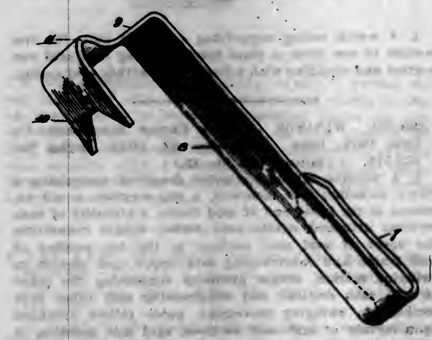
1. In a dust cap or the like, means for engaging the tire valve casing, said means formed of substantially noncompressible material, and means for positively forcing said means into frictional contact with the valve casing, said forcing means being adjustable, so that the engaging means may be tightened by hand to a lesser or greater degree to hold the cap against direct or indirect longitudinal displacement on the valve casing.

1,399,312. SYNTHETIC ANESTHETIC AND PROCESS OF MAKING SAME. NAGAYOSHI NAGAI, Tokyo-fu, Japan, assignor to M. Dick Bunnell, San Francisco, Calif. Filed Mar. 28, 1916. Serial No. 87,323. 4 Claims. (Cl. 23—24.)

1. As a new compound, an organic acid ester of a mydriatin derivative; said compound having probably the formula

where R is an organic acid radical; X^2 is hydrogen, or an alkaryl group; and X^3 is an alkaryl group.

1,399,313. BOTTLE. LOUIS EUGENE NEWELL, Baltimore, Md., assignor to Carr-Lowrey Glass Company, Baltimore, Md. Filed Apr. 9, 1921. Serial No. 460,830. 3 Claims. (Cl. 215—1.)

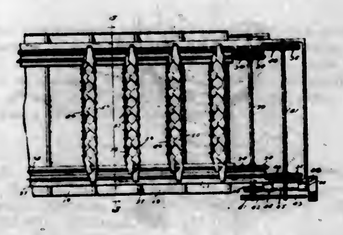


1. A bottle including a translucent wall containing a design and transparent ribs extending across said wall and intersecting the design.

1,399,314. TEST-INDICATOR. CHARLES H. NICHOLSON, Brooklyn, N. Y. Filed July 23, 1921. Serial No. 487,045. 4 Claims. (Cl. 33—172.)

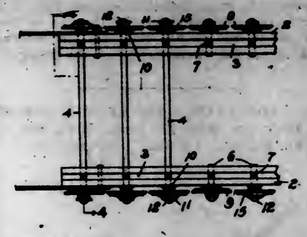
4. A test indicator of the character specified comprising a longitudinally tapered casing, having a scale at the widest end, an indicating member having one end pivotally supported centrally of the casing and its other end provided with a pointer for coöperation with the scale end, a work engaging member pivotally supported at the opposite end of the casing and operating dogs pivoted to the casing on opposite sides of the pivoted end of the indicating member, said dog being offset relative to the axis of the member, and pin means provided on said dogs and adapted to be alternately engaged by the work engaging means for bringing said dogs into engagement with the indicating member whereby the scale-pointer means of the latter may be advanced along the scale means.

1,399,315. SHEET-METL FASTENER. CARLOS JUVENTINO OCAMPO, Los Angeles, Calif. Filed Apr. 1, 1920. Serial No. 370,459. 1 Claim. (Cl. 108—9.)



A sheet metal fastener comprising a shank having one end portion bent substantially at a right angle to form a shoulder adjacent the shank and terminating in a prong extending in the direction of the length of the shank parallel thereto; said bent portion being formed with an outwardly extending arch between the shoulder and the base of the prong, the prong being a continuation of one side of the arch and projecting beyond the end of the shank, the other end of said shank being bent and returned upon the shank on the side thereof opposite the prong to form a hook.

1,399,316. ADJUSTABLE FRAME FOR SAW-BLADES. NEILS D. OLSON, Waterloo, Iowa. Filed Feb. 17, 1921. Serial No. 445,762. 1 Claim. (Cl. 145—34.)

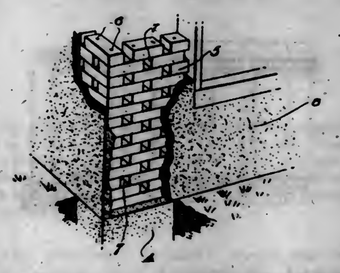


In combination, an elongated blade, a tubular holder therefor having a longitudinal slot to receive the back of said blade, and like adjustable securing-devices positioned at opposite ends of said holder, each comprising a threaded stem slidably mounted in the hollow thereof to project therefrom, said stem having its inner end bent and projected outwardly through said slot and bifurcated to receive said blade and having a plurality of engaging-means to fasten the blade releasably in adjusted positions angularly away from said holder, and sleeve-nuts on said threaded stems engaging ends of said holder for securing said stems and their bifurcations in desired positions of longitudinal adjustment.

1,399,317. FRUIT-SIZING APPARATUS. FLORENT JODON PEARSON, Troy, Ohio. Filed June 13, 1921. Serial No. 477,121. 5 Claims. (Cl. 130—32.)

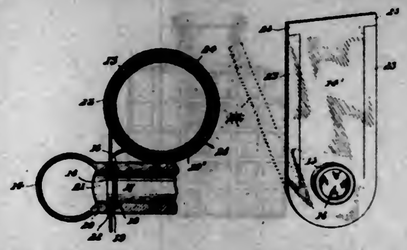
1. In a fruit sizing apparatus, the combination of differentially moving bars, endless flexible members to which said bars are connected, each of said bars having an upstanding flange along one edge and having recesses along its other edge, the recessed edges of the bars coöperating to form series of fruit sizing apertures lengthwise of the bars.

1,399,318. GRAVITY-CARRIER. WILLIAM G. PRICE, Yakima, Wash. Filed Apr. 12, 1920. Serial No. 373,240. 5 Claims. (Cl. 64—17.)



1. A wheel for gravity carriers comprising an annular disk, and a plurality of flat spoke members extending diametrally across the said disk and having their ends connected thereto.

1,399,319. FASTENING OF THE SPRING-SOCKETS OF PRESS-BUTTONS. AUGUST PRYM, Büsbach, near Stolberg, Germany. Filed Nov. 23, 1914. Serial No. 873,617. 1 Claim. (Cl. 24—218.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



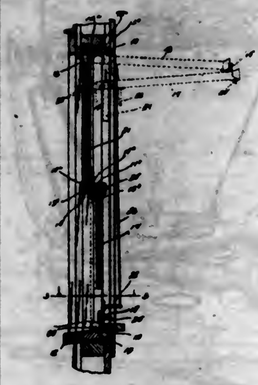
In a separable button, the combination with a socket plate having a turned over edge, a double shank wire spring rigidly held with its body underneath of said turned over edge in said socket plate, a perforated dome projecting from the middle of the plate provided with incisions, permitting a free movement of the elastic shanks of said wire spring acting on the interior of the dome, a cap, a hollow rivet on said cap and an outwardly flared flange on said rivet adapted to be inserted into the perforation of said dome and to be turned down around the edge of said perforation for tightly gripping the material between the cap and socket plate, substantially as described.

1,399,320. WALL CONSTRUCTION. ISRAEL F. RAUDABAUGH, Celina, Ohio. Filed July 30, 1920. Serial No. 400,028. 1 Claim. (Cl. 20—4.)

A wall including a skeleton comprising relatively small blocks arranged in horizontal rows with the blocks of each row spaced a substantial distance apart, the blocks of one horizontal row contacting with the blocks of adjacent horizontal rows and extending across the spaces between the blocks of adjacent horizontal rows.

1,399,321. CHARGE-HEATER FOR EXPLOSIVE-MOTORS. GEORGE A. RICHARDS, Pueblo, Colo. Filed June 5, 1920. Serial No. 386,847. 3 Claims. (Cl. 237—241.)

1. A charge heater for motors, comprising means for conveying heat from the exhaust manifold to the intake pipes of a motor, said means including a metallic plate having portions thereof cut-away for encircling the exhaust manifold, and a screen supported in said plate to be heated thereby and interposed between the intake pipe and intake manifold.



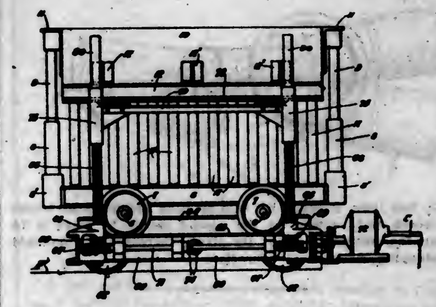
1,399,322. WATCHCASE. CHARLES ROTHEN, Geneva, Switzerland. Filed May 7, 1921. Serial No. 467,737. 6 Claims. (Cl. 58—88.) (Granted under the provisions of the act of Mar. 3, 1921, 14 Stat. L., 1313.)

1. A watch casing comprising a bottom with the rim portion in one piece, a glass bezel screwing into said rim portion and engaging with a dust sleeve within said casing.

1,399,323. WINDOW. ALFRED PETTER SCHOELLERMAN, Lake Park, Iowa. Filed Dec. 28, 1920. Serial No. 433,575. 3 Claims. (Cl. 20—42.)

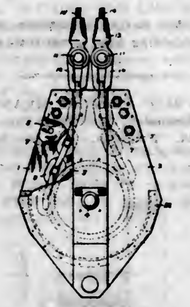
1. A window of the character described comprising a frame including side members, a top member, a sill arranged at the lower end of said frame, a plurality of sash sections arranged within said frame, hinges connecting the upper of said sash sections to the top member of said frame and constraining said upper sash section to swinging motion, hinges pivotally connecting the other of said sash sections and constraining said other sash sections to swinging movement, guide rollers arranged upon certain of said sash sections, said side members of said frame having grooves operatively receiving said guide rollers, angular arms carried by the lowermost of said sash sections, weights operatively arranged in said frame, flexible elements connecting said angle arms and said weights, a handle carried by the lowermost of said

sash sections and sash locks carried upon certain of said sash sections and coöperating with said frame to secure said sash sections in closed position.



1,399,324. ARMORED PNEUMATIC TIRE. GEORGE M. STIVERS, Dixon, Calif. Filed Jan. 18, 1921. Serial No. 438,149. 2 Claims. (Cl. 152—16.)

1. The combination with a tire having a median rib and side ribs, of a split circumferential shield having an inner groove to receive the median rib of the tire and having side flanges abutting the side ribs of the tire, said shield having external circumferential grooves upon opposite sides of its median line, and endless cables detachably seated and normally held within said grooves by the pressure of the tire.

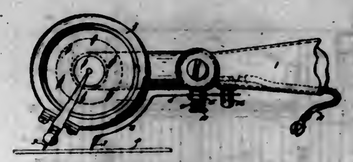


1,399,325. MACHINE FOR MAKING BUILDING-BLOCKS. FRANCIS J. STRAUB, New Kensington, Pa. Filed Nov. 15, 1920. Serial No. 424,133. 24 Claims. (Cl. 250—41.)

1. Apparatus for molding plastic blocks comprising a movable mold, a filling device beneath which the said mold is adapted to pass, a press beneath which the movable mold is adapted to pass, and a movable stripping device supported on trucks for receiving and transporting the molds and for stripping the blocks from the mold

after the mold has been moved from beneath the press and received by said stripping device.

1,399,326. CABLE-EQUALIZER. GORHAM A. TAYLOR, Duluth, Minn. Filed Jan. 17, 1921. Serial No. 437,781. 2 Claims. (Cl. 254—135.)

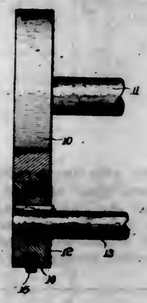


1. The combination with the termini of two pulling lines having a sheave block adjacent said termini, of a chain reeved about the sheave within the block and attached to the ends of the lines, and means coöperatively connected with said attachment to prevent either end of the chain being pulled through the block.

1,399,327. PHONOGRAPH-STOP. EDWARD J. TOMLINSON, Newark, N. J., assignor to Splitdorf Electrical Company, Newark, N. J. Filed Oct. 27, 1919. Serial No. 333,800. 5 Claims. (Cl. 192—116.)

3. In a phonograph, the combination of a sound record body, motor means for driving said sound record body, a tone arm carrying a reproducer having a playing needle, means for stopping said motor means and a second needle normally out of engagement with the sound record body for actuating the stopping means but pivotally mounted on the tone arm for movement in two directions, means independent of the tone arm for holding said second needle from movement toward the sound record until

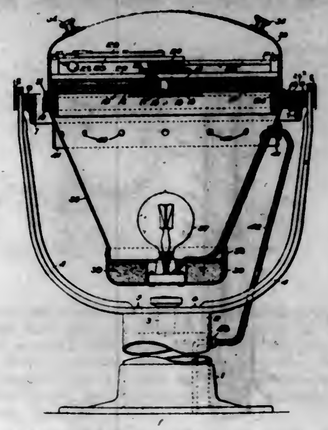
after the record has been played and then releasing it, means carried on the tone arm for moving the second needle about its pivot onto the sound record body after



it has been released by said holding means, said sound record body acting on the second needle to move it in another direction about its pivot whereby it brings said stopping means into operation.

1,399,328. RESILIENT HEEL AND TREAD-INSERT. HARVEY H. TROXEL, Ashland, Ohio. Filed Aug. 7, 1920. Serial No. 401,846. 9 Claims. (Cl. 36—59.)

1. A resilient heel having a fastener, and a relatively movable fastener driving head constituting a tread insert for the heel.



1,399,329. NON-SLIP DRIVING MEANS. ROBERT O. VANDERCOOK, Evanston, Ill. Filed June 16, 1921. Serial No. 477,954. 7 Claims. (Cl. 74—26.)

1. The combination with two members having rolling engagement and continuously in contact, one of said members having a depression, of elastic friction material in said depression to be compressed during engagement of said members to prevent slippage between them.

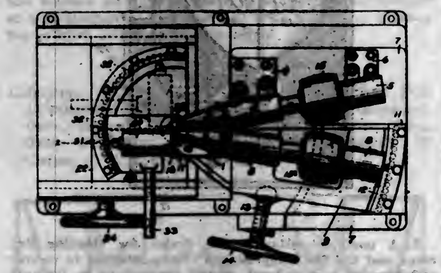
1,399,330. PELORUS. WILFRID O. WHITE, West Newton, Mass. Filed Oct. 17, 1918. Serial No. 258,570. 11 Claims. (Cl. 33—72.)

1. A pelorus of the class described comprising a frame, a universally mounted inner ring thereon having a cover, a compass dial with illuminated characters beneath the

cover and means carrying the dial and extended above the cover for independently rotating the dial.

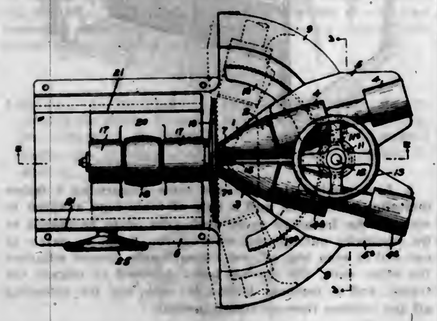
1,399,331. VEHICLE-WHEEL. GEORGE B. BELL, Cambridge, Mass., assignor to Sarah L. Bell, Cambridge, Mass. Filed Feb. 8, 1921. Serial No. 443,323. 4 Claims. (Cl. 152—8.)

4. A vehicle wheel embodying therein a felly, a resilient rim constructed in two parts fast to the opposite sides of said felly, each of said parts embodying therein a flange, said flanges coöperating with said felly to form a peripheral groove extending around said felly, a strip fast to each of said flanges provided with corrugations formed thereon, a helical spring extending around said rim within said groove and seated in said corrugations and means for retaining said helical spring within said groove and corrugations.



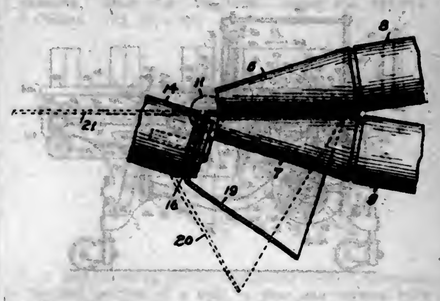
1,399,332. FLIER FOR ROVING-FRAMES AND OTHER LIKE TEXTILE APPARATUS. LEON W. CAMPBELL, Barre Plains, Mass. Filed Dec. 21, 1920. Serial No. 432,183. 7 Claims. (Cl. 118—57.)

2. In a flier for roving-frames, the combination of a member adapted to be mounted on the bolster-spindle, a



vertical rod journaled in a bearing on said member, a presser carried at the lower end of the rod to adapt it to swing outwardly from the axis of the spindle, a weight, a cord for suspending the weight on the member, and means to connect the cord to the rod to resist the turning movement of the latter by the action of gravity on the weight.

1,399,333. MILL FOR ROLLING TAPERED DISKS. ARNOLD CHRISTIANSON, Detroit, Mich., Filed July 21, 1920. Serial No. 397,956. 8 Claims. (Cl. 80—16.)



2. In an apparatus for converting metallic cups into disks, the combination of rolls arranged one to bear on the inside and the other on the outside of the cup and receiving the cup walls therebetween, said rolls being arranged to exert the greatest rolling action on the cup walls at the open end and a gradually reducing rolling action toward the bottom thereof, means engaging the bottom of the cup and holding the same in position between the rolls, said means being arranged to vary its angular position in relation to the pass between the rolls as the cup is progressively flared and means to adjust said rolls to vary the rolling pressure to a greater extent at the open end of the cup than toward its bottom.

1,399,334. MILL FOR ROLLING TAPERED DISKS. ARNOLD CHRISTIANSON, Detroit, Mich. Filed July 21, 1920. Serial No. 397,957. 6 Claims. (Cl. 80—16.)

4. In apparatus for converting metallic cup-shaped blanks into disks, the combination of a rotary blank holder to which the bottom of the blank is secured, a spinning roll adapted to enter the cup-shaped blank, means for progressively changing the angle of the axis of the spinning roll relative to the axis of the blank holder, and a carriage movable toward and from the spinning roll and provided with bearings for the rotary blank holder.

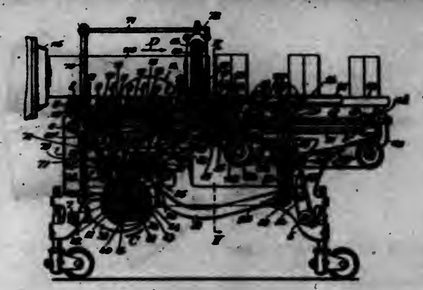
1,399,335. METHOD OF FORMING WHEEL-DISKS. ARNOLD CHRISTIANSON, Detroit, Mich. Filed July 21, 1920. Serial No. 397,958. 8 Claims. (Cl. 29—159.)

1. The method of making disks which consists in forming a metallic cup-shaped blank, rotatably supporting said blank by its bottom, and subjecting the same to a circumferential rolling action to reduce and expand the same, such reducing and expanding action being greatest at the open end of the cup and decreasing toward its bottom, thereby increasing the diameter of the cup in a uniformly increasing degree from the bottom of the cup to its open end and producing a disk of gradually decreasing thickness from its central portion to its perimeter.

1,399,336. INTERIOR DECORATIVE FINISH. ALBION P. COLE, Brockton, Mass. Filed Jan. 6, 1921. Serial No. 435,537. 2 Claims. (Cl. 106—36.)

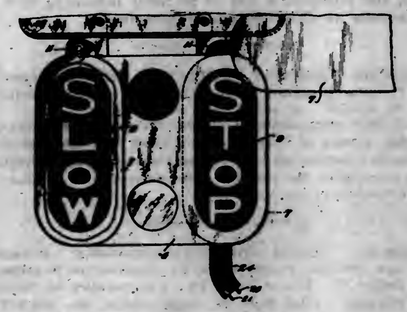
1. In a composition of matter, for interior decorative finish, a main or body portion of wood pulp, flour for an adhesive, petrolatum for permanent resiliency, and glycerin as a non-drier, the colorings being derived from the natural coloring of the wood pulp.

1,399,337. TOOTH FOR STEAM-SHOVELS. ROBERT REX DOWNIE, Beaver Falls, Pa., assignor to Keystone Driller Co., Beaver Falls, Pa., a Corporation of Pennsylvania. Filed Feb. 28, 1920. Serial No. 361,927. 4 Claims. (Cl. 37—56.)



1. A tooth for steam shovels, comprising a basic portion terminating at the forward end in a taper nose, a cap for the nose having a cavity of larger dimensions than the nose, to accommodate liners or shims, with the nose and cap provided with approximately registering holes, and a pin for traversing the holes when the liners are applied, whereby to cause a tight wedging fit of the cap through the liners to the nose.

1,399,338. BLOCK-PRESS. ERNST FREY, Chur, Switzerland. Filed Oct. 7, 1920. Serial No. 415,343. 6 Claims. (Cl. 25—107.)



1. In an apparatus for cutting bricks, tiles and the like, means to support a plastic bar on being expressed through a die, a cutting device with one cutting member, means to operate said cutting device, a carriage upon which said cutting device is mounted adapted to move with the same speed as the expressed bar during the cutting action, means to impart motion to said carriage for shifting every ele-

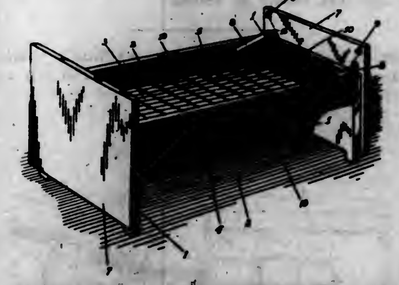
ment severed from said bar after the cutting action is completed to form a narrow gap between said element and the

bar, means to return the cutting device through said gap into the operative position, and means to remove the severed element from the carriage.

1,399,339. VEHICLE-SIGNAL. Jacob G. Freeman, Chicago, Ill. Filed Dec. 28, 1920. Serial No. 433,643. 8 Claims. (Cl. 116—42.)

1. In a signaling device, the combination of a signal box, a signal therein, a cover for said signal, means for positively actuating said cover to open the same, latch means to temporarily lock the cover in open condition, and means for releasing the latch means.

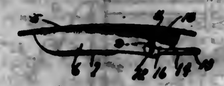
1,399,340. FACIAL MASSAGE DEVICE. Hazel E. Gray, Little Silver, N. J. Filed June 23, 1920. Serial No. 390,992. 3 Claims. (Cl. 128—62.)



1. As an article of manufacture a massage device comprising a substantial bar of wax-like material having an enlarged end portion at one end and a smaller cupped portion at the other end thereof.

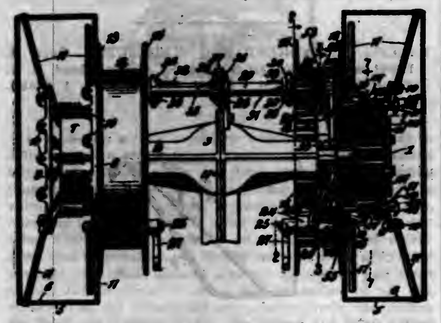
1,399,341. MOP-CLEANING DEVICE. Agnes B. Gaynes, Los Angeles, Calif. Filed Jan. 14, 1921. Serial No. 437,212. 7 Claims. (Cl. 15—12.)

5. A portable self-contained device for cleaning dry mops and the like comprising a casing adapted to receive and support a mop head, means adapted to be inserted at a plurality of places between the strands of the mop head, a source of power and transmitting devices for causing said means to oscillate back and forth between the strands to shake the dust therefrom, a conical receptacle into which the dust falls, a container, and means for conveying the dust from the receptacle to said container.



1,399,342. COMBINATION BED, TABLE, AND SETTEE. Charles H. Gunn, Oakland, Calif. Filed Jan. 22, 1921. Serial No. 439,070. 2 Claims. (Cl. 5—17.)

2. In a combination bed and table comprising a frame inclosing a bed area and a pair of table tops adapted to rest on the frame to cover such area or to be moved to lie vertically outside the ends of the frame, a catch at one end of each top, catches on each side thereof adjacent the other ends, the catches being adapted to engage the frame, and a common means in each top for releasing all the catches thereon simultaneously.



1,399,343. BUCKLE. Walter E. Guyot, Attleboro, Mass., assignor to Morse-Andrews Company, Attleboro, Mass., a Corporation of Massachusetts. Filed Mar. 30, 1921. Serial No. 456,921. 6 Claims. (Cl. 24—191.)

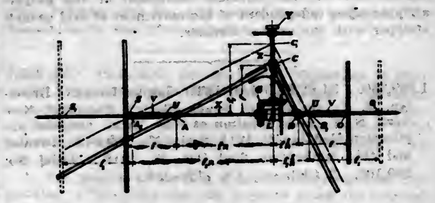
1. A buckle comprising a body portion, a clamp member pivotally supported in said body and having two separated relatively rigid clamping edges located at different distances from the pivotal axis of said member, each edge being adapted to clamp a belt independently of the other edge whereby belts of widely different thick-

nesses may be retained in said body, and a free swinging bail member pivotally mounted on said clamp independent of the clamp-pivot and provided with means for limiting the relative swinging of said clamp.

1,399,344. POWER-DELIVERING ATTACHMENT FOR AUTOMOBILE-TRACTORS. Leo Haubert, Muskogee, Okla., assignor of one-half to John A. Wolfe, Tulsa, Okla. Filed Mar. 24, 1920. Serial No. 368,251. 20 Claims. (Cl. 254—166.)

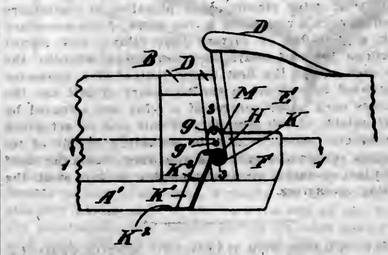
1. A power delivering attachment for a motor vehicle having a drive axle, comprising substitute traction wheels and a carrier for each wheel separate therefrom and adapted to be applied to and removed from and receive power from the axle, each of said carriers being mounted on and fixed to the axle and provided with means whereby the substitute wheel may be tightened to the carrier and loosened therefrom, and each carrier having means from which power may be taken.

1,399,345. CLOSURE-PLUG FOR TANKS. Paul Henry, Neuilly-sur-Seine, France. Filed June 22, 1920. Serial No. 390,961. 2 Claims. (Cl. 220—40.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



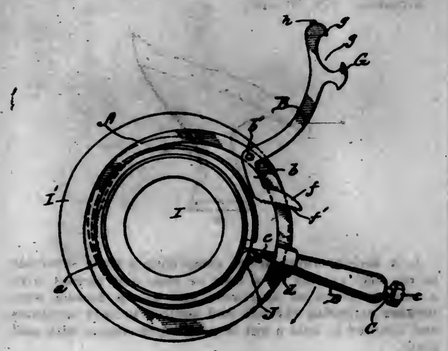
1. A closure plug for tanks comprising a cylindrical cap closed at its ends and having a plurality of peripheral openings, a rod axially fixed in the cap, a head slidable on the rod and provided with projections extending through the peripheral openings, and a spiral spring surrounding the rod between the head and one end of the cap.

1,399,346. HEEL FOR FOOTWEAR. Strauss Jamoulos, Boston, Mass., assignor to The Eureka Metal Heel Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 10, 1920. Serial No. 423,014. 3 Claims. (Cl. 36—40.)



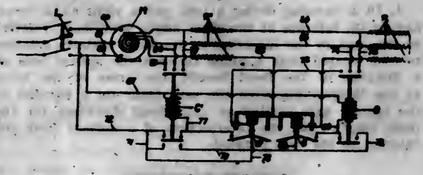
1. A heel-fastening device comprising a plate securable to the heel portion of a boot or shoe and formed with a central group of apertures, and a cup formed with tongues extending through and secured in said apertures and adapted to hold a nut in position to engage with said plate.

1,399,347. FOCUSING DEVICE. August F. Jobke, Pittsburgh, Pa. Filed Aug. 11, 1920. Serial No. 402,862. 6 Claims. (Cl. 88—24.)



1. In a focusing device a lens and a right angle lever, having its fulcrum at the right angle, stationary relative to the lens in the direction of its axis, variable relative to and located from a plane through the optical axis at a distance of the focal length, the arms of the lever at the intersection with the said plane on a parallel to the optical axis cutting at extra-focal distances for the focal length from the intersection of a normal from the fulcrum to the said parallel.

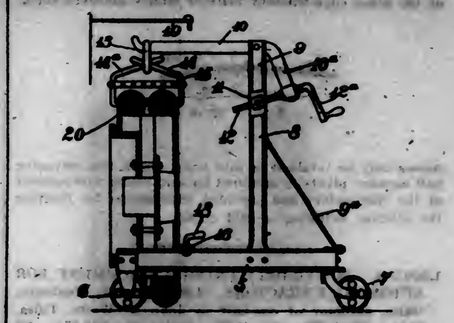
1,399,348. VEHICLE. John C. Jones, Brookline, Mass. Filed Aug. 11, 1920. Serial No. 402,826. 5 Claims. (Cl. 296—75.)



1. A vehicle having a storage compartment and a foot-rest, the latter serving as a wall for said compartment, the ends of the foot-rest extending forwardly with relation to the center of the foot-rest.

1,399,349. JAR-OPENER. RAYMOND A. KEMPER, Ramsey, N. J. Filed Apr. 2, 1918. Serial No. 226,848. 11 Claims. (Cl. 81—3.1.)

1. A jar opener embodying a carrier member, and a gasket stripper supported by said carrier member, said gasket-stripper being shiftable at will relatively to the carrier member, the shiftable movement of the gasket-stripper being independent of the movement of said gasket-stripper with the carrier member.



1,399,350. ELECTROMAGNET. LOUIS LARSEN, Brooklyn, N. Y., assignor to Sundh Electric Company, New York, N. Y., a Corporation of New York. Original application filed Jan. 2, 1918, Serial No. 209,842. Divided and this application filed Oct. 29, 1918. Serial No. 260,102. 3 Claims. (Cl. 172—289.)

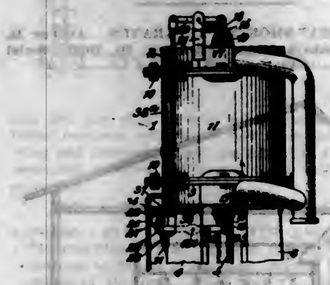
3. In a control system for polyphase induction motors, the combination, with the motor and resistances in the secondary or rotor circuit, of a plurality of contactors controlling each a resistance in the wires of the secondary circuit, a plurality of current-limit relays, and circuit connections for the relays and contactors whereby the relays each except the first under control of a contactor are actuated by current in the secondary circuit and the contactors each under control of a relay are actuated by current outside of the secondary circuit and on actuation each contactor short-circuits the actuating circuit of its controlling relay and establishes a holding circuit for itself and the last contactor opens the holding circuits of all the preceding contactors.

1,399,351. CRANE FOR HANDLING MOTOR-VEHICLE WHEELS. WILLIAM E. LEE, Columbus, Ohio. Filed Sept. 23, 1919. Serial No. 325,628. 6 Claims. (Cl. 212—140.)

1. A crane for handling a motor car wheel comprising, in combination, a base, a post thereon, a crane arm fulcrumed in the post, said arm having means for engaging and sustaining the wheel at its upper portion including

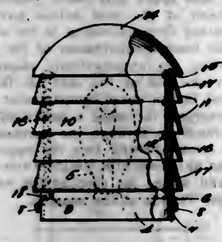
a journaled threaded block, and a screw swiveled in the crane arm turning in said block.

1,399,352. HEADREST FOR BATHTUBS. SAUL S. LEFFLER and RUDOLPH R. HATTON, Coney Island, N. Y. Filed July 26, 1920. Serial No. 398,989. 1 Claim. (Cl. 4—2.)



A head rest for bath tube including a supporting structure equipped with upstanding slidable arms, a pillow, and angle straps adjustably connecting said arms and pillow to permit angular retention of the latter.

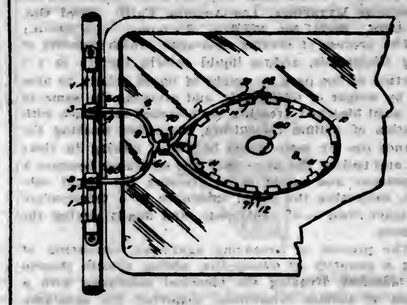
1,399,353. CARBURETER. CHARLES C. LITTLE, San Jose, Calif. Filed Mar. 19, 1919. Serial No. 283,457. 8 Claims. (Cl. 261—12.)



1. A combined vaporiser and carbureter including a heating medium conducting chamber having an inlet and outlet, fuel conduits extending through the chamber between the inlet and outlet, a by-pass arranged in the wall of the chamber between the inlet and said conduits and adapted to place the interior of the chamber in communication with the atmosphere, a valve mounted in the by-pass for controlling the passage of heating medium from the chamber to the atmosphere, an adjustable deflector mounted in the chamber for directing heating medium into one or more of said conduits, and means connecting the valve and deflector, the valve, deflector and means connecting the same being so arranged that opening of the valve will cause the deflector to direct heating medium on an increasing number of conduits.

1,399,354. DOUBLE-ACTING FOUR-CYCLE EXPLOSION-ENGINE. CHARLES O. LOUREUS, Manistee, Mich. Original application filed Jan. 29, 1920, Serial No. 354,066. Divided and this application filed Aug. 16, 1920. Serial No. 404,538. 2 Claims. (Cl. 123—63.)

1. A double-acting explosion engine provided with a cylinder and a single piston therein, the cylinder having inlet and exhaust ports for both ends thereof, spring controlled valves for the ports, rocker arms engaging the valves at one end of the cylinder, other rocker arms, engaging the valves at the other end of the cylinder, still other rocker arms connected to the first named rocker arms and adjacent to the second named rocker arms, and a single cam shaft located between the second and third named rocker arms to cause the actuation of all the rocker arms for alternately and consecutively controlling the inlet and exhaust valves, the second and third named rocker arms being pivoted independently of each other on the engine.

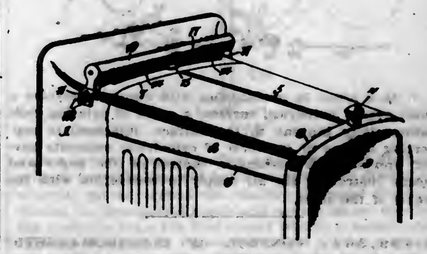


1,399,355. LIGHT-DEFLECTOR. JAMES A. LOVELAND and MERRITT L. FISHER, Kalamazoo, Mich. Filed Mar. 22, 1920. Serial No. 367,702. 3 Claims. (Cl. 240—11.)

1. A device of the class described comprising a body portion including a plurality of superposed spaced deflectors, a source of light within the body portion, each deflector having an inwardly extending apertured portion, and means extending through said apertured portions of the deflectors for securing them in position.

1,399,356. GLARE-REFLECTOR. EDWARD C. LYTLE, Watertown, N. Y. Filed Feb. 24, 1921. Serial No. 447,399. 2 Claims. (Cl. 296—97.)

1. A glare reflector for automobiles comprising the following elements in combination; a bifurcated frame, a vertical supporting rod, operative connections that join the bifurcated frame to the rod for vertical and horizontal adjustment, the said bifurcated frame including portions bent toward each other and terminating in angled extensions clamped together to constitute a horizontal bearing, a second bifurcated frame, having the outer ends



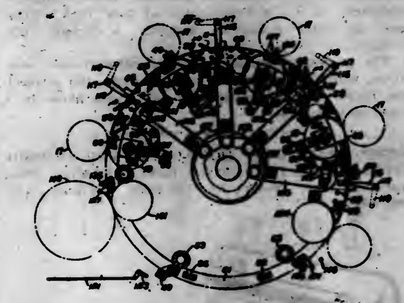
of the spread members joined to form a socket for engaging the aforesaid bearing, to provide for vertically swingable adjustments of said second frame, and a glare reflector supported between the separated ends of the said second frame and operative connections between the glare reflector and the said second frame to provide for sustaining the said glare reflector.

1,399,357. PROCESS OF MAKING COLORED NITROCELLULOSE COMPOSITIONS. LESTER J. MALONE, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y. a Corporation of New York. Filed Apr. 20, 1921. Serial No. 463,092. 4 Claims. (Cl. 8—5.)

1. The process of making a colored nitrocellulose composition, which comprises the steps of dying the nitrocellulose fibers and then dissolving said dyed fibers in a nitrocellulose solvent.

1,399,358. RAINPROOF HOOD-COVER FOR AUTOMOBILES. GEORGE F. MANSFIELD, Pascagoula, Miss. Filed Apr. 11, 1919. Serial No. 289,397. 1 Claim. (Cl. 180—69.)

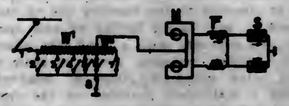
A rainproof cover for an automobile hood, comprising a flexible section, a spring roller to which one end of the flexible section is attached, a casing for the spring roller attached at its ends to the forward end of the body of the automobile, said casing having an edge spaced from said body and provided with a bead, the upper side of the flexible section engaging the said bead when the section is being withdrawn from or returned to the casing, and a watershed provided on the rear of the casing, said watershed comprising a strip of flexible waterproof material and adapted to bear upon the body portion of the vehicle to divert water from beneath the casing,



said flexible section having a stiffening strip at the outer edge, said stiffening strip engaging between said bead and said hood when the section is wound upon the spring roller.

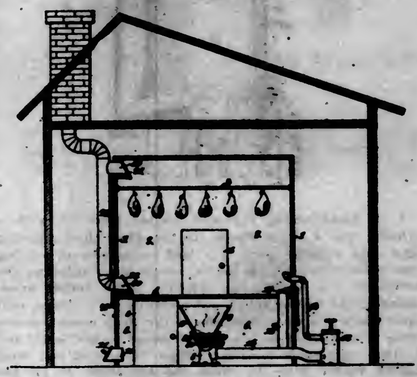
1,399,359. PROCESS FOR MAKING AGAR-AGAR. CHOKICHI MATSUOKA, Los Angeles, Calif. Filed Oct. 10, 1918. Serial No. 257,672. 2 Claims. (Cl. 99—9.)

1. The process of making agar-agar, which consists of drying *Gloiopeltis*, adding liquid chlorin thereto in the proportion of one part by weight of liquid chlorin to nine parts by weight of *Gloiopeltis*, and allowing the same to stand until bleached, treating the bleached substance with a solution of sodium thiosulfate, thereafter washing the substance one or more times in water, placing in clear water and boiling the same until the substance becomes a homogeneous and viscid mass, freezing the viscid substance, subjecting the viscid substance to a temperature not higher than −5° centigrade, and finally drying the substance.



2. The process of preparing agar-agar, consisting of drying a quantity of *Gloiopeltis*, adding chlorin thereto until bleached, treating the bleached substance with a solution of sodium thiosulfate, removing the substance from the solution and washing the same in clear water, subjecting the cleansed substance to the action of heated water until a homogeneous and viscid mass is obtained, freezing the viscid mass, and finally trying the same with sun heat.

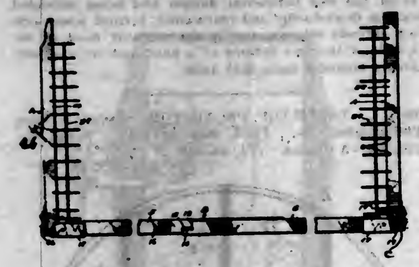
1,399,360. PRINTING-PRESS. CHARLES A. MIESSE, Dorchester, Mass., assignor to Meisel Press Manufacturing Company, Dorchester, Mass., a Corporation of Massachusetts. Filed Apr. 19, 1919. Serial No. 291,216. 46 Claims. (Cl. 101—184.)



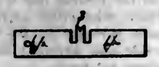
1. In a press, in combination with means to revolve a sheet over a cylindrical surface, a series of printing rolls substantially tangent to the surface, intermediate supporting devices in the form of cylindrical segments having provision for pneumatic control of the paper and means controlling the air supply in correlation with the travel of the sheet.

1,399,361. CONTROL OF ELECTROMAGNETIC TRACK-BRAKE SYSTEMS. GOTTLIEB L. METTARTH, Geneva, Switzerland. Filed Sept. 18, 1919. Serial No. 324,678. 2 Claims. (Cl. 188—159.)

1. A method of controlling electro-magnetic track brakes on electrically propelled railway and tramway vehicles of the kind wherein the track brakes are adapted to be operated by current supplied from the vehicle motors acting as generators with or without an additional supply of current from the propulsion circuit, which method consists in including, during the short-circuit braking, the usual motor starting resistance only in the motor short-circuit in series with the track brakes, while, on changing over to short-circuit braking with additional supply circuit current, an additional resistance is connected in the closed motor and track brake circuit and put in series with the starting resistance between the supply circuit conductor and earth, substantially as and for the purpose described.



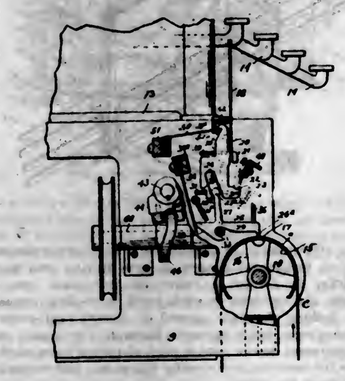
1,399,362. MEAT-SMOKING APPARATUS. AUGUST M. MILLER, Mankato, Minn. Filed Oct. 20, 1920. Serial No. 418,211. 4 Claims. (Cl. 99—2.)



1. In a smoking apparatus of the character described, a housing having a solid horizontal partition whereby upper and lower compartments are provided, means in the upper compartment for suspending the articles to be smoked, a smoke stack, the latter having a connection which extends into the upper end and a connection which extends into the lower end of the upper compartment of the housing, automatically closing valves engaging the intakes of the said upper and lower connections to the smoke stack, each of the said valves having attached means for operating them extending to the outside of the smoke house, the lower compartment of the housing having an air intake, an automatically closing valve located on the intake end of the said air inlet, a smoke generator located in the lower compartment of the housing, the said generator including a smoke outlet having a branch that extends up through the horizontal partition for leading the smoke directly into the upper or smoking compartment, an automatically closing valve for the said smoke outlet, and means for opening the valve at times operable from the outside of the housing.

1,399,363. COLLAPSIBLE CAMP-BED FRAME. FRANKLIN A. MILLER and BERTRAND M. TANNER, St. Anthony, Idaho. Filed Dec. 28, 1920. Serial No. 433,685. 2 Claims. (Cl. 5—5.)

1. A bed bottom comprising a pair of completely separable sections, each having a transversely extending end frame member and a pair of longitudinally extending side rails, studs carried by the side rails of one pair, notches formed in the ends of the side rails of the other pair adapted to engage said studs, horizontally overlapping portions upon the side rails of the opposed pairs which limit downward rocking movement of the two sections to a position where the side rails lie in substantial alinement with each other, legs pivotally connected to the end members and adapted to fold upwardly therebeneath and in parallelism therewith and hinge connections between the end frame members and the side rails for permitting the side rails to fold in parallelism with the end frame members, portions of said hinge connections overlying and abutting against the legs when the parts are in assembled relation to thereby hold said legs against movement.



1,399,364. ELECTRICAL SWITCH AND METHOD OF PRODUCING SAME. ARCHIE OAKES, Detroit, Mich., assignor to Square D Company, Detroit, Mich., a Corporation of Michigan. Filed May 17, 1918. Serial No. 235,061. 14 Claims. (Cl. 200—172.)

4. An electrical switch blade having an upwardly extending rivet member formed integrally therefrom and projecting beyond the upper longitudinal edge of the blades.

1,399,365. MECHANISM FOR AUTOMATICALLY OPERATING TYPEWRITER-LEVERS AND THE LIKE. JOHN H. PILLINGS, Hamilton, Ohio. Filed Feb. 7, 1921. Serial No. 442,096. 6 Claims. (Cl. 197—20.)

1. In mechanism of the character described, the combination of a vertical plate, guiding means therefor permitting vertical movements and movements forward and backward, a pivoted lever having a prong at its end, a controller supporting device having a recess below said prong, connections between the plate and lever such that the downward movement of the prong end of the lever will displace the plate forward, and that the downward movement of the plate will lift the pronged end of the lever and means to move the plate downward when it has been displaced forwardly.

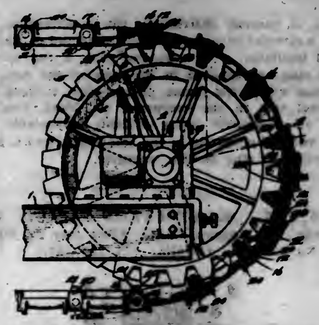
1,399,366. TIMER. SILAS E. SELLECK, Cold Spring, N. Y., assignor of one-third to Theodore J. Selleck, Cold Spring, N. Y. Filed Mar. 17, 1920. Serial No. 366,525. 2 Claims. (Cl. 200—27.)

1. In a current distributer the combination with a frame, a circular insulator in the frame and contact points in said insulator, with a floating ring, a cup attachment to the ring and a pivot in the apex of the cup, a shaft extension within the frame, an eccentric, a block fitting a diametral slot in the eccentric, the block fast on the shaft, the eccentric being slidably adjustable on the block, and the eccentric in the slot space, and a ball-bearing peripheral ring on the eccentric.

1,399,367. SODA-FOUNTAIN FAUCET. CARL U. SENTER, Los Angeles, Calif. Filed July 28, 1921. Serial No. 488,200. 1 Claim. (Cl. 225—27.)

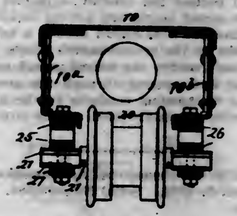
In a faucet, a nozzle having a narrow center discharge conduit for squirting and having a number of discharging conduits spaced around the conduit, a second nozzle inclosing the first-named nozzle and having larger discharging facilities than the first-named nozzle, a hollow shaft turnably disposed in the second-named nozzle, propelling wings on the shaft within the second-named nozzle to be actuated by the flow passing through the second-named nozzle from the discharging conduits in the first named nozzle and stirring wings provided on the outer free end of the shaft.

1,399,368. BRUSH. FREDERICK A. SHELTON, Chicago, Ill. Filed Jan. 7, 1921. Serial No. 435,584. 3 Claims. (Cl. 15—16.)



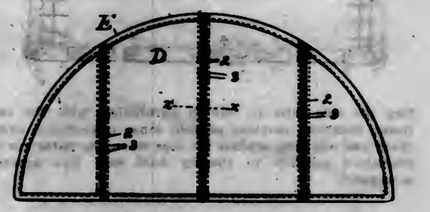
3. A brush comprising a body member provided with an opening, a bristle bearing member provided with an opening, a threaded member passing through said openings,

and wires for fastening said bristles in said bearing member and forming projections on the back of the bristle



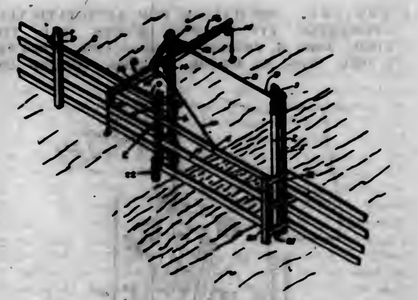
bearing member to engage the body member and assist the threaded member to retain said bristle bearing member in proper position on said body member.

1,399,369. ENDLESS-TRACK MECHANISM FOR VEHICLES. ARTHUR B. WOOD, Chicago, Ill., assignor to William N. Smith, Chicago, Ill. Filed Nov. 17, 1919. Serial No. 338,476. 6 Claims. (Cl. 305—10.)



1. An endless track for vehicles formed of a plurality of links each having an inwardly projecting tooth at each end; in combination with a gear wheel having teeth with one of which one tooth upon a link has driving engagement when the track is moving in one direction, another tooth of said gear wheel engaging the other tooth upon the same link with the last aforesaid link tooth upon reversal in the direction of the track travel, the teeth upon similar ends of the links being arranged in one zone while the teeth upon the remaining ends of the links are arranged in another zone spaced apart from the first zone; and ribs between the teeth of the gear wheel and substantially midway between the ends of these teeth that move in the space between the aforesaid tooth zones.

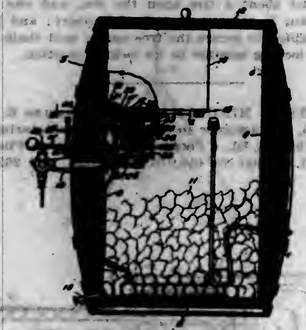
1,399,370. TRACK-LAYING TRACTOR. ROLLIN H. WHITE, Cleveland Heights, Ohio, assignor to The Cleveland Tractor Company, Euclid, Ohio, a Corporation of Ohio. Filed Oct. 11, 1919. Serial No. 329,963. 1 Claim. (Cl. 305—9.)



In a track laying tractor, the combination of a track frame having two parallel spaced apart side beams which are respectively provided along their lower edges with horizontal flanges which extend toward each other, a plurality of pairs of leaf springs, the two springs of each pair being at corresponding ends clamped to the under faces of the two horizontal flanges and being extended therefrom downwardly and rearwardly, a track wheel axle which extends between and is nonrotatably fixed to the free ends of the two springs of a pair, and track wheels rotatably mounted upon said axles.

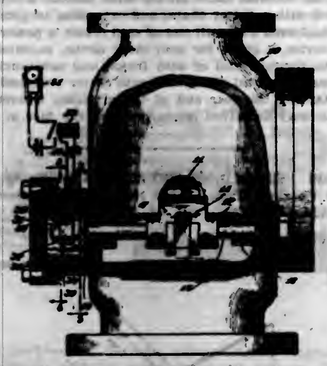
1,399,371. TABLE-TOP PROTECTOR. OSCAR WINTER, Philadelphia, Pa. Filed May 3, 1917. Serial No. 166,208. 5 Claims. (Cl. 65—53.)

1. The combination in a table top protector having two outer sheets of flexible material, of a plurality of sections of non-heat-conducting sheets slightly separated from one another at their adjacent edges and arranged between said outer sheets, a row of stitches passed through the two outer sheets on the folding line between the adjacent edges of the non-heat-conducting material, and rows of stitches, 3, 3, passed through all the sheets of material one row on each side and adjacent to a folding line or hinge, for the purpose set forth.



1,399,372. FARM-GATE. ALBERT OLTMAN, Eureka, Ill. Filed Jan. 17, 1920. Serial No. 352,044. 2 Claims. (Cl. 39—48.)

1. In a sliding gate, in combination, two tracks disposed in different horizontal planes, a gate having end posts, which differ in height, a roller on each post, one for each track, obstructions on each track near their opposite ends for locking the gate opened or closed, said obstructions comprising bolts secured through the tracks and having abutment heads, and a pair of cables connected to said gate for opening and closing the same, and extending laterally from the gate.



1,399,373. DISPENSING APPARATUS. CHARLES L. BASTIAN, Chicago, Ill. Filed May 13, 1921. Serial No. 469,838. 6 Claims. (Cl. 225—26.)

1. A dispensing apparatus comprising a charging tank, means for maintaining a predetermined level of syrup in said tank, a draft arm having a handle lever, a measuring cup in the charging tank connected with said draft arm, and means connecting said handle lever with the cup whereby the cup may be raised to clear the level of the

syrup in the charging tank when the handle lever is moved to open the syrup passage in the draft arm and thereby permit the flow of a measured charge of syrup from the charging tank through the draft arm.

1,399,374. ALARM-VALVE FOR AUTOMATIC FIRE-EXTINGUISHING SYSTEMS. ERIC E. BIRKLAND and GUNNAR O. LILJEGREN, Chicago, Ill.; said Birkland assignor to said Liljegren. Filed July 24, 1920. Serial No. 398,697. 6 Claims. (Cl. 169—23.)

2. In a device of the class described, a casing having a valve mounted therein on a suitable hinge-pin, an oscillating case on the hinge-pin having an unrestricted chamber provided with a by-pass, terminals of an electric circuit in the chamber, a mercury column in the chamber to open and close the circuit through the terminals when the case is oscillated on the pin, a time delay relay in the circuit, an alarm controlled by the relay, a rock-arm on the hinge-pin normally restraining the oscillation of the case, and a spring to oscillate the case when the rock-arm is moved away from the case.

1,399,375. SPARK-PLUG. GEORGE R. BLODGETT and MOSES E. CHENEY, Brooklyn, and ROY T. HURLEY, New York, N. Y. Filed Oct. 22, 1921. Serial No. 509,483. 4 Claims. (Cl. 123—169.)

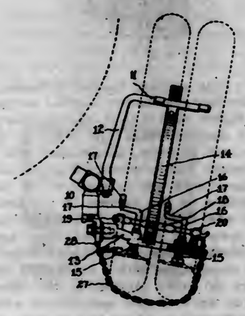
1. In a spark plug adapted for use in connection with cylinders of internal combustion engines having a compression ratio lower than 5 to 1, the combination of an electrode and a shell provided with a space, to be filled with gas from the cylinder, surrounding the electrode and adjacent parts, and a restricted orifice adapted to connect the space with the cylinder of an engine, the relative proportions of the volume of the space within the spark plug and the effective area of surface of the walls of

said space and the cross-sectional area of the orifice to one another being substantially as follows: the volume of said space being within about 1.75 cubic centimeters to about 1.25 cubic centimeters, the effective area of surface of the walls of said space being within about 43. square centimeters to about 20. square centimeters, and the cross-sectional area of the orifice being within about 0.10 square centimeters to about .20 square centimeters.

1,399,376. SPARK-PLUG. GEORGE R. BLODGETT and MOSES E. CHENEY, Brooklyn, and ROY T. HURLEY, New York, N. Y. Filed Oct. 22, 1921. Serial No. 509,482. 4 Claims. (Cl. 123—169.)

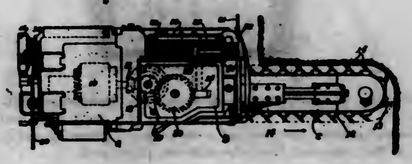
1. In a spark plug adapted for use in connection with cylinders of internal combustion engines having a compression ratio higher than 5 to 1, the combination of an electrode and a shell provided with a space, to be filled with gas from the cylinder, surrounding the electrode and adjacent parts, and a restricted orifice adapted to connect the space with the cylinder of an engine, the relative proportions of the volume of the space within the spark plug and the effective area of surface of the walls of said space and the cross-sectional area of the orifice to one another being substantially as follows: the volume of said space being within about 1.25 cubic centimeters to about .50 cubic centimeter, the effective area of surface of the walls of said space being within about 20.0 square centimeters to about 10.0 square centimeters, and the cross-sectional area of the orific being within about 0.20 square centimeter to about 1.0 square centimeter.

1,399,377. HANDBAG. ATHELSTAN H. CHRISTIE, St. Louis, Mo. Filed Apr. 23, 1921. Serial No. 463,747. 2 Claims. (Cl. 190—37.)



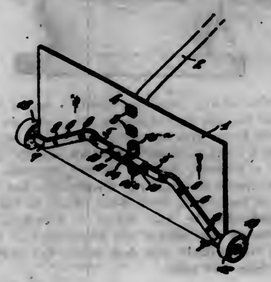
1. A hand bag comprising a pair of relative stiff sides, a T-shaped reinforcing strip formed of sole leather and provided with a rounded exterior edge extending around the edges of said sides and being substantially flush with the sides, a gusset, a row of stitching passing through the sides and gussets and reinforcing strip for uniting the same together, and a hinged frame to which said gussets are attached.

1,399,378. HEADLIGHT. JOHN P. CLULEY, Chicago, Ill. Filed Mar. 4, 1918. Serial No. 220,192. 2 Claims. (Cl. 240—41.)



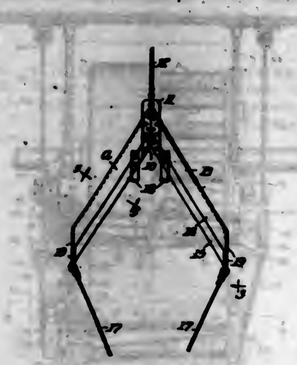
1. The combination with a parabolic reflector, of a substantially straight line light source horisontally positioned at the focal point of said reflector, a transparent envelop for said light source the fore part of which is of such a shape that direct rays from the light source reflected thereby are divergent, and means for adjusting said light source within said reflector to position said light source at the focal point of said reflector without disturbing the horizontal position of said light source.

1,399,379. MOTOR-VEHICLE. HOWARD S. CURRIER, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Apr. 5, 1919. Serial No. 287,753. 13 Claims. (Cl. 224—29.)



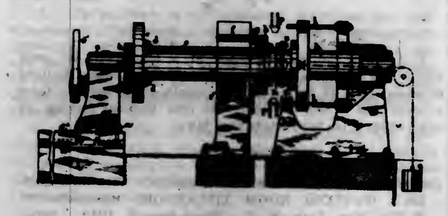
1. In a tire carrier of the class described, rim supporting means adapted to lie within a rim supported by the carrier and including a manually operable holding member adapted to engage the interior of a rim and hold it in place upon the carrier; a movable locking member adapted to lock said holding member in its holding position aforesaid; a chain adapted to extend about a rim upon the carrier and about a tire upon the rim, and one end of which chain is secured to a fixed support; and locking means adapted to secure the free end of said chain and to lock said locking member in its locking position.

1,399,380. MINING-MACHINE. CHARLES B. DAVIS, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 28, 1921. Serial No. 456,076. 3 Claims. (Cl. 262—30.)



1. In a mining machine, in combination, a motor, a frame member mounted forwardly of said motor, said motor and said frame member forming a bottom plate upon which the machine slides on the mine bottom, a cutter bar provided with a cutter chain, and extending longitudinally from the forward or wall end of said frame, a power-driven draft device, a guide for said draft device mounted adjacent the forward end of said frame and substantially in the same horizontal plane with said cutter arm, and means for retarding the rear end of the machine, whereby said machine may be moved laterally along the face of a mine wall.

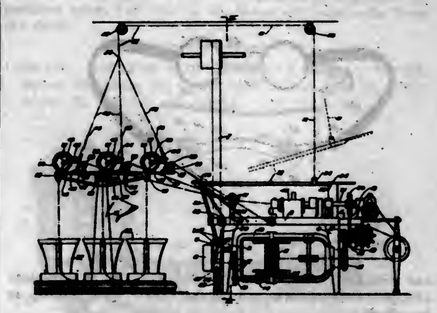
1,399,381. SPREADING DEVICE. ISAAC EVANS, Cleveland Heights, Ohio. Filed Nov. 8, 1920. Serial No. 422,525. 9 Claims. (Cl. 91—62.5.)



1. A device for the purpose described comprising a blade, rollers supporting said blade, and means for obtaining relative adjustment between said rollers and said blade.

1,399,382. SCRAPER. LESLIE P. GAMON, Chicago, Ill. Filed Sept. 28, 1920. Serial No. 413,455. 5 Claims. (Cl. 37—19.)

1. A scraper comprising sides secured together at one end and diverging forwardly, and guiding and digging extensions extending downwardly from said sides forward of the juncture between them, substantially as described.



1,399,383. APPARATUS FOR MAKING MULTIPLE BEADINGS ON PIPES. FERDINAND HECK, Dusseldorf-Rath, Germany. Filed Sept. 22, 1915. Serial No. 52,132. 4 Claims. (Cl. 153—27.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

4. Apparatus for forming pipe flanges, comprising a longitudinally slidable standard, means thereon for supporting and rotating a pipe at one end thereof, a coöperating standard freely supporting the opposite end of the pipe, an abutment ring adjustable on the pipe and having a bearing against said standard, a mandrel entering the pipe end and profile rollers carried thereby and bearing under axial pressure against the pipe end to buckle the wall of the latter and form the buckled portion into a flange.

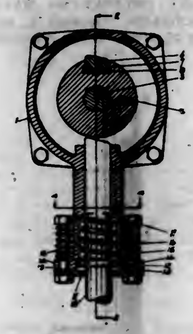
1,399,384. AUTOMATIC STOP FOR BARB-WIRE MACHINES. FRANK HEILMAN, Cleveland, Ohio, assignor to The American Steel and Wire Company of New Jersey, a Corporation of New Jersey. Filed Jan. 26, 1921. Serial No. 440,194. 4 Claims. (Cl. 140—126.)

1. The combination with a wire working machine having a driving belt and fixed and loose pulleys, of a belt shifter therefor, means tending to move said belt shifter, a latch bar for normally preventing the movement of said belt shifter, means engaging the wire fed to the machine, means connecting said first named means and said latch bar for releasing said bar, and a brakeshoe adapted to engage said fixed pulley when said belt shifter is operated to shift the belt to said loose pulley.

1,399,385. SHEET-DELIVERING MECHANISM FOR VENDING-MACHINES. GILBERT L. HUFF, St. Louis, Mo. Filed May 27, 1921. Serial No. 473,146. 2 Claims. (Cl. 211—8.)

1. In a device of the class described, the combination with a stationary sheet holder, of a rotary shaft, a sliding arm carried by said shaft and carrying a contact member adapted to engage with the sheet farthest removed from said stationary holder and to disengage said sheet from the holder, and a spring for said contact member to cause it to automatically compensate for the number of sheets carried by said holder.

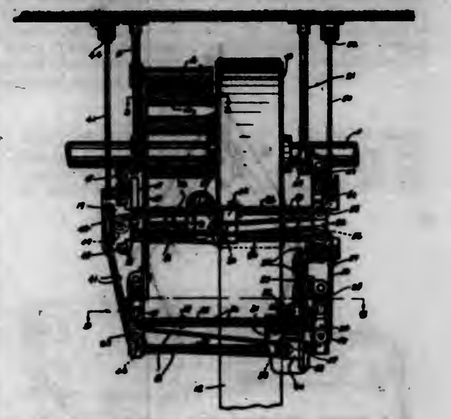
1,399,386. ABDOMINAL SUPPORT. FRANK Z. HUSAR, Chicago, Ill. Filed Nov. 20, 1917. Serial No. 202,802. 1 Claim. (Cl. 128—96.)



An abdominal support comprising a pad; an elongated plate extending horizontally across the front side of said pad; ball and socket connections loosely connecting said pad and plate at a plurality of points so as to permit

swinging movement of said pad about only a horizontal axis passing through said ball and socket connections;

and attaching means connected with the ends of said plate adapted to embrace the body of the wearer, substantially as described.

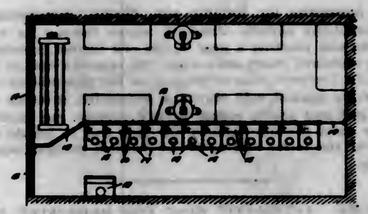


1,399,387. TAMPER AND LIKE IMPACT-TOOL. CONWILL JACKSON, Kalamazoo, Mich. Filed Apr. 11, 1921. Serial No. 460,557. 10 Claims. (Cl. 104—13.)

1. In a structure of the class described, the combination of a casing-like body member having a laterally projecting tool holder disposed at one end, a tool reciprocatingly mounted in said tool holder, an impact bar for said tool, a supporting spring for said bar, a driving shaft provided with bearings in the ends of said body member, impact wheel on said shaft provided with a tappet coacting with said tool, a handle comprising an S-shaped spring having one end rigidly secured to the tool holder end of said casing, a bowed spring pivotally secured to the other end of said casing, and a handle bar on the outer ends of said springs, and a spring normally holding said tool out of the path of the tappet.

1,399,388. BELT-SHIFTER. EMERALD E. JONES, Chicago, Ill., assignor to Surty Guard Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 22, 1921. Serial No. 439,098. 23 Claims. (Cl. 64—4.)

1. A belt shifter comprising two frames positioned on opposite sides of a belt, means carried by one of said frames for supporting the belt, a pair of bars interposed between said frames, a slide block movably mounted on said bars, a roller revolubly mounted on said slide block opposite one edge of the belt, and means for moving said



slide block for pushing said belt into position on said bar supporting means.

1,399,389. SOFT-COLLAR CLASP. HERMAN KAPOTKIN, New York, N. Y. Filed Mar. 25, 1921. Serial No. 455,523. 3 Claims. (Cl. 24—81.)

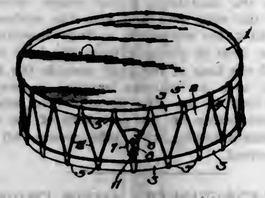
3. A collar holder composed of a blank slit on each side of its center to leave a web, said blank being doubled between the slits and along the length of the web to form a front and a rear member, the rear member having its ends shaped to form clamping jaws.

1,399,390. SERVICE ESTABLISHMENT AND CUSTOMER'S WAITING-ROOM THEREFOR. BENJAMIN W. KLEIN, New York, N. Y. Filed Dec. 6, 1919. Serial No. 343,068. 6 Claims. (Cl. 20—1.1.)

6. In a service establishment, an inclosure, a partition in the inclosure defining separate compartments and having an opening therethrough inter-communicating the compartments and provided with a transparent portion through which inspection of the compartments may be made one from the other, and a plurality of booths arranged in one compartment and having relatively low

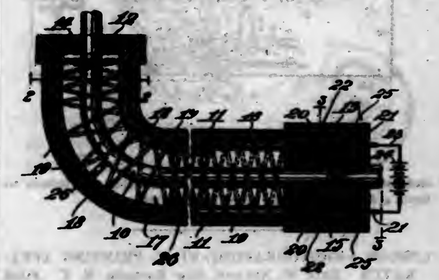
walls for exposing the upper part of persons in the booths, said transparent portion of the partition and said low walls of the booth permitting an attendant passing between the compartments to quickly determine the entrance and positions of persons in the booths.

1,399,391. SLIP PRINTING AND REGISTERING MACHINE. HAAKON A. MARTIN, Whitestone, N. Y., assignor to The National Cash Register Company, Dayton, Ohio. Filed Dec. 28, 1918. Serial No. 268,727. 42 Claims. (Cl. 235—3.)



1. In a machine of the class described, the combination of an item recording mechanism, a transaction recording mechanism, differentially adjustable actuators for setting the item recording and the transaction recording mechanisms, and independent means for operating each of said mechanisms.

13. In a machine of the character described, the combination of a transaction recording totaliser, differentially adjustable actuators therefor, a platen for receiving record material, means for moving the transaction totaliser to engage the platen and record its data upon the record material, and means for automatically restoring the totaliser to zero.



22. In a machine of the character described, the combination of an item recording mechanism, a transaction totalizer, a consecutive transaction recorder, and means controlled by the totaliser for actuating the consecutive transaction recorder.

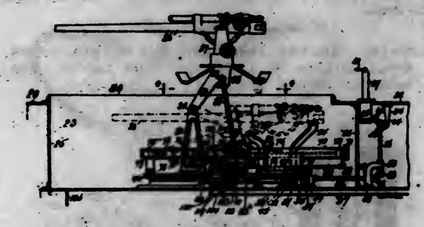
1,399,392. DRUM-EAR. OTTO MEYER, Chicago, Ill. Filed May 10, 1920. Serial No. 380,178. 2 Claims. (Cl. 84—413.)

2. The combination in a drum with a drum cord under tension, of a drum ear, said drum ear having a body portion provided with a pair of extensions and a rod-like member pivoted therebetween, said pivoted member having a diameter greater than the normal distance between the adjacent parallel portions of said drum cord, having a length greater than the normal distance between said drum ear and the adjacent portion of the drum, and being adapted to be swung about its pivot between adjacent portions of the drum cord, thereby spreading such adjacent portions apart and moving the drum ear outwardly from the drum.

1,399,393. HEATER FOR GASOLENE-SUPPLY PIPES. EDGAR MILLNER, St. Louis, Mo. Filed July 30, 1920. Serial No. 400,021. 9 Claims. (Cl. 219—38.)

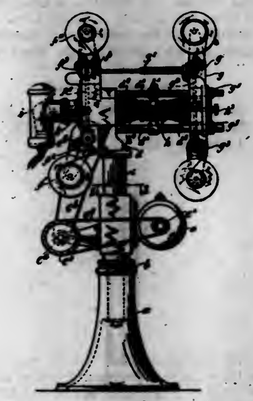
1. A heating device or hydro-carbon supply pipes comprising, in combination, a pair of spaced heads adapted for location upon a supply pipe, a flexible tube arranged between, and having engagement with, the heads, a shell disposed within the tubular member and adapted to provide a chamber around the pipe to be heated, and an electric heating coil for heating the chamber and pipe, the coil being disposed between the shell and tubular member.

1,399,394. GLASS CHEMICAL WARE. ALBERT MOND, London, England. Filed Oct. 2, 1918. Serial No. 256,595. 4 Claims. (Cl. 73—166.)



1. Measuring cylinders, graduated test mixers and the like glass chemical ware, comprising a cylinder of uniform gage made from a drawn glass tube and provided with equidistant graduations, a bottom consisting of a removable stopper, and a foot on which said cylinder stands.

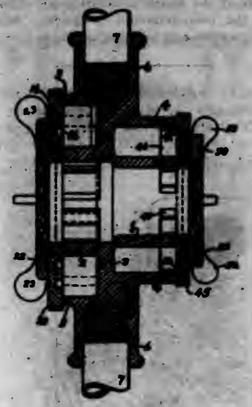
1,399,395. GUN-DISAPPEARING APPARATUS. JOHN AUSTIN MORAN, Brooklyn, N. Y. Filed Dec. 30, 1919. Serial No. 348,271. 6 Claims. (Cl. 89—38.)



1. In a gun disappearing apparatus the combination of a gun, a socket for the pivot of the gun, arms extending from the socket, a pair of links with the upper end of each pivoted to said socket, a turntable, journal brackets supported on the turntable, the arms of the socket pivoted to said journal brackets, a pair of cylinders supported on the turntable, a piston for each cylinder, a piston rod for each piston, pairs of guides on the

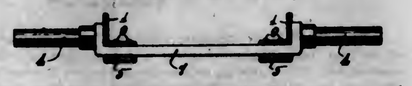
turntable, a cross head for each pair of guides, said cross head connected to its accompanying pisten rod, the lower

ends of said links pivoted to said cross heads and means to force a fluid into each end of both cylinders.



1,399,396. PHOTOGRAPHIC-FILM-PRINTING APPARATUS. ERIK W. NELSON, New Rochelle, N. Y. Filed May 22, 1920. Serial No. 383,387. 3 Claims. (Cl. 88—24.)

1. A photographic film printing apparatus comprising a base, a supporting head mounted thereon and rotatable about a vertical axis, a horizontal bar extended from the head, a film carrier mounted on the head, a second film carrier mounted movably on said bar, a lens system supported by the head between the two film carriers and a source of light supported by the head external to the two film carriers.



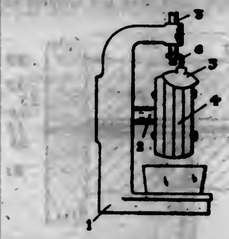
1,399,397. DIESTOCK. IRA W. NONNEMAN, Warren, Ohio, assignor to The Borden Company, Warren, Ohio, a Corporation of Ohio. Filed Feb. 9, 1920. Serial No. 357,236. 11 Claims. (Cl. 10—122.)

1. The combination with a chaser carrying frame, a plurality of sets of radially movable chasers, a series of cams for actuating one set of chasers radially, and lever connections between each chaser of one set with a chaser of the other set, whereby inward movement of one set

of chasers causes outward movement of the other set of chasers.

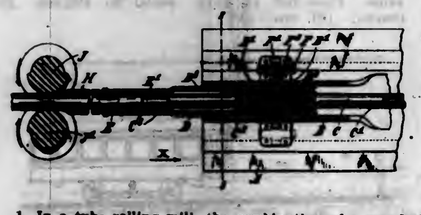
1,399,398. AXLE-BOX. ROBERT C. OSGOOD, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed May 28, 1920. Serial No. 385,011. 7 Claims. (Cl. 295—42.)

1. In combination, a frame, a drop axle disposed beneath the same, an axle box having a recess of less depth than that of the drop portion of said axle receiving the bottom of said portion, and means exterior to said axle for clamping said box to said frame.



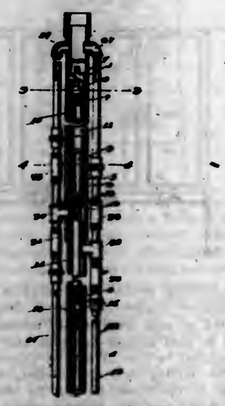
1,399,399. CONNECTOR. HOWARD ELLSWORTH PARSON, Calgary, Alberta, Canada. Filed May 12, 1920. Serial No. 380,920. 1 Claim. (Cl. 137—21.)

The combination with an oil container of a plug, screwed into the base thereof and projecting therein, having a central hollow cavity and orifices in the side walls within the container, a cap screen covering the open end of the said plug and also the orifices on the side walls within the container, a ring connector around the said plug, held in place between the base of the oil container and the base of the plug, outside the container, and provided with an interior annular groove, orifices in the lower end of the plug opening into said groove, and a pipe connection on the periphery of the said ring connector communicating with said groove, all substantially as described.



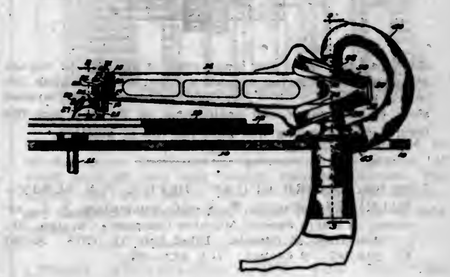
1,399,400. LENS-GRINDER. ARTHUR PELLOW, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed July 17, 1919. Serial No. 311,406. 2 Claims. (Cl. 51—278.)

2. The process of constructing and reconstructing a grinding tool to secure maximum wear from the grinding tool, consisting in building the tool of a series of laminations, separably connecting said laminations and progressively shifting the laminations from summit to edge



of the curve being ground thereby, inserting new units at the summit, and removing a unit from the edge as a new unit is placed at the summit to preserve the wear and bulk of the tool substantially constant.

1,399,401. TUBE-ROLLING MILL. JACQUES REIMANN, Erdington, Birmingham, England. Filed Aug. 21, 1919. Serial No. 318,964. 4 Claims. (Cl. 80—14.)



1. In a tube rolling mill, the combination of a mandrel holder, which is progressively advanced and partially rotated, a tube carrying mandrel connected thereto, a sleeve screw-threaded upon said mandrel-holder, and extending over the junction of the mandrel holder and mandrel, a shaft geared to said sleeve and normally rotating in harmony with it, and means, for rotating said shaft variably with reference to its normal movement, substantially as set forth.

1,399,402. PUMP. FANT ROBERTS, Eldorado, Kans. Filed July 15, 1920. Serial No. 396,442. 6 Claims. (Cl. 103—71.)

5. A pump comprising upper and lower connected barrels, a plunger in each barrel, a connection between the plungers, a stuffing box between the plungers through which the connection moves, a plurality of connections between the upper barrel above the upper plunger and the lower barrel below the lower plunger, each of said connections connecting intermediate the ends with one of the barrels, one of the connections being above the stuffing box and the other below the said box, and check valves for constraining the liquid to flow upward.

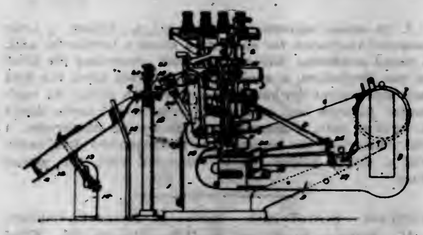
1,399,403. SOUND-REPRODUCING APPARATUS. HENRY K. SANDELL, Chicago, Ill. Filed Oct. 3, 1919. Serial No. 328,229. 2 Claims. (Cl. 274—28.)

1. In sound reproducing apparatus, a support, a lever mounted thereupon for oscillation about a horizontal axis, a sound producing diaphragm, a link connecting the lever to the diaphragm, a second lever mounted upon the first mentioned lever for oscillation therewith about its horizontal fulcrum but oscillatable relatively thereto about a vertical axis, a second sound producing diaphragm, a link connecting the second lever to the second diaphragm, and a stylus holder rigidly connected with the second lever.

1,399,404. SOUND-BOX. HENRY K. SANDELL, Chicago, Ill., assignor to Herbert S. Mills, Chicago, Ill. Filed June 19, 1920. Serial No. 390,209. 4 Claims. (Cl. 274—28.)

2. A sound box comprising a diaphragm, a supporting casing therefor, a stylus holder pivotally mounted upon said casing at substantially right angles thereto and vibratory in a direction substantially parallel to the plane of the diaphragm and a link extending from a point on said support intermediate its pivot point and its free end to a centrally located point on said diaphragm and making an angle of about 22 to 25° therewith.

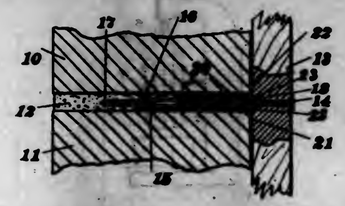
1,399,405. QUICK-DETACHABLE DUST-CAP. GEORGE W. SCOTT, Santa Rosa, Calif. Filed Mar. 18, 1920. Serial No. 366,776. 3 Claims. (Cl. 152—12.)



2. A device of the kind described comprising a nut adapted for threaded engagement with a valve stem and having an exterior portion shaped for engagement by a wrench, a sleeve projecting from said nut, bayonet slots formed in said sleeve and spaced from the face of the

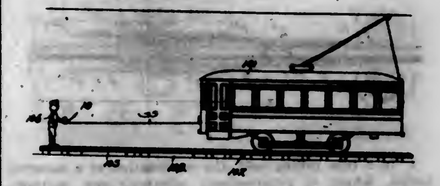
nut, a spring surrounding said sleeve, a washer riding on said spring the nut being formed with portions to inclose said spring and inturned at the top to retain said washer, a cap adapted to fit said sleeve and inclose the valve stem said cap having internal projections to engage the bayonet

slots and to permit the lower edge of the cap to engage and depress the spring pressed washer, whereby when the cap is partially rotated the coaction between the bayonet slots on the sleeve the projections on the cap and the tension of the spring will hold the cap in position.



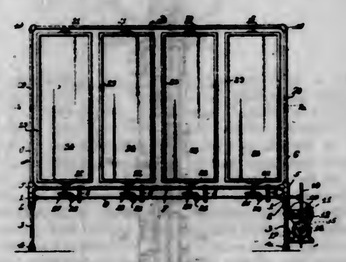
1,399,406. FABRIC-GUIDING DEVICE FOR SEWING-MACHINES. WALTER W. SCOTT, Amsterdam, N. Y., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed July 11, 1918. Serial No. 244,367. 3 Claims. (Cl. 112—63.)

1. The combination with a sewing machine having a work supporting arm, a presser foot, stitching mechanism operating at the free end of said arm, and means for feeding the material being stitched off from the end of said arm; of a strip guiding means for directing a continuous strip to the stitching mechanism, said strip guiding means including devices for supporting a strip supply at the rear of the machine, a reverting guide on the work supporting arm adjacent the opposite end of said arm from the stitching mechanism, whereby the direction of movement of the strip may be reversed and the strip fed to the stitching mechanism in a direction substantially parallel with the work supporting arm, and a guide located adjacent the stitching mechanism for directing said strip beneath the presser foot and for directing the body fabric to the stitching mechanism whereby the strip and body fabric will be united.



1,399,407. WALL-PLUG. SERAPHIM SIEVERS, Omaha, Nebr. Filed Jan. 3, 1921. Serial No. 434,412. 1 Claim. (Cl. 72—105.)

A wall or floor plug comprising a single sheet of metal overturned intermediate its ends at a relatively sharp angle and with its sides diverging toward its ends to provide a wedge-shaped throat and at said ends bent outwardly and oppositely to provide wall abutting flanges, said plug being adapted to be embedded in a body of plastic material in a wall or floor and with said flanges abutting against the outer face thereof, one of said overturned portions of said strip having its edges bent inwardly toward and engaging the other end portion to provide lateral flanges to space and support said sides apart and prevent entrance of the plastic body therebetween, and said other end portion of the strip having spurs struck up therefrom at the outer sides of said flanges to hold the latter from collapsing and adapted to anchor



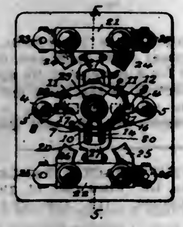
the plug in the plastic body, said plug being adapted to receive the end of a nail in said wedge-shaped throat, whereby to wedge said nail therein and bind the plug in the plastic body.

1,399,408. SYSTEM OF CONTROL. KARL A. SIMMON, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 13, 1917. Serial No. 196,395. 23 Claims. (Cl. 104—149.)

1. In a system of vehicle control, the combination with an electric motor and means located upon the vehicle for normally governing the motor operation, of means for effecting motor operation from a point external to the vehicle and for preventing concurrent operation from the vehicle itself.

1,399,409. ADVERTISING DEVICE. EMIL A. SLEDZ, Detroit, Mich. Filed Apr. 10, 1920. Serial No. 372,778. 1 Claim. (Cl. 40—76.)

An advertising device comprising A frames, a longitudinal member connecting said A frames, hanger bearings carried by said longitudinal member, a driven shaft journaled in said hanger bearings and said A frames, a bracket carried by one of said A frames, means on said bracket for driving said shaft, uprights carried by said A frames, a top frame having its ends seated on said uprights, flat panel-like article and sign carrying members of less thickness than said top frame so that said

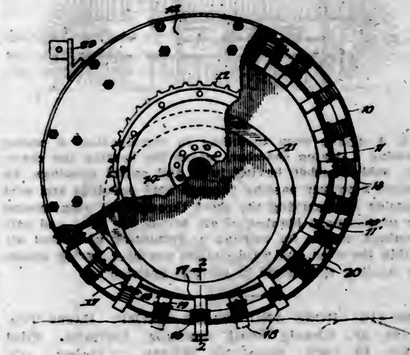


members may lie in a common plane within said top frame, said members having platies journaled in said top frame and said longitudinal member, and beveled gear wheels adapted to transmit a rotary movement to said article and sign carrying members from said driven shaft.

1,399,410. WHEEL. FREDERICK S. STAFFORD, Chicago, Ill., assignor to Henry G. Saal, Chicago, Ill. Filed Apr. 16, 1920. Serial No. 374,306. 8 Claims. (Cl. 301—63.)

1. A wheel having a disk whose central portion is provided with a shoulder seated upon a shoulder which is provided upon the wheel hub; and a ring secured to the disk against once face thereof and provided with a shoulder seated upon a second shoulder with which the hub is provided.

1,399,411. REVERSING-SWITCH. BRUNO STECHBART, Chicago, Ill. Filed May 12, 1919, Serial No. 296,368. Renewed Jan. 22, 1921. Serial No. 439,318. 8 Claims. (Cl. 200—70.)



3. In a reversing switch, the combination of an operating plate, means for imparting a rocking movement to said plate, a pair of rocking contact arms moving in unison and insulated from each other, pairs of fixed contact members individual to the rocking contact arms aforesaid, and an operative connection between said rocking contact arms and the aforesaid operating plate, comprising a sliding head operatively connected to said rocking contact arms, means between said sliding plate and the operating plate for locking said sliding plate at each end of its path and at the middle of said path, the same comprising marginal flanges on the operating plate and lugs on the sliding plate adapted for intermittent engagement with said marginal flanges, and a spring associated with said rocking contact arms and the operating plate for imparting a snap movement to said arms when the sliding plate is released from either of the aforesaid holding engagements with the operating plate, substantially as set forth.

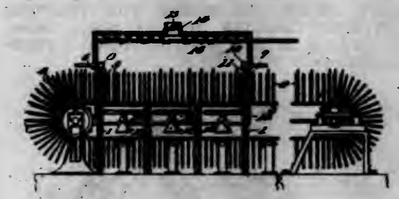
1,399,412. CORN CLEANING AND SORTING MACHINE. ANDREW STERNAD, Chicago, Ill. Filed Oct. 24, 1919, Serial No. 333,013. Renewed Aug. 18, 1921. Serial No. 493,465. 15 Claims. (Cl. 130—32.)

1. In combination, a plurality of rollers adapted to having spaces therebetween permitting the passage of small ears of corn and foreign material between the rollers and hold larger ears of corn on the rollers; and means for washing said larger ears of corn on said rollers.

1,399,413. PROPELLING-WHEEL FOR TRACTORS AND OTHER VEHICLES. HORACE G. STONE, Chicago, Ill. Filed Feb. 23, 1921. Serial No. 447,091. 5 Claims. (Cl. 301—48.)

5. A traction wheel, comprising a rim, a hub, an inner band, traction plugs extending through said band and rim, means for connecting the rim, inner band and hub, springs for retracting said plugs to bring the outer ends substantially flush with the surface of the wheel, and a rolling gravity member for engaging the inner ends of said plugs to project them into traction ground engaging position with the inner ends substantially in the plane of the inner face of said inner ring.

1,399,414. HARDENED STEEL TOOL. WILLIAM B. SULLIVAN, Chicago, Ill., assignor to Rich Tool Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 24, 1920. Serial No. 360,659. 1 Claim. (Cl. 78—46.)



A hardened steel tool comprising integrally formed cylindrical head and shank arranged in longitudinal alinement but differing substantially in size and expanding abruptly between the shank and head, a part of the head of the tool adjacent the shank being provided with an annular series of longitudinal grooves of gradually diminishing depth leading from the union of the head with the

shank and disappearing entirely intermediate the length of the head, the bottoms of the grooves being flush with

the exterior of the adjacent part of the shank at one end and with the exterior of the adjacent part of the head at the other end of the grooves.

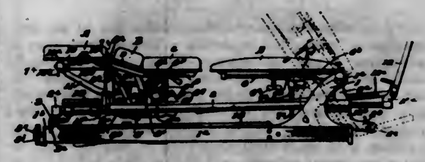
1,399,415. APPARATUS FOR DRYING LITHOGRAPHED METAL SHEETS. THOMAS LUCIEN TALIAFERRO, Chicago, Ill., assignor to Phoenix Hermetic Company, Chicago, Ill., a Corporation of New York. Filed Apr. 15, 1920. Serial No. 374,033. 3 Claims. (Cl. 34—12.)

3. A drying oven including in combination, a casing forming a drying chamber, means for heating the chamber, said chamber having inlet and outlet openings, an endless conveyer passing through said openings and said chamber for carrying the sheet through the oven, means for projecting a blanket of air across the inlet and exit openings, means for causing a circulation of heated air within the oven, and said endless conveyer having means for holding the sheets in vertical position.

1,399,416. HOSE AND OTHER CLAMP. HARRY TURNER, Sr., Glenelg, South Australia, Australia. Filed Feb. 10, 1920. Serial No. 357,636. 2 Claims. (Cl. 24—19.)

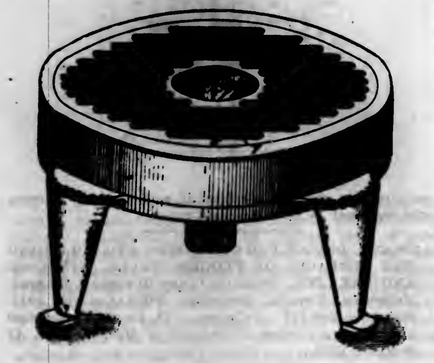
1. The combination with an encircling spring band having a relatively wide portion and a narrow tongue portion one end of the latter being adapted to pass through a circumferential aperture in said wide portion, said end having a bifurcation and a pivot pin seated in said bifurcation, of a lever pivotally connected with said pivot pin and having a screw-threaded portion, a link pivotally connected at one end with the wide portion of the band, and a screw-threaded member to which the other end of the link is connected and with which screw-threaded member the threaded portion of the lever engages in the manner and for the purpose specified.

1,399,417. REGISTER, &c. CURTIS HUSSEY VREDEN, Hartford, Conn., assignor to The Veeder Manufacturing Company, Hartford, Conn., a Corporation of Connecticut. Filed Feb. 16, 1921. Serial No. 445,234. 2 Claims. (Cl. 74—101.)



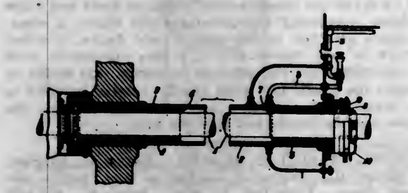
2. The combination of a mechanism to be driven, a base plate therefor having a pedestal with detachable cap to form a circular bearing and a gear casing having a split cylindrical hub seated in said circular bearing.

1,399,418. SPINNING-RING CARRIER. THOMAS WHITEHEAD, Blackpool, England. Filed Apr. 15, 1921. Serial No. 461,485. 3 Claims. (Cl. 118—60.)



1. The combination, with a revoluble driving sleeve having an enlargement at its upper end, of a carrier provided with a race for a traveler at its upper end, and a reinforcing ring secured to the lower end of the carrier and provided with means for placing it into and out of driving engagement with the said sleeve.

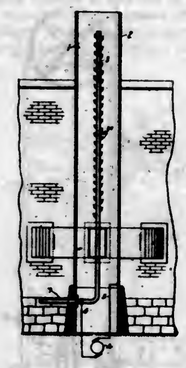
1,399,419. CHIROPRACTIC TABLE. WILLIAM G. WILLIAMS, Elgin, Ill. Filed Dec. 11, 1920. Serial No. 429,962. 29 Claims. (Cl. 128—73.)



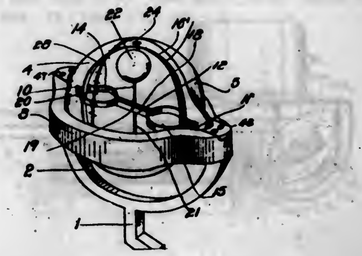
1. In a table of the character specified; a base section; a table section pivoted thereon; major spring means connected to the table section; an adjustable tubular sleeve connected to the base, a member on said sleeve connected with the major spring means whereby the tension of the spring means can be adjusted; supplemental spring means connected with the table section; and means telescoping said sleeve whereby the supplemental spring means may be adjusted so as to vary the point at which such springs will come into or go out of effective operation.

1,399,420. METHOD OF MENDING ELECTRIC RESISTANCE ELEMENTS. NOEL CARRICO, Sidney, Mont., assignor of one-half to Frank C. Hughes, Evanston, Ill. Filed Sept. 11, 1920. Serial No. 409,660. 16 Claims. (Cl. 219—10.)

1. The method of mending a helical wire electric resistance element by hooking together the broken ends and passing through the element the normal operating electric current.



1,399,421. STUFFING-BOX FOR PROPELLER-SHAFTS. CARL WILHELM CEDERVALL, Gottenborg, Sweden. Filed July 19, 1917. Serial No. 181,490. 4 Claims. (Cl. 286—8.)

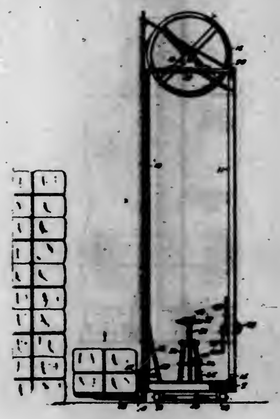


3. In a stuffing box for propeller shafts running in oil under pressure, a member secured to said shaft and rotating therewith, a flanged sleeve slidable on said shaft and operatively attached to said member to rotate therewith, a stationary flange and a stationary ring, said flange of said sleeve being located therebetween, and means to maintain said flanges and ring in closed contact.

1,399,422. ELECTRICAL PRECIPITATING SYSTEM. LEWIS WARRINGTON CHUBB, Pittsburgh, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 9, 1918. Serial No. 221,897. 16 Claims. (Cl. 183—7.)

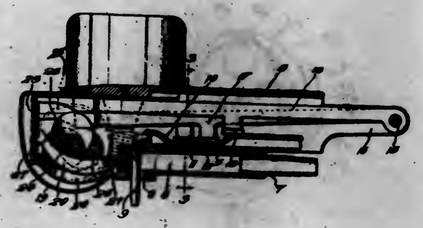
1. In an electrical precipitating system, the combination with a treating chamber and a discharge electrode positioned therein and having a plurality of annular recesses, of thermal means for causing thermionic currents to flow from said discharge electrode upon the application of potential to the same, said thermal means consisting of flame blasts to heat said electrode to incandescence in the vicinity of said recesses.

1,399,423. AIRPLANE-INDICATOR. WILLIAM B. CUNNINGHAM, Kansas City, Mo. Filed Aug. 11, 1919. Serial No. 316,693. 6 Claims. (Cl. 33—206.)



1. In a balance indicator for airplanes, a globe, a non-compressible fluid completely filling said globe, a frame inclosed by and having pivotal connection with said globe so as to be turnable on a normally horizontal axis, an indicator shaft pivotally connected to said frame and having its axis at right angles to the axis of the frame, a hollow ball at one end of the shaft, and a weight at the other end of the shaft.

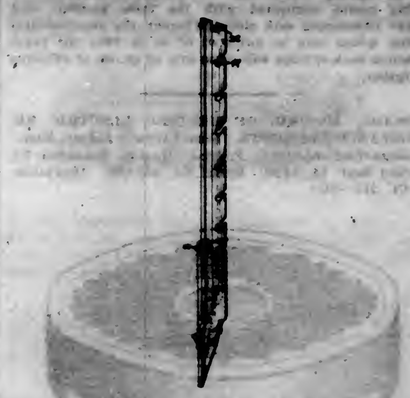
1,399,424. PORTABLE DERRICK. WILLIAM STANHOPE GARRETT, Richmond, Va. Filed July 1, 1919. Serial No. 307,963. 18 Claims. (Cl. 214—121.)



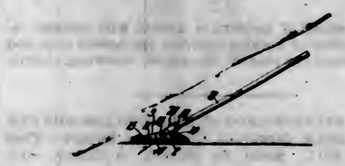
2. A portable derrick, comprising a base structure with means carried thereby enabling the propulsion of the derrick by one man, operatively associated means for steeering the base structure during propulsion, a super-

structure carried by the base structure, hoisting mechanism, load lifting means operatively associated with said

superstructure and hoisting means, and independently operable means associated with said lifting means for discharging the load either laterally or toward the front.



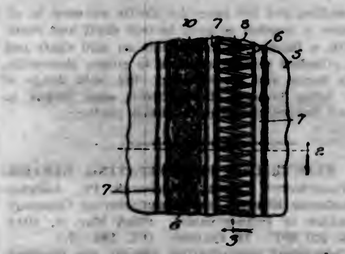
1,399,425. ART OF PRODUCING ORNAMENTAL SURFACES. MAJOR E. GATES, Terra Cotta, Ill. Filed Apr. 28, 1920. Serial No. 377,840. 29 Claims. (Cl. 91—45.)



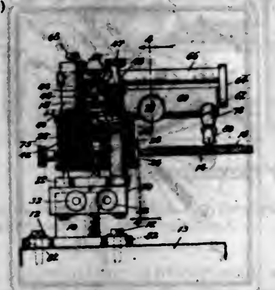
1. In the art of coating surfaces, the method which consists in causing the coating fluid to be projected intermittently through the outlet end of a conduit to cause discharge of fluid therefrom in separated bodies of a cross-sectional area substantially equal to the cross-sectional area of the outlet and delivering the coating fluid against the object to which it is to be applied, with sufficient force to cause it to flatten against the object.

1,399,426. FENCEPOST. GEORGE V. HARDING, Oakland, Calif. Filed Mar. 17, 1920. Serial No. 366,651. 2 Claims. (Cl. 189—28.)

1. A fence post comprising a flat bar, driven section having a longitudinal flange thereon, said bar and flange tapering to a pointed end and having a socket formed in the end opposite said pointed end; an upper section of similar cross-section adapted to engage the socket in said driven section whereby the longitudinal flange in said driven section aligns with the longitudinal flange in the upper section; and lugs and notches formed respectively in the flat portions of said sections whereby said lugs may be bent into said notches.



1,399,427. DEVICE FOR CLEANSING AND POLISHING THE SURFACES OF FLOORS, WALLS, WINDOWS, AND THE LIKE. WILLIAM JAMES HOULIHAN, Prahran, Melbourne, Victoria, Australia. Filed Aug. 10, 1918. Serial No. 249,357. 4 Claims. (Cl. 15—56.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



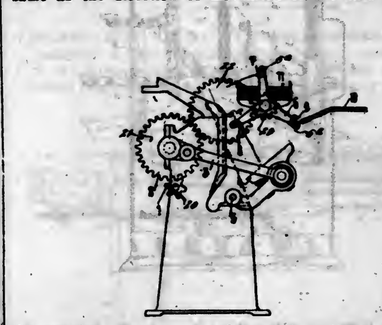
1. A device for cleansing and polishing floors and other surfaces, comprising a substantially flat frame, a superstructure attached to one side of said frame, a socket pivoted to said superstructure, a boss upstanding from the superstructure and adapted to engage said socket to support the handle in correct angular position relative to the frame, and a locking screw passing through the socket and the handle and into the boss.

1,399,428. ELECTRIC HEATER. FRANK C. HUGHES, Chicago, Ill., assignor of one-half to Noel Carrico, Sidney, Mont. Filed Oct. 9, 1920. Serial No. 415,850. 2 Claims. (Cl. 219—64.)

1. In an electric heater, a substantially bare resistance element attached to a support by an electrically non-conductive and thermally conductive cement whereby a portion of the heat from the element is conducted to the support and radiated therefrom.

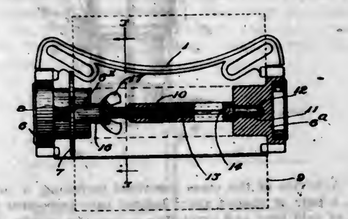
1,399,429. RECORDING TELEGRAPHIC RECEIVING INSTRUMENT. JOHN A. HULIT, Chicago, Ill. Filed Mar. 22, 1917, Serial No. 156,556. Renewed May 10, 1921. Serial No. 468,204. 15 Claims. (Cl. 178—96.)

1. In a device of the class described, the combination with a suitable support, electromagnets and armature therefor; adjustable contacts on opposite sides of said armature, limiting its motion, means for mounting one of said contacts, permitting movement of said contact from its normal position with reference to said armature to another position in which it is entirely clear of the path of movement of said armature, an ink receptacle pivotally mounted and connected to move in unison with said armature, and a marking device supplied with ink from said receptacle and moving with it, for the purposes set forth.



1,399,430. SEGMENTAL CASING FOR TIRES. ROLLA N. INK, San Diego, Calif. Filed Sept. 9, 1921. Serial No. 499,477. 2 Claims. (Cl. 152—10.)

1. A supplemental tire casing comprising a multiplicity of segmental sections arranged end to end and in contact with each other, fastening members carried by the sections, each fastening member comprising a threaded shank extending through one wall of the section, a head formed on the inner end of the shank, a connecting member removably secured on the shank and formed to provide a loop, cables extending through the loops, and means at the ends of the cables for drawing the latter together.

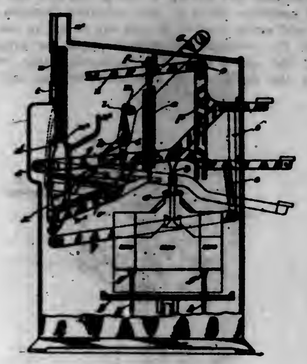


1,399,431. PLATEN PRINTING-PRESS. OTTO JOHNS, Bautzen, Germany. Filed Mar. 31, 1914. Serial No. 828,449. 4 Claims. (Cl. 101—287.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A platen printing press comprising a platen having a to-and-fro movement, a laying-on table, a laying-off table, gripper arms mounted on a revoluble shaft independent of and spaced from said platen, said revoluble shaft being free from the said to-and-fro movement of said platen, and grippers mounted on said gripper arms, said grippers passing adjacent said platen, said laying-on table, and said laying-off table during the revolution of said gripper arms, said grippers being adapted to draw the sheet from the laying-on table, support the same in hanging position, place it into printing position on said platen, and again remove it and lay it off on the laying-off table, the direction of movement of the gripper arm drawing the sheet from the laying-on table being the same as the direction of movement of the said platen.

4. A platen printing press, comprising a bed, a platen having to-and-fro movement, a laying-on table, a laying-off table, a feeding mechanism for taking the sheets from the laying-on table, placing the same in printing position upon the bed of said press, and again removing said sheet and placing it on said laying-off table, said feeding mechanism being rotatable entirely in front of said bed of said machine, said laying-on and laying-off tables and said feeding mechanism being disposed above said platen.

1,399,432. DISPENSING-FIXTURE. GEORGE T. JOHNSON, New York, N. Y. Filed Mar. 1, 1920. Serial No. 362,449. 14 Claims. (Cl. 211—31.)



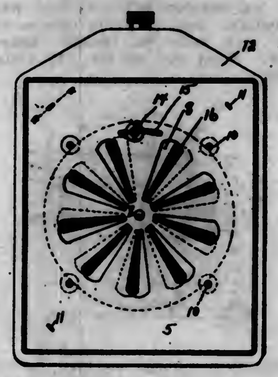
1. A dispensing fixture for continuous web material wound in roll form, having a roll support adapted to enter the central opening of a roll, and a spring-actuated friction-plate adapted to act against an end of a roll applied to said roll-support, movable lengthwise of the roll-support, and engaging with the roll-support so as to be held thereby from turning with the roll.

1,399,433. WEIGHING-MACHINE. KARL JUKES, Wuthenow, near Neuruppin, Germany. Filed Dec. 20, 1920. Serial No. 432,126. 10 Claims. (Cl. 265—28.)

1. In a weighing machine, the combination, with a scale platform and a set of weights adapted to rest upon it in their lowered position, of weight-shifting mechanism comprising a set of weighing levers, from each of which a weight is suspended; and a set of supporting springs,

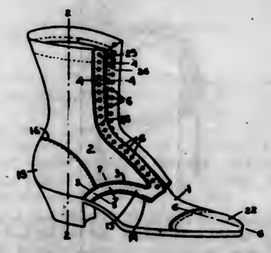
one individual to each lever, for holding said levers and weights normally in elevated position, the tension of the

springs being so adjusted as to normally balance the levers and associated weights.



1,399,434. IRRIGATION-VALVE. CLINTON J. KURTS, San Diego, Calif. Filed Dec. 4, 1919. Serial No. 342,339. 4 Claims. (Cl. 137—13.)

1. A device of the class described including, a concrete pipe, a pair of spaced apart lateral bars embedded in the wall of said pipe and extending across the middle thereof some distance from the end, an integral valve seat formed on the end of said concrete pipe, a plate with its outer edge conforming to said valve seat provided with a central hole, a bolt mounted in said central hole and extending downwardly and a nut mounted between said lateral bars adapted to fit on the end of said bolt.

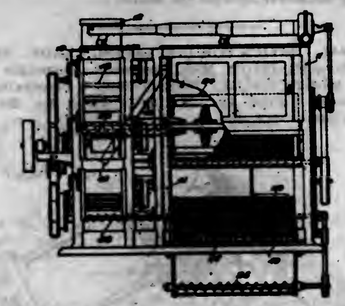


1,399,435. RADIATOR-COVER. HOWARD G. LAPSLEY, Plainfield, N. J. Filed Oct. 9, 1920. Serial No. 415,923. 1 Claim. (Cl. 257—132.)

A radiator cover comprising a relatively flat stationary plate adapted to lie flat in front of the radiator, said stationary plate having a series of radially disposed slots therein, a movable plate pivoted to the stationary plate and provided with a series of radially disposed slots corresponding to the slots in the stationary plate, a bolt carried by the movable plate and passed through an arcuate slot in the stationary plate for securing the movable plate in adjusted position relatively to the stationary

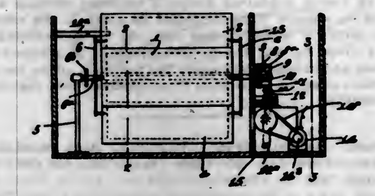
plate, and staples adapted to pass through the radiator for securing the stationary plate thereto.

1,399,436. SHOE. ALEXANDER E. LITTLE, Lynn, Mass., assignor to A. E. Little Company, Lynn, Mass., a Corporation of Massachusetts. Filed May 12, 1920. Serial No. 380,808. 4 Claims. (Cl. 36—45.)



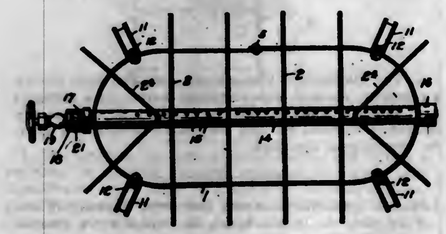
2. A shoe having a vamp portion and a quarter portion arranged with their meeting edges in abutting relation, a lining for the vamp having its edges bent around that edge thereof which abuts an edge of the quarter, and a cover strip overlying and extending longitudinally of said abutting edges and secured to both quarter and vamp.

1,399,437. APPARATUS FOR MAKING FLOUR AND MEAL. LUCIUS FREEMAN LITTLE, Owensboro, Ky. Filed May 14, 1920. Serial No. 381,348. 16 Claims. (Cl. 83—42.)



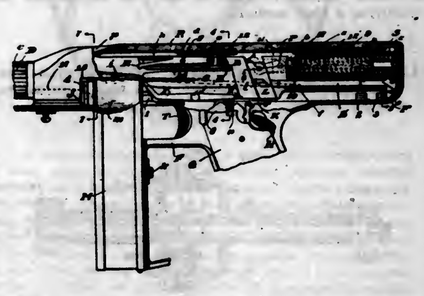
1. In a mill of the class described, the combination of a casing having a roll-section and a centrifugal-section, a plurality of pairs of break-rolls in said roll-section,

scalping sieves having coarse and fine screens for each pair of rolls, a centrifugal in said centrifugal-section,



and means to receive and deliver the throughs from all of said scalping sieves to said centrifugal.

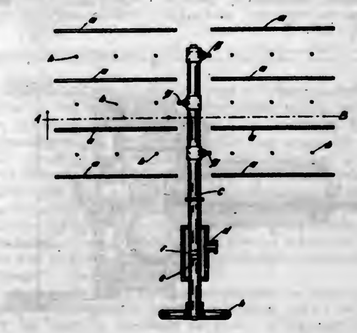
1,399,438. AUTOMATIC ADVERTISING-MACHINE. HENDRICK W. LUNDQUIST, San Diego, Calif. Filed Feb. 20, 1918. Serial No. 218,251. 2 Claims. (Cl. 40—77.)



1. In an automatic advertising machine, the combination of spaced apart spider members, card holders pivotally mounted between each two pairs of arms on said spider members, each card holder provided with oppositely disposed card supports, gear, ratchet, escapement and brake means for intermittently revolving said spider a portion of a revolution, stop means secured to the casing for engaging said card holders and revolving them a one-half revolution with each revolution of said spider, means for intermittently illuminating the card on one side of said holder and means for projecting the matter on said card onto a translucent plate during the time said card remains standing.

1,399,439. LAUNDRY-STOVE. CHARLES P. MELVIN, Youngstown, Ohio, assignor to The Melvin-Lloyd Company, Youngstown, Ohio, a Corporation. Filed May 23, 1919. Serial No. 299,308. 1 Claim. (Cl. 126—40.)

A stove comprising a frame member of band metal bent to substantially oval form, with its ends united and provided with a pair of oppositely disposed holes, flat bar metal rest members edgewise interlocked with the frame member by interengaging kerfs, the end rests being bent in substantial V-shape to interfit with the kerfs in the end portions of the frame member, legs secured to said frame member, and a perforated gas burner pipe extending through the oppositely disposed holes in the frame member.



1,399,440. GUN. OSCAR V. PAYNE, Cleveland, Ohio, assignor to Auto-Ordnance Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 5, 1919. Serial No. 342,698. 42 Claims. (Cl. 89—33.)

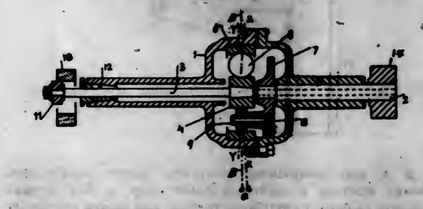
2. A gun comprising automatic breech mechanism, means whereby a cartridge holder may be fed through the gun to deliver cartridges thereto, and means responsive to the rate of cartridge feed to control the rate of firing.

4. The method of controlling the action of an automatic gun which comprises feeding cartridges to the gun and controlling the rate of firing by regulating the rate of cartridge feed.

1,399,441. MEANS FOR CLEANING THE ELECTRODES IN ELECTRICAL FUME-PRECIPITATORS. ALFRED PETERSEN, Frankfort-on-the-Main, Germany, assignor to International Precipitation Company, Los Angeles, Calif., a Corporation of California. Filed July 10, 1916. Serial No. 108,297. 6 Claims. (Cl. 183—7.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In combination with collecting electrodes of an electrical precipitator, a blast pipe provided with means for supplying gas thereto and mounted to rotate so as to direct gas on to different parts of said electrodes.

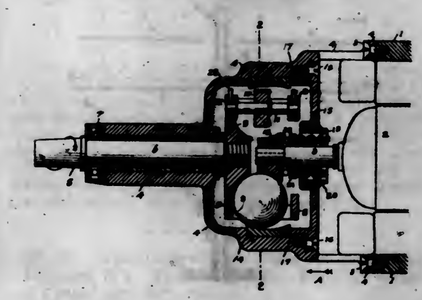
2. In combination with discharge and collecting electrodes of an electrical precipitator, gas supply means



and air blast means in communication with said gas supply means and mounted to move rotatively and longitudinally to direct a gas blast at different parts of said electrodes.

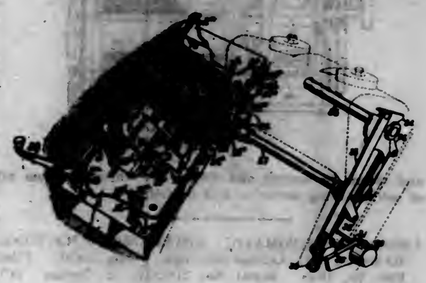
3. In combination with electrode means in an electrical precipitator, gas blast means movably mounted to direct a gas blast to different parts of said electrode means to clean the same.

4. In combination with a flue in an electric precipitator a blast pipe, means for controlling the direction of the blast in the flue and means for supplying a blast medium.



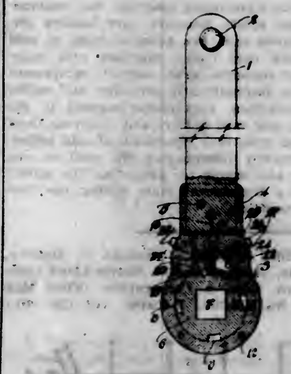
5. In combination with a flue in an electric precipitator a blast pipe, means for moving the pipe in axial direction, means for rotating the pipe and means for supplying a blast medium.

1,399,442. FRICTION-GEARING. TURE GUSTAF RENNERFELT, Stockholm, Sweden. Filed June 2, 1919. Serial No. 301,239. 12 Claims. (Cl. 74—26.)



1. In a friction gearing for transmission of power between a shaft and a spindle the combination of a friction pinion mounted on the spindle, a racering having a concave running face, a plurality of rollers between the pinion and the racering, means fastened to the spindle for transmitting pressure to the pinion and forcing it against the rollers, and means carried by the shaft for causing the rollers to roll on the racering, the rollers being arranged to make contact with the racering at the largest diameter of its running face.

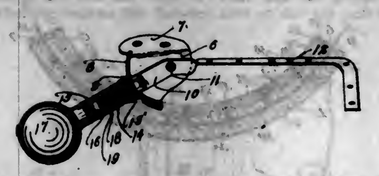
1,399,443. FRICTION-GEARING. TURE GUSTAF RENNERFELT, Stockholm, Sweden. Filed May 13, 1918. Serial No. 234,175. 10 Claims. (Cl. 74—26.)



1. Friction gearing for transmission of power between two shafts, embracing a casing, a pinion fastened to one of the shafts, a yoke fastened to the other shaft, a racering clamped within the casing, a plurality of balls between the pinion and the racering, a spring pressed between the casing and the pinion and arranged to force the pinion against the balls, and rollers which make contact with the balls journaled in the yoke and serving to convey the power between the shafts.

1,399,444. DEVICE FOR DISPLAYING CARDS. FRANK C. RISACHER, Detroit, Mich., assignor to Burroughs Adding Machine Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 24, 1919. Serial No. 292,899. 32 Claims. (Cl. 40—78.)

1. In a card displaying device, a traveling carriage arranged to support cards arranged in a stack, the cards being pivotally mounted near one end in said carriage, and a vibrating shifting member mounted in stationary position and arranged to engage the free ends of the cards *seriatim* and successively shift them angularly into position of visibility.

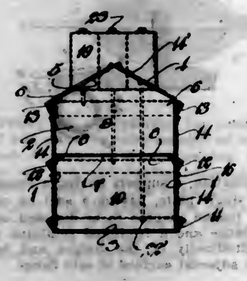


1,399,445. HAND-CRANK. FRANK A. ROSS, Spokane, Wash. Filed July 27, 1920. Serial No. 399,280. 5 Claims. (Cl. 74—33.)

2. The combination with a crank arm, and head having a rotatable, notched, socket-bushing therein, of a shiftable pawl device pivoted in said head, and said head having oppositely disposed recesses adapted to receive said pawl, for the purpose described.

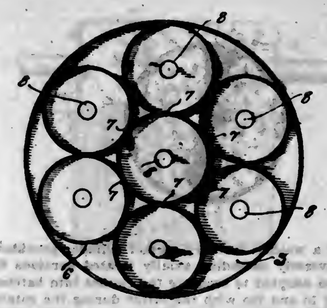
1,399,446. SHIELD. HARRY SIMMONS, Spokane, Wash. Filed Feb. 9, 1921. Serial No. 443,684. 4 Claims. (Cl. 296—95.)

1. The combination with a pair of spaced brackets, of a head pivoted in each bracket, arms on said heads and a shield on said arms, a slotted flange on one of said brackets, a threaded stud on a head movable in said



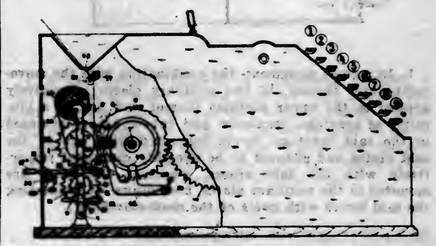
slotted flange, a clamp member on said threaded stud adapted to engage said flange, and a counterweight on said clamp member.

1,399,447. ARCH-SUPPORT. GEORGE F. SPINDEL, Rochester, N. Y. Filed Mar. 8, 1920. Serial No. 363,938. 3 Claims. (Cl. 36—71.)



1. In an arch support, the combination of a cover, a plurality of springs under said cover adapted to span over the shank of the shoe from the ball to the heel, the forward ends of said springs being connected by a bow shaped spring plate, said cover being supported by said springs along the length thereof and being supported between the forward ends of the springs by said bow shaped spring plate.

1,399,448. COOLER. WILLIAM O. THOMPSON, Spokane, Wash., assignor of one-half to Harold B. Thompson, Spokane, Wash. Filed Aug. 4, 1920. Serial No. 401,243. 2 Claims. (Cl. 62—91.)



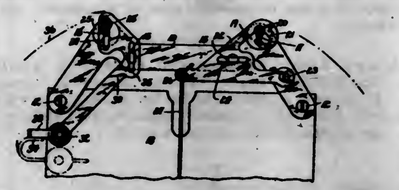
1. The combination with a closed cooling box having a plurality of exterior troughs extended thereabout and formed with upper slots, of a series of curtains attached above the troughs with their lower edges passing through said slots, guard flanges along said slots co-acting with said curtains, a tank having a separate supply compartment for each trough, and a feed pipe from said compartments to a trough.

1,399,449. CAKE-CUTTER. LAURA C. THATHEWAY, Stratford, Ontario, Canada. Filed Aug. 9, 1920. Serial No. 402,217. 3 Claims. (Cl. 107—51.)

1. A cake cutter consisting of a plate, the circumference of said plate being flanged downward, suitable handles attached to the upper side of said plate, cutting members attached to the under side of said plate, said cutting members consisting of strips with one side attached to the under side of said plate and one end of each of said strips forming a complete cutting member and a section of a central cutting member with an end of two adjacent strips abutting on opposite sides of a complete cutting member.

1,399,450. PAPER-STRIP FEED FOR ADDING-MACHINES. FRANZ THIENS, Brunswick, Germany. Filed Sept. 8, 1916. Serial No. 119,018. 11 Claims. (Cl. 101—288.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

6. A paper strip feeding mechanism for adding machines, comprising, in combination, a revoluble platen around which the strip is arranged to pass; an oscillatory frame wherein said platen is mounted; operating means for said frame; a ratchet wheel carried by said frame and geared to said platen; and a pair of oppositely-acting pawls engageable with said ratchet wheel and arranged to rotate the same solely in one direction, one pawl active during one stroke of the frame, and the other pawl during the return stroke thereof, whereby said ratchet wheel and said platen will be fed two steps at each complete oscillation of the frame.



10. In a paper strip feeding mechanism for adding machines, the combination, with a revoluble platen around which the strip is arranged to pass; of an oscillatory frame; operating means for said frame; and mechanism controlled by the oscillation of said frame for feeding said platen, comprising an intermittent motion member, and a pair of oppositely-arranged actuating members therefor, one adapted to actuate said intermittent motion member during one stroke of the frame, and the other adapted to actuate said intermittent motion member in the same direction during the return stroke of the frame.

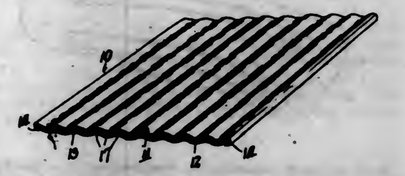
1,399,451. WASHING-MACHINE. HARVEY H. TROXEL, Ashland, Ohio. Filed Jan. 7, 1921. Serial No. 435,563. 4 Claims. (Cl. 68—18.)

1. In a washer, a rotary washer cylinder provided with a transversely extending axially located pervious flexible partition adapted to separate the clothes into batches and to move to and fro with the latter during the rotation of the cylinder.

1,399,452. CHIME AND STRIKE CLOCK MOVEMENT. FREDERICK WEHINGER, Waterbury, Conn., assignor to Waterbury Clock Co., Waterbury, Conn., a Corporation. Filed Sept. 29, 1921. Serial No. 504,191. 3 Claims. (Cl. 58—13.)

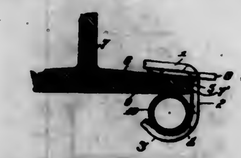
1. In a clock movement, the combination with the movement-plates thereof, of two auxiliary plates respectively applied to the upper portions thereof and having a plurality of bearings, regulator- and cut-out-arbors mounted in the said bearings, levers connected with one of the said plates and adapted to be operably connected respectively with the said arbors, wherever the same are mounted in the auxiliary plates, and means for connecting the said levers with parts of the clock-movement.

1,399,453. CHECKER. HARVEY L. WINSLOW, Waterbury, Conn. Filed Jan. 14, 1921. Serial No. 437,174. 1 Claim. (Cl. 46—65.)



A checker comprising a base member and a crowning member, both formed from cup-shaped pieces of metal, and both formed at their open ends with flanges, the crowning member being inverted and extending into the base-member, the base member being larger in diameter than the diameter of the crowning member, means adapted to hold the crowning member in its depressed position, a spring between the two members, and the base member adapted to be compressed on opposite sides, whereby the crowning member is released.

1,399,454. SEWER-STRUCTURE INVERT-SECTION. JACOB H. ZINN, Indianapolis, Ind. Filed Aug. 16, 1919. Serial No. 317,925. 3 Claims. (Cl. 72—54.)

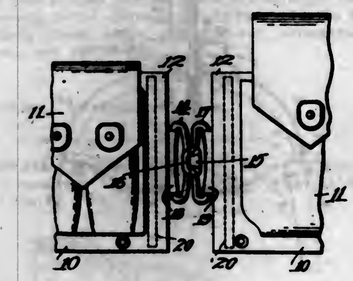


1. In a portable sewer structure invert section, the combination of a curved monolithic concrete body having plane edges and ends with grooves therein one side of the body being concave and having longitudinal grooves therein, and a plurality of segmental tile sections arranged on said concave side and having longitudinal ribs secured in said longitudinal grooves.

1,399,455. WEATHER-BOARD. MORGAN K. ARMSTRONG, Winnetka, Ill., assignor to Bestwall Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Feb. 24, 1920. Serial No. 361,021. 1 Claim. (Cl. 154—45.9.)

A weather board comprising top and bottom surface coverings of fibrous material, and a plaster composition body between and adhered to said surface coverings, said weather board being permeated with a waterproof solution and having longitudinally extending, alternately arranged undulations, and being of substantially the same thickness throughout its width.

1,399,456. PIPE OR CONDUIT HANGER. JAMES F. BARRY, Chicago, Ill. Filed Jan. 20, 1921. Serial No. 438,682. 11 Claims. (Cl. 248—32.)



4. In combination, a support having a flange, a hanger formed of a single plate, having a seat on one side the flange and a tongue adapted to be disposed on the other side of the flange and a frictional retaining member extending longitudinally of the tongue and between the same and the adjacent surface of said flange.

1,399,457. WIDE BELT AND FASTENER THEREFOR. FRANK B. BATCHELDER, Worcester, Mass., assignor to Mills Belt Company, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 17, 1919. Serial No. 338,638. 2 Claims. (Cl. 224—23.)

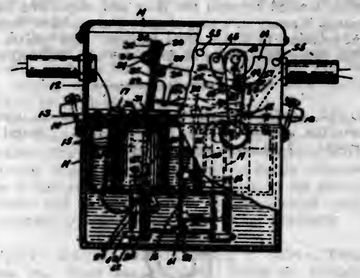
1. As an article of manufacture, a flexible woven cartridge belt having a straight vertical end provided with a

materially shorter centrally located stiff clasp or fastener member constituting an attachment therefrom to the other end of the belt and located in a space between the two ends of the belt but close to them, said belt projecting materially beyond the fastener both at the top and bot-

tom and having secured thereto a resilient flexible strip materially stiffer than the belt itself, but capable of yielding to the motions of the wearer, and extending beyond the top and bottom of the fastener to hold the belt in shape and guard the ends of the stiff fastener so as to prevent it from restricting the bending of his body.

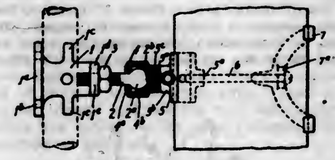
1,399,458. PROCESS OF CYANIDING PRECIOUS-METAL-BEARING MATERIALS. JOHN C. HAUN, Tonopah, Nev., and ALBERT SILVER, San Francisco, Calif. Filed Dec. 4, 1920. Serial No. 428,227. 3 Claims. (Cl. 75—185.)

1. A process of treating precious metal bearing materials which comprises subjecting such materials to the action of a solution containing a cyanid, a bicarbonate and a lead compound capable of combining with the sulfur of sulfids.



1,399,459. FULLER BALL. DAVID B. BIRD, Chicago, Ill. Filed Sept. 10, 1920. Serial No. 409,312. 6 Claims. (Cl. 251—159.)

5. In a Fuller ball construction, the combination with a crank rod and a hollow valve member of resilient material mounted thereon, of a compression member also mounted on said rod, and having telescopic engagement with the valve member, a filling of resilient material, and means associated with the compression member for actuating the said members to compress the filling material and securing the members together, said filling material being entirely inclosed by the two members.



1,399,460. OIL-SWITCH. GEORGE A. BUANHAM, Saugus, Mass., assignor to Sears B. Condit, Jr., Brookline, Mass. Filed May 26, 1917. Serial No. 171,274. 9 Claims. (Cl. 200—17.)

8. An electric switch having starting, running, and neutral positions, an operating handle, operating mechanism arranged to be normally disconnected from said handle and to connect therewith only upon movement of said handle from neutral to starting positions, and electrically-

controlled means to disconnect said mechanism and handle to cause the switch to move from running to neutral positions.

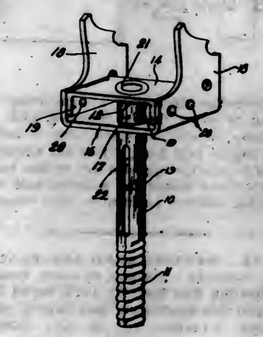
1,399,461. MIRRORSCOPE. CLARENCE E. CHILDS, San Diego, Calif. Filed May 18, 1921. Serial No. 470,581. 6 Claims. (Cl. 45—97.)

1. A mirrorscope including a supporting member, a bolt adapted to screw therein provided with a spherical head, a clamp member provided with a socket portion adapted to engage said head, a lock nut adapted to screw thereon and engage the opposite side of said head, another clamp member and means for securing said clamp members in certain relative position to each other.

1,399,462. BEATING-REED AND BEATING-REED ORGAN. GEORGES CLOETENS, Brussels, Belgium. Original application filed Mar. 20, 1911, Serial No. 615,767. Divided and this application filed June 5, 1914. Serial No. 843,249. 2 Claims. (Cl. 84—35.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A reed organ comprising a plurality of chambers each with an inlet and an outlet, a partition in each chamber located between the inlet and the outlet and having a passage through it, a hinged rigid plate in each chamber spring-pressed to close the passage, said plates

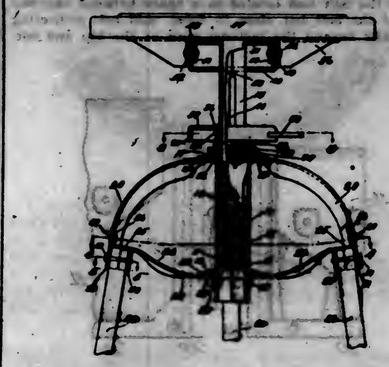
and springs being tuned to give the notes of a musical scale.



2. A reed organ comprising a plurality of chambers each with an inlet and an outlet, a partition in each chamber located between the inlet and outlet and having a passage through it, a hinged glass plate in each chamber, spring-pressed to close the passage, said plates and springs being tuned to give the notes of a musical scale.

1,399,463. CHECKREIN-HOLDER. ELIOT K. CLOVER, Lohrville, Iowa. Filed Feb. 7, 1921. Serial No. 443,074. 7 Claims. (Cl. 54—61.)

1. A check rein hook including inner and outer split loops connected at their ends to define a mouth entering the inner loop through the outer loop.

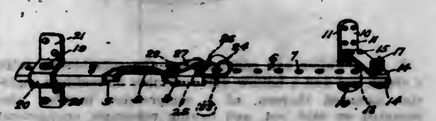


1,399,464. CHAIR-IRON. DAVID R. COLLIER, Gardner, Mass., assignor to Collier-Keyworth Company, Gardner, Mass., a Corporation of Massachusetts. Filed Aug. 19, 1920. Serial No. 404,602. 4 Claims. (Cl. 155—134.)

1. A spindle for swivel chairs and the like, formed of sheet metal rolled into the form of a tube, a head connected with said tube, said head comprising parallel upper and lower plates having apertures through which the spindle projects, a bead and a flange formed at the upper end of the spindle between which the upper plate of the head is secured and a reinforcing tube fitting tightly within the bore of the spindle, and located in the zones of the head.

1,399,465. STOOL. DAVID R. COLLIER, Gardner, Mass., assignor to Collier-Keyworth Company, Gardner, Mass., a Corporation of Massachusetts. Filed Feb. 24, 1921. Serial No. 447,524. 13 Claims. (Cl. 155—135.)

1. A hub consisting of a frame comprising two pairs of separate crossed sheet-metal bars, the ends of the bars of each pair being inverted to the ends of the corresponding bars of the other pair, and the crossed portions of the



bars of said pairs of bars being provided with alined apertures.

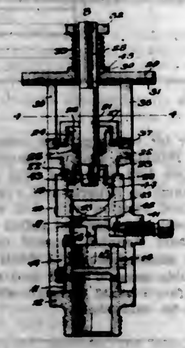
1,399,466. CHAIR-IRON. DAVID R. COLLIER, Gardner, Mass., assignor to Collier-Keyworth Company, Gardner, Mass., a Corporation of Massachusetts. Filed Mar. 17, 1921. Serial No. 452,898. 5 Claims. (Cl. 155—138.)

1. A chair iron hub comprising a central tubular member, a plurality of channel irons disposed about said member and having projecting lugs at one end, and a collar on said tubular member engaging said lugs and securing them to said member.

1,399,467. DOOR-HOLDER. HENRY F. CORDES, Cincinnati, Ohio. Filed Aug. 13, 1920. Serial No. 403,309. 2 Claims. (Cl. 292—267.)

1. A door-holder comprising a pair of telescopically-sliding elongated bar-members, one bar-member being channeled and the other being plain the plain bar having a longitudinal series of holes or perforations pierced therein, a horizontal forked-bracket extending outwardly from the upright side-frame of the door-way and to the outer end of which forked-bracket one end of the said pierced plain bar is pivotally connected, an upright pin extending from the upper face of the said plain bar near its pivotally-connected end and adapted to form a stop in connection with said forked-bracket to limit any further backward-movement of the said plain bar toward the door, a horizontal U-shape bracket-arm extending

from the inner face of the door and to which said channeled-bar is pivotally connected at its outer end and serves as a take-up or compensating pivotal-coupling between the channeled-bar and the inner face of the door, and a pointed latchpin mounted on a handle-bar that is hinged to the inner end of the channeled-bar and adapted to engage the respective holes in the plain bar for holding the door in open position at the desired angle from the door-way, or for otherwise locking the door when shut or entirely closed within said door-way, substantially as shown and described.



1,399,468. [WITHDRAWN.]

1,399,469. WATER-TOBOGGAN. HENRY CUCELLO, New Orleans, La. Filed Aug. 12, 1921. Serial No. 491,804. 2 Claims. (Cl. 104—70.)

1. A water toboggan, comprising a supporting structure, an elevated platform thereon, an inclined gravity discharge way leading downwardly from the platform to a body of water therebelow, said discharge way consisting of spaced longitudinally disposed side rails, longitudinally disposed channel strips arranged in parallel relation to the inner sides of said rails and a series of transverse rollers supported in said channel strips, the lower end of the discharge way being curved slightly upwardly whereby to effect the ricochetting of a toboggan discharged therefrom over the surface of said body of water, and a return way leading upwardly over the supporting structure to the platform.

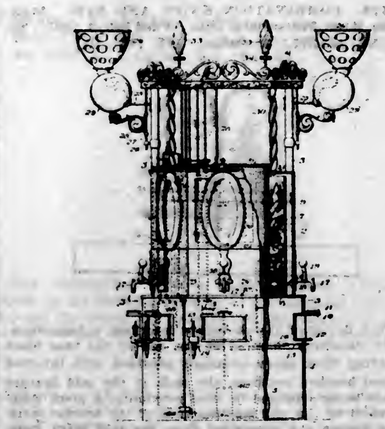
1,399,470. BOILER-CHECK SHUT-OFF VALVE. MARTIN A. ENGEN, Willmar, Minn., assignor of one-half to Russell Spicer, Willmar, Minn. Filed June 1, 1918. Serial No. 237,727. 8 Claims. (Cl. 277—65.)

1. In combination, a check valve, a chamber therefor, a shut-off valve, a chamber therefor, a centrally apertured partition through which said chambers communicate, a by-pass between said chambers, and means for controlling the passing of fluid through said by-pass.

1,399,471. METHOD OF PRESERVING VEGETABLES, FRUIT, AND THE LIKE. ARNOLD FASTENRATH, Berlin, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed May 24, 1917. Serial No. 170,663. 6 Claims. (Cl. 99—5.)

1. Method of preserving fresh vegetables, fruit and the like consisting in separating the juice from said vegetables, fruit and the like, condensing said juice and thereupon mixing said condensed juice again with the pulp obtained by said separation.

6. Preserves in the form of blocks consisting of a mixture of condensed natural juice separated from fresh vegetables, fruit and the like and the remaining pulp, the main body of said blocks containing sufficient moisture to allow of the swelling-up and dissolving of its previously swellable and soluble components, respectively, and being inclosed by a dried film of the same substance.

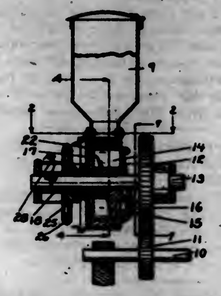


1,399,472. EXPLOSIVE. PATRICK J. GAFFY, Philadelphia, Pa. Filed Apr. 23, 1920. Serial No. 376,052. 1 Claim. (Cl. 52—6.)

The method of making an explosive material, the same consisting in boiling cat-tail fiber in a solution of one-quarter pound of salt dissolved in a quart of water, then thoroughly drying said fiber, and mixing with each pound of fiber one tablespoonful of nitro-glycerin.

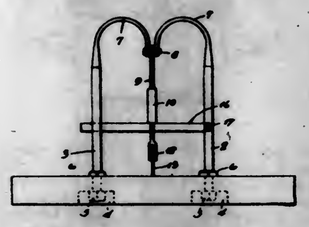
1,399,473. PROCESS OF MANUFACTURING CAOUTCHOUC-LIKE SUBSTANCES. FRIEDRICH GRAF DE LA ROSEE, Garmisch-Partenkirchen, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed Jan. 8, 1919. Serial No. 270,243. 4 Claims. (Cl. 106—23.)

1. The process of manufacturing caoutchouc-like substances, consisting in melting resins with an addition of chlorid of calcium, subjecting the molten mixture to a repeated distillation process with further addition of chlorid of calcium in connection with chlorid of lime, mixing the thereby obtained oils with india-rubber, and subjecting this mixture to the usual vulcanizing process, substantially as described.



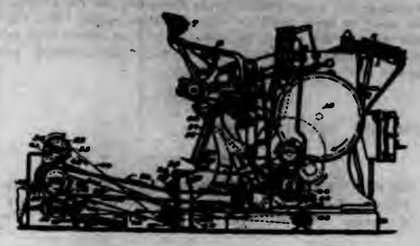
1,399,474. MECHANISM FOR EXTRACTING AND DISPENSING FRUIT-JUICES. DANIEL J. GORMAN, Philadelphia, Pa., assignor to German Fountain and Beverage Manufacturing Corporation, a Corporation of Delaware. Filed June 8, 1920. Serial No. 387,339. 5 Claims. (Cl. 225—21.)

1. The combination of a storage tank for a beverage, a storage tank for beverage ingredients, a conduit leading



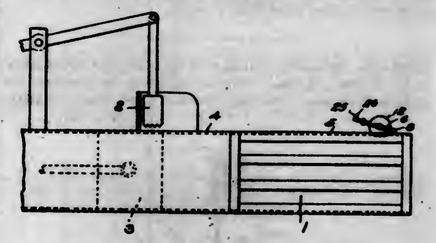
from a lower part to an upper part of said latter tank, a circulating pump in said conduit, a conduit leading from said first conduit to said first tank, and a valve in said conduit to direct liquid from said pump into said first tank.

1,399,475. SEED-PLANTER. JOSEPH HAINES, Claypool, Ind. Filed June 14, 1920. Serial No. 388,850. 8 Claims. (Cl. 221—137.)



1. In a planter the combination of a hopper having an opening in the bottom thereof, a relatively fixed feed cylinder disposed in said opening and having a feed discharge passage opening at the periphery thereof, a shaft, a feed wheel having an externally threaded hub mounted on said shaft to rotate therewith, said feed wheel being provided with a flange-like rim rotatable upon said cylinder and having axially disposed slot-like seed cups adapted to register with the discharge passage of said feed cylinder as the feed wheel revolves thereon, a feed cup adjusting member provided with a hub having a peripheral groove therein, mounted on said feed wheel hub for axial adjustment thereon and having finger-like cup members disposed to telescope in the cups of said feed wheel, an adjusting wheel for said cup adjusting member threaded upon said feed wheel hub and having a lug engaging said groove in said cup adjusting member hub, and driving means for said shaft.

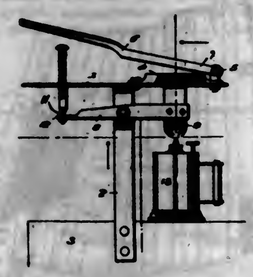
1,399,476. COMBINATION KNIFE AND SAW. ALEXANDER HALL, Portsmouth, Ohio. Filed Feb. 8, 1921. Serial No. 443,377. 3 Claims. (Cl. 146—12.)



1. In a device of the character described, a base block, upright standards mounted at one end of the base block and having their upper terminals provided with inverted U-shaped bracket members, the ends of the said bracket members being arranged in close proximity, a pivot member carried by the said meeting ends of the bracket members, a hanger rod suspended from the said pivot member, and a cutting element carried by the lower end of the said hanger rod and adapted to extend across the surface of the said block.

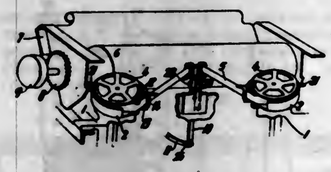
1,399,477. DELIVERY ATTACHMENT FOR PRINTING-PRESSES. HARRY F. HAMPSHIRE and FRANK B. CRAWMER, Philadelphia, Pa., assignors to Thomson Printing Company, a Corporation of New Jersey. Filed Dec. 24, 1920. Serial No. 432,014. 7 Claims. (Cl. 271—64.)

2. A delivery mechanism, comprising a conveyer-belt extending between two rolls and operative to convey sheets of paper from a printing-press toward the second of said rolls, a frame operative to support said second roll, third and fourth rolls also supported by said frame upon substantially opposite sides of said second roll, a belt extending over and between said third and fourth rolls and movable in fixed relation with said first belt over said second roll, said second belt being operative to maintain a sheet upon said first belt until the sheet is substantially inverted beneath said first roll, a roll adjacent to the lower portion of said second belt, means operative to lead the sheet from said second belt and toward said last-named roll, and a tray adapted to receive sheets from said last-named roll.



1,399,478. INDICATOR FOR BALING-PRESSES. HENRY H. HARDT, Gibsonia, Pa. Filed Jan. 25, 1921. Serial No. 439,793. 7 Claims. (Cl. 116—114.)

1. An indicator for baling presses comprising a frame, a serrated wheel rotatably mounted therein on a horizontal axis, said frame being provided with means to pivotally mount the same on a horizontal axis on top of the press in an inclined position with said wheel projecting into the compression chamber and riding on the bale being formed, a shaft mounted in said frame normal to the axis of said serrated wheel, a friction wheel longitudinally adjustable on said shaft and peripherally engaging the side face of said serrated wheel, and an indicator actuated by said shaft.

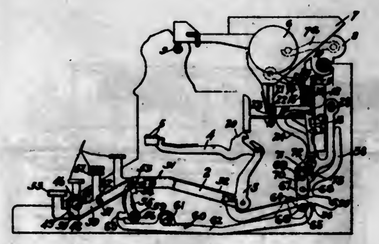


1,399,479. MACHINE FOR DOCKING LAMBS' TAILS. RICHARD COOPS HARVEY, Lethbridge, Alberta, Canada. Filed July 8, 1920. Serial No. 394,791. 8 Claims. (Cl. 128—305.)

1. A tail docking device comprising a support, a blade affixed thereto, a lever pivoted to said support and provided with a sharpened surface to cooperate with the fixed blade of the support, and a heated finger movable with

respect to said support and arranged adjacent to said cutting edges adapted to singe the part being severed.

1,399,480. TYPEWRITING-MACHINE. WILLIAM F. HELMOND, Hartford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 19, 1919. Serial No. 283,500. 8 Claims. (Cl. 197—151.)



1. In a typewriting machine, the combination with ribbon mechanism including a pivoted ribbon-tension arm, a pivoted ribbon-spool-supporting drum, and means for limiting the movement of each, of a spring connecting said drum and said arm, said spring serving as means for holding each of said pivoted members in a normal position and for returning each to said position when removed therefrom.

7. In a ribbon mechanism, a ribbon-vibrator formed of a single piece of metal and having open-ended slots for guiding and supporting the ribbon, the entrance to each of said slots being restricted by a finger extending substantially thereacross and having its end bent slightly to the rear, so as to permit insertion of the ribbon and to lie directly thereacross when the ribbon is in its normal path, the ribbon-vibrator being also provided adjacent the outer edge of each slot with a finger projecting forwardly therefrom so as to lie across the ribbon as it extends from the slot in its normal path.

1,399,481. TYPEWRITING-MACHINE. WILLIAM F. HELMOND, Hartford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 24, 1919. Serial No. 292,270. 20 Claims. (Cl. 197—78.)

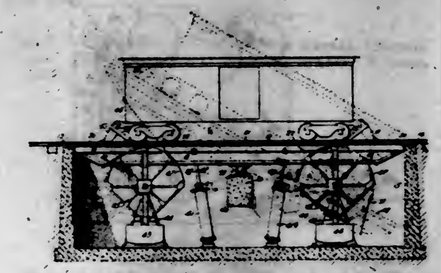
1. In a typewriting machine, the combination with a shiftable platen, of means, including a shift frame, for moving said platen, a shift lever for actuating said shift frame, means for locking said shift frame in either upper or lower-case position including a pin connected with said shift frame to move therewith, and means to adjust said pin with reference to said shift frame, and thereby determine the upper and lower-case positions assumed by the shift frame, said adjusting means being

accessible from the outside of the machine when the same is in normal upright position.

1,399,482. WRINGER. HERMAN C. HIRSCHY, Minneapolis, Minn. Filed Mar. 1, 1920. Serial No. 362,319. 7 Claims. (Cl. 68—32.)

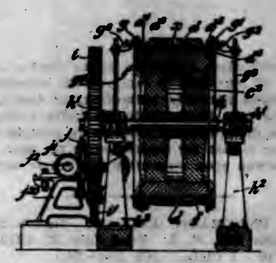
5. In combination, a wringer frame having separable sections, a roll journaled in each section, separable intermeshing pinions normally connecting the two rolls, one roll having a gear fixed within its frame section to its shaft, and a drive member mounted in part in the companion frame section for meshing with the gear and separable therefrom upon separating the frame sections.

1,399,483. PNEUMATIC PICK-UP. HENRY S. HORNBECK, Union Hill, N. J. Filed July 22, 1920. Serial No. 398,119. 1 Claim. (Cl. 294—64.)



The combination with a suction pick-up having a recess in its working face, of a rod extended centrally through the recess and projected rigidly beyond the plane of the working face and within the boundary thereof.

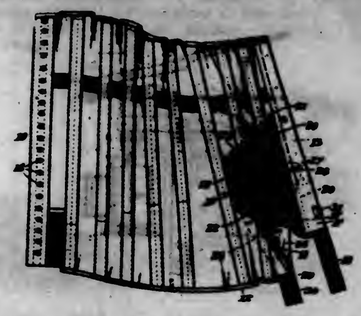
1,399,484. CAR UNLOADING OR DUMPING APPARATUS. EDMUND M. HULL, Buffalo, N. Y. Filed Apr. 8, 1918. Serial No. 227,209. 16 Claims. (Cl. 214—47.)



1. In a car unloading apparatus, the combination of a pivoted table, opposite movable car-supporting rails on said table, fluid pressure actuated mechanism sup-

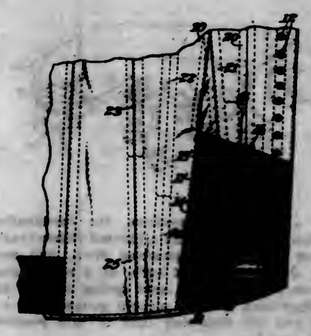
ported by said table for moving said mills simultaneously relatively to said table, one upwardly and the other

downwardly to tilt the car sidewise, and means for tilting said table endwise.



1,399,485. PLASTER-SLAB-MOLDING MACHINE. Frank Mihill Johnson, Mitcham, England, assignor of one-half to Cafferata & Co., Newark-upon-Trent, Nottingham, England. Original application filed Dec. 15, 1919, Serial No. 345,620. Divided and this application filed May 11, 1921. Serial No. 465,772. 3 Claims. (Cl. 25—39.)

1. A plaster slab molding machine comprising a molding table, an endless conveyer movable over said table and constituting a continuous base for the mold, swinging members disposed one at each side of the conveyer to constitute mold walls, and a roller adjacent the delivery end of the table having a curved periphery about which the conveyer passes to move said swinging members apart.

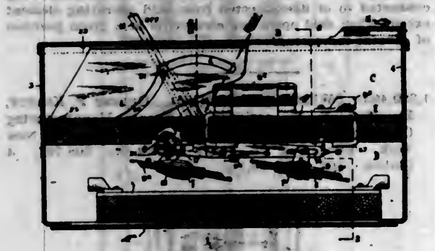


1,399,486. APPAREL-CORSET. Daniel Kops, New York, N. Y. Filed Nov. 16, 1920. Serial No. 424,341. 4 Claims. (Cl. 2—73.)

1. In an apparel corset comprising corset body halves having skirt members and in each corset body half, a front steel, an extension of the corset body half below the lower end of the front steel, and a supporting strap secured at one edge adjacent the front steel and extending from the lower end of the said extension to the upper portion of the abdomen and also extending rearwardly on the inner side of the garment and attached at its opposite edge to the body of the garment forward of the hip section so that the lower edge of the supporting strap lies directly in the main section of the wearer, whereby the adjustment of the garment to position on

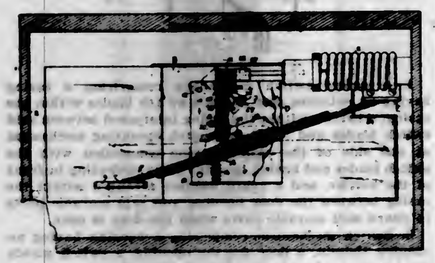
the body places a tension on the said supporting strap causing the strap to conform to the lower portions of the abdomen to act as a support for the same.

1,399,487. APPAREL-CORSET. Daniel Kops, New York, N. Y. Filed Feb. 17, 1921. Serial No. 445,628. 2 Claims. (Cl. 2—73.)



1. In an apparel corset and in each corset body half thereof, a yielding tension strap continuing at one edge, the back lacing edge of the garment, connected at its opposite edge to the adjacent portion of the garment and extending from the lower edge of the garment upwardly to the upper portions of the buttock section of the garment, and stay members placed in diverging positions in the body of the garment with the lower ends thereof extending an appreciable distance below the upper edge of the yielding tension strap whereby the pressure exerted by the tension strap against the lower ends of the stays causes the latter to bridge a hollow at the back of the wearer and thereby produce a flat back effect.

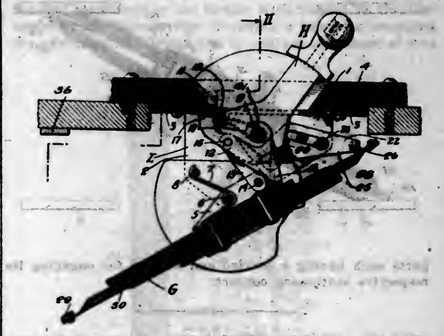
1,399,488. SAFETY STARTING-SWITCH. Hubert F. Krantz, Brooklyn, N. Y., assignor to Krantz Manufacturing Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Mar. 22, 1916. Serial No. 86,854. 2 Claims. (Cl. 200—8.)



2. A switching device comprising an inclosing casing, a door in the front wall thereof to give access therein, a plate of insulating material arranged within the casing spaced from the door, a barrier of insulating material

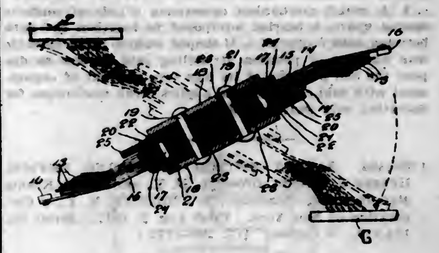
within the casing arranged between the insulating plate and the door substantially parallel with the insulating plate to form a fuse compartment between itself and the door accessible when the door is open and to form a guarded switch compartment between itself and the insulating plate that is inaccessible, an elongated contact

member extending along the front of the insulating plate within the switch compartment, a contact member disposed at one side of the barrier within the switch compartment, a switch for engaging the contact members, a fuse disposed on the barrier in the fuse compartment and connected to one of the contact members, and means for actuating the switch.



1,399,489. SAFETY CUT-OUT. Hubert F. Krantz, Brooklyn, N. Y., assignor to Krantz Manufacturing Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Apr. 6, 1916. Serial No. 89,350. 12 Claims. (Cl. 200—50.)

12. A switching device comprising a housing having a cover provided with an opening therein, a door for said opening hinged to swing into open and closed positions, a switch blade located within the housing and carried by the said door and having a part that is movable into and out of position beneath the cover to retain the door closed and means carried by the door for moving the switch blade and for locking the switch blade in its retaining position.

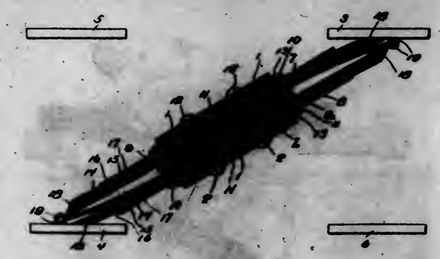


1,399,490. ELECTRIC-SWITCH MECHANISM. Hubert Krantz, Brooklyn, N. Y., assignor to Krantz Manufacturing Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed June 16, 1917. Serial No. 175,191. 11 Claims. (Cl. 200—67.)

1. As an article of manufacture, a switch unit combining a base plate having an opening therethrough, a switch member and operating mechanism therefor located at one side of said base plate and including a toggle for retaining the switch member in open position and means for moving the switch member to closed position with a snap action when the toggle is broken, and an operating handle

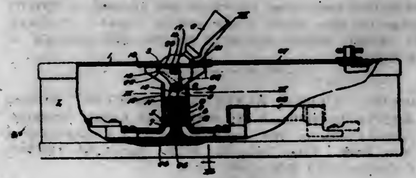
located at the other side of said base plate and having a lost-motion connection therewith and adapted to directly engage the knee of the toggle and to "break" the toggle and permit closing movement thereof independently of the handle.

1,399,491. SWITCH BLADE AND PROCESS. Hubert Krantz, Brooklyn, N. Y., assignor to Krantz Manufacturing Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed June 16, 1917. Serial No. 175,192. 6 Claims. (Cl. 200—166.)



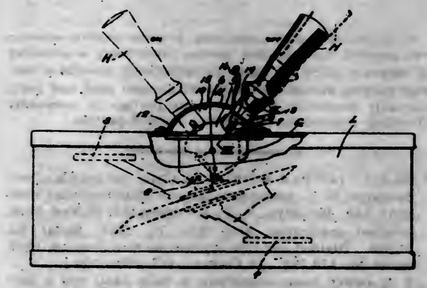
6. A switch blade comprising a main portion and an end portion, and the end portion comprising a plurality of separate parts arranged to collectively provide a contact portion at the end of the blade, and said end parts normally projecting from the main portion in outwardly diverging relation to constitute a beveled portion.

1,399,492. DOUBLE SWITCH-BLADE. Hubert Krantz, Brooklyn, N. Y., assignor to Krantz Manufacturing Company, Inc., Brooklyn, N. Y., a Corporation of New York. Original application filed Mar. 11, 1915, Serial No. 27,298. Divided and this application filed June 16, 1917. Serial No. 175,193. 12 Claims. (Cl. 200—166.)



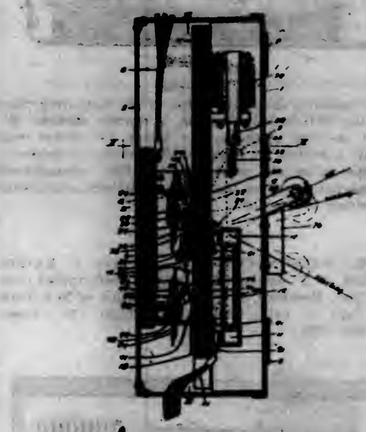
1. A switch blade comprising a body part, and a pair of contact parts having relatively movable laminations projecting from one side of the body part in the same general direction, the body part comprising means whereby the switch blade may be supported to swing the end por-

tions of said contact parts from one stationary contact to another, and the end portions of said laminated contact



parts each having a beveled end surface for engaging its respective stationary contact.

1,399,493. SWITCH MECHANISM. HUBERT F. KRANTZ, Brooklyn, N. Y., assignor to Krantz Manufacturing Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed June 16, 1917. Serial No. 175,196. 6 Claims. (Cl. 200—16.)

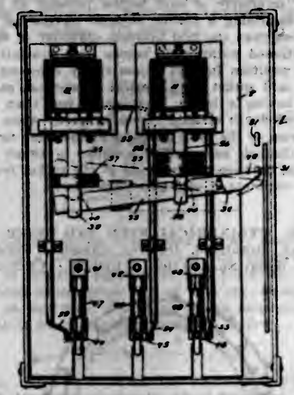


1. A switch mechanism comprising a pair of contacts spaced apart, a barrier interposed to lengthen the path between said contacts, a U-shaped switch blade movable into and out of position straddling said barrier to dispose the end portions of its legs into and out of engagement with said contacts, and a quick-break mechanism for operating said switch blade.

1,399,494. SAFETY-SWITCH-OPERATING DEVICE. HUBERT F. KRANTZ, Brooklyn, N. Y., assignor to Krantz Manufacturing Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Aug. 2, 1917. Serial No. 184,010. 3 Claims. (Cl. 200—172.)

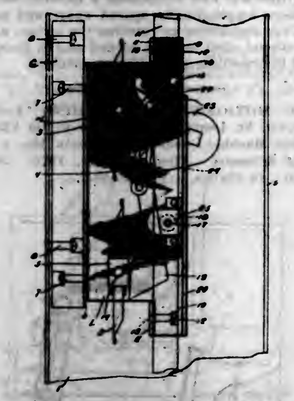
3. In a switch mechanism comprising a box, a switch blade therein, and a pivotally mounted operating element for said switch blade projecting outwardly through an opening in one wall of said box, the combination therewith of a guard member fixed to the mentioned wall of the box in a position substantially inclosing the projecting portion of said operating element, a separate handle having a part adapted to be inserted through an opening in said guard member and into functional relation with said operating element, and said guard member and said handle having parts cooperative to prevent the handle from being connected to or disconnected from said operating element except when said operating element is in a given position of pivotal movement.

1,399,495. SWITCH MECHANISM. HUBERT F. KRANTZ, Brooklyn, N. Y., assignor to Krantz Manufacturing Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Dec. 26, 1917. Serial No. 208,797. 4 Claims. (Cl. 200—50.)



1. A safety switch mechanism comprising a casing having an entrance door thereto, switch blades within the casing, a barrier within the casing interposed between said switch blades and the door, switch operating mechanism at one side of the casing having connection with the switch blades and having movable parts projecting in front of the barrier, and a guard member arranged within the casing between the door opening and said movable parts to guard said movable parts when the door is open.

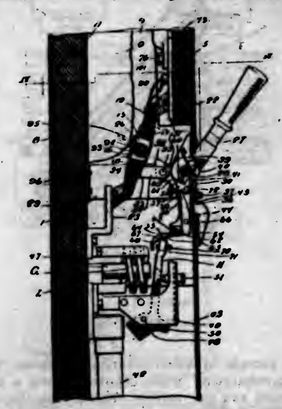
3. Switch mechanism comprising a housing having an opening therein, a door for the opening, a switch within the housing, a detachable barrier within the housing interposed between the switch and the door, switch-operating mechanism within the housing and operable from the exterior thereof, and an electrically-actuated means mounted on, and removable with, the barrier and engaging the switch mechanism for actuating the switch mechanism under predetermined current conditions.



1,399,496. NO-VOLTAGE RELEASE-SWITCH. HUBERT F. KRANTZ, Brooklyn, N. Y., assignor to Krantz Manufacturing Company Inc., Brooklyn, N. Y., a Corporation of New York. Filed Dec. 26, 1917. Serial No. 208,796. 8 Claims. (Cl. 200—94.)

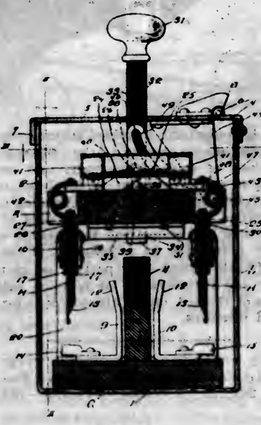
3. The combination with a three-pole switch having a pivoted operating member, of a pair of core members of different weights for engaging the operating member at different distances from the pivot therefor, the heavier member being disposed nearer to the pivot than the lighter member, and a tripping coil for each core member for retaining the members out of engagement with the operating member when the coils are energized and so connected across the pole of the switch that interruption of current through either pole of the switch will cause

sufficient reduction of current through one coil to permit the core member thereof to drop into actuating engagement with the operating member.



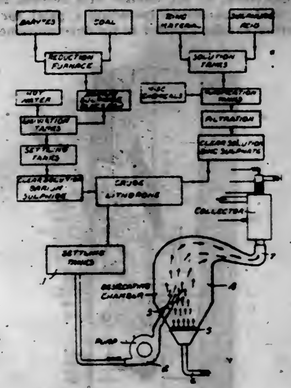
1,399,497. SUPPORTING-BRACKET FOR SWITCH MECHANISM. HUBERT F. KRANTZ, Brooklyn, N. Y., assignor to Krantz Manufacturing Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Aug. 5, 1918. Serial No. 248,228. 7 Claims. (Cl. 200—166.)

1. In a switch mechanism comprising a pair of walls spaced apart, a contact supported by one of said walls, and a switch blade intermediate said walls movable into and out of engagement with said contact, the combination therewith of a supporting bracket for said switch blade and said two walls, said supporting bracket comprising a single piece of material shaped to provide attaching means for each of said elements and having a laterally projecting flange formed thereon serving as a guard member for said switch blade.



1,399,498. SAFETY-SWITCH MECHANISM. HUBERT F. KRANTZ, Brooklyn, N. Y., assignor to Krantz Manufacturing Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Aug. 5, 1918. Serial No. 248,330. 19 Claims. (Cl. 200—88.)

11. A safety switch mechanism comprising a switch blade movable into "on" and "off" positions, a contact for the switch blade, an operating handle for the switch blade, connections between the operating handle and the switch blade whereby to move the switch blade in response to the movements of the handle and which permit independent movement of the handle with respect to the connections, said connections including a pawl for engaging the operating handle adapted to produce movement of said



connections by movement of the handle in one direction, said connections also including a toggle, a member pivotally connected to one link of said toggle, and means to move said member about its pivot for disengaging said pawl from said handle, and said last mentioned means being adapted also to thereafter move said member with said link to operate the toggle.

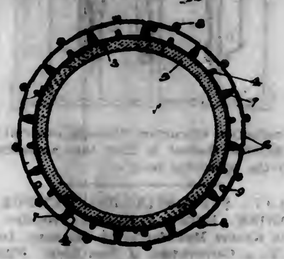
1,399,499. SWITCH MECHANISM. HUBERT F. KRANTZ, Brooklyn, N. Y., assignor to Krantz Manufacturing Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Sept. 6, 1918. Serial No. 252,877. 25 Claims. (Cl. 200—50.)

2. A switch mechanism comprising a pair of elements spaced apart and adapted for receiving the opposite ends of a fuse, a pair of contacts one associated with each of said elements, and switch devices relatively movable with respect to the fuse and to one another for making and breaking electrical connection between each of said elements and its respective contact.

1,399,500. PROCESS OF MANUFACTURING LITHOPONE. CHARLES B. KUSELL, Clarkdale, Ariz. Filed Aug. 15, 1921. Serial No. 492,342. 7 Claims. (Cl. 134—78.)

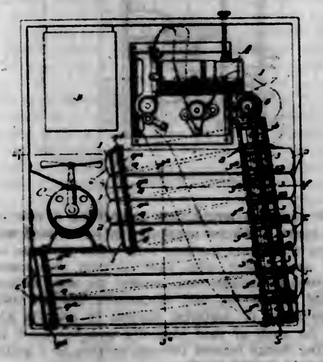
5. The process of manufacturing lithopone which consists in precipitating crude lithopone from a mixture of barium sulfid and zinc sulfate, discharging the liquid containing crude lithopone as a fine spray into a current of heated air whereby the zinc sulfid constituent of the lithopone will undergo a partial superficial oxidation and thereafter collecting the finished product as a finely divided powder.

1,399,501. BED-SPRING. HARRY LITVAK, New York, N. Y. Filed July 22, 1920. Serial No. 398,077. 1 Claim. (Cl. 5—65.)



A bed spring comprising a divided spring body of woven wire mesh, cross pieces secured to the end portions of the divided portions of said spring body, said cross pieces having resilient means adjacent to the head and foot of the bed for attachment to a bed, and threaded members in opposed operative relation at the free ends of the cross pieces for joining and separating the divided spring portions and for permitting an adjustment of the space between said divided spring body portion so as to take up any slack or sag therebetween or between said portions and the sides of the bed, and a hinged cover for the space and threaded members.

1,399,502. ELECTRICAL PROTECTIVE DEVICE. JAMES J. LOUGH, New York, N. Y. Filed Dec. 18, 1918. Serial No. 267,225. 8 Claims. (Cl. 173—358.)



1. The combination with an electrical socket provided with a uniform circular hollow member of electrically conducting material serving as one contact and of predetermined depth for receiving the base of an electrical lamp or plug, said socket having its other contact insulatingly mounted interiorly of said hollow member of protecting means comprising a hollow element having an outer diameter less than the said uniform diameter of said recess and positioned within said recess, said protecting device when in position in said recess freely exposing the contacts of said socket for electrical connection, said hollow element having a length appreciably less than said predetermined depth of said recess, whereby upon insertion of the lamp or the plug the base of the lamp or the plug extends through said hollow member to afford electrical connection between the contacts of the socket respectively with the contacts of said base respectively.

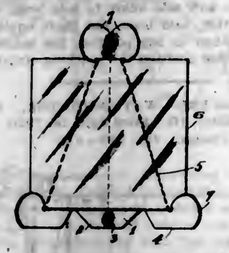
1,399,503. CYLINDRICAL KILN AND DRIER. GEORGE MCCRAE, Brantford, Ontario, Canada. Filed Oct. 6, 1920. Serial No. 415,199. 7 Claims. (Cl. 222—7.)

1. A cylindrical kiln comprising a metallic shell; annular members longitudinally spaced apart and secured to the shell for supporting or rotating the latter; and an external sectional shell secured to and spaced from the kiln shell and intermediate two adjacent members.

1,399,504. MOTION-PICTURE MACHINE. PAUL J. MCCULLOUGH, St. Louis, Mo., assignor to De Vilbiss Endless Film Machine Company, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 19, 1920. Serial No. 404,640. 15 Claims. (Cl. 88—18.7.)

1. In a film feeding machine, a plurality of independent compartments, each adapted to receive and store a portion of a continuous film and each having gates through which it receives and discharges film; a discharging gate on one compartment being adapted to deliver to the receiving gate of the next compartment; means being provided for positively advancing the film from each compartment to the next.

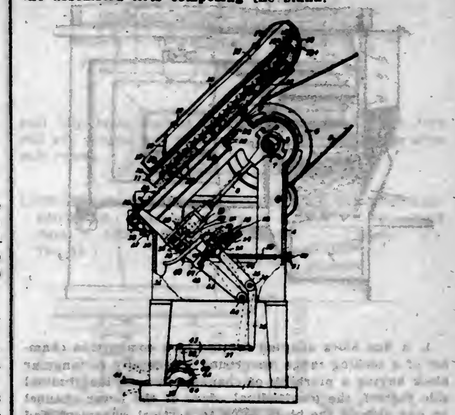
1,399,505. LIGHTING SYSTEM AND MEANS FOR CONTROLLING THE SAME. WILLIAM K. MCIVER, Elgin, Ill., assignor, by mesne assignments, to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Oct. 14, 1916. Serial No. 125,724. 5 Claims. (Cl. 200—1.)



2. An electric switch comprising a plate adapted to be attached to a supporting member, an open-ended cap mounted in inverted position on said plate, an insulated base secured in the upper end of said cap, switch blades mounted on said base, and an operating member mounted on said plate for operating said switch blades.

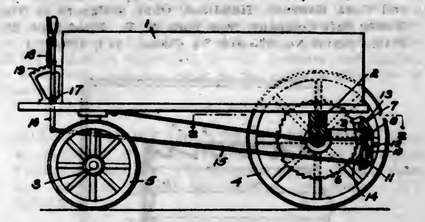
1,399,506. MANUFACTURE OF CADMIUM PIGMENT. JOHN R. MARSTON, Clarkdale, Ariz. Filed Aug. 15, 1921. Serial No. 492,472. 5 Claims. (Cl. 134—78.)

3. In the manufacture of cadmium pigment, the process which consists in treating zinc dust precipitates containing metallic copper and cadmium with dilute sulfuric acid to dissolve the zinc as zinc sulfate, thereafter heating the mixture to a temperature to effect a solution of the cadmium as cadmium sulfate, drawing off the solution and thereafter treating the same with barium sulfid to precipitate the zinc and cadmium as sulfids and produce a paint pigment.



1,399,507. EASEL. AMERICUS C. MILLS, Jr., deceased, Rochester, N. Y., by Minnie C. Mills, executrix, Rochester, N. Y. Filed May 27, 1920. Serial No. 384,706. 2 Claims. (Cl. 40—149.)

1. An easel comprising two members hinged together and each having a supporting portion against which the back of a flat article may rest, and oppositely extending projections at the ends of said portions having overhanging portions for binding against the front face of an article as the members swing outward on their hinges to confine the article on said supporting portions, the projections at the lower end of each member being farther removed from the hinge than that at the upper end of each member so that the article occupies an inclined position on the support.

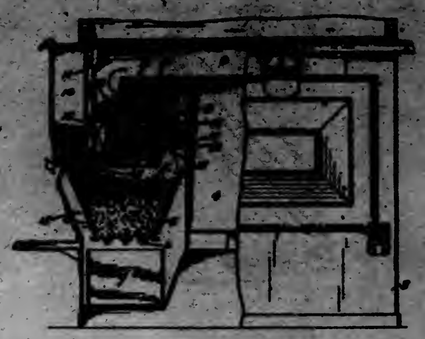


1,399,508. HEEL-BLANK BUILDING. JOHN E. MITCHELL and DENNIS PARKS, St. Louis, Mo. Filed Dec. 28, 1920. Serial No. 432,695. 12 Claims. (Cl. 12—50.)

1. The method of successively detaching heel-blanks temporarily maintained in column formation, which consists in advancing the column of blanks in stages and continuously forcing one end of the column of heel-blanks in a path diverging from that of the column, in such manner as to bodily deflect each blank in turn from the column without disturbing the relative positions of the assembled lifts composing the blank.

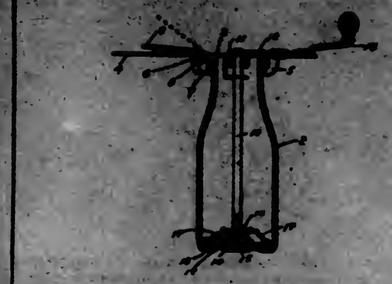
8. In a machine of the class described, the combination of a holder for a series of heel-blanks and separators in column formation, means for forcing successive blanks and separators into the holder at one end thereof, and a lateral extension at the remote end of the holder for guiding the blanks and separators laterally and effecting their successive detachment from the column.

1,399,509. VEHICLE-REVERSE LOCK. DAVID MIZRUCHY, Pittsburgh, Pa. Filed Apr. 19, 1920. Serial No. 374,878. 4 Claims. (Cl. 188—30.)



1. In a vehicle, in combination with a vehicle wheel, of a ratchet plate rotatable with the wheel, a detent pivotally attached to a fixed part of the vehicle and arranged to engage the ratchet plate and prevent rearward rotation of said plate and vehicle wheel, a rocking frame pivoted on the detent axis, a projecting finger on said frame arranged to engage the detent and hold it out of operative relation to the ratchet plate, and means for rocking said frame.

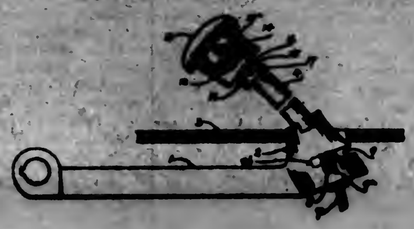
1,399,510. PROCESS OF MAKING TANNING MATERIALS. WILLY MOELLER, Hamburg, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed Mar. 14, 1916. Serial No. 84,246. 7 Claims. (Cl. 23—24.)



1. The preparation of a tanning agent which comprises condensing a derivative of an aromatic hydrocarbon to an insoluble condensation product, and subsequently oxidizing said condensation product until a substantially water soluble material is obtained.

1,399,511. FLUE-BLOCK FOR HEATING AND COOKING. Benno Mannasse, Minneapolis, Minn. Filed Jan. 14, 1920. Serial No. 351,241. 2 Claims. (Cl. 126—92.)

1. A flue block adapted for use in a combustion chamber of a cooking range comprising a generally rectangular block having a plurality of channels in each longitudinal side thereof, the longitudinal edges of the lower channel on one side of the block being in vertical alinement and the longitudinal edges of the upper channel in the opposite sides being in vertical alinement, the upper edge of the upper channel in the first mentioned side being disposed inwardly of the edges of the lower channel and the lower edge of the lower channel in the second mentioned side being disposed inwardly of the edge of the upper channel on that side, said block having a plurality of transverse flues extending therethrough and connecting the channels at each side of the block.



1,399,512. SAFE. Moses Moulin, New York, N. Y., and Carl Bartels, Hamilton, Ohio, assignors to The [illegible] Co., a Corporation of Ohio. Filed Jan. 14, 1920. Serial No. 351,241. 2 Claims. (Cl. 126—92.)

thereby a movable jaw mounted to engage the neck of the bottle on the opposite side from said fixed jaws, a

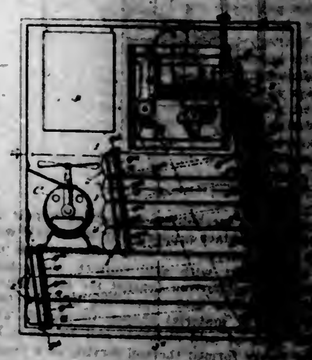
shaft mounted in said plate, means for revolving said shaft, and a beating device carried by said shaft.

1,399,514. MOTOR-VEHICLE LOCK. Brice Owen, Los Angeles, Calif. Filed Nov. 9, 1920. Serial No. 422,830. 2 Claims. (Cl. 70—128.)

2. In a motor vehicle the combination of a clutch lever and a pedal shaft slidable therein; and a lock in said

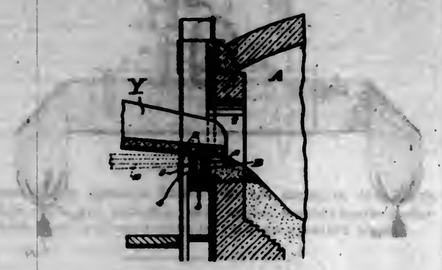
1,399,501. BED-SPRING. Henry Lutyar, New York, N. Y. Filed July 22, 1920. Serial No. 398,077. 1 Claim. (Cl. 5—68.)

A bed spring comprising a divided spring body of woven wire mesh, cross pieces secured to the end portions of the divided portions of said spring body, said cross pieces having resilient means adjacent to the head and foot of the bed for attachment to a bed, and threaded members in opposed operative relation at the free ends of the cross pieces for joining and separating the divided spring portions and for permitting an adjustment of the space between said divided spring body portion so as to take up any slack or sag therebetween or between said portions and the sides of the bed, and a hinged cover for the space and threaded members.



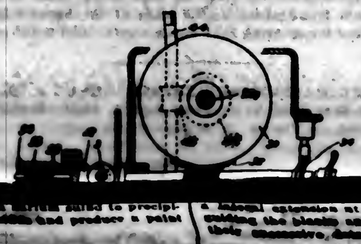
1,399,502. ELECTRICAL PROTECTIVE DEVICE. James J. Lonsr, New York, N. Y. Filed Dec. 18, 1918. Serial No. 267,225. 8 Claims. (Cl. 173—358.)

1. The combination with an electrical socket provided with a uniform circular hollow member of electrically



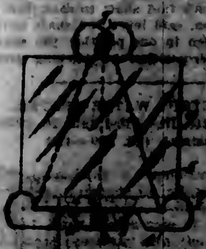
1. A cylindrical film comprising a [illegible] shell, [illegible] members longitudinally spaced apart and secured to the shell for supporting or rotating the latter, and an external sectional shell secured to and spaced from the film shell and intermediate two adjacent [illegible].

1,399,504. MOTION-PICTURE MACHINE. Paul J. McCullough, St. Louis, Mo., assignor to The Vitaloo Motionless Film Machine Company, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 23, 1920. Serial No. 404,640. 15 Claims. (Cl. 88—18.5.)



1. In a film feeding machine, a plurality of [illegible] compartments, each adapted to receive a portion of a continuous film and each which is received and [illegible] an one compartment, being [illegible] ceiving gate of the next [illegible] vided for positively advancing the film [illegible] ment to the next.

1,399,516. FALSE SILL FOR OPEN-HEARTH-FURNACE DOORS. Thomas Porter, deceased, by Nellie Porter, administratrix, Millin township, Allegheny county, Pa. Filed Jan. 10, 1921. Serial No. 436,151. 3 Claims. (Cl. 263—1.)

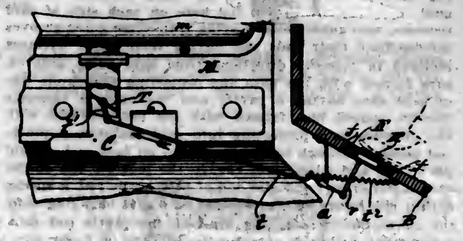


1. A false sill as and for the purpose described, comprising a substantially rectangular body portion, and a projecting head portion having a recess therein for the reception of the pool of a charging machine.

1,399,517. PHONOGRAPH-MOTOR. Ernest J. Postal, Grand Rapids, Mich. Filed May 22, 1919. Serial No. 299,081. 4 Claims. (Cl. 185—37.)

1,399,507. HASEL. Asbricus C. Mills, Sr., deceased, Rochester, N. Y., by Minnie C. Mills, executrix, Rochester, N. Y. Filed May 27, 1920. Serial No. 384,703. 2 Claims. (Cl. 46—202.)

1. An easel [illegible] and each having [illegible] back of a flat [illegible] projections at the [illegible] ing portions for [illegible] cle as the [illegible] fine the [illegible] at the lower [illegible] from the [illegible] so that the [illegible] support.

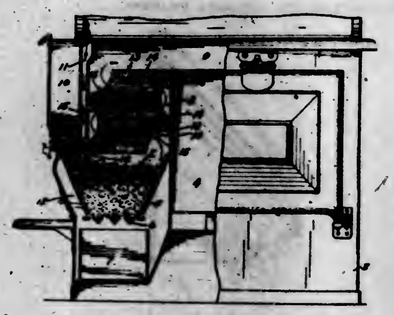


1,399,508. [illegible] Mitchell [illegible] Dec. 28, [illegible] 12—50.) 1. The [illegible] temporarily

fastened to said chain, and a retaining clip pivoted to the trap for preventing accidental withdrawal of the lure, said clip being curved longitudinally whereby its free end will project into the recess when in registration with said recess.

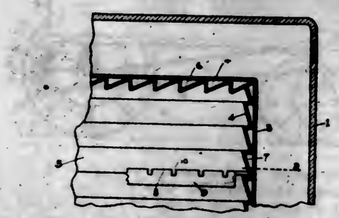
1,399,519. CARBURETER-CONTROL MEANS FOR GAS-ENGINES. Thomas Redfern, Kearney, N. J. Filed July 3, 1920. Serial No. 393,944. 2 Claims. (Cl. 74—81.)

[illegible] icles onto the [illegible]



1. In combination with a gas motor of the character designated, a throttle valve controlling means comprising a rock lever pivotally mounted and provided on one side of its fulcrum with a rigid thrust arm connected with a valve-actuating rod and formed with rockable means on the other side of its fulcrum adapting it to be rocked laterally in one direction as related to the throttle valve

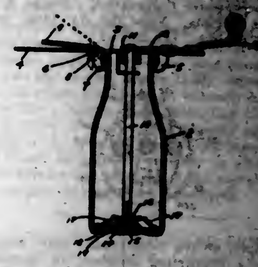
1,399,509. VEHICLE-REVERSE LOCK. David Mitchell, Pittsburgh, Pa. Filed Apr. 19, 1920. Serial No. 374,393. 6 Claims. (Cl. 280—33.)



2. In a [illegible] with a [illegible] wheel, of a [illegible] and ar- [illegible] and each [illegible] of said [illegible] to engage said [illegible] a [illegible] and [illegible] a [illegible] and [illegible] a [illegible] and

1,399,511. FLUE-BLOCK FOR STOVES AND THE LIKE. Peter Mequier, Minneapolis, Minn. Filed Jan. 16, 1920. Serial No. 351,911. 2 Claims. (Cl. 126—83.)

1. A flue block adapted for use in a combustion chamber of a cooking range comprising a generally rectangular block having a plurality of channels in each longitudinal side thereof, the longitudinal edges of the lower channel on one side of the block being in vertical alinement and the longitudinal edges of the upper channel in the opposite sides being in vertical alinement, the upper edge of the upper channel in the first mentioned side being disposed inwardly of the edges of the lower channel and the lower edge of the lower channel in the second mentioned side being disposed inwardly of the edges of the upper channel on that side, said block having a plurality of transverse flues extending therethrough and connecting the channels at each side of the block.



1,399,512. SAFE. Moses Mosler, New York, N. Y., and Carl Barthels, Hamilton, Ohio, assignors to The Mosler Safe Company, New York, N. Y. Filed Sept. 22, 1919. Serial No. 325,578. 1 Claim. (Cl. 109—1.)

In a safe, the combination of a lining member, a corrugated inner lining secured against the inner vertical surfaces of said lining member, to present alined horizontal shoulders on opposite sides, a corrugated lining secured to the ceiling of said lining member, to present vertical shoulders, and a shelf adapted to rest on said horizontal shoulders and having vertical grooves, adapted to receive the bottom edges of partitions having their upper edges engage said vertical shoulders.

1,399,513. EGG-BEATER. Albert F. Nyberg, Minneapolis, Minn. Filed Apr. 19, 1920. Serial No. 374,990. 4 Claims. (Cl. 259—182.)

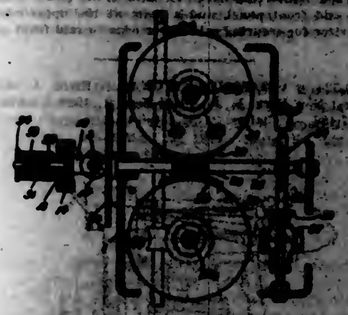
1. An egg beater comprising a plate, jaws fixed thereon and adapted to engage the neck of a bottle on one side thereof, a movable jaw mounted for engaging the neck of the bottle on the opposite side from the fixed jaws,

shaft mounted in said plate, means for rotating said shaft, and a beating device carried by said shaft.

1,399,514. MOTOR-VEHICLE LOCK. Emma Owen, Los Angeles, Calif. Filed Nov. 8, 1920. Serial No. [illegible]. 2 Claims. (Cl. 70—128.)

2. In a motor vehicle the combination of a clutch lever and a pedal shaft slidable therein; and a [illegible] shaft adapted to lock said shaft to said lever when in an inoperative position, said lever and shaft having [illegible] parts whereby when in one position the operating circuit is open and in other position the operating circuit is closed.

1,399,515. ELECTRIC WATER-HEATER. Ransom L. Phelps, Wilmette, Ill. Filed Jan. 20, 1920. Serial No. 353,991. 13 Claims. (Cl. 219—41.)



1. An electric water heater comprising [illegible] having two compartments of relatively [illegible] practically separate but communicating [illegible] through small specially arranged openings [illegible] heating device of comparatively low heating [illegible] in the larger of said compartments, and a [illegible] heating device of relatively high heating [illegible] smaller of said compartments, said [illegible] device being adapted to raise the [illegible] to a moderate degree and said [illegible] device being adapted to raise the [illegible] water to a higher degree as said water [illegible] said openings from said larger compartment [illegible] compartment.

1,399,516. [illegible] NACE DOORS. [illegible] Porter, administratrix, [illegible] county, Pa. Filed Jan. 10, 1921. Serial No. 436,181. 3 Claims. (Cl. 202—1.)

1. A false sill or [illegible] comprising a substantially [illegible] projecting head portion [illegible] reception of the [illegible]

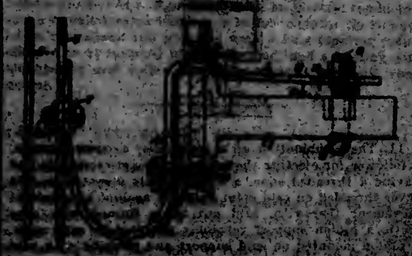
1,399,517. [illegible] Grand Rapids, [illegible] 299,021. 6 Claims. [illegible]

3. A motor [illegible] mounted horizontal [illegible] on the shaft [illegible] about a vertical axis at each side of the shaft, a [illegible] gear on each drum [illegible] sides thereof, [illegible] normally turning [illegible] axes, means for [illegible] drums simultaneously [illegible] erner shaft [illegible] worm in [illegible] engages, a [illegible] maintain the [illegible] and mechanism [illegible] as described.

1,399,518. [illegible] William [illegible] 1921. [illegible]

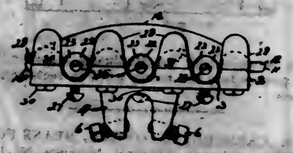
A trap [illegible] chamber in [illegible] municating [illegible] including a [illegible] recess, a [illegible]

[illegible] thereof, and a retaining cap [illegible] the lug-supporting [illegible] withdrawal of the [illegible]



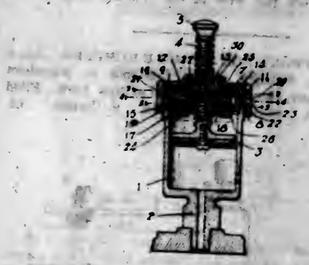
said cap being [illegible] substantially [illegible] fits free and will project [illegible] when in registration with said recess.

1,399,519. CARBURETER-CONTROL MEANS FOR GAS-ENGINES. Thomas Rowles, Kearny, N. J. Filed [illegible], 1920. Serial No. [illegible]. 2 Claims. (Cl. [illegible].)



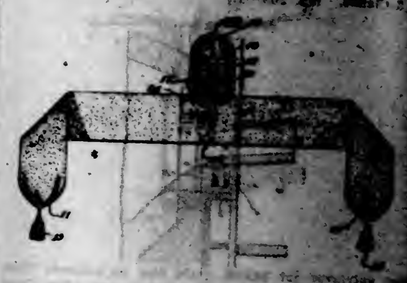
[illegible] to [illegible] to close the valve, a [illegible] to [illegible] to open the valve.

1,399,520. SUPPORT FOR [illegible] BUMPERS. John [illegible], Pennsylvania, assignor to American Chain Company, Inc., [illegible] of New York. Filed Oct. 8, 1921. Serial No. [illegible]. 6 Claims. (Cl. 293—63.)



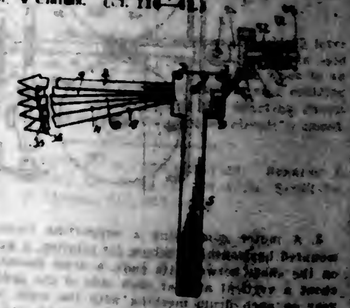
having a shank adapted to extend through an aperture of said transverse portion and means for drawing said transverse portion on said shank into abutment with said nose.

1,399,521. THREAD AND YARN FRICTION-GUIDE. JOHN ROGERS, Philadelphia, Pa. Filed Jan. 14, 1921. Serial No. 437,146. 2 Claims. (Cl. 242—154.)



1. In a device of the character stated, a base provided with means for attachment to a suitable support and having lateral recesses arcuate in cross section, vitreous guide blocks mounted on said base on each side of said recesses, said guide blocks having transverse guide grooves intermediate their ends and having their upper surfaces inclined in opposite directions from said guide grooves, ears formed with the base and projecting therefrom, one of said ears having a cavity and the other a chamber therein, spaced lugs formed with the ear provided with the chamber and projecting into said chamber, a pintle rod passing through said ears, a head on each end of said pintle rod and adapted to engage the lugs on one of the ears, a nut on the opposite end of said pintle rod, a spring within the cavity of one of said ears and engaging said nut to normally force the head of the pintle rod into engagement with the aforementioned lugs, a finger supporting plate journaled on said pintle rod, a tension spring coiled about said pintle rod and having one end connected with said plate and with said rod, and a plurality of fingers including non metallic portions carried by said plate and positioned to pass between the guide blocks and enter the lateral recesses.

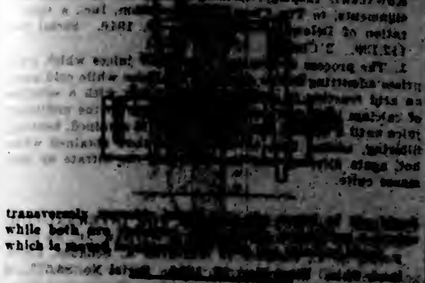
1,399,522. AUTOMATIC FORCE-FEED LUBRICATOR. AUGUST RUSS, Belleville, N. J. Filed Apr. 30, 1920. Serial No. 377,806. 11 Claims. (Cl. 184—45.)



11. The combination of a receptacle, a cover thereon, a follower for ejecting the contents of said receptacle and having a threaded stem, a nut revolubly mounted in said cover threaded on said stem and held against longitudinal movement therewith, said nut being formed with gear teeth, a pinion support revolubly mounted in said cover, a pinion mounted on said support and meshing with said gear teeth, a gear revoluble in said cover and meshing with said pinion, a spring having one end connected to said cover and the other end connected to said gear to rotate the same, relative rotation of said cover and said pinion support in one direction winding said spring, and means for preventing relative rotation of said cover and said pinion support in the opposite direction.

1,399,523. COMBINED [illegible] Rahlin, New York, N. Y. [illegible] 407,471. 2 Claims. (Cl. [illegible]—154.)

1. In a combined hood and cowl, a [illegible] from a substantially rectangular [illegible] extending from said [illegible] middle portion and adapted to be [illegible] at the back of the neck, said hood [illegible] front panel, a rear panel and [illegible] top edges of said panels for [illegible] a seam about which said hood [illegible] connecting said hood and [illegible] upturned reinforcing visor on said front panel [illegible] with said front panel, and a seam on the upper edge of said visor for securing said upper edge to [illegible]



1,399,524. AUTOMOBILE-SIGNAL. [illegible] Samuel, West New York, N. J. Filed Sept. 2, 1920. Serial No. 407,486. 4 Claims. (Cl. 116—[illegible])

3. A signal device of the class [illegible] casing, a plurality of signal blades [illegible] manually controlled means for [illegible] blades to project it into signalling [illegible] latter blade for engaging the other [illegible] several blades to be projected in the [illegible] pliable means connecting the outer [illegible] blades for the purpose set forth.

1,399,525. PROCESS AND MACHINE [illegible] CUTTERS. ARTHUR G. SCHMAL [illegible] June 28, 1919. Serial No. [illegible] 80—5.1.)

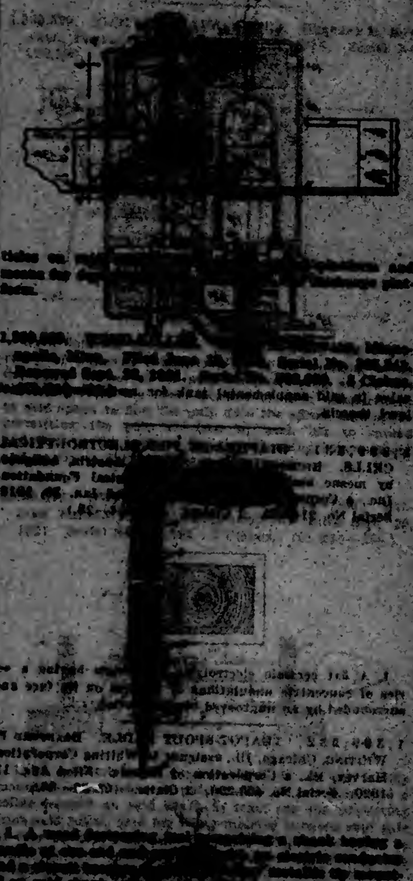
2. A machine for forming [illegible] consists of three knurls mounted [illegible] the knurls being movable transversely [illegible]

transversely [illegible] while both are [illegible] which is mounted [illegible]

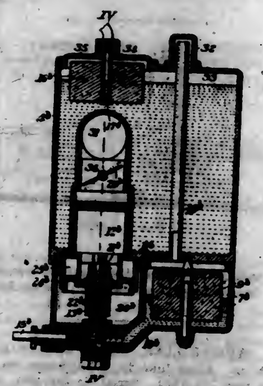
1,399,526. PROCESS AND [illegible] SULFURIC ACID TOWERS CHAMBERS AND TOWERS. THEODOR [illegible] KLENCKE, Frankfort-on-the-Main, [illegible] to Ed. Greutert & [illegible] 13, 1920. Serial No. [illegible]

1. A process [illegible] the customary [illegible] ing the bringing [illegible] acid in sulfuric [illegible] containing [illegible] mixing devices, [illegible] that at no point [illegible] of the denitration [illegible]

1,399,527. [illegible] SMITH, [illegible] chisery, Camden, [illegible] New Jersey. [illegible] 20 Claims. (Cl. [illegible])



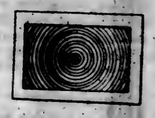
2. A button [illegible] means for [illegible] derlying material, [illegible] tacking [illegible] rerial, [illegible] tion above [illegible] work to [illegible] with the [illegible]



6. A button [illegible] mechanism for [illegible] and means for [illegible] register with the [illegible]

1,399,528. [illegible] Harlan, Ipswich, [illegible] 6 Claims. (Cl. [illegible])

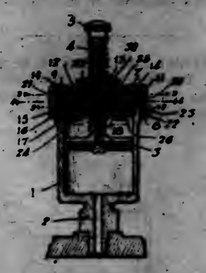
1. In a [illegible] a receiving [illegible] jecting [illegible]



create substantially equal degrees of suction in said float chamber and said supplemental tank, and a float controlled

valve in said supplemental tank for restricting the fuel level therein.

1,399,531. DIAPHRAGM FOR ELECTROLYTICAL CELLS. RICHARD WALTER, Villach, Austria, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed Jan. 30, 1918. Serial No. 214,484. 2 Claims. (Cl. 214—28.)

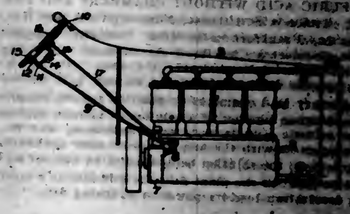


1. A flat ceramic electrolytic diaphragm having a series of concentric undulations or grooves on its face and surrounded by an ungrooved border portion.

1,399,532. TEAPOT-SPOUT LADLE. BRADFORD H. WHITING, Chicago, Ill., assignor to Whiting Corporation, Harvey, Ill., a Corporation of Illinois. Filed Aug. 13, 1920. Serial No. 403,286. 1 Claim. (Cl. 22—83.)

[illegible] on each side of said [illegible] and [illegible] intermediate their [illegible] ears fitted in opposite directions from said guide gudgeon, ears formed with the base and projecting therefrom, one of said ears having a cavity and the other a chamber therein, spaced lugs formed with the ear provided with the chamber and projecting into said chamber, a pintle rod passing through said ears, a head on each end of said pintle rod and adapted to engage the lugs on one of the ears, a nut on the opposite end of said pintle rod, a spring within the cavity of one of said ears and engaging said nut to normally force the head of the pintle rod into engagement with the aforementioned lugs, a finger supporting plate journaled on said pintle rod, a tension spring coiled about said pintle rod and having one end connected with said plate and with said rod, and a plurality of fingers including non metallic portions carried by said plate and positioned to pass between the guide blocks and enter the lateral recesses.

1,399,822. AUTOMATIC FORCE-FEED LUBRICATOR. AUGUST RUSS, Belleville, N. J. Filed Apr. 30, 1920. Serial No. 377,866. 17 Claims. (Cl. 184—36.)



11. The combination of a receptacle, a cover thereon, a follower for ejecting the contents of said receptacle and having a threaded stem, a nut revolubly mounted in said cover threaded on said stem and held against longitudinal movement therewith, said nut being formed with gear teeth, a pinion support revolubly mounted in said cover, a pinion mounted on said support and meshing with said gear teeth, a gear revolubly in said cover and meshing with said pinion, a spring having one end connected to said cover and the other end connected to said gear to rotate the same, relative rotation of said cover and said pinion support in one direction winding said spring, and means for preventing relative rotation of said cover and said pinion support in the opposite direction.

1,399,523. PROCESSES OF [illegible] FURATING THE JUICES [illegible] MANUFACTURE OF SUGAR. [illegible], and KOWALSKI, Leipzig, Germany, [illegible], by mesne assignments, to The Chemical [illegible] ration of Delaware. Filed [illegible] 112,139. 2 Claims. (Cl. [illegible])

1. The process of treating raw [illegible] juices which [illegible] prises admitting sulfur dioxid to the juice while cold [illegible] an acid reaction is obtained, [illegible] of calcium hydroxid, [illegible] juice until a decided alkaline reaction is [illegible] filtering, adding lime to the [illegible] hot, again filtering, and then [illegible] masse cuite.

1,399,534. SAFETY-INDICATOR FOR [illegible] BUSTION ENGINES. [illegible], Fortis, N. Y., assignor to [illegible] land, Ohio. Filed Mar. 25, 1916. [illegible] Claims. (Cl. 184—6.)

1. A device of the character described, [illegible] combination, an internal combustion [illegible] system therefor, including a [illegible] fluid pressure, a pipe connection [illegible] said gage, a thermometer [illegible] separate casing for said thermometer, a pipe [illegible] said connection to said casing, a valve in [illegible] a return pipe leading from said casing [illegible] substantially as described.

1,399,535. PROCESS OF MAKING [illegible] DUCING BLOOD-PRESSURE. [illegible] lottenburg, near Berlin, [illegible] signments, to The Chemical [illegible] tion of Delaware. Filed [illegible] 845,325. 7 Claims. (Cl. [illegible])

5. The process of making [illegible] pressure which comprises mixing [illegible] with normal paraoxyproxin, [illegible] about 12 hours, separating the [illegible] from the liquid medium, crushing the [illegible] incorporating said separated [illegible]

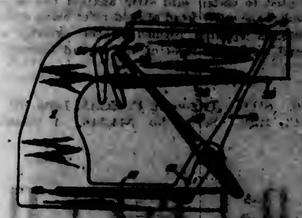
7. The process of making means for [illegible] sure which comprises mixing [illegible]

2. In a [illegible] hood and scarf, a scarf member formed from a substantially homogeneous blank, a hood member extending from said scarf member substantially at the middle portion and adapted to be suspended therefrom at the back of the neck, said hood member comprising a front panel, a rear panel and a seam at the side and top edges of said panels for securing said panels together, a seam about which said hood member is adapted to fold connecting said hood and scarf members together, an upturned reinforcing visor on said front panel integral with said front panel, and a seam at the upper edge of said visor for securing said upper edge to said front panel.

1,399,524. AUTOMOBILE-SIGNAL. EMIL J. SANER, West New York, N. J. Filed Sept. 1, 1920. Serial No. 407,486. 4 Claims. (Cl. 116—[illegible])

3. A signal device of the class described comprising a casing, a plurality of signal blades pivoted in said casing, manually controlled means for actuating one of said blades to project it into signaling position, means on said latter blade for engaging the other blades to cause the several blades to be projected in fan shape formation, and pliable means connecting the outer free ends of said blades for the purpose set forth.

1,399,525. PROCESS AND MACHINE FOR FORMING CUTTERS. ARTHUR G. SCHAAB, Detroit, Mich. Filed June 26, 1919. Serial No. 306,766. 2 Claims. (Cl. 90—5.1.)

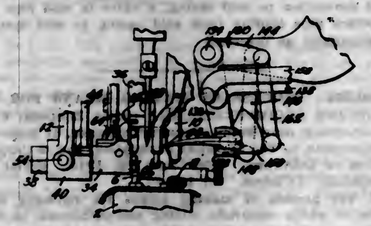


2. A machine for forming teeth on cutter blanks which consists of three knurls mounted on parallel axes, one of the knurls being movable transversely toward the others,

reverse direction to [illegible] rotation of said [illegible] said clutch during the [illegible]

vent rotation of the entire driving means for preventing accidental coupling of said clutch when uncoupled and said driving means is actuated, and means for holding said device against movement.

1,399,527. TOY, [illegible], Cincinnati, Ohio, assignor of one-half to [illegible], Norwood, Hamilton County, Ohio. Filed May 20, 1920. Serial No. [illegible]. 6 Claims. (Cl. 124—14.)



1. In a toy, the [illegible] device: of a projectile [illegible] and having the [illegible] and [illegible] being provided [illegible] said projectile.

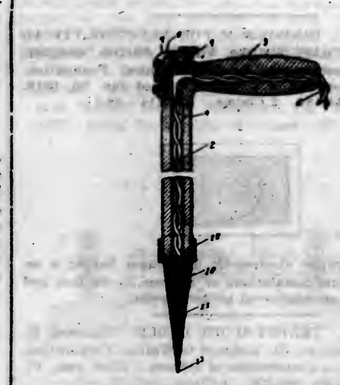
1,399,528. LOCK [illegible], Mich., [illegible] Rapids, Mich. [illegible] 13, 1920. Serial No. [illegible]

1,399,526. PROCESS FOR THE PRODUCTION OF SULFURIC ACID WITHOUT CHAMBERS AND TOWERS. THEODOR SCHMIEDEL, Nürnberg-Doos, and HANS KLENCKE, Frankfort-on-the-Main, Germany, assignors to Ed. Greulert & Cie., Basel, Switzerland. Filed Aug. 13, 1920. Serial No. 403,417. 6 Claims. (Cl. 23—1.)

1. A process for manufacturing sulfuric acid without the customary lead chambers or reaction towers, comprising the bringing together of a solution of nitrosyl sulfuric acid in sulfuric acid in very fine subdivision, and SO_2 containing gases with the help of one or more mechanical mixing devices, the solution being used in an amount such that at no point in the plant does the solution, as a result of the denitration lose its power of oxidising SO_2.

1,399,527. BUTTON-SEWING MACHINE. WILLARD A. SMITH, Melrose, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 30, 1918. Serial No. 225,618. 20 Claims. (Cl. 112—109.)

2. A button attaching machine having, in combination, means for supporting a button-holed material and an underlying material, sewing mechanism for passing button attaching loops through a buttonhole and the underlying material, mechanism for feeding buttons into attaching position above a buttonhole, and mechanism for spacing the work to bring the buttonholes successively into register with the sewing mechanism.



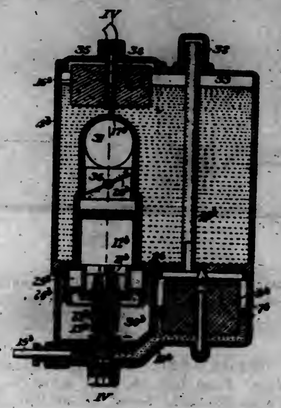
6. A button attaching machine, having in combination, mechanism for attaching a button through a buttonhole, and means for engaging a buttonhole and feeding it into register with the button attaching mechanism.

1,399,528. PILING-MACHINE. FRANK SOMMERS, Indiana Harbor, Ind. Filed Dec. 15, 1920. Serial No. 431,005. 6 Claims. (Cl. 214—6.)

1. In a device of the class described, the combination of a receiving platform, having arms spaced apart and projecting from one side thereof, a discharge platform having

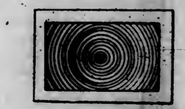
form.

1,399,529. WEED-KILLER. JAMES E. STEWART, Minneapolis, Minn. Filed June 19, 1919, Serial No. 305,841. Renewed Sept. 23, 1921. Serial No. 502,600. 3 Claims. (Cl. 219—31.)



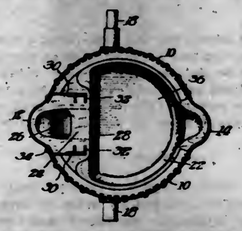
1. A weed destroying tool comprising a shank having a handle at one end and provided with an electric conductor and a circuit breaker therefor, a hollow metallic tip mounted on said shank and provided with a long tapering point adapted to be inserted into the ground, and a heating coil mounted in said hollow tip and connected with said conductor.

1,399,530. FUEL-SUPPLY SYSTEM FOR INTERNAL-COMBUSTION ENGINES. REID T. STEWART, Pittsburgh, Pa. Filed Dec. 28, 1915. Serial No. 69,005. 7 Claims. (Cl. 158—36.)



1. In combination, a carbureting passage-way having an air inlet at one end and a mixture outlet at the other end, a fuel inlet to said carbureting passage-way, a float chamber feeding said fuel inlet, a throttle valve in said mixture outlet, a supplemental fuel tank adapted to draw fuel from a source of supply, said supplemental tank being arranged at a higher level than said float chamber to feed thereto, suction means communicating with said carbureting passageway at a point anterior to said throttle valve and extending to said float chamber and to said supplemental fuel tank, said suction means being operative to

create substantially equal degrees of suction in said float chamber and said supplemental tank, and a float controlled

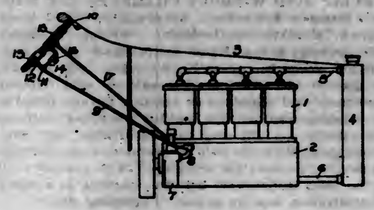


valve in said supplemental tank for restricting the fuel level therein.

1,399,531. DIAPHRAGM FOR ELECTROLYTICAL CELLS. Richard Walter, Villach, Austria, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed Jan. 30, 1918. Serial No. 214,484. 2 Claims. (Cl. 214—28.)

1. A flat ceramic electrolytic diaphragm having a series of concentric undulations or grooves on its face and surrounded by an ungrooved border portion.

1,399,532. TEAPOT-SPOUT LADLE. Bradford H. Whiting, Chicago, Ill., assignor to Whiting Corporation, Harvey, Ill., a Corporation of Illinois. Filed Aug. 13, 1920. Serial No. 403,296. 1 Claim. (Cl. 22—83.)



A molten metal retaining ladle consisting of a cup shaped metallic receptacle lined with molten metal resisting material, the same having a vertically positioned interior partition wall located adjacent to one side of the ladle and perforated from top to bottom inside the wall to form a spout leading from the bottom of the ladle to an external edge of the ladle and means embedded in the fire resisting material, adjacent to said spout for reinforcing said material and holding it in place, the reinforcing means comprising metal plates, secured to the ladle wall, and provided with surface projections engaging and holding the resisting material, for the purposes set forth.

1,399,533. PROCESSES OF SYSTEMATICALLY SULFURATING THE JUICES OBTAINED DURING THE MANUFACTURE OF SUGAR. Mieczyslaw v. Wirbuss-Kowalski, Leipzig, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed July 29, 1916. Serial No. 112,139. 2 Claims. (Cl. 127—17.)

1. The process of treating raw sugar juices which comprises admitting sulfur dioxid to the juice while cold until an acid reaction is obtained, neutralizing with a solution of calcium hydroxid, adding milk of lime to the unfiltered juice until a decided alkaline reaction is obtained, heating, filtering, adding lime to the filtrate thus obtained while hot, again filtering, and then working the filtrate up into masse cuite.

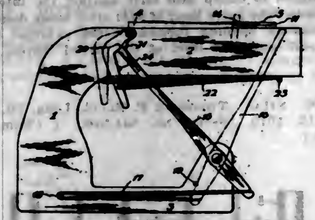
1,399,534. SAFETY-INDICATOR FOR INTERNAL-COMBUSTION ENGINES. Gideon S. Witham, Jr., Au Sable Forks, N. Y., assignor to Gustavus A. Schanze, Cleveland, Ohio. Filed Mar. 25, 1916. Serial No. 86,577. 2 Claims. (Cl. 184—6.)

1. A device of the character described, comprising in combination, an internal combustion engine, a lubricating system therefor, including a pump, a gage for indicating fluid pressure, a pipe connection between said system and said gage, a thermometer mounted adjacent said gage, a separate casing for said thermometer, a pipe leading from said connection to said casing, a valve in said pipe and a return pipe leading from said casing to said system; substantially as described.

1,399,535. PROCESS OF MAKING MEANS FOR REDUCING BLOOD-PRESSURE. Georg Eublers, Charlottenburg, near Berlin, Germany, assignor, by mesne assignments, to The Chemical Feundation, Inc., a Corporation of Delaware. Filed June 15, 1914. Serial No. 845,325. 7 Claims. (Cl. 167—7.)

5. The process of making means for reducing blood pressure which comprises mixing non-pathogenic bacteria with normal amboceptors, refrigerating said mixture for about 12 hours, separating the bacteria and amboceptors from the liquid medium, washing the separated mass and incorporating said separated mass with gelatin.

7. The process of making means for reducing blood pressure which comprises mixing 2 mg. bacterium coli with normal amboceptors, refrigerating said mixture for about 12 hours, separating the bacteria and amboceptors from the liquid medium, washing the separated mass and incorporating said separated mass with 10 c. c. of 10% gelatin, and finally cooling.

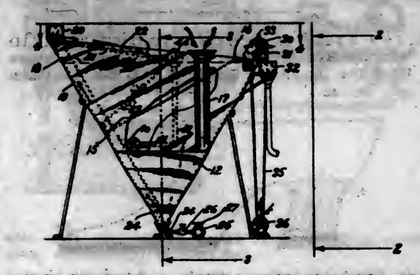


1,399,536. FISHING-REEL. Walter L. Adams, Akron, Ohio, assignor to The Enterprise Manufacturing Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 15, 1916, Serial No. 115,068. Renewed Oct. 1, 1920. Serial No. 414,128. 10 Claims. (Cl. 242—84.5.)

4. A fishing reel, comprising a frame, a spool therein, driving means for said spool including a clutch and arranged when operated in one direction to couple said clutch and drive said spool and when operated in the reverse direction to uncouple said clutch and permit free rotation of said spool, a device continuously effective upon said clutch during its entire rotation and tending to pre-

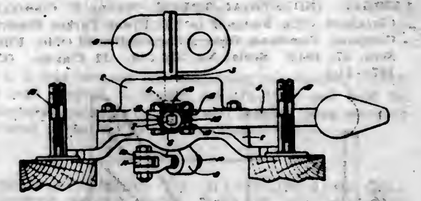
vent rotation of the entire driving means for preventing accidental coupling of said clutch when uncoupled until said driving means is actuated, and means for holding said device against movement.

1,399,537. TOY. Jasomus Z. Bayliss, Cleveland, Ohio, assignor of one-half to Arthur E. Merkel, Cleveland, Ohio. Filed May 20, 1919. Serial No. 298,383. 7 Claims. (Cl. 124—14.)



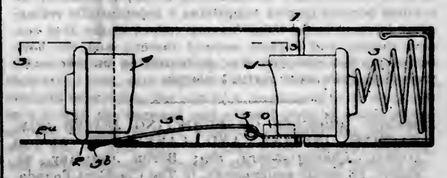
1. In a toy, the combination with a projecting device; of a projectile adapted to be mounted on the latter and having the general contour of a boomerang; said device being provided with a guide fitting a concave portion of said projectile.

1,399,538. LOCK SET. Harold Blee, Grand Rapids, Mich., assignor to National Brass Company, Grand Rapids, Mich., a Corporation of Michigan. Filed Jan. 13, 1919. Serial No. 270,936. 1 Claim. (Cl. 70—14.)



In a device of the character described, an elongated housing, an operating member provided with key receiving recesses in each end thereof rotatably mounted transversely of and within the housing, a locking bolt formed of sheet metal located lengthwise of the housing and extending at its rear end under the operating member and formed with two upstanding ears at its rear end, an arm projecting from the operating member, a link formed into substantially channel form from sheet metal pivotally connected at its front end to the arm and at its rear end passing downwardly between the ears of the bolt, a pivot connecting the rear end of the link and said ears, and spring means disposed between the link and rear end of the bolt tending to force the front end of the link toward the bolt, substantially as described.

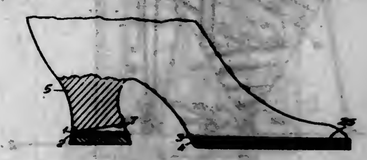
1,399,539. FLOTATION APPARATUS. Herbert H. Bonnell, Denver, Colo. Filed Apr. 3, 1918. Serial No. 226,386. 6 Claims. (Cl. 83—85.)



1. In flotation apparatus, the combination with a plurality of adjacent compartments, of an aerating apron extending across all of said compartments, and a lift extending from the lower portion of each compartment to said apron to flow the pulp onto the apron, said apron permitting the pulp elevated by each lift to spread and flow partly back to the corresponding compartment and partly to the adjacent compartment.

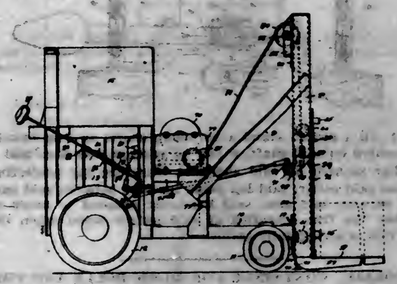
1,399,540. SWITCH-OPERATING MECHANISM. William Milton Brown, Johnstown, Pa. Filed Sept. 29, 1921. Serial No. 504,184. 6 Claims. (Cl. 246—289.)

1. In a switch stand a revoluble shaft, an arm loosely mounted on said shaft, a pair of ears on said arm, and a collar secured on said shaft, at least one lug projecting from said collar, said lug being inserted between said pair of ears on said arm, said lug being adapted to break to allow the free operation of said switch stand when the switch is accidentally trailed.



1,399,541. CONTAINER FOR MUSIC-ROLLS AND THE LIKE. Charles S. Burton, Oak Park, Ill. Filed Sept. 15, 1919. Serial No. 323,829. 7 Claims. (Cl. 206—59.)

1. A container comprising a tubular box having an open end, and a closure hinged at one edge of the open end for swinging from closed to open position; a spring in the rear closed end of the box for ejecting the con-



tends through the open end, and a hinged latch carried by the box extending in front of the closure for holding it at closed position and which is accessible for swinging it away from closure-holding position; whereby when the latch is thus moved, the spring thrusts the contents against the closure and opens the same, protruding the contents from the box, the latch being mounted for movement past the hinged edge of the closure for releasing the latter.

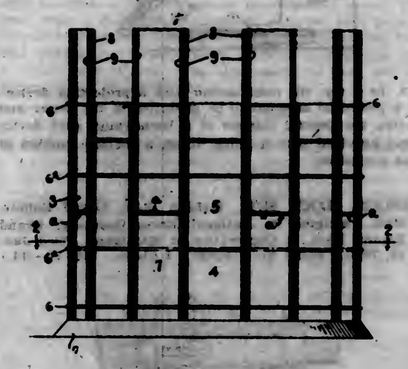
1,399,542. DETACHABLE FOOTWEAR-TREAD. WILLIAM HENRY CHESSEY, Montreal, Quebec, Canada. Filed Oct. 9, 1920. Serial No. 415,800. 1 Claim. (Cl. 36—42.)

In detachable footwear treads, a detachable member formed of a metal plate and the tread proper, said metal plate being formed with barbs projecting into said tread proper and hooks, a permanent member comprising an upper portion and a plate, both being provided with registering holes, said latter plate having barbs projecting into the upper portion, said hooks of the first named plate being constructed and arranged to pass into said holes and engage the second plate, and a locking tongue having an offset to enter one of said holes and in the rear of a hook to lock the same and thereby lock the plates.

1,399,543. INDUSTRIAL TRUCK. CLYDE E. COCHRAN, Cleveland, Ohio, assignor to The Elwell-Parker Electric Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 27, 1919. Serial No. 326,789. 11 Claims. (Cl. 187—11.)

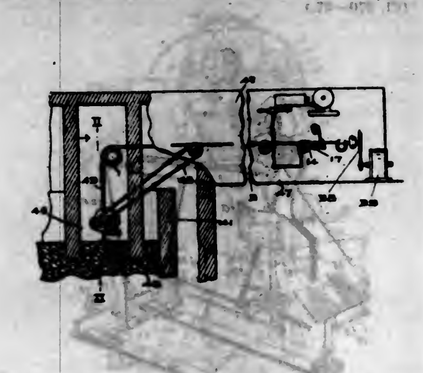
5. In combination with an automobile truck having load elevating means associated therewith, a load-receiving member comprising a substantially L-shaped member, the vertical portion thereof comprising a substantially rectangular channel beam frame having rollers at the four corners thereof and a plate secured thereto, and the horizontal portion comprising a plate resting on two arms projecting from said vertical portion.

1,399,544. PROCESS OF PURIFYING JUICES CONTAINING INULINE AND LAEVULOSE. ARNOLD DANIEL, Charlottenburg, near Berlin, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc., a Corporation of Delaware. Filed Apr. 10, 1918. Serial No. 227,816. 4 Claims. (Cl. 127—23.)



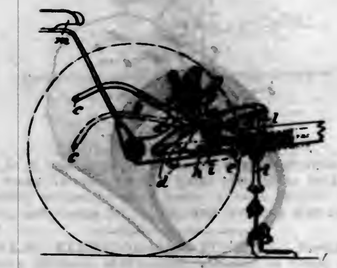
1. The process of obtaining inuline from juices which comprises heating the juice for about ½ to 1½ hours at a temperature of about 60° C., adding an alkali belonging to the alkali metal group, during the heating and until an excess is shown, filtering and evaporating to crystallization.

1,399,545. FLASHLIGHT. RICHARD MAX EATON, Niagara Falls, N. Y. Filed Mar. 22, 1920. Serial No. 367,775. 2 Claims. (Cl. 240—8.5.)



1. In a device of the class described the combination with a hollow cylinder and a threaded ferrule at one end thereof, said ferrule having a flanged portion covering the material of the cylinder, of a contact strip in said cylinder, said strip having an angular outturned end set in a recess in the wall of the cylinder in engagement with the flange of the ferrule, and a tubular rivet having an inner head adapted to clamp said strip against the interior of said cylinder, the outer head of said rivet being disposed in a countersunk opening formed in the exterior of said ferrule and below the level of the thread thereof.

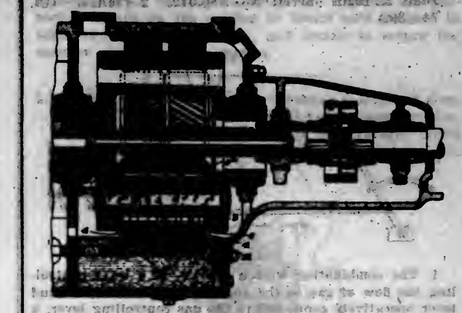
1,399,546. SILO. THEODORE F. ELLIS, Lena, Ill. Filed Dec. 13, 1919. Serial No. 344,546. 1 Claim. (Cl. 72—6.)



A silo comprising blocks rectangular in side elevation and arranged edge to edge around the silo structure, each of the blocks being provided at one vertical edge with a groove and at its opposite vertical edge with a tongue, the tongue of one block being received in the groove of the adjacent block, each block being provided at its outer side and at its vertical edges with outstanding flanges which extend from end to end of the block, said flanges being provided with outer edge faces, the outer edge faces of the flanges of the adjacent blocks being angularly disposed with relation to each other and substantially radially disposed with relation to the silo structure and a filling of cement material closing the spaces between the outer edge faces of the flanges of the adjacent blocks.

1,399,547. SHEET-GLASS DRAWING APPARATUS. BENNET C. HUMES, Toledo, Ohio. Filed Aug. 1, 1919. Serial No. 314,626. 8 Claims. (Cl. 49—17.)

6. A continuous draw sheet glass apparatus comprising a bending roll, and means in the roll for raising the temperature of the roll.

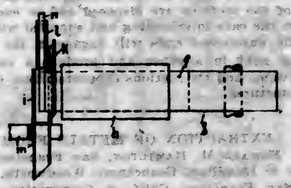


1,399,548. MOWER. JOHANN GEORG FAHR, Gottmadingen, Germany, assignor to Maschinenfabrik Fahr A.-G., Gottmadingen, Germany. Filed Dec. 24, 1915. Serial No. 68,579. 1 Claim. (Cl. 56—74.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

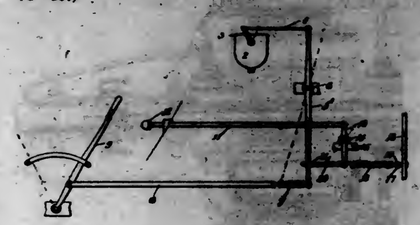
A mower including a frame, a cutter secured thereto, a treadle attached to said frame provided with a rearwardly extending arm, a spring having one end connected to the rear end of said arm and its other end connected to the front of the frame, and transmission means extending between the treadle and cutter, whereby when the treadle is operated the transmission means operate to lift the cutter bars into vertical position in a single step, the treadle being at all times within easy reach of the foot of the operator.

1,399,549. RESILIENT GEAR. GUSTAVE FAST, Mount Washington, Md., assignor of twenty-five per cent. to Curran W. Harvey and ten per cent. to F. Barton Harvey. Filed Mar. 11, 1918. Serial No. 221,763. Renewed May 5, 1921. Serial No. 467,125. 14 Claims. (Cl. 74—29.)

1. A power transmission gear consisting of a helical strip yieldable in the circumferential direction of its convolutions, the ends of the strip being relatively movable, said convolutions having teeth extending across them, substantially as described.

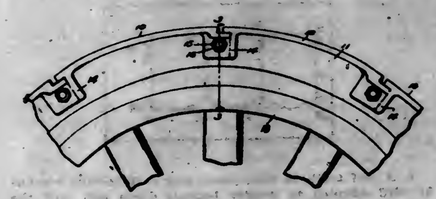


1,399,550. MANUFACTURE OF BOOK-FILES FOR CARDS AND THE LIKE. ALFRED GILBERT, Birmingham, England. Filed Dec. 24, 1918. Serial No. 268,186. 3 Claims. (Cl. 129—20.)



1. A leaf for book files comprising card-holding strands of cord adapted to receive beneath them and hold the corners of cards to the leaf, said strands being mutually secured to the leaf by lock-stitching.

1,399,551. METHOD OF MANUFACTURING CIGARETTE-TUBES WITH HOLLOW MOUTHPIECES. MAX CLEMENS GRAHL, Dresden-Löbtau, Germany. Filed July 16, 1915. Serial No. 40,274. 2 Claims. (Cl. 93—77.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

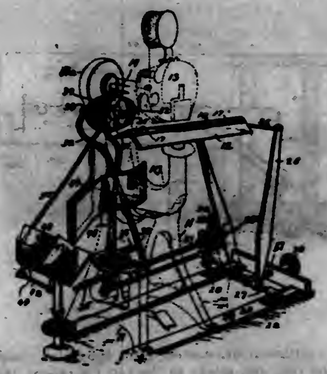


1. A method of making and inserting coils of paper for cigarette tubes, said cigarette tubes having seams, which consists in winding the end of a continuous strip of paper into a coil, the forward end of said strip of paper being gripped during the said winding, releasing the said forward end of said strip of paper after the said winding has been completed, whereby the said coil is free to expand, and then severing the rear end of said coil from said strip of paper, and then introducing said coil of paper into said cigarette, the outer edge of the said coil being caused to register with the seam of the said cigarette.

1,399,552. TRACTOR SAFETY DEVICE. Auguste Guignard and Fred Rosiere, Hood River, Oreg. Filed June 2, 1920. Serial No. 386,012. 2 Claims. (Cl. 74—89.)

1. The combination with a tractor, of a lever controlling the flow of gas to the engine of the tractor, a hand lever operatively connected to the gas controlling lever, a spring held member normally engaging the gas controlling lever to prevent its operation by the hand lever, and a foot operated device for holding said member in inoperative position.

1,399,553. TIRE-PROTECTOR. Truman Wallace Hamill, Merced, Calif. Filed Feb. 26, 1921. Serial No. 448,025. 1 Claim. (Cl. 152—3.)



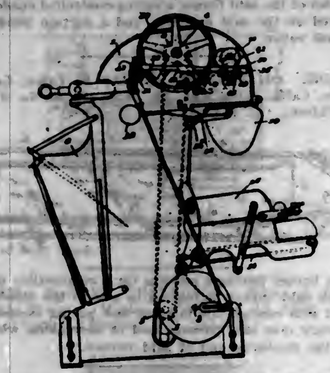
A tire armor comprising a plurality of sections curved longitudinally to correspond to the curvature of the tire and each depressed at one end to form a seat sunken below the outer line of the section, perforated ears depending below the seat portion and spaced from the side edges of the section and perforated ears depending below the section at the other end and extending in advance of the same, the outer faces of the last mentioned ears being flush with the side edges of the sections, whereby when a plurality of the sections are disposed end to end around a tire with the ears interlapping and supplied with pintle devices, the unrecessed ends will engage in the seats of the section next in advance and produce a continuous line of sections, and the sections supported from deflection at their junctures.

1,399,554. EXTRACTION OF METALS FROM THEIR ORES. Edward M. Hamilton, San Francisco, Calif., assignor to Hamilton, Beauchamp, Woodworth, Incorporated, San Francisco, Calif., a Corporation of California. Original application filed Mar. 14, 1917, Serial No. 154,848. Divided and this application filed June 7, 1917. Serial No. 173,306. 7 Claims. (Cl. 75—18.)

1. The process of recovering molybdenum from its ores and concentrates which comprises reducing the ore or concentrate to a suitable condition of fineness for further chemical treatment, mixing the pulverized material with water and with a non-volatile alkali-metal compound the aqueous solution of which is alkaline to form a pulp, heating the pulp to convert the molybdenum into a soluble compound, filtering, and recovering the values from the filtrate.

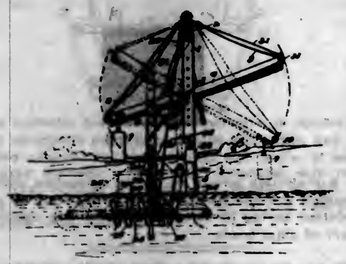
1,399,555. AUTOMATIC FEEDER FOR BOOK-STITCHING MACHINES. William A. Hetrick, Lancaster, Pa. Filed Jan. 9, 1919. Serial No. 270,965. 3 Claims. (Cl. 270—37.)

1. In a book stitching machine, the combination of a work table and a plurality of alternately acting work feeders each having an idle and a feed motion and the feed motion of one occurring during the idle motion of the other.



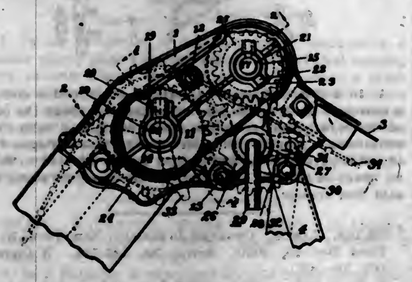
1,399,556. PNEUMATIC TIRE. Louis A. Hill, Washington, D. C. Filed Sept. 6, 1921. Serial No. 496,674. 3 Claims. (Cl. 152—16.)

3. A pneumatic tire casing having a series of inner fabric bands, another circumferential fabric band embedded in the tread rubber at a distance from said inner bands drawn taut to exert a restrictive action against the expansive tendency exerted by the inner tube, and an annular series of metallic anti-slipping devices clamped between said bands when the tire is inflated, for the purpose set forth, said metallic anti-slipping devices being covered by a coating of hard rubber prior to insertion in the tire.



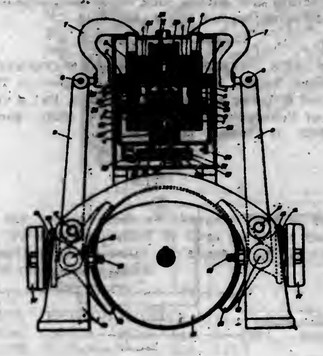
1,399,557. CARD-FEEDER. Joseph B. Howe, Worcester, Mass., assignor to George S. Harwood & Son, Boston, Mass., a Copartnership composed of Sydney Harwood and John H. Harwood. Filed Dec. 18, 1920. Serial No. 430,866. 12 Claims. (Cl. 19—7.)

9. In a machine of the class described, fiber elevating mechanism, an oscillating doffer, and means for actuating said elevating mechanism and said doffer comprising a clutch having disengagable elements and a member operable for disengaging said elements, said latter member being constructed and arranged to become operative



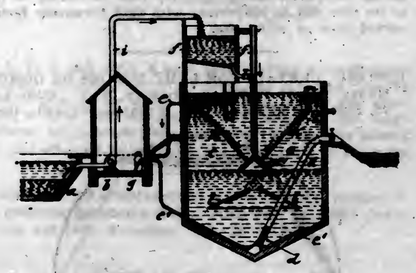
to disengage said elements only when said doffer occupies a predetermined position in its path of movement.

1,399,558. WATER-MOTOR. Olaf L. Howe, Seattle, Wash. Filed Jan. 9, 1919. Serial No. 270,283. 6 Claims. (Cl. 170—131.)



1. In a water motor, a frame, a support from which said frame is suspended, a beam pivoted on said frame, a cradle carried by said beam, a vane carrier on said cradle, and means for raising and lowering said cradle.

1,399,559. ELEVATOR-ROLL SUPPORT. Edwin Frederick Huddle, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Mar. 8, 1920. Serial No. 364,056. 2 Claims. (Cl. 56—185.)



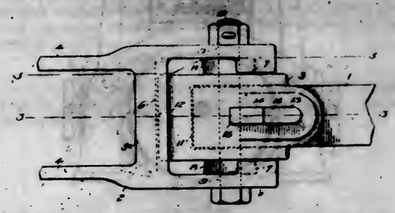
1. In a harvester and binder, the combination with the elevator frame, of elevator rolls having spindles, a casting on the frame, openings in said casting through which the rolls are capable of being inserted or withdrawn, a member having bearings in which the spindles are supported, means on the casting to locate said member in place to close said openings, and means to secure the member rigidly to the casting.

1,399,560. CUSHION-BRAKE. Frederick Hymans, Glen Ridge, N. J., assignor to Otis Elevator Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 27, 1917. Serial No. 204,151. 6 Claims. (Cl. 188—171.)

1. In combination, a brake, brake applying means, main cylinders, pistons movable therein to control the operation of the brake applying means for a gradual operation, an auxiliary cylinder of smaller bore than the said cylinders, and a piston movable therein to regulate the movement of the main pistons, and pipes connecting the main and auxiliary cylinders.

1,399,561. PROCESS OF TREATING SLUDGE. Karl Imhoff and Heinrich Blunk, Essen-on-the-Ruhr, Germany. Filed Apr. 19, 1913. Serial No. 762,260. 11 Claims. (Cl. 210—18.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

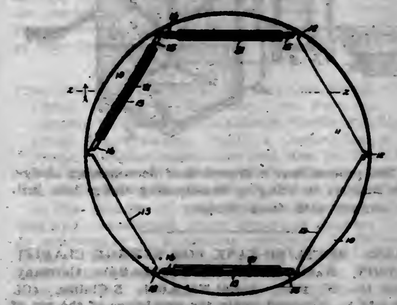
1. The process herein described of decomposing sludge, which consists in bringing decomposing sludge into intimate contact with fresh sludge.



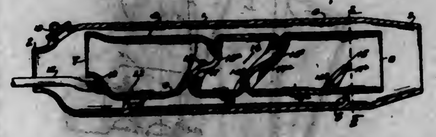
1,399,562. SETTLING-TANK FOR SEWAGE CLARIFICATION. Karl Imhoff, Essen-on-the-Ruhr, Germany. Filed Jan. 27, 1915. Serial No. 4,661. 5 Claims. (Cl. 210—18.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a sewage clarification plant, in combination, a funnel-shaped settling tank, a sludge-pit arranged below

the lowest point of said tank, an inlet and outlet at opposite points of the periphery of said tank and a hood arranged within said settling tank above the sludge-pit, said hood extending beyond the water level.



1,399,563. COUPLING AND YOKE CONNECTION. WILLIAM KELSO, Pittsburgh, Pa., assignor to The McConway & Torley Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed June 4, 1920. Serial No. 386,532. 6 Claims. (Cl. 213—42.)



1. In a coupler and yoke connection, the combination with a coupler, having a stem provided with a key slot near its rear end, of a yoke provided at its forward end with oppositely disposed rearwardly facing curved bearing faces and having a forwardly facing curved face located rearwardly of said oppositely disposed curved faces and also having a side opening between said forwardly facing curved face and said rearwardly facing curved bearing faces, an intermediate member between said coupler and yoke and pivotally connected to the latter, and key means extending into said slot of the coupler stem for connecting said coupler and said intermediate member, said intermediate member being provided with oppositely disposed trunnions respectively engaging said rearwardly facing curved bearing faces of the yoke and being curved at its rear end to coöperate with said forwardly facing curved face of said yoke.

1,399,564. CURTAIN FOR LAMP SHADES OR DOMES. HENRY AUGUST F. KUNZE, Brooklyn, N. Y. Filed Apr. 28, 1921. Serial No. 466,085. 2 Claims. (Cl. 240—108.)

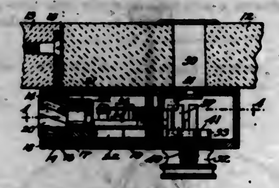
1. A curtain for lamp shades or domes, comprising a frame made of a piece of spring wire bent into polygonal shape, the corners of the frame alternately engaging the inner face of a lamp shade or frame to support the frame therein, brackets attached to and depending from one of the sides of the said frame, a spring-controlled shade roller mounted on the said brackets, and a curtain winding on the said roller.

1,399,565. OIL-BURNER. HAROLD S. LAMB, Los Angeles, Calif. Filed Apr. 20, 1920. Serial No. 375,359. 7 Claims. (Cl. 158—33.)

1. A burner having a passage for a combustible mixture through said burner increasing in size in the direction of flow of said combustible mixture and having inclined ribs projecting into said passage and of decreasing width toward the discharge end of said burner.

1,399,566. PROJECTION-SCREEN. ISAAC LASARUS, Berlin, Germany, assignor to Perbatino, O. Co. Pe. G. M. B. H., Berlin, Germany. Filed July 18, 1912. Serial No. 710,329. 7 Claims. (Cl. 88—24.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A projection screen for use in connection with cinematograph and similar exhibitions, comprising an opaque foundation having its image display surface composed of a layer of glass beads.



11,399,567. CINEMATOGRAPHIC APPARATUS. JOHANNES LEHMANN, Jena, Germany, assignor to The Firm of Carl Zeiss, Jena, Germany. Filed Apr. 22, 1913. Serial No. 762,982. 2 Claims. (Cl. 88—16.4.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

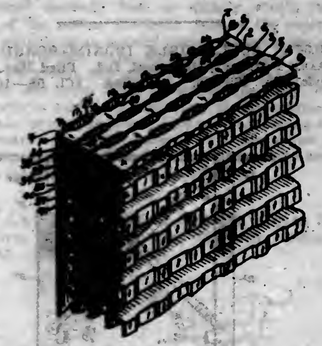
1. In a cinematographic apparatus an objective system, a source of light, a film adapted to travel through the path of the rays coming from the source of light, a color-filter containing a plurality of colors and rotatably disposed in the said path of rays and optical means adapted to form an image of the said color-filter in the plane, in which the said film travels.

1,399,568. LOCK. CHARLES LIBERMAN, New York, N. Y. Filed Dec. 28, 1920. Serial No. 433,711. 3 Claims. (Cl. 70—46.)

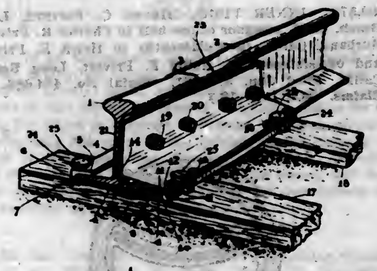
1. In a lock, a bolt mounted to slide and having a revolvable spirally fluted head, a casing provided with spaced bolt bearings for the bolt head to slide in and corresponding to the cross sectional area of the said bolt head, and a keeper adapted to pass between the said bearings and having an opening for the passage of the said bolt head.

1,399,569. BARREL-PROTECTOR. WILLIAM FRANCIS MEEK, Tampico, Mexico. Filed Oct. 19, 1920. Serial No. 417,950. 8 Claims. (Cl. 217—72.)

1. A protector for receptacles, including in combination with a receptacle comprising bulged side walls, and head attached adjacent the ends of said side walls, of means, of a fixed diameter within said receptacle, said means being longitudinally extensible to permit of the contacting of the same with the interior face of said receptacle upon being extended.



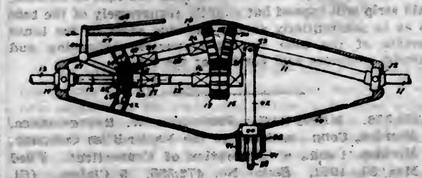
1,399,570. TRACTOR. EDWARD C. MYERS, Seattle, Wash. Filed July 6, 1920. Serial No. 394,336. 19 Claims. (Cl. 180—14.)



1. In an industrial or lumber tractor, comprising a tractor power plant and rear axle and differential housing with suitable wheels mounted on the rear axles, a truck frame supported by the rear axle and differential housing and extending forwardly and to the rear thereof, means for supporting the forward portion of said frame, means for supporting the front end of the tractor power plant from said frame, and load carrying means mounted on said rearwardly extending portion of the frame.

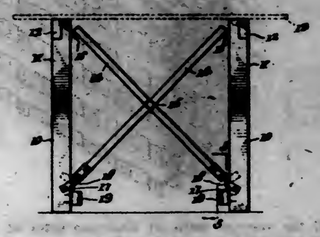
1,399,571. RADIATOR. FRANK A. NEVEU, Los Angeles, Calif. Filed Aug. 18, 1919. Serial No. 318,307. 2 Claims. (Cl. 257—130.)

1. In a radiator, a water and air cell construction comprising water cell members and air cell members arranged alternately, each water cell member comprising two pieces bent upon vertical lines and fitting together to form water tube portions, and the air cell members each comprising a spacing plate bent to form horizontal walls and vertical walls, the vertical walls at alternate sides of the horizontal walls being pressed to form seats for the water tube portions of the water cell members at the respective sides of the spacing plates.



1,399,572. RAIL-CHAIR. CHARLES PASCAL, Montreal, Quebec, Canada. Filed Apr. 5, 1921. Serial No. 458,699. 2 Claims. (Cl. 238—210.)

1. In a rail chair a base plate having a longitudinal overlap, extending upwardly from one side and forming a rail base recess and a longitudinal rib on the other side, a filler bar between the rail base and the longitudinal rib, a brace plate having screw fasteners joining to said rib, and bolts joining the brace plate to the rails.



1,399,573. TRANSMISSION MECHANISM. ROBERT B. PERKINS, Oklahoma, Okla. Filed Dec. 17, 1920. Serial No. 431,451. 8 Claims. (Cl. 74—84.)

1. A transmission mechanism, comprising a follower shaft, a gear fixed to said shaft, a drive shaft having a

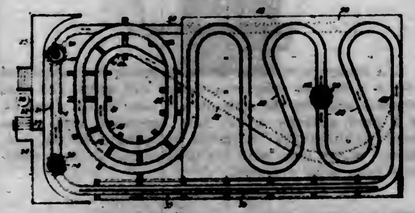
universal joint, a gear fixed to the drive shaft and meshing with and adapted for orbital travel around the first gear, and means for applying a retarding influence to the orbital travel of said second-named gear.

1,399,574. COLLAPSIBLE IRONING-BOARD STAND. FRANK PHILLIPS, Hammond, Ind. Filed Mar. 26, 1921. Serial No. 455,906. 4 Claims. (Cl. 68—10.)

1. A stand for ironing tables and the like, comprising a pair of standards, and a pair of braces carried one by each standard and adapted for detachable interlocking engagement with each other and each with one of the standards.

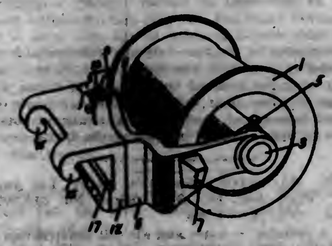
1,399,575. INNER TUBE. HENRY C. PRIVETT, Long Beach, Calif., assignor of one-half to Charles R. Privett, Burbank, Calif., three-sixteenths to Helen E. Privett and one-sixteenth to Hollis F. Privett, Long Beach, Calif. Filed Jan. 3, 1921. Serial No. 434,686. 3 Claims. (Cl. 152—13.)

1. An inner tube for tires formed of relatively soft stock and having a strip at the outer portion of the tread of relatively hard stock so that when the tube is inflated, said strip will expand but slightly transversely of the tube so as to substantially anchor the side edges of the inner portion of the tube against transverse expansion and thereby compress said portion of the tube.



1,399,576. MESH-BAG. FREDERICK W. RETTENMEYER, Meriden, Conn., assignor to the Napier-Bliss Company, Meriden, Conn., a Corporation of Connecticut. Filed May 25, 1921. Serial No. 472,855. 5 Claims. (Cl. 150—34.)

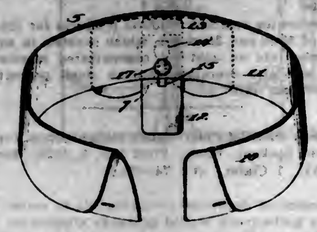
4. A hand-bag comprising a flexible body portion secured to a frame adapted to allow access thereto, a grip comprising two sections hinged together and clasped to provide a closed receptacle, and a flexible connection between the



frame and the grip and secured to the grip at substantially the center of one of its sections.

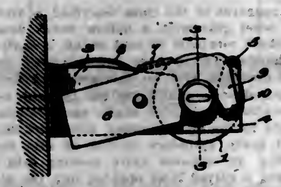
1,399,577. PLEASURE-RAILWAY. HENRY E. RIEHL, Brooklyn, N. Y. Filed July 28, 1921. Serial No. 488,096. 7 Claims. (Cl. 104—64.)

1. In a pleasure railway a continuous track comprising a station section, an up-track inclined upwardly from one end of the station section, a down-track connected with the said up-track and formed of a series of compound curves, a vertical spiral section and a diagonal portion, and a home stretch leading from the said diagonal portion to the other end of the said station section.



1,399,578. BELT-GUIDE. JOHN ROCKE, Pontiac, Ill., assignor, by mesne assignments, to Adolph Woehner, trustee, McLean county, Ill. Filed Oct. 8, 1919. Serial No. 328,800. 8 Claims. (Cl. 74—61.)

5. The combination with a power driven belt and pulley on a motor vehicle and a front axle, of a belt guide

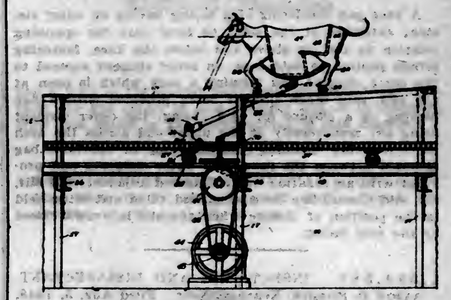


comprising a pulley wheel, a bracket member having arms projecting therefrom, said arms acting as a support for the belt wheel, and rearwardly extending hooked arms carrying over said axle and affording a detachable mounting therefor.

1,399,579. TIE-SLIP. CHARLES ROSIER, New York, N. Y. Filed June 28, 1920. Serial No. 391,893. 7 Claims. (Cl. 2—71.)

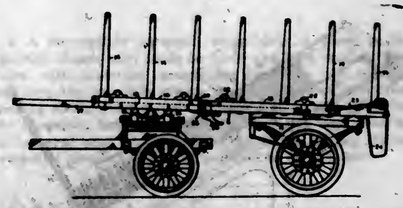
8. A tie slip of the class specified for removable insertion between the folds of a collar, consisting of a body having an operating strap secured to and extending over one side and depending below the lower edge thereof, the opposite ends of the body having inwardly projecting flanges.

1,399,580. TUBE HOLDER AND EJECTOR. WILLIAM J. ROTHROCK, Wilmington, Del. Filed Mar. 26, 1920. Serial No. 368,937. 2 Claims. (Cl. 248—20.)



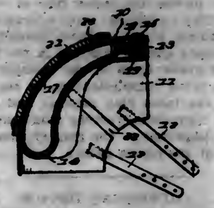
1. A device of the kind described comprising a bracket arm having a semi-circular jaw portion lying in a vertical plane, a movable plate member mounted vertically on a side of the bracket arm and having a coöperating jaw, a flange carried by the plate member overhanging the arm of the bracket, and a leaf spring secured to the bracket arm and bearing on the upper face of the flange.

1,399,581. PISTON-RING. THOMAS GUNNI SAXTON, New York, N. Y. Filed Apr. 16, 1919. Serial No. 290,434. 1 Claim. (Cl. 74—109.)



A piston ring comprising an inner ring member and an outer ring member, said members being associated in interlocked relation and susceptible as a unit of longitudinal and peripheral expansion, the outer face of the inner member including a central outwardly extending angular ridge, oppositely inclined face portions diverging from said ridge, and a shoulder projecting outwardly therefrom at the termination of one of said inclined face portions, the inner and outer faces of the shoulder being parallel and the peripheral face of the shoulder normally flush or slightly within the periphery of the piston, the inner face of the outer ring member comprising an angular groove formed of oppositely inclined continuous plane surfaces extending from the angle of the groove and terminating in the inner edges of the upper and lower faces of the member, one of said plane surfaces being complementary to the reversely inclined face of the inner ring member and having a free sliding contact therewith, whereby axial and radial movements may be imparted to the ring elements to seal the opposite sides of the piston groove.

1,399,582. AMUSEMENT DEVICE. JAMES SAYIN, Brooklyn, N. Y. Filed Oct. 25, 1920. Serial No. 419,343. 5 Claims. (Cl. 46—27.)

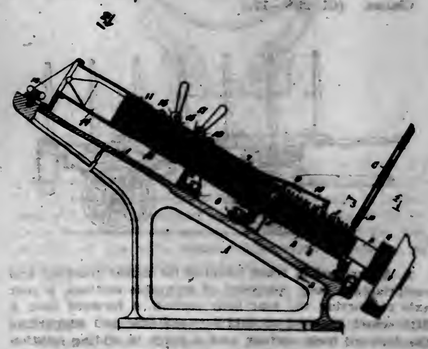


1. In an amusement device, a stationary annular runway having an undulating surface provided with concentric annular slots, a plurality of concentric circular rows of cars movable thereover, a common means for driving the same in opposite directions, swinging means for connecting the cars to the driving means through said slot to compensate for the relative vertical movements of the cars with respect to the driving means, and means for preventing the advancement of the cars beyond their connection with the driving means.

1,399,583. TRUCK. WILLIAM OSCAR SHADBOLT, Brooklyn, N. Y. Filed Feb. 19, 1919. Serial No. 278,082. 5 Claims. (Cl. 298—17.)

1. An extensible truck adapted for motor trucking and comprising a body composed of separable sections, a rear axle supporting the rear body section, a forward axle, a fifth wheel disposed on said forward axle and supporting the forward body section, and a reach in sliding relation to said fifth wheel and projecting forward thereof in the contracted position of the truck, the forward body section being connected with said fifth wheel and slidably adjustable on said reach from or toward said rear body section.

1,399,584. PNEUMATIC KNEE-PAD. James T. Shelton, Cooper, Tex. Filed May 21, 1919. Serial No. 298,653. 1 Claim. (Cl. 2—138.)

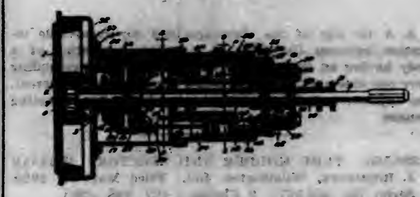


A knee pad consisting of a casing having an outer element extended at the sides to form ears for spanning relation to the leg above and below the knee, fastening straps secured to said ears, an inner element secured to the outer element and forming a sack which is open at one end, said inner element being provided with a flap serving as a closure for said casing, the outer element being slit transversely at the upper end across the arch thereof, lacing spanning said slit, and an inflatable bag disposed between the inner and outer elements and provided with an inflation valve disposed adjacent said slit, the said closure flap embracing said valve and being held in the position of closure when the slit is drawn closed by the said lacing.

1,399,585. INSECTICIDE AND DISINFECTANT. Aaron D. Shreve, Kearney, Nebr. Filed Aug. 5, 1918. Serial No. 248,380. 1 Claim. (Cl. 167—3.)

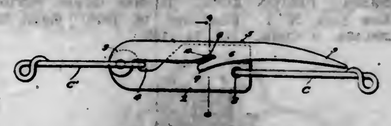
A composition for the purpose set forth consisting of a mixture of the following ingredients in about the proportions stated; crude tar oil, ten gallons, carbon produced during the conversion of oil into gas and known as high-pressure carbon, ten gallons, carbolic acid, five gallons, sodium chlorid, five pounds, and sodium oxid, five pounds.

1,399,586. MILK-BOTTLE-CAP-TUBING MACHINE. Paul Raymond Simmons, Huntington, Ind. Filed Mar. 23, 1918, Serial No. 224,274. Renewed June 3, 1921. Serial No. 474,764. 6 Claims. (Cl. 226—14.)



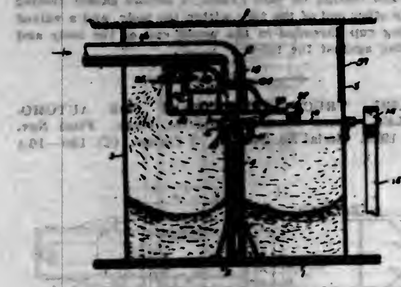
1. A machine of the class described comprising a guide tube, means for feeding bottle caps into the tube, means for supporting a packing tube in alinement with the guide tube, a tubular coupling connecting the packing tube with the guide tube, and means in the coupling for engaging the caps for holding the same while the packing tube and coupling are removed from the device.

1,399,587. PROCESS OF PRECIPITATING VISCOSE. Franz Strimmig, Hanover, Germany. Original application filed June 12, 1913, Serial No. 773,824. Divided and this application filed Aug. 12, 1916. Serial No. 114,661. 15 Claims. (Cl. 18—54.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. Process for treating cellulose products for the manufacture of films and filaments, which consists in squirting the viscose into an acid-free concentrated solution of a neutral salt also containing only a small percentage of an ammonium salt.

1,399,588. PNEUMATIC TRANSMISSION. John W. Struck, Spokane, Wash. Filed Jan. 5, 1920. Serial No. 349,541. 1 Claim. (Cl. 74—34.)



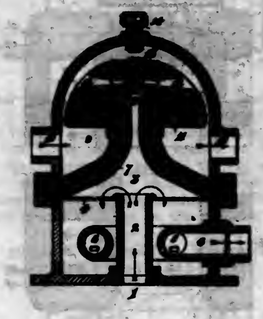
In an apparatus of the class described, a drive member having a bevel gear with a hollow shank fixed thereto, a driven shaft rotatable in said shank, a casting having a fluid chamber and a bore encompassing said driven shaft and provided with an enlarged head fixed to said shaft, opposed stub shafts carried by said head, bevel gears rotatable on said stub shafts and meshing with the gear carried by the drive member, eccentrics fixed to said stub shaft gears, cylinders carried by said casting and each having an exhaust valve opening into said fluid chamber and a valved inlet opening into the atmosphere, pistons reciprocable in said cylinders, pitmen connecting said eccentrics and pistons, and an outlet opening in one wall of said fluid chamber, and a manually operable valve for controlling the discharge through said opening.

1,399,589. CHAIN FASTENER AND TIGHTENER. Fred M. Trimble, Humboldt, Nebr. Filed Mar. 9, 1921. Serial No. 451,052. 2 Claims. (Cl. 24—69.)

2. A fastener of the class described comprising a member having a bill at one end with a link receiving seat at its base and an aperture at its other end, for permanent connection with a link at one end of the chain to be connected, a combined lever and latch member pivoted at one end to the bill of said first mentioned member and having a forwardly inclined seat in its inner edge provided with an overhanging guard, said guard being in the form of a hook-like member midway its ends directed toward the pivoted end thereof.

1,399,590. MIXER. Grover Cleveland Trunlow, Dupper, N. C. Filed May 14, 1921. Serial No. 469,449. 11 Claims. (Cl. 19—9.)

1. A mixer of the character described, including a feed pipe, a continually swinging hollow distributing arm communicating with the feed pipe, means for introducing a current of air and the material to be mixed into the feed pipe, means carried by the distributing arm for scattering the material discharge therefrom, said means comprising a conical deflector, and means for revolving said deflector.



1,399,591. BRAKE ATTACHMENT. Walter B. Uffner, Jamaica, N. Y. Filed Nov. 12, 1919. Serial No. 337,976. 2 Claims. (Cl. 303—89.)

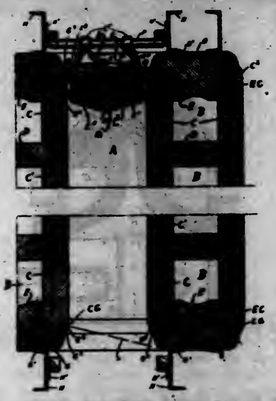
1. In combination, an air brake system including a cylinder having a piston connected to a brake rigging, and an air pressure source connected to the cylinder and equipped with a controlling valve having an exhaust pipe, a rack bar secured to the piston and movable therewith, an auxiliary cylinder, a piston in said last cylinder, a pivoted dog connected to the last piston and adapted to be moved by the latter to engage the rack bar, a pipe connected to the auxiliary cylinder, and an auxiliary controlling valve connecting said last pipe to the exhaust pipe for directing air pressure exhausted from said first controlling valve into the auxiliary cylinder for actuating the dog and said auxiliary controlling valve being adapted to be positioned to permit the exhaust air pressure from the first named valve to escape to the atmosphere and to permit the air pressure to escape from the auxiliary cylinder.

1,399,592. DEVICE FOR SEPARATING GASES FROM HOT WATER. Heinrich Wenner, Frankfort-on-the-Main, Germany. Filed July 31, 1914. Serial No. 854,821. 3 Claims. (Cl. 210—15.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In apparatus for the purpose set forth, the combination of a chamber having an inlet and an outlet for hot water, a strainer in said chamber, a second chamber having an inlet and an outlet for cold water and an outlet for gas, a partition between said chambers, having an orifice enabling steam and gas to pass from the first mentioned chamber to the second mentioned chamber,

and a float in the second mentioned chamber, adapted to close the gas outlet of said chamber and to be removed from said outlet by gas accumulating in said chamber.

1,399,593. CONVERTIBLE GARMENT. Irving Wheeler, New York, N. Y. Filed Jan. 12, 1921. Serial No. 436,960. 8 Claims. (Cl. 2—145.)



1. A convertible garment, comprising a dress having shoulder straps each made in front and back sections provided with fastening means for fastening the sections together, the shoulder straps providing a neck and front opening and arm scyes, and combined bloomers and waist, the bloomers having a sanitary back flap and forming an integral part of the waist, the latter having sleeves extending through the said arm scyes of the dress.

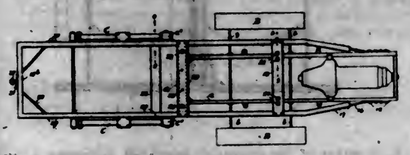
1,399,594. COKE-OVEN DOOR AND DOORWAY. Louis Wilputte, New Rochelle, N. Y., assignor of two-thirds to Alice A. Wilputte, New Rochelle, N. Y. Filed Jan. 17, 1921. Serial No. 437,647. 5 Claims. (Cl. 202—6.)

1. In a coke oven having a vertically disposed doorway and a door removably inserted in said doorway, the improvement which consists in metallic door and doorway parts which coöperate to provide outwardly flaring troughs at the sides of the door open at their inner and outer edges and adapted to receive mortarlike luting material,

and each of such width at its outer edge that the luting material may readily be thrown into it, and narrow

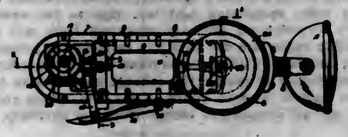
enough at its inner edge to prevent substantial amounts of the luting material being thrown through it.

1,399,595. COKE-OVEN-WALL CONSTRUCTION. LOUIS WILPUTTE, New Rochelle, N. Y., assignor of two-thirds to Alice A. Wilputte, New Rochelle, N. Y. Filed Oct. 14, 1921. Serial No. 507,610. 3 Claims. (Cl. 202—6.)



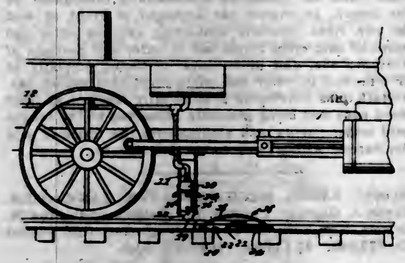
1. In a coke oven structure comprising coking chambers and interposed hollow heating walls, the improvement which consists of brickwork forming the outer end and the side walls of the flue spaces in the ends of the heating walls and metallic armor for the ends of the heating walls, said armor and brickwork being so relatively arranged and disposed that the armor positively holds the side wall bricks against spreading.

1,399,596. PRIMING-CUP. CHARLES G. ANDERSON, Jr., Buffalo, N. Y. Filed May 19, 1920. Serial No. 382,463. 1 Claim. (Cl. 123—187.5.)



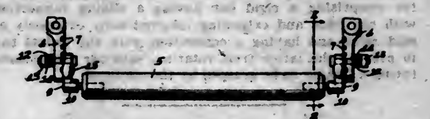
A priming cup comprising a cylindrical body having oppositely disposed sight openings, a flange formed on one end of said body and projecting inwardly and outwardly of the same, a pipe formed on said flange and in communication with the cylinder of an engine, a gasket on said flange within the body, a transparent tube in said body and resting on said gasket, a second gasket resting on the other end of the tube within the body, and a valved priming cup threaded in the upper end of the body and pressing against the tube.

1,399,597. TRUCK ATTACHMENT FOR AUTOMOBILES. JOHN ARMSTRONG, Seattle, Wash. Filed Nov. 11, 1918. Serial No. 262,013. 3 Claims. (Cl. 180—16.)



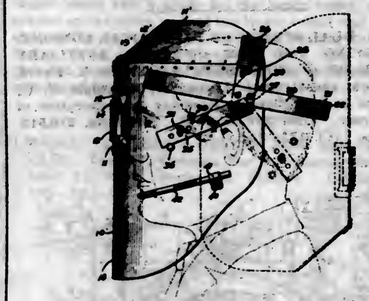
1. An attachment for application to the chassis of an automobile for converting the latter into a truck, including a truck frame adapted to be imposed on the frame of an automobile and presenting side bars spaced to lie outside of the side members of the automobile frame, steel elements on said side bars and projecting forwardly beyond the same, said elements presenting front portions offset laterally inward from the general planes of said side bars and presenting side surfaces adapted to lie against the said members of the automobile frame, means to detachably secure said elements to the automobile frame, a cross bar on top of said side bars and secured thereto, vertically disposed U-bolts extending through said side bars in position to receive and effect clamping engagement with the side members of the automobile frame, a second cross bar also disposed on top of said side bars rearward of the first cross bar and positioned to be imposed on the rear cross bar of the automobile frame, bolts for securing said rear cross bar to the imposed second mentioned cross bar, side springs at the outside of said side bars, rearward of the second mentioned cross bar, brackets on said side bars to which the forward ends of the springs are connected, and a girt uniting said side bars and disposed at the under side of the latter adjacent to said brackets to resist any tendency of the truck frame to wind.

1,399,598. FLASHLIGHT-GENERATOR. WILLIAM WALFRED ANDERSON, Michigamme, Mich. Filed Mar. 1, 1921. Serial No. 448,798. 1 Claim. (Cl. 240—8.5.)



A dynamo operated flash-light including an armature, a lamp, means to conduct the current generated by said armature to said lamp, a plurality of fly wheels associated with said armature to provide the latter with an even speed when operated, a plurality of magnets arranged end to end, a plurality of field poles secured to the ends of said magnets, a gear train secured on a shaft transversal to the longitudinal axis of the armature, a worm gear associated with said gear train, a worm meshing with said worm gear to impart to the armature a high speed ratio, a segmental rack, a hand operated lever, a link connecting the lever with the said rack.

1,399,600. RAILWAY SAFETY APPLIANCE. EARL E. BUNN, Lakehurst, N. J. Filed Oct. 21, 1920. Serial No. 418,428. 1 Claim. (Cl. 246—190.)



A safety appliance for railway trains having a relief valve for normally retaining train pipe pressure and the plunger in operative relation to the valve and having a tappet member depending toward the road bed, and a ramp consisting of a bow spring having one terminal secured to the road bed, a bell-crank lever disposed below the spring at an intermediate point in the length of the latter, a link connection between the terminal of one arm of the lever and the remaining terminal of the bow spring, a movable road side signal, and operative connections between said signal and the remaining arm of the bell-crank lever, whereby operation of the signal may serve to bend the spring to raise the central member of the latter for engagement with the tappet member of the relief valve.

1,399,601. LAWN-MOWER ATTACHMENT. WILLIAM J. BOLL, Platteville, Wis. Filed Sept. 16, 1920. Serial No. 410,764. 6 Claims. (Cl. 56—238.)

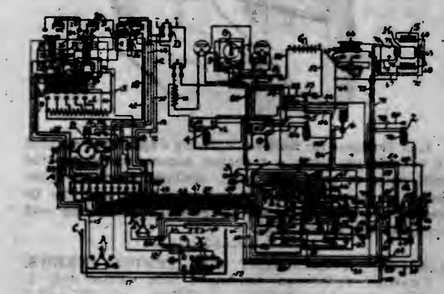
3. A roller adjusting attachment for lawn mowers, comprising a pair of roller carrying adjusting plates, handles and locking lugs on the roller carrying adjusting plates and the blade supporting frames of the mower having arc shaped series of recesses therein adapted to receive the lugs, said roller carrying adjusting plates pivotally connected to the blade supporting frames and springs maintaining the lugs in the recesses.

1,399,602. HELMET OR MASK. FREDERICK MENGLE BOWERS, Chester, Pa. Filed May 21, 1921. Serial No. 471,330. 5 Claims. (Cl. 2—117.)

1. A headgear for masks comprising a split band adapted to encircle the head, a U-shaped member embracing the split ends of said split band, resilient members interposed between the ends of the split band and the U-shaped member, and means for pivotally connecting said headgear within the mask.

1,399,603. ATTACHMENT FOR TEMPER-SCREWS. CHARLES A. BUTLER, Okmulgee, Okla. Filed July 1, 1919. Serial No. 308,002. 2 Claims. (Cl. 287—61.)

1. In combination with a commerical temper screw having the usual reciprocable reins formed with the usual



stic nut for engaging the tamper screw, such tamper screw being provided with the hand bar for rotating it and a swivel seat for the swivel bar, an attachment therefor comprising a rigid bar having a sliding connection with the reins and extending longitudinally exteriorly of said reins and having a connection with the swivel bar to prevent the latter from rotating, said bar also constituting a handle to be grasped by the operator.

1,399,604. QUININ SILVER-PHOSPHATE COMPOSITION AND PROCESS OF MAKING SAME. ROBERT LATTA CROWN, Memphis, Tenn. Filed Feb. 24, 1920. Serial No. 360,831. 7 Claims. (Cl. 167—9.)

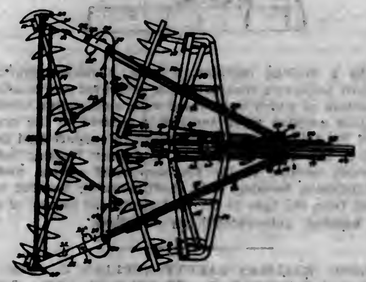
1. A process of making a germicidal agent which consists in adding a solution of a phosphate to a solution of silver salt to form an insoluble precipitate of silver phosphate, washing said precipitate, dissolving said precipitate in a syrupy phosphoric acid, and adding alkaloidal quinin to complete saturation.

7. A germicidal composition which consists of a mixture of quinin silver phosphate and quinin phosphate.

1,399,605. DUAL SYSTEM OF ELECTRICAL CONTROL EMBODYING THE USE OF MAIN AUXILIARY SOURCE OF CURRENT-SUPPLY. EDWIN G. DAVIS, New York, and DAVID L. LENDQUIST, Hastedale, N. Y., assignors to Otis Elevator Company, a Corporation of New Jersey. Filed Jan. 5, 1918. Serial No. 210,512. 8 Claims. (Cl. 172—152.)

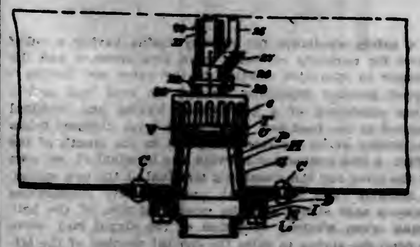
1. In an electric elevator system, the combination of a car, a hoisting motor, and hoisting cables between the car and motor, a high voltage main source of power supply for the motor, and a low voltage auxiliary source of power supply for the motor, independent of the said main source of supply, comprising a relatively low voltage storage battery, and a relatively high voltage motor generator set, comprising a separately excited low voltage unit, adapted, in case of an emergency, to receive current from the said low voltage auxiliary source of power and function as a motor, and, in a different case, to act as a generator and deliver low voltage power to the said auxiliary source of power, and a relatively high voltage unit, adapted to deliver current to the field windings of the hoisting motor, and as a motor to receive current from the said high voltage main in the charging operation of the said low voltage auxiliary source of power.

2. In an electric elevator system, the combination with the hoisting motor, electro-responsive brake apparatus therefor, a source of power supply for the motor and brake, an auxiliary source of power supply comprising a storage battery forming the supply for the armature of the hoisting motor, and a motor generator forming the supply for the field winding of the hoisting motor and the brake.



1,399,606. SURGICAL APPLIANCE. SAMUEL[illegible] FINKELSTEIN, Battle Creek, Mich. Filed Dec. 2, 1920. Serial No. 427,740. 8 Claims. (Cl. 128—85.)

1. A surgical appliance comprising a leg stretching frame, a supporting shoe movably associated with said frame, means for vertically adjusting the position of said shoe with respect to the frame, said means also serving to support the shoe upon the frame, and means for moving said stretching frame independently of the shoe supported



---

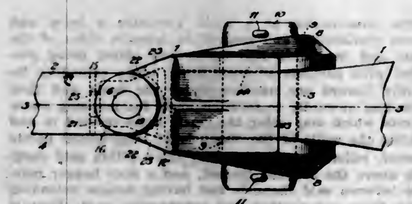
1,399,607. TANDEM DISK HARROW. FRANK H. FRENCH, Preston, Iowa. Filed June 12, 1920. Serial No. 388,520. 13 Claims. (Cl. 55—83.)

1. In a tandem disk harrow, a leader harrow provided with a frame and a tongue, a trailer harrow provided with a cross frame bar extending substantially throughout its entire length, an evener bar arranged in front of said frame bar, links pivotally connecting extreme outer end portions of said cross frame bar to outer end portions of said evener bar, and draft links connected pivotally at their rear end to outer end portions of said evener bar, said draft links converging substantially together at their forward ends and being pivotally connected to the tongue of said leader harrow and arching over the frame of said leader harrow without any connection thereto.

1,399,608. VALVE MECHANISM FOR TANK-CARS. MYRES A. GARRETT, Chicago, Ill., assignor to Carlton M. Garrett, New York, N. Y. Filed Apr. 21, 1920. Serial No. 375,642. 43 Claims. (Cl. 137—21.)

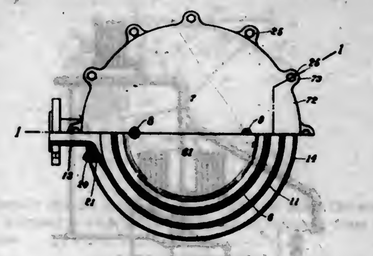
34. The combination with a tank car having an opening at the bottom provided with a ring secured to the

tank wall about the opening, of a valve casing having a flange at the bottom and a frusto-conical valve seat with an opening, and a frusto-conical valve with an opening fitting the seat, said casing flange matching and secured to said ring, and said casing and valve being located mainly within the interior of the tank wall.



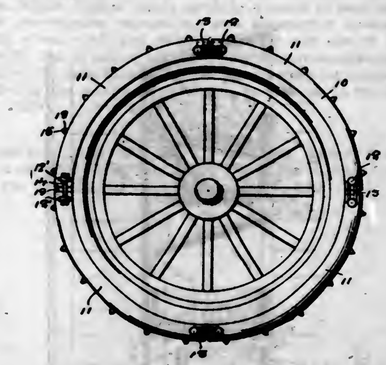
41. The combination with a tank car having an opening at the bottom with a rotary discharge valve at said opening and an opening at the top, of means for rotating said valve from a closed to an open position, and vice versa, said means extending from the valve to a position adjacent said top opening, the arrangement of said means being such that the action of opening the valve projects the upper end of said means outside the opening at the top, and the action of closing the said valve lowers the said raised portion of said means below the opening.

1,399,609. CAR COUPLING AND DRAFT-YOKE CONNECTION. ENOCH GEORGE, Jr., Pittsburgh, Pa., assignor to The McConway & Torley Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed June 4, 1920. Serial No. 386,607. 3 Claims. (Cl. 213—42.)



1. In a coupler and yoke connection, the combination with a coupler having a stem, of a yoke, a member intermediate of said yoke and coupler provided with spaced arms adapted to receive the stem of said coupler between them, means for pivotally connecting said intermediate member to said yoke, and means for connecting the stem of said coupler to said intermediate member, said last named means being adapted to engage said spaced arms and to resist lateral spreading thereof.

1,399,610. COUPLING AND YOKE CONNECTION. ENOCH GEORGE, Jr., Pittsburgh, and ISAAC H. MILLIKEN, Aspinwall, Pa., assignors to The McConway & Torley Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 30, 1920. Serial No. 399,993. 5 Claims. (Cl. 213—42.)

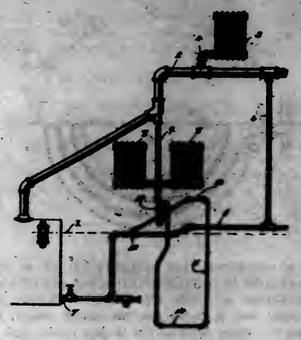


1. In a device of the character indicated, the combination with a coupler having a slotted stem, of a draft yoke, a member intermediate of said coupler and yoke and pivotally connected to the latter, a key for connecting said coupler and intermediate member, and means for pivotally connecting said intermediate member and yoke, said intermediate member being provided at its forward end with oppositely disposed slotted portions adapted to receive the coupler stem between them and being provided at its rear end with a plurality of perforated pivot lugs which are integrally united on opposite sides by rearwardly converging webs.

1,399,611. CONDENSER. RUDOLF F. GOSCHE, Elyria, Ohio. Filed July 20, 1918. Serial No. 245,164. 2 Claims. (Cl. 257—209.)

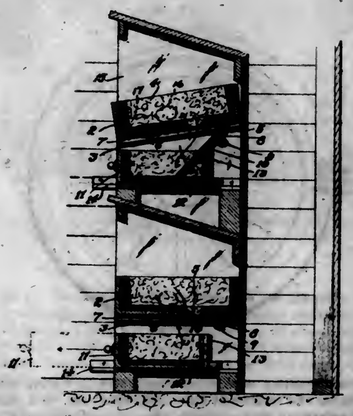
1. In a condenser, the combination of a condensing chamber formed of two differently sized nested vessels connected together at their top edges, a jacket about the larger vessel and a cover for the inner vessel, a coat of enamel on the inner wall of the larger vessel and the outer wall of the smaller vessel, and tubes passing through the jacket walls and communicating with the condensing chamber through which vapors may be introduced to and withdrawn from the chamber.

1,399,612. ANTISKID DEVICE FOR MOTOR-VEHICLES. VANCE L. GOSNEY, New Alexandria, Ohio. Filed June 11, 1920. Serial No. 388,318. 1 Claim. (Cl. 152—16.)



The combination with a sectional metallic casing adapted to cover the tread and side walls of a tire, of a plurality of relatively soft metallic cone shaped members provided with exteriorly threaded reduced shanks removably secured to said casing, and having shoulders abutting the outer surface of said casing and a plurality of cylindrical cores of relatively hard metal projecting outwardly from said cone shaped members.

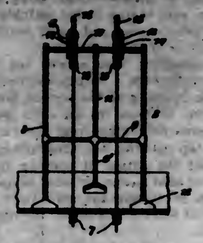
1,399,613. HEATING SYSTEM. ADELBERT L. GOWER, Janesville, Wis. Filed Mar. 29, 1920. Serial No. 369,620. 2 Claims. (Cl. 237—67.)



1. In a steam heating system, a steam generator, a steam supply pipe, a radiator connected with the supply pipe relatively close to the generator, a return pipe connected with the base of the generator to return water of condensation thereto, a condensation pipe leading downwardly from the radiator, and a pipe loop having one end connected with the condensation pipe and the other end

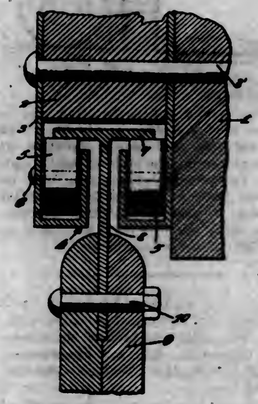
with the return pipe, the top of the loop being a relatively considerable distance above the water level of the

generator, but below the bottom of said radiator, the bottom of the loop being below the lowest point of the return pipe.



1,399,614. HEN'S NEST. JOAB C. GROVES, Valley Point, W. Va. Filed July 1, 1920. Serial No. 393,300. 3 Claims. (Cl. 114—48.)

1. In a nesting device, a nest container perforated at the bottom and pivotally mounted forward of said perforation, a closure for said perforation pivotally mounted rearward thereof in such a position and relation as to cause the said closure to form an incline for the delivery of eggs from said nest receptacle upon a predetermined downward movement of the forward part of said nest box upon said pivot.

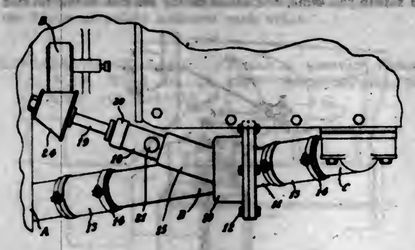


1,399,615. AUTO-SIGNAL. MAX R. GRUENDER, Milwaukee, Wis. Filed Dec. 30, 1919. Serial No. 348,962. 1 Claim. (Cl. 74—39.)

A signal operating mechanism, the combination of a frame including a cross piece, a pair of spaced drums rotatably mounted on the cross piece of said frame, a cable connected with each drum, a handle on each drum for rotating the same, ratchet mechanism for holding the

drums in adjusted positions and a lever pivoted to each drum and yieldingly connected with the handle for releasing said ratchet mechanism.

1,399,616. TRACK AND HANGER. JOHN LAYTON GUERRANT, Sedalia, Mo. Filed Nov. 17, 1917, Serial No. 202,831. Renewed May 23, 1921. Serial No. 471,970. 1 Claim. (Cl. 16—96.)

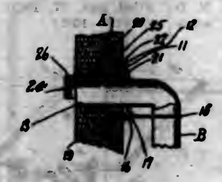


The combination of a track including a beam and plates overlapping and secured to opposite sides of the beam and depending therefrom, said plates being provided with portions at their lower edges extending inwardly toward one another under the beam and then extending upwardly to form channels for trapping water therein which may enter the track, axles secured to and bracing the walls of the channels at longitudinal points thereof, rollers mounted on said axles within said channels above the bottoms thereof, and a door hanger movable between said channels and having flanges extending away from one another and overhanging said channels and seated on the rollers.

1,399,617. WATER-CIRCULATOR. ARNO HAHN, Boulder, Mont. Filed June 1, 1920. Serial No. 385,860. 1 Claim. (Cl. 122—175.)

The combination with a water cooled engine of a motor vehicle, of a substantially tubular member interposed between the outlet of the radiator and the inlet of the water jacket, an obliquely disposed portion of said member constituting a bearing, a shaft journaled in said bearing and projecting from said member in the direction

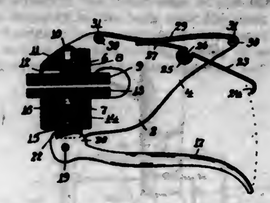
of the fan belt pulley, a cone-shaped pulley carried by the free end of said shaft and arranged to be driven by



the fan belt, and a propeller carried by the opposite end of the shaft and operating in said tubular member for the purpose specified.

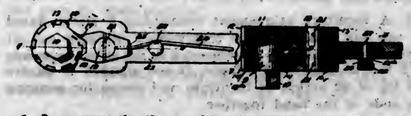
1,399,618. BOX-OPENER. CLARENCE L. HAHN, Baltimore, Md. Filed July 20, 1920. Serial No. 397,658. 4 Claims. (Cl. 220—43.)

1. The combination with a container having an annular bead spaced from the open upper edge thereof and a removable flanged cover engageable over the container, of a member mounted for sliding movement through an opening in the bead and engageable with the edge of the cover for the removal of the latter.



1,399,619. STOVEPIPE-THIMBLE ATTACHMENT. HARRY HEFFNER, Cleveland, Ohio. Filed Feb. 21, 1920. Serial No. 360,348. 4 Claims. (Cl. 126—314.)

1. The combination with a stove pipe thimble, of a member carried by the thimble and projected within the flue to direct rain water or the like away from the pipe receiving opening of the chimney.



1,399,620. POCKET SEAL-PRESS. HAROLD HELLEMS, West Somerville, Mass. Filed Aug. 8, 1921. Serial No. 490,457. 6 Claims. (Cl. 101—3.)

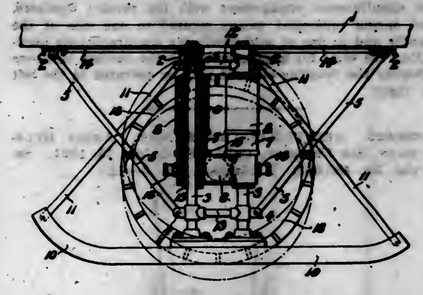
1. A seal press comprising a body member, a block held thereby having a recess therein, a die member having a hub fitting said recess, and a screw passing through said block into said hub, the block having a channel

to permit the die member to be withdrawn after the screw has released it and its hub is partially removed from the recess.

1,399,621. WRENCH. ARTHUR D. HULLETT, Newport, Tenn. Filed Feb. 23, 1921. Serial No. 447,023. 2 Claims. (Cl. 81—62.)

1. In a wrench, the combination with a handle having an enlarged head, a nut receiving element rotatably carried by said head, a ratchet member integral with said rotatable element, a separable ratchet member carried by and rotatable with said first mentioned ratchet member, double toothed pawls pivotally secured in said head for simultaneous engagement with the ratchet members, and spring controlled means secured to one side of the handle and to one of said pawls for simultaneously oscillating the same for engagement with the ratchet members whereby the rotating element may be operated to the left or right.

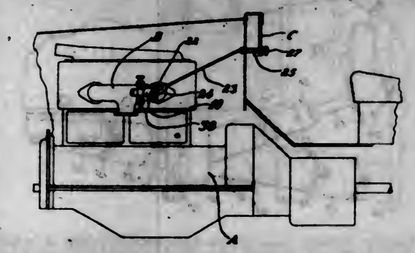
1,399,622. ARTIFICIAL-ARM FRAME. ANTON HULSMANN, San Francisco, Calif. Filed July 15, 1921. Serial No. 485,006. 2 Claims. (Cl. 3—12.)



1. In an artificial arm frame, fore arm side members produced from a single strip of material and including an integral stump cover, and upper side members pivotally connected to ends of the fore arm side members, said upper side members being produced from separate sheet metal blanks each folded upon itself to produce a double thickness of metal for each member.

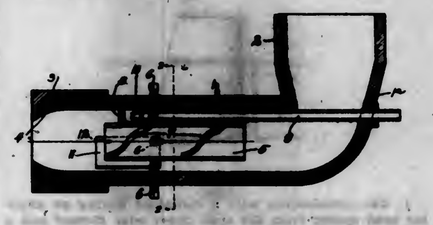
1,399,622. CHAIR. Elmer D. Hoyt, Huntington, W. Va. Filed Apr. 19, 1921. Serial No. 462,669. 2 Claims. (Cl. 45—137.)

1. A furniture attachment comprising a sleeve flared at one end and having a transversely disposed cut-out portion to provide a band connected to the sleeve by means of a tongue, said band being adapted to receive the leg of an article of furniture and means for securing the ends of the band together.



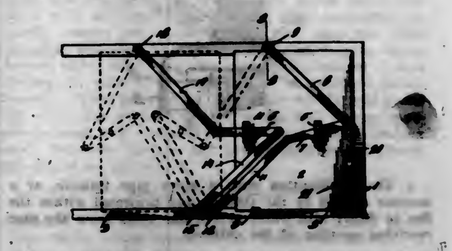
1,399,624. MOTOR-SLEIGH. Lionel Gustavus Andrew Ferguson Jarkel, Luton, England. Filed Oct. 24, 1919. Serial No. 333,091. 1 Claim. (Cl. 180—6.)

In a sleigh attachment for motor vehicles, the combination of cross members adapted to be attached to a vehicle frame, pairs of vertical standards depending from said cross members, runners secured to the lower ends of said standards, truss rods connecting the lower ends of said standards with said cross members, truss rods connecting the upper ends of said standards with said runners, sliding axle boxes mounted on said standards, an axle mounted in said boxes, telescoping spring housings on said rods, springs in said housings tending to force said boxes downwardly, and an open-work driving drum mounted on said axle and so arranged as to project below said runners or be moved above said runners.



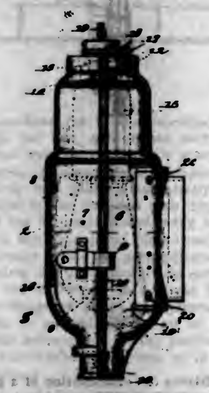
1,399,625. PRIMING DEVICE. Christian A. Johnson and Jesse P. Carruthers, Denver, Colo. Filed July 24, 1920. Serial No. 398,660. 6 Claims. (Cl. 123—180.)

1. An auxiliary priming device comprising a casing including a main portion adapted to be threaded into an intake manifold of an engine and including portions arranged at right angles and each having a bore extending to the end thereof, the extremity of one portion extending into the manifold carrying a screen of fine mesh, a rotatable plug disposed at the juncture of said casing portions and having passages adapted to register with the bores therein, a lever secured to said plug whereby to rotate the same, the other casing portion being formed



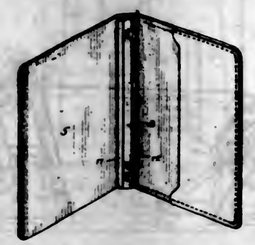
with a gasoline inlet passage terminating in a valve seat and being provided with an air inlet opening, a valve slidably mounted and adapted to engage said seat, and means connected with said lever whereby to move said valve.

1,399,626. OIL-BURNER. Jacob F. Kraus, Pittsburgh, Pa. Filed Sept. 28, 1920. Serial No. 413,294. 5 Claims. (Cl. 158—76.)



1. In an oil burner, a hollow body, a tubular member supported within said body substantially coaxially therewith, said member being open at both ends and spaced away from the body, the passage formed between the tubular member and the body being open at both ends, and means for discharging oil onto the upper portion of the tubular member.

1,399,627. CAR-DOOR OPERATOR. Edward Larson, Grand Forks, N. D. Filed Apr. 27, 1920. Serial No. 376,974. 8 Claims. (Cl. 16—156.)



2. The combination with a door frame and a sliding door; of operating and supporting means for the door comprising levers fulcrumed midway their ends on one face of the door, the fulcrums being in transverse alinement and spaced apart sufficiently to permit the free swinging of the levers without contacting with each other, the remote ends of said levers having links pivotally connecting them with the upper portion of the frame at longitudinally spaced points, and the adjacent ends of the said levers connected by links with the lower portion of the frame at points adjacent each other.

1,399,628. GAGE-LAMP. Nathan A. Levitan, Brooklyn, N. Y. Filed Jan. 24, 1920. Serial No. 353,775. 1 Claim. (Cl. 240—2.)

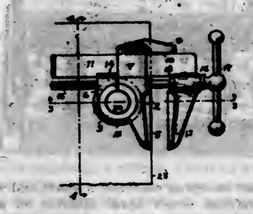
A device of the class described, comprising a pair of sections hingedly connected together at one side and having their co-acting edges formed with interfitting elements, and one of said sections formed with a side opening a flanged plug removably secured to one of said sections, a light bulb in said plug and in line with the aforesaid opening, a base whereby said device may be supported, and a removable section having a tubular extension secured over the aforesaid opening for projecting the light from said device, as and for the purpose described.

1,399,629. LOOSE-LEAF BINDER. Harry Brunel Lewis, Brooklyn, N. Y., assignor to Boorum & Pease Company, New York, N. Y., a Corporation of New York. Filed Nov. 27, 1920. Serial No. 426,689. 3 Claims. (Cl. 129—1.)

1. In a loose-leaf book, a cover, a back plate for supporting a binder mechanism arranged within the back of the book, and a fabric stitched to the cover and underlying said back plate, the opposite margins of said fabric being folded back over the back plate to hold the latter in position.

1,399,630. RAT-TRAP. Albert Livesay, Grinnell, Iowa, by John Ford, guardian. Filed Feb. 19, 1920. Serial No. 359,905. 2 Claims. (Cl. 43—61.)

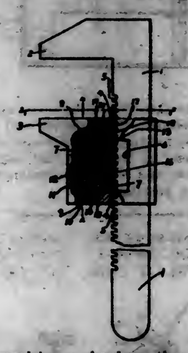
1. An animal trap comprising a hollow body open at one end, a gravity-lowered gate slidably mounted on said body to close the open end, a shoulder on the inner face of said gate adjacent the lower edge of the latter, a transverse bar disposed in the body near the open end thereof, said bar having a notch formed in its upper face constituting a seat, a trip rod resting loosely in said seat at a point intermediate the middle and one end of the bar,



said one end of the latter being flattened and engaged with the aforesaid shoulder, the opposite end of the rod extending to a point near the opposite end of the body, and a bait hook depending from the last named end of the rod, the bait, hook, and rod counterbalancing and holding said gate in open position.

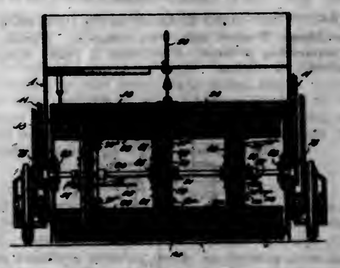
1,399,631. PLANE-SCRAPER. Charles J. Lofdahl and Carl A. Lofdahl, Joliet, Ill. Filed Dec. 27, 1919. Serial No. 347,754. 1 Claim. (Cl. 145—48.)

A frame, a rod spanning said frame, a front plate having a turned edge journaled on said rod, means associated with said plate and said frame to secure the plate in adjusted positions, ears extending from the plate, a rod mounted by said ears, a back plate intermediate said last rod and the adjacent portion of the front plate, flanges on the back plate resting on the second mentioned rod at one end, a blade intermediate the front plate and back plate of a width less than the width of the space between said plates, screws mounted by both of said plates and engageable against the blade on opposite sides to vary the angularity thereof, and a screw on the front plate engageable with the blade to urge it against the back plate at a distance from the first mentioned screws.



1,399,632. VISE. John R. Long, Akron, Ohio, assignor to The Akron Wrench and Vise Company, Akron, Ohio, a Corporation of Ohio. Filed July 5, 1921. Serial No. 482,366. 4 Claims. (Cl. 81—41.)

1. A vise, comprising a main body portion having a jaw and a hub with an opening extending therethrough, short and long arms at one side of said hub, the longer

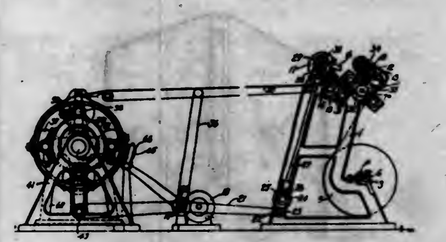


arm having rectangular openings and there being a bore therethrough and said short arm having a screw-threaded opening in register with said bore, and a movable jaw having a rectangular shank extending through the opening of said long arm and provided with a screw extending through said bore and opening in said pair of arms.

1,399,633. WRENCH. REGINALD LUMSDEN, Hamilton, Ontario, Canada. Filed Jan. 24, 1921. Serial No. 439,557. 1 Claim. (Cl. 81—158.)

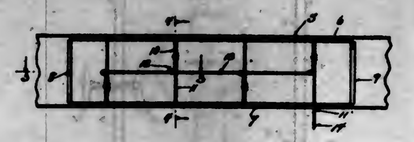
A wrench comprising a shank portion, a fixed jaw carried integrally thereby, a movable jaw slidably mounted upon the shank, a longitudinally disposed rack on the shank, the movable jaw having a rectangular transverse opening therein, a bracket having a vertical portion and an upper and lower horizontal arm extending from its upper and lower end respectively, the bracket being pivotally mounted within the rectangular opening in the movable jaw and being capable of being swung laterally therein about its pivot points, the lower pivotal connection of the bracket comprising a screw member whereby the bracket is detachably mounted in the movable jaw, a worm rotatably mounted in the bracket and co-acting with the rack, the top face of the upper horizontal arm of the bracket provided with a dimple, and a spring held ball carried in an orifice in the movable jaw and adapted to engage the dimple for locating the worm and rack in their engaged positions.

1,399,634. STREET-SWEEPING BRUSH. CHARLES WALTER LUND, Willows, Calif. Original application filed Apr. 11, 1919, Serial No. 289,826. Divided and this application filed Mar. 10, 1921. Serial No. 451,149. 5 Claims. (Cl. 15—37.)



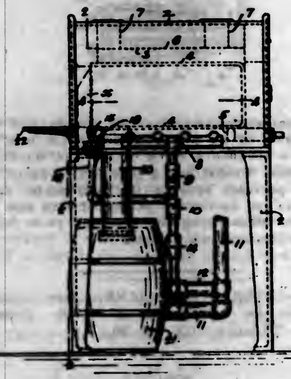
1. In a street sweeping machine, a shaft and rigid arms radiating therefrom, brush heads slidable on said arms, screw jacks extending from the shaft to said brush heads and having operating pinions, gears rotatable on said shaft and meshing with said pinions, and means for rotating said gears.

1,399,635. SCREWDRIVER WITH GRIPPING ARRANGEMENT FOR HOLDING THE SCREWS. JOHANNES LINDMARK, Askim, Sweden, assignor to Lasia Navigations-Instrument Aktiebolag, Gottenburg, Sweden. Filed Mar. 8, 1919. Serial No. 281,471. 6 Claims. (Cl. 145—52.)



1. In screw-drivers the combination of a gripping-device consisting of two jaws flexibly connected to one another and slidable along the driver to hold the screw to be operated securely against the end of the driver, an adjustable guard slidable along the driver and along the jaws and pressed against the outer sides of the jaws, the said guard being spring-actuated, so as to strive to shove itself backward from the end of the driver, and also being provided with a member connecting the guard with the jaws, so that these are caused to be carried along with the guard and thereby clenched about the screw to be operated.

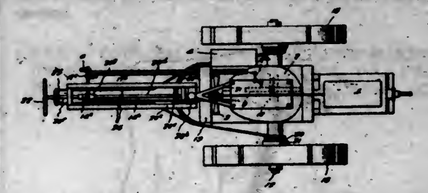
1,399,636. MACHINE FOR FORMING TUBULAR CONTAINERS. AXEL C. V. MALM, Philadelphia, Pa., assignor to The Pennsylvania Paper Products Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Oct. 7, 1918. Serial No. 257,126. 34 Claims. (Cl. 93—61.)



1. In a mechanism of the character described, means for feeding a web of flexible material from a roll of such material, a device operating intermittently to apply cement to the surface of said web for the entire width thereof as it is fed from said roll, a device operating to sever sections of material from said web, said severing device being so timed with relation to said cement applying device that each section of material severed from said web will have a portion only of its surface coated with cement, and a device to receive said severed sheet and wind the same into the same into tubular form.

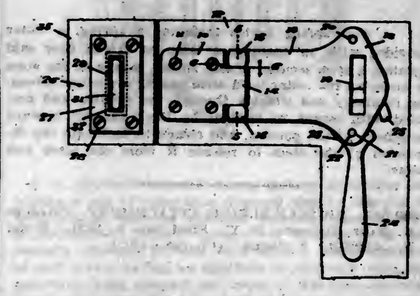
1,399,637. DRAFT-REGULATOR. PETER MARCZYNSKI, Milwaukee, Wis. Filed Feb. 28, 1921. Serial No. 448,670. 1 Claim. (Cl. 126—296.)

A draft regulator for flues comprising a frame to fit the inside of the flue, said frame including a pair of channel shaped side bars with the channels facing outwardly, a series of substantially semi-circular plates normally extending in a plane substantially at right angles to the direction of the flue and each cutting off substantially half of the flue, said plates being in staggered relation and each having a pivot pin extending transversely through the center of the flue perpendicular to the straight edge of the plate and journaled at its ends in the channel bars, a flat rod extending in a plane between the flat edges of the staggered plates and pivotally connected to each, whereby to maintain them all in parallel relation and means for moving one of the plates about its pivot and thereby simultaneously moving all of the other plates about their pivots.



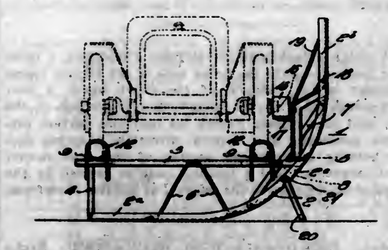
1,399,638. FURNACE. RICHARD MARX, Philadelphia, Pa. Filed May 6, 1920. Serial No. 379,320. 8 Claims. (Cl. 263—50.)

1. The combination in a furnace of a muffle having an opening; means for heating said muffle; means for maintaining a curtain of burning gaseous material across said opening; and means for causing a portion of the bottom of the muffle to be cooler than the remainder.



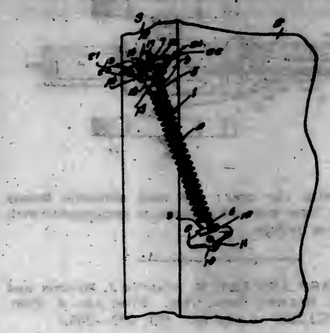
1,399,639. TRACTOR. HENRY MEYER, Rhineland, Mo. Filed Feb. 7, 1921. Serial No. 443,116. 3 Claims. (Cl. 180—17.)

1. Driving means for tractors and the like including an axle bearing ground or drive wheels, means carrying the same, a gear splined and movable laterally on the axle and characterized by anti-friction rollers at the side thereof, means to shift said gear, and shiftable means for



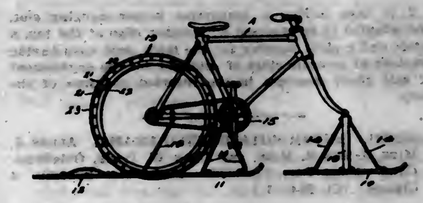
coöperation with the gear; the said shiftable means equipped with three worms for alternate engagement with the anti-friction rollers.

1,399,640. HASP AND LATCH. CALVIN J. MINTON and CHARLES H. HOLMES, Gage, Okla. Filed Apr. 5, 1920. Serial No. 371,328. 4 Claims. (Cl. 292—285.)



2. A hasp having a transverse keeper-engaging slot, and adapted to be reversed with either edge at the top, a latch, and a pivot member for the latch, said hasp having portions at opposite sides of said slot for the engagement of said pivot members in the reversed positions of the hasp.

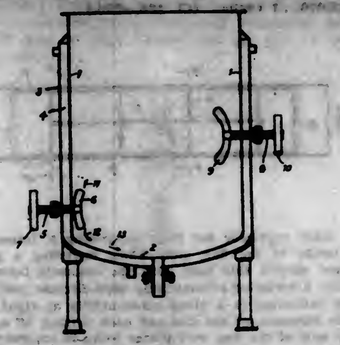
1,399,641. AUTOMOBILE-TILTING FRAME. ALLEN J. MIER, JAMES R. MIER, and JOHN W. IVERS, Oklahoma, Okla. Filed Dec. 27, 1920. Serial No. 453,266. 4 Claims. (Cl. 214—1.)



1. An automobile tilting frame comprising a pair of end frames each including a rocker, a pair of wheel supporting tracks extending between said end frames, means for clamping the automobile wheels to said tracks, a pair of hub engaging blocks, and an angle metal bar extending between the two end frames and spaced upwardly and laterally from one of said tracks to receive said blocks in its angle.

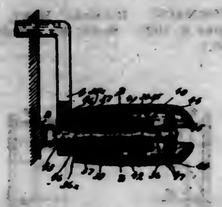
1,399,642. DOOR-SPRING. THOMAS J. MEANY, Washington, D. C. Filed Jan. 24, 1919. Serial No. 272,655. 2 Claims. (Cl. 16—99.)

1. A door spring device including a spring, a collar provided with an opening, a latch to extend over said opening, a stem secured to said spring, means on the stem to underlap the collar, said stem having a portion extending rotatably and slidably through the opening and provided with means to engage the latch through upward movement of the portion, and means to facilitate the depression of the stem to release it from the latch and collar.



1,399,643. BICYCLE SLEIGH ATTACHMENT. CHARLES K. NASH, Holcomb, N. Y. Filed Jan. 8, 1921. Serial No. 436,989. 2 Claims. (Cl. 206—161.)

1. A sleigh attachment for bicycles comprising a front runner connected with the front fork of the bicycle frame subsequent to the removal of the front wheel, a rear runner connected with the lowermost rear portion of the frame, said rear runner having its rear end portion pivoted for movement in a vertical direction, a spring normally holding said pivoted section of the rear runner against movement, and a toothed annulus carried by the rear wheel subsequent to the removal of the tire therefrom.



1,399,644. LIQUID-AGITATING MECHANISM. NIELS D. NIELSEN, Elyria, Ohio. Filed July 1, 1920. Serial No. 393,426. 37 Claims. (Cl. 259—104.)

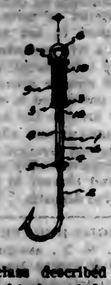
1. In combination, a tank having a saucer-shaped bottom and cylindrical side walls, a propeller shaft projecting through the side walls and a propeller on the end thereof located closely adjacent a portion of the meeting line of the bottom and side walls and adapted when operated to cause liquid to be driven against an upwardly curved portion of the bottom by which it is deflected along the side wall opposite the propeller, a second propeller mount-

ed in the side wall of the tank opposite and above the first propeller adapted to drive across the tank the liquid thus deflected upwardly by the bottom of the tank.

1,399,645. ARRESTING MEANS FOR THE SHIFTING-CRANKS OF CALCULATING-MACHINES. VALENTIN JAKOB ODHNER, Gottenborg, Sweden. Filed Aug. 22, 1919. Serial No. 319,219. 2 Claims. (Cl. 74—33.)

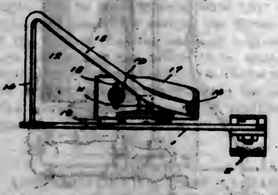
1. In a calculating machine, the combination with a shifting crank, of an arresting device for said crank, comprising a stationary notch or the like, an arresting piece, a handle divided into a plurality of parts, a cam mechanism provided between the said parts, actuated by said parts and operatively connected with said arresting piece for disengaging the arresting piece from the notch when the handle is grasped.

1,399,646. INTERLOCKING LINK. JOSEPH OPPMAN, Pittsburgh, Pa. Filed May 25, 1920. Serial No. 384,064. 2 Claims. (Cl. 59—90.)



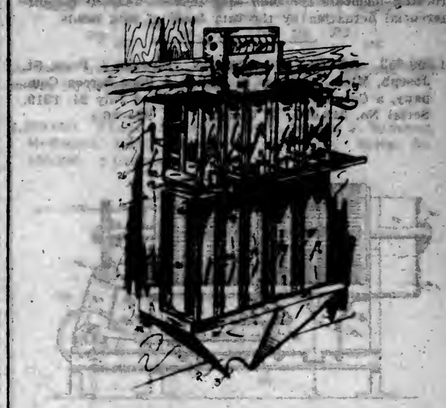
1. A link blank comprising a body portion of substantially rigid strain resisting material and having oppositely extending hook-like members, the free end of each hook having diagonally opposite recesses in its opposed edges and lugs carried by the base of the other hook to enter and interlockingly engage said recesses for securing the hooks in operative position, said base having a recess between said lugs to receive the correspondingly shaped hook till whereby the parts are securely locked in closed position and held against strains exerted longitudinally or edgewise.

1,399,647. ROPE-CLAMP. JAMES OSMAN, Camdenville, Pa. Filed Feb. 26, 1921. Serial No. 448,782. 8 Claims. (Cl. 24—134.)



4. A rope clamp comprising a plate having an annular flange integral therewith, a pair of eccentrically pivoted elements having coöperating teeth thereon rotatably mounted to the inner side of said plate, said flange being cut away to permit a rope to be trained about and engaged between said rotatable elements and the flange in different clamping position, segmental blunted teeth also formed on said elements and means exterior of the plate for actuating said elements to clamp and release the said rope from clamping position with said blunted teeth.

1,399,648. HOOK. CHARLES PARRELLO, Liverpool, N. Y. Filed June 20, 1920. Serial No. 390,709. 1 Claim. (Cl. 43—27.)

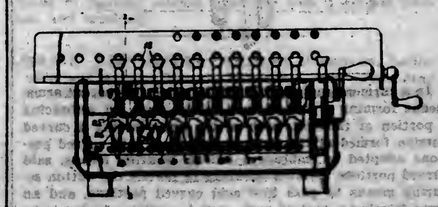


A device of the class described comprising a hook provided with a straight elongated shank terminating in an off-set eye, a guide rod formed from a single strand of wire, bent upon itself to provide a loop, extending through the off-set eye of said hook and terminating in an off-set eye surrounding the shank of said hook, a disk mounted on said rod and engaging said loop and a spring catch secured to said rod, passing through said loop and adapted to engage the offset eye of said hook.

1,399,649. TENSION DEVICE. GEORGE T. PENLAND, Gastonia, N. C. Filed Jan. 14, 1921. Serial No. 437,330. 3 Claims. (Cl. 28—20.)

3. In a tension device the combination of a body having an inwardly tapered mouth and an eye connected through a slot with the inner end of said mouth and also having on its rear portion a lip with a sharp edge, a guard and guide having an upright portion connected to the body and also having a forward inclined portion, a transverse portion and a rear arm connected with the body, and a rotary friction member mounted on the body and disposed above the slot and eye, the said body being adapted for connection to a carrying rail and being further provided in front of the lip with a litter-discharge opening.

1,399,650. COIN-COLLECTING AND CHANGE-MAKING DEVICE. GILES A. PEARSON, Wilmington, Del. Filed Oct. 27, 1919. Serial No. 333,621. 8 Claims. (Cl. 194—30.)

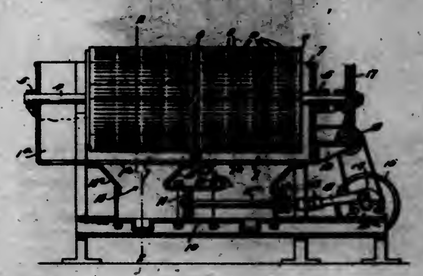


1. A coin-receiving and change-making apparatus comprising a row of magazines disposed side by side for the reception of coins of different denominations, a series of horizontally movable plates, one thereof being horizontally disposed beneath each of said magazines, each of said plates having an aperture to receive a coin, said apertures being adapted for coins of different denominations, said plates being disposed end to end and movable in a direction lengthwise of said row, selectively-actuated coin controlled elements horizontally slidable in a plane above said magazines, and mechanism intermediate said elements and said plates for selectively moving the latter.

1,399,651. COMPOSITION FOR PREVENTING INCRUSTATION IN STEAM-BOILERS. ADOLFO PASSI, Trieste, Italy. Filed June 16, 1921. Serial No. 478,099. 1 Claim. (Cl. 87—27.)

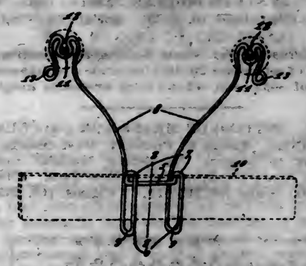
A disincrustant for steam boilers, the constituent ingredients of which are 20–40% of crude pyroligneous acid, 10–30% of soda, and 0.5–1.5% of arsenious anhydrid.

1,399,652. SETTING-UP MEANS FOR CALCULATING-MACHINES. EDGAR E. PHINNEY, West Orange, N. J., assignor to Monroe Calculating Machine Company, Orange, N. J., a Corporation of New York. Filed Mar. 15, 1920. Serial No. 365,970. 7 Claims. (Cl. 235—79.)



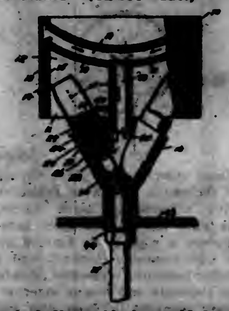
1. In a calculating machine having a differential actuating element, a series of denominational keys having

a common degree of operative movement, and means for setting up said element by the operation of any key, including cam heads all of the same pattern for the stems of said keys, and a movable member adapted for differential actuation by varying fractions of the cam faces of said heads.



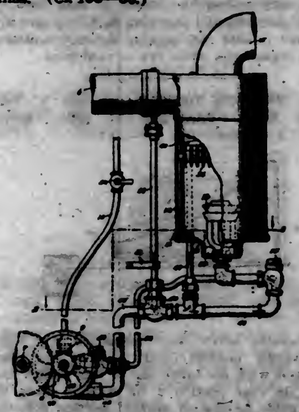
3. In a calculating machine having differential actuating elements, a series of denominational keys, and means for setting up said elements by the operation of said keys, including heads for the stems of said keys all of the same pattern and having each opposed cam faces, and rocking members for each said element adapted for differential actuation by the cam faces of said heads.

1,399,653. REVOLVING SCREEN. EDWARD J. POPE, St. Joseph, Mich., assignor to Mullen & Pope Screen Company, a Corporation of Michigan. Filed July 24, 1919. Serial No. 313,070. 5 Claims. (Cl. 92—36.)



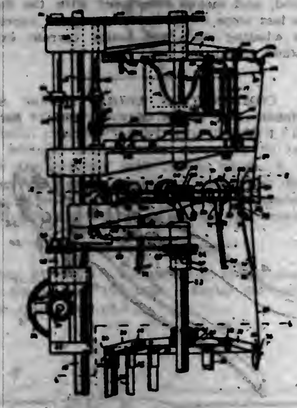
1. A screen or sifter, including a vat having an outlet at one end, a rotatable screen positioned in said vat and having a numerously slotted or perforated perimeter, a common-pressure-exerting and suction generating means coöperative with said rotatable screen, and means subdividing said vat exteriorly of said screen, whereby the material in said vat is alternately forced upwardly and drawn downwardly through the slots in the screen plates of said screen.

1,399,654. BELT. JOE R. RANDLE, Columbus, Miss. Filed Nov. 24, 1920. Serial No. 426,230. 1 Claim. (Cl. 241—9.)



In a garment supporter, a belt, a pair of divergent arms, means forming a part of each of the arms for embracing a portion of the belt, each of the arms having a curved portion formed at the outer end thereof, said curved portions adapted to embrace a button securing means, said curved portions forming openings to permit the button securing means to pass into said curved portions, and an arms forming a part of each curved portion adapted to be operated to vary the size of the opening to permit the same to be passed over the button securing means.

1,399,655. BURNER-CLEANER. ENOCH RECTOR, New York, N. Y., assignor, by mesne assignments, to The Yale & Towne Manufacturing Company, Stamford, Conn., a Corporation of Connecticut. Filed July 15, 1918, Serial No. 244,964. Renewed Apr. 30, 1921. Serial No. 465,926. 10 Claims. (Cl. 158—120.)

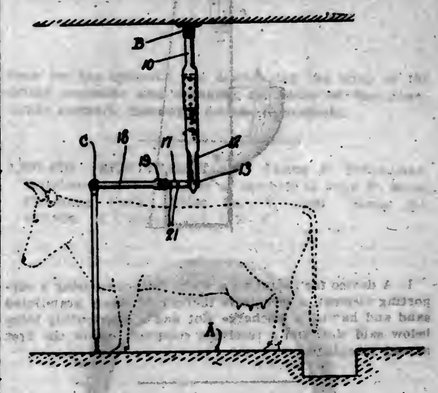


1. A burner including a block provided with a gas containing chamber having an opening through a side thereof, a metallic plug demountably positioned in said opening and provided with a bore extending therethrough, a Venturi tube of a heat resisting substance demountably fitted in said bore and having a gas conducting passageway extending axially therethrough, an outer portion of said passageway being constricted to form a vent of relatively small clearance designed to act as a Venturi tube, a cleaner in the form of a wire mounted in said passageway, free to fall by gravity into normal position substantially clear of the vent, said cleaner provided with an enlarged head at its lower end positioned in said chamber, presenting a relatively large area to the action of the gas flowing through the passageway and adapted to be raised by the pressure of gas flowing through the passageway thereby to move the wire longitudinally of the same and to reciprocate the upper end thereof in the vent to clear the same of any accumulated deposits.

1,399,656. PILOT-LIGHT-BURNER CONTROL. ENOCH RECTOR, New York, N. Y., assignor, by mesne assignments, to The Yale & Towne Manufacturing Company, Stamford, Conn., a Corporation of Connecticut. Original application filed Oct. 16, 1916, Serial No. 125,796. Divided and this application filed Feb. 18, 1919, Serial No. 277,868. Renewed Apr. 30, 1921. Serial No. 465,926. 2 Claims. (Cl. 158—36.)

1. In a device of the class described, the combination with a source of liquid fuel, a rotary pump constantly operated and supplied from said source and having a discharge port, a burner, a main conduit of relatively large conducting capacity between the discharge port of the pump and said burner, a valve normally closing said conduit, a by-pass conduit of relatively small conducting capacity, carried by the pump, supplied from said source and leading to the burner, a gravity controlled valve in said by-pass conduit closed by the pressure from the pump in the main conduit acting on the top thereof and opened by the pressure from said source acting on the underside thereof when free of the pump pressure.

1,399,657. MACHINE FOR UNRAVELING KNITTED GOODS AND WINDING THE YARN. MICHAEL F. ROSECHON, Utica, N. Y. Filed Sept. 15, 1919. Serial No. 323,711. 12 Claims. (Cl. 242—1.)



1. In a machine for unraveling knitted goods having a plurality of feeds, the combination of a thread-drawing unit for each feed of the knitted goods, each drawing unit comprising a movable thread-engaging member having at different parts thereof different drawing speeds, a thread guide movably mounted to direct the thread to differently-speeded parts of the thread-engaging member, a movable arm engaged by the thread as it comes from the knitted goods and adapted to be moved by its thread in one direction when said thread becomes tight and to be moved by the thread in the other direction when the thread becomes loose, and means operatively connecting said thread guide and said arm whereby the guide is moved to the lower-speeded part of the thread-engaging member when the thread is tight and to the higher-speeded part when the thread is loose and means for moving the thread-engaging members of the various drawing units at a given relative speed, a rack for holding the fabric to be unraveled and means for obtaining relative movement between said fabric rack and the rest of the machine whereby the unraveling points on the fabric remain in operative position relative to their respective drawing units.

1,399,658. ANTISKID DEVICE. ANTON I. SANDBO, Rock Island, Ill., assignor to Bear Manufacturing Company, Rock Island, Ill., a Corporation of Delaware. Filed Apr. 30, 1920. Serial No. 377,804. 16 Claims. (Cl. 152—14.)

7. An anti-skid device comprising a clamp composed of two longitudinal side sections, each section having adjustably connected parts with portions for receiving spokes of a wheel so that each section can be adjusted according to the spacing of the spokes, each section being independently adjustable and having means for maintaining the adjustment traction means connected to said sections, and means for connecting said sections.

1,399,659. STALL ATTACHMENT. MYRON J. SANDERS, Medimont, Idaho. Filed Aug. 23, 1920. Serial No. 405,265. 2 Claims. (Cl. 119—27.)

1. A stall attachment of the character described comprising spaced parallel vertically disposed bars suspended from a suitable overhead support and associated therewith for swinging movement, a transverse bar carried by lower ends of the before mentioned bars and having a sharp edge, means whereby said bar may be adjusted vertically with respect to the back of the animal, and means connecting said bar with a part of the stall, said means being adjustable to permit of horizontal movement of the bar with respect to the back of the animal for the purpose specified.

1,399,660. PROCESS OF GRANULATING CALCIUM CYANAMID. PAUL SAVÈS, Toulouse, France. Filed Nov. 22, 1919. Serial No. 340,079. 4 Claims. (Cl. 71—9.)

1. The process of granulating calcium cyanamid, consisting in treating calcium cyanimid with a silicate solution, and crushing.

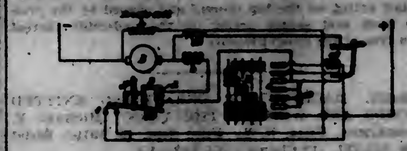
1,399,661. CLOTHESPIN. CHARLES SCHRODER, Bellisville, and AUGUST KUHEL, Milwaukee, Wis. Filed May 5, 1921. Serial No. 466,871. 2 Claims. (Cl. 24—137.)

1. As a new article of manufacture, a clothes-pin composed of a single strip of wood having the fiber running in

the direction of its length, the strip being raised upon itself to form gripping legs, a filler block inserted within the crotch of the legs, and a pin for securing the block and legs together.

1,399,662. IMITATION WATERFALL. KARL WILHELM HERMANN SCHNEEMANN, Leipsig-Reudnitz, Germany. Filed Dec. 16, 1920. Serial No. 430,745. 3 Claims. (Cl. 46—37.)

1. A device for imitating a water-fall, comprising a supporting element, a receptacle thereon for finely granulated sand and having a discharge slot and a distributing ledge below said slot, and a receiving receptacle below the first named receptacle.

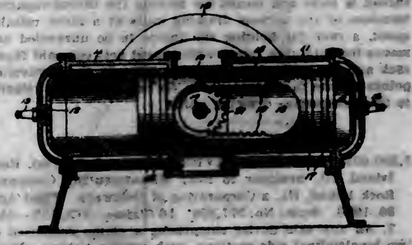


1,399,663. PROCESS OF REMOVING MATERIAL TO BE DUMPED, &c. GEORG SCHWARACK, Charlottenburg, near Berlin, Germany. Filed Oct. 7, 1916. Serial No. 124,498. 5 Claims. (Cl. 214—22.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A process of removing material to be dumped into heaps from furnace installations, consisting in directly discharging the material shut off from the atmosphere into water flowing through a tank, and in conveying the material from the tank in the direction of flow of the water.

3. In apparatus for removing material to be dumped into heaps from furnace installations, the combination with a discharge pipe for the material, of a channel containing water sealing the end of the discharge pipe, and conveyer means for removing material discharged into the channel, said conveyer means comprising conveyer elements each having the form of a shovel and having wheels mounted to run on the sides of the channel.

1,399,664. SYSTEM OF CONTROL FOR ELECTRIC MOTORS OPERATING UNDER VARIABLE AND ABNORMAL CONDITIONS. WILLIAM BAILEY BOOTH and WILLIAM BARTHOLOMEW, Montreal, Province of Quebec, Canada. Filed Nov. 25, 1918. Serial No. 263,262. 6 Claims. (Cl. 172—278.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



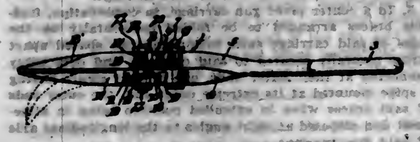
1. The combination of an electric motor having a series winding, stepped controller means for starting the motor on full field, and means associated with the controller toward its last steps, to automatically shunt current from the series winding when the motor current exceeds a predetermined amperage.

1,399,665. COMBINATION-TOOL. SAMUEL SHAPIRO, Philadelphia, Pa. Filed May 2, 1920. Serial No. 379,906. 1 Claim. (Cl. 7—4.)

A tool of the character described comprising a pair of members pivoted in crossed relation and terminating in handles, the confronting faces of said handles rearwardly of and adjacent the pivot being formed with recesses of varying depth or width, and laterally and outwardly extending jaw members carried by said members and formed with spaced grooves on their outer faces, the thickness of the combined last-named members at the bases of the grooves when these members are closed being substantially the same as the width of said first-named recesses when the handle members are closed.

1,399,666. ENGINE. DUANE W. SAUER, Empire, Oreg. Filed Oct. 5, 1920. Serial No. 414,909. 1 Claim. (Cl. 123—56.)

In an engine, a pair of aligned cylinders, sparking members at the outer ends of said cylinders, a shaft journaled

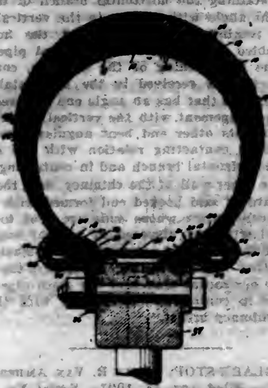


between the inner ends of said cylinders, a supported gear on said shaft, and a single piston connected for reciprocation within said cylinders and formed open at its central portion, the opening being elongated, the opposite longitudinal walls of said opening being formed with rack teeth meshing with said supported gear, one set of rack teeth meshing with the gear at one stroke of the piston and the other set meshing with the gear on the opposite stroke.

1,399,667. TOY AUTOMOBILE. CHARLES J. SLADEK, Chicago, Ill. Filed Dec. 12, 1919. Serial No. 344,362. 5 Claims. (Cl. 46—48.)

1. A toy automobile comprising a body, wheels supporting the body, gears having driving connection with certain of said wheels, rubber bands connected to said gears, a device for twisting said rubber bands, a crank for operating said device, means for controlling direction of operation of said crank, and a manually operated element for controlling the operation of said last named means.

1,399,668. SHEARS. THORWALD C. STENE, Jacksonville, Fla. Filed Jan. 17, 1921. Serial No. 437,849. 2 Claims. (Cl. 30—13.)



1. A sheet metal worker's snips, as herein described, comprising two handle members having lapping body portions which are pivotally connected, the body of one of the handles being of a greater length than the other, and the last mentioned body having its inner face depressed, rounded in plan, formed with radial teeth, a jaw having its outer face at its inner end depressed and formed with radial teeth engaging the first mentioned teeth, the body of the second jaw having a rounded end provided with peripheral teeth, a second jaw having its inner end rounded and provided with teeth to engage between the first mentioned teeth, a pivot passing through both of the jaws and through the end of the body of the first mentioned handle, said pivot having a flared shoulder received in a flared opening in the first mentioned jaw, the pivot having both of its ends threaded, and nuts screwed on said ends and contacting with the outer faces of both of the jaws.

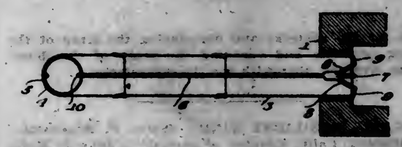
1,399,669. PUMP. ROBERT H. STOKES, Houston, Ohio. Filed Mar. 22, 1921. Serial No. 454,553. 3 Claims. (Cl. 74—14.)

2. A device of the class described comprising a rotatable shaft, a pair of eccentrics thereon connected together and including a lifting eccentric and a downstroke eccentric, straps for the eccentrics slidably mounted thereon, a reciprocating member, a flexible member connecting the reciprocating member with the strap of the lifting eccentric, a pitman connecting the reciprocating member with the strap of the upstroke eccentric and means for engaging the strap of the lifting eccentric therewith and disengaging the strap of the downstroke eccentric therewith from for the upstroke and disengaging the strap of the lifting eccentric therewith and engaging the strap of the downstroke eccentric therewith for the downstroke.

1,399,670. RESILIENT TIRE. JAMES F. STRANAHAN, Pittsburg, Calif., assignor of one-half to John F. Mora, Pittsburg, Calif. Filed Dec. 7, 1920. Serial No. 428,906. 4 Claims. (Cl. 152—8.)

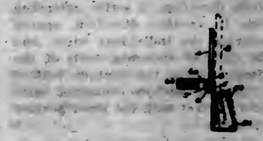
4. A tire comprising a series of wires extending obliquely around the tire in a given direction, a series extending obliquely around the tire in another direction, spaced annular elements for securing the individual wires, and spacing elements for the annular elements, each of the spacing elements including a plate for contact with a wheel rim, and flared engaging devices connected with the plate and positioned for contact with the inner portion of the tire at the edges thereof.

1,399,671. CONTAINER AND CAP THEREFOR. GEORGE M. S. TAIT, Washington, D. C. Filed Feb. 14, 1917, Serial No. 148,641. Renewed Sept. 12, 1921. Serial No. 500,269. 1 Claim. (Cl. 215—31.)



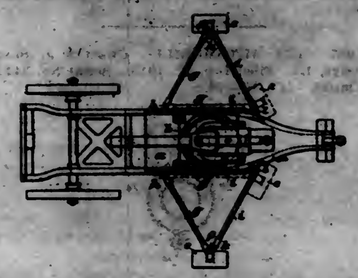
The combination with a bottle or other container comprising a mouth portion provided with a plurality of

cap-holding grooves of different heights, of a resilient closing cap seated in an upper groove and comprising upper



and lower members which are separable relatively, the lower member adapted to be drawn down into another groove of said mouth portion.

1,399,672. STOVEPIPE AND CHIMNEY CLAMP. James Clarence Teller, Jefferson, S. D. Filed July 25, 1919. Serial No. 313,143. 1 Claim. (Cl. 126—318.)

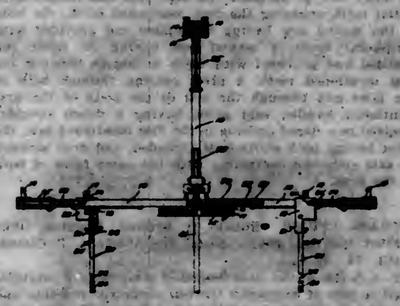


The combination with a stove pipe and chimney, of means for sustaining the horizontal branch of the stove pipe at a right angle with respect to the vertical branch thereof, for retaining the section of the horizontal branch assembled and for retaining the end pipe section thereof in the flue opening of the chimney, comprising a spring rod that is received in the horizontal branch of the chimney and that has an angle end received in and in contacting engagement with the vertical branch of the stove pipe, and its other end bent angularly to form a hook disposed in contacting relation with the said end section of the horizontal branch and in contacting engagement with the inner wall of the chimney, said rod having its sides inward of said hooked end formed with opposite angularly directed arms whose ends are bent to provide hooks parallel with but disposed at a right angle to the hooked end of the rod, said arms exerting a tension away from each other and contacting the sides of the said end section of the horizontal branch of the stove pipe and the hooks thereof in contacting engagement with the inner wall of the chimney breast.

1,399,673. GLARE-STOP. John R. Van Ambur, Watertown, N. Y. Filed Apr. 18, 1921. Serial No. 462,306. 2 Claims. (Cl. 296—97.)

2. A plane transparency, a pair of plates between which the transparency is clamped, one of said plates having integral tongues and having a spring hook for slidably and resiliently gripping the edge of a windshield, and the other plate having perforations to receive said tongues and against which the tongues are clinched.

1,399,674. [illegible] Vienna, Austria-Hungary, assignor to [illegible] Metallwaren-Fabrik Berndorf, Actiengesellschaft, Berndorf, Germany, a Corporation of Germany. Filed Sept. 7, 1915. Serial No. 49,881. 5 Claims. (Cl. [illegible]) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. In combination with a gun carriage, a center pivot gun, and a standard therefor, braces arranged at the sides of said carriage comprising horizontally collapsible struts having at their outer ends a spike, the outer ends of said braces when extended being in alinement with each other, and with a line drawn through said standard at right angles to the longitudinal axis of said gun carriage.

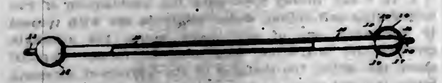
2. In a center pivot gun carriage, in combination, foldable braces arranged on the sides of said carriage, each brace comprising a strut pivoted to said carriage and having at its outer end a spike, and a second strut pivotally connected to said first mentioned strut at a point adjacent said spike and also to said carriage.

3. In a center pivot gun carriage, in combination, foldable braces arranged to be folded horizontally on the sides of said carriage each comprising two spaced apart struts pivotally secured to said carriage, and detachably connected at their outer ends, one of said struts having a spike mounted at its extreme outer end, the outer ends of said braces when in extended position being in alinement and disposed at right angles to the longitudinal axis of said gun carriage.

1,399,675. LEAF-HOLDER. Alfred W. Wardwell, Schleisingerville, Wis. Filed Nov. 22, 1920. Serial No. 425,734. 7 Claims. (Cl. 45—82.)

1. A book support of the character described comprising a standard, arms pivoted to said standard, leaf retaining means carried by the arms, and movable means carried by the standard, the latter controlling the movement of the leaf retaining means.

1,399,676. THERAPEUTIC APPARATUS. Melanchton B. Waggoner, Cedar Rapids, Iowa. Filed Apr. 19, 1921. Serial No. 462,969. 7 Claims. (Cl. 128—177.)

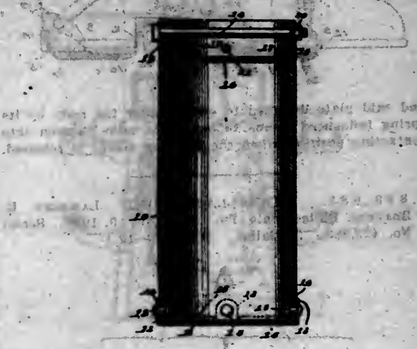


1. In an apparatus of the kind described, a stand provided with a top formed with a convex upper surface, a reservoir depending from said top and having an open upper end to receive the abdomen of the patient, a suction tube connected to said reservoir in a plane above the water-level and forming a communication with the interior of the reservoir between the body of the patient and the water-level, and means for attaching an electrical-wire connection to the exterior of the reservoir.

1,399,677. MARKER FOR CORN-PLANTERS. Strother Watson, Gallatin, Tenn. Filed Dec. 18, 1920. Serial No. 430,310. 2 Claims. (Cl. 111—82.)

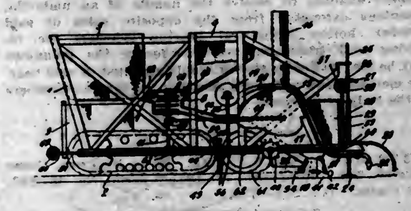
1. A marking device for a planter, comprising a cup-shaped element, an apertured brace connected therewith and extending across the open end of the cup, and a supporting member, said apertured brace permitting of the mounting of the cup on the supporting member.

1,399,678. CURTAIN-ROD. Mary M. Welsh, McGill, Nev. Filed Apr. 8, 1919. Serial No. 288,525. 1 Claim. (Cl. 156—19.)



A curtain pole comprising a rod or pole, a hollow spherical member having an opening in one side for the reception of the end of the pole, a hollow projection extending from the spherical member diametrically opposite the opening and providing a seat, a tapered extremity formed on the pole and engageable with said seat and a circumferential shoulder formed on the pole and spaced from the tapered extremity for removably holding the spherical member in position the circumferential portion being spaced from the end of the tapered portion a distance slightly greater than the diameter of the spherical member, causing the tapered portion to maintain its position with reference to the seat when subjected to strain tending to cause relative angular movement.

1,399,679. METHOD OF CONVERTING SCRAP METAL INTO MERCHANT BARS. John T. Wenyon, Harrisburg, Pa. Filed Feb. 14, 1921. Serial No. 445,017. 6 Claims. (Cl. 22—203.)



1. The process or method of producing a compact integral mass of iron or steel material in the form of an ingot, bloom, fagot, bundle, or pile, from miscellaneous particles of iron or steel scrap, which consists in assembling miscellaneous particles of iron or steel scrap in a mold, then pouring over the said scrap within the mold a new substantially slagless molten refined mass of iron or steel, to unite the particles of scrap to form a compact unit such as an ingot, bloom, fagot, bundle, or pile.

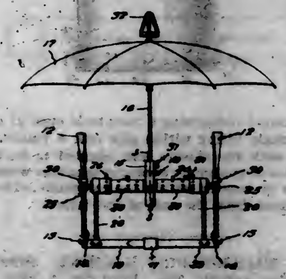
1,399,680. BIT-BOX. Murrel D. Atkinson, Indiana, Pa. Filed June 28, 1919. Serial No. 307,816. 2 Claims. (Cl. 220—24.)

1. A container comprising a receptacle open at one end, a closure snugly fitting within said end, a transverse rod engageable with the closure and adapted to be inserted in offset pairs of oppositely arranged openings whereby the closure may be secured within the receptacle, either flush with or spaced from the end of the latter.

1,399,681. ROAD-BUILDING MACHINE. Stephen F. Austin, San Antonio, Tex. Filed Oct. 1, 1920. Serial No. 413,953. 16 Claims. (Cl. 94—42.)

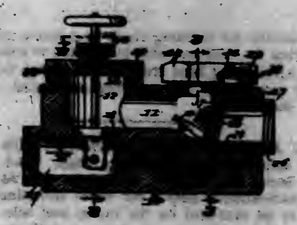
8. A machine for building roads comprising means for heat treating the road bed, stamps adapted to compact the road bed after being heat treated, and means for laying a surface carpet over the road bed so treated, substantially as described.

1,399,682. ANTISLIPPING ATTACHMENT FOR SHOES. Ray O. Bamdon, Upper Sandusky, Ohio. Filed May 28, 1921. Serial No. 473,259. 3 Claims. (Cl. 36—63.)



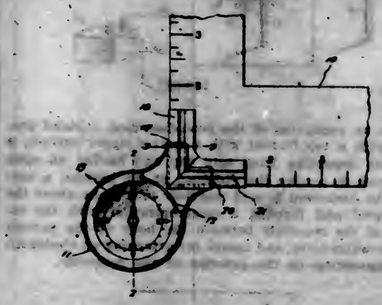
1. An anti-slipping device for shoes including a body designed to be arranged on the instep and sole portions of a shoe, and conforming in shape to said portions of the shoe, and a heel portion designed to receive the heel of the shoe, said heel portion comprising adjustable members, means on the heel portion for securing the same to the shoe, means on the outer corners of the body securing the same on the shoe, a spring influenced plate hingedly connected to the arched portion of the body, latching

ninge at the lower end of the said socket portion for holding the plate thereagainst, said casting by the plate,



and said plate designed to swing under the body by its spring influenced means to bring the calks thereon into contacting position when the holding means is released.

1,390,683. UMBRELLA-SUPPORT. LAMBERT E. BEAVERS, Philadelphia, Pa. Filed Nov. 9, 1920. Serial No. 422,883. 2 Claims. (Cl. 135—12.)

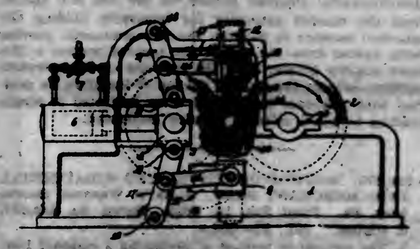


2. An umbrella support comprising a hollow tubular member adapted to receive the handle of an umbrella, trunnions extending from the opposite sides of said member, hollow cylindrical bearing members for receiving said trunnions, means whereby the trunnions may be longitudinally and rotatably adjusted in said bearing members and means for mounting the bearing members to the body of a person.

1,390,684. CHECK-VALVE. MARK BELCHER, Goose Creek, Tex. Filed Jan. 17, 1921. Serial No. 437,883. 1 Claim. (Cl. 251—128.)

A check valve including a casing having an intake and an outlet opening, a shoulder in the casing diagonally positioned with relation to the longitudinal axis of the intake opening, the said interior of the casing having a recess forming a continuation of the said shoulder, a valve seat lying against the shoulder and having a flange lying in the said recess, a check valve member having guiding projections mounted on the valve seat, a valve automatically controlled on the valve carrier, and a plate connected to the casing and bearing against the edge of the valve seat for holding the flange of the said valve seat in the recess of the casing.

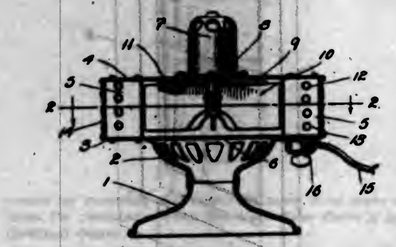
1,390,685. ATTACHMENT FOR SQUARES. JOSEPH D. BOX, Chesterton, Ohio. Filed May 16, 1921. Serial No. 468,289. 3 Claims. (Cl. 33—222.)



3. The combination with a square, of a compass, a holder for the compass, said holder comprising substantially circular spaced flanges and an L-shaped channeled gripping member for removably receiving the square.

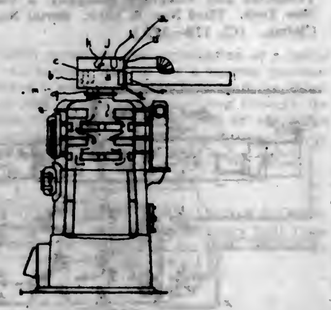
1,390,686. BALL-ROLLING APPARATUS. FERDINAND MORA CANDA, New York, N. Y. Filed Nov. 12, 1919. Serial No. 337,556. 9 Claims. (Cl. 80—21.)

1. In a ball rolling apparatus, the combination of two coöperating ball rolling disks, rotatable one with respect to the other, one of said disks having the alternate grooved and ungrooved segments, the former elevated above the latter, the surfaces of the ungrooved segments being inclined downwardly and outwardly to facilitate discharge of the finished balls.



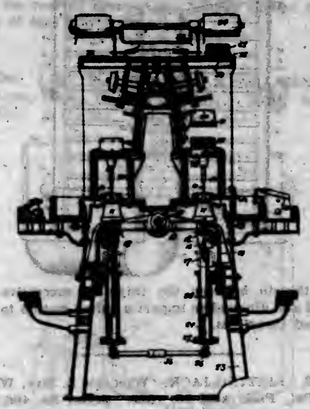
1,390,687. BALL-ROLLING APPARATUS. FERDINAND MORA CANDA, New York, N. Y. Filed Dec. 1, 1919. Serial No. 341,755. 3 Claims. (Cl. 80—36.)

3. In a ball rolling apparatus, the combination of coacting grooved ball-forming rolls, one of which is mount-



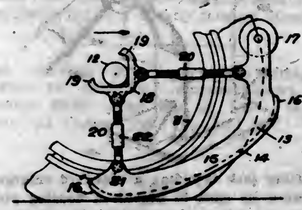
ed to be moved toward and from the other, means for so moving said roll, locating means for determining the position between said rolls of material to be acted upon, and levers pivoted at one end to fixed points and connected at the other end to said rolls and means connecting said levers at said points to the said locating means.

1,390,688. ELECTRIC HEATER. SAMUEL M. CARMEAN and JAMES H. CARMEAN, Kansas City, Mo. Filed Feb. 25, 1921. Serial No. 447,705. 5 Claims. (Cl. 219—34.)



1. An electric heater comprising a substantially circular horizontal casing, a base supporting said casing and communicating with the bottom thereof, vertical posts spaced about the perimeter of the casing, heating elements carried by the posts, and an air impeller concentric within the casing.

1,390,689. FUEL-ECONOMIZER. CHARLES O. CLARK, Montreal, Quebec, Canada, assignor to William George Borland, Montreal, Canada. Filed Sept. 2, 1919. Serial No. 321,247. 3 Claims. (Cl. 110—58.)

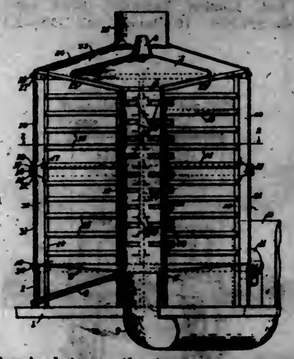


1. The combination with a furnace having a smoke pipe connection located at the top of the furnace and a smoke pipe, of a fuel economizing device adapted to be mounted upon said connection exteriorly of the furnace and effect communication between said connection and said smoke pipe, said device consisting of a hollow member the interior of which is divided into a smoke chamber and an air-heating chamber, the smoke chamber being in communication with the interior of the furnace and with the smoke pipe, said member having an air intake communicating with the air-heating chamber, a damper controlling said intake and a plurality of tubes located within said member and effecting communication between the two chambers.

1,390,690. ARTIFICIAL-SILK-SPINNING APPARATUS. JAMES CLAYTON, Coventry, England, assignor to Courtaulds, Ltd., London, England. Filed Apr. 8, 1918. Serial No. 227,350. 10 Claims. (Cl. 118—1.)

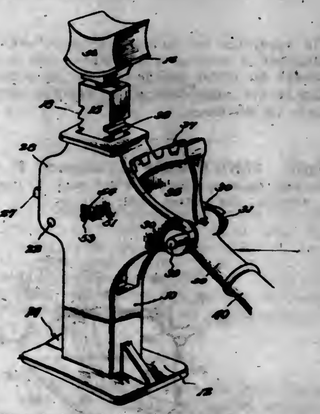
1. In apparatus for spinning artificial silk, a rotary spinning box, a housing within which said box rotates, and means for lifting said box to the upper part of the housing on the completion of the spinning operation to facilitate its discharge.

1,390,691. VEHICLE-JACK. FREDERICK P. CONNORS, Montreal, Quebec, Canada. Filed Sept. 7, 1920. Serial No. 408,721. 13 Claims. (Cl. 254—84.)



1. A jack comprising an axle rest, an arcuate cam member eccentrically disposed with respect to the axle rest, said cam member having a pair of spaced supporting points at the end remote from the rest adapted, in the axle supporting position of the device, to be disposed on opposite sides of a vertical dropped from the axle.

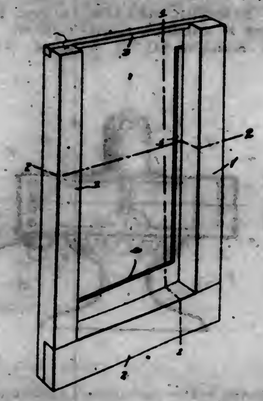
1,390,692. EVAPORATOR. HENRY E. CURTIS, San Jose, Calif. Filed July 6, 1920. Serial No. 394,323. 9 Claims. (Cl. 34—39.)



9. An evaporator including a chamber having a discharge opening in the upper portion thereof, an air conduit concentrically arranged therein and having a discharge opening at the upper end thereof, a plurality of sets of vertically spaced and radially arranged tray supports extending from said conduit, a plurality of trays

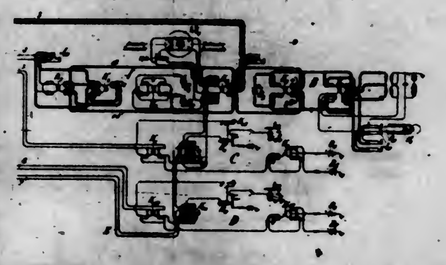
arranged in horizontal planes on said tray supports, said conduit having a plurality of laterally directed openings

formed therein between the trays on successive planes arranged and directed to impart a spiral motion to the air discharged therefrom.



1,399,693. LIFTING-JACK. WILLIAM L. DAY, Williamsport, Pa. Filed Aug. 26, 1920. Serial No. 406,069. 2 Claims. (Cl. 254—112.)

1. A lifting jack including a standard enlarged at a point between its ends to provide a housing projecting laterally at one side of the standard, the standard being formed opposite the housing with a pair of spaced ears projecting laterally from the opposite side of the housing, a lifting bar slidable in the standard, an elevating member pivoted between said ears to coact with the bar at one side thereof, a pawl mounted within said housing to coact with the bar at its opposite side for holding the bar elevated, an adjusting bolt threaded through the wall of the housing, and a spring bearing between the bolt and said wall, the bolt being provided at its inner end with a socket accommodating the spring whereby the spring is sustained by the bolt.

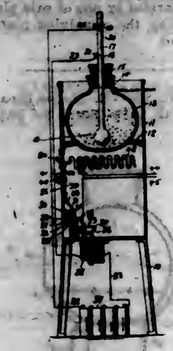


1,399,694. FILM-PACK KIT. RALPH B. DEAL, Flint, Mich. Filed Feb. 15, 1919. Serial No. 277,325. 1 Claim. (Cl. 95—19.)

As a new article of manufacture, a film-pack kit comprising upright spaced bars, a lower cross-bar of the same thickness as the upright bars fixed with respect to said upright bars and resting in the same vertical plane as the upright bars, a flange fixed with respect to and disposed immediately in front of the faces of said bars and having a lower horizontal portion extending upwardly beyond the lower cross bar and upright portions extending inwardly beyond the upright bars; said upright bars having

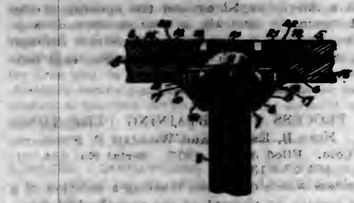
rabbets in their upper forward corners, and an upper reduced cross-bar fixed with respect to the upright bars and disposed in said rabbets and in a vertical plane immediately back of that of the flange whereby a vertically disposed opening is afforded between the upright bars back of said upper cross-bar.

1,399,695. ELECTRICAL TESTING-CIRCUITS. CHARLES S. DEMARREST, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Nov. 6, 1919. Serial No. 335,990. 6 Claims. (Cl. 179—175.)



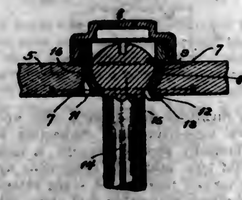
6. In a testing system, the combination of a plurality of test circuits, a meter, a signaling circuit, a plurality of line circuits, and means to disconnect the said meter from one of said test circuits and to connect said test circuit with said signaling circuit.

1,399,696. MOISTURE-TESTER. CORNELIUS P. DE ROO, Flint, Mich. Filed Sept. 9, 1920. Serial No. 409,206. 2 Claims. (Cl. 219—10.)



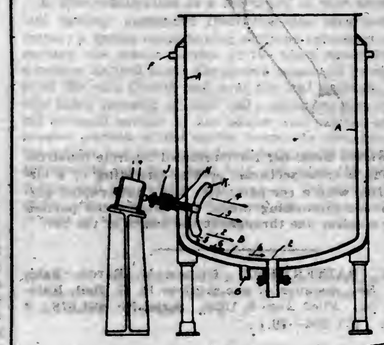
1. In an apparatus of the class described, a receptacle for the product to be tested, an electric heater device

movably supported in position to impart heat to the receptacle and the product therein, and electrically actuated



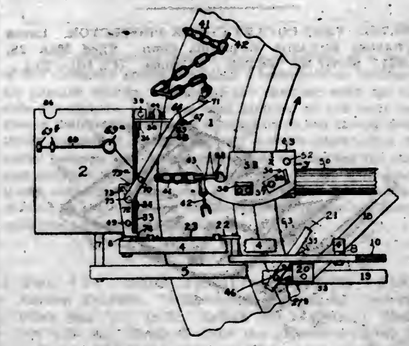
means for releasing said heater to cause it to move away from the receptacle when the heat rises above a predetermined degree.

1,399,697. STAYBOLT STRUCTURE. ETHAN I. DODDS, Central Valley, N. Y., assignor to Flannery Bolt Company, Pittsburgh, Pa. Filed Jan. 22, 1921. Serial No. 439,150. 6 Claims. (Cl. 85—1.5.)



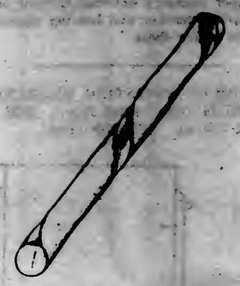
1. In a staybolt structure, the combination of a boiler sheet having an opening therein for a bearing member, the latter having a seat for a stay bolt head, an internally threaded ring having catches passing through the bearing member to engage the inner face of the boiler sheet, and a cap having an externally threaded portion to engage the internal threads on the ring.

1,399,698. STAYBOLT STRUCTURE. ETHAN I. DODDS, Central Valley, N. Y., assignor to Flannery Bolt Company, Pittsburgh, Pa. Filed Jan. 22, 1921. Serial No. 439,152. 2 Claims. (Cl. 85—1.5.)



1. In a staybolt structure, the combination of a boiler sheet having a concave opening the inner end of the wall of said opening being cut away at a plurality of points, a bearing member mounted in said opening and provided with hook shaped fingers adapted to be passed through said cut away portions and the bearing locked against outward displacement by turning the bearing to carry the hooked ends of the fingers under the sheet, a bolt the head of which is mounted in said bearing member, and a threaded member engaging external threads on the upper end of the bearing member and bearing against the outer surface of said boiler sheet.

1,399,699. LIQUID-AGITATING MECHANISM. MAX DONAUER, Elyria, Ohio. Filed July 1, 1920. Serial No. 393,431. 2 Claims. (Cl. 259—106.)

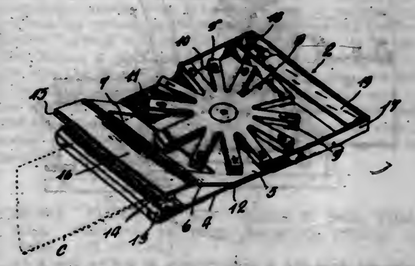


1. In a device of the class described, a fluid containing tank having curved side walls and a downwardly dished bottom wall, a propeller shaft and a pitched propeller adapted to be rotated in an inclined plane, said propeller being adapted to be rotated by the said shaft, said propeller being located so near a side wall and the bottom wall that said propeller when rotated in the proper direction will direct a portion of the fluid contents of the tank downwardly across the tank away from the propeller and at the same time hurl other portions substantially radially of the propeller but in a slightly forward direction.

1,399,700. DEVICE FOR APPLYING CHAINS TO WHEELS IN MOTION. HERBERT GROVE DORSEY, Gloucester, Mass. Filed Jan. 31, 1918. Serial No. 214,789. 14 Claims. (Cl. 152—14.)

10. Means for applying a non-skid device to a wheel in motion, combined with means to render said applying means inoperative during predetermined speed conditions.

1,399,701. TWISTED METAL BAR FOR REINFORCED CONCRETE CONSTRUCTION. Hermann Emerson Dyson, Westminster, London, England. Filed Nov. 16, 1920. Serial No. 424,495. 3 Claims. (Cl. 72—111.)



1. A twisted metal bar for reinforced concrete construction having a cross sectional profile, consisting of a circular outline with a comparatively small interrupted portion of a non-conforming plane, the interrupted portion following a spiral line throughout the length of the bar.

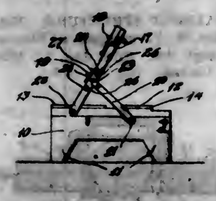
1,399,702. BATTERY-BOX. George M. Eaton, Bainbridge, Ga., assignor of one-third to H. G. Bell, Bainbridge, Ga. Filed Aug. 6, 1920. Serial No. 401,678. 2 Claims. (Cl. 204—29.)

1. A protector for batteries comprising a sheet metal box of a size and shape to snugly fit the battery in connection with which it is to be used, said box being open at its upper end and having recesses in the top edges of two of its walls, a closure for said box having a depending flange with recesses therein positioned to register with those in the box, and protective insulating means arranged around said recesses.

1,399,703. VEST-POCKET CHECK-PROTECTOR. Louis Charles Edwards, Effington, Conn. Filed Mar. 28, 1921. Serial No. 456,250. 8 Claims. (Cl. 101—20.)

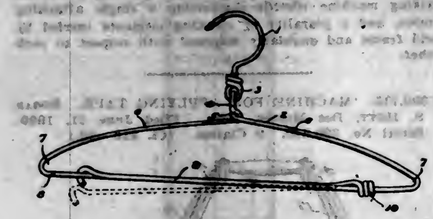
1. A check protector comprising a pair of spaced plates between which the check is adapted to be inserted, one of said plates being formed with an opening, a rotary scanning device carried by said one plate embodying a plurality of number arms to act on the check through said opening, an elastic pad carried by one of said plates, and a perforator bar carried by the remaining plate for co-action with said elastic pad.

1,399,704. COOKING-STOVE. Jacob Eida, South Boston, Mass. Filed June 12, 1919. Serial No. 303,598. 2 Claims. (Cl. 126—1.)



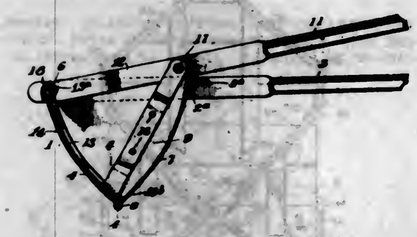
1. A cooking stove including with a bowl shaped casing having an opening in the bottom thereof, a supporting leg structure on which said bowl is mounted provided with a support for a heating element, a two-part container mounted in the bowl shaped casing and spaced therefrom, said container being adapted to be opened to give access to the interior and a flue arranged around the opening of the bowl-shaped casing to embrace a heating element supported by the legs and to direct heat therefrom through the opening of the casing to circulate around said container.

1,399,705. PROCESS FOR OBTAINING PURE TUNGSTATES. John B. Ekeley and William B. Stoddard, Boulder, Colo. Filed Aug. 7, 1917. Serial No. 184,831. 9 Claims. (Cl. 23—13.)



1. The process which comprises treating a solution of a tungstate to remove an element of the phosphorous group by adding a salt of an alkaline earth metal adapted to form an insoluble salt with an acid containing said element.

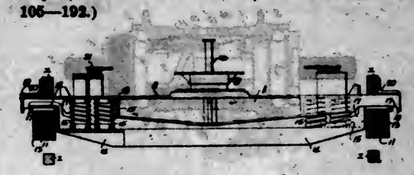
1,399,706. FURNITURE. Otis Ellison, Albuquerque, N. Mex.; E. J. Ellison administratrix of said Otis Ellison, deceased. Filed Oct. 7, 1918. Serial No. 257,084. 1 Claim. (Cl. 45—82.)



An article of furniture embodying a table and including spaced members, supporting legs connecting said spaced members and hingedly secured thereto, a rack pivotally connected to said legs, said rack comprising arms having spaced notches formed therein and studs extending therefrom, spaced members connecting said arms, said members connecting said arms, said members being foldable between the legs aforesaid and spaced connecting members to complete the table top, means to retain said members in lowered horizontal position, said supporting arms pivotally connected to said legs, a hook secured to the outer end of each of said arms to engage the stud on the first mentioned arms and hold the spaced member carried thereby in raised position to form a book rest and means comprising a connecting bar removably disposed in the spaced notches aforesaid for supporting a hook at different heights.

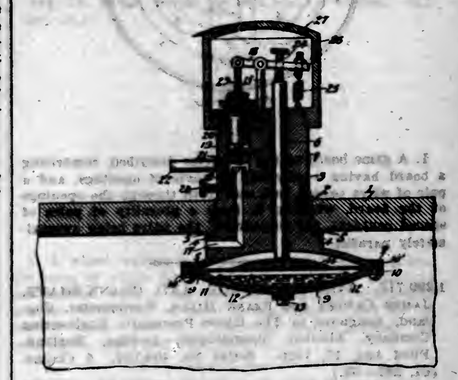
1,399,707. GARMENT-HANGER. Paul Salisbury Emerson, Tottenville, N. Y. Filed Sept. 13, 1920. Serial No. 409,574. 1 Claim. (Cl. 211—13.)

A garment hanger of the character described comprising a body and a hook, said body and hook portion being constructed from a single strand of wire, the body having its upper portion terminating to form a stem and having a looped end, the hook portion providing a stem which has a looped end to engage with the loop of the body, said body from the stem being extended at opposite downward inclinations providing the upper members of said body, said upper members at their outer ends being rounded upon themselves and continued inwardly in parallelism, one of said members having its ends terminating near the rounded end of the second base member and coiled thereabout, an offset hook provided on said base member at its free end to engage with one of the upper members, clamping means provided by the base member to effectively sustain a garment between said base member and the upper members.



1,399,708. FOOD-PRESS. Guy W. Ferdon, Crosskill, N. J. Filed Jan. 26, 1920. Serial No. 354,185. 5 Claims. (Cl. 100—41.)

1. A lever press comprising a perforated food container having plane ends and curved perforated sides, said sides meeting at their lower edges to form a substantially V-shaped cross section, and a reinforcing bar secured to the apex of the V and serving as a guard for said apex.

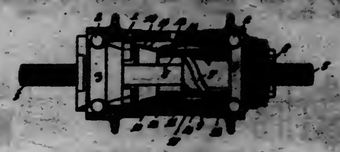


8. A lever press comprising a frame, a food container having plane end walls and curved perforated side walls secured to said frame, a pintle spanning said end walls near the outer end thereof and parallel to said side walls, a bifurcated lever pivoted on said pintle, a plunger also pivoted on said pintle, a brace connecting said lever and said plunger and a strip curved in cross section and secured to the outer curved wall of the food container and covering the crack between said pintle and the upper edge of the outer curved wall aforesaid.

1,399,709. CAR-TRUCK. Frank P. Holloway, Philadelphia, Pa., assignor to The Baldwin Locomotive Works, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 4, 1920. Serial No. 378,801. 2 Claims. (Cl. 105—192.)

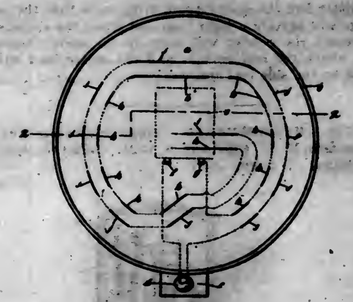
1. The combination in a car truck, of side frames; two leaf springs suspended from the side members of the frame; a spring beam having portions extending over said springs, the center portion of the beam being depressed; a bolster located above the spring beam and extending beyond the side frames and over the leaf springs, said bolster being recessed at each end; coiled springs located in the recessed portion of the bolster and carried by the depressed portion of the spring beam, the distance between the bolster and the spring beam being such that the coiled springs will sustain a light load and when the springs are compressed the bolster will bear on the spring beam directly above the leaf springs and the entire load will be carried by the side leaf springs.

1,399,710. RELIEF-VALVE. Henry William Justus, Napanoch, N. Y. Filed Jan. 6, 1921. Serial No. 435,895. 3 Claims. (Cl. 236—64.)



1. The combination with a steam chamber, of a device of the character stated including a body portion having an air passage therein connecting the chamber with the outside atmosphere, a spring held plunger in the body portion, a diaphragm casing, a diaphragm in the casing operatively connected to the plunger, a valve controlling the outlet passage, and means operatively connecting the valve and plunger, said means comprising a rocker arm operatively connected at one end to the valve, and a set screw carried by the other end of the rocker arm and engageable with the upper end of the plunger rod.

1,399,711. BACK-PEDALING COASTER-BRAKE. Alfred Kniehm, Frondenberg, Westphalia, Germany. Filed Mar. 17, 1915. Serial No. 14,960. 1 Claim. (Cl. 192—6.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

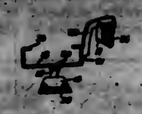


In a coaster brake comprising a clutch member provided with longitudinal grooves, a spring retarder, com-

pulsing springs mounted in said grooves and held in place by a cup shaped member at one end of the clutch member,

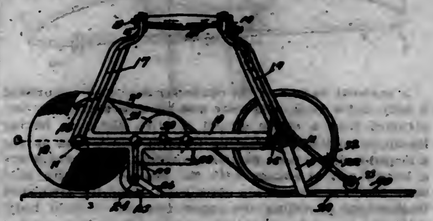
the other ends of the springs having a surface in contact with a non-rotative member of the brake.

1,399,712. ELECTRICAL AMUSEMENT APPARATUS. SAMUEL JOSEPH LEVI, London, England. Filed Jan. 30, 1920. Serial No. 355,257. 3 Claims. (Cl. 46—61.)



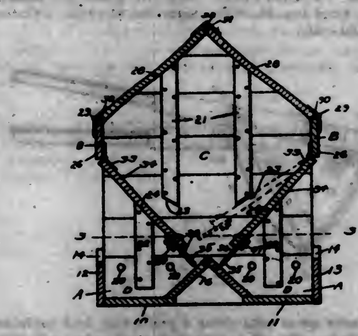
1. A game board of the character described, comprising a board having a plurality of parts of openings, and a pair of wires passed back and forth through the openings of the board, whereby to form a plurality of pairs of spaced contacts, the contacts of the pairs being approximately parallel.

1,399,713. CONNECTING-ROD AND CRANK-SHAFT. JAMES CAWLEY and FRANK HILLS, Westminster, England, assignors to The Globe Pneumatic Engineering Company, Limited, Westminster, London, England. Filed Aug. 17, 1920. Serial No. 404,192. 5 Claims. (Cl. 287—93.)



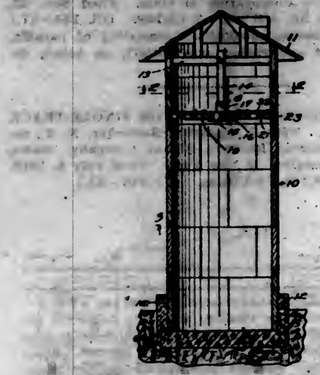
1. An assembling device for connecting rods and crank shafts, consisting in the combination of an annular big end formed with a lateral opening, the width of which is just sufficient to enable the said big end to be passed laterally over the crank pin, and the internal diameter of the said annular big end is greater than the diameter of the said crank pin to provide an annular space between these parts when assembled, and means adapted to be introduced into said annular space for retaining the said annular big end in position on the said crank pin.

1,399,714. BRUSH FOR TALKING-MACHINE RECORDS. JOSEPH P. SCHEID and WILHELM ROSSI, Brooklyn, N. Y. Filed Feb. 1, 1921. Serial No. 441,933. 5 Claims. (Cl. 274—1.)



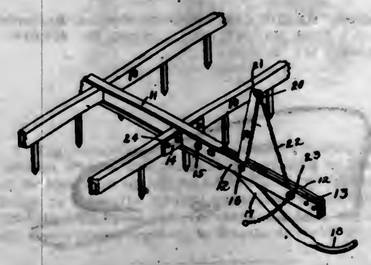
1. As an article of manufacture, a cleaning device for talking machine records comprising a single attaching frame, and a plurality of cleaning elements carried by said frame and angularly disposed with respect to each other.

1,399,715. MACHINE FOR APPLYING TAPE. EDGAR S. HOYT, Des Moines, Iowa. Filed June 21, 1920. Serial No. 390,640. 9 Claims. (Cl. 216—20.)



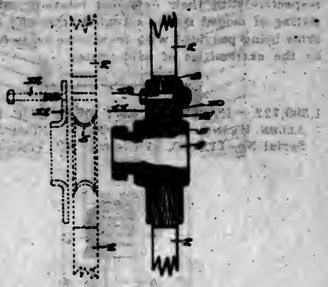
1. In a portable tape applying machine, a frame supporting rollers thereon, a tape smoother member movably mounted on said frame, a spool on said frame, a moistener device interposed between said smoother member and said spool and a device for imparting tension to said smoother member.

1,399,716. SECTIONAL HOG-FEEDER. LIELS L. RINDE, Greenville, Iowa. Filed July 19, 1920. Serial No. 397,280. 4 Claims. (Cl. 119—53.)



1. A feeder for swine comprising a base having a pair of feed troughs therein, and a dividing member fixed therebetween, a pair of end wall members adapted to be detachably fixed to said base, and a pair of combined top and side members, said side members being capable of slight pivotal movement, whereby feed within the feeder may be agitated, combined reinforcing cleats and stop devices fixed to the end members for limiting the pivotal movement of the side members and for reinforcing the end members, said combined cleats and stop members being designed to have the edge of the side members received therebetween and have their adjacent surfaces beveled so that the upper and lower edges overlap for forming a continuous reinforcing cleat, and an adjustable feed control board fixed to the lower ends of each of said side members, whereby the flow of feed into the troughs may be regulated.

1,399,717. SILO-TRUING DEVICE. JOSEPH A. DREW, Cascade, Iowa. Filed Sept. 20, 1920. Serial No. 411,572. 2 Claims. (Cl. 20—1.4.)

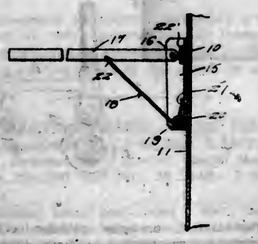


1. A silo truing device comprising a center member having a plurality of sockets formed therein, a plurality of arms having one end selectively received in said sockets and adapted to extend radially from said center member, wall engaging members adapted to rest against the inner surface of the silo wall mounted on the free end of each of said arms, and means whereby said wall engaging members may be moved relative to said arms, said means including a screw-threaded member formed on the end of said arm and partially received in said wall engaging member, a nut on said screw-threaded member whereby the wall engaging member may be forced outwardly away from said arm, and means operatively connected to said arm and said wall engaging member for preventing twisting of the wall engaging member.

1,399,718. HARROW LIFTING AND CLEARING DEVICE. PETER H. THIM, Renwick, Iowa. Filed May 23, 1921. Serial No. 471,871. 4 Claims. (Cl. 55—34.)

2. In a device of the class described, the combination of a harrow section with a lifting and clearing device, comprising a member fixed to the rear portion of said section, a member pivoted to said first member and adapted to slide on the ground rearwardly of its pivot point and having an upward extension, a guide element on said first member near the rear portion thereon, and a flexible device connected with said upper extension and extended to and around said guide device.

1,399,719. WHEEL FOR AUTOMOBILES. CHARLES GILBERT HAWLEY, Chicago, Ill., assignor to Baker Wheel & Rim Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 9, 1920. Serial No. 357,440. 4 Claims. (Cl. 301—65.)



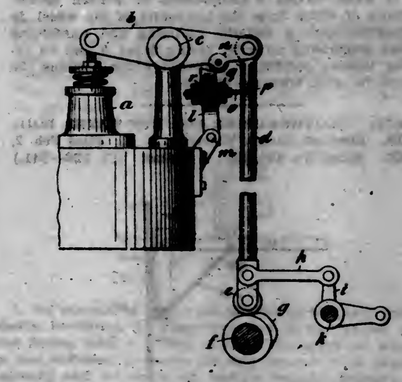
1. The combination with a wheel provided with a complement of wooden spokes having butts which form a hub center, and provided with a hub-hole extending through the spoke butts, of a hub adapted for insertion through said hub-hole, and a member contacting the extreme inner ends of said spokes, and affording substantially a single-line bearing for said hub.

1,399,720. WHEEL FOR AUTOMOBILES. ERLE KING BAKER, Chicago, Ill., assignor to Baker Wheel & Rim Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 20, 1921. Serial No. 493,775. 4 Claims. (Cl. 301—9.)

1. A wheel having a complement of wooden spokes, the butts of which form the hub-center of the wheel, in combination with a metallic centering and reinforcing member comprising an outer facing flange 5 and an expanded tubular portion, 5', between which portions the ends of the spoke butts are clamped.

1,399,721. CLOTHES-DRIER FOR HOT-WATER BOILERS. BERNARD LEAHY, Woodside, N. Y. Filed Feb. 2, 1921. Serial No. 441,925. 2 Claims. (Cl. 126—341.)

1. A drying rack for attachment to a hot water boiler having a boiler encircling strap or band and means for

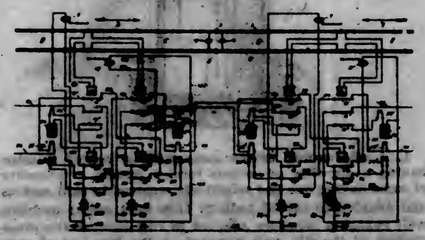


applying tension thereto to tightly embrace the bottle, having bolts threaded upon said strap or band for adjustment longitudinally thereof, drying arms pivotally mounted upon said bands for swinging movement in a vertical plane, and foldable braces for steadying the arms respectively in their extended relation, said braces consisting of looped spring actuated arms and the supporting arms being provided with transverse seats for engagement by the extremities of said braces.

1,399,722. INCANDESCENT ELECTRIC LAMP. JOHN ALLEN HEANY, New York, N. Y. Filed July 29, 1916. Serial No. 111,697. 1 Claim. (Cl. 176—131.)

The process of making a glower for incandescent electric lamps, which consists in molding into desired shape a plastic mass of highly refractory material, treating said mass to produce a strong porous body, impregnating the said body with a solution of a metallic compound, the metal of which incandesces at the temperature at which platinum volatilizes, and then reducing the compound to metal by heating the glower in the presence of hydrogen.

1,399,723. INTERNAL-COMBUSTION ENGINE, WHICH MAY BE DIRECTLY REVERSED. HANS HENRIK BLACHE, Hellerup, near Copenhagen, Denmark. Filed Sept. 10, 1920. Serial No. 409,470. 7 Claims. (Cl. 123—41.)

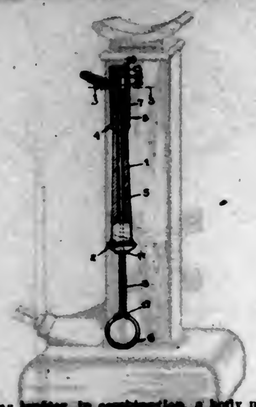


1. In combination, an engine cylinder having a blow-off valve; a reversing mechanism; a lever connected to control said valve; a roller on said lever; and a movable device connected to be shifted automatically by said mechanism during the reversing operation and shaft engageable with said roller at each limit to move said lever and thereby open the valve.

1,399,724. WATERPROOFING COMPOSITION. OTTO H. BRADTKE and MILES H. OSBURN, Akron, Ohio, assignors to The Waterise Chemical and Manufacturing Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 22, 1919. Serial No. 339,266. 2 Claims. (Cl. 134—17.)

1. A waterproofing composition consisting of paraffin, gasolene, benzol and rubber, substantially as herein described.

1,399,725. SIGNALING SYSTEM FOR SINGLE-TRACK RAILROADS. NEIL D. PEARCE, Rochester, N. Y., assignor to General Railway Signal Company, Gates, N. Y., a Corporation of New York. Filed July 8, 1916. Serial No. 108,184. 6 Claims. (Cl. 246—33.)



4. In a signaling system for railroads, in combination: a stretch of track divided into track circuit sections; a signal for governing traffic over said stretch; a circuit controlling device tending to assume an operated condition when said signal moves from one position to another position, said device after being operated being held in its operated position so long as said signal remains in its moved position; means for preventing the operation of said device by said signal; means governed by a track circuit section adjacent to said signal for rendering said means ineffective; and means for signaling controlled by said device.

1,399,726. HEADWEAR. SAMUEL WERNER, Rutherford, N. J. Filed Mar. 21, 1921. Serial No. 454,018. 2 Claims. (Cl. 2—106.)

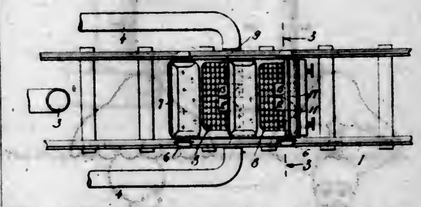
1. A cap having a slit in the edge thereof to allow for contraction and expansion to different head sizes and having a flap at one side of said slit provided with a series of openings and double flaps at the opposite side of the slit forming a pocket to receive the apertured flap and a fastening having complemental parts carried by the double flaps and arranged to pass through any selected one of the openings in the apertured flap.

1,399,727. IGNITER. JOSEPH A. KLEIN, Astoria, N. Y., assignor to Emily Berthold, Jamaica, N. Y. Filed Apr. 22, 1921. Serial No. 463,501. 2 Claims. (Cl. 67—19.)

1. In a gas igniter, in combination, a body member having an axial orifice, a cylinder extended at one end of said member, a rod of greater length than said member loosely entered in the axial orifice thereof, a perforated, closed casing, an igniting element therein, said casing being carried by said rod at one end thereof, and fitting within said cylinder to close its orifice, a handle at the other end of said rod, and a helical spring upon said rod, said spring lying between said handle and body member, and serving to extend said rod to thereby hold said casing normally ensheathed within said cylinder.

REISSUES.

15,242. SHEET-FOLDING MACHINE. ALLISON M. MACFARLAND, Williamsburg, Pa., assignor to Leo M. Kohn, Buffalo, N. Y. Filed Aug. 5, 1921. Serial No. 490,149. Original No. 1,313,713, dated Aug. 19, 1919, Serial No. 90,739, filed Apr. 12, 1916. 111 Claims. (Cl. 270—81.)

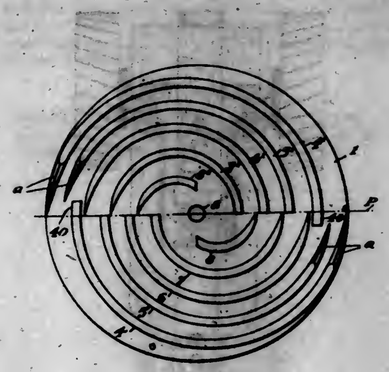


1. The combination of a mechanism for folding sheets of different lengths, and mechanism controlled by the length of the sheets for timing the actuation of the folding mechanism to cause the folding mechanism to fold sheets of different lengths at different distances from the ends of the sheets proportional to the lengths of the sheets.

15,243. MOTOR-VEHICLE. CHARLES M. MANLY, Buffalo, N. Y. Filed May 31, 1918. Serial No. 237,600. Original No. 1,179,336, dated Apr. 18, 1916, Serial No. 606,613, filed Feb. 4, 1911. 10 Claims. (Cl. 180—17.)

1. In a motor vehicle, the combination of a plurality of independently rotatable driving wheels, a plurality of separate hydraulic motors, a separate fluid pressure generating element for each of said motors, connections between each motor and its generating element and adjustable to establish communication between the connections of said separate motors as desired.

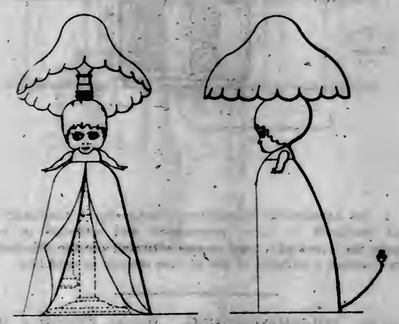
15,244. AMUSEMENT APPARATUS. HYLA FREDERICK MAYNES, Gaines, Pa., assignor of one-half to Emma C. Maynes, Gaines, Pa. Filed Aug. 15, 1921. Serial No. 492,510. Original No. 1,361,476, dated Dec. 7, 1920, Serial No. 402,638, filed Aug. 10, 1920. 17 Claims. (Cl. 104—53.)



1. An amusement apparatus, comprising a trackway, a car designed to carry passengers and adapted to run upon the trackway, and means situated on the trackway for causing a current of air to rise openly in said car.

15,245. POLISHING-WHEEL. DANIEL FREDERICK MCGOVERN, Montpelier, Vt. Filed Nov. 3, 1919. Serial No. 335,522. Original No. 1,296,985, dated Mar. 11, 1919, Serial No. 264,230, filed Nov. 26, 1918. 7 Claims. (Cl. 51—209.)

1. A polishing wheel comprising a plate having on its working face duplicate sets of symmetrically arranged semicircular flanges disposed on opposite sides of a plane passing transversely of the plate, the rear end of the



outermost flange of each set extending beyond said plane and overlapping the forward end of a flange of the

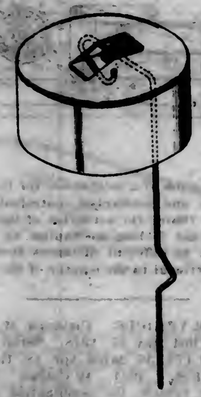
opposite set and constituting a choker effective to prevent the abrasive spilling out.

DESIGNS.

59,882. COMBINED TELEPHONE-COVER AND LAMP-STAND. HARRY C. ATHERLEY and JAMES E. ATHERLEY, San Francisco, Calif. Filed Sept. 2, 1920. Serial No. 407,807. Term of patent 7 years.

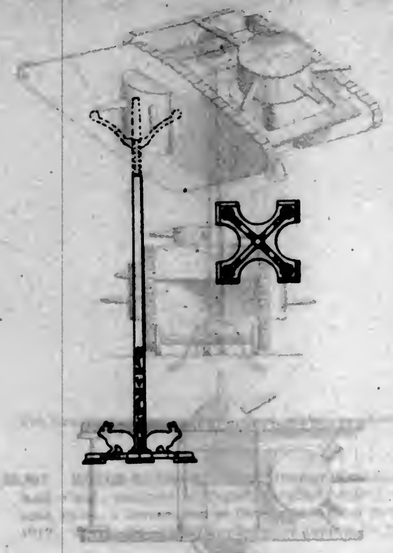
The ornamental design for a combined telephone cover and lamp stand, substantially as shown.

59,883. LIFTING-JACK. TRUE M. AVERY, Glens Falls, N. Y. Filed Dec. 29, 1920. Serial No. 432,626. Term of patent 14 years.



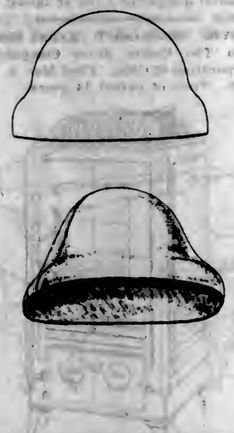
The ornamental design for a lifting jack, as shown.

59,884. LEATHER. CARL BRANDT, Boston, Mass., assignor to Winslow Bros. & Smith Co., Boston, Mass., a Corporation of Massachusetts. Filed Sept. 2, 1921. Serial No. 496,130. Term of patent 7 years.



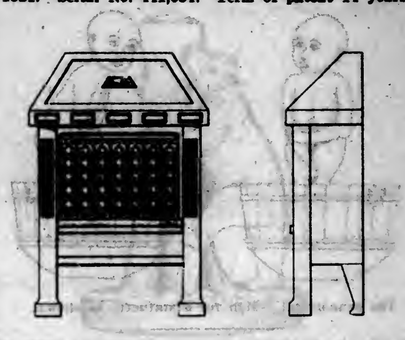
The ornamental design for leather, as shown.

59,885. PLANT-PROTECTOR. WILLIAM C. CLARK and EDWARD C. CLARK, Wellston, and LOUIS WEHRHEIM, St. Louis, Mo. Filed Feb. 25, 1921. Serial No. 447,887. Term of patent 7 years.



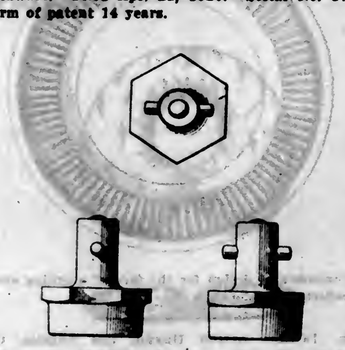
The ornamental design for a plant protector, substantially as shown.

59,886. COSTUMER. RICHARD C. HART, Evanston, Ill. Filed May 12, 1921. Serial No. 469,963. Term of patent 7 years.



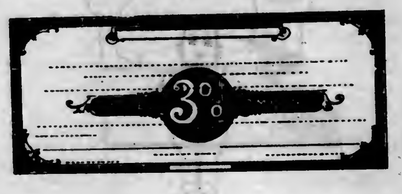
The ornamental design for a costumer as shown.

59,887. BLANK FOR CHANGEABLE-SHAPE SPORT-HATS. ALIDA GRACE FREEMAN, Great Neck, N. Y. Filed Apr. 7, 1921. Serial No. 459,480. Term of patent 7 years.



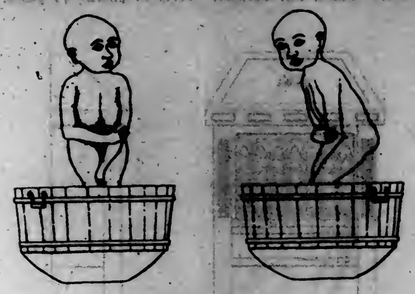
The ornamental design for a blank for changeable shape sport hats, as shown.

59,888. GAS-HEATER. JOHN H. GRAYSON, Athens, Ohio, assignor to The J. H. Grayson Manufacturing Company, Athens, Ohio, a Corporation of Ohio. Filed Jan. 29, 1921. Serial No. 441,054. Term of patent 14 years.



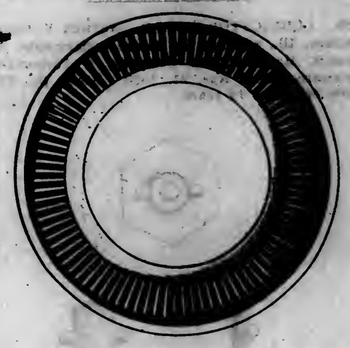
The ornamental design for a gas heater, as shown.

59,889. LUBRICATOR-NIPPLE. ARTHUR V. GULLBORG, Chicago, Ill., assignor, by mesne assignments, to The Bassick Manufacturing Company, a Corporation of Delaware. Filed Apr. 21, 1920. Serial No. 375,637. Term of patent 14 years.



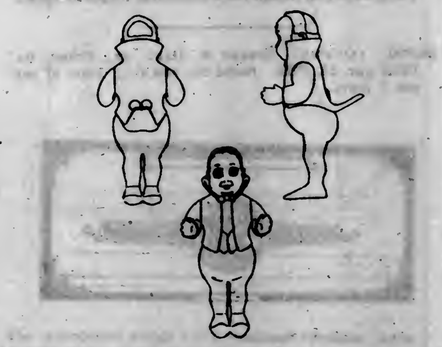
The ornamental design for a lubricator nipple as shown.

59,890. COUPON. ROBERT E. HALL, Jr., Tifton, Ga. Filed Apr. 25, 1921. Serial No. 464,471. Term of patent 7 years.



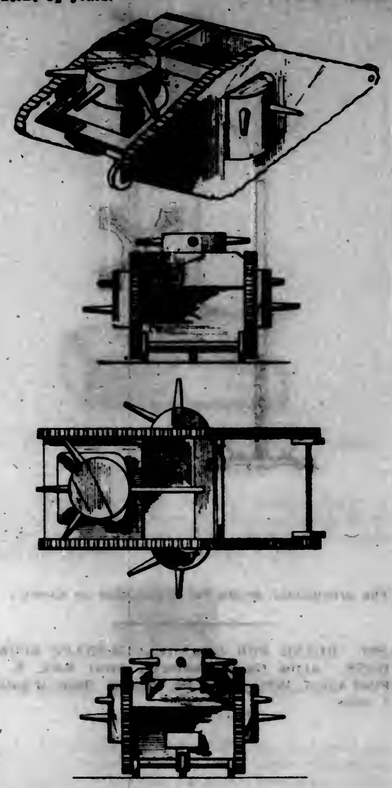
The ornamental design for a coupon as shown.

59,891. STATUETTE. Blanche Hibbert, Mount Clair, Colo. Filed Aug. 6, 1921. Serial No. 490,419. Term of patent 3½ years.



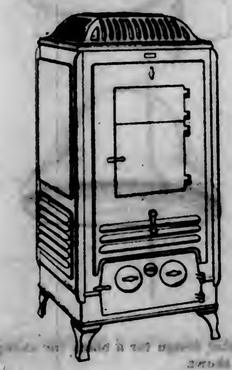
The ornamental design for a statuette as shown.

59,892. FACE OF A CEILING ELECTRIC-LIGHT REFLECTOR. John W. Hancock, Denver, Colo. Filed Jan. 15, 1921. Serial No. 437,506. Term of patent 7 years.



The ornamental design for the face of a ceiling electric light reflector, as shown.

59,893. DOLL. Almon Heath, Los Angeles, Calif. Filed Nov. 20, 1920. Serial No. 425,569. Term of patent 14 years.



The ornamental design for a doll, substantially as shown.

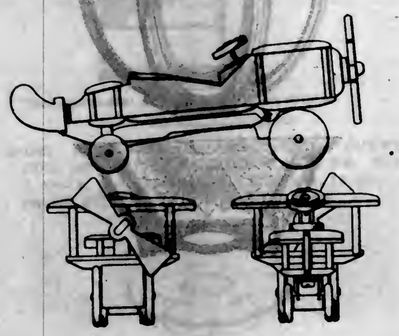
59,894. TOY. Stanley N. Stovall, Mount Lebanon, N. Y. Filed Aug. 26, 1920. Serial No. 406,944. Term of patent 3½ years.

The ornamental design for a toy as shown.

59,895. STOVE. Bertrand B. Kahn, Hamilton, Ohio, assignor to The Estate Stove Company, Hamilton, Ohio, a Corporation of Ohio. Filed Mar. 5, 1921. Serial No. 450,108. Term of patent 14 years.

The ornamental design for a stove as shown.

59,896. CLOCK-STAND. Henry J. Kane, Fairbanks, Miss. Filed Apr. 25, 1921. Serial No. 464,472. Term of patent 3½ years.



The ornamental design for a clock stand, as shown.

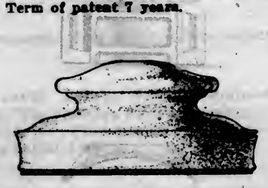
59,897. MOTOR-BONNET. Isaac Judson Kelly, Oakland, Calif., assignor to Fageol Motors Company, Oakland, Calif., a Corporation of California. Filed Nov. 19, 1919. Serial No. 339,172. Term of patent 14 years.

The ornamental design for a motor bonnet as shown.

59,898. TOY RUNABOUT. Harry V. Kiely, Brooklyn, N. Y. Filed July 25, 1921. Serial No. 487,558. Term of patent 7 years.

The ornamental design for a toy runabout, substantially as shown.

59,899. INCENSE-BURNER OR CANDLESTICK. Monsia L. Koelsaan, Denver, Colo. Filed June 2, 1921. Serial No. 474,872. Term of patent 3½ years.



The ornamental design of an incense burner or candlestick, as shown.

59,900. SEAT-CUSHION. Ernest S. Marsh, Ypsilanti, Mich. Filed Mar. 25, 1921. Serial No. 455,656. Term of patent 3½ years.

The ornamental design for a seat cushion, as shown.

59,901. HOLDER FOR LIGHTING-FIXTURES. Frederick W. Mathieu, New York, N. Y., assignor to Mitchell Vance Co., Inc., New York, N. Y., a Corporation of New York. Filed Apr. 7, 1920. Serial No. 372,083. Term of patent 7 years.

The ornamental design for a holder for lighting fixtures, as shown.

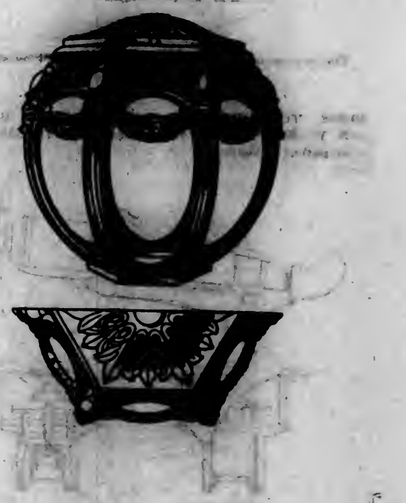
59,902. HOLDER FOR LIGHTING FIXTURES. Fredrick W. Mathieu, New York, N. Y., assignor to Mitchell Vance Co., Inc., New York, N. Y., a Corporation of New York. Filed Apr. 7, 1920. Serial No. 372,064. Term of patent 7 years.

The ornamental design for a holder for lighting fixtures, as shown.

59,903. EMBLEM, PIN, BADGE, OR SIMILAR ARTICLE. George McCaul, Portsmouth, Va. Filed May 23, 1921. Serial No. 471,984. Term of patent 14 years.

The ornamental design for an emblem, pin, badge, or similar article as shown.

59,904. TREAD-LINK FOR TIRES. Raleigh McCormick, St. Louis, Mo. Filed July 16, 1921. Serial No. 485,307. Term of patent 14 years.



The ornamental design for a tread link for tires, as shown.

59,905. BADGE. Norman H. McSwain, Washington, D. C., assignor to Alpha Phi Alpha Fraternity, a Corporation of the District of Columbia. Filed Dec. 20, 1920. Serial No. 432,114. Term of patent 7 years.

The ornamental design for a badge, as shown.

59,906. FRAME FOR LANTERNS. Paul Mohrmann, Chicago, Ill., assignor to Friedley-Voshardt Co., Chicago, Ill., a Corporation of Illinois. Filed Apr. 2, 1921. Serial No. 458,041. Term of patent 7 years.

The ornamental design for a frame for lanterns, as shown.

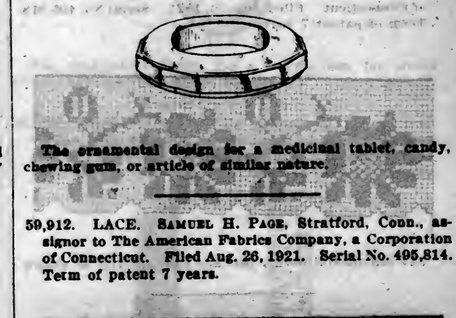
59,907. SEAT. Simon P. Nissley, Chicago, Ill. Filed July 20, 1921. Serial No. 486,276. Term of patent 7 years.

The ornamental design for a seat, as shown.

59,908. TOY. Simon P. Nissley, Chicago, Ill. Filed July 20, 1921. Serial No. 486,277. Term of patent 7 years.

The ornamental design for a toy, as shown.

59,909. MEDICINAL TABLET, CANDY, CHEWING-GUM, OR ARTICLE OF SIMILAR NATURE. Edward J. Noble, Port Chester, N. Y. Filed Mar. 11, 1921. Serial No. 451,576. Term of patent 14 years.



The ornamental design for a medicinal tablet, candy, chewing gum, or article of similar nature.

59,910. MEDICINAL TABLET, CANDY, CHEWING-GUM, OR ARTICLE OF SIMILAR NATURE. Edward J. Noble, Port Chester, N. Y. Filed Mar. 11, 1921. Serial No. 451,577. Term of patent 14 years.

The ornamental design for a medicinal tablet, candy, chewing gum, or article of similar nature.

59,911. MEDICINAL TABLET, CANDY, CHEWING-GUM, OR ARTICLE OF SIMILAR NATURE. Edward J. Noble, Port Chester, N. Y. Filed Mar. 11, 1921. Serial No. 451,578. Term of patent 14 years.

The ornamental design for a medicinal tablet, candy, chewing gum, or article of similar nature.

59,912. LACE. Samuel H. Page, Stratford, Conn., assignor to The American Fabrics Company, a Corporation of Connecticut. Filed Aug. 26, 1921. Serial No. 495,814. Term of patent 7 years.

The ornamental design for lace substantially as shown.

59,913. LACE. Samuel H. Page, Stratford, Conn., assignor to The American Fabrics Company, a Corporation of Connecticut. Filed Aug. 26, 1921. Serial No. 495,815. Term of patent 7 years.

The ornamental design for lace substantially as shown.

59,914. LACE. Samuel H. Page, Stratford, Conn., assignor to The American Fabrics Company, a Corporation of Connecticut. Filed Aug. 26, 1921. Serial No. 495,816. Term of patent 7 years.

The ornamental design for lace substantially as shown.

59,915. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, a Corporation of Connecticut. Filed Aug. 26, 1921. Serial No. 495,817. Term of patent 7 years.

The ornamental design for lace substantially as shown.

59,916. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, a Corporation of Connecticut. Filed Aug. 26, 1921. Serial No. 495,818. Term of patent 7 years.

The ornamental design for lace substantially as shown.

59,917. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, a Corporation of Connecticut. Filed Aug. 26, 1921. Serial No. 495,819. Term of patent 7 years.

The ornamental design for lace substantially as shown.

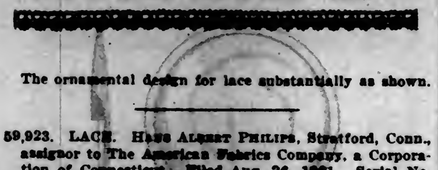
59,918. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, a Corporation of Connecticut. Filed Aug. 26, 1921. Serial No. 495,820. Term of patent 7 years.

The ornamental design for lace substantially as shown.

59,919. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, a Corporation of Connecticut. Filed Aug. 26, 1921. Serial No. 495,821. Term of patent 7 years.

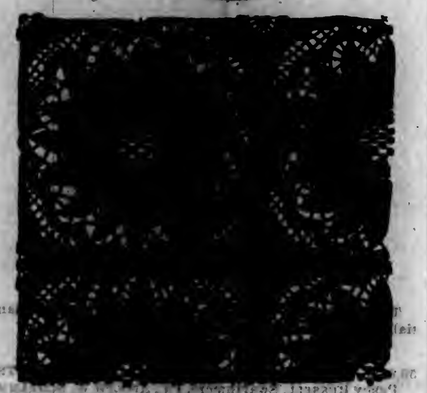
The ornamental design for lace substantially as shown.

59,920. HANDLE. NICHOLAS A. PETRY, Philadelphia, Pa. Filed Dec. 30, 1920. Serial No. 434,146. Term of patent 14 years.



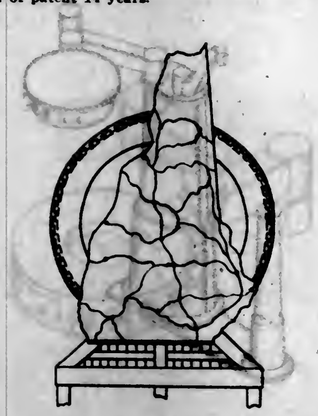
The ornamental design for a handle, substantially as shown.

59,921. LACE. HANS ALBERT PHILIPS, Stratford, Conn., assignor to The American Fabrics Company, a Corporation of Connecticut. Filed Aug. 26, 1921. Serial No. 495,823. Term of patent 7 years.



The ornamental design for lace substantially as shown.

59,922. LACE. HANS ALBERT PHILIPS, Stratford, Conn., assignor to The American Fabrics Company, a Corporation of Connecticut. Filed Aug. 26, 1921. Serial No. 495,824. Term of patent 7 years.

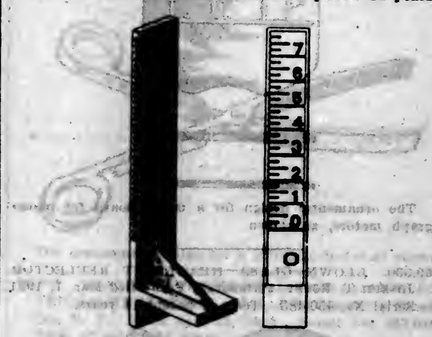


The ornamental design for lace substantially as shown.

59,923. LACE. HANS ALBERT PHILIPS, Stratford, Conn., assignor to The American Fabrics Company, a Corporation of Connecticut. Filed Aug. 26, 1921. Serial No. 495,825. Term of patent 7 years.

The ornamental design for lace substantially as shown.

59,924. TOURIST GUIDE-BOARD. EDGAR MINOT QUINT, Concord, N. H. Filed Dec. 21, 1920. Serial No. 432,367. Term of patent 14 years.



The ornamental design for a tourist guide board, as shown and described.

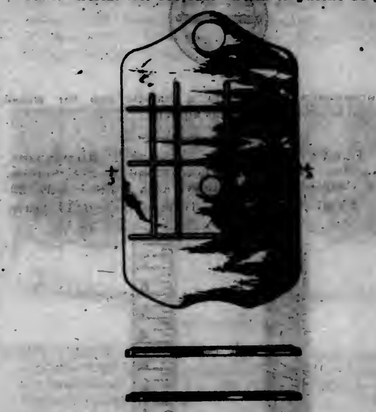
59,925. HANDLE-CAP FOR WHISK-BROOMS AND KINDRED ARTICLES. ANDREW C. RAGNAR, Oakville, Conn., assignor to The Chase Companies Inc., Waterbury, Conn., a Corporation. Filed Nov. 26, 1920. Serial No. 426,660. Term of patent 14 years.

The ornamental design for a handle cap for whisk brooms and kindred articles, as shown.

59,926. ELEVATION-SCALE. ANDREW T. RICHARDSON, Verona, Pa., assignor to Verona Tool Works, Verona, Pa., a Corporation of Pennsylvania. Filed July 29, 1921. Serial No. 486,488. Term of patent 14 years.

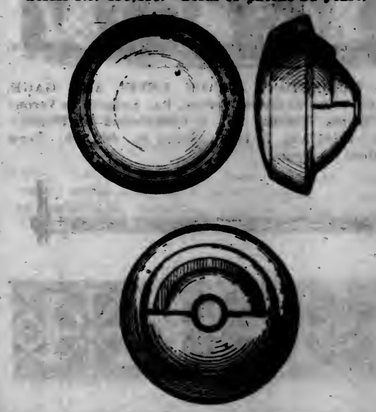
The ornamental design for an elevation scale, as shown.

59,927. INSPECTOR'S TRACK LEVEL AND GAGE. ANDREW T. RICHARDSON, Verona, Pa., assignor to Verona Tool Works, Verona, Pa., a Corporation of Pennsylvania. Filed Aug. 2, 1921. Serial No. 489,395. Term of patent 14 years.



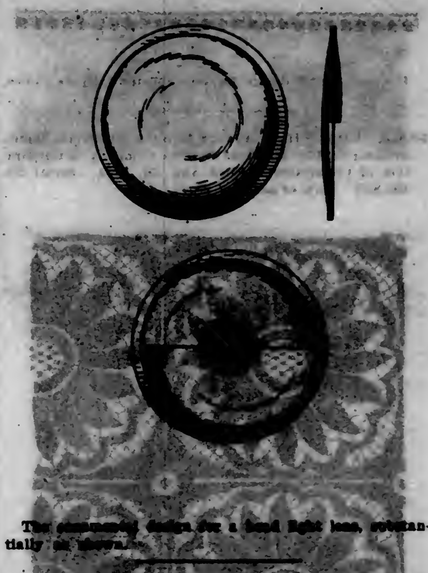
The ornamental design for an inspector's track level and gage, as shown.

59,928. CHARM. EMMA BERTHA RIEGEL, Brooklyn, N. Y., assignor to Macoy Publishing & Masonic Supply Co., New York, N. Y., a Corporation of New York. Filed Sept. 22, 1921. Serial No. 502,570. Term of patent 7 years.



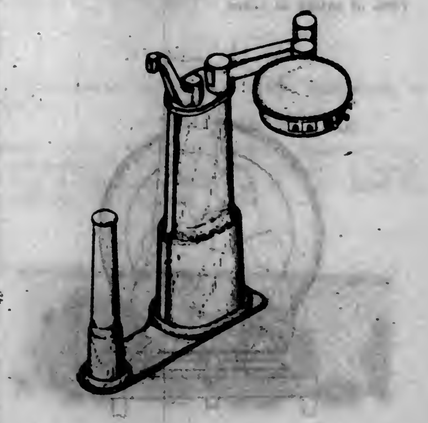
The ornamental design for a charm, as shown.

59,929. MOTOR-BOARD FOR PHONOGRAPH-MOTORS. THEODORE C. ROSSMAN, New York, N. Y., assignor to Columbia Graphophone Manufacturing Company, Bridgeport, Conn., a Corporation of Delaware. Filed May 5, 1921. Serial No. 467,212. Term of patent 14 years.



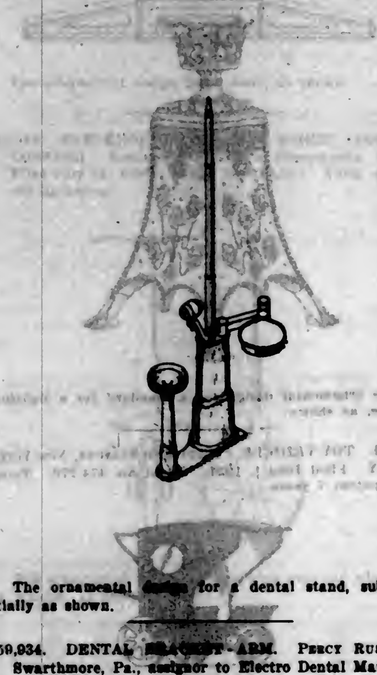
The ornamental design for a motor board for phonograph motors, as shown.

59,930. BLOWN-GLASS HEADLIGHT-REFLECTOR. JOSEPH T. ROSYY, Pittsburgh, Pa. Filed Mar. 7, 1921. Serial No. 450,433. Term of patent 14 years.



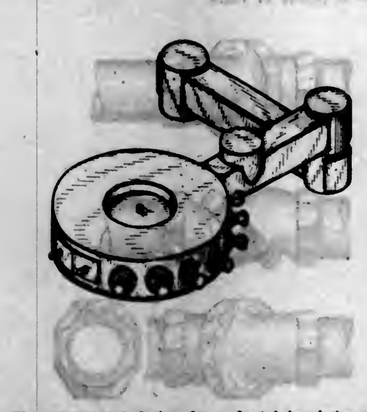
The ornamental design for a blow glass headlight reflector, substantially as shown.

59,931. HEADLIGHT-LENS. JOSEPH T. ROSYY, Pittsburgh, Pa. Filed Mar. 7, 1921. Serial No. 450,434. Term of patent 14 years.



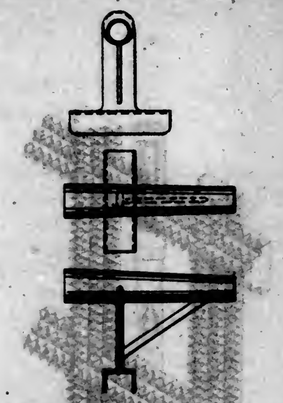
The ornamental design for a head light lens, substantially as shown.

59,932. PEDESTAL FOR DENTAL IMPLEMENTS. PERCY RUSSELL, Swarthmore, Pa., ADOLPH W. SCHRAMM, Riverton, N. J., and ROBERT S. WOODWARD, JR., Haverford, Pa., assignors to Electro Dental Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 29, 1920. Serial No. 420,557. Term of patent 7 years.



The ornamental design for a pedestal for dental implements, substantially as shown.

59,933. DENTAL STAND. PERCY RUSSELL, Swarthmore, Pa., ADOLPH W. SCHRAMM, Riverton, N. J., and ROBERT S. WOODWARD, JR., Haverford, Pa., assignors to Electro Dental Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 29, 1920. Serial No. 420,558. Term of patent 7 years.

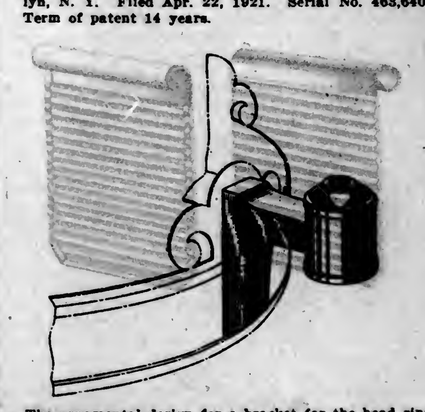


The ornamental design for a dental stand, substantially as shown.

59,934. DENTAL BRACKET-ARM. PERCY RUSSELL, Swarthmore, Pa., assignor to Electro Dental Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 29, 1920. Serial No. 420,559. Term of patent 7 years.

The ornamental design for a dental bracket arm, substantially as shown.

59,935. SLEIGH-KNEE FOR HEAVY VEHICLES. JOSEPH F. SCHMIDT, Walters, Minn. Filed Jan. 8, 1921. Serial No. 435,997. Term of patent 7 years.



The ornamental design for a sleigh knee for heavy vehicles, as shown and described.

WEE-GEE-WASH

Consisting of the term "Wee-Gee-Wash," no claim being made to the exclusive use of the word "Wash" apart from the mark shown in the drawing.
Particular description of goods.—Liquid Preparation for Washing Printers' Rollers.
Claims use since June 3, 1921.

Ser. No. 152,965. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) Rohm & Haas Company, Philadelphia, Pa. Filed Sept. 15, 1921.

SORBANOL

Particular description of goods.—Chemical Used for the Tanning of Hides.
Claims use since on or about Sept. 1, 1921.

Ser. No. 152,966. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) Ruth Brown Riccius, Miami, Fla. Filed Sept. 15, 1921.

Hybiscas

Particular description of goods.—A Medicine and Pharmaceutical Preparation, the Same Being a Lotion for Skin Irritations.
Claims use since July 15, 1921.

Ser. No. 152,974. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) Yorkville Manufacturing Co., Inc., New York and Brooklyn, N. Y. Filed Sept. 15, 1921.

Pressto

Particular description of goods.—Polishing-Wheels and Polishing-Disks.
Claims use since July 1, 1920.

Ser. No. 152,983. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) Colgate & Company, Jersey City, N. J. Filed Sept. 16, 1921.

Clair de Lune

Particular description of goods.—Liquid and Powdered Perfumes.
Claims use since Sept. 7, 1921.

Ser. No. 153,009. (CLASS 32. FURNITURE AND UPHOLSTERY.) Joseph M. Hansen, Lake Forest, Ill. Filed Sept. 16, 1921.

Restona

Particular description of goods.—Mattresses and Cushions.
Claims use since Mar. 2, 1921.

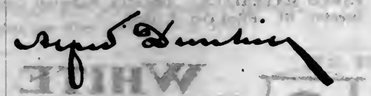
Ser. No. 153,050. (CLASS 40. FANCY GOODS, FURNISHINGS, AND NOTIONS.) M. B. Shantz, Incorporated, Rochester, N. Y. Filed Sept. 17, 1921.

Shanstyle

Particular description of goods.—Buttons of Vegetable Ivory.
Claims use since May 21, 1921.

Ser. No. 153,066. (CLASS 32. FURNITURE AND UPHOLSTERY.) The Brockman Company, Chicago, Ill. Filed Sept. 17, 1921.

BROCK-CO



Particular description of goods.—Arm-Rests, Camp-Chairs, and Folding Chairs.
Claims use since Aug. 15, 1921.

Ser. No. 153,072. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) Roy H. Cochran, Ventnor, N. J. Filed Sept. 19, 1921.

LAITHINE

Particular description of goods.—Toilet or Complexion Cream.
Claims use since on or about Jan. 1, 1914.

Ser. No. 153,079. (CLASS 17. TOBACCO PRODUCTS.) Alfred Dunhill, London, England. Filed Sept. 19, 1921.

Consisting of the signature of the said Alfred Dunhill.
Particular description of goods.—Tobacco, Manufactured or Unmanufactured; Cigars, and Cigarettes.
Claims use since August, 1920.

Ser. No. 153,161. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) United Drug Company, Boston, Mass. Filed Sept. 20, 1921.

Elegans

Particular description of goods.—A Non-Alcoholic Vehicle or Base for Use by Pharmacists in Compounding Prescriptions.
Claims use since Feb. 1, 1920.

Ser. No. 153,162. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) The William Flood Company, Cleveland, Ohio. Filed Sept. 20, 1921.

AQUAD

Particular description of goods.—Liquid Stains.
Claims use since about Sept. 1, 1921.

Ser. No. 153,166. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) Werris Manufacturing Company, Inc., Richmond, Va. Filed Sept. 20, 1921.

KUZOL

Particular description of goods.—Medicinal Preparation for Aiding in the Treatment of Respiratory, Muscular, and Surface Ailments.
Claims use since Aug. 27, 1921.

Ser. No. 153,173. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) Badische Anilin- & Soda-Fabrik, Ludwigshafen-on-Rhine, Germany. Filed Sept. 21, 1921.

Ordoval

TRADE-MARK REGISTRATIONS GRANTED

(ACT OF MARCH 19, 1920, SEC. 1 (b)).

DECEMBER 6, 1921.

THESE REGISTRATIONS ARE NOT SUBJECT TO OPPOSITION.

149,300. (CLASS 39. CLOTHING.) ANNA R. ALSTON, New York, N. Y. Filed Apr. 11, 1921. Serial No. 145,989.

ALSTON
HOLD-U-THERE
BRASSIERE

Particular description of goods.—Elastic Corsets, Brassières, and Leg-Garments.
Claims use since October, 1918.

149,301. (CLASS 39. CLOTHING.) ANNA R. ALSTON, New York, N. Y. Filed Apr. 11, 1921. Serial No. 145,990.

ALSTON FIGURE FORM

Particular description of goods.—Elastic Corsets, Brassières, and Leg-Garments.
Claims use since October, 1918.

149,302. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) AMERICAN STANDARD TOURNIQUET COMPANY, Portland, Me. Filed June 10, 1921. Serial No. 148,914.

ROBINSON

Particular description of goods.—Tourniquets, First-Aid Belts, Bandages, and Fracture-Splint Holders.
Claims use since about Oct. 1, 1917.

149,303. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) BEN F. BARBOUR, Birmingham, Ala. Filed Jan. 24, 1921. Serial No. 142,690.

Co-Line

Particular description of goods.—A Non-Alcoholic, Maltless, Carbonated Beverage Not of a Cereal Nature Sold as Soft Drinks and Syrups for the Manufacture of the Same.
Claims use since September, 1919.

149,304. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) LOUIS BRAVE, New York, N. Y. Filed June 24, 1920. Serial No. 134,165.

DR. BRAVE'S

Particular description of goods.—Dentifrice.
Claims use since June 19, 1920.

149,305. (CLASS 27. HOROLOGICAL INSTRUMENTS.) BURLINGTON WATCH CO., Chicago, Ill. Filed Sept. 9, 1921. Serial No. 152,736.

Burlington

Particular description of goods.—Ladies' and Men's Watches.
Claims use since May, 1906.

149,306. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) THE L. D. CAULK COMPANY, Milford, Del. Filed June 11, 1921. Serial No. 148,971.

SYNTHETIC
PORCELAIN

Particular description of goods.—Porcelain for Filling Teeth and for Making Dental Facings, Crowns, and Window-Inlays.
Claims use since 1911.

149,307. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) THE L. D. CAULK COMPANY, Milford, Del. Filed Aug. 6, 1921. Serial No. 151,510.

CAULK

Particular description of goods.—Dental Supplies and Appliances—Namely, Porcelain for Use in Filling Teeth and for Producing Dental Crowns and Inlays, Facing-Forms, Crown-Forms, Celluloid Strips, Polishing-Wheels, Mandrels for Polishing, Matrix-Springs, Instruments for Manipulating Dental Porcelain, Mouth-Props, Spatulas, Lancets, Cotton-Pliers, Alloys, Instruments for Manipulating Amalgam, Amalgams, Bridge and Inlay Cement, Cements for Filling Teeth, Preparations for the Treatment of Dental Abscesses and for Capping Pulp and Nerves, Temporary Stopping, Points for Filling Root-Canals, Caps for Temporarily Closing Cavities, Dental Waxes, Casting Investments, Soldering Investments, Wax-Trays, Die-Plates for Artificial Teeth, and Cocoa-Butter Prepared for Use with Facing-Forms, Crown-Forms, and Celluloid Strips and Other Lubricating Purposes, and Cavity-Lining and Solvent Therefor.

Said trade-mark has been continuously used in the business of said corporation as applied to porcelain for use in filling teeth and for producing dental crowns and inlays and as applied to instruments for manipulating dental porcelain since the month of July, 1911; as applied to facing-forms and matrix-springs since April, 1917; as applied to crown-forms since December, 1917; as applied to celluloid strips since January, 1916; as applied to polishing-wheels and mandrels therefor since April, 1916; as applied to mouth-props since February, 1913; as applied to spatulas since December, 1917; as applied to celluloid strips since January, 1916; as applied to spatulas, lancets, and cotton-pliers since July, 1919; as applied to alloys since June, 1896; as applied to instruments for manipulating amalgam since October, 1913; as applied to amalgam since February, 1917; as applied to bridge and inlay cement and to cements for filling teeth since July, 1901; as applied to preparations for the treatment of dental abscesses and for capping pulp and nerves since January, 1911; as applied to temporary stopping and to points for filling root-canals since August, 1906; as applied to caps for temporarily closing cavities since May, 1913; as applied to dental waxes since August, 1905; as applied to casting investments since January, 1915; as applied to soldering investments since September 15, 1919; as applied to wax-trays since June, 1916; as applied to die-plates for artificial teeth since October, 1919; and as applied to cocoa-butter prepared for use with facing-forms, crown-forms, and celluloid strips and other lubricating purposes since November, 1913, and as applied to cavity-lining and solvent therefor since June, 1916.

149,308. (CLASS 39. CLOTHING.) ABNER COHAN, Brooklyn, N. Y. Filed Apr. 29, 1921. Serial No. 146,956.

Particular description of goods.—Men's, Women's, and Children's Hats.
Claims use since May 1, 1920.

149,309. (CLASS 39. CLOTHING.) DAVIS-FORM CORSET INCORPORATED, South Norwalk, Conn. Filed May 18, 1921. Serial No. 147,804.

Velo Felt

Particular description of goods.—Men's and Women's Hats.
Claims use since February, 1920.

149,310. (CLASS 27. HOROLOGICAL INSTRUMENTS.) GALDO DULZAIDES Y COMPAÑIA, Cardenas, (province of Matanzas,) Cuba. Filed Mar. 11, 1921. Serial No. 144,008.

PENNSYLVANIA

Particular description of goods.—Watches, Clocks, and Alarm-Clocks.
Claims use since August, 1919.

149,311. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) A. C. GIBSON, Dayton, Tenn. Filed June 20, 1921. Serial No. 149,297.

Tangerine

Particular description of goods.—Non-Alcoholic, Maltless Beverage Sold as a Soft Drink.
Claims use since June 10, 1920.

149,312. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE GREEN FUEL ECONOMIZER COMPANY, Beacon, N. Y. Filed June 14, 1921. Serial No. 149,181.

Semi-Silent

Particular description of goods.—Fans and Blowers.
Claims use since February, 1917.

149,313. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) HABIRSHAW ELECTRIC CABLE COMPANY, Inc., New York, N. Y. Filed Oct. 19, 1920. Serial No. 138,494.

"Proven by the test of time"

Particular description of goods.—Electric Cable and Insulated Wire.
Claims use since October, 1917.

149,314. (CLASS 42. SMOKERS' ARTICLES AND MATCHES.) INDIAN HEAD MILLS, INC., Cordova, Ala. Filed June 15, 1920. Serial No. 140,231.

CORDOVA

Particular description of goods.—Cotton Sheetings, Drills, and Flannels in the Piece.
Claims use since January, 1900.

149,315. (CLASS 2. RECEPTACLES.) THE KENNEDY CAR LINER & BAG CO., Shelbyville, Ind. Filed Mar. 10, 1921. Serial No. 144,575.

KENNEDY'S

Particular description of goods.—Paper Bags, Merchandise-Envelope, and Cut-Out Paper Car-Liners in the Nature of Receptacles.
Claims use since January, 1914.

149,316. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) LAKESIDE SUPPLY COMPANY, Chicago, Ill. Filed July 30, 1920. Serial No. 135,604.

ELECTRO-PHONE

Particular description of goods.—Phonographs.
Claims use since Jan. 10, 1920.

149,317. (CLASS 39. CLOTHING.) LA LOOP MILLS, Elizabeth, N. J., and New York, N. Y. Filed Oct. 16, 1920. Serial No. 136,966.

La Mode

Particular description of goods.—Hosiery.
Claims use since July 3, 1919.

149,318. (CLASS 17. INKS AND MARKING MATERIALS.) RICHARD S. LATTEY, Racine, Wis. Filed July 1, 1921. Serial No. 149,314.

CARBON WAXED

Particular description of goods.—Carbon Paper.
Claims use since on or about Jan. 1, 1918.

149,319. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FRANCES LA PIANA, Chicago, Ill. Filed July 7, 1921. Serial No. 150,112.

ANTI STENCH

Particular description of goods.—Deodorants.
Claims use since Apr. 1, 1920.

149,320. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) THE ANGELUS SOAP CO., Los Angeles, Calif. Filed Aug. 27, 1921. Serial No. 152,222.

CLEMENTE

Particular description of goods.—Toilet Soap.
Claims use since 1915.

149,321. (CLASS 50. CROCKERY, EARTHENWARE, AND PORCELAIN.) MARSHALL FIELD & COMPANY, Chicago, Ill. Filed May 9, 1921. Serial No. 147,440.

KENILWORTH STUDIOS

Particular description of goods.—Pottery-Ware.
Claims use since 1917.

149,322. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) MERRELL & MAYO CO., Waterville, Me. Filed Nov. 5, 1920. Serial No. 139,134.

ELM CITY

Particular description of goods.—Wheat-Flour, Dairy Rations, Stock Feed, Laying-Mash, and Scratch Feed.
Claims use since January, 1915.

149,323. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) RUTHERFORD W. MOORE, Schenectady, N. Y. Filed Sept. 3, 1921. Serial No. 153,169.

R. W. MOORE'S EMULSION

Particular description of goods.—A Preparation Useful in General Debility, Convalescence from Wasting Diseases, Coughs, and Colds.
Claims use since Oct. 1, 1915.

149,324. (CLASS 39. CLOTHING.) GUTMANN, Gutmann & Co. Inc., Baltimore, Md. Filed Feb. 19, 1921. Serial No. 143,617.

twin-button

Particular description of goods.—Union-Suits.
Claims use since Mar. 28, 1918.

149,325. (CLASS 39. CLOTHING.) PFEIFER BROTHERS, Little Rock, Ark. Filed Apr. 16, 1921. Serial No. 146,269.

Pfeifers

Particular description of goods.—Men's Hats and Caps, Men's Furnishing Goods—Namely, Shirts, Collars, Neckties, Hosiery—Men's Underwear, Men's Overcoats and Suits, Boys' Clothing and Furnishings—Namely, Hats, Caps, Suits, Overcoats, Shirts and Sweaters, Underwear—Men's and Women's Shoes of Leather; Infants' and Children's Ready-to-Wear Dresses, Wraps, Rompers, Overalls, Petticoats, and Underwear; Ladies' Blouses, Ladies' and Misses' Ready-to-Wear Lingerie, Dresses, and Suits; Ladies' and Misses' Hats; Men's, Women's, Children's, and Infants' Gloves; Misses' and Women's Hosiery, Kimonos.
Claims use since Oct. 6, 1895.

149,326. (CLASS 39. CLOTHING.) JACOB PRESS, New York, N. Y. Filed Oct. 16, 1920. Serial No. 138,450.

NU-FORM

Particular description of goods.—Men's Garters.
Claims use since Sept. 23, 1920.

149,327. (CLASS 39. CLOTHING.) RUBBERIZED SHEETING & SPECIALTY CO. INC., New York, N. Y. Filed Oct. 5, 1920. Serial No. 137,965.

QUICKSLIP

Particular description of goods.—Babies' Waterproof Bloomers.
Claims use since Jan. 9, 1919.

149,328. (CLASS 39. CLOTHING.) Jones Sportswear & Sims Company, Ogden, Utah. Filed Sept. 16, 1920. Serial No. 137,140.

Particular description of goods.—Overalls, Mechanic Suits, Khaki Pants and Coats, Riding and Riding Pants for Men and Boys, and Riding and Riding Pants for Ladies and Girls, and "Allovers" for Children.
Claims use since about Sept. 1, 1920.

149,329. (CLASS 39. CLOTHING.) J. P. Smith Shoe Co., Chicago, Ill. Filed Mar. 14, 1921. Serial No. 144,749.

DR. A. REED CUSHION SHOE

Particular description of goods.—Shoes of Leather and of Combinations.
Claims use since May 19, 1917.

149,330. (CLASS 39. CLOTHING.) Ty-On Frock Co., Los Angeles, Calif. Filed Sept. 20, 1920. Serial No. 137,546.

TY-ON FROCK

Particular description of goods.—House-Dresses.
Claims use since July 12, 1920.

149,331. (CLASS 10. OILS AND GREASES.) Will & Baumer Candle Co. Inc., Syracuse, N. Y. Filed Aug. 12, 1921. Serial No. 151,794.

PURIFICATION

Particular description of goods.—Candles.
Claims use since about Mar. 1, 1918.

149,332. (CLASS 37. PAPER AND STATIONERY.) Wortendyke Manufacturing Co., Richmond, Va. Filed Oct. 29, 1920. Serial No. 138,908.

GREENWOOD

Particular description of goods.—Toilet-Paper, Paper Napkins, and Paper Towels.
Claims use since Oct. 1, 1920.

DECISIONS OF THE COMMISSIONER OF PATENTS AND OF UNITED STATES COURTS IN PATENT CASES.

DECISIONS OF THE U. S. COURTS.

Supreme Court of the United States.

HILDRETH *v.* MASTORAS.

Decided November 7, 1921.

1. PATENTS—VALIDITY—PRESUMPTION OF INTERFERENCE CONTEST.
The presumption of priority and novelty which arises from the granting of a patent must have greatly increased weight when the claim of the inventor is subjected to close and careful scrutiny under the stimulus of a heated interference contest.

2. SAME—SAME—DIFFERENCE IN STRUCTURE.
A candy-pulling machine in which the pulling-pins have a relative in-and-out motion is not anticipated by a device in which corresponding pins move in concentric circles.

3. SAME—GENERIC PATENTS—IMPERFECT OPERATION.
Where a machine patented is imperfect in its operation but embodies the generic principle, *Held* to be enough if it performs its function, though only in a crude way.

4. SAME—VALIDITY—CANDY-PULLING MACHINE.
The Dickinson patent, No. 831,501, claim 1 of which is for a candy-pulling machine comprising a plurality of oppositely disposed candy hooks or supports and means for producing an in-and-out motion of those parts, *Held* valid and infringed by the defendant's device.

Mr. Frederick D. McKenney and *Mr. Geo. P. Dike* for Hildreth.

Mr. Joseph L. Atkins for Mastoras.

On writ of certiorari to the Circuit Court of Appeals for the Ninth Circuit.

Mr. Chief Justice TAFT delivered the opinion of the Court.

This is a certiorari to the Circuit Court of Appeals of the Ninth Circuit bringing here for review a decree of that court, reversing one of the District Court of Oregon, granting an injunction against infringement of a patent for a candy-pulling machine. The patent, No. 831,501, was issued to Hildreth as assignee by mesne assignments of Dickinson. Mastoras, the defendant in the district court, made and used a candy-pulling machine, under a later patent of Langer [No. 1,232,697]. The circuit court of appeals held the claim of the Dickinson patent sued on to be so limited as not to cover the Langer device. (263 Fed., 68; 268 Fed., 571.)

The chief question in this case is infringement, and that turns on the question whether Dickinson's invention is held to be a primary or generic invention, or a narrow one limited solely to the device shown.

Not all candy is pulled, but much of it is. The process is first the mixture of the ingredients, then the boiling, then the cooling on a slab, and then the pulling. After boiling and cooling, it is a compact mass of dark color. The pulling aerates it and makes it less in weight but larger in bulk, lighter in color and more capable of holding flavor. Until the beginning of this century, candy was pulled only by hand. It required much strength. Candy-pullers were hard to get. The work was strenuous and produced perspiration and uncleanliness. It was done with the bare hands, and it was impossible to avoid danger from eczema and abrasions of the skin of the hands. It was neither appetising nor sanitary. A good candy-puller might pull three hundred pounds of candy a day. The capacity of the large machines now in use is two and one-half tons each, and one man can attend to two machines. Thus since 1900, the art has advanced from a production of 300 pounds a day to 10,000 pounds, with the same labor.

In April, 1900, Dickinson published an article in the trade journal, "*The Confectioner*," describing a machine for pulling candy and offering it for sale. He advertised it quite largely. Hildreth ordered the Dickinson machine, tested it and rejected it as unsatisfactory. One of Hildreth's men, Thibodeau, having seen and worked on the Dickinson machine, made a machine which worked better. Hildreth filed an application for a patent for one device for pulling candy September 21, 1900. Thibodeau filed an application for another November 26, 1900, and an interference was declared between them. Thibodeau thereafter bought Dickinson's invention and caused him to file an application for a patent November 5, 1901. Six applications were pending in the Patent Office at the same time, those of Dickinson, Hildreth, Jenner, Thibodeau, Robinson and Henry, and the Patent Office framed the issue between them in terms exactly those afterward granted to Dickinson as the claim relied on in this case.

The controversy in the Patent Office lasted five years, was strenuously contested, and was carried to the Court of Appeals of the District of Columbia. The controversy involved, among other issues,

that of the operativeness of Dickinson's device, as does the present case in one of its phases. He had given a public test of his machine at Grand Rapids, where he lived, in 1900, and had produced a number of witnesses. They were called before the Examiner to testify whether the machine had worked successfully, and the Examiner found from the great weight of evidence that it had. Hildreth was a witness in the United States Court below on this issue. He was in the embarrassing situation of having fought, in the Patent Office, Dickinson's claim, which he was now supporting as his property. He testified that while Dickinson's machine was not a success commercially, he had found that by shortening it and speeding it up, in accord with a suggestion of Dickinson, he could and did make satisfactory candy. The record shows that the judge in the district court below had a working model before him which he refers to as demonstrating that the device is operative.

Hildreth has been a candy manufacturer of Boston for many years, and since 1900 has made candy-machines. In addition to his own patent, he has acquired by purchase all the other patents in interference with Dickinson. He acquired the Dickinson patent from Thibodeau before its issue, for $75,000.

By these new devices the art of candy-making has been revolutionized. Some kinds of candy which if pulled at all had to be pulled when cold, could not be pulled by hand, because it required more than man strength; but they are now pulled by power machines. The production of candy has greatly increased, and 90 per cent. of all the pulled candy made is pulled by machine. Hildreth makes a half dozen different classes of machines which embody the devices of his own patent and others which he has purchased, but none of the model of Dickinson's. Mastoras, the respondent here, was for some time a licensee of Hildreth until he made and used his present machine.

In candy-pulling by hand, the puller works the boiled candy, cooled but still warm and sticky, into a sausage-like piece two or three feet long, and weighing 20 or 25 lbs., called a batch. He throws the middle of this over a hook fixed in the wall about the level of his chin. He pulls down the two ends, stretching the batch two or three times its length. Then he holds the ends together with one hand and with the other spins the two strands about their middle and carries them over the hook, thus making a new bight of the folded or legged strands over the hook, and shortening the lengths hanging from the hook, the ends of which are now brought together and pulled down again. This operation repeated often, brings the candy into desired condition.

In the Dickinson machine, the candy is placed in the bottom of a trough, in the center of which is an upright pin, referred to in the patent as the "candy puller." There are two other pins disposed over the trough from the ends of an arm or plate which at turn is fixed to a support and made to rotate. By suitable contrivance, the support which carries the pins is made to move back and forth from end to end of the trough. At each end of the trough the pins are made by the rotary motion of the plate to which they are suspended, to traverse their positions from one side of the trough to the other before beginning their movement in the opposite direction. In this way there is produced an in-and-out movement of the suspended pins relative to the stationary pin every time they reach and depart from the ends of the trough. This movement causes the "batch" of the candy in the trough, attached itself to the movable pins, to be pulled by lapping on itself as the suspended pins pass and repass the fixed pin and as their positions are reversed. The change of the relative position of the three pins is such that in a complete cycle of operation of the machine one of the pins passes through the space between the other two, and then another of the pins passes through a space between the other two, and then the third between the other two, each pin at one phase of the operation passing between two others, and at another phase of the operation being one of the pair between which the third one is passing. Just as the hand-pulling of the candy produced a bundle of parallel fibers between which were formed air-cells rendering the mass porous, so the mechanism of Dickinson's machine secures the same result. It elongates the candy, folds it upon itself, again elongates the folded mass, again folds it upon itself, and repeats the operation in order. So far as this record discloses, no candy-pulling has been successful which does not in some form by an arrangement of three or more pins show this in-and-out movement to pull and lap the candy, and no one had shown it prior to Dickinson.

Dickinson's claim here sued on is as follows:

A candy-pulling machine comprising a plurality of oppositely-disposed candy hooks or supports, a candy-puller, and means for producing a specified relative in-and-out motion of these parts for the purpose set forth.

[1] This, as already said, is the claim which was framed in the Patent Office as the issue of the interference proceeding, and of which Dickinson was given priority over all. The presumption of priority and novelty which arises from the granting of a patent must have greatly increased weight when the claim of the inventor is subjected to such close and careful scrutiny under the stimulus of a heated contest.

The circuit court of appeals held the claim of Dickinson to be limited by a prior patent to Firchau [No. 511,011] for a candy-working machine applied for in March, 1893, and issued December 19, 1893. The machine shown in the Firchau patent comprises two disks which are rotated in opposite directions. On each disk is a finger which projects into a drum, into which the candy is put.

[2] The pins pass each other twice during each revolution of the disk and move in concentric circles, but do not have the relative in-and-out motion or figure 8 movement of the Dickinson machine. With only two hooks there could be no lapping of the candy, because there was no third pin to re-

engage the candy while it was held between the other two pins. The movement of the two pins in concentric circles might stretch it somewhat and stir it, but it would not pull it in the sense of the art. The Firchau device never, so far as appears in the record, made candy experimentally or otherwise. Indeed, no candy was commercially pulled by machine before or after the issuing of the Firchau patent in 1893 until the introduction of the Dickinson principle, nine or ten years later.

Counsel for the respondent in seeking to narrow the construction of the broad claim of Dickinson rely on the circumstance that one of Dickinson's claims in the Patent Office was canceled on a reference to Firchau. The canceled claim of Dickinson was:

In a candy-pulling machine, in combination, a series of pins or pulling members, and automatically-acting means for causing said members to feed the candy to each other and pull the same.

The Examiner evidently considered that the word "series" might be held to cover a device with only two pins, as shown in the Firchau patent; though having in mind the essential elements of the Dickinson patent, it could hardly have borne such a construction. However that may be, as neither Firchau nor anyone else has shown, with two pins only, the in-and-out movement in pulling candy, which is the fundamental element of the Dickinson invention, the cancelation does not seem to us important or to require a narrowing of Dickinson's claim for the described and indispensable cooperation of three or more pins to produce that movement.

[3] The court of appeals bases something of its conclusion in this case on the alleged inoperativeness of the Dickinson machine. As to this, we find no reason in the record for disturbing the finding of the district judge, with the working model and the witnesses before him, supported as he is by the finding of the Patent Office and the district court of appeals on extended evidence on this very point before them. It is not necessary, in order to sustain a generic patent, to show that the device is a commercial success. The machine patented may be imperfect in its operation; but if it embodies the generic principle and works, that is, if it actually and mechanically performs, though only in a crude way, the important function by which it makes the substantial change claimed for it in the art, it is enough. (*Telephone Cases*, 126 U. S., 1, 535; *Mergenthaler Linotype Co.* v. *Press Publishing Company*, 57 Fed. Rep., 502, 505.)

The Patent Office treated the Dickinson invention as a primary or generic one. So did the Court of Appeals of the District of Columbia, (25 App. D. C., 316,) Judge Rose of the District Court of Maryland, (*Hildreth* v. *Lauer*, 208 Fed. Rep., 1005,) and the Circuit Court of Appeals of the Fourth Circuit. (*Hildreth* v. *Lauer*, 219 Fed. Rep., 753.) In this view, after a consideration of the record, and for the reasons stated, we concur. The history of the art shows that Dickinson took the important but long delayed and therefore not obvious step from the pulling of candy by two hands guided by a human mind and will to the performance of the same function by machine. The ultimate effect of this step with the mechanical or patentable improvements of his device was to make candy-pulling more sanitary, to reduce its cost to one-tenth of what it had been before him, and to enlarge the field of the art. He was, therefore, a pioneer.

[4] We come now to the question of infringement. In the Langer patent, applied for in 1916 and issued in 1917, which the alleged infringement embodies, there is a so-called "floating puller," which is carried through a course of travel corresponding in form to the figure 8, and around fixed supporting-pins arranged concentrically within the two circular portions of figure 8. The candy is pulled by the floating puller and alternately carried thereby around the fixed supporting-pins. Instead of having Dickinson's single stationary pin and two other pins which move relatively to it and to one another, the machine of the Langer patent has two stationary pins and a third one which moves relatively to both of them in an actual and rigid figure 8.

Taking the first claim of Dickinson's patent as it reads, one can trace every element of it in the Langer machine. We find there a plurality of oppositely-disposed candy hooks or supports. The candy-puller is found in the movable pin of Langer, and a relative in-and-out motion in the pulling process is palpably present.

Both Dickinson and Langer in their specifications characterize the path of the candy under the operation of the hooks as being along a course of travel corresponding in form to the figure 8. The circuit court of appeals found, however, that the in-and-out movement of the Langer patent was different from the in-and-out movement of the Dickinson patent, in that it was a true figure 8 in the former, whereas in the Dickinson patent the candy follows a path of a series of V's and not a true figure 8 path at all. We differ from the court of appeals in this view. The actual movement of the candy in the Langer patent, even though the movable pin follows a fixed path of figure 8, forms a succession of V's closely resembling the V's of the Dickinson patent, so that in each the path of the candy is better described as an in-and-out movement than as a figure 8. The arrangement of the hooks by Langer is better than Dickinson's, but the principle of their operation is the same.

The counsel for the respondent, however, urge that the trough, not shown in the alleged infringement, is a necessary element of Dickinson's claim, because without it the batch of candy could not be supported against gravity and he suggests no alternative. Dickinson says in his specifications that he shows a trough for supporting the candy, but any suitable support may be used which has the capacity for supporting the candy while it is being operated upon. Two of the machines, the Jenner and the first Thibodeau, which were in interference in the Patent Office with Dickinson, had the pins set, not in an upright but in a horizontal position, and thus the candy in their machines

tested on trough support by contact with the [illegible] themselves, and this, according to patentee, [illegible] was an improvement which was [illegible] patentable, but none of the claims in suit [illegible] Office proceedings disclose that he was [illegible] improved appliances of the character which [illegible] take these matters with all the presumption of the claim awarded to Dickinson. As the Dickinson patent is a generic patent, the doctrine of mere equivalents properly applies here. *(Morley v. Lancaster Company*, 129 U. S. 263, 273; *Miller v. Bridgeport Manufacturing Company*, 151 U. S. 186, 207; *Pepper Bag Patent Case*, 210 U. S., 403.)

The circuit court of appeals held that the issuing of the Langer patent, after the Dickinson patent, raised the presumption of a patentable difference between that patent and the Dickinson patent, and against infringement. It is not necessary for us, however, to discuss that question, for we think that whatever presumption against infringement may attach to the issuing of the second patent, if any, the evidence here is quite sufficient to overcome it.

The decree of the circuit court of appeals is reversed, and that of the district court is affirmed.

ADJUDICATED PATENTS.

(U. S. C. C. A. N. Y.) The Beattie patent, No. 972,230, for expanding and contracting dies in collar-folding machines, *Held* valid. *Beattie Mfg. Co. v. Smith*, 275 Fed. Rep., 164.

(U. S. C. C. A. N. Y.) The Beattie patent, No. 972,695, for incorporating heating resistance-coils in folders of collar-folding machines, *Held* valid. *Beattie Mfg. Co. v. Smith*, 275 Fed. Rep., 164.

[illegible]

(U. S. C. C. A. N. Y.) The Beattie and Beattie patent, No. [illegible], for [illegible] adjustable arrangement of [illegible] in collar-folding machines, *Held* valid. *Beattie Mfg. Co. v. Smith*, 275 Fed. Rep., 164.

(U. S. D. C. E. D.) The Buck and Hewlett patent, No. [illegible], for suppression of high-tension line, not infringed. *General Electric Co. v. Ohio Brass Co.*, 275 Fed. Rep., 212.

(U. S. C. C. A. N. Y.) The Smith patent, No. 972,272, for separate heating of hot-plate inhalers in collar-folding machines, Held infringed. *Beattie Mfg. Co. v. Smith*, 275 Fed. Rep., 164.

Adverse Decisions in Interference.

Patent No. 1,380,000.

On November 4, 1921, a decision was rendered that Charles E. White was not the first inventor of the subject-matter covered by claim 6 of his Patent No. 1,381,000, relating to "heating and generating apparatus," and no appeal having been taken within the time allowed such decision has become final.

Patent No. 1,331,427.

On November 4, 1921, a decision was rendered that Dudley T. Fraser was not the first inventor of the subject-matter covered by claims 4, 5, 6, 7, 8, and 9 of his Patent No. 1,331,427, relating to "heating apparatus," and no appeal having been taken within the time allowed such decision has become final.

Patents Nos. 1,393,729 to 1,400,805.

THE OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 293—No. 2. TUESDAY, DECEMBER 13, 1921. Price—$5 per year.
[PUBLISHED DECEMBER 14, 1921.]

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions abroad to make payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

Nolan Act—Reciprocity of the Laws of Tunis Recognized.

(Order No. 2711.)

Department of the Interior,
United States Patent Office,
Washington, D. C., December 9, 1921.

Notice is hereby given that the laws of Tunis are recognised as affording to citizens of the United States privileges substantially reciprocal to the privileges accorded by the Nolan Act of March 3, 1921, (41 Stat. L., 1313,) and that consequently all the privileges specified in said act will be extended to its citizens.

THOMAS E. ROBERTSON,
Commissioner.

Interference Notices.

Department of the Interior,
United States Patent Office,
Washington, D. C., November 22, 1921.

Travers Bros. Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Columbian Rope Company, Auburn, N. Y., for registration of trade-mark and trade-mark registered Mar. 18, 1902, No. 76,094 to Travers Bros. Co., 107 Duane street, New York, N. Y., and a notice of such declaration sent by registered mail to Travers Bros. Co. at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Travers Bros. Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
First Asst. Commissioner.

Department of the Interior,
United States Patent Office,
Washington, D. C., December 7, 1921.

Perfection Mfg. Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Hankins Bros. & Company, corner of Prospect and Grand streets, Sioux City, Iowa, for registration of a trade-mark and trade-mark registered August 22, 1916, No. 112,216, to Perfection Mfg. Co., 434 Land Title Building, Philadelphia, Pa., and a notice of such declaration sent by registered mail to Perfection Mfg. Co. at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Perfection Mfg. Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the Official Gazette for three consecutive weeks.

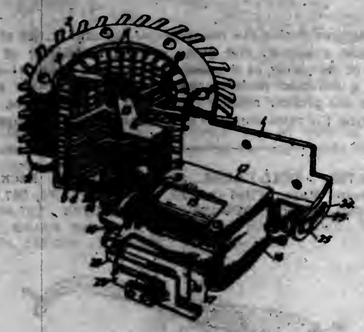
WM. A. KINNAN,
First Assistant Commissioner.

Communications to the Patent Office.

Rule 2. A separate letter should in every case be written in relation to each distinct subject of inquiry or application. Assignments for record, final fees, and orders for copies or abstracts must be sent to the Office in separate letters.

NOTICE—DESIGN PATENTS.

When an application for a design patent is found allowable, the patent will be granted for the term asked in the application papers unless specific request has been made for notice prior to allowance so that the term may be extended. Hereafter the Office will delay allowance and notify the applicant ONLY in cases where a specific request is filed.



Room No.	Divisions, Examiners, and subjects of inventions. (Old-issue case, Nov. 15; client consulted, Feb. 5.)	Oldest new applications and old not taken up for action by Examiners.		Average time in months from filing to issue.

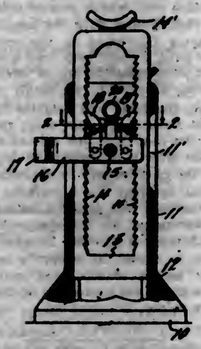
PATENTS

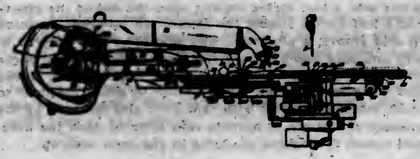


GRANTED DECEMBER 13, 1921.

1,399,728. AUTOMATIC SWITCH FOR TELEPHONE-EXCHANGE SYSTEMS. ARTHUR H. ADAMS, Galion, Ohio, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 28, 1919. Serial No. 313,434. 4 Claims. (Cl. 179—27.5.)

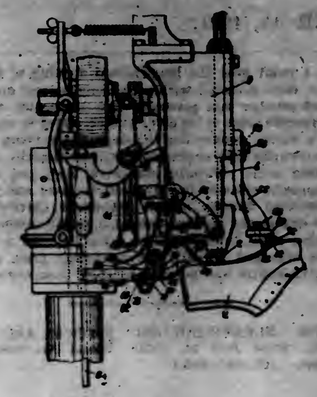
1. A rotary switch comprising a terminal bank, a rotatable brush set coöperatively associated with said bank, a ratchet wheel for driving said brush set, stepping means comprising a stepping pawl and motor magnet therefor adapted to rotate said ratchet wheel, said stepping means pivoted concentrically with said ratchet wheel and adapted to be adjusted angularly about its pivot.

1,399,729. LIFTING-JACK. GEORGE R. ADAMS, Hillsboro, Tex. Filed Dec. 21, 1920. Serial No. 432,177. 5 Claims. (Cl. 254—110.)



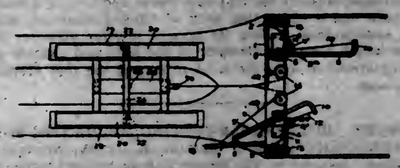
1. In a double acting jack, a standard, a rack-member slidably engaging the standard and having a longitudinal opening and spaced longitudinal racks upon opposite sides of said opening, an actuating lever pivoted upon the standard at a point near the longitudinal opening of the rack-member, dogs mounted within the longitudinal opening of the rack-member and pivotally connected with the lever upon opposite sides of its pivot and arranged to engage the racks, a spring connecting the dogs and serving to shift them outwardly into engagement with said racks, a pair of retracting arms pivotally connected with the standard upon opposite sides of the pivot of the lever and provided with inclined flanges, lateral extensions carried by the dogs to engage the inclined flanges, a spring connecting the retracting arms to move them inwardly, and a movable member arranged between the retracting arms and contacting therewith and adapted to shift them outwardly.

1,399,730. SLEEVE-HOLDER. SHIKICHI ABE, Detroit, Mich. Filed July 24, 1920. Serial No. 398,668. 2 Claims. (Cl. 24—245.)



1. A sleeve holder comprising a member adapted to be positioned beneath the fold of a sleeve and having a base, a head and a connecting neck of reduced diameter, and an endless band having its normal interior diameter of less length than the diameter of the head and capable of being stretched over the head to engage the fold around the neck.

1,399,731. BUTTONHOLE-CUTTING MECHANISM FOR SEWING-MACHINES. EDWARD B. ALLEN, Newtown, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Original application filed Aug. 16, 1919, Serial No. 317,902. Patent No. 1,360,704, dated Nov. 30, 1920. Divided and this application filed Mar. 20, 1920. Serial No. 367,299. 10 Claims. (Cl. 112—68.)



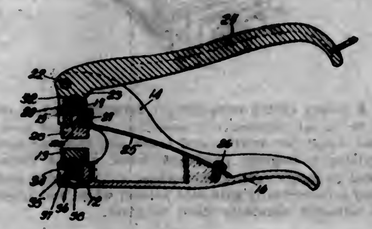
1. In a buttonhole sewing machine, in combination, stitch-forming mechanism, a buttonhole-cutter operating to clip out a section of the material in cutting the buttonhole, a passageway disposed horizontally below said cutter to receive the clippings, and means including a horizontally movable clipping engaging element for moving the clippings along said passageway.

1,399,782. MECHANISM FOR USE IN ATTACHING SHANK-PIECES TO SHOES. FRED L. AYRES, Everett, and FRED L. MACKENZIE, Beverly, Mass., assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 23, 1918. Reissued No. 224,179. 33 Claims. (Cl. 1—19.)

1. In a machine of the class described, a frame, fastening inserting mechanism carried by said frame for attaching a shank piece to a shoe, and means mounted on the frame for positioning the shank piece relatively to the fastening inserting mechanism.

1,399,783. AUTOMATIC DOOR-OPENING DEVICE. JOHN BALANS, Brantford, Ontario, Canada. Filed Aug. 28, 1919. Serial No. 320,403. 4 Claims. (Cl. 268—9.)

1. In an automatic door opening device, the combination with a door hinged to swing outwardly, of a lever pivotally secured to said door and having a notch in the underside, said notch having an angular end, a groove extending longitudinally of said lever and connected with said notch and having one end opening outwardly to the lower side, a leaf spring closing upon the end of the groove and a leaf spring closing the connection between the notch in said groove, a pin supporting said lever and adapted to slip into said notch to lock the lever with the door in the open position and adapted to spring past the last spring and to enter the longitudinal groove to allow the door to close, means connected with said lever and operated by the passage of the car to operate said lever to open the door, and means for locking the lever in the open position.

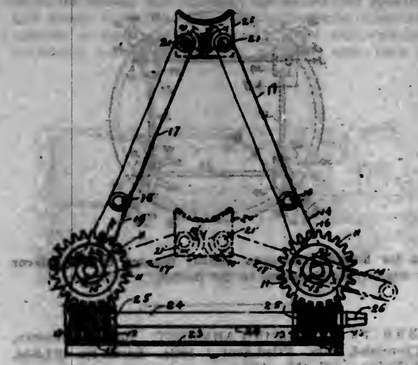


1,399,784. BRASING DEVICE. JOHN H. BALDWIN, Chicago, Ill., assignor to The Baldwin Brazer Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 30, 1918, Serial No. 260,741. Renewed July 11, 1921. Serial No. 483,946. 9 Claims. (Cl. 120—38.)

8. In an erasing device, in combination, a swinging support, a member having an adhesive contact face slidingly mounted upon the said support, a reciprocable plunger operable during a part of its stroke in one direction to swing the said support, a laterally swinging pawl carried by the plunger for engagement with the said member in one position o fthe pawl to advance the said member upon

the support during the remainder of the said stroke of the plunger, the pawl and plunger being both clear of the path of movement of the said member when the pawl occupies a different position, means for swinging the pawl when the plunger reaches the end of the said stroke, and a spring for retracting the said member upon the support.

1,399,785. SEAL-PRESS, &c. RICHARD R. BACHMEY, Revere, Mass. Filed Oct. 15, 1921. Serial No. 507,821. 4 Claims. (Cl. 101—3.)

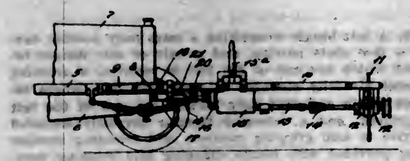


1. An implement comprising a body including a die-holding portion, provided with a lower die, a handle, and a standard provided with a plunger guide; a plunger movable in said guide and provided with an upper die, and with an anti-friction roll, whose axis of rotation is in the plane of, and at right angles with the longitudinal axis of the plunger; a lever fulcrumed on the standard and including a cam forming a short arm, and a handle forming a long arm, said arms constituting in effect a bell-crank lever; and a spring adapted to yieldingly raise the plunger and the lever, the form and relative arrangement of said cam and roll being such that when the plunger and lever are raised, the cam is at one side of the axis of the roll, and when the lever is depressed, to depress the plunger and its die, the cam swings to a position above said axis, whereby the leverage or depressing force exerted by the cam on the roll, the plunger, and the upper die, increases when the upper die, in approaching the lower die, contacts with work interposed between the dies, and whereby the cam is caused to impart a relatively quick initial movement and a slower final movement to the plunger, so that a minimum separation of the said handles, when the lever is raised, is permitted.

1,399,786. HOISTING MECHANISM. ISRAEL BENJAMINS, Brooklyn, N. Y. Filed Jan. 12, 1921. Serial No. 436,722. 5 Claims. (Cl. 254—126.)

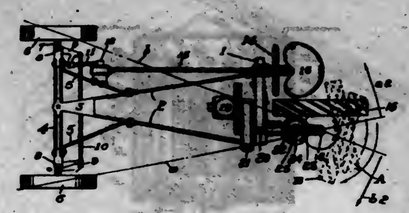
1. In a hoisting mechanism a pair of gears, a pair of worms in mesh therewith and adapted to rotate said gears

in opposite directions, a crank connected to each of said gears and adapted to rotate therewith, a connecting rod



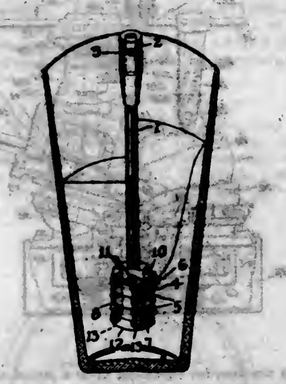
pivotally connected at its lower end to each of said cranks and a support for a load at the upper ends of said connecting rods.

1,399,787. SPEED-CHANGING MECHANISM. CHARLES C. BLAKE, Brookline, Mass. Filed Sept. 1, 1917. Serial No. 189,354. 2 Claims. (Cl. 192—96.)



1. In a mechanism of the character described, the combination of a hollow shaft, a member rotatably mounted on said shaft, and a clutch for connecting said member to said shaft and disconnecting it therefrom, comprising a hub fast on said shaft, said hub being closely encircled by said member, a hook-shaped spring lever supported on said hub and having a part extending into a position adjacent to the axis of said shaft and a device movable in the bore of said shaft and arranged to move said lever to operate the clutch.

1,399,788. POWER-TRANSMISSION ATTACHMENT FOR AUTOMOBILES. GIOVANNI A. BONELLI, Kingman, Ariz. Filed Nov. 29, 1919. Serial No. 341,495. 4 Claims. (Cl. 180—53.)

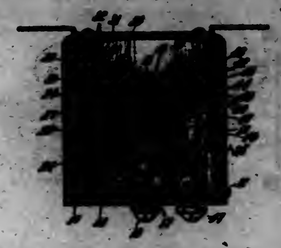


1. A power transmission attachment for automobiles comprising a chassis; forwardly projecting rails detachably secured to the sides of said chassis; a frame secured to said rails; a driven shaft mounted in said frame and arranged for connection with the engine shaft; and means for cranking the engine shaft comprising a gear member slidably mounted on said driven shaft and an engaging crank and gear carried by said frame.

1,399,789. MOTOR AGRICULTURAL MACHINE. CHARLES S. BROWN, Syracuse, N. Y. Filed July 15, 1918. Serial No. 245,059. 10 Claims. (Cl. 180—26.)

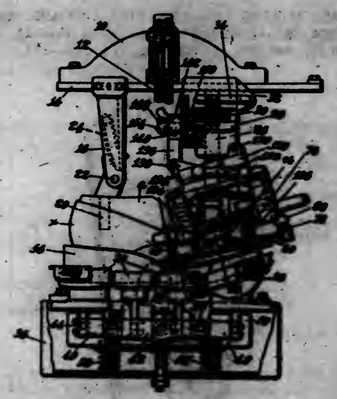
1. In a motor vehicle, the combination of a frame, a pair of steering wheels near one end of the frame, a tractor wheel near the other end of the frame and traveling in a path between the paths of the steering wheels, the tractor wheel being also shiftable about an upright axis from normal position into angular positions with its horizontal axis arranged radially relatively to the vertical diameter of one or the other of the steering wheels, a motor carried by the frame, and mechanism between the motor and the tractor wheel to drive and to shift the same, and means for controlling the shifting of the tractor wheel, substantially as and for the purpose described.

1,399,740. MIXING AND AERATING DEVICE. GEORGE R. BOTT, Mount Vernon, N. Y. Filed Feb. 21, 1921. Serial No. 446,536. 11 Claims. (Cl. 259—134.)



1. A mixing and aerating device for liquids comprising a solid spindle, said spindle having a solid core and provided on its exterior with an interrupted spiral and a plurality of parallel continuous channels, each intersecting the successive turns of the spiral, said channels extending inwardly below and beyond the spirals into the solid core of the spindle.

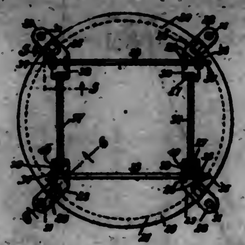
1,399,741. REGULATOR. STEPHEN F. BROOKS, Milwaukee, Wis., assignor to Briggs & Stratton Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 17, 1916. Serial No. 91,550. 17 Claims. (Cl. 200—90.)



1. In a vibrating regulator for controlling the charging of storage batteries from variable speed generators, a vibrating armature for generator-output regulation, means

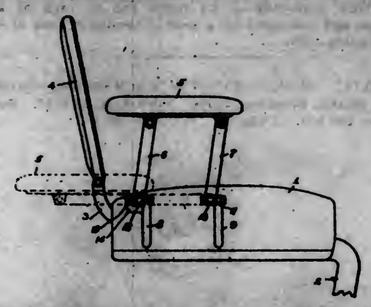
for giving a normal spring action to said armature, and an auxiliary charge boosting spring for varying the spring

action of said armature without affecting the adjustment of the normal spring action thereof.



1,399,742. MACHINE FOR PRESSING THE SOLES OF SHOES. MATTHIAS BROCK, deceased, Boston, Mass., by Edward L. Brock, administrator, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 8, 1919. Serial No. 275,786. 37 Claims. (Cl. 12—33.)

1. In a machine for operating upon a lasted shoe, means arranged to apply pressure to the bottom of the sole, and means arranged to co-act therewith to clamp the sole-extension at opposite sides of the shoe, one of said means being arranged to equalize the pressure at each side of the shoe relatively to that at the opposite side.



1,399,743. SUPPORTING-FIXTURE FOR MIRRORS AND THE LIKE. ELIAS J. BROOT, Roxbury, Mass. Filed May 8, 1919. Serial No. 295,602. 2 Claims. (Cl. 45—18.)

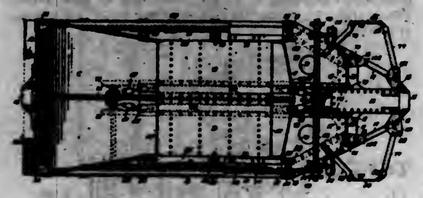
1. A device of the character described, comprising angularly disposed bracket members provided with face plates adapted to set adjacent to the back of the mirror and at the edge thereof and having hooked members projecting from said face plates for engaging the edge of the mirror, and depending coupling member lugs and bracket supports projecting from said bracket members and in opposite direction to said hooked members; and adjustable coupling members adapted to engage with said depending coupling member lugs for coupling said bracket members together

and for holding the same rigidly secured to the mirror for supporting the same in the device.

1,399,744. FOLDING ARMREST. JOHN P. BROPHY, Cleveland, Ohio. Filed Sept. 1, 1921. Serial No. 497,534. 4 Claims. (Cl. 155—196.)

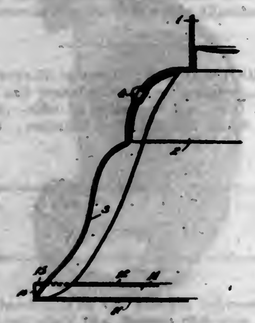
1. The combination with a seat, of an arm rest therefor, said rest being foldable both in a transverse direction onto said seat and in a longitudinal direction to clear the latter, substantially as described.

1,399,745. BELT-BUCKLE. SAMUEL BUCHBAUM, Chicago, Ill. Filed June 24, 1920. Serial No. 391,465. 30 Claims. (Cl. 24—191.)



29. A belt buckle comprising a main body portion having a face plate portion, and a pair of side flanges between which one end of the belt is received, a gripping member pivotally mounted between said side flanges between which and said body portion one end of the belt is gripped, and a releasing member pivotally mounted relative to said gripping member, said releasing member being provided with means engaging said gripping member for releasing said gripping member.

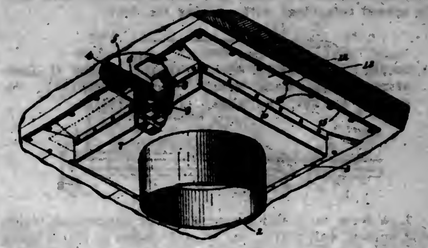
1,399,746. ORE-CAR. ARGYLE CAMPBELL, Chicago, Ill., assignor to Enterprise Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed June 4, 1920. Serial No. 386,842. 10 Claims. (Cl. 105—280.)



2. In a single hopper ore car, the combination with a hopper defined by side and end walls converging at their

lower edges and defining a discharge opening disposed centrally of the car, said opening being unobstructed; of doors for closing said opening; mechanism for operating said doors; and a load-sustaining underframe comprising, bolsters of relatively short length, draft sills extending outwardly beyond the bolsters, and side sills, each ex-

tending from the outer end of a draft sill diagonally across the corresponding outer end of a bolster to the outer side of the car at a point inwardly of the bolster, thence longitudinally of the car, and diagonally inwardly across the corresponding end of the other bolster to the outer end of a draft sill.

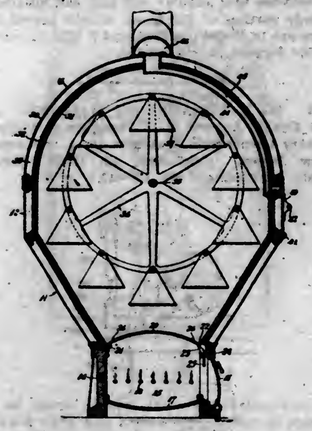


1,399,747. DRIP-PAN FOR STOVES. LEE S. CHADWICK, East Cleveland, Ohio, assignor to The Cleveland Metal Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 11, 1918. Serial No. 221,792. 4 Claims. (Cl. 126—277.)

2. The combination with a portable stove provided with legs which flare outwardly at their lower ends, of a pan on which the stove stands and above which the stove is spaced by said legs to provide an air space, said pin having a flange extending upwardly over the lower ends of the legs whereby the pan is clamped to said legs and will lift therewith when the stove is lifted.

1,399,748. DUSTPROOF CONNECTION FOR HOT-AIR-FURNACE PIPES. ANSEL J. CHENEY, Beverly, Mass. Filed Nov. 8, 1918. Serial No. 261,678. 3 Claims. (Cl. 126—317.)

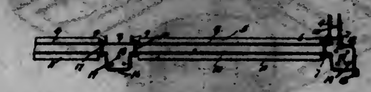
1. A connection of the character described for hot air conductors for furnaces, comprising a collar to surround the conductor, said collar having a sleeve portion constructed to extend substantially parallel to and embrace the conductor and a flashing projecting away from said sleeve at an abrupt angle thereto and constructed to be secured to a support adjacent to the conductor, and



means for fastening the sleeve portion of said collar to said conductor.

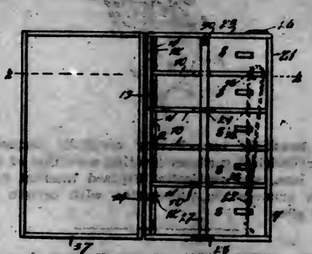
1,399,749. HEADLIGHT-LENS. OLIVER E. CONKLIN, Boston, Mass. Filed May 5, 1919. Serial No. 294,908. 5 Claims. (Cl. 240—48.4.)

5. A headlight lens having vertically disposed ribs having cylindrical surfaces covering a portion of one face of said lens, and vertically disposed internal reflecting members arranged in alternation with certain of said vertical ribs.



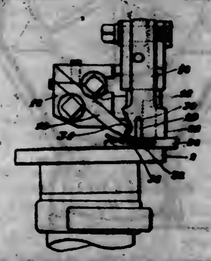
1,399,750. REEL-OVEN. JAMES DALTON, Los Angeles, and BERNARD C. DE MEULLE, Long Beach, Calif., assignors to Dalton Oven Co., a Copartnership composed of James Dalton and Bernard C. De Meulle, Long Beach, Calif. Filed June 4, 1919. Serial No. 301,805. 6 Claims. (Cl. 107—59.)

1. An oven having a baking chamber, a door for the baking chamber, a stack for said oven, flues for regulating the passage of heat from the baking chamber to said



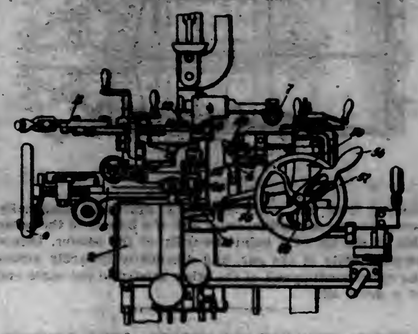
stock, a vent in open communication at one end with the stock and terminating at its other end within said baking chamber inside the door, and means whereby said vent is opened coincident with opening the door.

1,399,751. CONCRETE-WALL FORM. ALBERT H. DENNISTON, Fergus Falls, Minn. Filed Feb. 19, 1921. Serial No. 445,264. 7 Claims. (Cl. 20—131.)



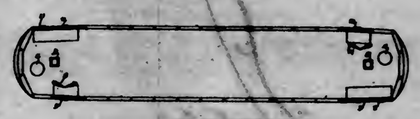
1. A form for making concrete walls comprising inside and outside wall plates, one of said classes of plates being spaced at corners and at intermediate columns, corner column forming plates connected to said spaced plates at the corners of the wall structure, and bulged intermediate column plates connected to the spaced intermediate ends of said plates and positioned to form intermediate columns.

1,399,752. WARDROBE-TRUNK. LOUIS DIAMOND, New York, N. Y. Filed Apr. 22, 1921. Serial No. 463,569. 6 Claims. (Cl. 190—13.)



1. In a wardrobe trunk, a body portion having a rectangular cross section, trays within same arranged for removal therefrom, one end wall of each tray being angularly disposed relative to the opposite end wall, whereby a space between said angular end wall and adjacent wall of the body portion of the trunk will be provided when said trays are in closed position, and a tube for umbrellas or the like located in said space.

1,399,753. SOLE-CHANNELING MACHINE. JOSEPH HENRY DOYLE, Auburn, N. Y., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 22, 1919. Serial No. 346,606. 12 Claims. (Cl. 12—27.)



7. A sole channeling machine having, in combination, a channeling knife; an edge knife; and a presser-foot, bearing on the stock in advance of said knives throughout the length of the cutting blades thereof, having a plow like formation provided with a blunt end extending slightly beyond the heel of said channeling knife.

1,399,754. LASTING-MACHINE. RENÉ E. DUPLESSIS, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 7, 1919. Serial No. 281,115. 10 Claims. (Cl. 12—14.)

1. In a bed lasting machine, a toe head movable longitudinally of the shoe, a toe rest having a post, a member to which the toe post is connected, said member being mounted on the toe head for limited movement in the direction of the length of the shoe, and yielding means between the head and the post to enable the head to be moved longitudinally of the shoe without movement of the post.

1,399,755. RAILWAY-CAR. THOMAS ELLIOTT, Cincinnati, Ohio, assignor to The Cincinnati Car Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Apr. 21, 1921. Serial No. 463,825. 5 Claims. (Cl. 105—341.5.)

1. A double-ended one-man car having front and rear doorways at each side thereof, and signs for said doorways, the signs on one side comprising an entrance legend at one doorway and an exit legend at the other doorway, and the signs on the other side comprising an exit legend at one doorway and an entrance legend at the other, so that such car may be used on the "pay as you enter" system when the entrance legend is at the front doorway and the exit legend at the rear doorway or on the "pay as you leave" system when the entrance legend is at the rear doorway and the exit legend at the front doorway.

1,399,756. AIR-HEATER. EARL J. ELLISON, Maywood, Ill., assignor to Ellison Engineering & Furnace Co., Chicago, Ill., a Corporation of Illinois. Filed Nov. 15, 1920. Serial No. 424,019. 22 Claims. (Cl. 126—104.)

1. In a heater, the combination with a combustion chamber of a radiating section mounted above the combustion chamber, the rear wall of the heater being spaced from the rear wall of the combustion chamber, means for admitting air to be heated into the space between said walls, a baffle plate between the combustion chamber and the radiator section for causing horizontal forward flow of air along the combustion chamber and a second baffle

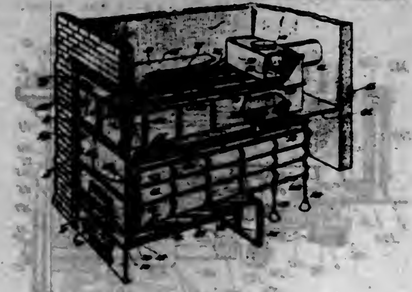


plate above the radiator section for causing horizontal flow of air in a reversed direction along the radiator section.

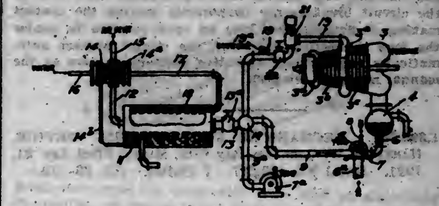
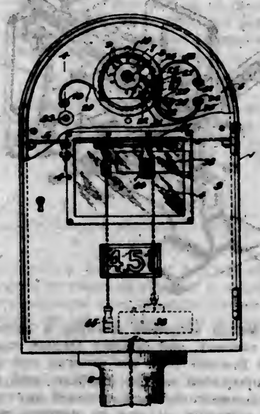


1,399,757. PHONOGRAPHIC TABLET. VICTOR H. EMERSON, New York, N. Y. Filed Aug. 6, 1919. Serial No. 315,682. 2 Claims. (Cl. 274—42.)

1. A sound reproducible record tablet having a base whose margin simulates the outlines of an object to which the subject matter of the record relates.

1,399,758. APPARATUS FOR CONSERVING MOTIVE FLUID. WARREN B. FLANDERS, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Co., a Corporation of Pennsylvania. Original application filed July 22, 1915, Serial No. 41,265. Divided and this application filed July 6, 1918. Serial No. 243,656. 8 Claims. (Cl. 257—26.)

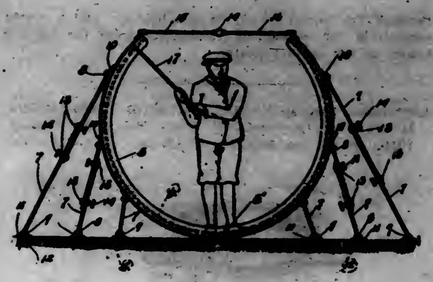
1. A feed-water heating system comprising a closed contact heater, means for supplying heating fluid to said heater, a surface heater arranged above the contact heater, a vent connection between the contact and surface heaters and having such capacity as to assure the transfer of the major portion of the heat in the contact heater, an atmospheric vent communicating with the surface heater, means for passing water successively



through the surface and contact heaters, and a drain connection for conducting condensate from the surface heater to the contact heater.

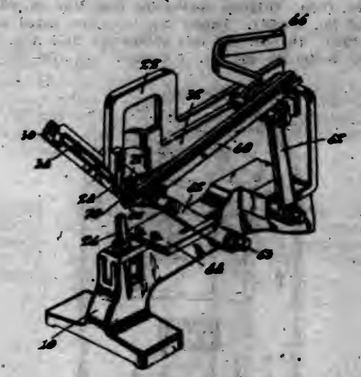
1,399,759. IRREMOVABLE CAP FOR CONTAINERS. HARRY W. FULENWIDER, St. Louis, Mo. Filed Oct. 27, 1919. Serial No. 333,711. 2 Claims. (Cl. 220—33.)

1. The combination with a threaded container fitting having a bearing and a threaded cap having a circular way, a pivot-pin having a head occupying said way and extended through said bearing and provided with a fixed stop to prevent its withdrawal from the bearing.



1,399,760. FIRE-ALARM SYSTEM. MANIOUS GARL, Akron, Ohio. Original application filed May 18, 1917, Serial No. 169,567. Patent No. 1,363,246, dated Dec. 28, 1920. Divided and this application filed Aug. 20, 1920. Serial No. 404,871. 5 Claims. (Cl. 179—5.)

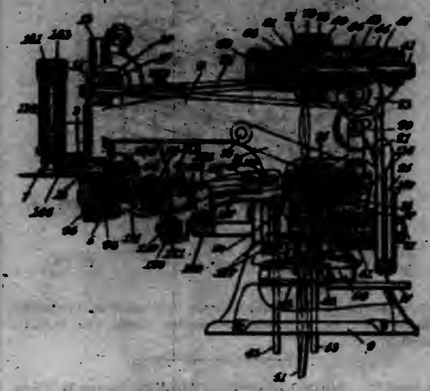
1. In an alarm system, the combination with a normally closed main line circuit, of a series of mechanical circuit breakers interposed in the closed circuit at different stations therein and each including a movable contact making element, a signal operable by the breaking of the closed circuit by the circuit breaker at any one



of the stations, a loop connection adapted to be introduced into the main line closed circuit at any one of the stations, and manual means associated with each of the circuit breakers for temporarily moving the contact making element thereof into an open position to render the loop connection operative, the circuit breaker automatically resuming an operative position as soon as the manual means is released.

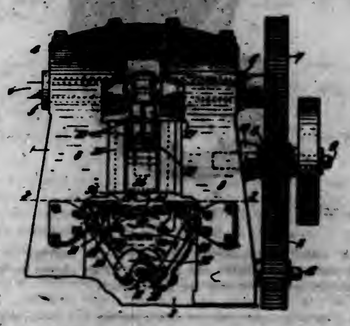
1,399,761. MECHANICAL GOLF-TEACHING DEVICE. Harrison W. Garland, Bay City, Mich. Filed Apr. 21, 1921. Serial No. 463,217. 7 Claims. (Cl. 35—12.)

1. A mechanical golf teaching device comprising a curved flexible member adapted to receive the head of a golf club.



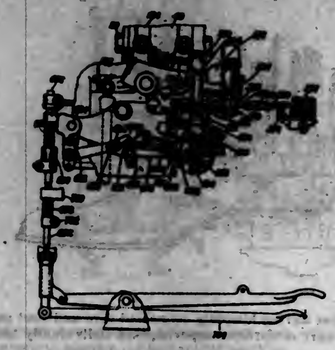
1,399,762. BUTTON-ATTACHING MACHINE. Perley B. Glass, Brookline, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 11, 1918. Serial No. 233,975. 23 Claims. (Cl. 218—9.)

1. In a button attaching machine, a button raceway, a fastener raceway, and fastener transferring means for removing a fastener from the raceway and delivering it to other mechanism of the machine, said transferring means being constructed and arranged to extend beneath the lower extremity of and to support said fastener during its removal from a position opposite the end of the fastener raceway.



23. In a button attaching machine, attaching mechanism, button and fastener raceways, and means carried by the button raceway for positioning a fastener for cooperation with the attaching mechanism.

1,399,763. SKIVING-MACHINE. Perley R. Glass, Brookline, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 13, 1919. Serial No. 276,980. 14 Claims. (Cl. 69—16.)



14. A machine of the class described, having in combination, a frame having an overhanging arm, a rotary knife shaft mounted in said arm and held from movement in any manner other than rotary, a disk knife fast to the lower end of the shaft, a feed roll located beneath the knife, and means whereby the feed roll may be adjusted both angularly and toward and from the knife.

1,399,764. AUTOMATIC FORGING-MACHINE FOR THE MANUFACTURE OF HORSESHOES AND OTHER ARTICLES. Donegood F. Glynn, Randwick, New South Wales, Australia. Filed Aug. 2, 1918. Serial No. 248,065. 14 Claims. (Cl. 59—46.)

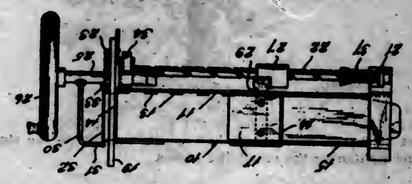
1. In an automatic forging machine, a frame, guides in said frame, slides in said guides, dies or tools mounted on said slides, means for operating said slides from different directions and in different planes to a common point, means controlling the timing of the movement of said slides to conform to a definite sequence and relationship, a magazine feeding heated blanks to said dies, a cut-off gate in said magazine, means automatically operating said gate in unison with the movements of said slides, an extractor removing the forged work from said dies, and means automatically operating said extractor in unison with the movements of said slides, substantially as described.

1,399,765. MACHINE FOR INSERTING FASTENINGS. Georges Gerod, Winchester, and Fred L. Mackenzie, Beverly, Mass., assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 10, 1919. Serial No. 270,502. 16 Claims. (Cl. 1—6.)

1. In a machine of the class described, fastening inserting mechanism comprising a raceway having a plurality of slots adapted to support and guide fastenings of different character, means for shifting the raceway to change the character of fastening inserted by said mechanism, controlling means for the shifting means, a gage for positioning the work relatively to the fastening inserting mechanism by engagement with the edge of the work, and power-operated means rendered operative by movement of the controlling means to effect movement of the gage from one gaging position to another concurrently with the shifting of the raceway.

1,399,765. SOLE FOR BOOTS AND SHOES. James E. Groseman, Lima, Ohio. Filed July 17, 1919. Serial No. 311,497. 8 Claims. (Cl. 36—30.)

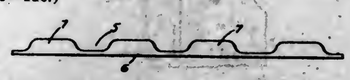
5. A shoe sole comprising a tread, a heel, and a shank portion, the first named portion being composed of rubber and fabric strips arranged endwise, the other portions being composed of rubber and cork composition, a fabric strip joining the said portions extending over the top of the heel and shank portions and bent under and embedded in the tread portion, and a flexible base over the sole.



1,399,767. CELLULAR RADIATOR. August William Louis Hartbauer, Detroit, Mich. Filed Feb. 15, 1919. Serial No. 277,179. 2 Claims. (Cl. 257—130.)

1. A cellular radiator comprising water tubes made up of spaced sheet metal plates, said tubes being arranged side by side to form a narrow vertical passage therebetween, angularly corrugated sheet metal perforated radiating plates arranged in said passages with the longitudinal edges of the corrugations disposed vertically, said plates being of spring metal and held in contact with the sides of said tubes by resilient pressure, said radiating plates terminating short of the front and rear ends of said tubes and

being insertable and removable from said passages only by vertical movement when said passages are open at their ends.

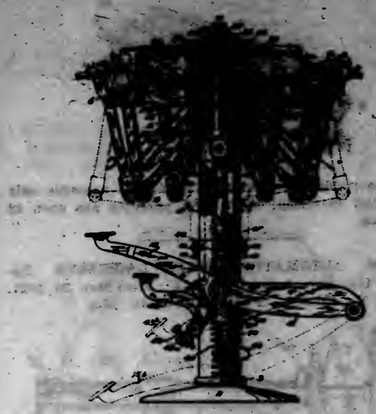


1,399,768. AUTOMATIC BUTTER-DISPENSER. Edmund Hartung, Jersey City, N. J. Filed Mar. 30, 1921. Serial No. 457,004. 2 Claims. (Cl. 31—65.)

1. A device of the class described comprising a trough, a compressor operable within the trough to force matter contained in said trough through one end of said trough, means to intermittently advance the compressor, means associated with the advancing means for severing that portion of the contents of the trough forced beyond its end and means for permitting the compressor to automatically return to withdrawn position.

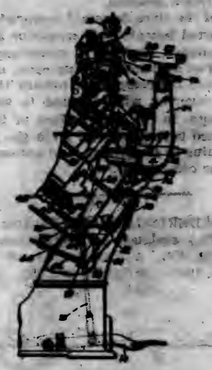
2. A device of the class described comprising a magazine, a trough supported beneath said magazine and adapted to receive the contents thereof, a compressor within the trough, one end of said trough being open, means to intermittently advance the compressor toward the open end of the trough, a severing wire adapted to sweep the open end of the trough, to cut that portion of the contents of the trough forced beyond its end from the portion of the contents remaining in the trough, and automatic means for withdrawing the compressor.

1,399,769. SOLDERING-STRIP. Francis Hodgkinson, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Co., a Corporation of Pennsylvania. Filed Nov. 24, 1917. Serial No. 203,852. 4 Claims. (Cl. 113—110.)



1. A soldering strip composed of sections of relatively large mass joined by elongated sections of relatively small mass and cross sectional area, whereby the latter sections are fused before the former when heat is applied to the strip.

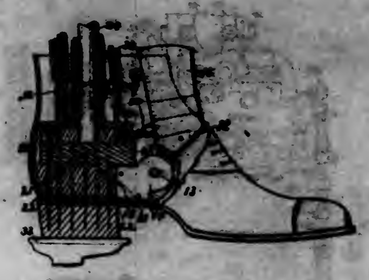
1,399,770. METHOD OF SHAPING AND TRUING WIRE WHEELS. Henry A. House, Jr., Buffalo, N. Y., assignor to Wire Wheel Corporation of America, a Corporation of New York. Original application filed Oct. 31, 1916, Serial No. 128,802. Divided and this application filed Mar. 22, 1918. Serial No. 224,069. 6 Claims. (Cl. 29—174.)



1. The method of truing and tensioning a wire wheel having a hub, a rim and a plurality of spokes connecting

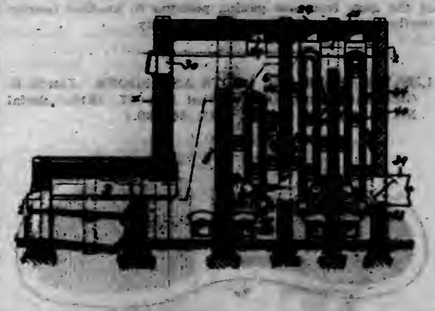
said hub and rim comprising the following elements embracing the hub and rim relative to each other, tightening one

set of spokes, shifting the hub axially relative to the rim and tightening the remaining spokes.



1,399,771. WORK-SUPPORTING MEANS FOR SHOE-MACHINES. CHARLES H. HOTZ, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 21, 1919. Serial No. 334,777. 36 Claims. (Cl. 12—4.)

1. In a machine of the class described, the combination with means for operating on a shoe, of a shoe support mounted for movement from an idle position into operative relation to the shoe, and separately operated power mechanisms arranged to act in succession to initiate and to complete respectively the movement of the support into operative relation to the shoe.

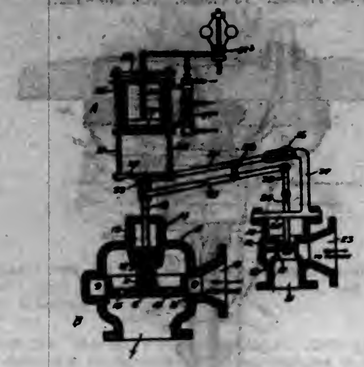


1,399,772. LAST AND DEVICE FOR ATTACHING HEELS. CHESTER HUNT, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 7, 1919. Serial No. 287,972. 10 Claims. (Cl. 1—32.)

1. In an apparatus of the class described, nail supplying and guiding means, nail-driving means, and a last having a heel part provided with holes corresponding to the guiding means, and interfitting means between the heel part and the mold means whereby the parts are held in proper operative relation during the driving of nails through the heel part.

4. A last having hingedly connected fore and heel parts, the heel part comprising superimposed individually hinged sections.

1,399,773. STEAM-SUPERHEATER. DAVID S. JACOBUS, Jersey City, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Original application filed Aug. 12, 1915, Serial No. 45,890. Divided and this application filed Nov. 27, 1920. Serial No. 426,758. 7 Claims. (Cl. 122—486.)

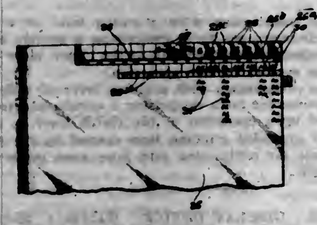


1. An independently-fired superheater comprising a setting, division walls therein to provide a plurality of chambers, said walls being provided with openings to permit the gases to flow through said chambers, a superheater section in each of said chambers, a wall disposed in front of the first section of the superheater and forming with the setting a secondary combustion chamber, the ends of the tubes of the first section of the superheater being short of the opening from the secondary combustion chamber to the first superheater chamber.

1,399,774. CONTROL MECHANISM. JOSIAH FRANCIS JOHNSON, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 31, 1917. Serial No. 171,906. 16 Claims. (Cl. 137—153.)

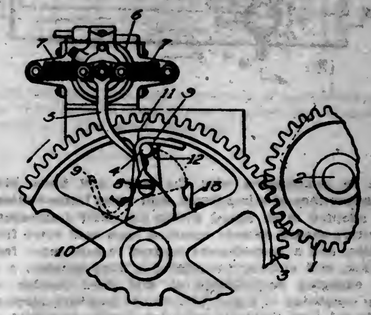
1. In a control mechanism, substantially parallel members connected together at an intermediate point by a pivotally mounted connecting member, one end of one member being restrained by a fixed pin so that synchronous move-

ments of the other ends of the members will not affect the substantially parallel relation of the two members, and



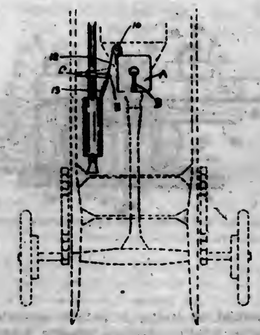
independent movements of said other ends will cause the members to assume a non-parallel position.

1,399,775. COMMON-BATTERY SUBSTATION. KENNETH S. JOHNSON, Jersey City, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 1, 1918. Serial No. 214,944. 32 Claims. (Cl. 179—81.)



1. An anti-side tone substation circuit including branches conjugate with respect to signaling currents, a transmitting instrument and a receiving instrument in said branches respectively, a ground connection, and a substation terminal so arranged that a direct potential difference between said ground and said terminal will cause current to flow through said transmitting instrument.

1,399,776. ACCOUNT-LEDGER. SIMEON B. KIRTLEY, Columbia, Mo. Filed Mar. 1, 1920. Serial No. 362,277. 10 Claims. (Cl. 283—37.)



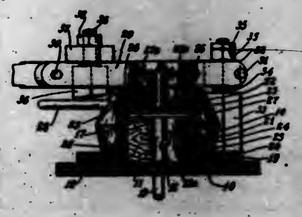
1. An account ledger, having series of master index sheets cut away in stepped relation to form a visible space upon each sheet of the series for the reception of a master index; a master index on the visible space of each of said sheets; a series of insert sheets before the series of master index sheets cut away in stepped relation to expose all of the master indexes of the series to which the insert sheets belong and to provide visible spaces adapted to have entered thereon identifications of the accounts contained on said insert sheets respectively; and a division sheet, before the series of master index sheets and insert sheets, having designating characters thereon indicating respectively the positions of all of the master indexes and also the positions of the cut away portions of the visible index sheets.

1,399,777. AUTOMATIC TIMING MECHANISM FOR OSCILLATING MAGNETOS. GUSTAVE J. LANG, Weehawken, N. J., assignor to American Bosch Magneto Corporation, Springfield, Mass., a Corporation of New York. Filed Apr. 8, 1919. Serial No. 288,611. 18 Claims. (Cl. 123—148.)

1. The combination with an internal combustion engine, of ignition generating apparatus therefor comprising an oscillating magneto, and means for oscillating said magneto in fully retarded or advanced positions, said means comprising means automatically actuated by said engine for changing the period of actuation of the oscillating means from full retard to full advance in a single step.

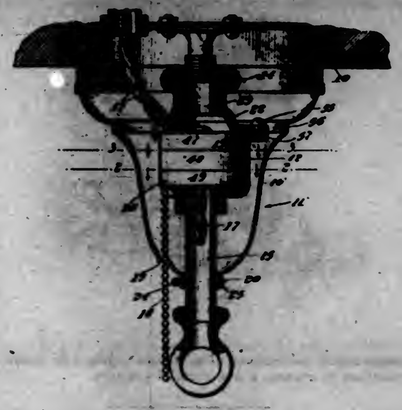
1,399,778. ROAD-VEHICLE SIGNAL. OSCAR LEHMANN, Salt Lake City, Utah. Filed May 27, 1921. Serial No. 473,106. 3 Claims. (Cl. 116—138.)

1. A signal for road vehicles comprising a longitudinally movable shifting fork of the reverse mechanism of an



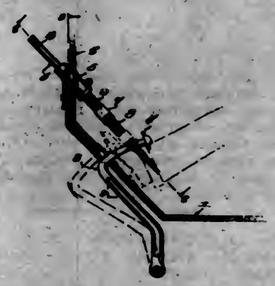
automobile; a lever to move said fork endwise; a sheave pulley mounted adjacent said fork; another lever fulcrumed on and connected with a valve in the exhaust pipe of said vehicle; and a cable fastened at one end to said fork and at its other end to the last mentioned lever.

1,399,779. BAG-FRAME CATCH OR HASP. WILLIAM A. LOTZ, Newark, N. J., assignor to The R. Neumann Hardware Co., a Corporation of New Jersey. Filed June 15, 1918. Serial No. 240,162. 2 Claims. (Cl. 70—116.)



2. In combination with the outer and inner hinged frame-sections of a bag frame, said inner frame-section being adapted to be closed within the outer frame-section, a button-shaped element mounted upon said outer frame-section, and a hasp-element secured to said inner frame-section, said element comprising a fixed member, a button engaging hasp hinged to said fixed member, said hasp consisting of a pair of resilient members adapted to be forced into separable retaining engagement with said button, and being further adapted to be folded down against the outer face of said outer frame-section so as not to interfere with the closing of said frame-sections, and a fingerpiece connected with said resilient members.

1,399,780. METHOD AND APPARATUS FOR LINING RECEPTACLES. FRANK J. MACDONALD, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed June 8, 1921. Serial No. 476,085. 18 Claims. (Cl. 18—1.)

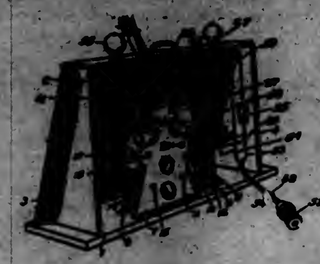


1. The method of lining a hollow structure with a plastic material which comprises placing a sheet of said material within the structure, pressing it lightly against the wall of the latter to cause it to adhere thereto, and applying fluid pressure to said plastic material.

1,399,781. SWITCH. FREDERICK A. MANAU, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, a Corporation of Illinois. Filed June 10, 1917. Serial No. 175,262. 18 Claims. (Cl. 240—122.)

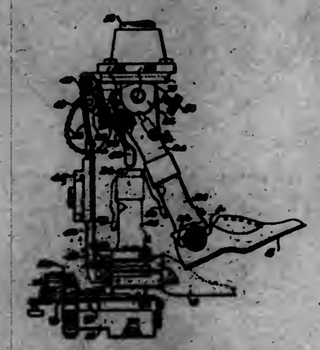
18. In an electric lighting fixture, a pull switch, an open work cage to removably hold the switch, said cage being constructed and arranged to be interposed in and forming part of a lighting fixture.

1,399,782. COMBINATION AUTOMOBILE LOCK AND THIEF-TRAP. BENJAMIN H. MANN, Milwaukee, Wis. Filed May 16, 1921. Serial No. 470,006. 9 Claims. (Cl. 43—50.)



4. The combination with a clutch lever of a device of the character set forth comprising a spindle adapted to be projected upon operation of the clutch lever to lock the same against further operation.

6. The combination with a clutch lever of a device of the character set forth comprising a spindle adapted to be projected upon operation of the clutch lever, a pair of normally expanded gripping jaws carried by the spindle, and means for contracting said jaws upon projection of the spindle.



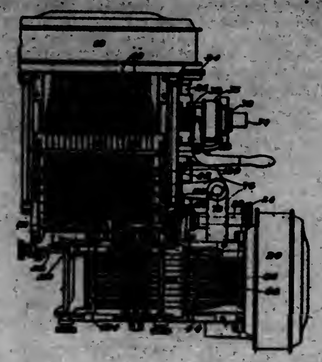
1,399,783. DISPLAY DEVICE. WALTER I. MAYER and FREDERICK BEAGLE, Kansas City, Mo., assignors to The Victory Advertising Manufacturing Company, Kansas City, Mo., a Corporation of Missouri. Filed Mar. 8, 1921. Serial No. 449,587. 5 Claims. (Cl. 40—104.)

1. In a device of the class described, a plurality of independently movable panel-carrying gears, complementary gears meshing therewith and having laterally projecting arms, a rotative disk having fingers to selectively

contact with the arms on the complementary gears, and move them to progressively turn the panels, and means for actuating said disk.

1,399,784. MACHINE FOR OPERATING UPON SHOES. BENJAMIN F. MATO, Salem, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 6, 1918. Serial No. 238,519. 32 Claims. (Cl. 1—32.)

8. In a heel-attaching machine, a movable jack post, a movable band-clamp, connections between the jack post and band-clamp, and means for controlling the movement of the band-clamp independently of the jack post.



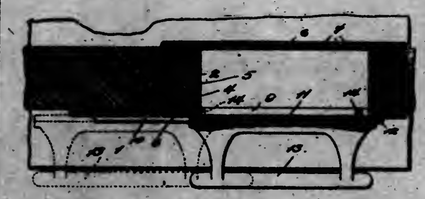
15. In a machine of the class described, means for applying pressure to the work, and a gage consisting of sections extending along the edge of the work, one of the sections being carried by the other and arranged to yield thereon in the direction of said pressure.

26. In a heel-attaching machine, a frame, loader mechanism movable on the frame and having a nail gate, an adjustable cross-head, a tripping member for the nail gate carried by the cross-head, and means constructed and arranged for adjusting the tripping member to compensate for the adjustment of the cross-head.

1,399,785. NAIL-DISTRIBUTING APPARATUS. BENJAMIN F. MATO, Salem, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 21, 1918. Serial No. 235,800. 27 Claims. (Cl. 1—39.)

1. In a nail-distributing apparatus, a plurality of receptacles for holding a supply of nails in bulk, a nail conveyer coöperating with each receptacle, means for moving one of the conveyers longitudinally, and connections from said conveyer to another conveyer to cause them to move together.

21. In a nail-distributing apparatus, a nail-way provided with nail channels, a series of nail-tubes, and a discharge roll interposed between the nail-way and tubes,



said roll being provided with plural sets of depressions arranged for alinement with sets of adjacent nail channels and delivering to a single nail-tube.

1,399,786. BENCH-VISE. JACK E. MESSENGER, Des Moines, Iowa. Filed June 1, 1920. Serial No. 385,498. 5 Claims. (Cl. 81—17.)

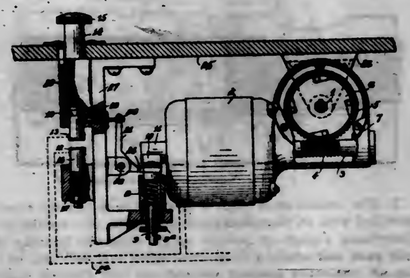
1. A vise, comprising a suitable base formed with a hole and also formed with radial notches intersecting said hole and also formed with radial grooves intersecting said hole and notches, an annular rotatable operating device overlying said base, jaw-stems slidingly mounted in said radial grooves and formed with heads adapted to be received in said radial notches and also formed with lugs, said operating device being formed with a spirally arranged groove receiving the lugs of said jaw-stems providing connections between said operating device and said jaw stems whereby rotary movement of the operating device effects rectilinear movement of the jaw stems.

1,399,787. WINDOW-VENTILATOR. SAM MEYER, St. Louis, Mo. Filed Oct. 22, 1918. Serial No. 259,214. 2 Claims. (Cl. 98—31.)

2. The combination with a window sash having a rail provided with an elongated opening therein, of a ventilator, comprising a plate of greater length than the opening in said sash rail adapted to be fixed upon said rail and having an elongated opening toward one end thereof registering with the opening in said sash rail and provided with spaced undercut longitudinal projections upon opposite sides of the elongated opening therein and extending

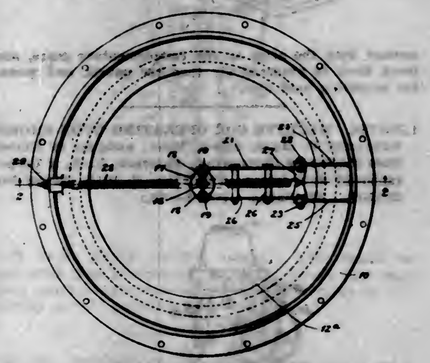
throughout substantially the length of the plate to form a guideway thereon, said guideway being open at one end and closed at its other end adjacent to the end of the opening in the plate, a closure slide of less length than the plate adapted to close the opening in said plate and having a dovetailed projection adapted to be slid into said guideway at the open end thereof and over the opening in said plate, a stop pin secured in said slide and projecting into the slot in said plate and serving as a stop to limit the opening movement and displacement of the slide, and a hand grip projecting from and carried by said slide, the extension of the plate beyond the opening therein serving as a support for the slide when in open position.

1,399,788. GAS-MIXER. Joseph Needham, Passaic, N. J. Filed Jan. 8, 1921. Serial No. 435,825. 6 Claims. (Cl. 158—118.)



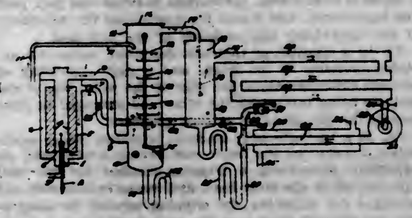
1. A device of the class described, comprising a main apertured body portion, a supplemental tubular body portion, means whereby the main body portion may be adjusted longitudinally of the supplemental body portion, a fuel supply device extending into the main body portion and upon which the same is movable, and a tubular member in the main body portion and adapted to extend into the supplemental body portion and provided with an outwardly flaring throat in connection with which said fuel supply device is adapted to operate to control the entrainment of air through said throat.

1,399,789. METHOD OF COMPOUNDING OF RUBBER PRODUCTS. Clayton Olin North, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed June 11, 1920. Serial No. 388,298. 15 Claims. (Cl. 106—23.)



1. In the manufacture of rubber goods containing a gel forming substance and a finely divided ingredient, the mixing method which consists in preparing an emulsion of the gel forming substance, by means of a volatile liquid mixing the finely divided ingredient therewith and then incorporating the whole into rubber.

1,399,790. WINDING MEANS FOR SPRING-MOTORS. James J. Phillips, Rochester, N. Y. Filed Sept. 25, 1919. Serial No. 326,167. 2 Claims. (Cl. 185—40.)

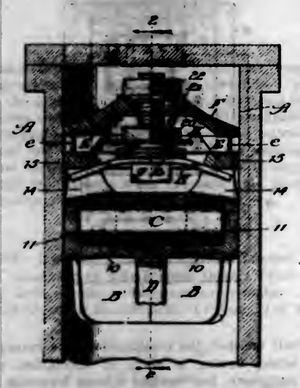


1. In combination with a shaft of a spring motor, a winding mechanism comprising an electric motor having driving connection with the spring motor and mounted to swing about said shaft as an axis, spring means resisting the turning of said motor about the shaft as an axis, a switch for the circuit of the electric motor having a part with a normal tendency to move to a position to break the circuit, and a detent for holding said switch part in a position to make the circuit controlled by the movement of the electric motor about the shaft axis against the action of the spring.

1,399,791. VALVE STRUCTURE. Robert M. Pierson, Akron, Ohio, assignor to the B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Oct. 29, 1919. Serial No. 334,332. 7 Claims. (Cl. 244—3.)

1. In combination, a valve-seat surrounding a port, a valve, and means for guiding said valve in an arcuate path toward and from its seat in successive positions of substantial parallelism to itself and to the plane of said seat.

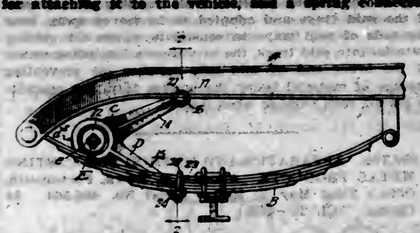
1,399,792. METHOD OF TREATING ASPHALTIC OILS. Paul Prutzman and Guy L. Goodwin, Santa Maria, Calif., assignors, by mesne assignments, to General Petroleum Corporation, a Corporation of California. Filed Sept. 27, 1917. Serial No. 193,420. 12 Claims. (Cl. 196—27.)



6. The method of producing a single fractionation of liquid hydrocarbon, which consists in subjecting the exposed surface of an undivided body of liquid hydrocarbon to the direct action of a flowing body of hot products of combustion free from oxygen and reduced in temperature for absorbing and removing the vapors therefrom.

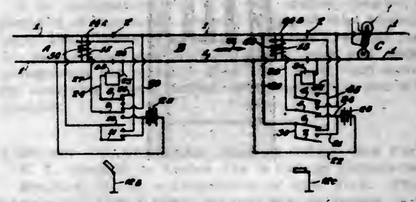
1,399,793. METHOD OF MAKING WINGED NUTS AND THE LIKE. Edgar Howard Reed, Worcester, Mass. Filed Mar. 13, 1920. Serial No. 365,592. 4 Claims. (Cl. 10—86.)

1. The method of making articles having a central main portion with projections therefrom, which consists in upsetting a cylindrical wire blank in an axial direction without changing the shape of a portion of said original blank, and forming the projections from the metal originally in the body of said blank and thereafter compressing the said projections laterally to finish them.



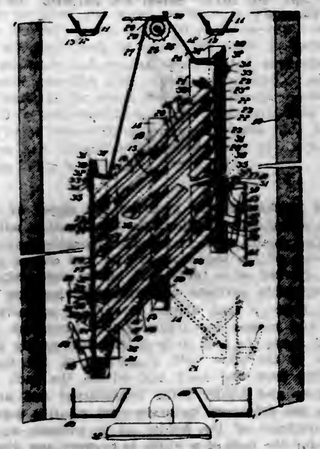
1,399,794. PISTON. Joseph Reid, Hebron, Ind., assignor of forty-five per cent. to Francis E. Ling, Hebron, Ind. Filed Aug. 9, 1918. Serial No. 249,125. 16 Claims. (Cl. 74—108.)

1. A piston of the character described, comprising a body composed of separate longitudinal sections, the walls of said sections being formed upon their interior with integral seats having closed outer ends and a pin for attachment to the piston rod, the outer ends of said pin terminating inside said seats.



1,399,795. SHOCK-ABSORBER FOR AUTOMOBILES AND OTHER VEHICLES. Joseph Reif, Hebron, Ind., assignor of forty-five per cent. to Francis E. Ling, Hebron, Ind. Filed June 1, 1920. Serial No. 385,481. 9 Claims. (Cl. 267—9.)

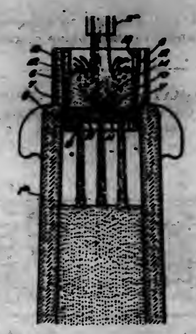
1. A shock absorber comprising a pair of relatively revoluble members arranged substantially one within the other and having the cam-shaped outer wall of the inner member engaging the cam-shaped inner wall of the outer member, a connector united to each of said members for attaching it to the vehicle, and a spring connected



to said members and adapted to oppose their relative movement at an angle to their plane of revolution.

1,399,796. AUTOMATIC TRAIN-CONTROL SYSTEM OR THE LIKE. Oscar A. Ross, Brooklyn, N. Y. Filed Apr. 3, 1917. Serial No. 159,328. 7 Claims. (Cl. 246—194.)

1. In a system of the kind described, a vehicle, a roadway therefor divided into blocks, track circuits therefor, inductive means on said roadway included in one of said track circuits, means for disconnecting each of said inductive means from one track circuit and connecting it to another and means for utilizing said inductive means.



1,399,797. APPARATUS FOR TREATING GRAIN, &c. William Roetzel, Chicago, Ill. Filed June 10, 1918. Serial No. 239,149. 9 Claims. (Cl. 34—36.)

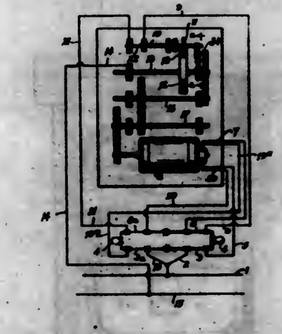
6. The combination of a plurality of trays vertically spaced and superposed one above the other, said trays

being mounted to tilt in unison, and a gate member adapted to prevent material from running off the ends of the said trays and adapted to be moved away from the ends of said trays to constitute means for guiding material into said trays, the arrangement including means at the lower end of said gate member for preventing passage of material below the bottom tray, but operable to permit such passage when desired.

1,399,798. APPARATUS AND METHOD FOR CASTING METAL PRODUCTS. Andrew R. Rowe, Portsmouth, Ohio. Filed May 3, 1921. Serial No. 466,564. 14 Claims. (Cl. 22—209.)

1. A method of depositing materials in a mold which consists in providing an open top body for the material in the upper end of the mold, discharging material into said body in a relatively large jet, discharging material from the body into the mold in relatively small streams and conducting the air from the mold around the exterior of the material in the body.

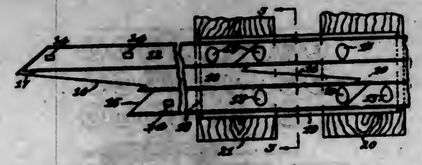
1,399,799. TACKING MECHANISM. Edgar E. Bowe, Chicago, Ill., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 30, 1918. Serial No. 231,616. 13 Claims. (Cl. 1—16.1.)



12. In mechanism for securing the upper of a turn shoe in pulled-over position, the combination with shoe positioning means, of a tack holder movable transversely of the edge of the shoe bottom into and out of position for the driving of a tack, said holder comprising relatively separable portions constructed to position a tack between them, a tack driver, means for operating said driver, and means for limiting the movement of the driver to cause the tack to be driven only partly through the sole of the shoe with a portion of the tack left upstanding from the work and within the tack holder, said driver and holder being constructed and arranged to cause the driver to maintain such relative separation of the portions of the holder as to provide an outlet passage for the tack of a width to prevent any displacing action of the holder on the tack during the movement of the holder to clear the tack.

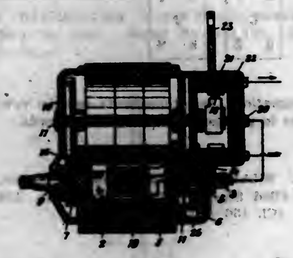
1,399,800. WASHING-MACHINE DRAW-OFF. Fourie Russell, Spokane, Wash. Filed June 21, 1920. Serial No. 390,388. 4 Claims. (Cl. 68—21.)

1. A washing machine comprising an outer closed casing and a tub mounted for to and fro movement in said casing, characterized by a flexible draw-off tube structure in fixed water receiving connection with said tub and extending through said casing and having a cock outside of said casing, whereby draw-off from said tub may be effected from the exterior of said casing without requiring an opening therein.



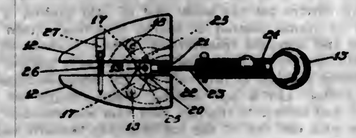
1,399,801. CIRCUIT-BREAKER FOR REVERSIBLE MOTORS. Lester E. Samuel, Brownsville, Oreg. Filed Apr. 17, 1920. Serial No. 374,716. 1 Claim. (Cl. 172—240.)

In a circuit breaker, the combination of a rotary circuit breaking wheel having a strip of insulating material across its periphery, two contact wheels traveling on said periphery, flexible shafts supporting the contact wheels, tension springs attached to the flexible shafts to press the contact wheels against the periphery of the circuit breaking wheel, a reversible motor, a train of gears between the motor and the circuit breaking wheel, two electric circuits for operating the motor in either direction, each circuit having a separate contact wheel but having the circuit breaking wheel in common, a manually operated switch to send an electric current through either one of the circuits, said current being automatically interrupted when one of the contact wheels arrives on the insulating strip of the circuit breaking wheel.



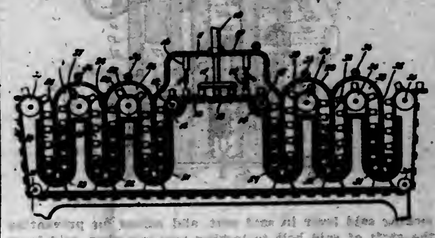
1,399,802. RAILWAY-TRACK. Harvey C. Sawyer, St. Paul, Minn. Filed Oct. 18, 1920. Serial No. 416,609. 1 Claim. (Cl. 238—282.)

In a railway track a plurality of rail sections having ends formed by two inclined plain surfaces and a vertical plain surface intersecting said inclined surfaces obliquely, a plate adapted to support the junction of rail sections



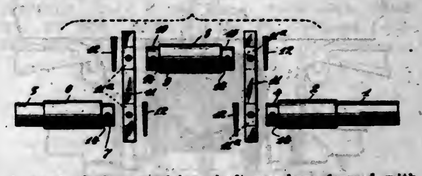
and means for securing said plate against longitudinal and transverse movement.

1,399,803. MAGNETO-ELECTRIC SPARKING APPARATUS. Max Schaefer, Stuttgart, Germany, assignor to Firm of Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Filed Aug. 20, 1919. Serial No. 318,769. 6 Claims. (Cl. 123—149.)



1. Magneto-electric sparking apparatus comprising, a stationary armature, a field magnet with pole pieces opposite to the said armature, movable pole faces between the pole pieces and coupled with the said armature, magnetic flux-directing members adapted to rotate between the pole faces and the armature, and means for turning the movable pole faces with the armature so as to shift the magnetic flux that passes from the said pole pieces through the armature, substantially as described.

1,399,804. SHOE-FORM. John C. Schelter, Rochester, N. Y., assignor to Fitz-Empire Double Pivot Last Company, Auburn, Me., a Corporation of Maine. Filed Apr. 21, 1919. Serial No. 291,539. 1 Claim. (Cl. 12—128.2.)



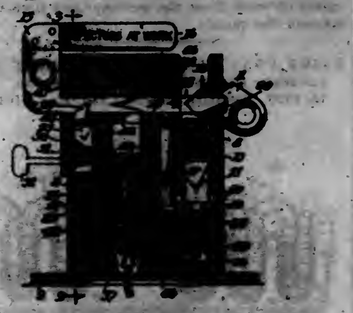
A shoe form comprising two forepart sections loosely confined at their forward ends and arranged to spread freely laterally, a pivotally connected pair of toggle links connecting the sections, said links being formed of sheet metal and each having a struck-up tongue on one edge arranged to abut against the end of the other link as the links are opened to expanded position to act as a limiting stop, whereby to arrest the links before the pivot of the said pivotal connection has passed the line joining their extremities, a heel member and a universal joint connecting said heel member with said pivot, the last-named connection also comprising means to separate the heel member from the forepart members and simultaneously to expand the toggle links, said forepart sections having stepped slots in which the toggle links are mounted, said steps corresponding to the thicknesses of the links, tongues and universal joint respectively, to secure minimum removal of wood from the sections and proper alinement between the parts.

1,399,805. VACUUM CAN-SEALING MACHINE. Laurence Oliver Schoff, St. Louis, Mo. Filed July 15, 1920. Serial No. 396,584. 13 Claims. (Cl. 113—82.)

1. In combination with a vacuum sealing chamber, a plurality of successive connected U-shaped inlet passageways, and a series of successive connected U-shaped outlet passageways, and which U-shaped inlet and outlet passageways are partially filled with liquid, and means for conveying objects through said passageways and said chamber.

1,399,806. CRANK-SHAFT. Edgar Scofield, New York, N. Y., assignor to Anchor Cap & Closure Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Mar. 10, 1919. Serial No. 281,780. 1 Claim. (Cl. 74—38.)

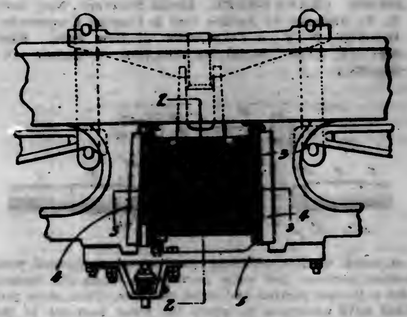
A crank shaft comprising shaft members formed with journal portions and wrist portions, a crank pin formed with a journal portion and wrist portions, crank arms provided with apertures in which the wrist portions of the shaft members and crank pin are seated, said shaft members being provided with shoulders disposed to abut associated faces of the crank arms, and securing means adapted to draw said shoulders against said faces, said securing means being removably seated in the crank arms and wrist portions and extending transversely of the latter to retain the parts in assembled relationship.



1,399,807. CATALYZER FOR AND PROCESS OF PRODUCING OXIDS OF NITROGEN. Wilfred W. Scott, Grantwood, N. J., assignor, by mesne assignments, to Atmospheric Nitrogen Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 7, 1918. Serial No. 253,071. 3 Claims. (Cl. 23—28.)

2. A catalyzer for producing oxids of nitrogen comprising a product which may be obtained from the ignition of a mixture of cobalt nitrate and aluminum nitrate, substantially as described.

1,399,808. SAFETY-LOCK FOR SWITCH-STANDS. Christopher H. Sweers, Chicago, Ill. Filed Sept. 13, 1920. Serial No. 410,053. 8 Claims. (Cl. 70—128.)

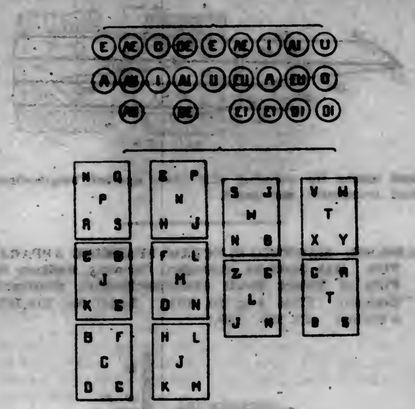


1. In a switch stand, the combination with an operating shaft and throw lever therefor, of a support having

a seat for receiving said lever when the latter is at the end of its throw, a bolt slidable into said support for

locking said lever in said seat, and means for preventing the shift of said bolt to locking position when said lever is out of said seat.

1,399,809. ADJUSTABLE DRIVING-BOX. WILLIAM M. SHOEMAKER, St. Louis, Mo., assignor to Commonwealth Steel Company, St. Louis, Mo., a Corporation of New Jersey. Filed June 27, 1921. Serial No. 480,778. 20 Claims. (Cl. 105—61.)



1. In combination with a locomotive pedestal, an axle journal box, and means for adjusting the movement of said box transversely of the pedestal.

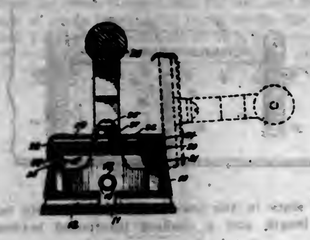
1,399,810. IRON OR STEEL BEARING ELEMENT AND METHOD OF MAKING SAME. ROBERT JAY SHOEMAKER, Chicago, Ill., assignor to Leadising Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 13, 1921. Serial No. 461,032. 9 Claims. (Cl. 148—28.)

1. A composite metal article consisting of a base of iron or steel and a facing of anti-friction metal united to the base by an intervening film of a bonding metal composed principally of lead.

1,399,811. WORD CARD GAME. FRANCES C. SMITH, Atlanta, Ga. Filed Jan. 10, 1921. Serial No. 436,192. 4 Claims. (Cl. 35—9.)

1. An article of manufacture comprising a word game apparatus consisting of a group of cards having thereon consonant letters of the alphabet, certain consonants of certain cards being identical with those of other of said cards, a plurality of groups of disks having vowels thereon, the vowels of one group being identical with those of another group, and a group of disks having thereon diph-

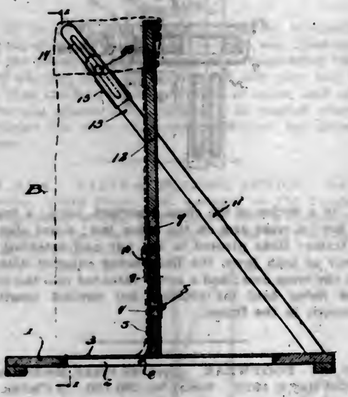
thong designations, said consonants and the vowels being coöperative in groups of letters spelling words.



1,399,812. SHADE-ROLLER. HANS SCHUSSEN, Hardy, Iowa. Filed Sept. 27, 1919. Serial No. 326,743. 1 Claim. (Cl. 156—23.)

In combination, a shade roller provided in one side with a longitudinal groove, a fixed ferrule at one end of the roller extending permanently over said groove, a disk pivoted upon the other end of the roller and having a radially extending lug adapted to register with and form an end closure for the other end of said groove, a plurality of guides located at spaced intervals within said groove and arranged transversely thereof, a shade having one end hemmed and disposable within said groove, said hem being notched at intervals for the accommodation of said guides, and a rod slidable longitudinally of said groove and insertible through said hem and through said guides with one end of the rod engaging beneath and retained in position by said ferrule and said disk being rotatable whereby to bring the lug thereof into engagement with the other end of said rod to prevent longitudinal movement thereof.

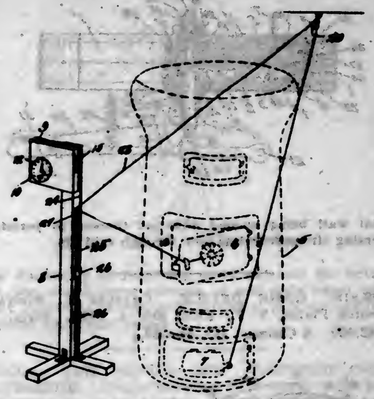
1,399,813. SELF-HEATING SADIRON. OTTO SPARR, Philadelphia, Pa., assignor to Strauss Gas Iron Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 6, 1920. Serial No. 371,679. 8 Claims. (Cl. 68—23.)



1. A self-heating end iron comprising a body, a cover movably mounted thereon, a plate carried by said cover in spaced relation to the top surface thereof and constituting

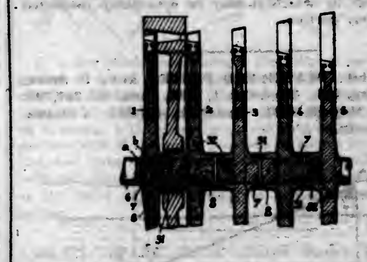
a heat-insulating device, a resilient locking member dependent upon and depending from said plate and deriving its re-

siliency at least in part therefrom and means on said body coöperating with said locking member to lock said cover in its closed position.



1,399,814. BAG-HOLDER. PETER SPARTS, Saukville, Wis. Filed May 25, 1920. Serial No. 384,134. 3 Claims. (Cl. 83—26.)

1. A device of the class described including the base member, a substantially upright supporting member mounted on the base member for holding a bag in upright position, said supporting member engaging one side of the bag, a brace extending from the base member to the supporting member and projecting beyond one side of the latter to form an arm, said arm being for engagement with the opposite side of the bag to hold the mouth of the same open, and an extension slidable on the arm for use in connection with bags of different sizes.

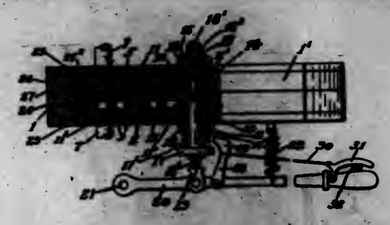


1,399,815. AUTOMATIC DRAFT CONTROL FOR HEATING APPARATUS. HARRY E. SPEARS, Baltimore, Md. Filed Feb. 14, 1921. Serial No. 444,958. 2 Claims. (Cl. 161—8.)

2. As a unitary article of merchandise, the draft-controlling attachment for furnaces, comprising a post, a pulley thereon, a normally detained lever mounted on said post and having one end extending over said pulley, time-controlled mechanism secured on said post and including means to release said lever, downwardly-pulling means under said end of the lever and connectible thereto for holding the downwardly pulling means against operation, means secured on the post for holding the downwardly pulling means in continuity with the post while permitting vertical movement of the pulling means and guiding it in such movement, and a haul-line secured to

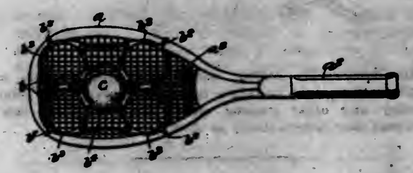
said downwardly pulling means and attachable to a furnace-door, said haul-line being coöperative with said pulley and other guiding means for controlling said furnace-door, substantially as shown.

1,399,816. ROTOR FOR MULTISTAGE HIGH-SPEED ENGINES. PAUL STEGER, Zurich, Switzerland. Filed Mar. 23, 1920. Serial No. 368,120. 7 Claims. (Cl. 253—39.)



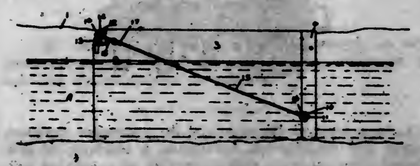
1. In a rotor of the disk-type for high-speed turbines, pumps and compressors, comprising a plurality of disk shaped rotor elements each consisting of a body of uniform strength the planes thereof being imperforate, a hollow pin provided on one side of a disk coaxially and integral therewith, a solid pin provided on the adjacent side of the adjacent disk coaxial and integral therewith, the bore of said hollow pin being slightly smaller than the outside diameter of the solid pin, the solid pin of one element inserted in the hollow pin of an adjacent element and holding the joint in position by radial compression stresses for uniting the single elements into a rotor.

1,399,817. DIES FOR MOLDING PHONOGRAPH-RECORDS AND THE LIKE. THOMAS STEVENSON, Framingham, Mass. Filed Aug. 3, 1920. Serial No. 401,045. 20 Claims. (Cl. 18—48.3.)



1. In a die of the class described having a plurality of

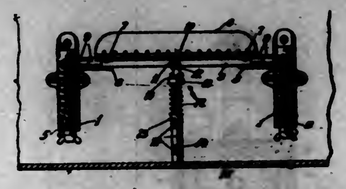
concentric channels, a radial wall passing through said channels, alternate channel walls on each side of said



radial wall being opened adjacent thereto to permit a reversing circumferential flow through said die.

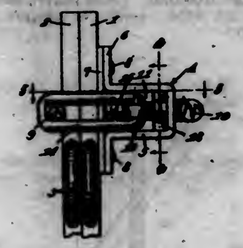
1,399,818. GAME DEVICE. CHARLES T. STEWART, Scotch Plains, N. J. Filed Feb. 4, 1921. Serial No. 442,360. 4 Claims. (Cl. 46—59.)

1. In a game device of the class described, a body portion provided with a ball cage member and forming in connection with the body portion ball receptacles adapted to receive a ball, said cage member having rotatably mounted legs by which it may be detachably connected with the body portion.



1,399,819. WATER-BED FENCE. RUBY P. STINE, Greensburg, Ind. Filed Oct. 1, 1919, Serial No. 327,707. Renewed May 13, 1921. Serial No. 469,325. 4 Claims. (Cl. 256—13.)

1. A water bed fence comprising abutments placed along the banks of a stream, metal bars secured at different elevations to said abutments, and a metal fence secured between said bars.



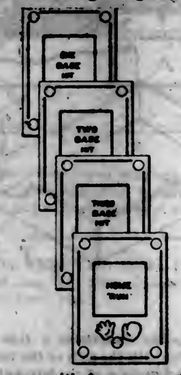
1,399,820. SEAT. JOHN H. STOOTS, Knoxville, Tenn. Filed May 26, 1921. Serial No. 472,681. 1 Claim. (Cl. 155—51.)

The combination of a seat pivotally mounted at one end upon a fixed support, a supporting leg for the free end of the seat comprising an upper member pivotally connected to the free end of the seat and depending therefrom and provided with a plurality of diametric openings in its lower portion, a lower tubular member receiving said upper member and provided with a series of longitudinal slots in its walls, a stop selectively engaging openings in the upper member and selectively

engaging slots in the lower member, the slots being of unequal length and a cushion interposed between the members.

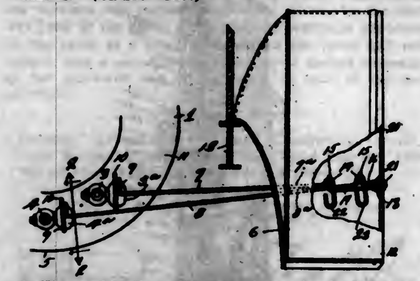
1,399,821. FENCING-GRIP. BARTON W. STONER, Hailey, Idaho. Filed Jan. 12, 1921. Serial No. 436,855. 2 Claims. (Cl. 24—263.)

1. In a device of the class described, jaws; a frame on one jaw; a cross arm on the other jaw; a nut slidable in the frame; links pivoted to the nut and extended transversely of both jaws, the links being engaged detachably with the cross arm; and a screw threaded into the nut, the screw being held for rotation but against longitudinal movement in the frame.



1,399,822. FOOTWEAR. CHARLES STERR, Rochester, N. Y. Filed May 6, 1919. Serial No. 295,100. 3 Claims. (Cl. 36—15.)

1. Footwear comprising an upper, a main sole formed with guides at its toe and heel portions, a detachable sole having a plate formed to engage the toe guides and having a rearward extension formed with a sleeve, a detachable heel having a top plate bent to provide guides engaging the heel guides of the main sole and having a sleeve at its forward edge, the breast of the heel below the top plate having a recess in which the sleeves of the detachable heel and the detachable sole are received, and means fitting in said sleeves for securing the heel and detachable sole to the main sole.



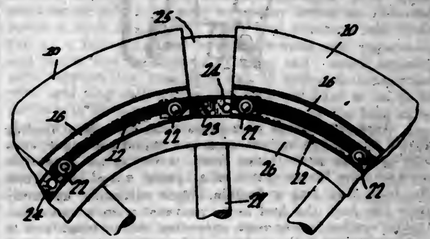
1,399,823. CARD GAME. NOTRE ROMUALD STROUT, Norwood, Ohio, assignor to The Champion Amusement Company, Cincinnati, Ohio. Filed Jan. 14, 1920. Serial No. 351,408. 1 Claim. (Cl. 46—25.)

A base ball card game consisting of a deck of fifty-two cards, said cards being divided into groups, each of the cards of which bear legends characteristic to the actual game of base-ball consisting of the terms One base hit, Two base hit, Three base hit, Home run, Strike, Ball, Hit batter, Base on error, Ground out, Fly out, and Foul out, the groups of cards bearing the terms strike the ball being of such predominant numbers as to be sufficient, when compared with the number of cards in the remaining groups, to cause their being brought into play during the

playing of the game with frequency sufficient to simulate the playing of the actual game of base-ball, and those cards bearing the remaining terms being of corresponding lesser numbers whereby they will be brought into play less frequently than the first mentioned group of cards, said cards of the various groups being adapted to be shuffled whereby to distribute the same throughout the deck for drawing therefrom.

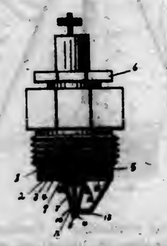
1,399,824. VALVE-ACTUATING DEVICE. ANTON SWANSON, South Bend, Ind., assignor to The Campbell Wire Specialty Works, South Bend, Ind., a Corporation of Indiana. Filed Sept. 30, 1921. Serial No. 504,426. 3 Claims. (Cl. 137—139.)

1. The combination with an engine casing having spaced pet cocks thereon and a fender having a downwardly extending skirt, of operating rods formed from rod material and attached to said pet cocks, loops formed on the ends of the rods for receiving the thumb engaging members of the pet cocks, the ends of said loops extending in the direction of the casing and forming means for engaging the casing and limiting the movement of the thumb engaging members in one direction, the outer ends of said rods being provided with handle members, and a bracket attached to the downwardly extending skirt and in which the operating rods have a bearing.



1,399,825. GARMENT. GLADYS GALE THOMPSON, St. Louis, Mo. Filed July 29, 1919. Serial No. 314,112. 4 Claims. (Cl. 2—60.)

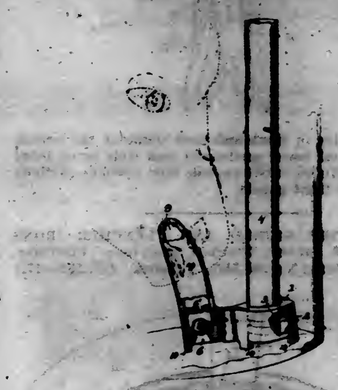
4. A unitary outer garment for women, including waist and skirt portions, the back of the skirt and waist comprising a wide panel and the front of the skirt and waist comprising two narrower panels connected to the back panel adjacent the shoulders and extending downwardly to



cross diagonally in front and meet adjacent the bottom rear, the lateral lower portions of said wide panel being drawn forwardly to constitute side skirt portions partially inclosing said front panels.

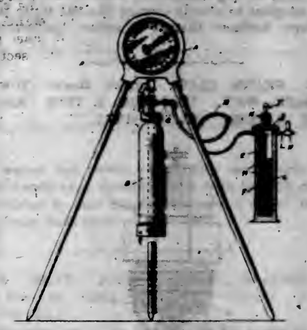
1,399,826. TIRE-SHIELD AND CLENCHER-IRONS THEREFOR. ALBERT TOKHEIM, Thor, Iowa. Filed Mar. 25, 1920. Serial No. 368,555. 2 Claims. (Cl. 152—17.)

2. A tire shield comprising a plurality of sections, consisting of a tire shoe having clencher portions, retaining members formed of rigid material and having curved sections and flat inner portions, the flat inner portions adapted to engage a tire rim, the curved sections adapted to cooperate with the clencher portions to secure the shoe to a tire, and links having connection with the retaining members and adapted to closely engage the flat inner portions at the inner surfaces thereof to secure the sections together.



1,399,827. SPARK-PLUG. JAMES HARRY TOWNSEND, Gloversville, N. Y. Filed Sept. 2, 1919. Serial No. 321,193. 2 Claims. (Cl. 123—169.)

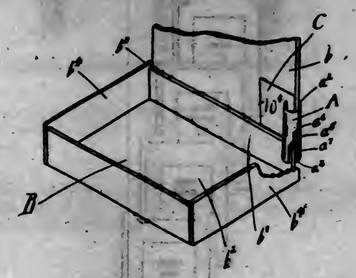
1. In a spark plug; a metal shell provided with a flanged support around its inner wall adjacent the lower extremity thereof; an insulator having a circular V shaped groove;



and a supporting shoulder thereon forming an air-tight chamber and a gasket therein; an electrode extending centrally through said receptacle and cushion and all said grooves; a funnel shaped agitator mounted on said electrode with means to agitate and engage with said groove; a nut fixed on the end of said electrode forming a support for said agitator that slidably engages with said electrode and said nut; said nut co-acting with the ground electrode forms the spark gap.

1,399,828. ARTIFICIAL-FEEDING DEVICE. ARTHUR TRAYNOR, Koshkonong, Wis. Filed July 5, 1921. Serial No. 482,526. 2 Claims. (Cl. 119—71.)

1. As a new article of manufacture, an animal feeding device adapted to be immersed in a liquid container, comprising a one-piece rubber head, including an expansible base ring for the reception of a handle, a heel offset from the base ring and a flexible nipple extending upwardly from the heel, the heel being provided with a valve controlled suction intake port, extending therethrough and in communication with the base of the nipple.



1,399,829. METHOD OF PRODUCING POISONOUS GASES. JAMES W. VAN METER, San Francisco, Calif. Filed June 15, 1920. Serial No. 389,569. 5 Claims. (Cl. 167—6.)

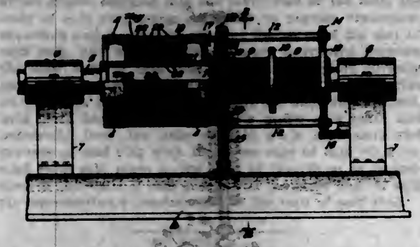
1. The method of producing a combination or mixture of gases which consists in liberating cyanogen from its salts by the reaction of chlorin on said salts.

5. The method of producing a mixture of insecticidal gases which consists in causing an excess of chlorin to act on an alkaline cyanid whereby the heat generated by such action causes sublimation of the cyanogen to be produced and mix with said excess of chlorin.

1,399,830. SUPPORT FOR BOX-LIDS. JOHN M. WARNELL, Greenfield, Ohio. Filed June 17, 1921. Serial No. 478,429. 2 Claims. (Cl. 217—61.)

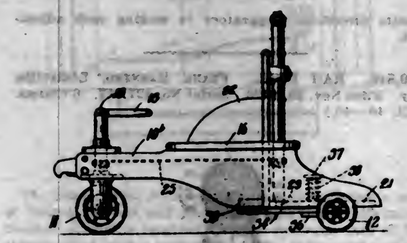
1. A box lid retainer comprising a tube having a slot substantially parallel with the axis of the tube and through which a box lid and a portion of the box wall mounting the lid may extend, and having a second slot through which the said box wall only may extend.

1,399,831. MULTIPLE-STAGE ROTARY DRILL. FRANK L. O. WADSWORTH, Pittsburgh, Pa., assignor to Hughes Tool Company, Houston, Tex., a Corporation of Texas. Filed Oct. 27, 1919. Serial No. 333,506. 17 Claims. (Cl. 255—71.)



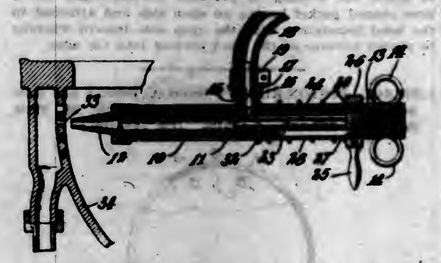
1. A multiple stage rotary earth boring drill comprising a two part head, one part of which is slidable resiliently within the other, roller cutters on the lower part and opposite disk cutters on the upper part arranged to drill the hole outside the bore cut by the preceding cutters.

1,399,832. DYNAMO-ELECTRIC MACHINE. HENRY H. WARE, Chicago, Ill. Filed Aug. 25, 1917. Serial No. 187,782. 5 Claims. (Cl. 171—252.)



5. In a dynamo electric machine, the combination with a laminated armature core; of windings on said core; a commutator; lugs connecting said commutator and

said windings; those being ventilating passages in said armature core and other ventilating passages adjacent



said commutator lugs; and separate means for adjusting the area of communication between said core ventilating passages and said commutator ventilating passages.

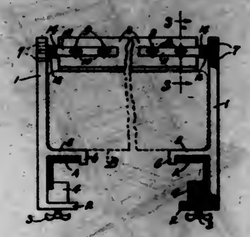
1,399,833. TOY VEHICLE. AGNES C. WIEBE, Brooklyn, N. Y. Filed Jan. 28, 1920. Serial No. 354,580. 11 Claims. (Cl. 206—165.)

1. A two passenger toy vehicle comprising a longitudinally extending beam, a steering wheel journaled at the forward end thereof, supporting wheels at the rearward end of the beam, a seat for one passenger supported by the beam at a point intermediate the front and rear wheels, and a standing platform for a second passenger at the rearward end of the beam in rear of the seat aforesaid.

1,399,834. APERTURE-CLEANING SYRINGE. STANISLAW WILINSKI, Bay City, Mich. Filed Dec. 18, 1920. Serial No. 431,581. 4 Claims. (Cl. 299—150.)

1. A device of the class described comprising a cylinder, having an intake opening between its ends, a discharge nozzle on said cylinder, a chambered plunger within said cylinder having a slot in its side wall and having its rear end closed, and means whereby said plunger may be advanced with the said slot in or out of registry with the said opening.

1,399,835. FOLDING CHAIR. HENRY S. WEAVER, Kenosha, Wis. Filed Dec. 30, 1920. Serial No. 434,665. 2 Claims. (Cl. 155—144.)



1. In a folding chair, the combination with two long rails; of a cross rail uniting upper portions of the long rails; a chair seat; a chair back with the lower end of which the rear end of the chair seat is in swinging connection, this chair back being itself in swinging connection, between its top and bottom sides, with upper portions of said long rails to occupy either an unfolded position with its top side below and adjacent said cross rail or a folded position with its bottom side uppermost and below and adjacent said cross rail; short crossing rails between the long rails and in swinging connection with said long rails below said seat and back so as to be foldable to lie substantially in the plane of the long rails, the forward portion of said seat being separately supportable upon the upper ends of the short rails, when the chair is unfolded; a link structure in swinging connection with the upper ends of the short rails and the lower portion of the chair back and in holding engagement with the bottom of the seat when the chair is folded; and a strut between the side rails that is in holding engagement with said link structure when the chair is unfolded to limit the angular displacement between the long and short rails and to define the unfolded position of the back and which strut engages the rear sides of the upper portions of short rails when the chair is folded.

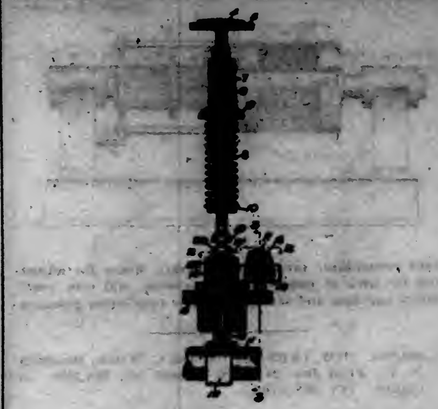
1,399,836. PNEUMATIC HEEL. GEORGE J. WINTER, Buffalo, N. Y., assignor of one-half to Harry G. Phillips, Buffalo, N. Y. Filed Feb. 10, 1921. Serial No. 446,287. 4 Claims. (Cl. 36—36.)

3. A heel comprising two removable sections, a cavity formed in the center of one section, channels surrounding the cavity and communicating therewith and a boss formed in the other section and adapted to rest in the cavity.

1,399,827. FOOTREST. Ernst L. Wood, Galeton, Pa. Filed Nov. 11, 1920. Serial No. 423,872. 1 Claim. (Cl. 5—41.)

The combination with standards, inwardly projecting arms thereon for engaging the side rails of a bed, feet upon the standards, and means upon the feet for adjustably clamping the side rails, of a foot rest angular in cross section and having a mattress engaging surface and an upstanding foot engaging surface, connecting strips adjustably attached to the ends of the foot rest and projecting therebeyond, yokes extending from said strips, and yoke engaging studs adjustably connected to the standards.

1,399,838. METHOD OF AND APPARATUS FOR RENDERING TIMBER NOT OTHERWISE SUITABLE, USABLE FOR CONTAINERS FOR COMESTIBLE SUBSTANCES SUCH AS BUTTER. Benjamin Abbey, Warrnambool, Victoria, Australia, assignor to Western District Co-Operative Produce and Insurance Company Limited, Melbourne, Victoria, Australia. Filed June 1, 1920. Serial No. 385,531. 10 Claims. (Cl. 91—51.)



1. Method of treating timber for the purpose specified consisting in feeding the timber at a suitable rate along the surface of a heated table while maintaining the timber in close contact with the table surface and applying lacquer to the heated surface of the timber.

3. An apparatus for treating timber comprising a heated chamber having a table top, an open vessel in said chamber, a transfer roller in the vessel, means for feeding timber along the table, and means for actuating the roller and feeding means.

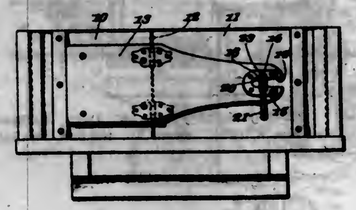
1,399,839. TAPPET-VALVE MECHANISM. Frank G. Alborn, Milford, Conn., assignor, by mesne assignments, to The Locomobile Company, Bridgeport, Conn., a Corporation of Delaware. Filed Aug. 16, 1918. Serial No. 250,143. 10 Claims. (Cl. 123—90.)

1. In a tappet valve-actuating mechanism of the class in which the tappet rotates and reciprocates, the combination of a tappet having a screw and nut for effecting axial adjustment and means cooperating with a fixed part of the mechanism to lock said tappet against rotation in

opposite directions preparatory to making such adjustment.

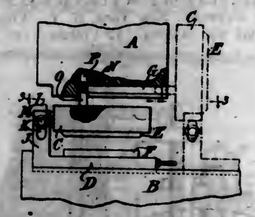
1,399,840. RAG DOLL. Frank Barnard, Louisville, Ky. Filed Nov. 29, 1920. Serial No. 427,017. 6 Claims. (Cl. 46—40.)

1. In a rag doll, a head having a foundation of stuffed fabric, said fabric being slit in the position of the nose to allow the stuffing to protrude therethrough, and a nose shaped pocket having an open side and attached to the head foundation with the open side inward whereby to permit passage of the head stuffing into the nose.



1,399,841. PISTON-RING. Joseph A. Bemels and Raymond T. Crisz, Detroit, Mich. Filed Apr. 28, 1919. Serial No. 293,282. 1 Claim. (Cl. 74—109.)

A piston ring having split ends divided on a bias, and longitudinally slotted, said ring at its split ends having

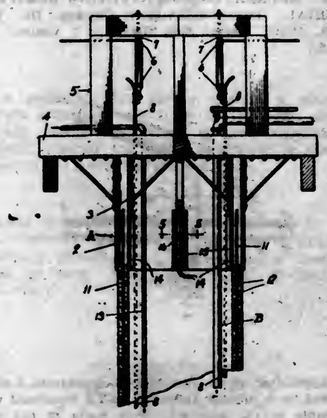


the inner walls grooved with one end of each groove merging at the outer wall of the ring, and the opposite end of the groove merging into the inner wall of the ring, the ends of said ring being cut away to provide transverse shoulders and supporting arms at the sides of the slot of said ring, and a connecting member interposed between the split ends of said ring and having a plate forming part of the outer wall of the ring and adapted to ride on the arms of said ring and abut the shoulders thereof, said plate having a rib extending under said plate and outwardly from the ends of said plate into slots and grooves of said ring with the outer edge of said rib arcuated from said plate to the ends of the rib so as to conform to the walls of said groove and the inner edge of said rib representing a continuation of the wall of said ring.

1,399,842. END-GATE LOCK. Mathias F. Bohr, Stickney, S. D. Filed Apr. 15, 1921. Serial No. 461,592. 1 Claim. (Cl. 296—55.)

The combination with a wagon end gate having a pair of hinged sections and one of them having a bifurcated member extending longitudinally on the outer face of the other section, and a wear plate on the bifurcated member adjacent the bifurcation, of a bolt rotatably supported in the said other section and having a transverse channeled head for movement through the bifurcation, and a spring pressed handle mounted pivotally in the head and having a nose for engagement in an opening of said plate when the head is disposed transversely of the bifurcation.

1,399,843. PRESS. William C. Bowden, Middle Village, Long Island, N. Y. Filed July 20, 1920. Serial No. 397,577. 5 Claims. (Cl. 18—16.)



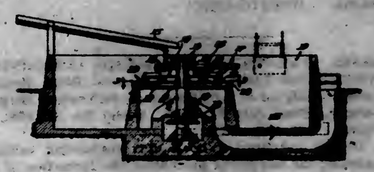
1. In a press, the combination of relatively movable upper and lower press members, upper and lower die members, the die members movable outwardly of the press members when the latter are separated, and the upper die member mounted to swing upwardly, and a connection from the lower to the upper die member adapted upon the moving of the lower member outwardly to move outwardly and swing upwardly the upper member, and the upper die and press members reciprocally constructed to permit the descent of the press member when the die member is restored to normal pressing position.

1,399,844. [WITHDRAWN.]

1,399,845. TREATMENT OF LIQUIDS CONTAINING SULFATE OF LIME. Henrik Janson Buls, Bergen, Norway, assignor to A/S De Norske Saltverker, Bergen, Norway. Filed July 24, 1919. Serial No. 313,058. 8 Claims. (Cl. 210—28.)

1. In the evaporation of liquids containing calcium compounds, the method of preventing the formation of incrustations containing calcium sulfate on the evaporating surfaces, which comprises causing crystals of calcium sulfate to be suspended in the liquid being evaporated and substantially saturated as to calcium sulfate in sufficient quantity to take up the calcium sulfate separated from the solution during evaporation.

1,399,846. CASING AND PILING CONSTRUCTION. Patrick F. Burns, Baltimore, Md. Filed Sept. 10, 1920. Serial No. 409,461. 4 Claims. (Cl. 25—181.)



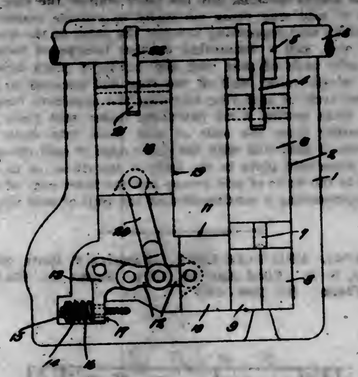
1. A device of the class described comprising a platform, a mold supported by said platform, a cutting member, and controlling cables for regulating the movement of the cutting member and cast from the mold.

1,399,847. METHOD OF TREATING PEAT-BOGS TO EXTRACT THE WATER FROM THE PEAT IN THE BOGS. William Watson Camp, Stratford, Ontario, Canada. Filed Mar. 8, 1920. Serial No. 364,273. 5 Claims. (Cl. 44—27.)

1. The method of treating peat bogs to extract the water from the peat therein consisting in excavating the bog uninterrupted step by step the desired depth to form a cavity, then macerating the excavated peat and then feeding such peat again into such cavity, which is continually formed by the ejection of the previously excavated peat.

1,399,848. SLAG-DISINTEGRATOR. Andrew G. Carnegie, Chicago, Ill. Filed May 13, 1921. Serial No. 467,940. 6 Claims. (Cl. 83—92.)

1. A slag disintegrator, in combination a vertically supported shaft, a plate mounted on the upper end of said shaft, a series of disks on said shaft below said plate of increasing diameter downwardly, said disks having marginal flanges, and being provided with apertures near said flanges, fan blades between adjacent disks and movable therewith, a conduit leading from the atmosphere to said fans, means for delivering slag to said plate, and means for rotating said shaft.



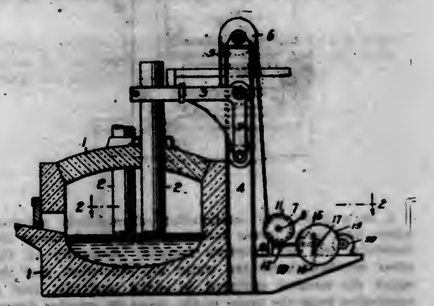
1,399,849. APPARATUS FOR APPLYING SEMIFLUID MATERIAL. David S. Chapin, Chicago, Ill. Filed Jan. 9, 1919. Serial No. 270,254. 1 Claim. (Cl. 18—3.5.)

In an applicator of the type described wherein a nozzle is traversed by a tubular guideway and a tensioned valve plug slidable in the guideway with ports in the valve plug and guideway normally out of registration and the port in the guideway being in line with the nozzle, said valve plug being slotted at its outer end, a laterally directed shoulder carried by said valve plug outwardly of the tubular guideway, and a pivoted lever working in said slot adapted to move the valve plug to bring the ports in the guideway and valve plug into registry, with the shoulder of the plug engaging the upper end of the guideway to limit movement of the plug.

1,399,850. HEADER FOR BOLT-MACHINES. William L. Clouse, Tiffin, Ohio, assignor to The National Machinery Co., Tiffin, Ohio. Filed Oct. 8, 1918. Serial No. 257,347. 4 Claims. (Cl. 10—22.)

1. In a bolt heading and forging machine a die slide, a bell crank, a stop, a pin slidably engaged by one arm of the bell crank, a spring upon the pin and yieldingly holding said arm against the stop, a toggle connection between the other arm of the bell crank and the slide, and means for actuating the toggle to move the slide, said toggle-and bell crank constituting means for throwing away from the stop and against the spring when

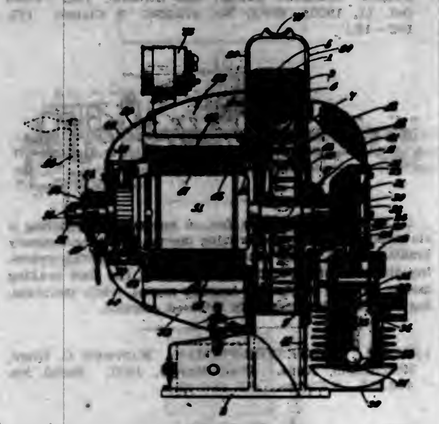
the movable die is held against movement under the action of the toggle.



1,399,851. PIPE-SHIELD. John N. Dart, Richmond, Va. Filed Apr. 8, 1921. Serial No. 459,528. 8 Claims. (Cl. 131—12.)

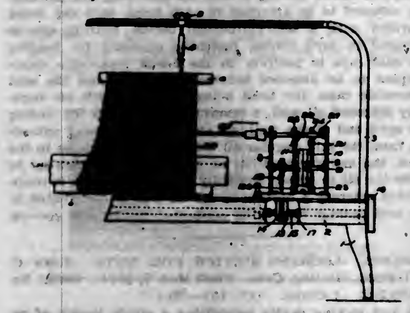
1. A pipe shield adapted to cover substantially the entire bowl of the pipe, and including an inclined hood terminating at a draft opening spaced throughout from the edges of the shield and bowl.

8. A smoking pipe having a shield pivotally attached to the bowl of the pipe, and adapted to cover the mouth thereof, said shield consisting of a disk-like member having a transverse slit or incision, the material of the disk-like member in rear of the said slit or incision being upset to provide a raised hood terminating at a substantially vertical draft-opening facing in the direction of the stem of the pipe.



1,399,852. REGULATOR FOR FURNACE-ELECTRODES. Waldemar Dyrssen, New York, N. Y. Filed Dec. 12, 1919. Serial No. 344,324. 12 Claims. (Cl. 204—64.)

1. An electric furnace having a plurality of electrodes and automatic means for intermittently moving the



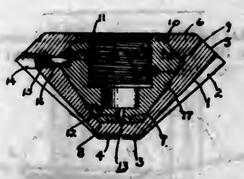
electrodes successively to vary the resistance of the arcs at different times so that no two electrodes are moved simultaneously.

1,399,853. PORTABLE ELECTRIC LIGHT AND POWER PLANT. Charles H. Ferguson, Valhalla, N. Y., assignor to Home Electric Lighting Company, East Orange, N. J., a Corporation of New Jersey. Filed Dec. 27, 1919. Serial No. 347,776. 7 Claims. (Cl. 290—1.)

1. In a device of the character described, the combination with the supporting housing, provided with parallel walls having coaxial apertures therein, of a bearing plate engaging one of said apertures, and provided with a crank-shaft bearing, said plate being provided with means for attaching an engine cylinder thereto and supporting it in proper relation to the crank shaft, a casing fitting the other of said coaxial apertures, generator field magnets carried by said casing, a crank shaft bearing carried by said casing, a crank shaft engaging said bearings, an armature carried by said shaft within said field magnets, an engine cylinder and piston carried by said bearing plate, and operative connections between said piston and said crank shaft.

1,399,854. APPARATUS FOR SEPARATING HEDDLES OR THE LIKE. Chester E. Field, Boston, Mass., assignor, by mesne assignments, to Barber-Colman Company, Rockford, Ill., a Corporation of Illinois. Filed Mar. 7, 1918. Serial No. 220,909. 48 Claims. (Cl. 139—94.)

1. In an apparatus of the kind described, means to pull back the harness cords which are to be threaded,

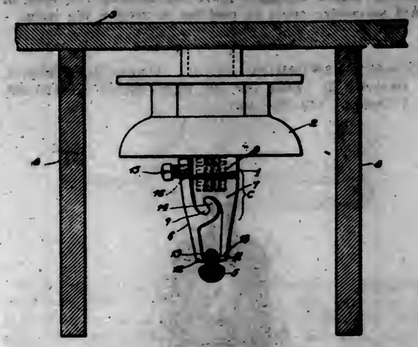


and means to pick off the cords one by one alternately from opposite sides of said held-back harness, said pick-off means having a part for holding the eyes of said successive cords in position to receive the warp.

1,399,855. SWIMMING DOLL. Albert L. Fiedler, Batavia, Ill. Filed Oct. 28, 1920. Serial No. 420,269. 7 Claims. (Cl. 46—40.)

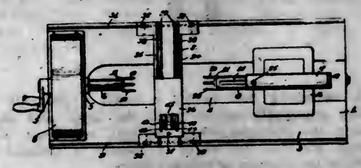
1. A swimming doll having a body, a plurality of members adjustable relatively to the body, and automatically movable weighting material associated with the body, whereby the center of gravity is changed by changes in the position of the doll figure.

1,399,856. PROCESS OF MAKING BEARINGS. Harold W. Fletcher, Houston, Tex., assignor to Hughes Tool Company, Houston, Tex., a Corporation of Texas. Filed Sept. 18, 1920. Serial No. 410,038. 6 Claims. (Cl. 76—108.)



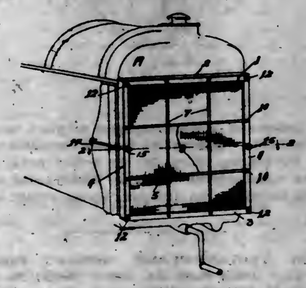
1. A process of forming a bearing within a rotary member comprising placing a tapered mandrel centrally within the bearing space, forcing molten metal into said space to completely fill the same, withdrawing said mandrel and machining an attaching recess within said bearing.

1,399,857. TROLLEY-CLAMP. Arthur L. Ferrell, Ensley, Ala. Filed Sept. 22, 1921. Serial No. 502,428. 3 Claims. (Cl. 191—48.)



1. A conductor holder comprising a pair of plates each of said plates having longitudinally extending claws in telescopic engagement with one another arranged to form a fulcrum and also to prevent relative vertical

movement of said plates in either their operative or partially assembled condition, and means extending laterally



through one of said plates and bearing on the other plate to effect a clamping movement of one of said plates.

1,399,858. VEGETABLE-PARING MACHINE. CLAUDE E. GARRIO, Madison, Wis. Filed Aug. 10, 1920. Serial No. 402,522. 3 Claims. (Cl. 146—8.)

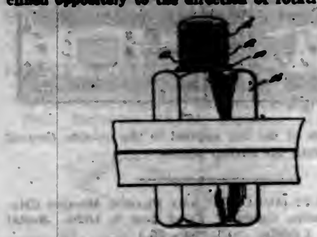
3. The combination with a bed plate, and a rotary vegetable holder, means to actuate the vegetable holder, rails along the longitudinal edges of the bed plate, a carriage movable along the rails, transverse rails carried by the carriage, a second carriage movable transversely across the first mentioned carriage, a cutter mounted on the second carriage, and spring means associated with the second carriage to normally hold the cutter into engagement with the vegetable.

1,399,859. RADIATOR-PROTECTOR. JOSEPH P. GARVER, Charleston, Ill. Filed May 5, 1920. Serial No. 379,132. 3 Claims. (Cl. 180—68.)

1. A guard for tractor radiators provided with forwardly and rearwardly extending projections, said guard comprising a frame formed of angle bars, a perforate material covering said frame, securing means for said perforate material engaging the margin thereof, tie-rods spanning said frame and lying adjacent said perforate material, means for uniting the tie-rods to said frame, means secured to said frame for engaging the rearwardly extending projections of the radiator, said frame being adapted to engage the forwardly extending projections of the radiator.

1,399,860. AIR-BRAKE AND STARTER FOR AUTOMOBILES. HERBERT GREEN, San Antonio, Tex. Filed Oct. 11, 1920. Serial No. 415,993. 3 Claims. (Cl. 192—13.)

1. An air brake system for an automobile including a clutching means, a foot braking means, and an emergency braking means, and a control valve for successively releasing the clutching means, and applying the foot braking means and the emergency braking means, while maintaining the clutching means in released position.

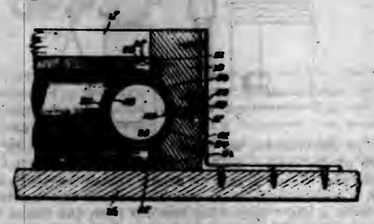


1,399,861. HARVESTER-PITMAN. MATTHEW C. HOFF, Hutchinson, Kans. Filed May 4, 1921. Serial No. 466,657. 2 Claims. (Cl. 74—17.)

1. A pitman of the character described comprising an elongated shank having a head at each end, a removable cap adapted to be attached to each head, each cap being provided with a semi-cylindrical recess, bearing sleeves mounted in each recess, fastening elements for holding the said caps in position on the heads, removable shims adapted to be disposed between the heads and the said removable caps, the head being provided with an angularly disposed oil well, a removable spring cap for closing the open end of the well, an angular passageway extending from the said angular oil well to the said recess in the head, the angular position of the well being such as to cause the oil to splash upwardly when the pitman is reciprocated whereby a portion of the oil will be distributed in the said passage-way to be conducted to the said sleeves.

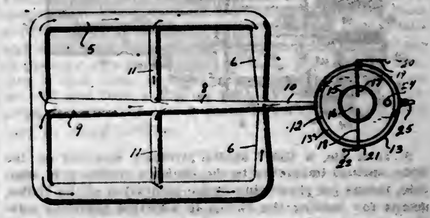
1,399,862. LOCKING DEVICE FOR NUTS. JOHN C. HUFFER, Sterling, Colo. Filed Mar. 7, 1921. Serial No. 450,202. 1 Claim. (Cl. 151—30.)

A nut locking device comprising a single length of resilient material bent to form a spring coil having the convolutions thereof wound in the same direction as the threads of the bolt with which the device is adapted to coact, the inner faces of the convolutions of the coil being provided with bolt engaging teeth, said teeth being inclined oppositely to the direction of rotation necessary to



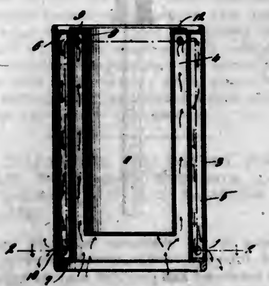
apply the coil to the bolt, the end portions of the material being formed into loops, the extremities of such end portions being sharpened and adapted to extend into the threads of the bolt.

1,399,863. REAMER. HOWARD R. HUGHES, Houston, Tex. Filed Apr. 23, 1918. Serial No. 230,258. 2 Claims. (Cl. 255—78.)



1. An enlarging reamer for maintaining the gage of the hole comprising a head, threaded at one end for attachment to a drill stem and threaded at the other end for attachment to the drill, and disk-shaped reaming cutters housed in slots in the sides of said head and inclined outwardly and downwardly.

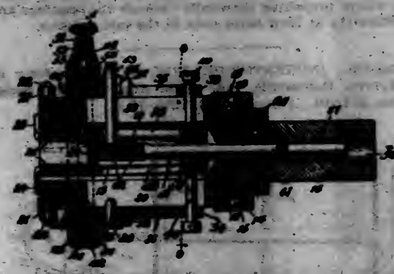
1,399,864. GAME. JOSEPH JOHNSON, Menlo Park, Calif. Filed May 1, 1920. Serial No. 378,206. 2 Claims. (Cl. 46—11.)



1. A game board having a resilient playing surface and upright rails surrounding the playing surface and provided with inner grooved faces, inflatable tubes disposed in the grooves along the central portions thereof, and castings covering the exposed portions of the said tubes and having side wings secured within the upper and lower portions of the grooves above and below the tubes, said rails having transverse openings and outer recesses from which the openings extend into communicating relation with their grooves, and said inflatable tubes having inflating valves projecting outwardly through the openings and terminating at their outer ends in the said recesses.

1,399,865. INCUBATOR-HEATING SYSTEM. JOHN D. JULIUS, Heltonville, Ind. Filed Aug. 7, 1920. Serial No. 402,010. 1 Claim. (Cl. 237—15.)

A heater for incubators comprising a conduit member having tapered end portions, said member being formed into a frame adapted to engage the inner walls of an incubator, an inlet conduit extending transversely of the tapered end portions of the frame, one end portion of said inlet conduit being larger in diameter than the opposite end portion, said large end portion being connected to one end portion of the frame, branch conduits intersecting the intermediate portion of each side of the frame and the inlet conduit, whereby water discharged into the frame through the large end portion of the inlet conduit is caused to circulate by the discharge of water from the branch conduits into the water disposed in the side portions of the frame, a tapered outlet member intersecting the tapered end portions of the frame, and means supplying heated water to the heater.



1,399,866. COOKING UTENSIL. ROBERT B. KIRK and JOSEPH B. YOUNG, Olden, Tex. Filed Jan. 26, 1921. Serial No. 439,996. 1 Claim. (Cl. 126—215.)

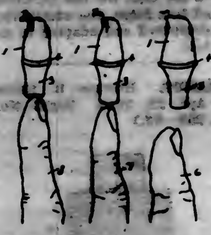
A cooking utensil including a drum comprising inner and outer metal sheets, said outer sheet being cylindrical and having its terminals turned inwardly at right angles to provide flanges, the inner sheet being also cylindrical, arranged within the outer sheet, and engaged with said flanges, said inner sheet having its upper end bent inwardly at right angles to provide a utensil supporting flange, said inner sheet having a series of openings near its upper end and said outer sheet having series of open-

legs near the lower end whereby the heel is permitted to deviate upwardly through the inner sheet and downwardly between both sheets substantially as described.

1,399,867. AUTOMATIC DIE. HORACE FALK NEUMEIER, Macungie, Pa. Filed May 29, 1920. Serial No. 385,302. 9 Claims. (Cl. 10—86.)

9. In a die, a body, blades pivotally mounted on the body, springs imparting to the blades a tendency to separate, means for preventing undue separation of the blades, means for holding the blades in adjusted positions relative to each other, means operable by engagement with the work for releasing the holding means and permitting the blades to spread to their fullest extent, said last-named means comprising an adjusting bar, a head at one end of the bar for engagement with the work, a cut-away connectable to the bar in a plurality of positions, and clamping means for securing the bar and the adjustable blade holding means together.

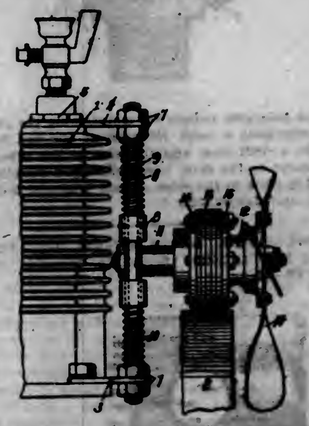
1,399,868. FILLING AND TESTING DEVICE. ADOLPH J. NUSS and FREDRICK A. PARKER, Williamsport, Pa. Filed Mar. 23, 1921. Serial No. 454,066. 4 Claims. (Cl. 226—36.)



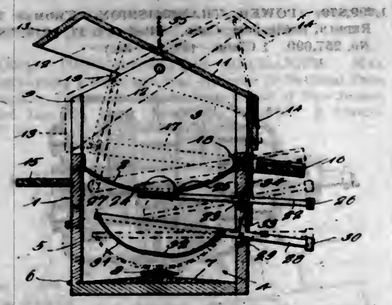
1. A device of the character described, comprising a tube and a funnel, to communicate therewith, said tube open at its lower end and provided near its upper end with a lateral opening, and means carried by the funnel and depressible to close said lateral opening near the upper end of the tube.

1,399,869. HARNESS-TUG. NICK PATTS, San Antonio, Tex. Filed Nov. 27, 1920. Serial No. 426,761. 4 Claims. (Cl. 54—82.)

3. A harness tug, comprising longitudinally arranged chains embedded in plastic material, anchor plates at the ends of the tug made of sheet metal also embedded in and covered by the plastic material and having holes to which the ends of said chains are connected, and fastening devices at the ends of the tug applied to the outside thereof and connected with the anchor plates.

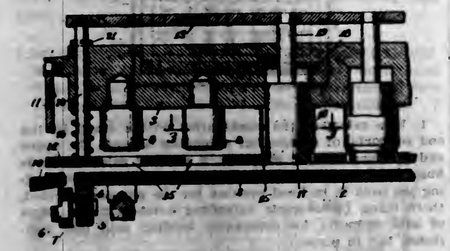


1,399,870. FRUIT-HULLER. AMY PEARCE, Mission City, British Columbia, Canada. Filed Aug. 6, 1920. Serial No. 401,726. 1 Claim. (Cl. 294—25.)



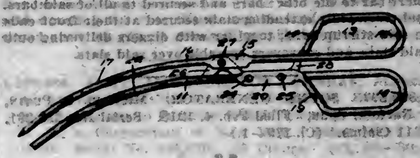
A fruit huller comprising, a metallic thimble-like protector for the finger tip adapted to entirely inclose the same and conforming to the shape thereof, said protector being slightly raised on one side at its closed end to form an integral false nail, and an elastic tube secured to the open end of said protector adapted to grip tightly the finger when slipped thereover.

1,399,871. ENGINE-COOLING MEANS. EDWARD I. PEARSON, Toledo, Ohio. Filed Jan. 17, 1921. Serial No. 437,718. 3 Claims. (Cl. 122—171.)



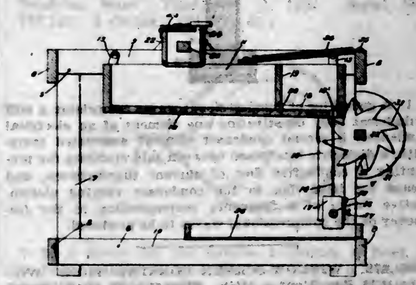
2. In combination, an engine casing, a fly-wheel in advance of the casing, guide means attached rigidly to the casing and having a pair of fixedly spaced vertical guide rods, a cross-head frame guided for vertical movements by the rods, a shaft projecting forward from the frame and movable therewith, a driven wheel and a fan fixedly carried by the shaft with the wheel positioned over the fly-wheel, a coiled spring mounted on each guide rod above the cross-head frame to act on the frame to cause the driven wheel to bear downward against the fly-wheel, and a coiled spring mounted on each rod below the frame and acting upward against the frame to partially counteract the pressure of the first spring means against the frame.

1,399,872. POULTRY-NEST. CARL EMIL POIGNANT, Matsqui, British Columbia, Canada, assignor of one-half to Carl Gust Poignant, Matsqui, Canada. Filed Oct. 20, 1919. Serial No. 332,074. 8 Claims. (Cl. 119—47.)



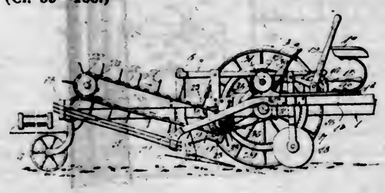
6. A device of the class described comprising a housing provided with an entrance and an exit, a nest removably supported in said housing, doors for said entrance and said exit, means independent of said nest for holding the entrance door open and the exit door closed and operable by an egg laid in said nest to reverse the position of said doors, and means independent of said nest and positioned externally of said housing and actuated by the weight of the hen after leaving said housing for restoring said doors to the initial position.

1,399,873. APPARATUS FOR FORMING CAKES, &c. HOWARD L. POWELL, New York, N. Y., assignor to National Biscuit Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 28, 1919. Serial No. 341,014. 3 Claims. (Cl. 107—26.)



3. In apparatus for forming cakes and the like, the combination of a platen, a plurality of design stamps carried thereby, in a staggered row, and a plurality of peripheral cutters carried by said platen in a staggered row, parallel to and spaced apart from said stamps, a clear plate below said platen, having openings through which said stamps and cutters are adapted to pass, a back plate above the platen, means for rigidly securing the back plate and clear plate together, strippers mounted inside said cutters, secured to said back plate and movable relatively to said platen, and spring means between said platen and clear plate.

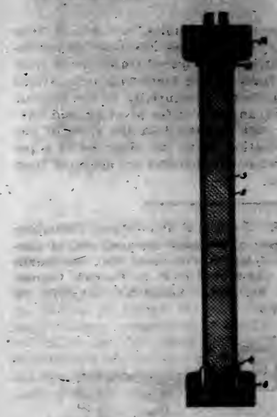
1,399,874. HAIR-WAVER. HULDAH B. PRAHL, Detroit, Mich. Filed Feb. 2, 1918. Serial No. 215,742. Renewed May 23, 1921. Serial No. 473,817. 1 Claim. (Cl. 132—32.)



A hair waver comprising two handles, two sets of tines attached respectively to said handles, the tines of the respective sets in alternation being spaced transversely from each other, all of the tines having transverse undulations and being curved to conform substantially to the contour of the head of a person, and means for pivoting said handles to each other in such manner that the tines of one set will pass from a position above the other set to a position below the same when said handles are operated from open to closed position.

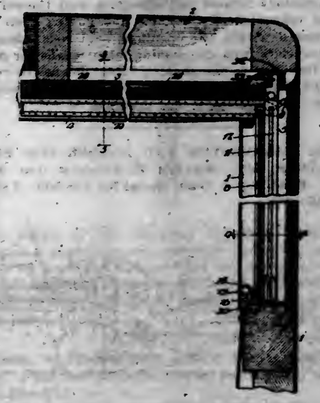
1,399,875. STRINGER. JOSEPH F. PRITCHETT, Columbus, Ga., assignor, by direct and mesne assignments, of one-fourth to John Allen Johnson, Columbus, Ga., one-fourth to Q. T. Foster and one-fourth to F. A. Patrick, Columbus, Ga. Filed Dec. 31, 1920. Serial No. 434,317. 10 Claims. (Cl. 29—84.)

1. A device for stringing travelers including a frame, a shaking table disposed above the frame, said shaking table having openings formed in the bottom wall thereof, traveler rods supported by the table and having their upper ends disposed within the openings, said rods adapted to receive travelers from the shaking table, means for delivering the travelers to the shaking table, means for reciprocating the shaking table, and means within the table for directing the travelers to the openings.



1,399,876. HARVESTER AND LOADER FOR BEETS, POTATOES, &c. WILLIAM Z. PULLIAM, Los Angles, Calif. Filed May 3, 1920. Serial No. 378,509. 2 Claims. (Cl. 55—138.)

1. A harvesting machine comprising a frame including a pair of spaced longitudinal bars and a relatively short

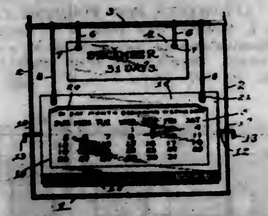


longitudinal bar disposed between them and terminating between the ends of the frame, the rear end of said relatively short bar declining rearwardly, a pair of U-shaped stirrup bars extending from said rear end of said relatively short bar to the other bars and secured to all of said bars, and rearwardly extending slats secured at their front ends to said stirrup bars; together with diggers delivering onto said slats, and conveyers operable over said slats.

1,399,877. SOUND-GENERATOR. MICHAEL I. POTIN, Norfolk, Conn. Filed Feb. 4, 1918. Serial No. 215,291. 11 Claims. (Cl. 179—1.)

1. A generator of compressional waves comprising a stiff cylindrical body constituting one element of an electrical condenser, a second condenser element associated therewith, a dielectric interposed between said elements for preventing a conductive flow of current therebetween, and means for imparting to the condenser varying electromotive forces of a frequency corresponding to the frequency of the compressional waves to be produced.

1,399,878. WINDOW-SCREEN CONSTRUCTION. WILLIAM H. RAY, Monroe, Mich. Filed Feb. 28, 1919. Serial No. 279,813. 16 Claims. (Cl. 296—45.)



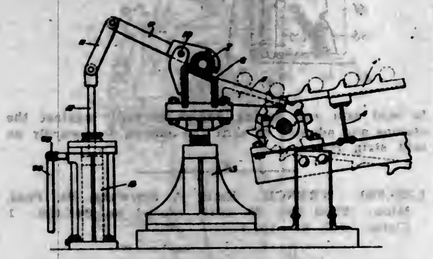
1. In a convertible summer and winter top for an automobile, an upright frame, a top above said frame, inclosing means including a screen and comprising a movable sash which is higher than the screen for said frame, and horizontally disposed guides extending over the upper end of the screen and disposed in position in said top to receive the sash, with the upper end of the sash in the plane of said guides, whereby the sash may be swung outward at its lower end and then raised and moved horizontally over the screen and into an overhead storage position under the top, the sash being manually releasable and operable in this manner entirely from within the automobile.

1,399,879. POWER TRANSMISSION. THOMAS PAUL REDDIN, Bridgeport, Conn. Filed Oct. 11, 1918. Serial No. 257,690. 1 Claim. (Cl. 74—34.)

A power transmission having alined driving and driven shafts and jack shafts parallel thereto, planet pinions carried by said driven shaft, and geared to said driving shaft, gears carried by said jack shafts, and a compound sun and orbit gear meshing with said planet pinions and with the gears on said jack shafts, said driving shaft being alternately geared to said jack shafts.

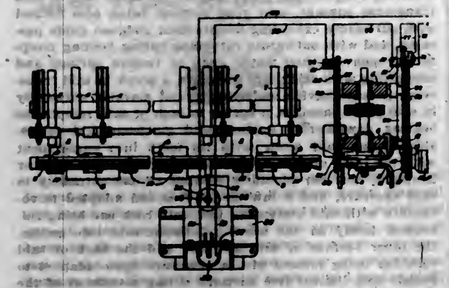
1,399,880. CALENDAR. HUGH T. REED, Chicago, Ill. Filed Apr. 18, 1921. Serial No. 462,200. 6 Claims. (Cl. 40—119.)

1. In a calendar, the combination with a stand having end supports, of a cross bar extending between the upper end portions of said supports, a pack of calendar cards hung from said cross bar, another cross bar for supporting the pack in inclined position for the purpose specified, there being transversely extending notches in the edges of said supports for detachably holding said last mentioned bar in place.



1,399,881. APPARATUS OR MEANS FOR AUTOMATICALLY STOPPING GRAMOPHONES AND LIKE MACHINES. JOHN INSHAW RODWAY, Retford, England. Filed Mar. 18, 1920. Serial No. 366,910. 2 Claims. (Cl. 192—116.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. An automatic brake device of the kind set forth for gramophones and the like, characterised in that a freely pivoted lever operated by the sound arm carries a brake pad or shoe adapted to be brought into contact with the periphery of the turntable by the movement of the said arm, the arrangement being such that directly the said pad or shoe contacts with the turntable a toggle action is set up by the rotation of the latter, whereby the re-

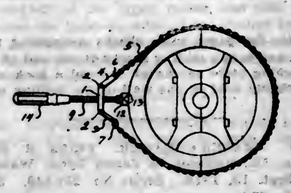


tation of said turntable augments the brake pressure independently of the motion of the sound arm.

1,399,882. TROUGH-DUMPING MECHANISM. MAX ROSENBERG, Pittsburgh, Pa., assignor to National Tube Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Jan. 13, 1921. Serial No. 436,953. 5 Claims. (Cl. 80—42.)

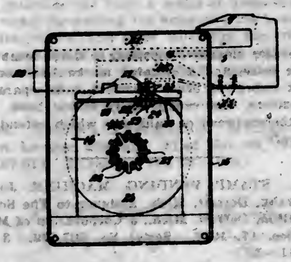
5. The combination with the dumping trough of a pipe cooling table having a hinged cover, of a fluid actuated piston for operating said cover, a valve adjacent one end of said trough for controlling the inlet of fluid to said piston, a second valve adjacent the other end of said trough for controlling the exhaust from said piston, a lever adjacent each end of said trough, said levers being fulcrumed intermediate their ends in forked bearings on said trough and having one end slidably connected to said valves, and a rocker block on the other end of each of said levers, said rocker blocks having a tapered recess therein adapted to receive the pipe passing under said cover, thereby rocking said levers and actuating said lever.

1,399,883. TROUGH-COVER-LIFTING MECHANISM. MAX ROSENBERG, Pittsburgh, Pa., assignor to National Tube Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Jan. 13, 1921. Serial No. 436,954. 7 Claims. (Cl. 80—42.)



7. In a pipe mill, the combination with the sizing rolls and cooling table of said mill, said cooling table having a dumping trough, a hinged cover for said trough and means for closing the pathway to said rolls, of electrically operated means for controlling the movement of said pathway closing means and said dumping cover, said controlling means being arranged to close said pathway when said dumping cover is lifted, and to hold said pathway closed until the pipe is released by said dumping cover.

1,399,884. PLATE-MAGAZINE FOR CAMERAS. ALFRED A. RUTTAN and CHARLES B. HUTCHINGS, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 13, 1920. Serial No. 365,470. 15 Claims. (Cl. 95—90.)



1. In a plate magazine for cameras, the combination with a casing embodying two plate chambers and an intermediate exposure opening partly in register with both chambers, of a shifter adapted to transfer a plate from one of said chambers into registry with the exposure opening.

1,399,885. CHAIN CLAMP. JOHN HENRY RYAN, Brighton, Mass. Filed Mar. 2, 1921. Serial No. 449,142. 2 Claims. (Cl. 81—65.)

1. In a device for the purpose indicated, a head, a link jaw connected to one end of the head, a link jaw connected to the opposite end of the head and provided with a hook, a flexible clamp connected to the first link jaw and passing about the work to be clamped and having its other end adapted to detachably engage said hook, and means adjustable through the head and bearing upon the work, for drawing the flexible clamp taut.

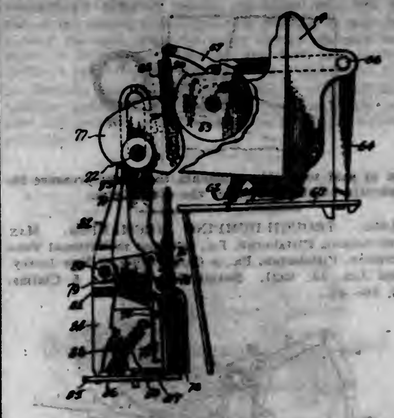
1,399,886. DOOR-LOCKING MECHANISM. ANGELO DOMENICO SARRA, New York, N. Y. Filed Nov. 5, 1920. Serial No. 421,945. 4 Claims. (Cl. 70—53.)

1. A lock of the type described comprising a casing, a sliding bolt mounted therein, a tensioned dog carried by

the belt, positioned within the casing below the belt and having spaced notches thereon extending under the casing having peripheral outlines adapted to receive the fastened dog carried by the belt to shift the belt within the casing and independently operating means associated with the dials to position the notched edges thereof for reception of the dogs.

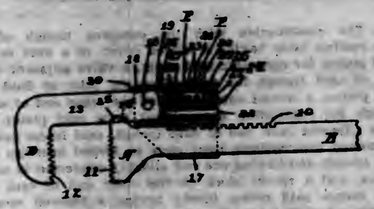
1,399,827. SALES-CHECK HOLDER AND MOUCHER THEREFOR. WALTER H. SAWYER, Philadelphia, Pa., assignor to Harry R. Keen, Philadelphia, Pa. Filed Aug. 15, 1919. Serial No. 317,901. 1 Claim. (Cl. 211—87.)

A holder for paper sales checks comprising means to surround and hold a pack of checks at one end of the pack, and a backing plate having at one end a hook straddling and detachably held on one wall of the holding means.



1,399,868. ERASER-CLEANER. FRANK M. SCHAEFER, Chicago, Ill., assignor to James Lynn, Wabash, Ind. Filed Sept. 19, 1918. Serial No. 254,849. 3 Claims. (Cl. 15—25.)

3. An eraser cleaner comprising a shaft, means for rotating the same, and a cleaning mechanism mounted on said shaft embracing brush members, rods separating the brush members, and centrifugally acting hook members disposed therebetween on said rods which extend parallel to the shaft.

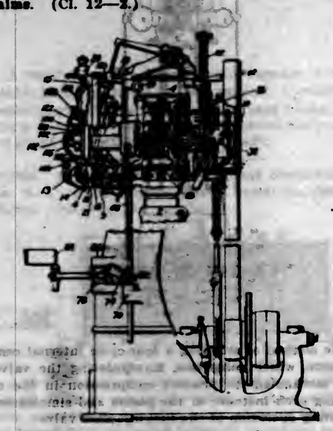


1,399,889. STAMP-VENDING MACHINE. JOSEPH J. SCHERMACK, Detroit, Mich., assignor to The Schermack Corporation, Detroit, Mich., a Corporation of Michigan. Filed Dec. 17, 1917. Serial No. 207,579. 3 Claims. (Cl. 211—33.)

3. In a stamp vending machine, a strip frame adapted to have stamps move downwardly in front thereof, a drive shaft above said frame, a slotted arm on said shaft, a cam on said shaft adapted to reciprocate said arm, sliding stamp feeding device in front of said strip frame attached

to said arm and having fingers normally against the stamps and adapted to shift the stamps downwardly on said strip frame.

1,399,890. WRENCH. EMIL P. SCHWARZ, St. Paul, Minn. Filed Dec. 30, 1919. Serial No. 348,428. 1 Claim. (Cl. 81—167.)

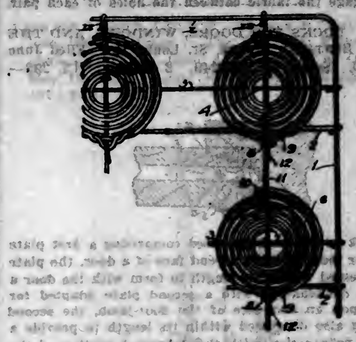


A wrench, comprising, in combination, a stationary jaw member having a handle bar, thread engaging teeth on one edge of the handle bar, a jaw extending from one end of the handle bar, side guides projecting from the jaw portion and a bearing between said side guides, a yoke sliding longitudinally on said handle bar having an aperture in one end and a transverse passage across said engaging teeth, said passage being closed at its outer end by an integral connecting portion and formed with a handle bar receiving longitudinal guide way at the inner end of said transverse passage, said yoke member being also formed with outwardly extending longitudinal gudgeon guide passages, and with outwardly extending spring holding receptacles open at their outer ends to receive springs and connecting with said guide passages, a screw in said transverse passage having gudgeons in and movable outwardly in said guide passages, a spring in each of said receptacles bearing downwardly against said gudgeons and releasably urging said screw with its teeth into engagement with the teeth of said handle bar, a movable jaw member having a rock bar pivotally secured at one extremity in said aperture, and a jaw on its free end adapted to cooperate with said stationary jaw, said rock bar being fulcrumed freely on the bearing between said side guides, the inner surface of said aperture and the back of said rock bar being formed with a clearance space adapted to permit only limited free outward tilting movement of the rock bar in the yoke and consequent limited opening movement of the movable jaw, and closures in the outer ends of said spring holding receptacles.

1,399,891. PROCESS OF ISOLATING FIBER FROM RAMIE. DONALD H. GOODY, Dedham, Mass., assignor to Arthur D. Little, Incorporated, Cambridge, Mass., a Corporation of Massachusetts. Filed Aug. 7, 1916. Serial No. 113,280. 2 Claims. (Cl. 69—4.)

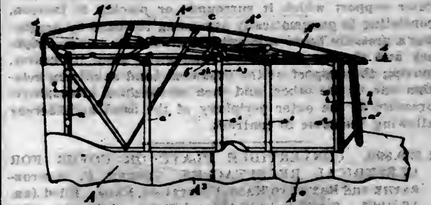
1. Process of isolating fiber from ramie, which consists in subjecting the raw material in the presence of water to mechanical force causing progressive disintegration of the material and detachment of the pith from the fiber and simultaneously removing the insoluble impurities and the pith by screening while retaining the purified fiber.

1,399,892. LASTING-MACHINE. THOMAS H. SMELY, Malden, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 17, 1920. Serial No. 271,642. 18 Claims. (Cl. 12—2.)



1. In a machine of the class described, the combination of a gripper having its shank disposed substantially perpendicular to the shoe bottom, means for operating the gripper to seize the stock, means for effecting updraw and overdraw movements of the gripper, means for giving the gripper a lateral movement, after it gripe the stock, inwardly of the shoe, and means for giving the gripper a turning movement in a similar direction.

1,399,893. SHUTTLE-EYE. JOHN C. SHAMBOW, Woonsocket, R. I., assignor to Shambow Shuttle Company, Woonsocket, R. I. Filed Feb. 12, 1921. Serial No. 444,823. 8 Claims. (Cl. 139—46.)



1. In a shuttle, an eye having an axial passage and formed with a radial slot leading therefrom and a diagonal slot terminating in a guide hole, and having a peripheral cut-out extending from the radial slot upwardly, a guard beam by the shuttle body and extending above the lower end of the peripheral cut-out, and a pair of cutting projections extending into the axial passage and having their free ends confronting and spaced and formed to permit the passage of the yarn and to cut same upon any bunches or knots borne by the yarn encountering the projections.

1,399,894. BED-SPRING. JOHN WILLIAM SEARS, Muskogee, Okla. Filed May 14, 1920. Serial No. 381,454. 2 Claims. (Cl. 5—39.)

1. A bed spring comprising an upper frame having longitudinally extending strands, a lower frame, spiral springs positioned between the frames in longitudinally extending rows and having their lower ends connected with the lower frame and their upper ends at one side intertwined with the longitudinally extending strands of the upper frame and bent to provide outstanding eye extensions within the intertwined portions whereby the upper portions of the springs will be held against turning and against movement upon the longitudinally extending strands of the upper frame, and side arms extending from the opposite sides of the springs and having their end portions bent to provide hook elements extending through the eye extensions of adjacent springs to slingedly connect the springs.

1,399,895. AUTOMOBILE-CURTAIN. FRANK L. SHOEMB, Cincinnati, Ohio. Filed Jan. 6, 1919. Serial No. 269,851. 9 Claims. (Cl. 296—143.)

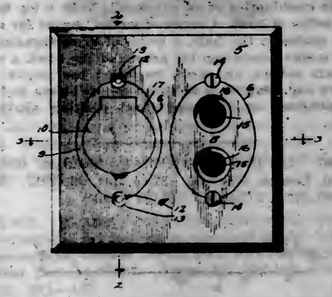
1. The combination of an automobile body, a top having in it a series of bows, a series of guides, means for securing the guides to the body, a series of arms engaging the guides, means connecting the arms and the bows, a series of curtain rollers, and arms mounting the rollers upon the bows and adapted to hold the rollers either in transverse positions or in longitudinal position above the guides.

1,399,896. LACING-FASTENING. MICHAEL HOLROYD SMITH, London, England. Filed Mar. 26, 1917. Serial No. 157,577. 2 Claims. (Cl. 24—140.)

2. Lacing fastenings embodying therein fabric turned upon itself and having a plurality of pairs of small holes

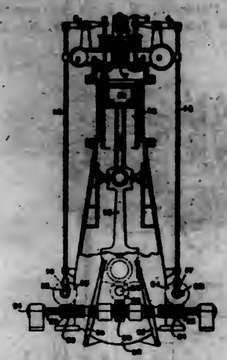
along the bight of the fabric, and a sequence of staples having prongs passed through the holes of each pair and bent toward and lapped upon each other, whereby said prongs engage the fabric between the holes of each pair.

1,399,897. LOCKS FOR DOORS, WINDOWS, AND THE LIKE. BENJAMIN STOREN, St. Louis, Mo. Filed June 28, 1920. Serial No. 392,249. 3 Claims. (Cl. 292—340.)



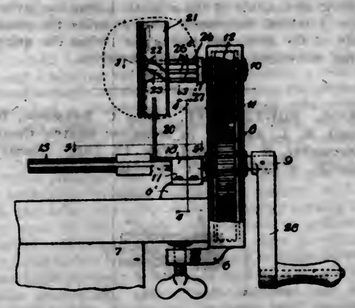
1. A lock of the kind described comprising a first plate adapted for location upon an end face of a door, the plate being depressed within its length to form with the door a pocket, in combination with a second plate adapted for location upon an end face of the door-jamb, the second plate being also depressed within its length to provide a cavity for coöperation with the depressed portion of the first plate, and a hook integral with one side edge of the second plate and adapted to fit within said pocket when the door is closed, the hook lying within the depression of the second plate and its outer face being flush with the outer face of the second plate to each side of said depression.

1,399,898. APPARATUS AND METHOD FOR HANDLING RUBBER GOODS. THOMAS SLOPER, Devizes, England. Filed June 17, 1921. Serial No. 478,319. 14 Claims. (Cl. 18—2.)



1. A method of removing an endless band, from a circular support which it surrounds or placing it thereon, consisting in pneumatically expanding the band by producing a pressure below atmospheric around its outer periphery and thereby flexing the band away from its center, moving the support or the expanded band axially in relation one to the other, and then establishing atmospheric pressure at the outer periphery of the band and thereby allowing the same to contract.

1,399,899. CONVERTIBLE PLATE OR COVER FOR ELECTRICAL RECEPTACLES. JOSEPH F. SONTGRATHE and RAYMOND KALB, Cherryvale, Kans. Filed Jan. 18, 1921. Serial No. 438,184. 4 Claims. (Cl. 247—23.)



1. A device of the character described comprising a face plate for an outlet box having a plurality of like main openings, closure plates detachably mounted within said openings and being interchangeable with each other, said closure plates having their outer surfaces substantially flush with the outer surface of the face plate, each closure plate being adapted to coöperate with a different type of electrical unit, and means for holding the closure plates and face plate in place in use.

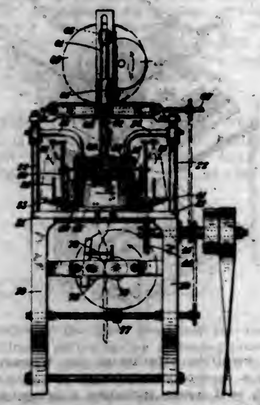
1,399,900. METHOD OF AND APPARATUS FOR MANIPULATING INTERNAL-COMBUSTION ENGINES. CARL G. SPRADO, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Oct. 22, 1919. Serial No. 332,565. 18 Claims. (Cl. 123—41.)

1. The method of stopping a four-cycle internal combustion engine, which comprises, manipulating the valve operating mechanism to produce compression in the cylinder during each instroke of the piston and simultaneously interrupting operation of the fuel injection valve.

1,399,901. FRUIT AND VEGETABLE PARER. PAUL SPROMS, Chicago, Ill. Filed Apr. 10, 1920. Serial No. 372,888. 7 Claims. (Cl. 146—8.)

1. In a device of the class described, a revoluble holder, a threaded shaft having its axis substantially parallel with the axis of revolution of said holder, a carrier provided with a tapped hole to receive and coact with said threaded shaft whereby revolution of said shaft shall cause a movement of said carrier longitudinally thereof in either direction depending upon the direction of such revolution, means for actuating said holder and said shaft, and a cutter member yieldingly mounted on said carrier to engage an article on said holder and constructed to cut during the movement of the carrier in either direction.

1,399,902. FRUIT AND VEGETABLE PARER. PAUL SPROMS, Chicago, Ill. Filed July 15, 1920. Serial No. 396,484. 7 Claims. (Cl. 146—8.)

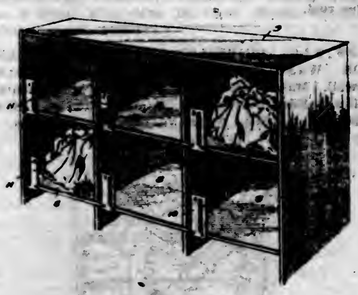


1. A vegetable parer comprising a support, a revoluble vegetable holder mounted on said support, a cutter carrier movable longitudinally of the axis of said holder, a blade having a narrow cutting end, and a substantially spherical guard about the cutting end of said blade.

1,399,903. DRYING DEVICE. GEORGE STEVENSON, Camden, N. J. Filed July 22, 1920. Serial No. 398,125. 4 Claims. (Cl. 34—18.)

1. A device of the character described for use in connection with printing presses for printing sheet material, including a burner pipe having a row of holes in its side to cause flames to be projected laterally therefrom in a direction substantially parallel to the printed sheet; and a screen extending laterally substantially parallel on its top with the flames and printed sheet and forming a housing for said flames; substantially as described.

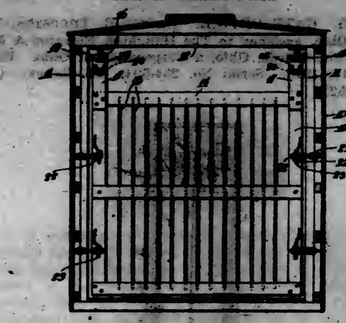
1,399,904. WEAVING-MACHINE. THOMAS TERRELL, London, England. Filed Feb. 24, 1920. Serial No. 360,951. 17 Claims. (Cl. 139—7.)



17. A mandrel for circular looms, comprising a body portion having part of its surface provided with a spiral shoulder, the angle of which is substantially equal to the angle of the spiral on which the weft threads are laid, substantially as described.

1,399,905. GATE DEVICE. BENNET B. THURSTON, Toledo, Ohio, assignor to The Haughton Elevator & Machine Co., Toledo, Ohio, a Corporation of Ohio. Filed May 15, 1918. Serial No. 234,594. 25 Claims. (Cl. 187—52.)

25. An elevator car, a car gate, hoist means for the gate, a guide carried by the gate, a block movable in the guide, a line providing a bight about the block and connecting the gate and car, a dog automatically thrown on initial travel of the block, and a well for the car having a two-part door, simultaneous travel effecting connecting means between the two parts of the well door, one of said doors being provided with means to be engaged by the dog whereby opening of car door may also open the well door.

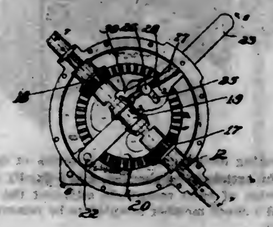


1,399,906. LAUNDRY-CHECKING DEVICE. JOHN H. TODD, Cleveland, Ohio. Original application filed Apr. 24, 1919, Serial No. 292,326. Divided and this application filed Apr. 15, 1920. Serial No. 374,037. 3 Claims. (Cl. 40—19.5.)

1. A checking device comprising a series of open receptacles for the article to be checked, a key fixedly secured to the oute redge of each receptacle adjacent the open end thereof, and a check member adapted to be removably fitted to each key.

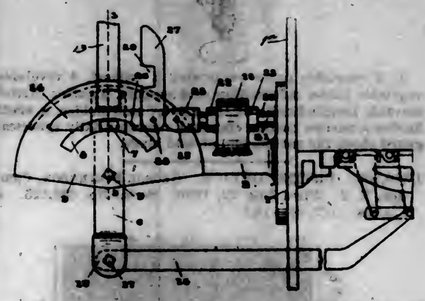
1,399,907. [WITHDRAWN.]

1,399,908. MOVABLE PARTITION FOR STOCK-CARS. Thomas A. Vassos, Wilson City, N. C. Filed Sept. 9, 1920. Serial No. 408,816. 1 Claim. (Cl. 119—11.)



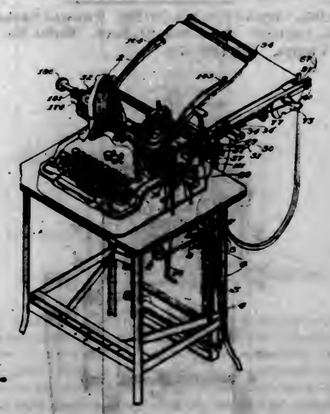
The combination with a housing member provided with vertical braces, spaced from the sides thereof, of rails positioned beneath the roof thereof, a partition member, hinges connecting said partition member and said rails, said hinges being slidable longitudinally on said rails, means to retain said partition member in a fixed position with respect to said housing member, comprising means carried by said partition member adapted to encircle said spaced vertical braces and means carried by said partition to lock said encircling means.

1,399,909. METAL RAIL-TIE. John Kelly Wadsworth, Cuba, Ala. Filed Feb. 7, 1921. Serial No. 443,233. 6 Claims. (Cl. 238—282.)



6. A device of the class described comprising a hollow metal tie including spaced longitudinal walls having inturned supporting flanges at their upper edges, spaced rails resting on said flanges, and clamping means for the rails slidable between said walls and beneath said flanges, being equipped with spaced shoulders on which said flanges rest.

1,399,910. DRIVE AND REVERSING MECHANISM FOR WASHING-MACHINES. Charles Wilhart, Lowell, Mass., assignor, by mesne assignments, to Gillespie-Eden Corporation, a Corporation of Delaware. Filed Oct. 6, 1919. Serial No. 328,865. 2 Claims. (Cl. 74—50.)

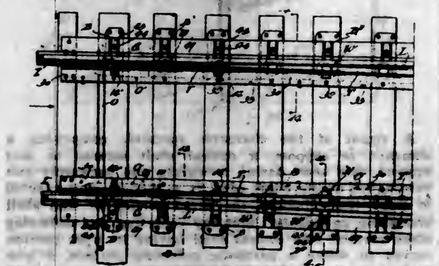


1. The combination with a drive for a washing machine of a reversing mechanism for the clothes drum comprising a gear connected to the clothes drum, a pair of bevel pinions normally meshed therewith, an inclined drive shaft on which said pinions are journaled, a clutch element on the drive shaft adapted to interlock with said pinions to drive the same, a pivoted star wheel carried on said gear having one tooth longer than the others, a shifting lever for the clutch element, and pins on said gear and lever for co-action with the star wheels, the pin on the lever adapted to adjust the same to bring the long tooth into contact with the gear pin to effect shifting of the lever to reverse the drive to the gear after a predetermined number of revolutions thereof.

1,399,911. GRATE SHAKING AND DUMPING MECHANISM. Robert C. White, Irondale, Ala. Filed Nov. 15, 1920. Serial No. 424,312. 8 Claims. (Cl. 126—169.)

1. In a grate shaking mechanism, a pivoted shaking lever having a projection, a notched stop member movable into position to engage said projection to limit the angular movements of said lever, a second movable stop member movable to engage said projection and hold the lever in neutral position, and a common means to adjust said stop members.

1,399,912. MANIFOLD ATTACHMENT FOR TYPEWRITERS. Fred G. White, Kansas City, Mo., assignor to Albert Pico, Kansas City, Mo. Filed Oct. 7, 1918. Serial No. 257,250. 18 Claims. (Cl. 197—126.)

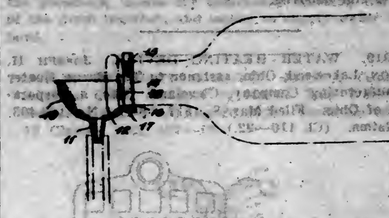


1. In a manifold attachment for typewriters, means for pulling a predetermined length of paper through the attachment, said means including a swinging frame normally inclined rearwardly, means for releasing the frame to permit it to swing into vertical position, and a supplemental extensible frame on the first named frame mounted for movement longitudinally of the first named frame after the first named frame has swung to a vertical position.

1,399,913. AEROPLANE. Ernest E. Wood, Minneapolis, Minn. Filed Mar. 10, 1921. Serial No. 451,228. 9 Claims. (Cl. 244—14.)

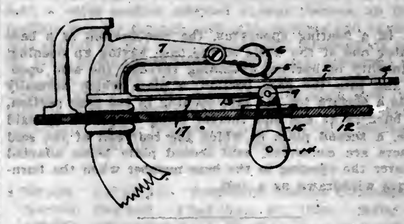
1. An aeroplane comprising, a fuselage, framework supported on the fuselage, a main plane supported on the framework, said main plane being curved transversely and having downwardly inclined end portions, head and tail planes at the ends of the main plane, and transversely curved subsidiary planes mounted at the sides of the main plane and movable to occupy expanded and folded positions.

1,399,914. RAILWAY-SWITCH. John Alonzo, Deborgia, Mont. Filed May 15, 1920. Serial No. 381,725. 28 Claims. (Cl. 246—433.)



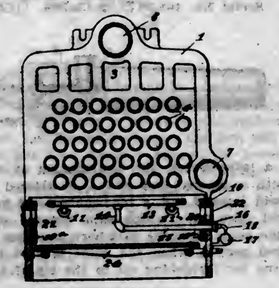
2. A railway switch comprising a switch tongue movable vertically throughout its length, a plurality of horizontal rotary wedges supporting said tongue and mounted on vertical axes, gear teeth on said wedges, a longitudinal rack bar meshing with the teeth on all wedges, and means for sliding said rack bar.

1,399,915. TAB-ATTACHING DEVICE FOR LACES. Arthur E. Anderson, Oak Park, Ill. Filed May 29, 1918, Serial No. 237,224. Renewed Aug. 25, 1919. Serial No. 319,647. 8 Claims. (Cl. 81—15.)



1. In a device of the class described the combination of a pair of hinged plates having matching grooves in the inner faces thereof adapted to compress and form a tab around a lace, one of said plates being provided with a perforation at the end of the groove thereof, adapted to receive the lace therethrough for holding same in the groove.

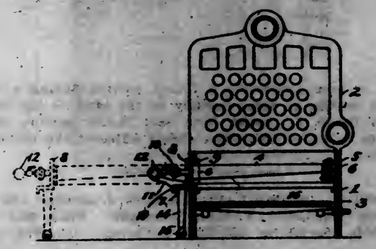
1,399,916. LIQUID-DROPPER. Louis V. Arnson, Newark, N. J. Filed June 22, 1921. Serial No. 479,561. 2 Claims. (Cl. 215—56.)



1. A tube comprising a funnel portion having a cut away portion to approximately fit the same to the neck of a bottle, an outlet from said funnel portion, and means to secure the device closely adjacent the lip of a bottle.

1,399,917. PHONOGRAPH. Evelyn J. Rupert Atkinson, Melbourne, Victoria, Australia. Filed Nov. 3, 1919. Serial No. 335,339. 2 Claims. (Cl. 274—1.)

1. In a phonograph for reproducing from disk records, a rotatable support for the record, a rotatable shaft arranged parallel to the surface of said support and disposed radially with respect to said support, a wheel engaging said surface and splined to said shaft, means for rotating said shaft, and means controlled by a record on said support for moving said wheel longitudinally of said shaft.



1,399,918. WATER-HEATING DEVICE. Joseph H. Bacon, Lakewood, Ohio, assignor to The Bacon Heater Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 18, 1916. Serial No. 85,828. 3 Claims. (Cl. 110—22.)

2. In a water heating device, a base portion adapted to support a water containing portion, a series of grate bars supported by the base portion adjacent the lower part thereof, an opening through which coal may be supplied to the grates, a door for closing the opening, a plurality of gas burners within the said base and ex-

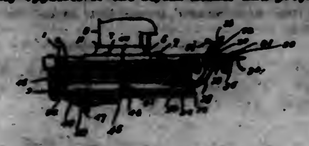
tending transversely thereof, means for supporting said gas burners said base portion having openings in a wall thereof through which the said gas burners may be inserted and removed.

1,399,919. WATER-HEATING DEVICE. Joseph H. Bacon, Lakewood, Ohio, assignor to The Bacon Heater Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 8, 1917. Serial No. 153,403. 2 Claims. (Cl. 110—22.)

2. In a heating apparatus, the combination of a base member one of the walls of the base having an opening, a plurality of burners extending through the said opening and into the base portion, a plate which normally forms a closure for the said opening in the base portion, the burners at one end thereof being supported by said plate, a second plate to which the rear end of the said burners are connected, said second plate being adapted to cover the opening in the base member when the burners are withdrawn as a unit.

1,399,920. WHOLE-RICE MEAL. Moses M. Baumgartner, Freeport, Ill. Filed Apr. 19, 1920. Serial No. 374,921. 1 Claim. (Cl. 99—11.)

A whole rice meal consisting of sterilized dried rice kernels embodying the whole natural rice, including the germ and cuticle with the starch dextrinized and the fats and proteids stabilized, and reduced to a finely divided form.

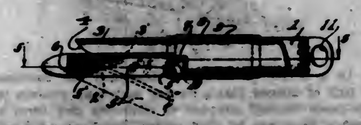


1,399,921. LATHE-CENTER. Lyle Berman, Milwaukee, Wis., assignor to Manufacturers' Hardware Corporation, Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 14, 1919, Serial No. 289,906. Renewed May 12, 1921. Serial No. 468,977. 2 Claims. (Cl. 82—33.)

1. In a lathe-center, the combination of a shank provided with a tapered end and a shouldered portion, adjacent said tapered end, a renewable point provided with a tapered bore into which said tapered end fits, the end of the point adjacent said bore abutting against said shouldered portion when the point is held to the work, and means for furnishing oil to the tip of the point.

1,399,922. REPRODUCER. Josey Belfiddio, Bridgeport, Conn. Filed Apr. 20, 1920. Serial No. 375,804. 4 Claims. (Cl. 274—28.)

3. A reproducer comprising a circular body, a single diaphragm in said body, a double stylus holder secured to one side of the body, a support secured to the body diametrically opposite to the stylus holder and projecting



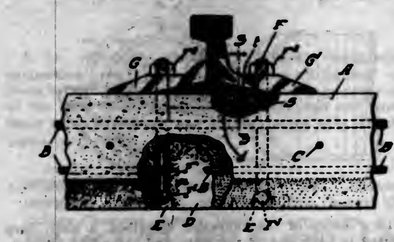
over the diaphragm, a single stylus holder pivoted to said support, and means connecting the stylus holders to the diaphragm.

1,399,923. SIGNALING DEVICE. William Vreeland Bimson, Hillsboro, Oreg., assignor of one-half to Arthur C. Shute, Hillsboro, Oreg. Filed Mar. 18, 1920. Serial No. 366,728. 1 Claim. (Cl. 88—1.)

A signal of the character specified, comprising a standard or support, a conical shell secured to said support, said shell flaring forwardly and outwardly and surrounded on its outer edge by a vertical ring adapted to carry traffic indicia, the flared portion of said shell presenting an annular light ray collecting and deflecting plane surface, said conical shell having its apex portion curved to define a parabolic reflecting surface, a lens held at the focus of said parabola, the diameter of said lens being less than the diameter of the parabolic area and spaced forward of the vertical plane of the juncture of the flared and parabolic portions of the shell, whereby an annular passage is defined between the lens and the shell to permit passage of light rays from the headlight of the approaching vehicle device, which have been collected and deflected by the plane surface of the shell into the parabolic reflector and also received and reflected by the parabolic reflector to be reflected forwardly through the lens to the approaching vehicle.

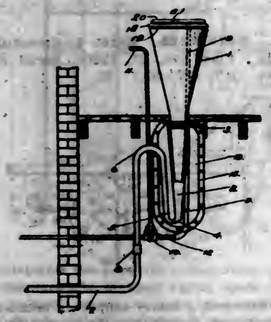
1,399,924. FABRIC-CUTTING DEVICE. Andrea Lassen Berthelsen, Chicago, Ill. Filed Apr. 19, 1920. Serial No. 374,975. 10 Claims. (Cl. 30—9.)

1. A fabric cutting device of the class described, comprising a blade holder, and means movable along the holder to thereby change the point of the blade edge



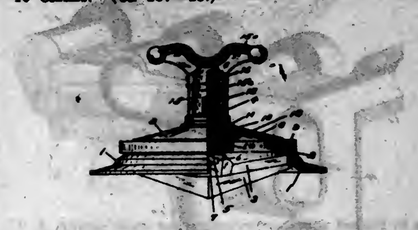
which is operative to effect the cutting action, said means being constructed to guide the severed portions of the material laterally outward with respect to the blade edge.

1,399,925. WASHING-BOWL. Carl P. Bohland, St. Paul, Minn. Filed Apr. 5, 1920. Serial No. 371,215. 8 Claims. (Cl. 137—21.)



1. In a device of the class described, a shallow receptacle for a washing fluid providing an endless submerged course for vehicles, said course sloping downwardly and inwardly to a central area, said area being depressed to form a settling basin, the inclination of said course serving to aid drivers in the management of their vehicles and also serving to direct silt accumulating from the vehicles toward the settling basing during the agitation of the liquid by the moving vehicle.

1,399,926. CONCRETE TIE AND RAIL-FASTENING. Martin A. Bonk, Manitowoc, Wis. Filed Mar. 17, 1920. Serial No. 366,684. 2 Claims. (Cl. 238—377.)



2. A tie provided with cross slots at its underside, rail fastening bolts passing through the tie and having T-heads which lie in the said cross slots, clamps bearing upon the flanges of the rail and receiving said bolts, and nuts upon the free ends of the bolts to hold the parts in assembled position and a cushioning filler block spacing the bolts at each side of the rail.

1,399,927. TOILET. David S. Buck, Pueblo, Colo. Filed June 15, 1920. Serial No. 389,215. 3 Claims. (Cl. 4—20.)

2. In apparatus of the character described, a bowl, a substantially vertical trap member connected with the lower end of the bowl, a gooseneck connected with the lower end of the trap member, a two part heat insulating drum inclosing the trap member and the inner arm of the gooseneck, means for detachably securing the parts of the drum together, and means to supply water to the bowl.

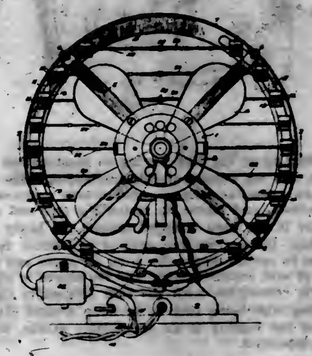
1,399,928. IRRIGATION-VALVE. John A. Case, Los Angeles, Calif., assignor to Martin Iron Works, Los Angeles, Calif. Filed Aug. 24, 1921. Serial No. 496,062. 10 Claims. (Cl. 137—18.)

1. In an irrigation valve, a base member having a valve seat, a valve member adapted to seat thereon, an intermediate member through said valve member and having a part seating on said valve member, said intermediate member being internally threaded, a valve stem connected with said base member and threaded into said intermediate member, and a handled member fitting upon said intermediate member and having a handle for turning said intermediate member independently of said valve member to seat and unseat the said valve member.

1,399,929. LEGGING. Frederick George Chamberlin, Norfolk, England. Filed Aug. 30, 1920. Serial No. 406,078. 10 Claims. (Cl. 36—2.)

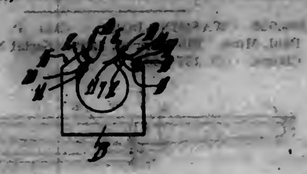
1. A legging or the like having in combination means to fasten the top corner of the overlapping edge of the legging, an encircling strip of substantially uniform width at the bottom, and means to fasten the free end of said strip after it has been wrapped around the lower end of the legging, the overlapping edge of the latter being so formed as to extend diagonally from its upper end to the top edge of said encircling strip and the length of the strip beyond its connection with the said diagonally extended overlapping edge being such as to wrap around the lower portion of the legging to an appreciable extent, substantially as described.

1,399,930. COMBINED INTAKE AND EXHAUST MANIFOLD. George Florian Clark, Des Moines, Iowa. Filed Dec. 27, 1919. Serial No. 347,673. 1 Claim. (Cl. 123—122.)



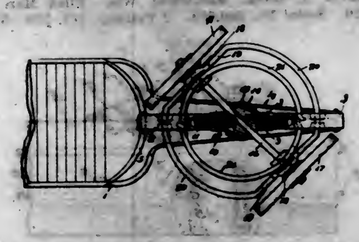
A combined intake and exhaust manifold comprising a body having inner and outer spaced walls forming an

exhaust passage therebetween, laterally extending intake and exhaust connecting tubes, the exhaust tube of which communicates with the said exhaust passage, a lower intake pipe, and an intake channel formed in the outer wall with a portion of its surface exposed to the exhaust passage and including an upper horizontal distributing portion in communication at its opposite ends with the tubular intake connections, a lower horizontal portion in communication with the intake pipe, curved sections ex-



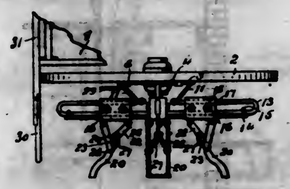
tending upwardly and inwardly into one another from the ends of the lower horizontal portion and partially choked at their upper meeting ends by a laterally constricted section forming a relatively narrow slot like passage way above the upper meeting ends of the curved sections and between the same and the distributing portion approximately at the center of the latter, said upper meeting ends of said curved sections having a fuel guiding portion to deflect fuel upwardly through said slot-like passage.

1,399,931. ELECTRIC FAN HEATER. JOSEPH C. CLOTTS, Fort Thomas, Ky. Filed Nov. 23, 1920. Serial No. 426,065. 10 Claims. (Cl. 219—42.)



1. In a heat circulating apparatus, removable heating elements electrically connected in parallel and disposed in the air current path of an electric fan, electrical connections for said heating elements in circuit with the fan power current, and means for making and breaking the said heating circuit independently of the fan circuit.

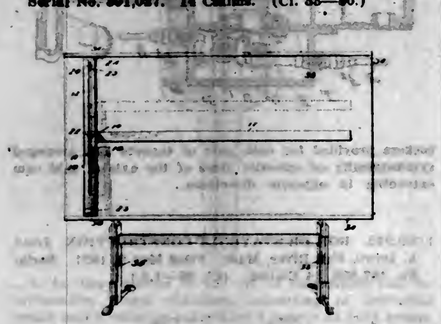
1,399,932. DIE. EDWARD W. CLOUTIER, Conway, Mass. Filed May 24, 1920. Serial No. 383,684. 3 Claims. (Cl. 10—121.)



3. A thread cutting device, having the usual leading portion and a tapering portion at the entrance end of the die to form the usual cutting portion, and a second tapered portion substantially at right angles to the first tapered portion and intersecting therewith, the intersection of said tapered portions constituting the cutting edge of the cutting portion.

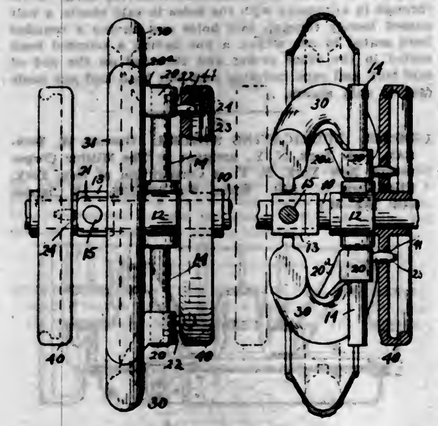
1,399,933. DRIVE FOR TRUCKS AND THE LIKE. HENRY L. CRAVEN, Dalton, Mich. Filed Nov. 17, 1919. Serial No. 338,666. 4 Claims. (Cl. 180—50.)

1. In a device of the character described, a body, bars connected to each end of the body and extending horizontally toward each other, each of said bars being formed with a central ring and slotted lengthwise at the central portion thereof, a ring head mounted within the ring, a gear attached to said head, projections extending inwardly from opposite sides of the band, a spherical driving member located within the band and provided with grooves in opposite sides into which the projections extend, an axle passing through the driving member, wheels mounted at the ends of the axle, and means for mounting the axle on the body and permitting the same to turn to different angles with respect to the body, substantially as and for the purposes described.



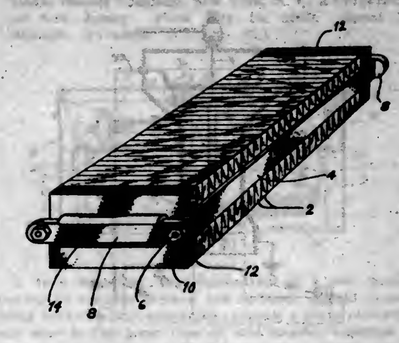
1,399,934. WIRE-REEL. ETHEL L. CROSWHITE, Kansas City, Mo. Filed Dec. 27, 1920. Serial No. 433,106. 2 Claims. (Cl. 242—95.)

1. In a wire reel, a rotary support, a member carried by said support and having two diametrically opposite U shaped radial portions, two clamping plates respectively radially adjustable on said U-shaped portions, means for securing each clamping plate in the position in which it



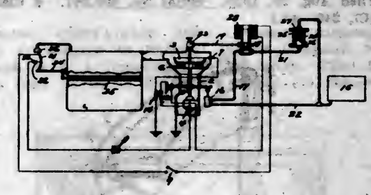
may be adjusted and for holding it from turning, two coil holding members respectively pivoted to said clamping plates and movable to and from a coil holding position, and releasable means for locking the coil holding members in the holding position, substantially as set forth.

1,399,935. ADJUSTABLE BLACKBOARD T-SQUARE. MILO L. CURTS, Bloomington, Ind. Filed June 23, 1920. Serial No. 391,087. 14 Claims. (Cl. 33—90.)



1. An adjustable blackboard T-square comprising a supporting arm capable of lengthwise adjustment and a blade carried by the arm, said arms having gripping means at the ends thereof adapted to engage and bite into the inner faces of the top and bottom ledges of a blackboard frame or the like.

1,399,936. COLLAPSIBLE TIRE-CORE. HAROLD A. DENMIRE, Akron, Ohio, assignor to The General Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed July 9, 1921. Serial No. 483,499. 5 Claims. (Cl. 154—9.)

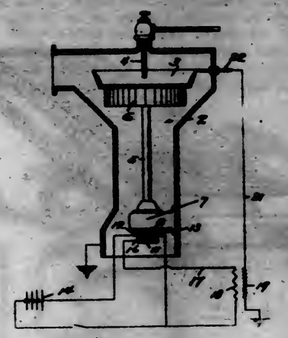


1. In a collapsible tire core, the combination of a shaft, a pair of diametrically opposed radial guide bars each having an inclined groove, a pair of arc-shaped core sections which are slidably supported on said guide bars respectively, each of said core sections having a pin which projects into the groove in the guide bar in which it is supported.

1,399,937. CUTTING-BLOCK. ARMIT C. BENDING, Johnson City, N. Y. Filed July 3, 1920. Serial No. 393,599. 7 Claims. (Cl. 164—78.)

1. A cutting block having its cutting body formed of a composition of cellulose fiber and leather.

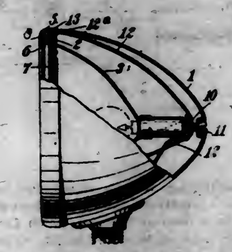
1,399,938. FUEL-CONTROL SYSTEM FOR BURNERS. JOHN A. DOBLE, San Francisco, Calif., assignor to Doble Laboratories, San Francisco, Calif., a Corporation of California. Filed Apr. 29, 1918. Serial No. 231,309. 6 Claims. (Cl. 158—36.)



1. The combination with a liquid fuel burner, of an electric motor operatively associated therewith, a circuit for said motor, a conduit through which fuel is conveyed to said burner, a pump in said conduit, an electrically operated valve in said conduit between the pump and the burner, a by-pass connecting the conduit on the pressure side of the pump with the conduit on the intake side of the pump and means in the by-pass connection opposing the flow of liquid therethrough and operating to prevent an excessive pressure in the conduit.

1,399,939. LIQUID-FUEL BURNER. JOHN A. DOBLE, San Francisco, Calif., assignor to Doble Laboratories, San Francisco, Calif., a Corporation of California. Filed July 29, 1918. Serial No. 247,128. 6 Claims. (Cl. 171—97.)

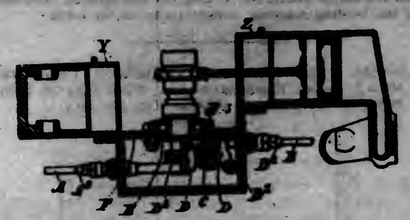
1. The combination with a direct current motor provided with a commutator having regularly spaced conducting segments separated by stripe of insulation, of powers circuit brushes engaging said commutator, a plurality of spaced insulating sections of greater width than the insulating stripe arranged on said commutator, a brush engaging the commutator and adapted to wipe said insulating section, a circuit connected to said brush and an ignition circuit inductively connected to said brush circuit.



2. The combination with a direct current motor provided with a commutator having regularly spaced insulated conducting segments, of power circuit brushes engaging said commutator, a circuit in shunt on the power

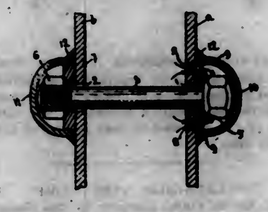
circuit and having a brush engaging said commutator, means on the commutator for opening and closing said

shunt circuit, a transformer having its primary in said shunt circuit and an ignition circuit containing the secondary of said transformer.



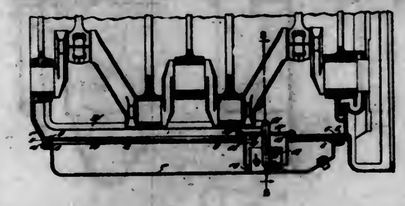
1,399,940. ELECTRIC LAMP FOR VEHICLES. PRIMUS OTTO DOREE, London, England, assignor to S. Smith & Sons (Motor Accessories) Limited, London, England. Filed Aug. 25, 1920. Serial No. 405,947. 6 Claims. (Cl. 240—41.)

1. The combination, with a lamp body, and a front member detachably mounted thereon, of a boss situated within the body at the rear thereof, arms radiating from said boss toward the front of the body, said arms co-acting at the front with the body and being shaped at the front to detachably engage said front member, and means arranged to be actuated from outside the body for moving said boss backward to cause the arms to pull said front member home on to the body, and forward to cause the arms to release the front member whereby the front member may be removed independently of said arms, substantially as described.



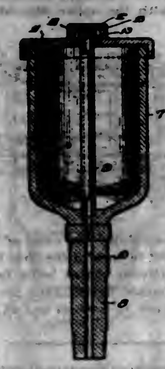
1,399,941. VALVE-OPERATING MECHANISM FOR INTERNAL-COMBUSTION ENGINES. WILLIAM WILSON DOUGLAS and STEPHEN LESLIE BAILEY, Bristol, England. Filed May 12, 1919. Serial No. 296,866. 2 Claims. (Cl. 123—56.)

1. In an internal combustion engine of the twin type the combination with a pair of opposed cylinders offset relative to each other, of a single cam shaft, an inlet and an exhaust valve for each cylinder, a pair of tappets for the two inlet and the two exhaust valves, the tappets of each pair being offset relative to each other in the same relationship as the two cylinders, a single cam provided on said cam shaft for each pair of tappets, and a pair of



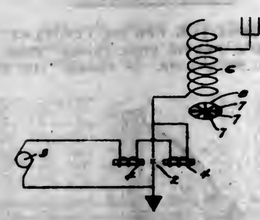
rockers provided for each pair of tappets and arranged symmetrically on opposite sides of the axis of said cam extending in opposite directions.

1,399,942. BOILER STAYBOLT CONSTRUCTION. JOHN A. DOWD, Fall River, Mass. Filed May 9, 1921. Serial No. 467,830. 4 Claims. (Cl. 85—1.5.)



1. A device of the class described comprising a pair of spaced boiler sheets having a pair of substantially oppositely positioned holes therein, sockets having holes therethrough in alinement with the holes in said sheets, a bolt passed loosely through said holes and having a rounded head seated in one socket, a nut having a rounded head seated in the other socket and threaded on the end of said bolt, and caps inclosing said bolt head and nut made fast to said sheets.

1,399,943. LUBRICATING SYSTEM. GEORGE W. DUNHAM, New York, N. Y., assignor to The Militor Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 8, 1919. Serial No. 270,108. 11 Claims. (Cl. 184—6.)



2. In a lubricating system of the character set forth, the combination of two substantially horizontal walls spaced one above the other, an inclosure supported by the lower wall, a suction duct having its receiving end disposed within said inclosure, and a casing carried by the upper wall and extending downward over the inclosure.

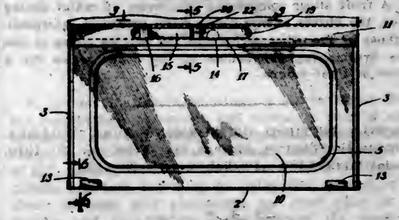
1,399,944. GREASE-CUP. ANTHONY EBERHART, Blue Island, Ill. Filed Sept. 22, 1920. Serial No. 411,902. 6 Claims. (Cl. 184—38.)

2. An improvement in the art of lubricating and decarbonating steam chambers, consisting in delivering steam into a chamber containing a supply of hard grease, melting the grease, and redelivering the steam with the entrapped grease to the chambers, the steam in its passage in both directions passing through a single conduit, said conduit extending through the body of hard grease.

1,399,945. RADIOTELEGRAPHY. HAROLD F. ELLIOTT, Palo Alto, Calif., assignor to Augustus Taylor, San Francisco, Calif. Filed July 24, 1920. Serial No. 398,757. 26 Claims. (Cl. 250—19.)

1. A radio telegraphy transmission system including an antenna circuit, an inductance coil in said circuit, a plurality of isolated overlapping sector circuits inductively connected to said inductance coil, and means for opening and closing the sector circuits.

1,399,946. CONNECTING LINK OR SHACKLE. FREDERIC WILLIAM ERICKSON, New York, N. Y. Filed Jan. 29, 1921. Serial No. 440,928. 4 Claims. (Cl. 24—231.)



1. A connecting link or shackle to unite the separated ends or sections of chain, comprising a wire or bar whose ends are turned inward toward each other with a spiral located on said wire or bar and between the said ends, and rotatable thereon but without endwise movement.

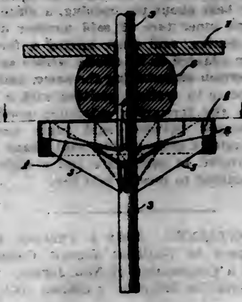
1,399,947. CONTAINER. JOHN J. FERRALL, Ridgewood, N. J., PETER J. SUNDHEIM, Cincinnati, Ohio, and CHARLES H. TRETHEWEY, Queens, N. Y., assignors to National Biscuit Company, New York, N. Y., a Corporation of New Jersey. Filed July 16, 1920. Serial No. 396,655. 5 Claims. (Cl. 220—82.)

1. In a container, the combination of a side member having an opening therein, the material of said member being inwardly beat about the opening, a plate pivoted at one edge to the inner face of said member adjacent an edge of said opening, said plate having a forwardly extending portion adapted to fit closely within said opening, and an edge portion surrounding the same, and means for securing said plate in vertical position with a name card extending over the forwardly extending portion of the same and clamped between said plate and member around the margin of said opening, said means comprising a latch bar pivoted to said plate and a socket on said side member adapted to receive said bar.

1,399,948. CONTAINER. JOHN J. FERRALL, Ridgewood, N. J., assignor to National Biscuit Company, New York, N. Y., a Corporation of New Jersey. Filed July 16, 1920. Serial No. 396,656. 4 Claims. (Cl. 220—82.)

1. In a container, the combination of a side member having an opening therein with a cross piece above the opening having a horizontal slot therethrough, and spaced inwardly from said side member, a seating surface below said opening with lugs spaced inwardly from said side member, said cross piece and lugs being adapted to engage the inner surface of a transparent pane mounted between the same and said side member, a top abutment movable through said slot into and out of position to prevent upward movement of the pane, said abutment having a flange thereon to prevent entire withdrawal thereof from the slot, spring means pressing said abutment through said slot into operative position, and manually operable means movable into position to move said abutment out of operative position, and holding the same in such position.

1,399,949. SEAL FOR CONTAINERS. CROSBY FIELD, Yonkers, N. Y., and WALTER E. NEWELL, Bayonne, N. J., assignors to National Aniline & Chemical Co., Inc., a Corporation of New York. Filed Sept. 18, 1920. Serial No. 411,186. 19 Claims. (Cl. 217—114.)



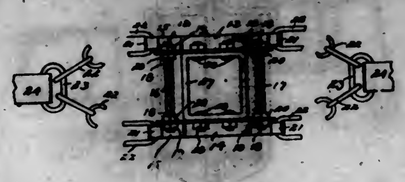
1. A seal for a container comprising a pair of wires extending across the end of the container at an angle to

each other and having their ends secured to the walls of the container, and a metallic member overlying the intersection of the two wires and having openings through

which the two wires extend, said member being mounted loosely on the wires and restrained from movement away from over the intersection of the wires by said intersection of the wires.

1,399,950. FRUIT-SLICER. CHARLES S. FISH, Rochester, N. Y., assignor to Boutell Manufacturing Co., Rochester, N. Y., a Corporation of New York. Filed Aug. 20, 1921. Serial No. 493,842. 8 Claims. (Cl. 146—8.)

1. A fruit slicer comprising two series of radial slicing knives, the knives of one series being arranged intermediate those of the other series and the cutting edges of one series overlapping the bodies of the other series for a portion of their length.



1,399,951. METHOD OF FORMING DISK WHEELS. GEORGE H. FORSYTH, Chicago, Ill. Filed Nov. 10, 1919. Serial No. 336,780. 10 Claims. (Cl. 29—159.)

1. The method of forming disk wheels from sheets of metal which consists in bending the sheet in the plane thereof to form an annulus and simultaneously to cause progressive expansion of the same toward the periphery whereby to taper the cross section.

1,399,952. MUD-HOOK. MAURICE HELTON FRANK, Anthon, Iowa. Filed Mar. 5, 1921. Serial No. 449,978. 4 Claims. (Cl. 152—14.)

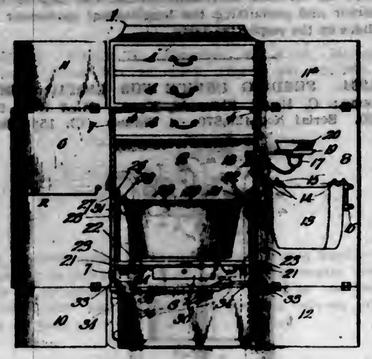
1. A mud hook comprising a pair of spaced angle iron members adapted to extend transversely across the tread of a tire, a pair of spacing rods extended through registering openings in said angle iron members for spacing said angle irons relative to each other, a non skid block received between said angle iron members and between said spacing rods, said non-skid block being detachably fixed to said angle irons, the upper edge of said non skid block being flush with the upper edge of said angle iron

members, loops formed on the ends of said angle iron members, chains fixed to each of the ends in said loops, the free ends of the adjacent chains being fastened together, and a strap and buckle device fixed to said chains for securing said mud hook to a wheel as and for the purposes stated.

1,399,953. PYROTECHNIC COMPOSITION. ROBERT R. FULTON, Indian Head, Md. Filed Apr. 16, 1921. Serial No. 461,954. 3 Claims. (Cl. 52—24.)

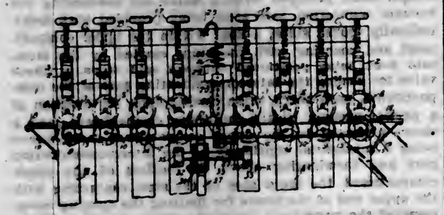
1. A pyrotechnic composition of the character herein described containing iron oxid, cupric oxid, aluminum metal, magnesium metal and phosphorus.

1,399,954. PYROTECHNIC COMPOSITION. ROBERT R. FULTON, Indian Head, Md. Filed Apr. 16, 1921. Serial No. 461,955. 3 Claims. (Cl. 52—24.)



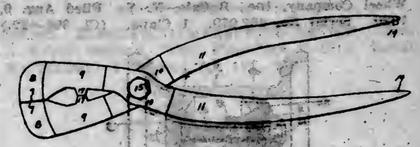
1. A pyrotechnic composition of the character herein described containing iron powder, cupric oxid and magnesium metal.

1,399,955. SIGNAL FOR USE ON VEHICLES. GEORGE ARTHUR GARTH, Nuwara Eliya, Ceylon. Filed Jan. 31, 1921. Serial No. 441,318. 16 Claims. (Cl. 116—48.)



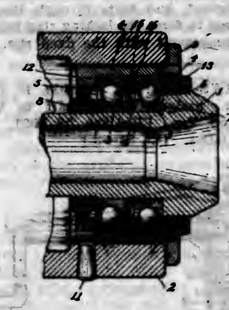
1. A direction indicator comprising in combination, a casing having a glazed aperture at the front, a signal member disposed to the rear of but close to the said aperture, a rotatable member within and disposed toward the rear of said casing, connecting means between the signal member and the rotatable member, and means for rotating the latter member.

1,399,956. BABY TOILET CABINET. ANNIE M. GAWTHROP, deceased, Kansas City, Mo., by order of court and name subsequently, to Florence B. Waller, Kansas City, Mo. Filed Jan. 27, 1920. Serial No. 354,440. 4 Claims. (Cl. 45—33.)



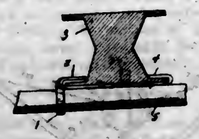
1. A baby toilet cabinet having a front opening, and a dressing table adjustable to an operative position forward of the cabinet, means to support the front end of the table when in operative position, and a pair of doors normally overlapping and closing the opening of the cabinet, and provided at their lower ends with foldable extensions for extending down to the floor when the doors are opened; said cabinet having an adjustable shield for extending from the said opening to the floor and coöperating with said door extensions in cutting off draft along the floor and adjacent the cabinet.

1,399,957. WILLOW-BARK-STRIPPING MACHINE. GAETANO GERACE, Windsor, Ontario, Canada. Filed Aug. 17, 1921. Serial No. 492,137. 1 Claim. (Cl. 144—207.)



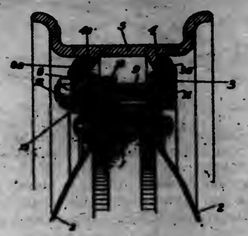
In a machine of the class described, the combination with a suitable frame, a horizontally arranged plurality of paired conveying rollers journaled in the frame, means for actuating said rollers simultaneously in a common direction, an upper transversely mounted scraper having a notched lower edge and tensioned downwardly, a lower scraper mounted parallel with the upper scraper and in a common vertical plane and having a notched upper edge tensionally engaging the notched edge of the upper scraper, means for separating said scrapers when required, a horizontal belt running transversely of the frame and mounted on pulleys journaled therein, a plurality of tensionally yieldable metallic strippers secured to said belt at spaced intervals and extending normally at right angles therefrom, those of said plurality of strippers travelling upwardly of said pulleys extending slightly above the horizontal plane of the notched edges of said scrapers, means for actuating said belt simultaneously with said rollers, and means for tensioning each pair of said rollers.

1,399,958. HOOF-TRIMMING TOOL. JAMES J. GOSNEY, Shaw, Oreg. Filed May 11, 1920. Serial No. 380,802. 1 Claim. (Cl. 168—49.)



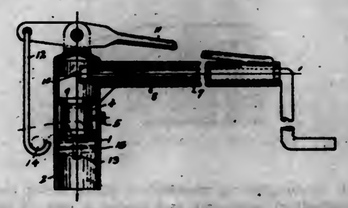
In a hoof trimmer, the combination of a pair of pivoted crossed arms which are equipped at the same ends with long wooden handles and having at each of the opposite ends a cutting edge forming an obtuse angle to the plane of the handles and forming an acute angle to the pivot axis, said cutting edge having convex faces and convex tips.

1,399,959. BALL-BEARING. BENOT M. W. HANSON, Hartford, Conn. Filed Jan. 16, 1920. Serial No. 351,890. 5 Claims. (Cl. 64—36.)



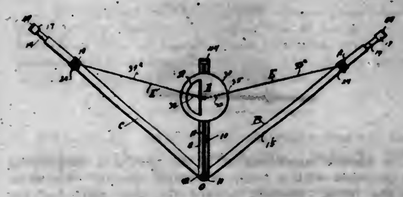
5. In combination, a housing; a sleeve keyed therein for longitudinal movement and having a pair of spaced abutments one of which is adjustable relative to the other; a spindle extending through said sleeve; a pair of ball bearing units interposed between said sleeve and spindle and each including an outer ring carried by said sleeve between said abutments, an inner ring on said spindle and anti-friction balls between the inner and outer ring; and a resilient spacing member between the outer rings.

1,399,960. PIPE-HANGER. WILLIAM HARDING, Cleveland, Ohio. Filed Mar. 18, 1921. Serial No. 452,843. 3 Claims. (Cl. 248—32.)



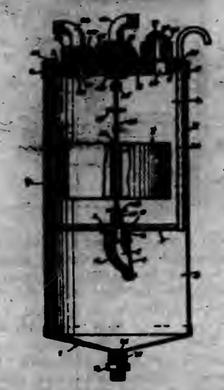
2. A hanger consisting of a bar having a suspending loop provided with a point extending laterally therefrom said bar being returned toward the loop and then extended beyond the point to provide a securing portion, and said point extending from the same side of the loop as and in spaced relation to the securing portion.

1,399,961. FIXED RIM AND LOCKING-RING STRUCTURE FOR DEMOUNTABLE RIMS. LOUIS D. HARVEY, Buffalo, N. Y., assignor to Harvey Rim & Wheel Company, Inc., Buffalo, N. Y. Filed Aug. 9, 1920. Serial No. 402,079. 1 Claim. (Cl. 301—22.)



In a structure of the character described, a fixed rim provided with an outwardly projecting flange adapted to receive one edge of a demountable rim, a locking ring arranged to rest on the fixed rim on the opposite side thereof from the flange, the contacting faces of said rim and ring being beveled, lugs on the fixed rim adjacent the beveled edge thereof, and bolts through the ring, lugs and the rim flange to force the locking ring into frictional and wedging engagement with the fixed rim.

1,399,962. VALVE-CLEANER. DANIEL D. HENDERSON, Houston, Tex., assignor of one-half to William R. Drexel, Houston, Tex. Filed Feb. 28, 1921. Serial No. 448,719. 7 Claims. (Cl. 81—3.)

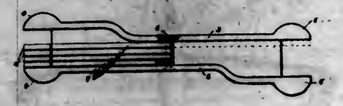


4. In combination, a casing adapted to fit over a valve stem, means for anchoring the casing securely in place, a plunger adapted to reciprocate within the casing, said casing and plunger having alined slots to receive the rocker arm which actuates the valve, a projection carried by said plunger and rotatable member provided with actuating means which successively contact with and release said projection as said member is rotated, whereby the valve is opened and released in quick succession.

1,399,963. TELEGONIOMETER. WILLIAM L. HOGG, Denver, Colo. Filed Mar. 20, 1920. Serial No. 367,251. 12 Claims. (Cl. 33—75.)

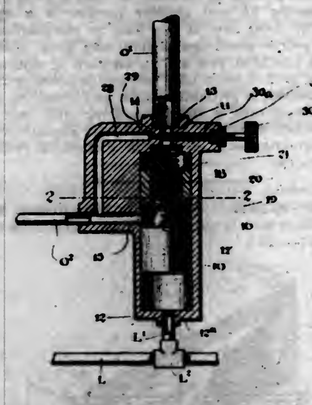
1. An angle measuring and indicating device of the character described comprising three arms pivoted to each other at one of their extremities for independent and relative movement, a protractor slidingly mounted on one of said arms, slides slidably carried on the other arms, and radius elements connected to the center of the protractor and to said slides, said radius elements being mounted for circular movement around the axis of the protractor and permitting the longitudinal movement of the slides on the respective arms.

1,399,964. FEEDING DEVICE FOR LIQUID FUEL. RUSSELL C. HUFF, Eldorado, Kans. Filed Nov. 27, 1920. Serial No. 426,870. 1 Claim. (Cl. 158—36.)



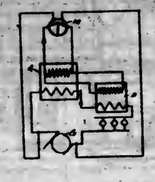
A device of the character described comprising vertically spaced compartments having an intercommunicating port, the upper compartment being provided with a fuel inlet and with a vacuum connection, the lower compartment being in communication with the atmosphere above the liquid level therein and also having a discharge in its lower portion, a vertically movable stem within the upper compartment provided with a valve for controlling the vacuum connection, said stem being provided with longitudinally spaced stops, a float within the upper compartment and coacting with the stops carried by the stem, said float being positioned between said stops, a check valve for closing the intercommunicating port of the compartments, such check valve closing upon the creation of a partial vacuum within the upper compartment, and a sleeve arranged in the upper compartment, said sleeve being a substantial continuity of the intercommunicating port and terminating above the bottom of the upper compartment, the lower stop of the stem contacting with the upper end of the sleeve for limiting the opening movement of the valve.

1,399,965. RAT-TRAP. ROBERT FRANKLIN KENT, Fannettsburg, Pa. Filed May 21, 1920. Serial No. 383,071. 10 Claims. (Cl. 43—73.)



1. An animal trap comprising, a frame having a runway provided therein, a cage within the runway having one end thereof normally open, a movable platform within the runway, a door mounted within the frame and controlling the open end of said cage, a follower movable through the runway and in the direction of said door, and mechanism controllable by said platform for moving the follower in the direction of the door, elevating the door to open position, and returning the follower to its normal potion, and then moving said door to closed position as said follower reaches its normal position.

1,399,966. WRENCH. CHARLES W. KING, Memphis, Tenn. Filed July 11, 1919. Serial No. 310,269. 1 Claim. (Cl. 81—185.)



A wrench having a longitudinally recessed handle terminating in relatively off-set pairs of differently spaced jaws at its ends, and filler strips hinged in the hollow of the handle and movable into position between either pair of jaws.

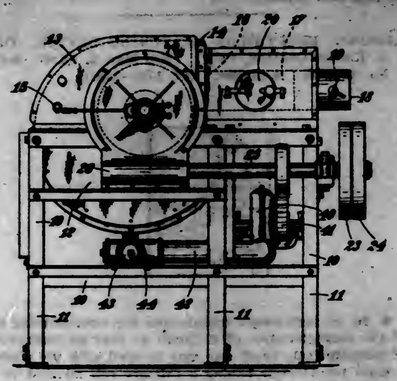
1,399,967. AUTOMATIC FUEL CUT-OFF. EDGAR STEDMAN KING, Osgood, Ind. Filed Oct. 8, 1920. Serial No. 415,684. 10 Claims. (Cl. 123—196.)

1. In a device of the character described, in combination with an internal combustion engine having fuel supply and a lubricating system in which the lubricant is circulated under pressure, an automatic fuel cut-off incorporated in the fuel supply and controlled by the pressure of the lubricant and consisting of a cylinder having its upper end in communication with the fuel supply and having a lateral discharge outlet for the fuel intermediate its ends and having its lower end in communication with the lubricating system, a piston slidably mounted in said cylinder having a lower solid head exposed to the pressure of the lubricating system, an upper hollow head having its upper end open, said piston being provided intermediate the upper and lower heads with an annular groove in its periphery and a plurality of openings extending from the interior of the hollow head to the annular groove, a coil spring arranged in the upper end of the cylinder and engaging the upper head of the piston whereby the normal lubricant pressure when the engine is running balances the coil spring to aline the annular groove with the lateral discharge outlet and permit a free flow of fuel, a bypass around said cylinder for starting the engine, and a needle valve controlling said bypass.

1,399,968. ELECTRICAL MEASURING DEVICE. OTTO A. KNOFF, Oakland, Calif. Filed Mar. 2, 1917. Serial No. 151,695. 6 Claims. (Cl. 171—119.)

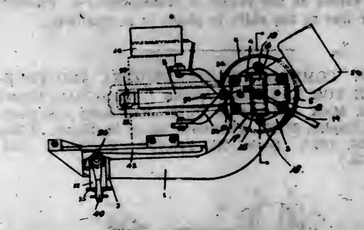
6. In an instrument transformer for transforming one of the characteristics of a circuit so that an instrument of comparatively small size may be used with the circuit, a main transformer having a primary coil adapted to be connected to the circuit and a secondary coil adapted to be connected to an instrument, and an auxiliary transformer comprising a pair of coils in mutual inductive relation, one of the pair of coils being adapted to be energized in accordance with that characteristic of the circuit which is reduced by the instrument transformer, and the other connected so as to buck the effect of the primary coil of the main transformer, the two transformers being so constructed that the phase angle errors of the two transformers have substantially the same relative values as the ratios of transformation, whereby the error due to the shift in phase is neutralized.

1,399,969. COMBINATION HANDWHEEL AND FACE-PLATE FOR LATHES. ARMEN S. KURKJIAN, Grand Rapids, Mich, assignor to Oliver Machinery Company, Grand Rapids, Mich., a Corporation of Michigan. Filed July 24, 1918. Serial No. 246,492. 2 Claims. (Cl. 142—55.)



1. A combined hand wheel and face plate for lathes, comprising a central boss, a web extending therefrom, having a flat outer face against which work to be turned on the lathe may be secured and an outer annular heavy rim of curved outline, the surface of said rim joining with and curving away from said flat outer face of the hand wheel and face plate, substantially as described.

1,399,970. FURNACE. CHARLES JOSHUA LANE, London, England, assignor to Cyril Frank Elwell, London, E. C. 1, England. Filed Aug. 6, 1920. Serial No. 401,769. 2 Claims. (Cl. 91—12.5.)

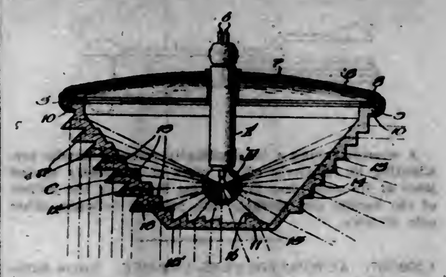


1. In a furnace for heat-treating material, the combination of a substantially cylindrical combustion chamber whereof the length is greater than the diameter, a hinged cover extending throughout the length of said chamber on the upper part thereof, a plurality of twyers spaced

apart in a line along the lower part of said combustion chamber, a closed rotatable drum supported substantially

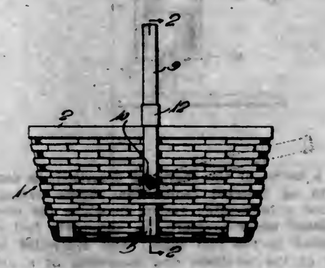
within the upper portion of said combustion chamber and means outside said combustion chamber adapted to be coupled to said drum to rotate it.

1,399,971. CUTTER-BORING ARM. Alphonse Joseph Lavoie, Montreal, Quebec, Canada. Filed July 26, 1918. Serial No. 246,890. 4 Claims. (Cl. 77—1.)



1. In a device of the class described, a reciprocating member, a pivoted base thereon, a tool carrying member rigidly held by said base, and a guide arm extending from the base in the same direction as the tool carrying member and a guide for engagement by the guide arm for swinging the base and therewith the tool carrying member.

1,399,972. CAR BRAKE OR STOP. Caleb Liddicoat, Albia, Iowa. Filed Feb. 11, 1920. Serial No. 357,801. 8 Claims. (Cl. 188—62.)

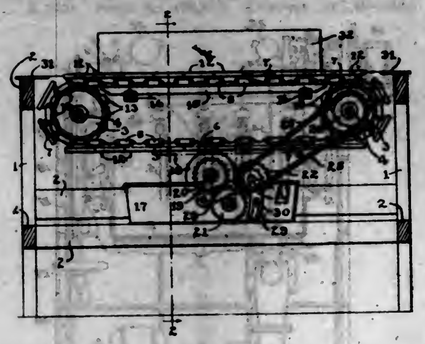


1. A braking device of the character described comprising a lower supporting rail, an upper braking rail, links pivotally connecting the two rails, a counterweight urging the braking rail away from the supporting rail, and manually operable means for shifting the braking rail toward the supporting rail and including an actuating arm pivotally connected to the supporting rail and the braking rail and extending upward beyond the braking rail, a lever pivotally connected to the upper end of said arm, a releasably retainable device, and connections leading from said last named lever to the retaining device whereby the lever may be shifted to cause the braking rail to move toward the supporting rail.

1,399,973. HEADLIGHT. Alexander S. Limpert, Pittsburgh, Pa. Filed Nov. 8, 1919. Serial No. 336,892. 5 Claims. (Cl. 240—41.)

3. A headlight lens comprising an annular attaching portion and a main light-refracting body portion converging forwardly of said annular portion in a direction toward the focal axis of the lens, in combination with a light source positioned within said body portion in line with the focal axis and in advance of said annular attaching portion, said body portion provided with variangled concentric prismatic ridges and reflecting prisms, for refracting rays of light emanating from said source in a forward direction, and with equi-angled refracting ridges refracting rays of light in a direction inclined to the focal axis.

1,399,974. BASKET. William B. Loewenberg, Marion, Ind. Filed Mar. 5, 1921. Serial No. 449,820. 6 Claims. (Cl. 217—125.)



1. The combination with a basket, of a pair of reinforcing strips secured to the sides of said basket and extending above the same, an arched handle pivoted to said reinforcing strips at points spaced downwardly from their upper ends, and means for connecting the handle with said projecting strip ends to hold it in upright position.

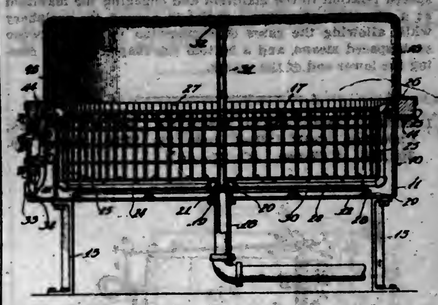
1,399,975. GLUING-MACHINE. Gregor McConnell, Grand Rapids, Mich. Filed Dec. 7, 1920. Serial No. 428,864. 7 Claims. (Cl. 91—24.)

6. A gluing machine comprising a chain having glue-spreading links and connecting links, sprockets over

which said chain runs having shoulders near their peripheries which engage and support said connecting

links and means for applying glue to said glue-spreading links.

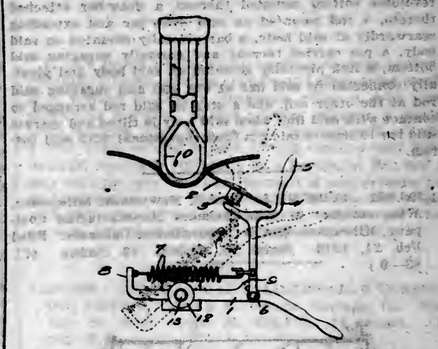
1,399,976. METHOD OF MANUFACTURING FIBER PRODUCTS. George James Manson, Toronto, Ontario, Canada. Continuation of application Serial No. 32,416, filed June 5, 1915. This application filed Mar. 15, 1919. Serial No. 282,780. 6 Claims. (Cl. 92—1.)



1. The herein described process of manufacturing a fiber product which comprises, first chipping saw mill waste, then grinding the raw chipped wood with water between closely spaced surfaces having a movement relative to each other, such surfaces being sufficiently far apart to permit at the narrowest point the presence of a plurality of fiber bundles therebetween, whereby a rolling separation is effected.

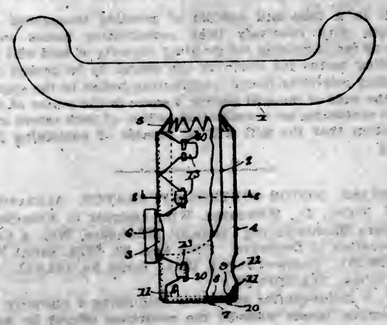
1,399,977. MOLD. Alfred J. Mabie, Alameda, Calif. Filed June 12, 1920. Serial No. 388,530. 5 Claims. (Cl. 154—27.)

1. A mold comprising bottom and end pieces, a top piece on said end pieces, tie rods anchored in said bottom-and-end structure and passing through said top piece, and means interposed between the ends of said tie rods and said top piece for lifting the top piece from and clamping it to the rest of the mold.



1,399,978. DISHWASHER. Thomas H. Monaghan, Chicago, Ill. Filed Oct. 26, 1920. Serial No. 419,375. 12 Claims. (Cl. 141—6.)

7. A dish washer comprising a cylindrical casing having a discharge opening, a water supply pipe, a rotary water sprayer element having nozzles directed toward said casing, a dish tray supported by said rotary water sprayer element adjacent the bottom of the casing, a valve for controlling said discharge opening, and means controlled by the rise of water in said casing for opening said valve



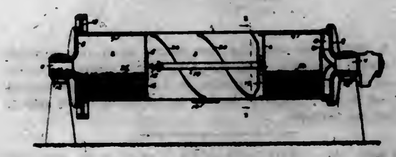
to permit of the escape of accumulated water while said dish tray is being rotated.

1,399,979. TIRE-BUILDING MACHINE. Frederic C. Morton, New Haven, Conn. Filed Oct. 10, 1918. Serial No. 257,593. 6 Claims. (Cl. 154—10.)

3. A device for shaping tire fabric on a tire forming core, and a mounting for said device said mounting being pivoted at a point fixed in relation to the core and invertible upon its pivot to position the device upon either side of the core as desired.

1,399,980. MANIFOLD-HEATER. August Q. Mueller and Walter H. Koeller, Milwaukee, Wis. Filed Dec. 29, 1920. Serial No. 433,789. 6 Claims. (Cl. 263—5.)

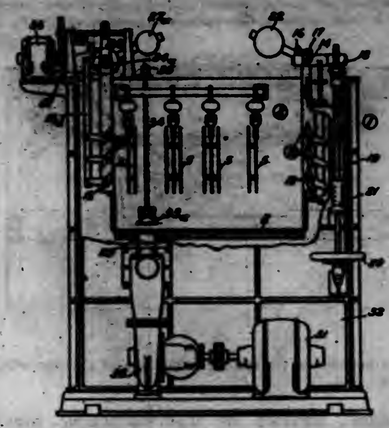
1. In combination, an internal combustion engine manifold, a heater therefor, comprising a casing encircling the



vertical portion of the manifold and spaced therefrom, resilient means for supporting the upper end of the heater in spaced relation to the manifold and engaging the manifold at a plurality of points completely around its periphery while allowing the gases of combustion to pass between such spaced means, and a bottom cup-shaped portion closing the lower end of the casing.

1,399,981. GAP-CLOSING MACHINE. NIELS A. NIELSEN, Cupertino, Calif. Filed June 28, 1920. Serial No. 392,215. 2 Claims. (Cl. 37—40.)

1. A gap closing machine comprising a scraper body, a revoluble bottom mounted thereon, a draw-bar attached thereto, a rod mounted on said draw-bar and extending rearwardly of said body, a bar pivotally mounted on said body, a pin carried thereby and normally engaging said bottom, a link pivotally mounted on said body and pivotally connected to said bar at one end and engaging said rod at the other end, and a step on said rod arranged to contact with said link when said body is tilted and operate said bar to remove said pin from engagement with said bottom.



1,399,982. TUBE-MILL. RAY C. NEWHOUSE, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Feb. 21, 1916. Serial No. 80,068. 13 Claims. (Cl. 83—9.)

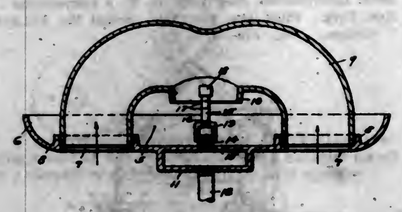
1. In a tube mill capable of grinding throughout its length with relatively light comminuting bodies only, means for increasing the grinding capacity of said mill including means for confining the charge to be ground including relatively heavy comminuting bodies to the spaces in the ends of the mill leaving a space in the center of the mill containing no comminuting bodies, of such extent and position that the mill will be capable of sustaining the load.

1,399,983. MOTOR-CONTROL APPARATUS. ALEXANDER J. NICHT, Jr., Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Aug. 23, 1919. Serial No. 320,287. Renewed July 1, 1921. Serial No. 481,932. 20 Claims. (Cl. 219—57.)

1. A motor-control apparatus comprising a plurality of rheostats, means whereby the resistance offered by said rheostats may be brought to and maintained at predetermined like values or different values, said means operable independently of said first mentioned means whereby the

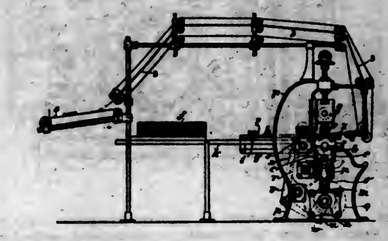
resistances may be simultaneously varied keeping the relative proportions substantially the same.

1,399,984. FURNACE-DAMPER REGULATOR. THOMAS OLINGER and JOHN L. DE GLOPPER, Holland, Mich., assignors to Federal Stamping Company, Holland, Mich., a Corporation of Michigan. Filed Dec. 7, 1920. Serial No. 428,860. 11 Claims. (Cl. 74—89.)



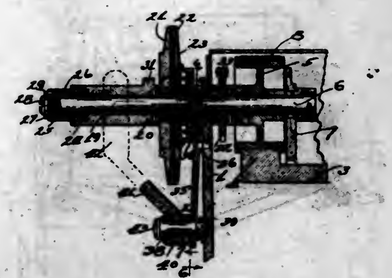
1. In a furnace regulator, an outer member having a front face, rearwardly extending annular side and flange turned from the rear edge of said side, said member being formed centrally of its face with a hub pressed rearwardly therefrom, a second chain actuating member formed with a front rearwardly dished face with a central opening therethrough, an outwardly projecting head at its edges, a rearwardly extending annular side and an outturned flange located within the first member with the hub passing through said opening, said flange on the second member being partly cut away at its upper portion with a chain attaching tang left between the portions cut away, and an operating handle having an opening in its lower end passed through the upper portions of said sides of the members and engaged with the hub, said hub passing through the opening in the handle and having its end pressed outwardly to secure the parts together with the dished face of the second member forced to substantially parallel relation with the face of the outer member, said side of the outer member at its upper portion being slotted substantially half of its length where the operating handle passes therethrough and having an opening for the passage of a chain at a point below each end of the slot, substantially as described.

1,399,985. FURNACE-REGISTER. THOMAS OLINGER, Holland, Mich., assignor to Federal Stamping Company, Holland, Mich., a Corporation of Michigan. Filed Jan. 3, 1921. Serial No. 434,415. 8 Claims. (Cl. 98—54.)



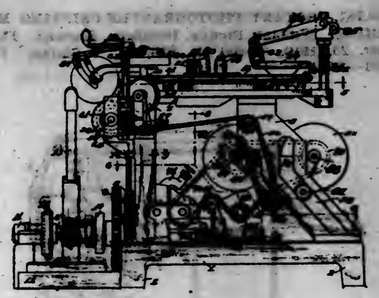
8. In combination, a sheet metal plate formed with an open grating set in short distances from its edges, and being provided at the upper part of the grating with a horizontal rib having a longitudinal recess in its rear side, a sheet metal closure plate formed at its upper edge with a rolled bead seating in said recess, tangs integral with the rib passing rearwardly through the closure plate and bent upwardly around the bead thereof, a sheet metal operating handle formed with spaced apart projections at its lower end extending through openings in the closure plate, said handle extending upwardly through the grating, a tongue struck rearwardly from the handle a short distance below the connection of the closure plate to the first plate and passing through an opening in the closure plate, a leaf spring located against the rear side of the closure plate, said tongue passing therethrough, and means at the end of the tongue for holding the spring against the closure plate, substantially as described.

1,399,986. OIL-BURNER. CYRUS L. PEMBERTON, Fairmount, Ind. Filed May 14, 1921. Serial No. 469,638. 3 Claims. (Cl. 158—53.)



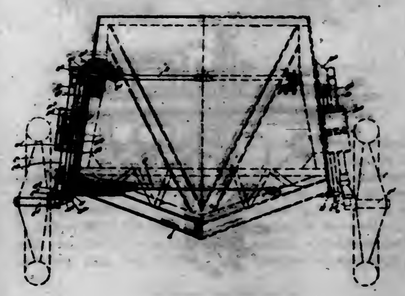
1. In an oil burner, a main receptacle having air inlet openings formed in the bottom thereof, an inverted approximately U-shaped air supply conduit having its ends in communication with the inlet openings and provided with a downwardly discharging tubular outlet, a main generating chamber formed upon and arranged beneath the main receptacle and located between said air inlet openings, means to supply oil or the like into the main chamber, a sub generating chamber arranged near and above the main chamber within the main receptacle and having communication therewith, and a tubular burner element connected with the sub generating chamber and surrounded by the tubular air outlet.

1,399,987. ROTARY PHOTOGRAVURE-PRINTING MACHINE. WILLIAM PICKUP, Pendleton, England. Filed Oct. 25, 1919. Serial No. 333,148. 8 Claims. (Cl. 101—153.)



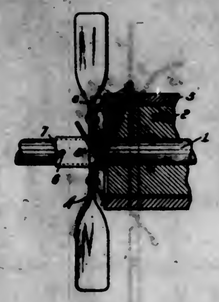
1. In a rotary photogravure printing machine having a vertically slidable printing cylinder and above same mounted a vertical stationary impression roller, a spur wheel secured on the shaft of said printing cylinder, a driving shaft mounted below in a vertical line with said cylinder, a spur wheel secured to said driving shaft, a spur wheel mounted vertically stationary in a horisontal line and in gear with the spur wheel on the shaft of said cylinder and an intermediate spur wheel mounted between and in gear with said vertical stationary wheel in and the spur wheel on said driving shaft, for the purpose specified.

1,399,988. AUTOMATICALLY-ADJUSTABLE TENSIONING DEVICE. FRANK M. PIERCE, Chicago, Ill. Filed Apr. 29, 1920. Serial No. 377,583. 16 Claims. (Cl. 242—6.)



1. A winding device comprising a shaft, a reel rotatably mounted thereon, a friction plate on the reel, a friction plate slidable but non-rotatable on the shaft adapted to engage said first friction plate, cam-controlled means for varying the frictional engagement of said plates, and a lever for automatically operating said cam controlled means.

1,399,[illegible]. [illegible]. [illegible] Chicago. Patented Dec. 13, 1921. Serial No. 488,[illegible]. 10 Claims. (Cl. 242—[illegible])

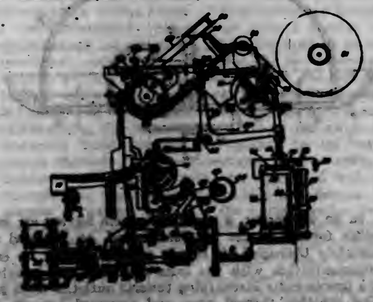


1. A wrapping machine comprising a frame, a rotatable shuttle thereon, means for rotatably supporting an article to be wrapped, and a slotted frame for guiding said supporting means, the upper portions of the slots in said frame being vertical and the lower portions thereof extending in an angular direction.

1,399,990. ALIGHTING OR LANDING GEAR FOR AIRCRAFT. Reginald Kreenhw Pierson and Thomas Smith Duncan, Westminster, London, England, assignors to Vickers Limited, Westminster, England, a British Company. Filed June 21, 1921. Serial No. 479,309. Carved out of application on which Patent No. 1,364,518 was granted Jan. 4, 1921, and filed after grant of patent. 11 Claims. (Cl. 244—2.)

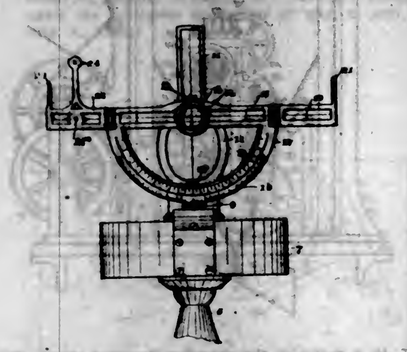
1. In aircraft, the combination with a hull, of an inwardly inclined wheel carrying frames, operating means carried by each frame and engaging a pendent pin on said hull and means for imparting motion to said operating means to angularly move the frame.

1,399,991. SHORT-CIRCUITING BRUSH FOR ARMATURE COMMUTATORS. Edward J. Kennedy, Galena, Ohio. Filed Jan. 25, 1921. Serial No. 439,520. 7 Claims. (Cl. 172—279.)



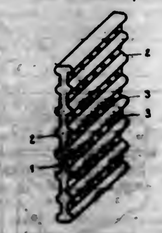
1. In an electric motor, a commutator, and means operated by fluid pressure generated by a running of the motor to short-circuit the commutator segments when the motor has attained a predetermined speed.

1,399,992. INDEXING-FIXTURE FOR MACHINE-TOOLS. Joseph A. Pelissoni, Allentown, Pa., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 4, 1920. Serial No. 421,770. 6 Claims. (Cl. 90—72.)



1. In combination with a reciprocating table and a fixed cutter, a fixture mounted on the table including a chuck for the work, an indexing wheel separate from the chuck and a pawl coöperating with the wheel and operated by movement of the table for indexing the work.

1,399,993. PRINTING-TELEGRAPH. Hasby Pfannenstiehl, East Orange, N. J., and Edward F. Watson, New York, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 23, 1919. Serial No. 272,615. 7 Claims. (Cl. 178—27.)

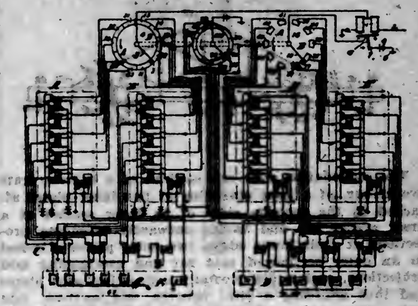


1. In a telegraph receiving printer, a paper platen, ribbon feeding mechanism, mechanism for rotating said platen for line spacing, selecting mechanism comprising a plurality of shifting magnets, permutation bars controlled thereby, an electromagnet energized upon the positioning of said permutation bars in a predetermined manner, and bands responsive to the energization of said electromagnet for operating said ribbon feeding and line spacing mechanisms simultaneously.

1,399,994. SURVEYOR'S COMPASS. Charles H. Phoenix, Bellingham, Wash. Filed Mar. 30, 1921. Serial No. 456,991. 3 Claims. (Cl. 33—69.)

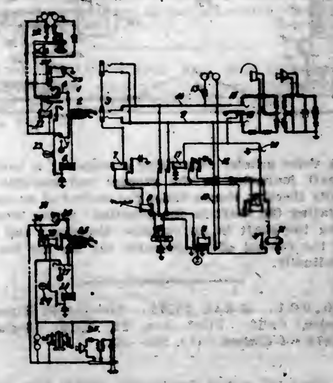
1. In a surveyor's compass in combination, a compass case; a compass mounted in said case; a front sight standard fastened to said case; a rear sight standard fastened to said case; a transverse sight arm pivotally mounted for rotation on said rear standard; a graduated arc fastened to said arm; and verniers on said rear standard readable with the scales on said arc.

1,399,995. NEGATIVE PLATE FOR ELECTRIC ACCUMULATORS. Adolfo Pouchain, Turin, Italy. Filed Sept. 18, 1919. Serial No. 324,656. 3 Claims. (Cl. 204—20.)



1. A negative electrode for electric accumulators, comprising a core of non-metallic conducting material coated with a metallic layer of zinc associated with mercury.

1,399,996. NEGATIVE PLATE FOR ELECTRIC BATTERIES. Adolfo Pouchain, Turin, Italy. Original application filed Sept. 18, 1919, Serial No. 324,657. Divided and this application filed Feb. 11, 1920. Serial No. 357,897. 2 Claims. (Cl. 204—38.)

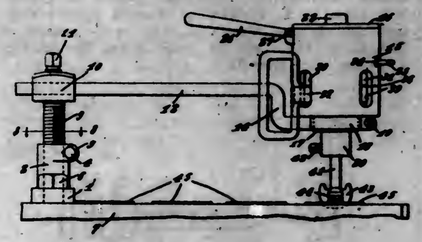


1. A negative electrode for electric batteries consisting of a zinc plate wrapped in a sheet of pressed paper which is kept adherent to said plate by a layer of a fatty substance.

2,399,997. TELEGRAPH SYSTEM. Paul M. Hawes, Glen Ridge, N. J., assignor to Western Electric Company, Incorporated, N. Y., a Corporation of New York. Filed Jan. 2, 1919. Serial No. 270,169. 14 Claims. (Cl. 178—33.)

1. In a telegraph system, in combination with a line, a selecting mechanism, a plurality of sets of relays between said mechanism and said line, a plurality of switching relays between said mechanism and said sets of relays, and means for energizing and deenergizing the switching relays successively to connect said selecting mechanism with said sets of relays.

1,399,998. TELEPHONE SYSTEM. Arthur Raynsford, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 25, 1919. Serial No. 340,484. 4 Claims. (Cl. 179—51.)

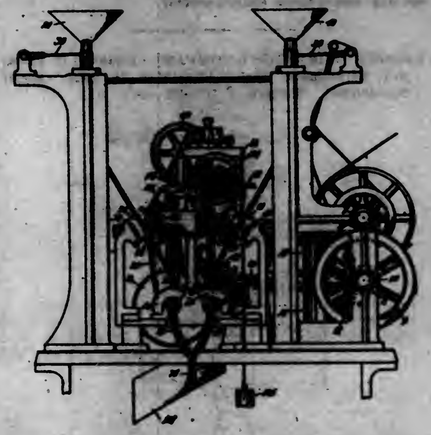


1. In a telephone system the combination with a link circuit, of a plurality of different types of cord circuits for connection therewith, a signaling device and a relay responsive to a particular variety of current for operating said signaling device associated with each cord circuit, a telephone set, means for connecting said telephone set to said link circuit, a plurality of sources of current, and means operated in response to the disconnection of said telephone set from said link circuit to connect one of said sources of current to said link circuit to operate the signaling device of the connected cord circuit.

1,399,999. DRAFT-EVENER FOR HARROWS. Jessen Alfred Rehms, Elk Horn, Iowa, assignor of one-half to Hans Christian Hansen, Elk Horn, Iowa. Filed July 9, 1920. Serial No. 394,999. 1 Claim. (Cl. 55—84.)

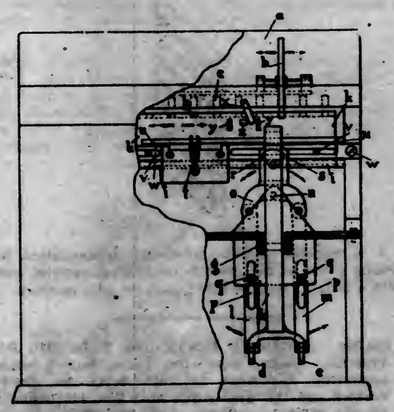
The combination with two sections of a harrow draft evener bar, of a joint consisting of two inner plates attached to the opposite sides of an inner section of a draft evener bar and having outwardly extending projections at their lower edges, two outer plates attached to an outer section of said bar and overlapping said projections, and a pin pivotally connecting said plates and thus affording a joint between said sections, said outer plates and said outer section of said bar having straight vertical shoulders adapted to rest on the said inner plates and said inner draft bar section to support said outer section in an upright position when said outer section is turned up on said pin.

1,400,000. VALVE-GRINDER. Fidèle F. Richard, Moncton, New Brunswick, Canada. Filed Feb. 9, 1921. Serial No. 443,570. 6 Claims. (Cl. 51—29.)



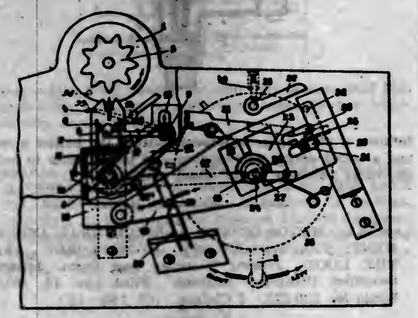
1. A valve grinder comprising a support; a tool-carrying shaft journaled in the support and movable longitudinally therein; means under the control of an operator for rotating the shaft in one direction; spring means for rotating the shaft in an opposite direction; and means under the control of an operator for moving the shaft longitudinally.

1,400,001. X-RAY TUBE. Thomas B. Rider, Los Angeles, Calif. Filed Jan. 22, 1919. Serial No. 272,473. 4 Claims. (Cl. 250—35.)



1. In an X-ray tube in combination with the cathode in such tube having its face disposed eccentrically on its supporting body on a centrally disposed stem in the tube, operating means disposed on the stem for a sliding movement, and means operatively engaged with the operating means for turning the cathode on the stem by such sliding movement.

1,400,002. MACHINE FOR CARDING SNAP-FASTENERS. Benjamin L. Benton, New York, N. Y., assignor to American Snap Fastener Company, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 27, 1919. Serial No. 333,783. 14 Claims. (Cl. 218—18.)

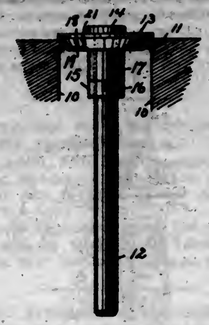


1. In a device of the character described, means for holding a set of fastener elements, means for holding a set of coöperating fastener elements, and means for subjecting one of said holding means to suction, whereby air pressure is effective in aiding the holding means to hold the several fastener elements.

1,400,003. CALCULATING-MACHINE. Carl Schallbr, Brunswick, Germany, assignor to Grimme, Natalis & Co., Commanditgesellschaft auf Actien, Brunswick, Germany, a Corporation of Germany. Filed June 19, 1916. Serial No. 104,537. 8 Claims. (Cl. 235—63.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a calculating machine, in combination with a sliding carriage, means for automatically shifting said carriage stepwise in either direction, said means comprising an actuator for causing the shift in one direction, a second actuator for causing the shift in a direction opposite to the direction caused by said first actuator, and oscillating means for moving the carriage and loosely engaged and alternately operated by the said actuators for moving the carriage in different directions.

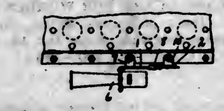
1,400,004. CALCULATING-MACHINE. Carl Schallbr, Brunswick, Germany, assignor to Grimme, Natalis & Co., Commanditgesellschaft auf Actien, Brunswick, Germany, a Corporation of Germany. Filed July 10, 1916. Serial No. 108,448. 19 Claims. (Cl. 235—75.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



18. In a calculating machine, the combination of a revoluble main actuator; a revolution-counting mechanism comprising a plurality of counting pinions, one for each denominational order; a zero-setting device in conjunction with said revolution-counting mechanism; a plurality of locking members, one for each counting pinion and normally engaged therewith; a releasing member common to all of said locking members; a cam arranged to directly operate said releasing member when said main actuator is operated; and means connected to said cam for operating said releasing member when said zero-setting device is operated.

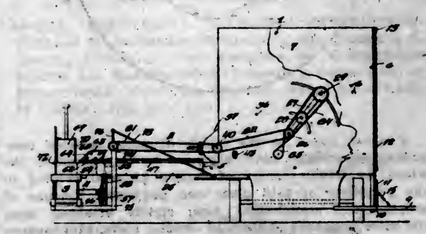
1,400,005. HOLDER FOR THE GLOWERS OF TUNGSTEN LAMPS. Otto Schallbr, Südende, near Berlin, Germany, assignor to Firm: Julius Pintsch Akt.-Ges., Berlin, Germany. Filed Oct. 27, 1916. Serial No. 128,100. 1 Claim. (Cl. 176—39.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

A holder for metallic filament lamps of a low specific consumption of energy, thereby characterised that it consists of tungsten with an addition of 1–4% of thorium oxid, substantially as set forth and for the purpose specified.



1,400,006. VALVE FOR INTERNAL-COMBUSTION ENGINES. John D. Schwenas, Elizabeth, N. J. Filed Aug. 25, 1920. Serial No. 405,960. 1 Claim. (Cl. 123—188.)

A valve for internal combustion engines comprising a stem, a valve head rotatably secured on the end of the stem, the valve head having a tapered edge and adapted to rest on a tapered valve seat, said valve head having an annular groove on its bottom face adjacent said sleeve, and having obliquely arranged grooves extending from said annular groove to the tapered edge, whereby fluid under pressure traverses the grooves to give rotative

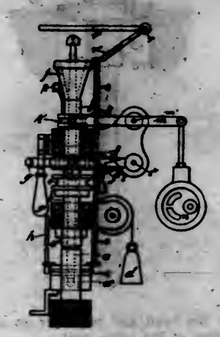


movement to the head and to direct an oblique blast on the tapered face of the valve seat.

1,400,007. BRACKET. William Sparks, Jackson, Mich., assignor to The Sparks-Withington Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 18, 1921. Serial No. 453,233. 5 Claims. (Cl. 248—20.)

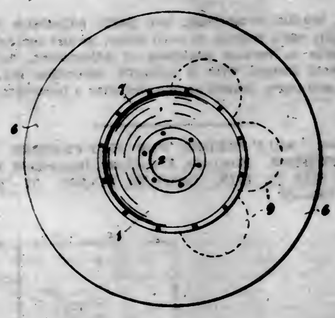
2. A bracket comprising two parts adjustable longitudinally with respect to each other, means for holding said parts in various positions of adjustment, each of said parts formed with a laterally extending lug, and one of said parts formed at one end with a horn-attaching flange.

1,400,008. SELF-FEEDER FOR HAY-PRESSES AND THRESHERS. Edwin O. Stanclift, Bakersfield, Calif. Filed Sept. 22, 1919. Serial No. 325,362. 31 Claims. (Cl. 100—25.)



1. A self feeder, comprising means for receiving the material, means for rearwarding it, and means for subdividing the material, comprising material stopping means with an associated movable member for pushing the divided section out.

1,400,009. COP-WINDING ATTACHMENT FOR SPINNING-FRAMES. Keith Stewart, Calcutta, British India. Filed June 21, 1920. Serial No. 390,566. 4 Claims. (Cl. 242—30.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



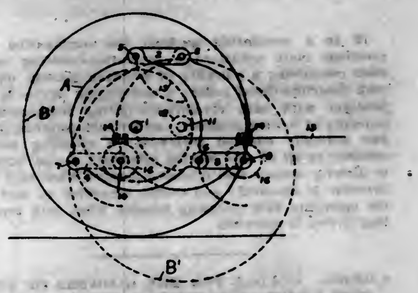
1. A cop winding attachment for spinning frames characterised by a rotating thread twisting and cop

building some upon a sleeve within which is the spindle of ordinary construction, driving means for said sleeve including a loose pulley and a vertically sliding clutch

adapted to be brought into and held in operative engagement one with the other, and engaging and disengaging means for said pulley and clutch.

1,400,010. SPLASH-GUARD FOR WHEELS OF MOTOR-VEHICLES. JOHN HARDACRE STIRK, Gravelly Hill, near Birmingham, England. Filed Jan. 19, 1920. Serial No. 352,485. 1 Claim. (Cl. 280—156.)

A splash guard for the wheels of motor vehicles, comprising an annular plate arranged to be secured to the wheel, an annular sheet of flexible material secured to the periphery of said plate and projecting tongues of substantially semicircular form rigidly attached upon the outer periphery of the said annular plate, said tongues being arranged to bear flatwise against the said annular sheet of flexible material to lend support to the same.

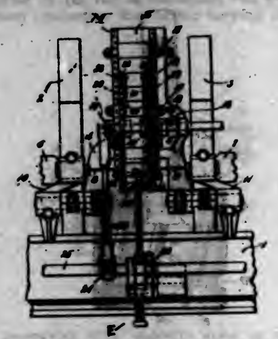


1,400,011. CHECK-VALVE. LINNAEUS E. BAKER, Fort Wayne, Ind., assignor to Wayne Oil Tank & Pump Company, Fort Wayne, Ind., a Corporation of Indiana. Filed Sept. 18, 1917. Serial No. 191,926. 1 Claim. (Cl. 251—146.)

In an improved check valve, the combination of a casing provided with a valve seat, a valve adapted to close on said seat, said valve having a hollow stem forming an axially extending socket provided near the base of said socket with a laterally extending vent passing through said stem, and a guide fixed to the casing and

forming a plunger to reciprocate within the hollow stem, and a coiled spring surrounding said hollow stem to hold the valve normally in its closed position.

1,400,012. MOTOR-DRIVEN AGRICULTURAL IMPLEMENT, TRACTION-ENGINE, MOTOR-LORRY, AND THE LIKE. JOSEPH BAMFORD and CYRIL JOSEPH BAMFORD, Uttoxeter, England. Filed Apr. 18, 1918. Serial No. 229,375. 7 Claims. (Cl. 180—41.)

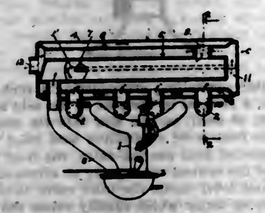


1. A device of the class described, comprising a traction wheel, a stub axle on the wheel, a disk supported on the stub axle, a driving shaft having a direct driving connection with the wheel, a plurality of links pivotally connected to said disk at one end and having their other ends pivotally mounted at fixed distances from the center of said shaft, and means for displacing said disk in relation to said shaft, said links serving to maintain a constant distance between the axial center of the driving shaft and the wheel.

1,400,013. AUTOMATIC TURNING-MACHINE. FRANK H. BANCROFT, Gardner, Mass., assignor to P. Derby & Company, Gardner, Mass., a Corporation of Massachusetts. Filed Oct. 21, 1918. Serial No. 258,103. 6 Claims. (Cl. 144—46.)

1. In a turning machine having a receiver to which pieces of stock are successively supplied prior to being fed to the spindles, the combination with said receiver of means for shaping the end of each piece of stock

to interlit with a spindle, and reciprocatory means for automatically clamping each piece of stock in the re-



ceiver while being shaped by said first means, said last means being arranged to reciprocate approximately longitudinally of the magazine.

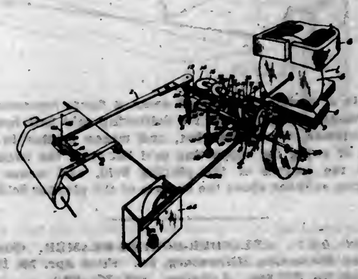
1,400,014. KEY FOR FASTENING GEAR-WHEELS, RACEWAYS FOR BALL-BEARINGS, AND THE LIKE TO ROTATABLE SHAFTS. CHARLES C. BARNES, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 30, 1920. Serial No. 427,321. 4 Claims. (Cl. 287—52.)

1. A friction key comprising an elliptical resilient link opened near one end of its major axis to divide said link into two arms.

1,400,015. AIR-HEATER FOR INTERNAL-COMBUSTION ENGINES. BENJAMIN B. BLOCK, Los Angeles, Calif., assignor of one-half to Mary Avery Scherfee, Los Angeles, Calif. Filed Sept. 9, 1918. Serial No. 253,210. 1 Claim. (Cl. 123—122.)

An air pre-heater for internal combustion engines comprising an outer casing, an intermediate casing within the outer casing, partitions between the outer and intermediate casings, dividing the space between said casings into first and second air heating chambers, an inner casing within the intermediate casing and constituting a superheating chamber, and dividing the space within the intermediate chamber into first and second exhaust-receiving chambers, said first air heating chamber having an air inlet at one end and connecting at its other end with the second air heating chamber, and said superheating chamber having an outlet at one end and connecting at its other end with the second heating chamber at the end thereof which is remote from its point of communication with the first air heating chamber, said first exhaust-receiving chamber, having inlet means for receiving exhaust gases and the second exhaust-receiving chamber having an outlet at one end and communicating at its other end with the first exhaust-receiving chamber.

1,400,016. PROCESS FOR PRODUCING WOOL-LIKE EFFECTS ON COTTON FABRICS. GUSTAV ADOLF BOSSHARD, Arbon, Switzerland, assignor to the Firm A.-G. Seeriet, Bleicherei, Filiale Arbon, Arbon, Switzerland. Filed July 9, 1920. Serial No. 394,979. 3 Claims. (Cl. 8—20.)



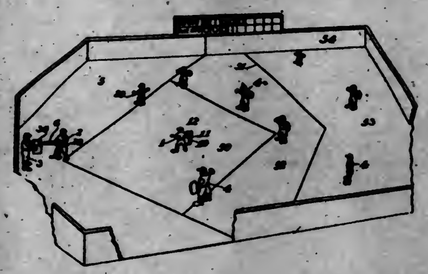
1. In a process for producing wool-like effects on cotton fabrics, the step of treating the fabrics with nitro-sulfuric acid of 48.3° Bé. cooled down to at least 0° C.

1,400,017. AUTOMOBILE ORNAMENT. JAMES R. BOWNE, Dallas, Tex., assignor to Adolphus Auto Rent Company, Dallas, Tex., a Corporation of Texas. Filed Sept. 18, 1920. Serial No. 411,115. 1 Claim. (Cl. 240—7.)

In an automobile display device, the combination of a base having a depending screw threaded element for attachment to a radiator cap, an annular upstanding marginal flange on the base, an electric lamp socket in the center of the base, a translucent cylinder fitting on the base snugly within the flange, a cap having a countersunk annular recess in its underside snugly receiving the upper end of the cylinder, said cylinder having a symbol on its surface, a rod within the cylinder having its ends engaged in the base and cap for clamping the cylinder therebetween, and a figure mounted on the cap, the base and cap extending radially beyond the cylinder.

1,400,018. ELECTRICAL MEASURING INSTRUMENT. WILLIAM M. BRADSHAW, Wilkinsburg, and CLARENCE A. BODDIE, Pittsburgh, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed June 18, 1917. Serial No. 174,450. 17 Claims. (Cl. 234—55.)

2. In a recording-measuring instrument, the combination with a measuring instrument, a recording device and

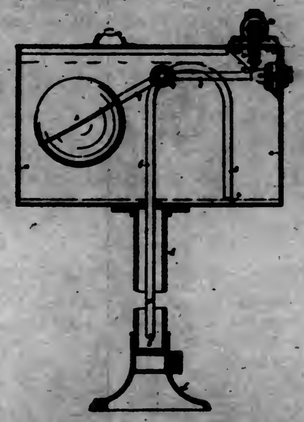


a recoiled sheet, of means for moving the recording device in the reverse of its natural direction of movement after each advance of the record sheet a predetermined distance in accordance with a previous indication of the recording device.

1,400,019. SPRING, PARTICULARLY FOR USE IN PERCUSSION-TOOLS. Maurice Louis Brandon, Stafford, England. Filed Nov. 2, 1920. Serial No. 421,405. 4 Claims. (Cl. 125—31.)

1. A resonator comprising a reciprocating mass suspended between liquid columns operating as springs so arranged and adjusted that a condition of resonance is established between the mass and the liquid springs substantially as specified.

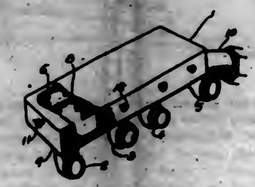
1,400,020. MECHANICAL BASEBALL GAME. Gideon Edward Brown, Seattle, Wash. Filed Oct. 5, 1920. Serial No. 414,788. 11 Claims. (Cl. 46—61.)



1. In a mechanical baseball game, a figure representing a batsman, a ball, means for delivering said ball toward the batsman, a weighted bat, and means flexible in the plane of swing for supporting said bat from the batsman above the surface of the playing field, and means for swinging said bat above the surface of the playing field.

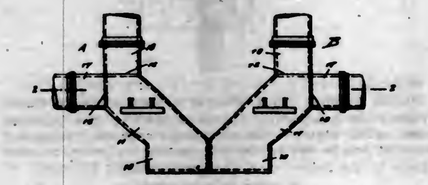
1,400,021. CYLINDER-BORING REAMER. Gordon Mark Braubaker, Millersburg, Pa. Filed Apr. 10, 1920. Serial No. 372,846. 5 Claims. (Cl. 77—72.)

1. A reamer comprising a head having a clearance chamber opening through its forward portion, and provided with an annular series of longitudinally extending blades having their forward ends terminating in rear of said clearance chamber, and longitudinal oil grooves extending alongside said blades, said head further having channels leading from the forward ends of said grooves into said clearance chamber.



1,400,022. SIPHONIC CONTROLLING MEANS FOR VALVES. Edwin William Buckley, Manchester, England. Filed May 24, 1921. Serial No. 472,253. 1 Claim. (Cl. 137—145.)

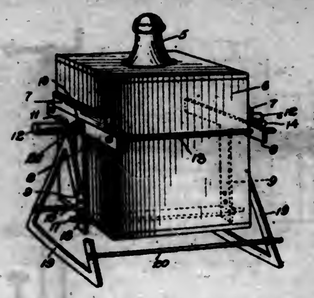
In a siphonic controlling arrangement a tank, an inlet valve therein, a channel in the seat of the said inlet valve to give a drip or small stream flow into the siphon tank, an adjustable float lever controlling said inlet valve and a spring-controlled fluid control valve, the float lever and the spindle of the control valve being so arranged that the lift of the float lever opens the inlet valve thus allowing the rapid flow of water which rapidly raises the float and attached float lever to open the fluid control valve, the whole serving to give a rapid filling of the tank, actuation of the fluid control valve and siphonic discharge when water, through the small stream flow, has reached a predetermined height in the tank, substantially as described.



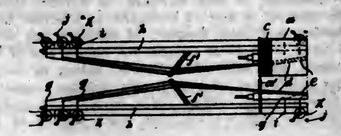
1,400,023. MANIFOLD-STOVE. James H. Carman, Harold F. Rossman, and John M. Rossman, Kansas City, Mo. Filed Dec. 28, 1919. Serial No. 347,478. 2 Claims. (Cl. 126—30.)

2. A heater for attachment to the exhaust of explosion engines consisting of a hollow casing having a tubular inlet to receive the products of combustion of the gas engine, said casing having an outlet port, heat conducting fins carried by the top of the casing and within the same, the heat conducting fins having varying areas pro-

gressively decreasing from opposite sides of the longitudinal center, outstanding pins carried by the side walls of the casing, and yielding utensil-engaging members cooperating with the pins to hold the utensils onto the top of the casing.



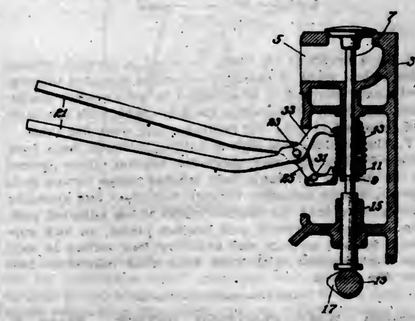
1,400,024. GAS-BURNER. Virginius Z. Caracristi, Bronxville, N. Y., assignor to The Gas Combustion Company, Pittsburgh, Pa. Filed Oct. 9, 1919. Serial No. 329,532. 4 Claims. (Cl. 158—109.)



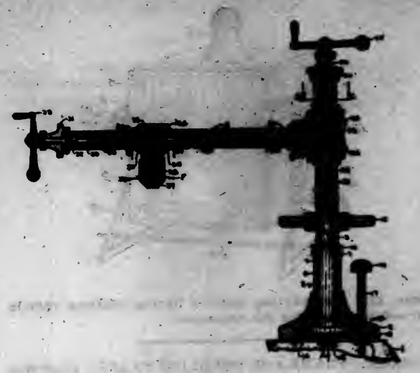
4. A gas burner comprising a body portion having a vertically disposed outlet and an inclined upwardly extending portion leading from the outlet, said vertically disposed outlet portion and said upwardly extending portion having therein longitudinally extending and closely spaced apart narrow and broad passages, and said upwardly extending portion having independent gas and air inlets with the gas inlet communicating with alternate passages and the air inlet communicating with intermediate passages, whereby gas and air may be delivered to the upwardly inclined portion at different velocity pressures and may be delivered from said outlet portion in adjacent thin films for promoting combustion of the gas, said outlet portion being slitted at its outer end in register with said passages and said slits being of less width than said passages whereby to effect the delivery of the sheets of gas and air in relatively fine films.

1,400,025. SUPPORT FOR CONTAINERS. James A. Carey, Pittsburgh, Pa. Filed Sept. 4, 1920. Serial No. 408,115. 6 Claims. (Cl. 248—58.)

1. A support for containers comprising horizontal end members, trunnions on said members, depending vertical portions on said end members rigidly connected therewith and in alinement with the trunnions, said end members having a series of openings therein, a cross member having means thereon for engaging in the openings for adjustably connecting the lower ends of the depending portions, and a supporting member having bearings therein for coöperating with the trunnions.

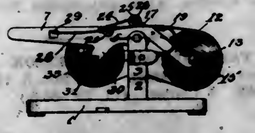


1,400,026. FRAME FOR DOUBLING YARNS. Fletcher Chadwick, Rochdale, England. Filed July 9, 1920. Serial No. 395,085. 2 Claims. (Cl. 28—34.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. The combination with a warper's beam doubling frame, of a plurality of spindles, drawing rollers parallel with said beam, means for drawing off groups of threads vertically in tape form from said beam, and means for distributing said groups diagonally to the drawing rollers and thence to the spindles over the wider distance occupied by the spindles, while maintaining the groups in tape form.

1,400,027. VALVE-SPRING COMPRESSOR. Harry W. Coddington, Natick, Mass. Filed Nov. 5, 1920. Serial No. 422,039. 5 Claims. (Cl. 29—86.3.)



1. A tool for handling the spring and spring-supporting washer of a puppet valve, comprising a washer-engaging member, a member adapted to be thrust between the coils of the spring and having a groove to engage one of them, and means for causing the members to be moved toward each other whereby the spring may be held compressed and while so held removed or replaced.

1,400,000. DENTAL INSTRUMENT. Morton Gurney, New York, N. Y. Filed Apr. 8, 1920. Serial No. 371,122. 7 Claims. (Cl. 32—10.)

4. In a dental parallelograph, the combination of a bed plate, of a standard support carrying a partially hollow slotted standard, of a gear and pinion means for controlling movement of said standard, of a rider element vertically slidable in slot of standard, of a screw means for actuating said rider element, of an operating means for said screw, of a cover element for hollow end of slotted standard, and said cover element acting as journal means for said screw, of a vertically slidable bracket attached to said rider element, of a horizontally movable arm carried by said bracket, and chuck carried by said arm.

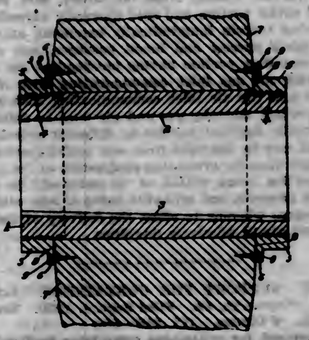
1,400,029. AUTOMATIC-FEED MEMORANDUM DEVICE. Edward F. Carey, Chicago, Ill. Filed Nov. 13, 1920. Serial No. 423,790. 7 Claims. (Cl. 281—11.)

4. In a device of the class described, a pivoted writing table, a bell crank, a ratchet mechanism operated thereby, feed means adapted to be actuated by said ratchet mechanism, and means connecting the bell crank with the table and operated thereby for feeding paper over the table.

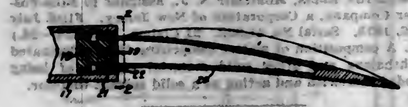
7. The combination with a writing table, of main feed-rollers for feeding paper thereover, bracket plates pivoted on the sides of said table, said bracket plates having slots therein, screws engaging through said slots and engaging said table to hold the bracket plates in an adjusted position, springs secured to said bracket plates, an axle supported by said springs, and auxiliary feed rollers on said axle for co-action with said main feed rollers to feed over the table.

1,400,030. WELL-CLEANING DEVICE. Frank E. Cravvo, Dallas, Tex. Filed Jan. 14, 1921. Serial No. 437,260. 5 Claims. (Cl. 166—99.)

1. In a well cleaning device, a pipe section, elastic packing elements mounted on the section and spaced apart, the section having perforations within the packing elements and being imperforate between the packing elements, the packing elements being expansible, whereby the fluid passing through the perforations will create pressure and expand said elements against the side of the well casing and then discharge from the elements into the space between said elements.



1,400,031. SAFETY-RAZOR. Ferdinando De Grazia, Washington, D. C. Filed May 20, 1920. Serial No. 382,958. 3 Claims. (Cl. 30—12.)

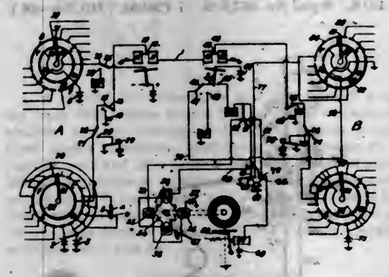


1. In a safety razor wherein a guard plate is transversely curved, spring fingers carried by the opposite ends of the plate, said guard rollers removably journaled in said fingers and retained in operative position on said plate by the resiliency of the spring fingers.

1,400,032. SELF-TIGHTENING PROPELLER-HUB. Daniel Adam Dickey, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 16, 1919. Serial No. 271,568. 5 Claims. (Cl. 170—173.)

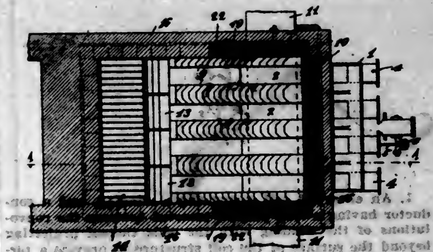
1. A hub for propellers and the like comprising a cylindrical body formed with a shaft-receiving bore and having its ends exteriorly and reversely threaded, and clamping nuts applicable to the reversely threaded ends of the body.

1,400,033. PROPELLER. Daniel Adam Dickey, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 15, 1919. Serial No. 277,243. 5 Claims. (Cl. 170—173.)



1. A propeller comprising a hub having tubular internally threaded ends, clamping heads screw into the ends of the hub and having outwardly directed tapered end portions, hollow blades of molded fibrous material and a binder adapted, at their inner ends, to snugly engage about the terminals of the clamping heads, and split clamping rings screwed into the ends of the hub to bind the inner ends of the blades to the clamping heads.

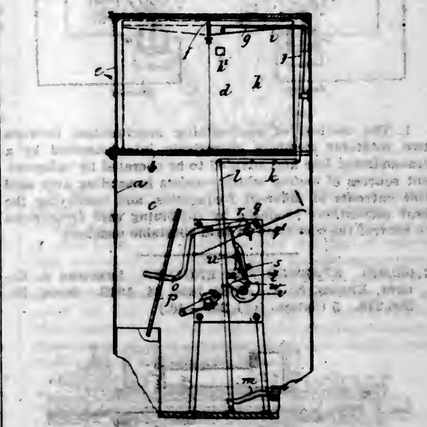
1,400,034. GREASE-GUN. Ammon J. Dilley, Muir, Mich. Filed Feb. 18, 1919. Serial No. 277,827. 9 Claims. (Cl. 221—90.)



1. In a grease gun, a piston pump, hand operated means for imparting a reciprocal motion and angular motion around the axis of the pump to the piston, a valve controlling the passage of grease to and from the pump, and means actuated by the angular movement of the piston, for operating said valve.

1,400,035. TELEGRAPH SYSTEM. Amos F. Dixon, Newark, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 20, 1917. Serial No. 202,941. 7 Claims. (Cl. 178—58.)

1. In a telegraph system, a line circuit, a motor including driving magnets therefor, means for the alternate working of message and control impulses over said line circuit, a line relay and a relay responsive to said line relay for energizing the driving magnets to operate said motor.

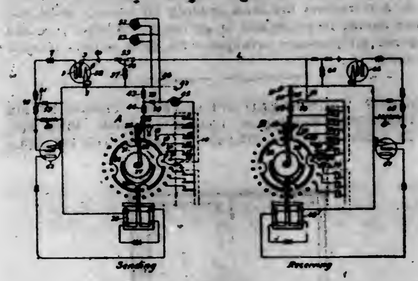


1,400,036. FURNACE. Warren Charles Dennis, Inwood, N. Y. Filed Oct. 15, 1919. Serial No. 329,433. 6 Claims. (Cl. 110—75.)

1. In a furnace a refractory wall bounding the combustion chamber, the same formed with face channels or gutters facing the fuel bed within the chamber and with numerous tapered apertures each arranged with its outlet in the bottom of one of said face channels so as to conduct jets into said channels, and means for supplying air or other fluid under pressure to said apertures.

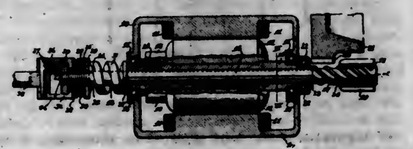
3. A refractory fire brick or block for furnace walls, the same having face channels or gutters at its inner face and tapered air passages arranged with their outlets in such channels.

1,400,037. COIN-FREED APPARATUS. Thomas Bennis Dennehoum, Kensington, London, England. Filed Apr. 23, 1920. Serial No. 375,949. 4 Claims. (Cl. 194—95.)



1. Apparatus of the kind referred to, comprising a casing for exhibits, a screen provided with a peep hole arrangement and means for moving the same from a position where normally a free display of the exhibits results to a position such as to obscure the exhibits from the view of all but one individual at a time through such peep hole arrangement, coin freed mechanism adapted to operate the exhibits and said means and maintain the partial obscurity for a predetermined time, and means controlled by the coin freed mechanism for operating the exhibits during the period of partial obscurity.

1,400,038. COIL TERMINAL. HENRY C. BOWNTON, Passaic, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 26, 1918. Serial No. 231,013. 4 Claims. (Cl. 175—359.)



1. An electrical coil comprising a winding, and a conductor having a loop portion inserted between the convolutions of the winding with the ends thereof projecting beyond the surface of the coil structure to provide a terminal for the ends of the winding and a support for the coil structure.

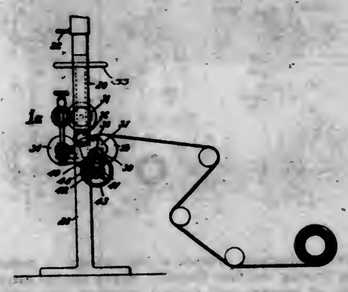
1,400,039. SIGNALING SYSTEM. HENRY C. BOWNTON, Ridgewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 27, 1918. Serial No. 268,482. 7 Claims. (Cl. 178—53.)

1. The method of maintaining synchronism between two rotatable members operatively interconnected by a transmission line and adapted to be operated by independent sources of motion which consists in sending over said line currents of different frequencies, and employing the beat oscillations produced by combining said frequencies to control the operation of said rotatable members.

1,400,040. STARTER FOR ENGINES. STEPHEN A. ELLETT, Elmira, N. Y. Filed June 24, 1919. Serial No. 306,278. 5 Claims. (Cl. 290—46.)

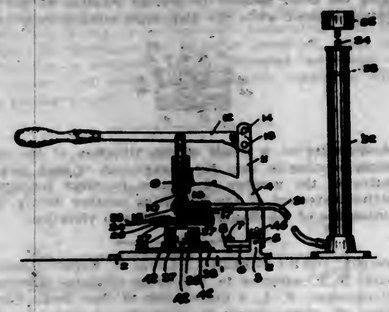
1. A starter for an engine comprising, in combination with an engine driven member to start the same, a single dynamo electric machine having an armature, a shaft rotated by the engine carrying a clutch member, a combined movable and rotatable shaft rotated by or rotating said armature and having a threaded section, a pinion movable on said rotatable shaft and engaging the threaded section of said movable shaft for engaging and actuating the engine driven member, and a clutch on said movable shaft for engaging and disengaging the clutch member on the shaft rotated by the engine.

1,400,041. CONCRETE COATING AND THE LIKE. CARLETON ELLIS, Montclair N. J., assignor to Ellis-Foster Company, a Corporation of New Jersey. Filed July 26, 1915. Serial No. 41,923. 21 Claims. (Cl. 134—26.)



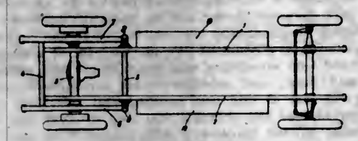
1. A composition of matter comprising tetra chlorinated naphthalene and other solid material capable of being blended therewith and acting as a solid solvent therefor.

1,400,042. ARTIFICIAL LIMB. ARTHUR A. ERB, Denver, Colo. Filed Oct. 17, 1921. Serial No. 508,870. 8 Claims. (Cl. 3—7.)



2. An ankle joint for artificial limbs, comprising in combination a tubular, substantially cylindrical, member having open ends, a longitudinally elongated opening in one side of said member, an enlarged portion between the ends thereof, a groove in said enlarged portion, a cylindrical member adapted to be inserted into said tubular member through the open end thereof, said cylindrical member having a longitudinal channel in one side thereof, and two spaced openings from said channel to the other side, a pair of spaced transversely elongated openings in said tubular member, a U bolt encircling said cylindrical member and coöperating with said groove, a U bolt having its arms passing through the spaced openings in the tubular and cylindrical members, and having its transverse portion in the channel in the cylindrical member.

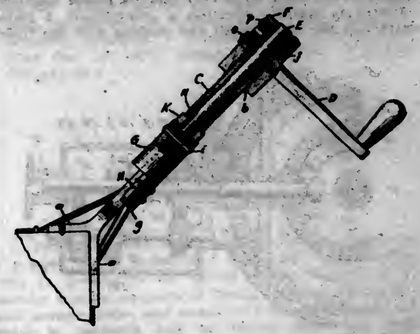
1,400,043. HEAT-REGULATING ATTACHMENT FOR TUBE-MACHINES. LOUIS T. FREDERICK, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 16, 1918. Serial No. 262,915. 7 Claims. (Cl. 34—48.)



1. In a heat-regulating device for tube machines and the like a heating roll and adjustable supports therefor.

1,400,044. DENTAL CASTING-MACHINE. JOSEPH HARRISON FRENCH, Peterboro, Ontario, Canada. Filed Feb. 24, 1921. Serial No. 447,579. 7 Claims. (Cl. 22—69.)

1. In a dental casting machine, the combination, with the base plate and a hinged bracket thereon, of a mold detachably mounted on the said base plate, a mold cover, a vertical plunger slidably mounted on the hinged bracket, said vertical plunger having an orifice extending up from the bottom thereof, a valve casing mounted on the lower end of the said plunger, a valve stem secured at its lower end to the mold cover and extending up through the valve casing into the orifice in the plunger, said valve stem having a vertical orifice extending up therethrough for a certain extent and communicating with a horizontal orifice opening in the side of the stem, a spring interposed between the top of the valve stem and the top of the orifice in the plunger, means for preventing the rotation of the valve stem relatively to the plunger and valve casing, a valve member adapted to engage the valve stem, and means for admitting air through the valve member and through the valve stem, and through the mold cover into the mold upon the horizontal orifice in the valve stem registering with the corresponding orifice in the valve member.



1,400,045. CHASSIS FOR AUTOMOBILE VEHICLES. ERNEST FUCHS, Paris, France, assignor to Louis Renault, Billancourt, France. Filed Dec. 31, 1919. Serial No. 348,709. 2 Claims. (Cl. 280—106.5.)

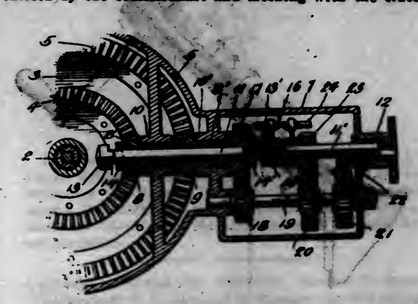
1. A chassis for automobile and like vehicles comprising main side frames placed the minimum distance apart required for the steering of the front wheels, a pair of cross beams connecting said main side frames at their extreme rear and intermediate portions, a pair of auxiliary side frames disposed outside of said main frames and connected to said cross beams, and suspension springs having their ends connected to the ends of the auxiliary side frames, said springs being positioned directly beneath the auxiliary side frames.

1,400,046. DEVICE FOR TIGHTENING AND SECURING ROUND-WIRE BOX-STRAPPING. LEONARD S. GANS, New York, N. Y. Filed Dec. 3, 1919. Serial No. 342,101. 1 Claim. (Cl. 140—119.)

A device for tightening and securing round wire box-strapping which comprises a suitable frame, a revoluble device mounted therein, and provided with a notched member over which the wires are looped, and means for rotating said device in one direction to move said notched member away from the box around which the wires have been put, thus tightening said wires, and means for

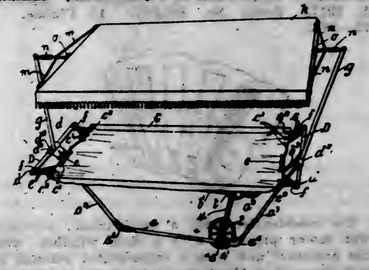
rotating said device in the opposite direction to cause said notched member to rotate, thus twisting said wires around each other while said notched member approaches said box and neutralizes the strain caused by such twisting of said wires.

1,400,047. SINGLE-PHASE ALTERNATING-CURRENT COMMUTATOR-MOTOR. GEORGE H. GARCELON, Swissvale, and CLIFFORD A. M. WEBER, Edgewood Park, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 11, 1917. Serial No. 185,707. 12 Claims. (Cl. 172—276.)



2. The combination with a single-phase, alternating-current motor provided with a field winding, with a slotted armature and with a commutated winding lying in said slots, of a short-circuited winding of relatively high reactance as compared with its resistance underlying said commutated winding in certain of said slots, the reactance of said short-circuited winding being such as to cause the flux of said winding to be largely dephased with respect to the flux of said field winding, whereby the effectiveness of said commutated winding during starting conditions is only slightly impaired.

1,400,048. TRACTOR TRANSMISSION MECHANISM. GEORGE IRA GARGETT, Mount Pleasant, Mich. Filed May 17, 1918. Serial No. 235,095. 1 Claim. (Cl. 74—59.)



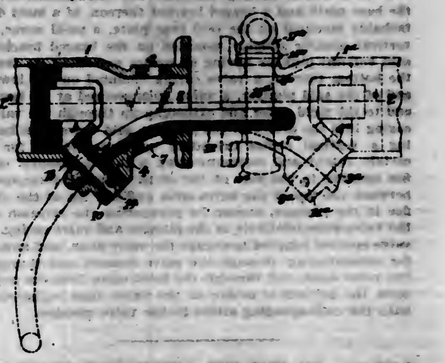
In a transmission, a housing, a jack shaft, a disk carried by said jack shaft in the housing and having inner and outer concentric gear rings, bearings in said housing, sleeves rotatably mounted in said bearings, a pinion carried by one of said sleeves and meshing with the inner gear ring and provided with a clutch element, a sleeve rotatably mounted in the other bearing and having a pinion at one end meshing with the outer gear ring and a pinion at its other end having a clutch element, a driven shaft slidably and rotatably passing through the sleeves

and pinions, a clutch element upon the end of the driven shaft for engaging the clutch element of the first pinion when the driven shaft is moved in one direction, a clutch element intermediate the length of the driven shaft for engaging the clutch element of the pinion carried by the second sleeve when the driven shaft is moved longitudinally in an opposite direction, a countershaft, a pinion carried by the countershaft and meshing with the clutch

carrying pinion of the second sleeve, spaced gears rigid upon said countershaft, an idler gear meshing with one of the spaced gears, and a gear slidably carried by the driven shaft and rotating with the same and means for moving the last mentioned gear longitudinally upon the driven shaft for selective engagement with the idler gear and second spaced gear of the countershaft to rotate the countershaft in a predetermined direction.

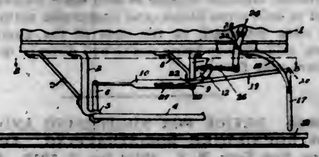
1,400,049. HAMMOCK. Frank Gossard, London, England. Filed May 18, 1921. Serial No. 469,265. 3 Claims. (Cl. 5—32.)

1. A hammock, portable bed, or the like, comprising in combination, a metallic tubular frame formed of two side members, each consisting of a straight central part and two straight end parts connected thereto by obtuse angled couplings, the end parts of each side member being connected together by an acute angled coupling, a horizontal tubular member secured to and extending transversely on each side of each acute angled coupling, a hammock-like receptale supported by cords from the extremities of said horizontal members, rods extending vertically from the center of said acute angled couplings, a covering supported above said hammock-like receptacle by cords attached to the upper ends of said rods, and means for maintaining the said covering taut and in a horizontal plane above said hammock-like receptacle.



1,400,050. SIGNALING SYSTEM. Bertram B. Grace, Upminster, England, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 5, 1918. Serial No. 252,709. 2 Claims. (Cl. 177—329.)

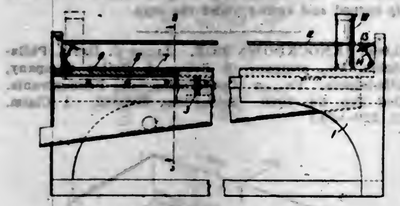
1. A signaling device comprising a vibratory diaphragm member having an opening therethrough, a rotatable indicating member, a pivoted support for the indicating member extending through the opening of the diaphragm member, and means carried by one of the members engaging the other member to prevent rotation of the indicating member while the diaphragm member is at rest



and operative as a result of the vibration of the diaphragm member to vary the engagement of such means relative to the member it engages to effect continued rotative movement of the indicating member during the maintenance of the diaphragm member in vibration.

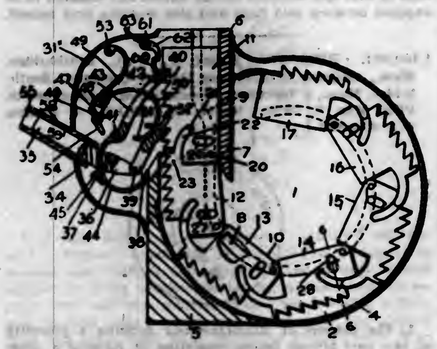
1,400,051. CAR-COUPLING. Louis D. Gregg, Hackensack, N. J., assignor to The Gregg Company, Limited, Hackensack, N. J., a Corporation of New York. Filed June 17, 1920. Serial No. 389,578. 2 Claims. (Cl. 213—50.)

1. In a link-and-pin car-coupling, the combination comprising a head containing a chamber with a front opening and a downwardly-disposed rear opening and also two transverse registered openings that retain a coupling-pin for engaging a coupling-member carried by an adjacent car, said chamber having also an upwardly-convexed floor extending longitudinally between the front and rear openings aforesaid, a coupling-link in the form of a similarly-convexed loop straddling said coupling-pin and supported on said floor, and a demountable anchor-bolt located near the rear of said rear opening and extending transversely thereof and through said loop whereby the latter on being shifted rearwardly will project from said head and hang down suspended from said bolt.



1,400,052. CAR-FENDER. James W. H. Griffin, Altona, Mich. Filed May 1, 1920. Serial No. 378,263. 6 Claims. (Cl. 293—35.)

1. In a device of the class described, a car; a fender pivoted thereto and having an upstanding arm; a support on the car; a locking member mounted on the support for



sliding movement and pivoted to the arm, the locking member having a shoulder adapted to engage with the support to hold the fender elevated; an apron mounted to swing on the car; a connection pivoted to the apron and mounted for sliding movement on the support, the connection having an inclined part coöperating with the support to disengage the shoulder therefrom when the connection is advanced by the swinging movement of the apron; and means for uniting the connection with the locking member.

1,400,053. COIN-COUNTING DEVICE. Horace Groff, Wilmington, Del. Filed Dec. 24, 1919. Serial No. 347,177. 4 Claims. (Cl. 133—8.)

1. In a coin counting device, the combination of a base, a dumping plate supported thereby, a coin trap having a series of openings located above said dumping plate, a distributer adapted to receive coins and slide over said openings, means for guiding said distributer, and means lying in the path of said distributer and adapted to be engaged thereby and automatically actuated by said distributer when it passes said series of openings so as to dump said plate.

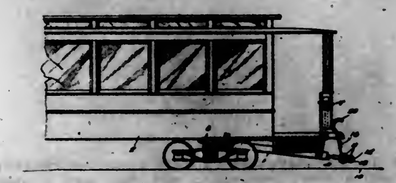
1,400,054. LIFTING-JACK. Anthony Gustiana, Sudbury, Ontario, Canada. Filed Apr. 18, 1921. Serial No. 462,124. 8 Claims. (Cl. 254—111.)

1. A lifting jack comprising a casing adapted to rest upon the ground and having an upwardly presented orifice and a vertical channel leading therefrom into the casing, a lifting column comprising a series of sections hingedly connected together so as to fit in longitudinal alinement within the vertical channel and to fold on their hinged joints within the casing, a ratchet rack forming the outer face of each section, an operating lever pivotally mounted within the casing, a lever pawl pivotally carried by the lever and engaging the rack of the column, spring means for holding the upper pawl in engagement with the rack, and means for automatically locking the segments together as they are drawn into longitudinal alinement within the aforesaid channel.

1,400,055. SHAFT-BEARING. Max B. Grabl, Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 13, 1917. Serial No. 207,009. 6 Claims. (Cl. 64—24.)

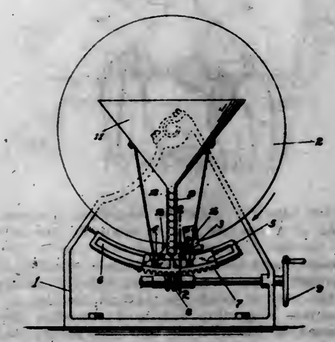
1. The combination with a shaft, a lubricant reservoir, a bearing sleeve surrounding said shaft and provided with an opening in the curved surface thereof, of an annular member composed of fibrous material surrounding said bearing sleeve and means whereby said fibrous material is positively held in contact with said shaft through the opening in said bearing sleeve, the lowermost portion of said fibrous member being disposed within said reservoir.

1,400,056. BUST-SUPPORTER. Kaletar Hadley, Kansas City, Mo. Filed Mar. 7, 1919. Serial No. 281,242. 1 Claim. (Cl. 2—73.)



In a bust supporter, a pair of supporting elements each consisting of a circular rim of relatively fine material so as to provide for a close fit of said rims to the body of the wearer, and a smooth fabric body attached to the rim in pocket formation and having sufficient fullness to permit the bust to retain its natural identity, a relatively narrow supporting body-band extending horizontally around the back of the body and having its ends connected to the rings of the supporting elements at the outer sides and approximately midway the upper and lower portions of said elements, relatively narrow shoulder straps having their ends connected to the body band at spaced points and extending up over the shoulders of the wearer and having their opposite ends connected to the tops of the supporting elements, and tie ribbons connected to the rims of the supporting elements at the inner sides and midway the tops and bottoms of said elements, the said tie ribbons having their oppositely opposed ends free and adapted to be tied.

1,400,057. CAR-FENDER. Louis Davis Hamilton, Titusville, Fla., assignor of one-half to Thomas A. Conway, Titusville, Fla. Filed Mar. 12, 1921. Serial No. 451,719. 2 Claims. (Cl. 293—17.)



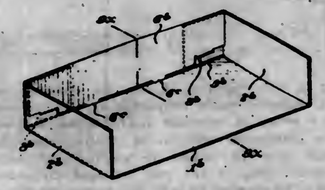
1. The combination of a vehicle body, longitudinal cylinders carried in forwardly and downwardly inclined

position at the underside of said body, pistons movable in the cylinders and having rods extended forwardly through the forward ends of the cylinders, manually-controlled means to supply fluid under pressure to and exhaust fluid under pressure from the rear portions of the cylinders, an axle journaled in the forward portions of the piston rods and having flanged wheels to travel on track rails, a corrugated roller of elastic material connected by gearing with the said axle and arranged

in advance of the axle and in a plane below that of the axle, a roller mounted at the forward end of the vehicle body, a spring housed in said roller and adapted to be placed under tension by turning of the roller in one direction and to rotate the roller in the opposite direction, and a flexible support connected with the forward portions of the piston rods and the roller on the body and adapted to be drawn from and taken up on said roller.

1,400,058. PROJECTILE-THROWER. LOUIS B. HARVEY, Buffalo, N. Y. Filed Apr. 11, 1921. Serial No. 460,469. 4 Claims. (Cl. 124—1.)

1. A device of the character described including a disk adapted to be rotated at a high speed, a hammer fixed to and projecting from the periphery of the disk, a table under the hammer, a bin to receive shot, a chute leading therefrom and discharging onto the table, and means for positively drawing the shot from the chute to pass into and lie in the path of movement of the hammer.



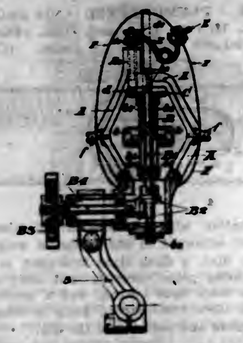
1,400,059. BATTERY TERMINAL. ALDA F. HAWKINS, Fort Worth, Tex., assignor to Standard Battery Manufacturing Company, Fort Worth, Tex., a Corporation of Texas. Filed Aug. 2, 1919. Serial No. 314,984. 1 Claim. (Cl. 204—29.)

In a battery terminal fastening, a terminal post having lugs and flat sides connecting the lugs, and a nut having a slot shaped to receive the lugs and pass down the flat sides, one of said elements having diagonally disposed

inclined faces at points of contact with the other element, whereby the nut and lugs are wedged together when the nut is turned and swung under the lugs.

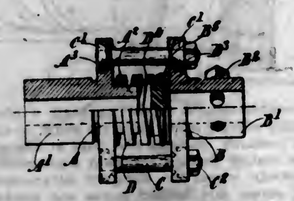
1,400,060. KNOCKDOWN BOX. JACOB C. HEIM, Philadelphia, Pa., assignor to Brown & Bailey Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 24, 1920. Serial No. 360,632. 1 Claim. (Cl. 229—30.)

A knock-down box member having a rectangular body section provided with parallel edge scores, side sections hinged to said body section along said scores; flaps hinged to said side sections and adapted to be engaged in said scores in bowed relation to said side sections; side sections hinged to said body section along lines at right angles to said scores, and extensions hinged to the ends of said side sections second named and adapted to be engaged between said flaps and side sections first named.



1,400,061. BIFOCAL. HARRY W. HILL, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Mar. 8, 1920. Serial No. 363,929. 3 Claims. (Cl. 49—82.1.)

1. The process of simultaneously forming a plurality of two part bifocal lenses consisting in forming a countersink centrally of a blank, securing a segment of different index of refraction within the countersink and subsequently splitting the blank through the countersink to provide a plurality of lens portions each having a near and a distant vision section.

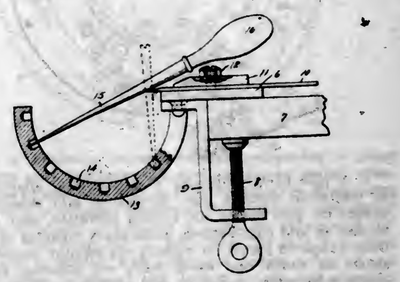


1,400,062. AUTOMOBILE-SPEED CONTROLLER. HENRY C. HILL, Cincinnati, Ohio. Filed Dec. 22, 1920. Serial No. 432,555. 3 Claims. (Cl. 123—118.)

1. In a speed controller for automobiles a centrifugal spring governor containing a pivoted vertical shaft, upon the lower end of said shaft a rigidly attached collar, upon the upper end of said shaft a movable sleeve, the rigid collar and movable sleeve being joined by two or more flat metal springs, said springs being provided with metal balls or weights at their mid-lengths, so arranged and operating that when the metal balls and springs expand by revolution of the governor the movable sleeve is drawn downward on the governor shaft, a circular disk attached to said movable sleeve upon which rides

a vertically sliding stem, said stem being insulated from the body of the governor and provided with lock nuts to limit the downward travel and break contact between the lower end of said stem and the revolving disk, when the speed of the governor is such that the disk is drawn so far downward that the sliding stem no longer rides on it, and means for connecting said sliding stem with the primary wire of the electric circuit to the spark plugs of an automobile, substantially as described.

1,400,063. TOOL-HOLDER. THOMAS HINTON, Reading, England, assignor to Herbert Merton, Reading, England. Filed Feb. 25, 1919. Serial No. 279,124. 3 Claims. (Cl. 279—16.)

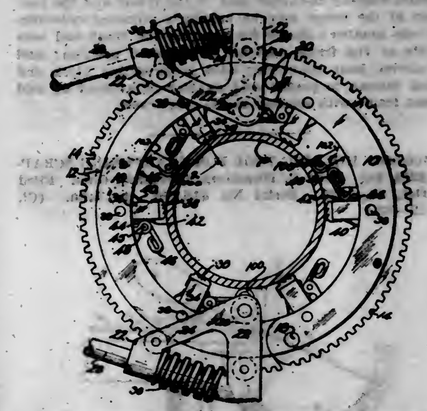


1. A tool holder of the character described for use with a support, comprising in combination a supporting member comprising a disk adapted to be secured to said support, a chuck member comprising a disk normally coaxial with said first mentioned disk for receiving a tool, each of said disks having seats in its outer face remote from the other disk, links extending through said disks and having hemispherical portions at each end seated in said seats, said links constituting the sole means for connecting and transmitting rotational movement from the supporting member to the chuck member, and normally extending parallel with the axis common to said members and being free to swing universally each about its point of connection with said members, whereby the chuck and supporting member may have a relative rotary movement and be caused thereby to move axially relatively to each other, and a compression spring between said members tending to thrust the same apart, substantially as and for the purpose set forth.

1,400,064. PORTABLE POWER-DRIVEN CROSSCUT-SAW. AXEL HOLMBERG, South Ecklin, via Terang, Victoria, Australia. Filed Oct. 1, 1918. Serial No. 256,385. 5 Claims. (Cl. 143—68.)

1. In a portable power-driven saw, the combination with a two-part frame; a saw blade carried by the front part of said frame; a motor carried by the rear part of the frame; means for connecting said motor to said saw blade, comprising a reciprocating block carried by the front part of the frame and a pitman carried by the rear part, means whereby the front part of the frame and the rear part of the frame may be angularly adjusted relatively to one another; means for securing the front and rear parts of the frame together in adjusted position; and a swivel joint connecting said reciprocating block and stem pitman to permit said angular adjustment of said front frame with relation to the rear frame.

1,400,065. HOLDING-TOOL FOR SHARPENING SCRAPERS, &c. PAUL O. HUBRICHT, Cleveland, Ohio. Filed Oct. 20, 1920. Serial No. 418,276. 1 Claim. (Cl. 29—83.)



A work holder for sharpening blades, comprising a horizontally arranged clamp for the blade, a screw clamp depending from the under side of said clamp, for the attachment of said clamp to the edge of a bench or the like, and a curved arm secured to the under side of the blade clamp and projecting outwardly therefrom, and having a plurality of depressions located at various angles with respect to the blade clamp and adapted to form a rest for the front end of a tool while it is being applied to the edge of the blade.

1,400,066. CONSTRUCTION TOY SET. ADOLF HUCK, Nuremberg, Bavaria, Germany. Filed July 18, 1914. Serial No. 851,799. 1 Claim. (Cl. 46—35.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

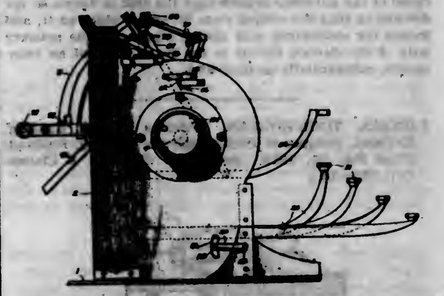
A set of toy construction members comprising in combination, assembling bodies provided with screw threaded recesses or holes in their faces, socket members

adapted to be secured into said crossbars, rods engaging with their ends said socket members, and means for detachably securing said rods and sockets in their relative position, substantially as described.

1,400,067. PIPE-BUCK. James C. Hunnam, Fort Morgan, Colo. Filed Apr. 5, 1920. Serial No. 371,410. 6 Claims. (Cl. 81—97.)

1. A pipe buck comprising a ring member adapted to be positioned about a pipe, devices on said member to engage the pipe during the turning operation, gear teeth formed on said ring member, worm gears engaging in said teeth at spaced points for turning the member converging shafts on which said worm gears are mounted, and a single drive shaft geared to said converging shafts.

1,400,068. RATCHET MECHANISM. Howard W. Hunt and Prospero B. Carbullo, Cincinnati, Ohio. Filed July 28, 1920. Serial No. 399,744. 12 Claims. (Cl. 74—84.)

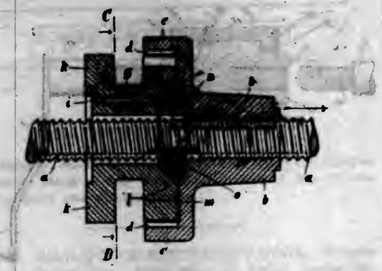


1. In combination, ratchet mechanism consisting of driving means reversible alternately in one direction and then in the other and of a driven element driven alternately in one direction and then in the other, means for disengaging the driven element from said driving means at a fixed point in the course of its motion when driven in one direction, and adjustable means for disengaging said driven element from said driving means at any predetermined point in the course of its motion when driven in the other direction.

1,400,069. PLUMB-LEVEL AND PROTRACTOR. Herbert L. Hunter, Cleveland, Ohio. Filed June 16, 1920. Serial No. 389,496. 1 Claim. (Cl. 240—2.)

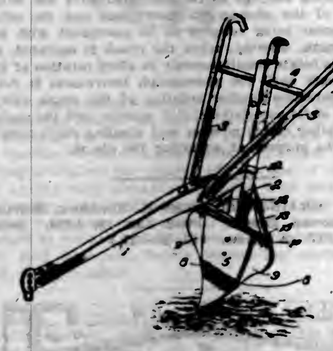
The combination with a stock having communicating recesses, a dial arranged in one recess, a weighted index finger for the dial, a flash light arranged in the other recess, a retaining plate covering said light and slotted to receive the flash light button, and a sectional casing slidable on the stock and adapted when in closed position to cover said plate and button and the dial.

1,400,070. TYPOGRAPHICAL MACHINE. William J. Irwin, Tacoma, Wash. Filed Dec. 26, 1920. Serial No. 432,704. 11 Claims. (Cl. 199—5.)



1. In combination, a supporting shaft a plurality of matrix disks slidably mounted on the shaft, means on the shaft for normally retaining the disks at one end thereof, a type casting mold, a key-board mechanism operable to successively release the disks for advancement along the shaft across said holding means and means for advancing them into coöperative relation with said mold for the casting of a type slug.

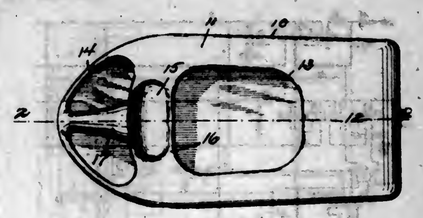
1,400,072. EXTRUSION-PRESS. Olaf B. Jacobsen, Birmingham, England. Filed Sept. 12, 1918. Serial No. 253,713. 4 Claims. (Cl. 207—3.)



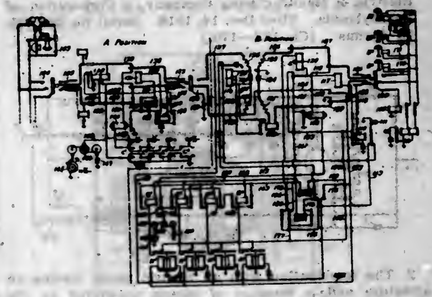
1. An extrusion press, involving a plunger, to the extremity of which a mandrel is secured, said mandrel being of diameter less than that of the plunger, in which the said plunger is located solely within a hollow plunger, and in which the plunger first mentioned is adapted to exert a proportion of the extrusion pressure

1,400,073. FEED DEVICE FOR THE MANDRELS OF MACHINE TOOLS OF ALL KINDS. Max Jänicke, Halle-on-the-Saale, Germany. Filed Apr. 18, 1916. Serial No. 92,024. 2 Claims. (Cl. 77—39.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A feed device for a mandrel of machine tools comprising in combination a nut, a mandrel having threaded engagement with said nut, and means for continuously preventing the rotation of said nut during the idle travel of the mandrel, and means whereby said nut is arrested intermittently upon resistance being applied to the mandrel during its feeding motion.



1,400,073. AGRICULTURAL IMPLEMENT. Thomas M. Jones, Chateaugay, N. Y. Filed Apr. 18, 1921. Serial No. 462,373. 2 Claims. (Cl. 97—26.)

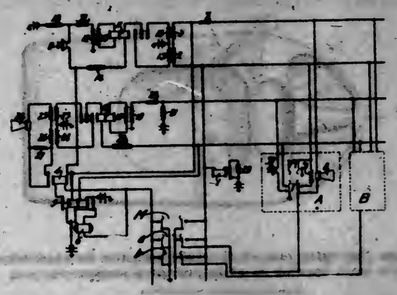


2. In combination, a beam and a standard, a cross bar secured to the standard, a cultivator blade secured to the front of the standard and bearing against the cross bar, the cross bar having reduced ends to form with the cultivator blade guides on opposite sides of the standard, wings pivoted to the cultivator blade and operating in the guides, the cross bar serving to brace the upper portion of the wings, diverging links pivoted to the upper ends of the wings, an operating lever pivoted to diverging links to swing the wings toward and from the standard.

1,400,074. BEDPAN. Joseph Kerrakis, Newark, N. J.; Clara Kerrakis administratrix of said Joseph Kerrakis, deceased. Filed Jan. 29, 1920. Serial No. 354,868. 4 Claims. (Cl. 4—10.)

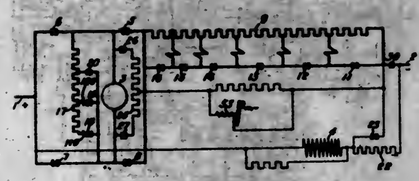
1. A bed pan having its top provided with the usual main opening, a tube at the front extending forwardly and downwardly into the pan, the pan being formed between the outer end of the tube and the forward edge of the main opening so as to provide a suspensory.

1,400,075. TELEPHONE-EXCHANGE SYSTEM. Charles W. Keckler, Newark, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 11, 1917. Serial No. 185,705. 4 Claims. (Cl. 179—55.)



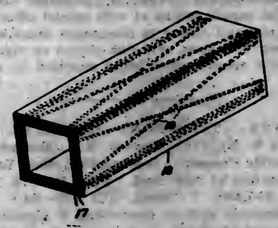
1. A telephone exchange system comprising a trunk circuit extending between a first and second central office, means at said first office to supply a plurality of signaling currents of different characteristics, means at said second office to supply a plurality of signaling currents of different characteristics, a link circuit at said first office adapted to connect with said trunk circuit, means at said first office to connect any desired one of said signaling currents at said first office with said link circuit, means associated with said trunk circuit and operated by the particular signaling current connected to said link circuit to automatically connect a particular current from said current supply means at said second office with said trunk circuit, and means to disconnect signaling current at said first office from said link circuit on signaling current at said second office being supplied to said trunk circuit.

1,400,076. TELEPHONE SIGNALING SYSTEM. Charles W. Keckler, Newark, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 16, 1919. Serial No. 345,380. 2 Claims. (Cl. 179—84.)



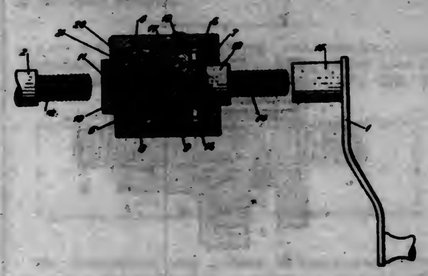
1. A telephone system comprising a plurality of stations, a source of signaling current, means at one of said stations for selectively connecting said source to signal any one of said other stations, and a chain of cyclically operating relays, consisting of a slow-acting relay, a second relay, energized upon the operation of said slow-acting relay, to release said slow acting relay, and a third

relay, energized upon operation of the said second relay and release of the said slow-acting relay, to disconnect



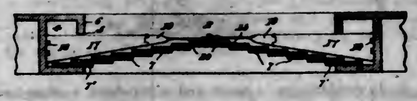
said source of signaling current and establish a talking connection between first said station and said other station.

1,400,077. MOTOR-CONTROL SYSTEM. HAROLD L. KEITH, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 14, 1918. Serial No. 266,691. 20 Claims. (Cl. 172—179.)



2. The combination with an electric motor having an armature and a resistor, of means controlled by the counter-electromotive force of said motor for inserting a portion of said resistor into parallel circuit with said armature, and means controlled by the current traversing said motor for inserting the remainder of said resistor into parallel circuit with said armature.

1,400,078. MOLDED TUBE. WILLARD H. KEMPTON, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 16, 1918. Serial No. 228,820. 8 Claims. (Cl. 93—94.)

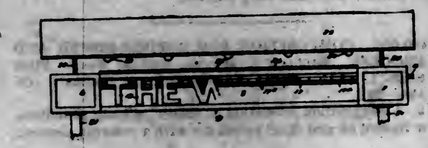


1. A reinforced tubular article including a tubular body formed of superimposed layers of fibrous sheet material secured by a binder and a plurality of reinforcing wires provided with a binder-impregnated fibrous covering interposed between the layers of the body.

1,400,079. SAFETY DEVICE FOR PHONOGRAPHS. CHARLES H. KREMER, Jersey City, N. J., assignor of one-fourth to Oscar A. Widenmann and one-fourth to Reinhold Prietz, Jersey City, N. J. Filed Aug. 9, 1920. Serial No. 402,214. 6 Claims. (Cl. 64—30.)

5. A safety device for phonographs embodying a casing, a pair of smooth faced cone clutch members positioned interiorly of the casing, means for yieldably maintaining the smooth conical surfaces of said clutch members in engagement with one another, one clutch member being locked to the casing for rotation therewith while free for automatic longitudinal adjustment therein and the other clutch member being rotatable with respect to the casing, the latter clutch member being provided with teeth on one of its parts other than the clutch face, an alarm member positioned exteriorly of the casing, and means cooperating with the toothed face of the rotatable clutch member for operating the alarm means, one of said clutch members being adapted to be associated with the winding shaft of the phonograph instrument and the other clutch member being adapted to be associated with the winding crank, whereby, when the crank is operated, all of the parts rotate simultaneously to effect rotation of the winding shaft until the phonograph instrument is fully wound, whereupon further rotation of the crank effects a rotation of its associated clutch member and the casing while the other clutch member and winding shaft remain fixed for the purpose of actuating the alarm.

1,400,080. GRAIN-DOOR. JOHN K. KOPCHUK, Melville, Saskatchewan, Canada. Filed Aug. 19, 1920. Serial No. 404,517. 9 Claims. (Cl. 20—27.)



1. A grain door of the type described comprising in combination with a door opening having frame pockets at opposite sides thereof, a door formed of sliding panels adapted to extend across the door opening when in closed position and to be received in said pockets when in open position, and means adapted to be moved into the path of opening movement of the panels to hold the same in closed position.

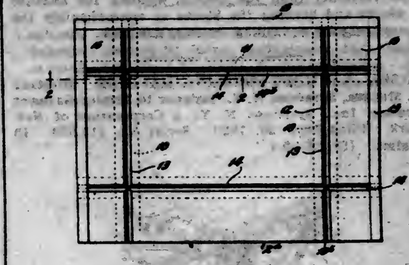
1,400,081. ADVERTISING-SIGN. EDWIN O. LA ROCHE, Clifton, Ill. Filed June 23, 1921. Serial No. 479,822. 5 Claims. (Cl. 40—96.)

1. A sign comprising two end boxes, a pair of channeled casings extending between said boxes and having

flanges at their top and bottom edges, drums in the boxes, an endless belt extending around the drums and along

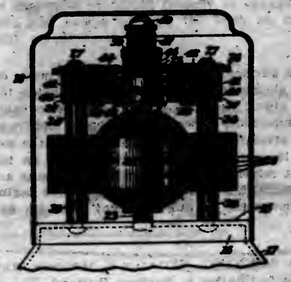
in the casings, said belt being exposed between the flanges, at opposite sides of the sign, and means in one of the boxes to drive one of the drums.

1,400,082. MAIL-POUCH-SUSPENDING HOOK. ROBERT E. LEE, Dallas, Tex. Filed Mar. 21, 1921. Serial No. 454,282. 2 Claims. (Cl. 24—232.)



2. In a mail pouch suspending hook, a hook body having a suspending element at one end and a laterally extending shank at the other end, said shank having a reduced end portion, a latch approximately U-shaped in cross section straddling the reduced end portion of the shank and having sides pivotally connected with said reduced end portion, said latch being provided at its rear end with fingers extending longitudinally beyond the pivot and adapted to contact with the sides of the reduced end portion, said latch and fingers terminating approximately flush with the shank.

1,400,083. THREE-PIECE WATCH-CASING. LOUIS LEHR, Bayonne, N. J. Filed Oct. 1, 1921. Serial No. 504,597. 7 Claims. (Cl. 58—88.)



1. A three-piece snap-casing having a body with a border flange, and a circular dust-collar projected from the front side of the body-plate and a bezel formed upon the rear side, a rear cover fitted to snap on the rear bezel, and the front having a marginal dust-flange fitted within the border flange upon the body, and having a crystal-opening of any desired shape.

1,400,084. CIGAR-BOX. HENRY LEHMAN, Tampa, Fla. Filed Jan. 14, 1920. Serial No. 351,904. 9 Claims. (Cl. 217—2.)

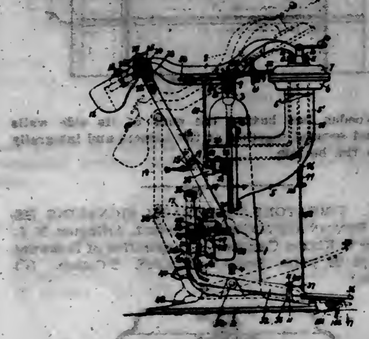
1. A wooden box having the ends of its side walls jointed and secured together at the corners and integrally united to the bottom.

1,400,085. VIBRATORY-DIAPHRAGM SIGNALING DEVICE. DUNCAN ALEXANDER MCCONNELL, Arlington, N. J., assignor to Klaxon Company, a Corporation of Delaware. Filed Apr. 24, 1918. Serial No. 230,448. 2 Claims. (Cl. 172—36.)

1. An electric motor, including a pair of supporting rods, pole pieces carried thereby intermediate of the ends thereof, a stamped metal member connecting said rods, a pair of lined sleeves, a band encircling each sleeve and having its end portions secured to said member, brushes longitudinally movable within said sleeves, and an armature shaft journaled in said member intermediate of said sleeves.

1,400,086. FRUIT PRESERVATIVE AND PROCESS FOR USING SAME. REX DE ORR MCDILL, Riverview, Fla. Filed Jan. 12, 1921. Serial No. 436,777. 4 Claims. (Cl. 99—8.)

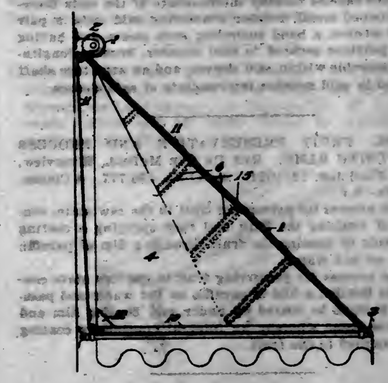
1. The process for preserving fruit in the raw state, consisting of washing the fruit and then applying a coating to the fruit by passing the fruit through a film of paraffin floating on hot water.



2. The process for preserving fruit in the raw state consisting in floating a film of paraffin on hot water and passing the fruit to be coated up under said floating film and lifting the same whereby an integral continuous coating will be applied to the fruit.

1,400,087. BASIC REFRACTORY BRICK. SPENCER B. NAWMMAR, Cleveland, Ohio. Filed Nov. 19, 1920. Serial No. 425,286. 7 Claims. (Cl. 106—10.)

1. The process of making basic refractory brick by calcining a mixture of lime and argillaceous matter in such



proportions that the resulting clinker will not shrink appreciably during continued heating when exposed to air, adding to the clinker a mixture of lime and argillaceous matter of greater fusibility than the clinker, molding the mixture into blocks and burning the blocks at approximately the temperature used in burning ordinary fire brick.

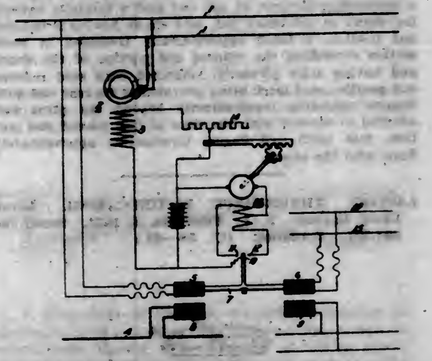
1,400,088. GARMENT-PRESSING MACHINE. RICHARD H. MILLER, Syracuse, N. Y., assignor to Triplex Garment Presser, Inc., Syracuse, N. Y., a Corporation of New York. Filed Sept. 29, 1920. Serial No. 413,559. 15 Claims. (Cl. 68—9.)

3. In a garment pressing machine, a frame, coöperative pressing elements, one of which is movable toward and from the other, a resting support for the movable element, toggle connections between said support and frame, a pedal lever for straightening the toggle to throw the movable element to its pressing position and having an independent movement relatively to the toggle, and means actuated by the independent movement of the pedal for flexing the toggle to release the movable element from its flexing position.

1,400,089. AWNING. WILLIAM E. METZGER, Rutland, Vt., assignor to Charles A. Metzger, Rutland, Vt. Filed Mar. 12, 1920. Serial No. 365,189. 4 Claims. (Cl. 156—44.)

3. In a roller-type awning, a drum or body portion having a gore cut from each end thereof; telescoping end curtains, one edge thereof being gored, said gored edges adapted to be joined to the gored ends of said body portion; pockets formed in said end curtains and adapted to embrace between [illegible] said end curtains and the other ends fastened to said body portion so as to prevent the ends of said battens from coming into contact with said body portion.

1,400,090. COMPOSITION FOR RUBBER-FINISH AND PROCESS. WILLIAM H. MILLER, Renton, Wash. Filed Sept. 1, 1921. Serial No. 497,982. 2 Claims. (Cl. 134—54.)



2. A composition consisting of rubber, silicate of sodium, raw linseed oil and drier substance with a coloring element.

1,400,091. AUTOMATIC RAILWAY SAFETY APPLIANCE. JOHN H. MUNDERBACK, Watertown, N. Y. Filed May 23, 1921. Serial No. 471,574. 3 Claims. (Cl. 246—260.)

1. In an appliance of the class described, a cross plate having a pair of upwardly projecting substantially cylindrical bosses, a contact member having a pair of cylindrically extending bosses telescoped within the bosses upon said strip, a member connected to the said contact device between the said bosses, and a flexible cable connected to said member and adapted to effect telescope movement of the bosses upon said contact device with the bosses upon said strips, and spring means within the bosses tending to move the contact device away from said strip.

1,400,092. CONTROLLING DEVICE. FRANK D. NEWBURY, Pittsburgh, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 4, 1918. Serial No. 215,403. 7 Claims. (Cl. 171—119.)

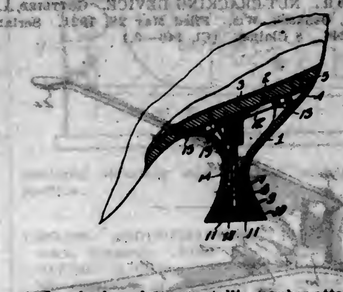
1. In a system for controlling an electrical quantity in proportion to the quotient obtained by dividing a second electrical quantity by a third electrical quantity, means for developing a force proportional to the product of said controlled quantity and said third quantity, means for developing a force proportional to the product of said second quantity and a fixed magnetic force, means for differentially combining said two forces, and means, operable by the movement of said combining means, for adjusting said controlled quantity.

N. Y., assignors to Twisted Wire & Steel Co., a Corporation of New York. Filed Dec. 24, 1920. Serial No. 432,990. 2 Claims. (Cl. 254—71.)

1. A wire-stretcher which is provided with a multiple pawl arrangement which consists of a pair of driving pawls adapted to operate alternately, and a pair of holding pawls each of which is adapted to be operated by its corresponding driving pawl during the tightening operation.

1,400,094. BOX-CAR. LEWIS C. ORD, Montreal, Quebec, Canada, assignor to The Holden Company, Limited, Montreal, Canada. Filed Feb. 28, 1920. Serial No. 362,169. 3 Claims. (Cl. 108—5.5.)

1. In a box car the combination with a roof structure and end plate thereof of a member effecting a union between the roof structure and end plate and mutually reinforcing the same, such member consisting of a comparatively wide and relatively thin plate secured to the roof structure and having a relatively shallow depending flange secured to the end plate.

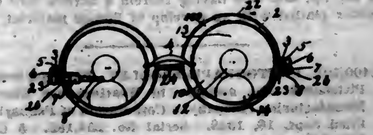


2. In a box car the combination with side plates, end plates, ridge pole, purlins and side furrings, of a member effecting a union between the ridge pole, purlins and side furrings and the end plate, such member consisting of a comparatively wide and relatively thin gusset plate extending in arch form from side plate to side plate and secured at its ends between the side plate and furrings and to the ridge pole and purlins, the said plate having at one side edge a longitudinal depending flange, and bolts fastening the said flange to the end plate at points in the vicinity of the purlins.

1,400,095. DETACHABLE HEEL. GEORGE W. OWEN, Indianapolis, Ind., assignor of one-half to Paul K. Thiry, Indianapolis, Ind. Filed Mar. 11, 1920. Serial No. 364,991. 8 Claims. (Cl. 36—41.)

2. In a heel structure, a metallic plate attachable to a sole, a hollow body member closed at its top, one of said [illegible] having inclined edges at its ends, and having a screw threaded lug, a hollow metallic body member having ridges within the shell and protected thereby to engage said inclined edges and means to hold the body to the plate, substantially as set forth.

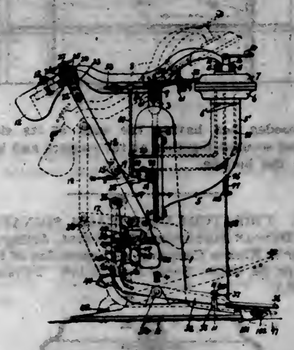
1,400,096. DETACHABLE HEEL. GEORGE W. OWEN, Indianapolis, Ind., assignor of one-half to Paul K. Thiry, Indianapolis, Ind. Filed Oct. 4, 1920. Serial No. 414,533. 6 Claims. (Cl. 36—41.)



1. In a heel, a plate, a metallic member attached thereto having inclined edges at its ends, and having a screw threaded lug, a hollow metallic body member having ridges within the shell and protected thereby to engage said inclined edges and means to hold the body to the plate, substantially as set forth.

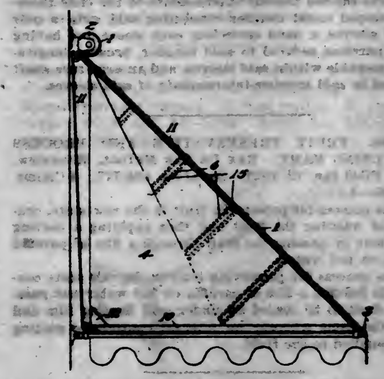
1,400,097. TOY AEROPLANE. LOUIS J. PERKINS, Lewiston, Idaho. Filed Apr. 8, 1921. Serial No. 460,552. 2 Claims. (Cl. 244—12.)

1. A toy aeroplane comprising a fuselage, a rudder pivoted to said fuselage, an operating rod connected to said rudder, a link pivoted to the forward end of said rod, a lever having a branch pivotally and slidably connected to said link and provided with a slot, a weight having a rod provided with a pin slidable in said slot, and a sleeve slidably supporting said weight, said lever, said rod, said weight and said sleeve being housed entirely within said fuselage.



1,400,098. OPTICAL INSTRUMENT. ARTHUR PERRIN, Brookline, Mass. Filed Jan. 5, 1921. Serial No. 435,138. 4 Claims. (Cl. 88—41.)

1. An optical instrument comprising front and rear spectacle frames, containing objective and eyepiece lenses respectively, said frames each having bows hinged thereto, and the bows of the respective frames being connected



improvement that the resulting clinker will not disintegrate after being continued heating when exposed to atmosphere, adding to the clinker a mixture of lime and argillaceous matter of greater fusibility than the clinker, molding the mixture into blocks and burning the blocks at approximately the temperature used in burning ordinary fire brick.

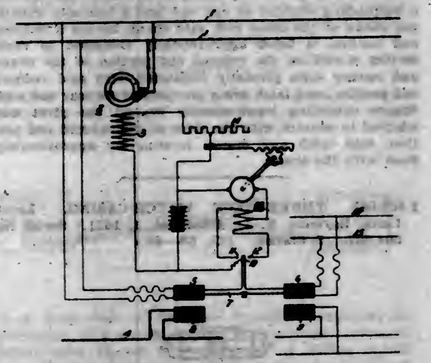
1,400,088. GARMENT-PRESSING MACHINE. RICHARD H. MELLEN, Syracuse, N. Y., assignor to Triplex Garment Presser, Inc., Syracuse, N. Y., a Corporation of New York. Filed Sept. 29, 1920. Serial No. 412,559. 15 Claims. (Cl. 68—9.)

3. In a garment pressing machine, a frame, coöperative pressing elements, one of which is movable toward and from the other, a rocking support for the movable element, toggle connections between said support and frame, a pedal lever for straightening the toggle to throw the movable element to its pressing position and having an independent movement relatively to the toggle, and means actuated by the independent movement of the pedal for flexing the toggle to release the movable element from its flexing position.

1,400,089. AWNING. WILLIAM E. METZGER, Rutland, Vt., assignor to Charles A. Metzger, Rutland, Vt. Filed Mar. 12, 1920. Serial No. 365,189. 4 Claims. (Cl. 156—44.)

3. In a roller-type awning, a frame or body portion having a guard cut from each end thereof; telescoping slat curtains, one edge thereof being curved, said curved edges adapted to be joined to the guard ends of said body portion; pockets formed in said end curtains and adapted to embrace between them, parallel with said curved edges of said curtains, one end of a batten, and a thumb fastened to said end curtains and the other ends fastened to said body portion so as to prevent the ends of said battens from coming into contact with said body portion.

1,400,090. COMPOSITION FOR RUBBER-FINISH AND PROCESS. WILLIAM B. MILLER, Renton, Wash. Filed Sept. 1, 1921. Serial No. 497,892. 2 Claims. (Cl. 134—54.)

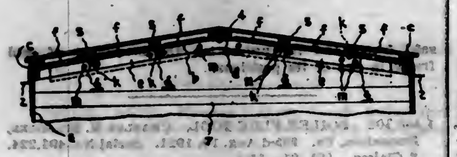


2. A composition consisting of rubber, silicate of sodium, raw linseed oil and drier substance with a coloring element.

1,400,091. AUTOMATIC RAILWAY SAFETY APPLIANCE. JOHN H. MUNDENBACK, Watertown, N. Y. Filed May 28, 1921. Serial No. 471,874. 3 Claims. (Cl. 246—200.)

1. In an appliance of the class described, a cross plate having a pair of upwardly projecting substantially cylindrical bosses, a contact member having a pair of cylindrically extending bosses telescoped within the bosses upon said strip, a member connected to the said contact device between the said bosses, and a flexible cable connected to said member and adapted to effect telescope movement of the bosses upon said contact device with the bosses upon said strips, and spring means within the bosses tending to move the contact device away from said strip.

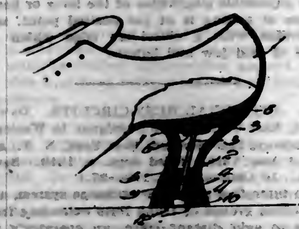
1,400,092. CONTROLLING DEVICE. FRANK D. NEWBURY, Pittsburgh, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 4, 1918. Serial No. 215,403. 7 Claims. (Cl. 171—119.)



1. In a system for controlling an electrical quantity in proportion to the quotient obtained by dividing a second electrical quantity by a third electrical quantity, means for developing a force proportional to the product of said controlled quantity and said third quantity, means for developing a force proportional to the product of said second quantity and a fixed magnetic force, means for differentially combining said two forces, and means, operable by the movement of said combining means, for adjusting said controlled quantity.

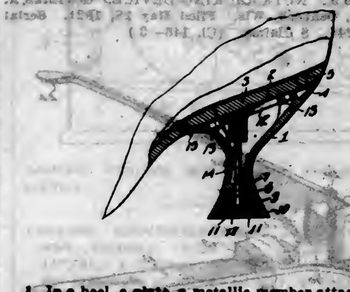
1,400,093. WIRE-STRETCHER. CHARLES J. O'CONNOR, Chicago, Ill., and [illegible], New York, N. Y., assignors to Twisted Wire & Steel Co., a Corporation of New York. Filed Dec. 24, 1920. Serial No. 432,990. 2 Claims. (Cl. 254—71.)

1. A wire-stretcher which is provided with a multiple pawl arrangement which consists of a pair of driving pawls adapted to operate alternately, and a pair of holding pawls each of which is adapted to be operated by its corresponding driving pawl during the tightening operation.



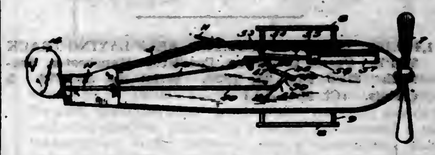
1,400,094. BOX-CAR. LEWIS C. ORD, Montreal, Quebec, Canada, assignor to The Holden Company, Limited, Montreal, Canada. Filed Feb. 28, 1920. Serial No. 362,169. 3 Claims. (Cl. 108—5.5.)

1. In a box car the combination with a roof structure and end plate thereof of a member effecting a union between the roof structure and end plate and mutually reinforcing the same, such member consisting of a comparatively wide and relatively thin plate secured to the roof structure and having a relatively shallow depending flange secured to the end plate.



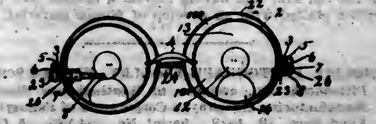
2. In a box car the combination with side plates, end plates, ridge pole, purlins and side furrings, of a member effecting a union between the ridge pole, purlins and side furrings and the end plate, such member consisting of a comparatively wide and relatively thin gusset plate extending in arch form from side plate to side plate and secured at its ends between the side plate and furrings and to the ridge pole and purlins, the said plate having at one side edge a longitudinal depending flange, and bolts fastening the said flange to the end plate at points in the vicinity of the purlins.

1,400,095. DETACHABLE HEEL. GEORGE W. OWEN, Indianapolis, Ind., assignor of one-half to Paul K. Thiry, Indianapolis, Ind. Filed Mar. 11, 1920. Serial No. 364,991. 8 Claims. (Cl. 36—41.)



2. In a heel structure, a metallic plate attachable to a sole, a hollow body member closed at its top, one of said members having an angular recess and the other having an angular projection to engage in said recess to prevent relative rotation of the two, and means to fasten the body to the plate.

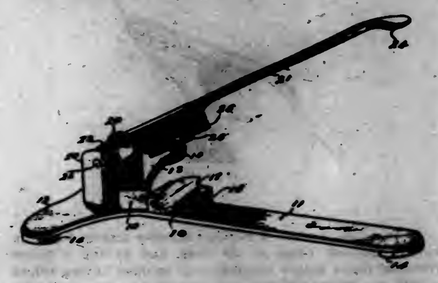
1,400,096. DETACHABLE HEEL FOR SHOES AND BOOTS. GUSTAV W. OWEN, Indianapolis, Ind., assignor of one-half to Paul K. Thiry, Indianapolis, Ind. Filed Oct. 4, 1920. Serial No. 414,533. 6 Claims. (Cl. 36—41.)



1. In a heel, a plate, a metallic member attached thereto having inclined edges at its ends, and having a screw threaded lug, a hollow metallic body member having ridges within the shell and protected thereby to engage said inclined edges and means to hold the body to the plate, substantially as set forth.

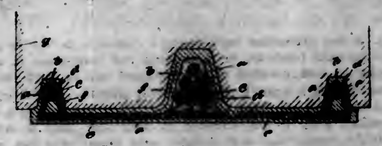
1,400,097. TOY AEROPLANE. LOUIS J. PERKINS, Lewiston, Idaho. Filed Apr. 8, 1921. Serial No. 459,582. 2 Claims. (Cl. 244—12.)

1. A toy aeroplane comprising a fuselage, a rudder pivoted to said fuselage, an operating rod connected to said rudder, a link pivoted to the forward end of said rod, a lever having a branch pivotally and slidably connected to said link and provided with a slot, a weight having a rod provided with a pin slidable in said slot, and a sleeve slidably supporting said weight, said lever, said rod, said weight and said sleeve being housed entirely within said fuselage.



1,400,098. OPTICAL INSTRUMENT. ARTHUR PERRIN, Brookline, Mass. Filed Jan. 5, 1921. Serial No. 435,138. 4 Claims. (Cl. 68—41.)

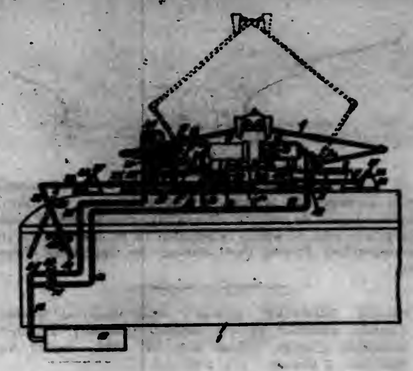
1. An optical instrument comprising front and rear spectacle frames, containing objective and eyepiece lenses respectively, said frames each having bows hinged thereto, and the bows of the respective frames being connected



by guides which accommodate a relative sliding movement by which the objectives may be moved toward and from the eyepieces while retained parallel and substantially co-axial therewith, the shoulders to which said bows are hinged having the pivotal axes of the bows of the respective frames substantially in line with one another when the front and rear frames are closed together, whereby the connected bows of both frames can be folded down parallel with the plane of the lenses.

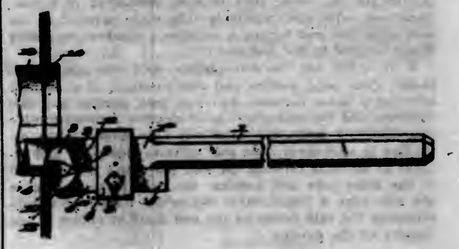
1,400,099. NUT-CRACKING DEVICE. Gottlieb A. Pueppke, Oshkosh, Wis. Filed May 28, 1921. Serial No. 473,244. 3 Claims. (Cl. 146—3.)

1. A nut cracker of the class described, comprising in combination, a block recessed for receiving and supporting an elongated nut, a lever arm pivoted for vertical swinging movement and adapted to crack said nut when swung downwardly, and coöperating shearing jaw, means carried by said block and lever arm whereby the ends of the nut are severed therefrom previous to the cracking thereof.



1,400,100. VEHICLE OF THE SELF-LAYING-TRACK TYPE. Frank Reddaway, Pendleton, Manchester, England. Filed Jan. 24, 1920. Serial No. 353,773. 5 Claims. (Cl. 304—10.)

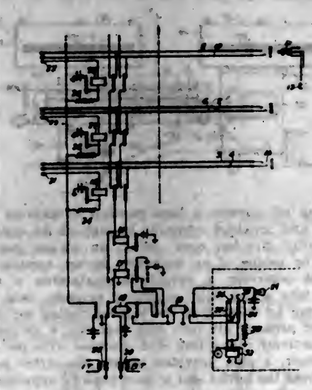
1. As an article of manufacture, a flexible traction member, having a tread surface of vulcanised material, layers of reinforcing material inserted in such tread surface, and a longitudinally extending rib on the opposite side thereof, said rib having an outer casing of vulcanised material and a core of rubber softer than the outer shell of the rib, said core having therein a flexible cord of soft rubber plaited with an envelop of fibrous material.



1,400,101. PANTOGRAPH-TROLLEY. William Schaake, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 16, 1918. Serial No. 254,185. 5 Claims. (Cl. 191—65.)

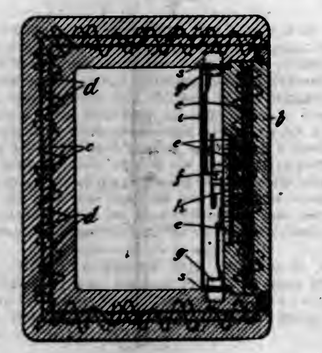
1. A trolley comprising a pantograph frame biased to its extended position, means for retracting the frame, latching means for holding the frame in a retracted position, means for actuating said latching means to release said frame, and additional means, having a plurality of positions, for releasing said latching means and moving

said frame and for preventing the movement of said frame in one of its positions.



1,400,102. BOILER-FLUE TOOL. Charles M. Spangler, Emporium, Pa. Filed Aug. 10, 1921. Serial No. 491,224. 3 Claims. (Cl. 81—15.)

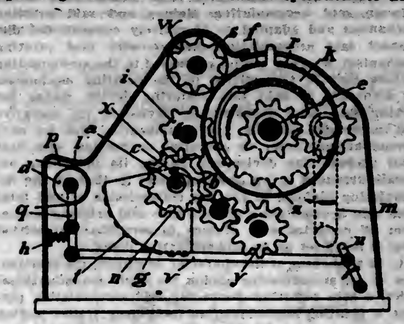
1. A boiler flue tool comprising a handle or lever having a rigid jaw provided with a fulcrum adapted to engage the inner surface of the flue which is to be removed, and a jaw adjustable lengthwise of the lever or handle for the purpose of setting it at the desired point, said jaw being provided with a chisel-like edge which extends lengthwise of said jaw and handle.



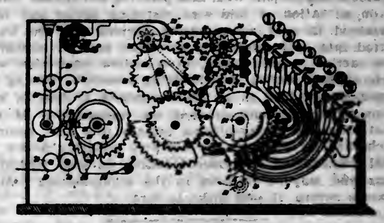
1,400,103. ARTIFICIAL BUSY-CIRCUITS. Dawson M. Taggart, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 4, 1919. Serial No. 321,584. 10 Claims. (Cl. 179—27.)

1. In an interoffice telephone exchange system, an office, a distant office, groups of trunk lines extending from said first office to said distant office, an operator's position at said distant office at which one of said groups of trunks terminates, apparatus at said first office to simultaneously render all the trunks of the group busy, and means under the control of an operator to operate said ap-

paratus over the talking conductors of one of said trunk lines.



1,400,104. SAFE. Werner Thörig, Zurich, Switzerland. Filed Oct. 16, 1919. Serial No. 331,169. 3 Claims. (Cl. 109—1.)



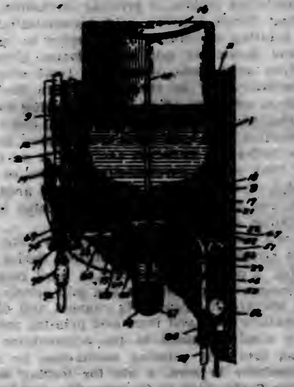
1. A safe comprising a body portion formed of concrete, rods in said concrete, bars in said concrete, said rods and bars being interlaced in screw-like manner, and a door, said rods and bars being situated substantially through the concrete.

1,400,105. CALCULATING-MACHINE. Franz Trinks, Brunswick, Germany. Filed Nov. 2, 1915. Serial No. 59,245. 10 Claims. (Cl. 235—58.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A calculating machine, comprising rotatable setting disks having displaceable teeth, a numeral printing mechanism adapted to be set by the displaced teeth, means for operating said disks, and means actuated by the disk operating means in its movement of operation for automatically returning said printing mechanism to zero position.

1,400,106. ADDING-MACHINE. Franz Trinks, Brunswick, Germany. Filed Aug. 30, 1916. Serial No. 117,791. 4 Claims. (Cl. 235—60.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

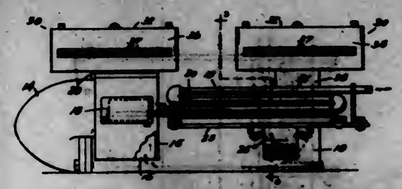
1. In a machine of the character described, the combination of an accumulator comprising an accumulating pinion for each denominational order, a zero restoring device for said accumulating pinions, a printing mechanism, a total transmitting device between said accumulating pinions and said printing mechanism and adapted to operatively connect and disconnect said accumulating pinions with said printing mechanism, whereby a total contained in the accumulator may be transmitted into the printing mechanism on actuation of said zero restoring device, and an indicating disk for each denominational order in operative connection with said total transmitting device and having its indicating numerals arranged in an order opposite to that of the accumulating pinions so that on transmission of any total by restoring said accumulating pinions to zero the total transmitted is being set up on said indicating disks.



2. In a machine of the character described, the combination of an accumulator, a zero restoring device for said accumulator, a printing mechanism, a total transmitting device between said accumulator and said printing mechanism and adapted to operatively connect and disconnect said accumulator with and from said printing mechanism, whereby a total contained in the accumulator may be transmitted into said printing mechanism by restoring said accumulator to zero, a pin for locking said total transmitting device both in its operative position and in its inoperative position, and a handle connected to shift said transmitting device from one of such positions to the other and provided with a pair of cams alternately engageable with said pin to lift the same out of locking position.

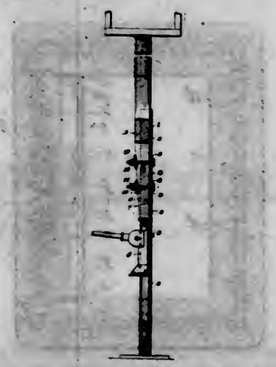
3. In a machine of the character described, the combination of an accumulating pinion for each denominational

setting, a zero restoring device for said accumulating pinions, a printing mechanism, a total transmitting device between said accumulating pinions and said printing mechanism and adapted to operatively connect and disconnect said accumulating pinions with said printing mechanism, whereby a total contained in the accumulating pinions may be transmitted to the printing mechanism on actuation of said zero restoring device, means for locking said total transmitting device in its operative and inoperative positions, and an indicating disk for each denominational order, in operative connection with said total transmitting device and having its indicating numerals arranged in an order opposite to that of the accumulating pinions, so that on transmission of any total from said accumulating pinions into said printing mechanism by restoring said pinions to zero the transmitted total is being set up on said indicating disks.



4. In a machine of the character described, the combination of an accumulating pinion for each denominational order, a zero restoring device for said accumulating pinions, a printing mechanism, an oscillatory frame, motion transmitting members on said frame for each denominational order and in operative connection with said printing mechanism, means for locking said oscillatory frame in either of its two positions, an oscillatory member adapted to render said locking means inoperative during the initial part of its oscillatory movement and to shift said oscillatory frame after having rendered said locking means inoperative, the shifting of said frame causing said motion transmitting members to operatively connect said accumulating pinions with said printing mechanism whereby on actuation of said zero restoring device any total contained in said accumulating pinions may be transmitted into said printing mechanism, and an indicating disk carried on said frame, in operative connection with each of said motion transmitting members, having its numerals arranged in an order opposite to that of said accumulating pinions so that on transmission of any total from said accumulating pinions into said printing mechanism by actuation of said zero restoring device the total transmitted is rendered visible on said indicating disks and may be restored in the accumulating pinions through return of said disks to zero.

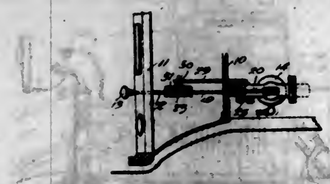
1,400,107. CHLORINATION APPARATUS. James W. Van Meter, San Francisco, Calif. Filed Feb. 23, 1921. Serial No. 447,197. 9 Claims. (Cl. 22—8.)



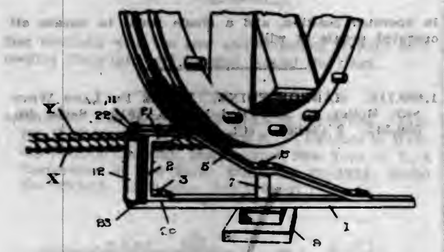
1. A chlorin apparatus comprising a light proof cabinet, an inverted bottle in said cabinet, a relatively small bulb of transparent material secured to the open end of said bottle and extending out of said cabinet, means for introducing fluid to be chlorinated to said bottle and bulb, and means for introducing chlorin gas under pressure to chlorinate said fluid.

1,400,108. OIL-BURNER. Thomas Wilson, Seattle, Wash. Filed Dec. 6, 1921. Serial No. 515,566. 9 Claims. (Cl. 158—61.)

1. In an oil burner, a base member containing a gas reservoir and provided adjacent to each of its ends with an upwardly directed neck outlet, an oil-gas generator operated by means of an auxiliary burner receiving fuel from said reservoir, a receptacle containing a mixing chamber into which said generator extends, said receptacle having an opening in the bottom thereof for the admission of primary air into said chamber, a return bend communicatively connecting said chamber with the end of the reservoir, a pipe provided within the latter and extending from the outlet end of said bend to approximately the midlength of the reservoir, a burner provided for each of said necks, said burners being provided with inlets for the admission of secondary air, a slotted cap piece provided within the head for the respective necks, said caps serving to deflect the secondary air into the passages of the necks to unite with the mixture of primary air and gas passing through the respective neck passages.



1,400,109. SHORE. Oscar L. Wallace, Cincinnati, Ohio. Filed Nov. 10, 1920. Serial No. 423,142. 2 Claims. (Cl. 248—21.)

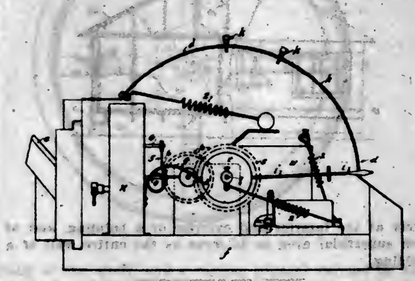


1. In a device of the class described, a channeled base member, openings in the web portion of the same, a head section of rectangular cross section slidably fitting within said base, having a downwardly tapered lower front face, a slot at a right angle to said tapered portion and of equal length thereto, clamping means traversing said base member and the slot of said head member and coacting with said tapered face.

1,400,110. CARBURETER CONTROL. William D. Wanzer, Columbus, Ohio, assignor of one-half to Horatio J. Fairchild, Kalamazoo, Mich. Filed Jan. 24, 1920. Serial No. 353,628. 5 Claims. (Cl. 137—144.)

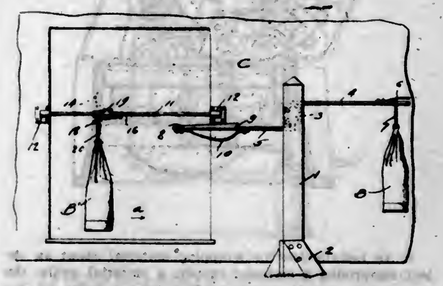
5. The combination with a carbureter including a choker valve and a fuel valve, of a control rod mounted for longitudinal and rotative adjustment and having connections to said control valve and fuel valve including a universal joint, a bell crank lever, a link connecting one arm of said lever to said choker valve, and a link connected to the other arm of said lever and having a connection to said control rod permitting relative movement thereof whereby said choker valve is actuated by the longitudinal movement of said control rod and said fuel valve is adjusted by the rotative movement thereof.

1,400,111. OIL-RIG BULL-ROPE TRIPPER. Elmer Walters, Eldorado, Kans. Filed Aug. 18, 1920. Serial No. 404,485. 1 Claim. (Cl. 64—4.)



A rope trip for shifting ropes on bull wheels of oil well rigs comprising a bottom bar, a top bar, a diagonal brace bar that extends rearwardly and form a part of the top bar and the bottom bar, a spreader block interposed between the brace portion and the base of the tripper, the said spreader block extending through the base member and terminating in a central bearing for the tripper, a base block into which the said bearing is received, a spreader iron that joins the outer ends of the top and base portions of the tripper, a roller bearing mounted vertically between the said top and base portions and a handle receiving member extended from the rear end of the base bar, all being arranged substantially as shown and described.

1,400,112. VEHICLE-WHEEL HUB. Edward R. Wagner, Milwaukee, Wis., assignor to E. R. Wagner Manufacturing Company, North Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 8, 1920. Serial No. 372,188. 5 Claims. (Cl. 301—84.)



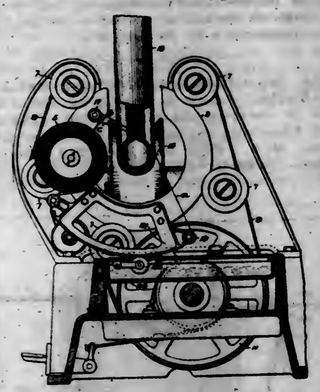
1. A wheel hub comprising two outwardly flanged sheet metal barrel sections, having their flanges secured together and radially grooved to form spoke sockets, and an abutment ring inserted in the barrel opposite the spoke sockets.

1,400,113. AUDIBLE ALARM OR INDICATION APPARATUS. George Edwin Washington and Harold Washington, Manchester, England. Filed June 25, 1919. Serial No. 306,782. 3 Claims. (Cl. 161—4.)

1. In an audible alarm, a base, a cover plate secured to the base and provided with a slot, a removable memorandum card marked to indicate time and attached to the cover at one side of the slot, a shaft secured to the base and arranged under the cover plate, an oscillatory arm pivoted on the said shaft and projecting through the said slot, means for sounding an audible alarm when the arm arrives at predetermined markings on the time card, and a clockwork mechanism secured to the base and operatively connected with the said arm.

1,400,114. MAIL-BAG CATCHING AND DELIVERING APPARATUS. James G. Welch, St. Louis, Mo., assignor of one-fourth to John Sinclair, one-fourth to Harry John Cross, and one-fourth to William Aitchison, Detroit, Mich. Filed June 24, 1919. Serial No. 306,314. 2 Claims. (Cl. 258—17.)

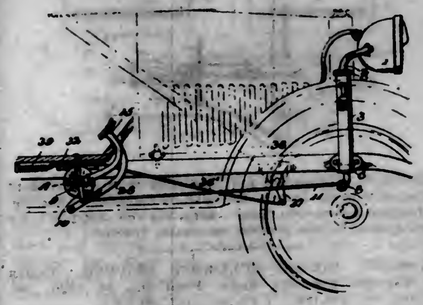
1. The combination with a mail sack having a loop; of an arm upon which the loop is adapted to pass, said arm having yielding means associated with one side thereof, and a sloping portion on the arm opposite the yielding means and upon which the mail sack loop is adapted to ride, the yielding means and sloping portions rendering the side of the arm such that the loop cannot pass thereon and beyond the yielding means without causing the latter to flex.



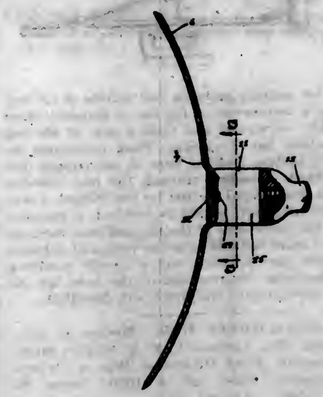
1,400,115. BUILDING-SLAB. Karl Wessel, St. Paul, Minn. Filed Jan. 12, 1920. Serial No. 350,997. 9 Claims. (Cl. 20—4.)

1. A wall slab having substantially its entire mass made from vegetable fiber united in compact self sustain-

ing form and of such strength, thickness and rigidity that it is adapted to support itself and a roof structure, when erected with its inner and outer surfaces exposed respectively at the interior and exterior of a building, and of such superficial area as to serve as the entire wall of a building.



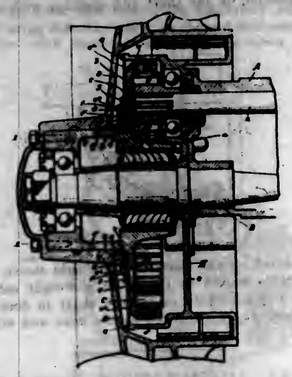
1,400,116. METHOD OF WRAPPING AND MEANS FOR PRACTISING THE SAME. WILLIAM M. WEBBLDON, Ashland, Mass., assignor to Edward H. Angier, Framingham, Mass. Filed Apr. 6, 1918. Serial No. 227,098. 2 Claims. (Cl. 242—6.)



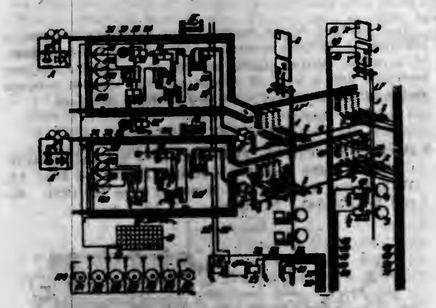
1. An installation for wrapping material about an object comprising a material supply, a material guide, the material from said supply leading from a point on one side of the object to a point at the opposite side of the object, providing a part between such points bearing on the object, leading at said opposite side over the guide and thence in the opposite direction back to the object in superposed relation to the part of the wrapping already thereon, providing a loop over the guide having a closed mouth provided by superposition of the two branches thereof on the article and means to effect relative rotation of object and supply.

1,400,117. VEHICLE-HEADLIGHT CONTROL. JOHN WESLEY WHITE, Lewistown, Mont. Filed Oct. 7, 1920. Serial No. 415,414. 7 Claims. (Cl. 240—61.)

1. Dirigible head lights, a foot pedal for turning each head light to signal a contemplated turn of the vehicle, automatic locking means for securing an operated pedal in operated position, and a single pedal to release all operated pedals at will.



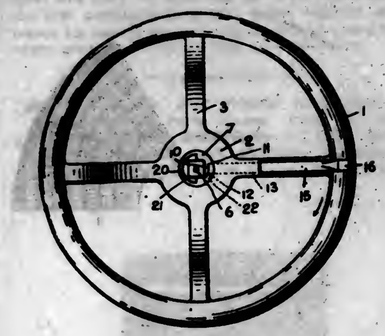
1,400,118. HARROW-POINT. WILLIS DE LANO WHITNEY, Holley, N. Y. Filed Nov. 8, 1919. Serial No. 336,545. 3 Claims. (Cl. 55—97.)



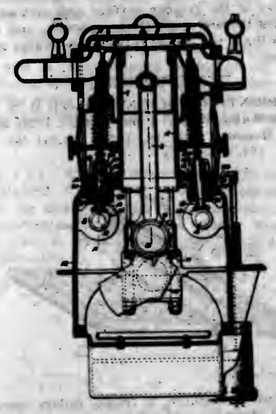
1. The combination with a clip constituting a fastening member and having a transverse bar; of a double ended point having side recesses receiving the sides of the clip adjacent to said bar, a lug projecting inwardly from the bar adjacent one side, said point having a recess communicating with one of the aforesaid recesses and receiving said lug therein.

1,400,119. HOUSING FOR TRUCK DRIVING-GEARS. RICHARD A. WHITTINGHAM, Newark, Del. Filed May 5, 1920. Serial No. 379,044. 2 Claims. (Cl. 74—7.)

2. The combination with a dead axle having a wheel spindle, a driving gear, having a hub, mounted on the spindle and a drive shaft having a pinion engaging the gear, of a gear housing secured to the dead axle and inclosing said gearing, the front wall of said housing having an annular pocket adjacent the gear hub, said pocket having an annular opening and having an opening in its lower part communicating with the interior of the housing, and packing rings between the walls of said pocket, a disk rotatable with the gear and extending between said packing rings into said housing beyond the rings.



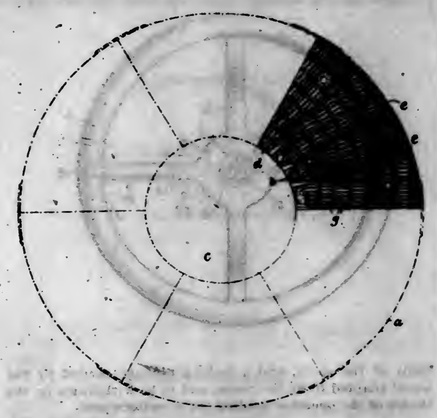
1,400,120. TELEPHONE-EXCHANGE SYSTEM. SAMUEL B. WILLIAMS, Jr., Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 17, 1918. Serial No. 229,035. 40 Claims. (Cl. 179—27.)



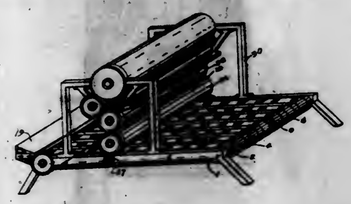
1. The combination with a switching mechanism having a plurality of contact banks, a corresponding plurality of trip magnets and trip rods, and a plurality of shafts with means for moving the same, each of said shafts carrying a set of brushes for each of said contact banks, of a plurality of switches, one for each of said brush sets, and operating means for each of said switches comprising two cooperating members, one member being controlled by the associated trip rod and the other member being controlled by the associated shaft.

1,400,121. DETACHABLE AUTOMOBILE STEERING-WHEEL. CEPHAS JOHN WILLS, Toronto, Ontario, Canada, assignor of one-half to Edgar James Wills, Toronto, Ontario, Canada. Filed Nov. 29, 1920. Serial No. 426,975. 5 Claims. (Cl. 74—33.)

1. The combination with the steering shaft and steering wheel, of a keeper portion carried by the steering shaft and provided with a keeper recess extending inwardly from the end of the shaft and circumferentially, an engaging projection carried by the steering wheel adapted to enter the recess so as to be carried longitudinally and circumferentially of the shaft, and a locking plunger carried by the wheel adapted to fit the recess and to be withdrawn by the thumb of the operator holding the steering wheel.



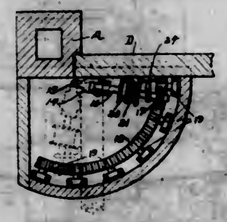
1,400,122. INTERNAL-COMBUSTION ENGINE. NIKLAS WINBLAD, Stepney, Conn., assignor, by mesne assignments, to the Locomobile Company, Bridgeport, Conn., a Corporation of West Virginia. Filed Nov. 14, 1917. Serial No. 202,034. 5 Claims. (Cl. 123—86.)



2. An engine comprising, in combination, a cylinder having a laterally offset valve chamber and a pair of valve seats, a piston working in said cylinder, a pair of valves coöperating with said seats, valve-actuating mechanism including a shaft whose axis is located at a greater distance from the axis of said cylinder than the distance from the centers of said valve seats to said axis, a pair of valve-actuators operated by said shaft, a pair of valve-actuator guides having outer circumferential surfaces arranged parallel with the axis of said cylinder and having inner valve-actuator guiding surfaces arranged at an angle to the axis of said cylinder, a support provided with openings whose internal surfaces form sockets for said outer circumferential surfaces of said guides, and means to predetermine the position of said guides and to insure alinement of their guiding surfaces with said valves.

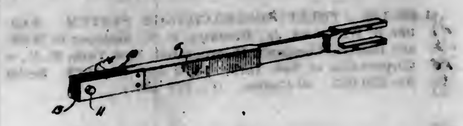
1,400,122. GRINDING-PLATE FOR ATTRITION-MILLS. GEORGE WOLFF, Paterson, N. J. Filed Nov. 30, 1920. Serial No. 427,000. 2 Claims. (Cl. 83—3.)

1. A grinder surface for a rotary attrition mill having sector-shaped grinder surface portions whose sides are radii from the center of rotation as between such grinder surface and a corresponding opposed grinder surface, each such sector-shaped surface portion being composed of series of spaced straight blades all arranged substantially parallel with one of said sides of said surface portion and said series being arranged at different distances from the center portion of the grinder surface and each series having the blades therein respectively opposite, and narrower at their tops than, the spaces between the blades in the adjoining series.



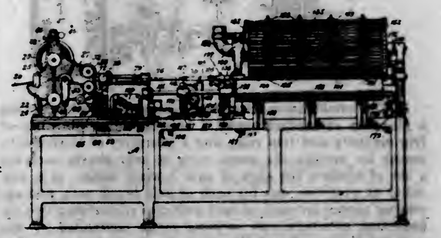
1,400,124. PRINTING-MACHINE. RALPH H. S. WOLVERTON, Walla Walla, Wash. Filed May 24, 1920, Serial No. 383,633. Renewed July 18, 1921. Serial No. 485,791. 4 Claims. (Cl. 101—35.)

1. In a printing machine, a frame, rollers mounted in said frame, a flexible resilient carrier mounted on said rollers and provided with pockets, a grooved parted carrier guide attached to said frame and positioned to register with the lower side of the upper portion of said carrier, an adjustable yielding roller positioned to register against the under side of the upper portion of said carrier, a feeding table, a resilient printing roller, a type roller to register with said printing roller and an inking mechanism, an inking mechanism, and an adjusting means for regulating the height of said inking mechanism with relation to the article to be printed.



1,400,125. DOOR-CLOSER. JOHN C. WOOD, Bellaire, Ohio. Filed Mar. 27, 1920. Serial No. 369,211. 2 Claims. (Cl. 16—47.)

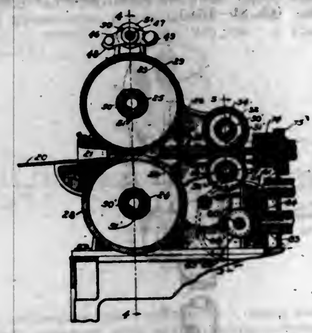
1. In door closing means, a door, a supporting plate, a bearing sleeve pivoted at one end to said plate for movement about a vertical axis, a shaft having one end rotatably mounted in said sleeve, a rack depending from said plate and disposed concentric with the pivot of said sleeve, a pinion secured on the shaft and meshing with said rack,



a drum secured on the shaft between said sleeve and the pinion, a cable wound on the drum, a weight secured on said cable and acting to rotate the shaft in door closing direction, and an arm secured to the door and straddling the shaft.

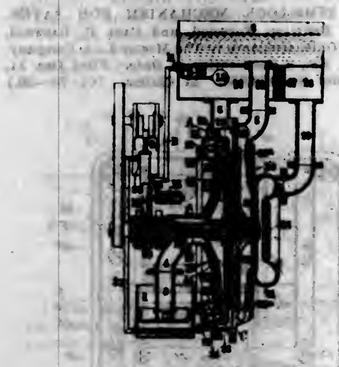
1,400,126. CONTACT DEVICE. JAMES A. WOTTON, Montclair, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 16, 1920. Serial No. 431,179. 6 Claims. (Cl. 175—345.)

1. A contact device comprising a vibrating member, a plurality of resilient members secured to the free end thereof, a contact button rigidly secured to one of the resilient members, and a body of elastic material secured between and in intimate contact with said resilient members.



1,400,127. MACHINE FOR MAKING SPIRAL STICK-CANDY. FRED E. ZARSE, Chicago, Ill. Filed Sept. 11, 1918, Serial No. 253,563. Renewed June 13, 1921. Serial No. 477,345. 27 Claims. (Cl. 107—4.)

1. In a machine of the character described, the combination of mechanism for shaping and continuously feeding a strip of material, means for twisting the strip, means for severing the twisted strip into lengths and means for severing the lengths into sticks of commercial size.

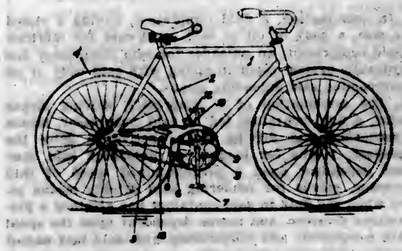


1,400,128. MACHINE FOR MAKING CANDY. FRED E. ZARSE, Chicago, Ill. Filed Dec. 8, 1919. Serial No. 343,263. 14 Claims. (Cl 107—10.)

1. In a machine of the character described, the combination of a pair of rolls for shaping and feeding a strip of candy and provided with means to shape different strips, mechanism for driving said rolls, means for heating said rolls, mechanism for acting upon the shaped strip after it leaves the rolls and means fro conjointly adjusting the rolls to bring different portions thereof into position for cooperation with mechanism for acting upon the shaped strip.

4. In a machine of the character described, the combination of a pair of rolls provided with means for shaping different strips, another pair of feed-rolls also provided with means for shaping different strips, mechanism for driving both pairs of rolls, mechanism for acting upon the shaped strip after it leaves the rolls, means for heating the rolls, and means for conjointly adjusting both pairs of rolls to bring different portions thereof into operative relation with the mechanism for acting upon the shaped strip.

1,400,129. WATER-CLEANING PLANT. HEINRICH WEMMER, Frankfort-on-the-Main, Germany. Filed Feb. 16, 1916. Serial No. 78,735. 3 Claims. (Cl. 210—1.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

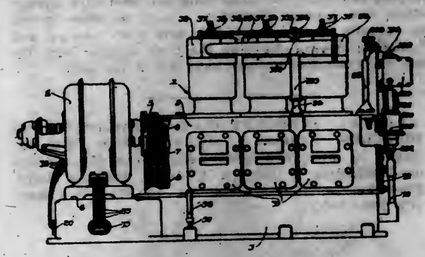


1. In a water cleaning apparatus, a casing, a tank positioned above the casing, means for dividing the tank into an upper and a lower compartment, a crude water tank in communication with the casing, a rotary dispenser within the casing having combs disposed on its periphery, said dispenser adapted to draw water from the crude water tank and simultaneously cause air to be mixed therewith, the combs adapted to convert the water and air into a spray and force the same into the lower compartment of the first mentioned tank, and means adjacent said dispenser for forcing the water by centrifugal action into the upper compartment of the first mentioned tank.

1,400,130. HINGE FOR DOORS AND THE LIKE. MAURICE ZÜTTEL, Paris, France. Filed May 19, 1913, Serial No. 768,659. Renewed Oct. 17, 1921. Serial No. 508,360. 3 Claims. (Cl. 16—130.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

3. In a hinge for doors and the like, a member adapted for attachment to the door and provided with a hinge pin, a slide movable in unison with said member, another member adapted for attachment to the door jamb and engaging said slide, the latter being provided with a longitudinal slot, a plate adapted to engage the slide on the side opposite to that engaged by said jamb member, and a clamping screw connecting the jamb member with the plate and extending through said slot of the slide.

1,400,131. SPROCKET-GUARD ATTACHMENT FOR BICYCLES. CHARLES S. ADAMS, Stockton, Calif., assignor, by direct and mesne assignments, of forty-nine one-hundredths to Howard A. Jones, Stockton, Calif. Filed Feb. 5, 1921. Serial No. 442,673. 2 Claims. (Cl. 208—145.)

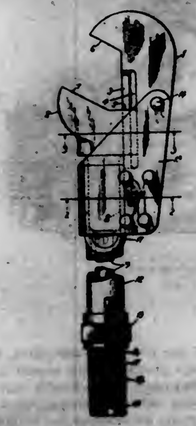


1. A sprocket guard for bicycles comprising a plate member adapted to partially surround the sprocket and chain adjacent thereto, and clamp members formed structurally integral with the plate, one of said clamps being adapted to embrace the vertical frame-bar of the bicycle and the other one the adjacent horizontal frame bar.

1,400,132. DRILL. JAMES BURWELL AGASSIZ, Hana Maui, Hawaii. Filed Apr. 4, 1921. Serial No. 458,230. 4 Claims. (Cl. 255—64.)

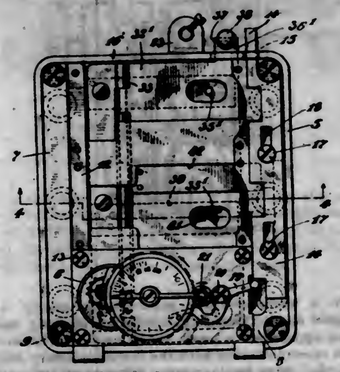
1. A drill comprising a hollow bit stock, a check valve on the upper end of said bit stock, a bit secured to the lower end of said bit stock embodying a plurality of arcuate cutting edges, and a ball secured to the upper end of said bit stock.

1,400,133. CONTROL SYSTEM FOR COMPRESSORS AND THE LIKE. BURTON S. AIKMAN, Milwaukee, Wis., assignor to National Brake & Electric Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed May 21, 1917. Serial No. 169,997. 118 Claims. (Cl. 230—24.)



8. In combination, a fluid compressor, having a closed crank-case, a body of oil in said crank-case for lubricating said compressor, an unloader for said compressor and an hydraulic system communicating with said body of oil for overcoming said unloading means.

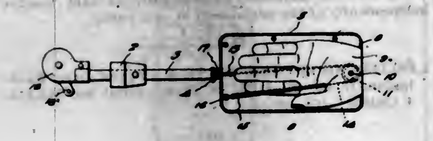
71. The combination of a compressor, driving means therefor, a fluid container fed by said compressor, means for rendering said driving means active to drive the compressor, means for loading or unloading said compressor dependent upon a predetermined speed of said compressor, means for rendering said driving means inactive when the fluid in said container has attained a predetermined pressure, and means dependent upon the speed of said compressor and coöperating with said last named means for rendering said driving means inactive after said compressor has been unloaded.



97. In combination, a compressor, a main reservoir, a motor, a starting resistance, a main switch for the motor, a starting resistance switch, operating cylinders for said switches, an auxiliary air reservoir charged from the main reservoir, means dependent upon a predetermined minimum pressure in the main reservoir for connecting the auxiliary reservoir to the main switch cylinder, means dependent upon the speed of the compressor for applying pressure to the starting resistance switch cylinder, the main switch cylinder having a leakage port for permitting the pressure of the auxiliary reservoir to leak away and permit opening of the main switch within a given period of time, and a detent for holding the main switch closed so long as the starting resistance switch is closed.

1,400,134. WRENCH. VICTOR A. ANDERSON, Elmwood Park, Ill. Filed Mar. 30, 1921. Serial No. 456,788. 1 Claim. (Cl. 81—164.)

In a wrench, a fixed jaw having its front edge diminished in thickness and an elongated groove terminating said edge, said groove being parallel to one of the edges of said jaw, a movable jaw operatively secured to said fixed jaw, said jaws being formed with parallel work-engaging surfaces disposed at an oblique angle to the jaw bodies, a lip integral with said movable jaw and projected over the diminished front edge portion thereof and into the said groove, and manually operable means for actuating said movable jaw, said means including a threaded core in engagement with the shank of said movable jaw.



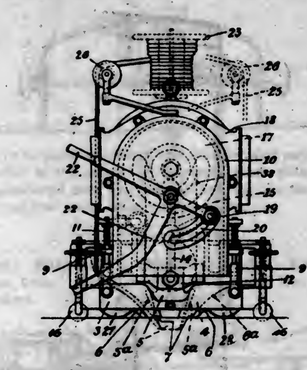
1,400,135. TIME-LOCK MECHANISM FOR SAFES. EDGAR M. BENHAM, Norwood, and CARL P. BARTELS, Hamilton, Ohio, assignors to The Mosler Lock Company, Covington, Ky., a Corporation of Ohio. Filed Dec. 11, 1920. Serial No. 429,857. 11 Claims. (Cl. 70—26.)

1. In locking mechanism, the combination of a door adapted to be locked to a door seat member, a bolt and

a timelock casing carried by said door, timelock mechanism carried by said casing, means tending to press said bolt into locking position, means operated by said mechanism to retract said pressing means at a set time, and means automatically operable to retract said pressing means whenever said mechanism is removed from said casing.

1,400,136. AUTOMOBILE-SIGNAL. LEROY AYERS BIGGAR and RUTHERFORD HAYES BIGGAR, Oneida, N. Y. Filed Nov. 2, 1920. Serial No. 421,326. 1 Claim. (Cl. 116—52.)

An automobile signal comprising a casing body, a tubular body connected with and extending endwise from the casing body and adapted to be affixed to an automobile portion, a flattened casing at the inner end of said tubular body, an actuating lever pivoted in said flattened casing and having spaced disk-like circular portions and also having an intermediate portion of less diameter than the disk-like portions between said portions, a signal member pivotally mounted in and movable out of and into the casing body, a pulley fixed with respect to and arranged alongside the signal member, a cable connected to said pulley and adapted to be taken up on the same, said cable being extended through the inner end wall of the casing and the tubular body and looped about the intermediate portion of the actuating lever and connected to said lever at a point outwardly beyond the disk-like portions thereof, and a retractile spring connected at one end to the casing and having at its opposite end a terminal portion that is connected to and adapted to be taken up on the pulley.



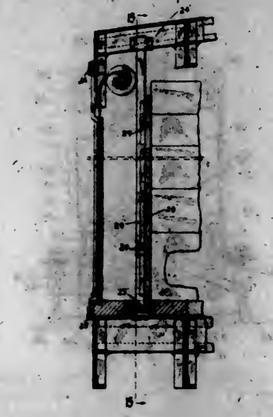
1,400,137. METHOD FOR TREATING RUBBER. WILLIAM H. BINNS, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Dec. 29, 1920. Serial No. 433,840. 9 Claims. (Cl. 18—53.)

1. The process of treating rubber comprising, shaping the rubber in desired form, and, before it has become set, placing it under compression.

1,400,138. CALKING-MACHINE. HENRY BREMNER, Broomhill, Glasgow, Scotland. Filed May 11, 1920. Serial No. 380,680. 7 Claims. (Cl. 114—224.)

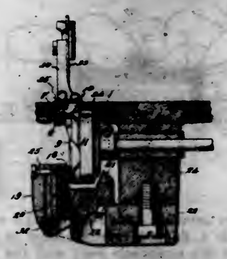
1. A machine for calking or packing seams, joints, slots or grooves, comprising a vertically reciprocated tool, means for feeding packing to the tool, means for guiding and traversing the tool along the seam or the like, and an extension for the reception of the tool, said extension being fitted over the seam to form an enlarged seam to which the packing is supplied and in which the tool operates.

1,400,139. VANITY-CASE FOR PERSONAL WEAR. MARGARET H. BROSNAN, Washington, D. C. Filed Aug. 27, 1920. Serial No. 406,849. 1 Claim. (Cl. 41—14.)



A device for personal wear comprising a receptacle body of pasteboard, a flanged cover member of pasteboard, a hinge joining the receptacle body and the cover member and connected of itself to the walls thereof, a fabric body surrounding the receptacle body and connected by adhesive thereto and provided with portions simulating leaves and with a portion simulating a flower stem, and a cap-like fabric body arranged over and connected by adhesive to the cover member and provided with portions simulating the petals of a flower and other portions simulating the pollen of a flower; said cap-like body simulating the portion of a flower by which the petals are carried.

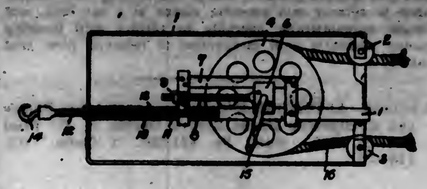
1,400,140. CAR CONSTRUCTION. THOMAS J. CALLERY, Jersey City, N. J. Filed Sept. 25, 1920. Serial No. 412,781. 6 Claims. (Cl. 105—369.)



1. In a railway car, composed of a permanent frame construction comprising an under-frame, end frames and a roof frame, said frames rigidly connected with each other and having substantially open sides, a plurality of pocket-like sockets provided in the floor and at the under-frame, a plurality of open brackets provided at the roof frame and disposed opposite to and alined with said sock-

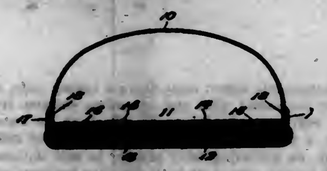
ets, removable posts adapted to engage the said sockets and brackets, sectional blockings held in place by said

posts within the car and adapted to prevent cargo from shifting against car doors, thus facilitating their closing and opening.



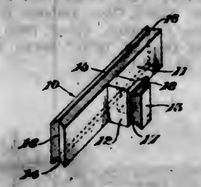
1,400,141. LOCK-STITCH SEWING-MACHINE. HERBERT CORRALL, Helensburgh, Scotland, assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed June 13, 1918. Serial No. 239,735. 8 Claims. (Cl. 112—231.)

1. In a lock-stitch sewing machine, in combination, a reciprocating needle, a rotary hook adapted to make a plurality of rotations for each reciprocation of the needle and formed with an open-sided raceway, said rotary hook being further formed with a loop-seizing beak and with a loop-arresting heel spaced circumferentially from and a substantial distance in advance of said beak, said rotary hook being shaped to permit the escape and drawing up of the needle-loop above the path of said beak before the latter reaches the needle-hole at the completion of its first or loop-seizing rotation, and a bobbin-case restrained against rotation within the field of action of said rotary hook.



1,400,142. PULLEY. ALEXANDRE CYR, Iberville, Quebec, Canada. Filed May 12, 1919. Serial No. 296,877. 6 Claims. (Cl. 68—2.)

5. A pulley support, comprising an elongated frame; a pulley mounted in said frame and adjustable longitudinally thereof; an elongated horizontal supporting bracket with which said frame is connected; and means whereby said

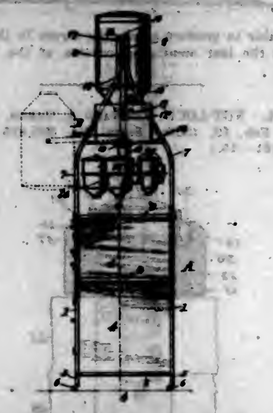


frame may be adjusted longitudinally of said bracket independently of the adjustment of said pulley.

1,400,143. SHOE CONSTRUCTION. FRANK DIAL, Washington, D. C. Filed Dec. 9, 1919. Serial No. 343,553. 4 Claims. (Cl. 36—4.)

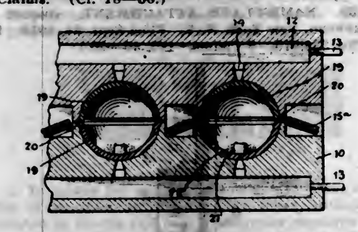
1. The process of forming a shoe from the upper, and outer sole of rubber, and a rubber composition inner sole, consisting in inserting the inturned lower edges of the upper between the outer and inner soles, vulcanizing the inner and outer soles together whereby the inturned edges of the upper will be embedded within the united inner and outer soles, the outer sole being of greater width than the inner sole whereby to provide projecting edges, and in stitching said projecting edges of the outer sole onto the upper adjacent the lower edges thereof.

1,400,144. BUILDING CONSTRUCTION. OTTO A. DEICHMANN, Willows, Calif. Filed Jan. 26, 1921. Serial No. 439,006. 4 Claims. (Cl. 72—39.)



1. In a wall structure a building element comprising a slab of plastic material having a V-shaped rib extending along its upper edge, a V-shaped groove extending along its lower edge and V-shaped grooves extending vertically along the ends thereof, a wing member of rectangular section emanating from one side of the slab and midway the length thereof, and an enlarged head substantially hexagonal in section formed upon the end of the wing.

1,400,145. KITCHEN-CABINET. WAYNE A. DUNCAN, Chicago, Ill. Filed Nov. 27, 1920. Serial No. 426,695. 4 Claims. (Cl. 46—16.)



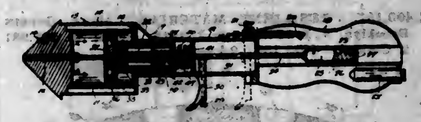
4. A cabinet of the class described, comprising a base portion and a superstructure consisting of upwardly extending members mounted on said base portion, a support or shelf arranged intermediate the upper and lower ends

of said superstructure members, a pair of pivotal links supported by the upper side of said shelf, a bin pivotally attached to said links, detachable means carried by the bin coöperating with the upper end of the superstructure for maintaining said bin in its normal position, a support carrying a rotating plate, comprising substantially a caster, secured to the under side of said shelf, a series of jars or

containers carried by said caster, a sliding top for said base portion, a sliding shelf carried within said top, upper and lower compartments dividing the base portion, subcompartments inside the upper compartment consisting of a food storage compartment and refrigerator compartments, and a water-cooler chamber surrounding said refrigerator compartments.

1,400,146. ART OF MAKING HOLLOW RUBBER ARTICLES. WALTER A. EGGERS, Brooklyn, and THERON DAVIS, New York, N. Y.; said Eggers assignor to said Davis. Filed Mar. 12, 1921. Serial No. 451,669. 7 Claims. (Cl. 18—56.)

1. The improvement in the art of making hollow rubber articles, which consists in shaping the article from unvulcanized stock in sheet form by the use of mold and core members, removing the core, retaining the shaped parts in the mold sockets by suction after the removal of the core, moistening with a rubber solvent or cement the edges of the formed parts at the surfaces to be united, uniting the edges and trimming the formed articles by pressure of the mold members, and then vulcanizing the formed articles in a separate mold.



1,400,147. HATPIN. JOHN B. FITZPATRICK, New York, N. Y. Filed Apr. 8, 1921. Serial No. 459,686. 6 Claims. (Cl. 132—71.)

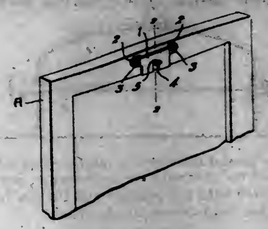
6. An assembly of the character described embodying a chambered pin point protector adapted to be secured at one side of a hat and provided with a smooth interior, a hat pin retainer adapted to be secured to the other side of the hat, and a hat pin embodying a plurality of telescoping sections having smooth coacting surfaces and

adapted to be passed through the retainer and project into the interior of the protector, in combination with locking means associated with the retainer and the pin for locking the pin against inadvertent displacement.

1,400,148. SOLDERING-IRON. ALONZO A. FRUM, Columbus, Ohio. Filed Jan. 28, 1921. Serial No. 440,069. 7 Claims. (Cl. 158—25.)

1. A soldering iron including a bit having a bore, a cylinder adjacent to the bit with which the bore communicates, a spring pressed plunger in the cylinder, means for heating the cylinder and bit, and a valve stem having a handle and having its forward portion extending into the bore of the bit and provided with grooves in its surface and also having a valve piece rearwardly of its grooved portion engageable with the bit around the rear end of its bore.

1,400,149. ELECTROTHERAPEUTIC APPARATUS. THOMAS W. GLEESON, Boston, Mass. Filed Dec. 17, 1920. Serial No. 431,372. 15 Claims. (Cl. 174—50.)



1. In a device of the class described, a self-contained portable holder, comprising, in combination, a plurality of positive electrodes and a plurality of negative electrodes all mounted upon the holder, each of said electrodes being arranged in operative relationship to one or more electrodes of the opposite polarity, means for connecting said electrodes with a source of electric current, and current control means provided on the holder, said control means being susceptible of simultaneous manipulation by the hand of the operator while said hand is employed in operating said device.

1,400,150. PICTURE-HANGER. PAUL J. GOBLE, Newark, N. J. Filed Sept. 3, 1920. Serial No. 408,019. 5 Claims. (Cl. 40—145.1.)

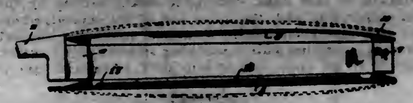
1. A hanger including a body portion of a strip of sheet metal adapted to be secured at its ends to an article to be hung, said body portion having a portion thereof offset so as to be spaced from said article and having a slot in said offset portion opening through the lower edge thereof out of alinement with the portions thereof fastened to said article to receive a headed supporting mem-

ber with the head thereof frictionally received between said body portion and the said article, whereby said hanger may yield to allow the article to swing at an

angle to the support and at the same time produce tight frictional engagement between the head of the supporting member and the article.

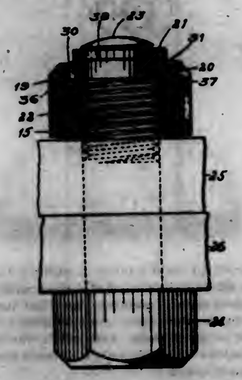
1,400,151. RESILIENT MATERIAL. MARK GOLBIN, Brooklyn, N. Y. Filed Apr. 7, 1919. Serial No. 287,981. 2 Claims. (Cl. 152—2.)

1. The combination with a vehicle wheel, of a rim comprising a metallic core having cup shaped depressions in its periphery, an elastic coating for said periphery, said coating extending into the depressions and providing suction cups.



1,400,152. BOILER-FLUE CLEANER. JOHN H. GOODFELLOW, Buffalo, N. Y. Filed Feb. 5, 1921. Serial No. 442,682. 19 Claims. (Cl. 83—64.)

1. A boiler flue scraper comprising a shaft, a saddle mounted thereon, a hinge ring on said saddle, scraper blades having arms detachably connected at one end to said ring to expand and contract relatively to said shaft, means for guiding the free ends of said blades, and means on said blades and coöperating with said guiding means for limiting the expanding movements of the blades, said blades normally projecting above the plane of said guiding means.



1,400,153. VIOLIN AND METHOD OF PRODUCING THE SAME. JAMES GORMAN, Chicago, Ill. Filed Aug. 12, 1920. Serial No. 403,015. 5 Claims. (Cl. 84—275.)

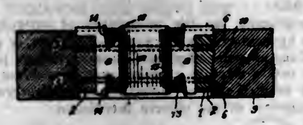
1. The method of producing a musical instrument of the viol and allied classes which comprises constructing the body frame of the instrument, forming one of the tables initially substantially flat and of a final thickness, providing a fulcrum upon one portion of the margin of the table and securing this fulcrum and portion of the table to the body frame, exerting pressure upon the opposite portion

of the table to produce a bending stress in the table, and securing the last mentioned portion of the table to the frame.

1,400,154. NUT-LOCK. EDWARD A. GREEN, Chicago, Ill. Filed Feb. 19, 1920. Serial No. 359,875. 5 Claims. (Cl. 151—15.)

1. The combination with a nut having a counterbore and recesses in the walls of said counterbore, of a retainer having lugs thereon which are movable in said recesses, and means limiting the movements of said lugs along said recesses.

1,400,155. NAME-PLATE ATTACHMENT. GEORGE G. GREENBURG, New York, N. Y. Filed Sept. 24, 1919. Serial No. 325,975. 5 Claims. (Cl. 40—20.)



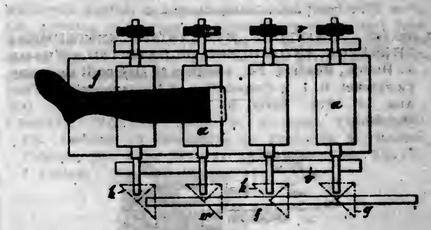
1. In a device for securing a name-plate to a part having an opening extending therethrough, the combination of a plate and attaching member therefor secured to its back, having an annular rim provided with forwardly and outwardly flared out-struck resilient tongues adapted to be sprung inwardly by said part when forced through the opening, said tongues having their free ends disposed to spring outwardly in opposed relation to and adjacent the inner face of said part for positively locking the plate against withdrawal.

1,400,156. ELECTRICALLY-HEATED SOLDERING-IRON. JAMES T. GRIFFITH, Oak Park, and WILLIAM A. TIMM, Berwyn, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 17, 1919. Serial No. 311,490. 4 Claims. (Cl. 219—28.)

1. In an electrically heated soldering iron, a heat conducting core having an extension thereon constituting a soldering tip, a heating unit surrounding said core, a casing surrounding said heating unit and having an open end beyond which the tip portion of the core extends, and a supporting member for said core comprising a plurality of radially extending arms secured to the casing wall and a cylindrical portion in engagement with said wall only at its end.

1,400,157. MEANS FOR ASSEMBLING COMMUTATORS. ARNOLD GROB, Cleveland, CHARLES B. KNOX, Wickliffe, and FRED J. BAIRD, East Cleveland, Ohio, assignors to The Homer Commutator Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 31, 1919. Serial No. 334,869. 7 Claims. (Cl. 29—89.)

1. In means for assembling commutators, the combination of an outer holding ring; an inner multi-part ring adapted to receive and hold commutator segments in their assembled position and having an exterior surface conforming with the interior surface of said outer ring; and elastic means for holding the parts of said multi-part ring together.



1,400,158. CHUCK FOR PHONOGRAPH-STYLI. MORRIS M. GAUBER, New York, N. Y., assignor to Pathe Freres Phonograph Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 29, 1918. Serial No. 225,430. Renewed Oct. 1, 1921. Serial No. 504,674. 2 Claims. (Cl. 279—78.)

1. A chuck for holding phonograph styli for playing records having record grooves of different types, comprising a chuck member having an angular bore extending part way therein and a cylindrical bore of reduced cross section in continuation of the angular bore, whereby the chuck is adapted to receive styli of a plurality of types, a lever pivoted in a slot provided therefor in the side of the chuck member, and a chuck sleeve screwed on the chuck member and adapted, upon being screwed on the chuck

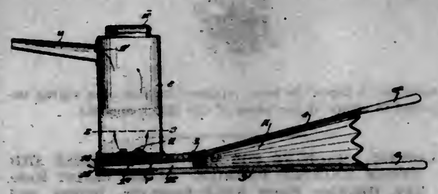
member, to force the lever against the side of a stylus inserted in either of the bores of the chuck member.

1,400,159. MACHINE FOR MERCERIZING HOSE AND OTHER KNITTED FABRICS. ALFRED ERNEST HAWLEY, Hinckley, PERCY FIELD CROSLAND, Halifax, and FRANCIS GRAHAM DIXON, Cheadle Hulme, England. Filed Jan. 5, 1920. Serial No. 349,549. 3 Claims. (Cl. 8—20.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. Means for mercerising and washing hose and similar knitted or woven goods, said means comprising stretching forms or plates on which the goods are mounted, and a series of pairs of rollers between which pairs of rollers the forms are passed, each succeeding pair of rollers being driven at a greater peripheral speed than the preceding pair whereby the goods on the forms are firmly held or stretched while being subjected to the action of the mercerising agent.

1,400,160. PROCESS OF PRODUCING MALTED PEARL-BARLEY. ALBERT HEINEMANN, Berlin-Wilmersdorf, Germany. Filed July 22, 1921. Serial No. 486,852. 2 Claims. (Cl. 99—10.)

1. The herein described process of treating barley, which consists in steeping the barley until it swells and germination commences, thereupon subjecting the barley to a preliminary drying action to interrupt the germination at a stage where the diastase produced by germination has converted only the outer starch portion of the kernel beneath the husk into sugar, completing the drying of the barley, and finally peeling the treated barley to obtain pearl barley.



1,400,161. PROCESS FOR PRODUCING A SUBSTITUTE FOR RAW COFFEE-BEANS. ALBERT HEINEMANN, Berlin-Wilmersdorf, Germany. Filed July 22, 1921. Serial No. 486,853. 2 Claims. (Cl. 99—11.)

2. The process for producing from barley a substitute for coffee in the form of an article of commerce corresponding with raw coffee beans, which consists in subjecting the grain to an incomplete germination process, drying and hulling it, steeping it in an infusion of hop flowers until it swells up and then drying it until the contents of water agrees approximately with that of the natural grain.

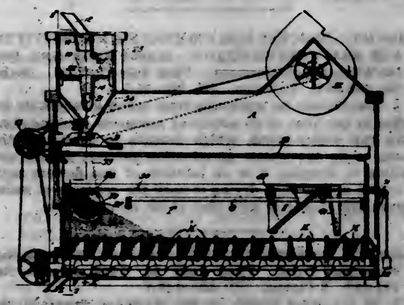
1,400,162. POWDER-BLOWER. THOMAS C. HOLMES, San Francisco, Calif. Filed June 24, 1918. Serial No. 241,498. 3 Claims. (Cl. 43—147.)

1. In a powder blower of the character described, the combination with the bellows connected by an air passage with the powder container, of a pair of vertically extending

guide lugs formed in the bottom of the container and positioned on opposite sides of the air passage, a valve plate positioned between the lugs, said valve plate being re-

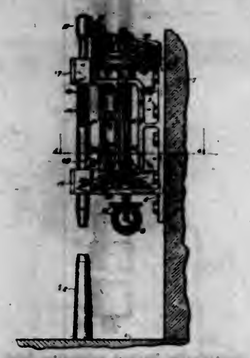
cessed at its opposite ends for the reception of the lugs, and an angular horizontally disposed extension on the upper end of each lug to limit the upward movement of the valve with relation to the bottom of the container.

1,400,163. KNITTING MECHANISM, INSTRUMENT THEREFOR, AND METHOD OF KNITTING. WILLIAM A. HOUCK, Reading, Pa., assignor to Hemphill Company, Pawtucket, R. I., a Corporation of Massachusetts. Filed Aug. 12, 1919. Serial No. 317,668. 26 Claims. (Cl. 66—26.)



7. Knitting mechanism comprising in combination a series of needles and a series of sinkers including interspersed special sinkers or instrumentalities, and operating means to cause the special sinkers or instrumentalities to measure off or take additional yarn and thereafter to prevent robbing, thereby securing the permanent apportionment of such additional yarn.

1,400,164. WATERPROOFING MATERIAL AND PROCESS FOR MAKING THE SAME. HENRY HICKS HUNT, New York, N. Y. Filed Nov. 27, 1918. Serial No. 264,442. 10 Claims. (Cl. 134—1.)

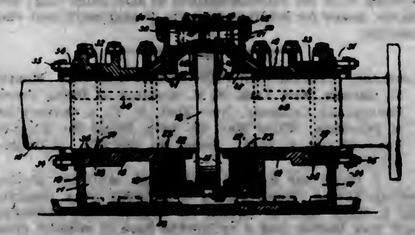


9. A composition of matter containing insoluble soap and sodium sulfate with sulfite waste liquor free from lime.

1,400,165. PURIFYING MIDDLINGS AND OTHER MATERIAL. EMANUEL S. JEWELL, deceased, Brooklyn, N. Y., by Lida Jewell, executrix, Brooklyn, N. Y. Filed Mar. 5, 1921. Serial No. 450,018. 16 Claims. (Cl. 83—38.)

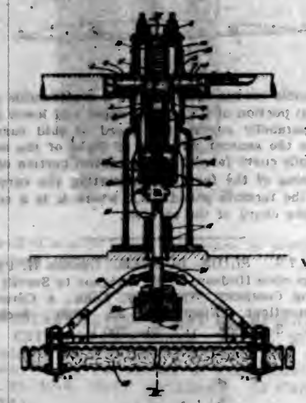
1. In a separating machine, the combination with separating mechanism, a stationary feed hopper for said mechanism, discharge means for a portion of the separated material, and means for returning a portion of the separated material to said feed hopper, of means controlled by the quantity of material in said stationary feed hopper for varying the amount of material returned to the feed hopper by said return means.

1,400,166. POWER-HAMMER. ERIC FRITJOF KARLSON, Beaumont, Tex. Filed May 13, 1920. Serial No. 381,098. 5 Claims. (Cl. 78—27.)



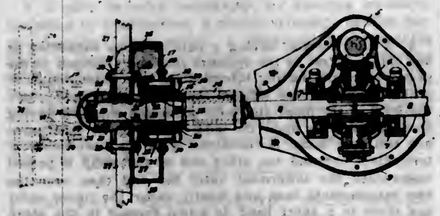
1. In a power hammer, a casting, a rotary shaft journaled in said casting, a plunger hammer arranged in said casting in spaced parallel relation to said rotary shaft, a cam wheel fast upon one end of said rotary shaft, means connecting said cam wheel and plunger hammer for raising said latter member, said means including a roller adapted to travel over one edge of said cam wheel, and means adapted to frictionally grip said plunger hammer immediately after said roller has passed beyond the extreme high point of said cam wheel.

1,400,167. PROCESS FOR THE PRODUCTION OF SOLID BASIC MAGNESIUM HYPOCHLORITE. GEORG KERSHOFF and EMIL WOLF, Ujpest, Hungary. Filed Apr. 8, 1920. Serial No. 372,331. 7 Claims. (Cl. 23—13.)



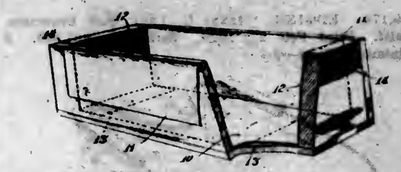
1. A process for the production of solid basic magnesium hypochlorite by the action of chlorin on magnesium oxid in the presence of water, characterized by introducing chlorin into a mixture of water and magnesium oxid, containing more than two molecules of magnesium oxid for each molecule of the chlorin introduced.

1,400,168. BEARING. ALBERT KINGSBURY, Pittsburgh, Pa. Filed Mar. 14, 1918. Serial No. 222,836. 54 Claims. (Cl. 64—25.)



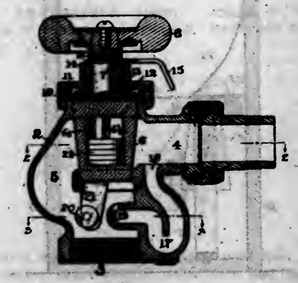
1. A bearing structure comprising a sector-shaped support provided with fixed end members, a series of equalizing plates supported thereon partially on the end members and partially on each other, and bearing shoes mounted on the said equalizing plates.

1,400,169. VIBRATING MECHANISM. FRED E. KLING, Youngstown, and LUTHER B. WEIDLEIN, Cleveland, Ohio. Filed Jan. 13, 1921. Serial No. 436,992. 4 Claims. (Cl. 183—44.)



1. A vibrating device comprising a casing, a cylindrical plunger member mounted within said casing, means for guiding said plunger within said casing, a rotary shaft journaled in bearings on said casing and passing through said plunger, an eccentric mounted on said shaft, a bearing mounted on said eccentric, a spring member having its one end abutting said bearing and its other end abutting the top of said plunger, a second spring member having its one end abutting said bearing and its other end abutting the botttom of said plunger, the rotation of said eccentric being adapted to actuate said springs to cause a reciprocation of said plunger.

1,400,170. DEMOUNTABLE DRIVE MECHANISM FOR AUTOMOBILES. EDWARD L. KRAFT, York, Pa., assignor of one-half to A. R. Cosgrove, York, Pa. Filed July 1, 1920. Serial No. 393,333. 4 Claims. (Cl. 180—75.)



1. In an automobile, a drive-axle provided with a shoulder, an axle-casing surrounding said axle, a bearing engaging said shoulder, a hub on the axle retaining the inner-race-way of the bearing against the shoulder, a bearing-housing fixed to the end of the axle-casing, a retaining cap for the outer-race-way of the bearing, and to said bearing, and fastening means for securing said retaining-cap to said bearing-housing from the outside, said fastening means also holding the axle carrying the wheel in driving relation.

1,400,171. PROCESS OF PREPARING CHEESE. JAMES L. KRAFT, Chicago, Ill. Filed Feb. 21, 1921. Serial No. 446,674. 3 Claims. (Cl. 99—8.)

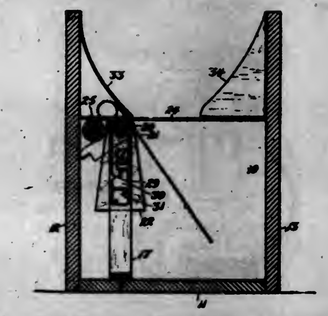
2. The improvement in the art of preparing cheese of a normally solid variety, which consists in comminuting previously manufactured cheese, stirring and heating the same until the mass has attained a uniform consistency and is capable of flowing to assume the shape of a container, and inclosing a definite portion of the fluid mass, while still heated, in a rectangular mold lined with metal foil, forming on cooling, a finished mercantile unit from which the retailer may cut slices or sections of like area and of different thicknesses to suit the particular weights desired by the consumer.

1,400,172. VALVE. HOSEA K. KRIEBEL, Philadelphia, Pa., assignor of one-fourth to Frederick L. Kriebel, Chicago, Ill. Filed Sept. 17, 1920. Serial No. 410,875. 7 Claims. (Cl. 277—31.)

1. A steam valve comprising a valve body having inlet and outlet ports and a main valve seat between them and also having a water sealed passage between the inlet and outlet ports arranged as a by-pass about the main valve seat, combined with a main valve for controlling the main valve seat, and an auxiliary valve movable with the main valve to control the water sealed by-pass whereby when the water sealed by-pass is closed, the main valve is also closed and the main valve may be adjusted for controlling communication between the inlet and outlet ports without closing the auxiliary valve.

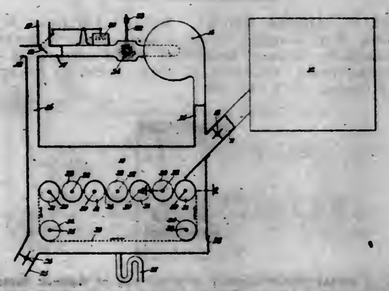
1,400,173. METAL WHEEL. MAURICE LACHMAN, New York, N. Y., assignor, by mesne assignments, to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed Nov. 17, 1919. Serial No. 338,421. 13 Claims. (Cl. 301—66.)

1. A metal wheel formed of a section of flanged metal bar having flanges at both edges, both bent to the form of



the rim, while the spokes in two sets consist of sub-divided portions of the base integrally joined at the hub part of the wheel.

1,400,174. EDGING. HENRI G. LEVY, San Francisco, Calif. Filed Feb. 27, 1920. Serial No. 361,805. 2 Claims. (Cl. 4—2.)



1. An edging strip of the character described, comprising a body portion centrally and longitudinally bifurcated, and a lip extending along each upper edge of said body portion and each lip being curved in an upwardly and forwardly extending manner for the purpose described.

1,400,175. ANIMAL-TRAP. HUGH C. MCCURRIN, San Francisco, Calif. Filed Nov. 3, 1920. Serial No. 421,445. 9 Claims. (Cl. 43—70.)

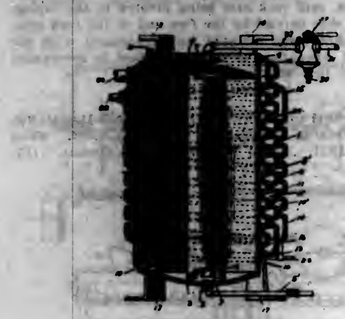
2. In a trap of the character described an inclosure, a platform tiltable longitudinally and transversely forming a top therefor and means associated therewith to hold the platform against tilting transversely until the same is tilted longitudinally.

1,400,176. PROCESS FOR THE PREVENTION OF ADHERENCE OF MOIST PARTICLES. MAX F. MANGELSDORFF, Union Hill, N. J. Filed Sept. 20, 1918. Serial No. 254,900. 2 Claims. (Cl. 99—5.)

1. The process of producing dry inadhering vegetable particles which comprises heating the particles in the presence of a moist medium, subjecting the heating particles to the action of a current of cool moist air and drying the particles.

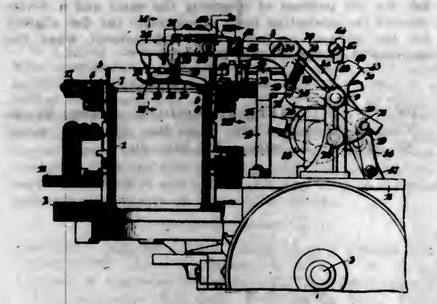
1,400,177. AEROFOIL. JAMES V. MARTIN, Elyria, Ohio. Filed Nov. 30, 1917. Serial No. 204,602. 14 Claims. (Cl. 244—12.)

1. A double convex aerofoil with a considerable part of the central portion of its normal upper and lower surface forming parabolic curves, the chord of said curves extending in the general direction of flight of the aerofoil, the parabolic curve formed by the central portion of upper surface being of the form approximating the curve indicated by the formula $y^2=.187KX$ where K is a constant equal to the chord of the aerofoil.



1,400,178. SLIDE-BUCKLE. GEORGE H. PERKINS, Hastings-upon-Hudson, N. Y., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Jan. 22, 1920. Serial No. 353,214. 3 Claims. (Cl. 24—200.)

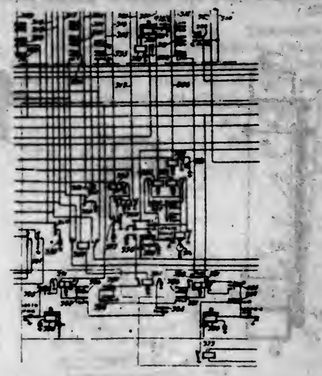
1. A slide buckle, having a pair of loops connected at one side and free at the opposite side and arranged in the same plane, and having intermediate bars extending integrally from the free side of the loops and raised above the level of the loops and their connected side and having free ends resting upon the side connection so that when one end of a strap is connected with the lowermost intermediate bar and the other end of the strap is passed underneath the lowermost outer bar and then over the two intermediate bars and finally under the upper outer bar there is a short bend or hump formed in the strap that serves to insure the fixed location of the buckle and prevent it from slipping or creeping.



1,400,179. OIL-FUEL HEATER. LOUIS A. PERRIER, San Francisco, Calif. Filed Feb. 11, 1920. Serial No. 357,880. 13 Claims. (Cl. 257—10.)

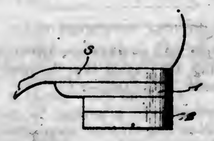
7. A heater including a drum having an oil inlet, a steam jacket formed by a spirally corrugated wall surrounding and joined to said drum, an oil jacket formed by a spirally corrugated wall surrounding and joined to the wall of said steam jacket, and connected with said drum and having an outlet, a second steam jacket formed by a spirally corrugated wall surrounding and joined

to the wall of said oil jacket, and means for passing steam through said steam jackets.



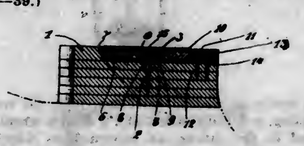
1,400,180. YARN SEVERING AND CLAMPING DEVICE FOR KNITTING-MACHINES. ALBERT M. PIGEON, Norristown, Pa., assignor to Wildman Mfg. Co., Norristown, Pa., a Corporation of Pennsylvania. Filed Sept. 21, 1916. Serial No. 121,405. 13 Claims. (Cl. 66—12.)

1. A yarn severing mechanism for knitting machines, including in combination, a needle cylinder; needles carried thereby; yarn guides, a relatively fixed shearing blade, a movable shearing blade, a spring for actuating said last named blade for its shearing action; an oscillatory cam; and devices coöperating with said cam to shift and set said movable shearing blade against the tension of the spring, to hold said blade in its set position, and to trip said blade, all during movement of said oscillatory cam one way.



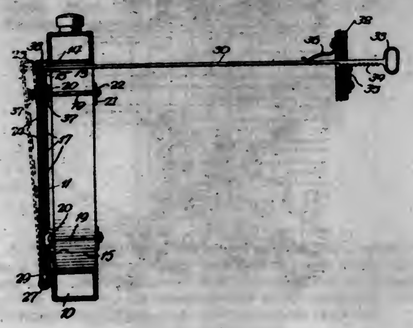
1,400,181. SEMI-AUTOMATIC TELEPHONE-EXCHANGE SYSTEM. LIPA POLINKOWSKY, London, England, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 23, 1918. Serial No. 259,342. 6 Claims. (Cl. 179—27.)

1. In a telephone exchange system, the combination with a plurality of operators' positions, calling lines, means for extending said lines to said operators' positions, automatic selective switches for extending said lines from said positions, means at one of said positions controlled by its operator for normally preventing the extension of calls to said position, means at a second operator's position adapted to permit the extension of calls from said first operator's position and retaining the same accessible at said second operator's position, and means at said second



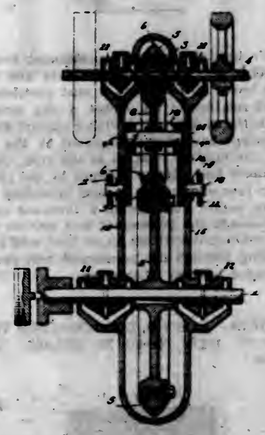
operator's position for controlling all stages of the establishment of connections to it in the same manner as calls directly connected to said second operator's position.

1,400,182. REVERSIBLE HEEL. ELLEN F. QUINN, Corona, N. Y. Filed Dec. 22, 1919. Serial No. 346,493. 1 Claim. (Cl. 36—39.)



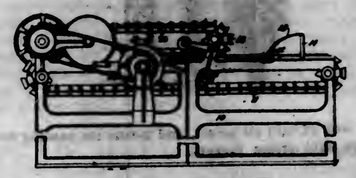
A reversible heel comprising a permanent heel portion having a socket cut from its lower face and having a recess in its lower face forming a seat positioned about and in spaced relation to the socket, a ring positioned in the seat about the socket, a disk fitting against the portion of the permanent heel portion inclosed by the ring and extending in overlapping relation to the ring, the portion of the permanent heel portion inclosed by the ring engaging the inner face of the disk, a boss extending from the plate into the socket and having a threaded opening, a heel fitting beneath the permanent heel portion and having the ring connected with its upper face, and a securing screw extending through the permanent heel portion and into the threaded opening of the boss.

1,400,183. HEEL. JAMES G. ROBERTSON, New York, N. Y. Filed May 20, 1918. Serial No. 235,487. 3 Claims. (Cl. 36—39.)



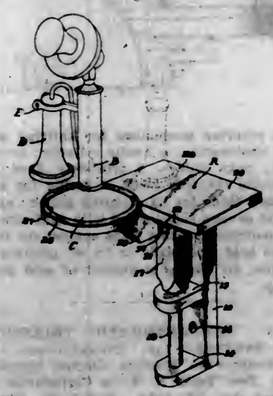
1. In a device of the class described, the combination with a heel having a recess formed in its lower surface, a casing rotatively mounted in said recess, means for rotatably supporting said casing, a disk inserted within said casing, and a metallic strip located behind said casing and forming a portion of the inclosure thereof.

1,400,184. RADIATOR-SHIELD FOR MOTOR-VEHICLES. HERBERT J. SAUVAGE, Chicago, Ill. Filed Feb. 20, 1919. Serial No. 278,281. 14 Claims. (Cl. 257—732.)



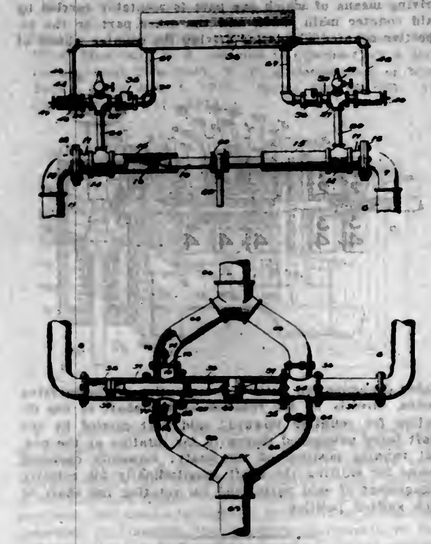
2. A radiator shield for motor vehicles, said shield embodying two coöperating elements arranged one in advance of the other, and means for connecting the elements for swinging movement relatively one with relation to the other and one toward and away from the other, said elements being provided with openings therethrough, the openings in one of the elements being arranged and maintained out of registering relation with respect to the openings in the other element.

1,400,185. POWER-TRANSMISSION DEVICE. HIESTER SEIDERS, Reading, Pa. Filed Sept. 2, 1919. Serial No. 321,077. 1 Claim. (Cl. 192—4.)



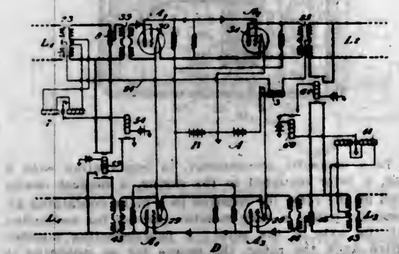
In a device of the character described, the combination of a casing, a driving wheel and a driven wheel rotatably mounted in the casing, an intermediate wheel, a shaft therefor, said casing having elongated slots in which said shaft may move longitudinally, a pair of links loosely engaging said shaft at one of their ends and having studs formed on their opposite ends, said studs being mounted in bearings in the casing and projecting beyond the outer surfaces of the casing, arms mounted on the outer ends of said studs, an operating rod pivotally engaging the other ends of said arms, a jaw-like rock arm secured to said shaft between the sides of the intermediate wheel and the links, said rock arm being pivoted to the casing, and a brake shoe carried by the free end of the rock arm, said brake shoe being adapted for engagement with the driven wheel when the intermediate wheel is disengaged from contact therewith.

1,400,186. FISH CUTTING AND CLEANING MACHINE. HOWARD DANIEL SAVERANCE, Monterey, Calif. Filed June 15, 1921. Serial No. 477,634. 4 Claims. (Cl. 17—10.)



1. In a machine of the class described, a conveyer provided with pockets, each to receive a fish with the heads projecting therefrom, an overhead device to clamp the fish in place within the pockets, a severing device to deliver a downward blow to the projecting heads of the fish for the purpose of removing the same and a device beneath the projecting head to penetrate the fish slightly for the purpose of preventing displacement when the severing device strikes the head.

1,400,187. SWINGABLE TELEPHONE. JOSEPH ELMER THOMAS, Sawtelle, Calif. Filed Mar. 22, 1921. Serial No. 454,554. 5 Claims. (Cl. 248—20.)



1. A telephone bracket comprising an attaching face plate, a post rotatably supported by the face plate, a radially extending supporting arm carried by the post, a telephone receiving base plate secured to the outer end of the arm, and a top plate secured to the arm in rear of the base plate.

1,400,188. PUMP. MARET SAMUEL TUCKER, Joplin, Mo., assignor of one-half to Edmund T. Nesbitt and John L. Shafer, Joplin, Mo. Filed Jan. 28, 1921. Serial No. 440,780. 12 Claims. (Cl. 103—68.)

4. A pump comprising a cylinder having its ends formed with couplings, a pair of cylinders connected to said couplings in alinement with said first named cylinder, a piston within said first named cylinder, a pair of pistons arranged on opposite sides of said first named piston and arranged within said pair of cylinders, said first and second named pistons being connected, and suction members connecting the said couplings, and fluid pressure conveyers connected to said pair of cylinders whereby the fluid pressure acts directly on said pair of pistons.

1,400,189. MEANS FOR CONTROLLING REPEATER-CIRCUITS. JOHN F. TOOMEY, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 16, 1917. Serial No. 196,898. 18 Claims. (Cl. 179—170.)

1. A signaling system comprising a pair of switching stations, a transmission line interconnecting said stations, terminal lines associated with said stations adapted to be switched into connection with said transmission line, a repeater in said transmission line, and means whereby said repeater may be controlled from one of said stations independently of voice currents transmitted over said transmission line.

16. In a signaling system, two stations, an amplifier at one of said stations, a potentiometer for controlling the amplification of said amplifier, and means controllable from the other station to adjust the potentiometer.

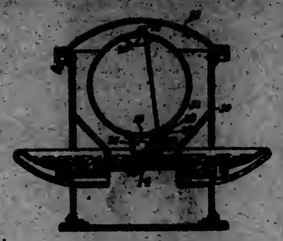
1,400,190. ADVERTISING DISPLAY. THADDEUS C. TUCKER, San Francisco, Calif., assignor to California Almond Growers Exchange, San Francisco, Calif., a Corporation of California. Filed Aug. 31, 1920. Serial No. 407,197. 4 Claims. (Cl. 40—126.)

2. An advertising display consisting of a sign; a container formed of the same material as said sign, detachably secured thereto; and a handle thereon detachably secured to said sign.

1,400,191. FOOD PRODUCT AND PROCESS OF MAKING THE SAME. PERRY C. WADSWORTH, Santa Ana, Calif., assignor to Taylor's, Santa Ana, Calif., a Corporation of California. Filed Nov. 17, 1919. Serial No. 338,454. 1 Claim. (Cl. 99—11.)

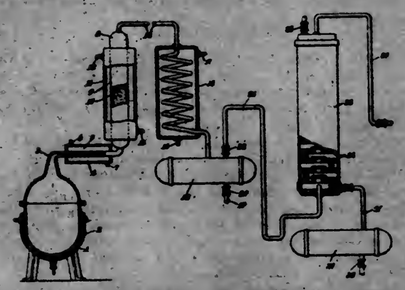
The process of making a food product which consists in cooking citrus fruit with its peel until tender, removing the cooked fruit from the liquid containing the oil and terpenes, mixing sugar and uncrystallizable cane sugar with the fruit thus treated, heating the mixture to boiling temperature, draining off the surplus liquid, molding the residue and drying to produce a substantially flat cake or slab of uniform consistency and permanent character.

1,400,192. PROCESS OF OBTAINING POTASSIUM COMPOUNDS. MILTON C. WHITAKER, New York, N. Y., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Dec. 31, 1917. Serial No. 209,606. 14 Claims. (Cl. 23—22.)



7. The process of recovering potassium compounds from distillery waste or slop which comprises spraying the latter into contact with vapors containing silicon tetrafluorid.

1,400,193. CONTAINER FOR VOLATILE LIQUIDS. MILTON C. WHITAKER, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Aug. 6, 1920. Serial No. 401,694. 15 Claims. (Cl. 221—11.)

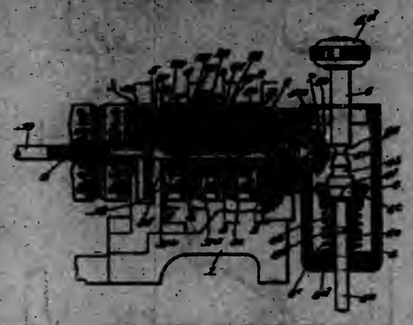


1. A container for volatile liquids having a puncturable diaphragm, an opening giving access to said diaphragm and a nozzle carried in said opening.

1,400,194. STOCK-WATERING TANK. Charles O. Wetzell, Des Moines, Iowa. Filed June 21, 1920. Serial No. 390,375. 1 Claim. (Cl. 119—72.)

In a device of the class described, a cylindrical tank arranged in substantially horizontal position, a tubular discharge passage leading from the bottom of said tank, a trough below said tank into which said discharge passage projects, a filling funnel device mounted in the upper part of said tank, said tank having in its upper wall a longitudinally arranged, inwardly opening, outwardly projecting channel, and an air exit tube leading from the upper part of said channel and thence downwardly into said trough.

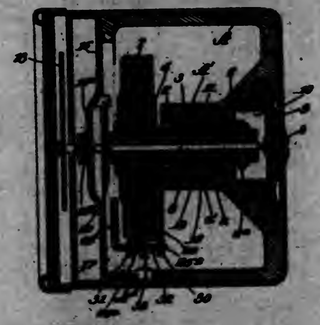
1,400,195. PROCESS OF MAKING METHYL FORMATE. Herman F. Willkie, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Dec. 24, 1918. Serial No. 268,189. 10 Claims. (Cl. 23—24.)



1. The process which comprises subjecting methyl alcohol to the action of a metallic catalyst so as to form methyl formate, the catalytic action taking place at a temperature lying between about 350 and about 450 degrees F.

1,400,196. PROCESS OF PRODUCING HOMOGENEOUS PRODUCTS, INCLUDING FILMS. Herman F. Willkie, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Apr. 12, 1920. Serial No. 373,084. 2 Claims. (Cl. 106—37.)

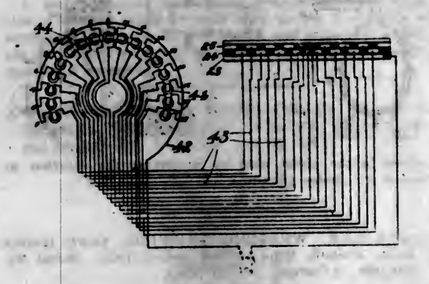
1. The process which comprises forming a film by evaporating a solution of a cellulose ester in a solvent consisting of an ester having a dehydrating action and an alcohol adapted to form a constant boiling mixture with and carry off water during the evaporation of the solvent.



1,400,197. REVOLUTION-COUNTER RESETTING. Andrew C. Wood, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Sept. 20, 1920. Serial No. 413,702. 9 Claims. (Cl. 235—144.)

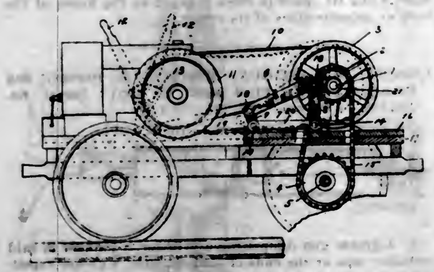
1. In a revolution counter, in combination with a series of counter wheels for successive decimal denominations; a counter shaft upon which the counter wheels are carried; permanently engaged but sliding connections between the wheel of lowest denomination and the next higher, and each wheel of lower denomination to the next higher, adapted to operate similarly in either direction of rotation; one-way driving means of which one part is rotatably carried by said counter main shaft, and the other part by the respective counter wheels for driving the counter wheels of

higher denomination without intervention of the carrying means, directly by the rotation of the shaft in the direction for counting upward; said part carried by the shaft being unengaged therewith for rotation at the normal running position of the shaft; manually operated means for shifting the shaft longitudinally for rotative engagement of said parts, and for rotating the shaft at such shifted position.



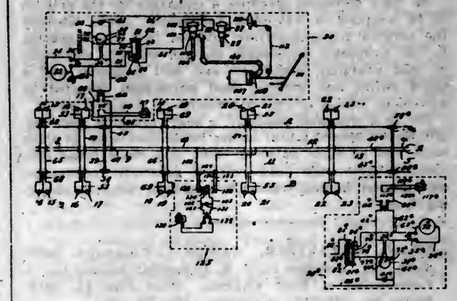
1,400,198. MAGNETIC SPEEDOMETER. Andrew C. Wood, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Oct. 16, 1920. Serial No. 417,449. 7 Claims. (Cl. 264—13.)

1. In a magnetic speedometer, in combination with a casing, a rotor mounted in the casing, a magnet device carried by the rotor for rotation in a plane containing all the magnet poles; a drag member pivoted for oscillation about the axis of the rotor; a field-deflecting member mounted upon the rotor, the means for so mounting it comprising a bracket extending from the rotor radially beyond the circumference of the magnet path of rotation, and the field deflector having its end which is free for movement positioned opposite the inter-polar gap of the magnet, and being for movement of its free end toward and from the magnet poles, pivoted to the bracket outside said path at a point such that the pivot axis produced extends past the free end of the deflector at the side



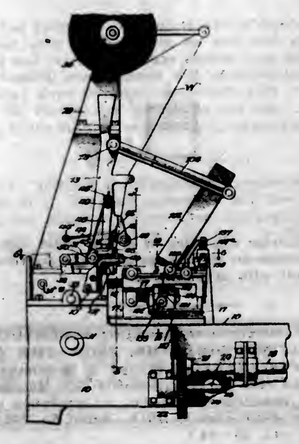
thereof toward the rotor axis, and at a substantial distance from said free end, and means for adjusting the deflector about its pivot to vary the distance of its free end from the magnet poles.

1,400,199. INDICATING MECHANISM. Frank W. Wood, Montclair, N. J., assignor to Charles Cory & Son, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 4, 1919. Serial No. 269,683. 12 Claims. (Cl. 177—337.)



1. In mechanism for automatically indicating positions of swinging or oscillating structures and wherein the indicator includes a plurality of normally-inactive indicating members each indicating a definite angular position of the structure, means for controlling the activity of the members, said means including a transmitting mechanism operative to translate the structure movements to the indicator through independent electrical circuit connections, said latter mechanism including a pair of stationary circuit make and break contacts each having segments individual to predetermined members, and a contactor movable relatively to said contacts, said contacts having a predetermined segment of one contact overlapping a segment zone of the other contact to produce a distinct indicating signal representing a definite angular distance in structure travel.

1,400,200. DRIVING MECHANISM. Horace E. Woolsey, St. Paul, Minn. Filed Aug. 27, 1920. Serial No. 406,515. 2 Claims. (Cl. 74—21.)



1. A drive mechanism comprising a driving member, a driven member, a pivoted frame intermediate said driving member and driven member, comprising linkage, a shaft carried by said pivoted frame, and operative connections between said driving member and shaft, and between said shaft and driven member, and means for moving said frame to tighten or loosen the operative connection between said shaft and driving member while maintaining said shaft at a substantially constant distance from said driven member.

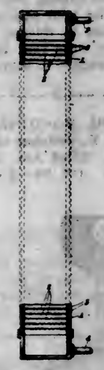
1,400,201. AUTOMATIC TRAIN-STOPPING, TELEPHONIC, AND BLOCK-SIGNAL SYSTEM. William H. Adkins, Kansas City, Kans. Filed Aug. 14, 1917. Serial No. 186,244. 24 Claims. (Cl. 246—11.)

5. An electric signaling system for railroad trains, consisting of block conductors electrically connected to the track, a contact on the train to traverse said block conductors, a piston connected to the locomotive throttle to close the same, a cylinder in which said piston is reciprocably mounted, a pipe to conduct fluid under pressure to said cylinder to actuate the piston, a normally closed valve connected to said pipe to control the flow of fluid therethrough, an electromagnet to open said valve, a circuit for energizing said electromagnet, a source of electrical energy connected to said circuit, conductors connecting said source to the contact which traverses the block conductors, a self-closing switch to close the circuit, a latch to normally hold said switch open, an electromagnet in the circuit to release the latch from said switch, and a meter to close that portion of the circuit leading to said electromagnet to energize the same.

1,400,202. WRAPPING-MACHINE. Harry Y. Armstrong, Syracuse, N. Y., assignor of one-half to William L. Hall, Chicago, Ill. Filed Apr. 26, 1920. Serial No. 376,729. 102 Claims. (Cl. 93—2.)

1. A wrapping machine comprising a movable carriage into which an article and its wrapper are placed, and

means for advancing said article and wrapper relatively to and through the carriage to wrap the wrapper about the article, said means including an element which engages said article and wrapper and is stationary while in engagement.

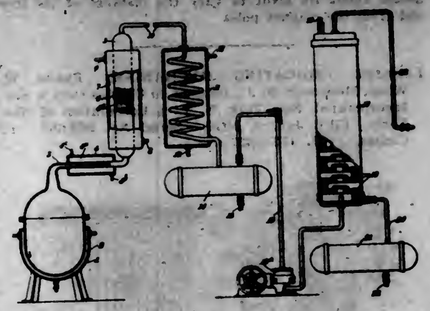


47. In a wrapping machine, a magazine for the articles to be wrapped, a wrapping mechanism, means whereby the articles are successively released from the magazine to the wrapping mechanism through relative movement of said wrapping mechanism and said magazine, and a paper cutter and wrapper feed mechanism operated by movement of one of the said relatively movable parts.

98. In a wrapping machine, a shaft provided with longitudinally spaced plural holder heads that open at their sides and at their adjacent ends, said shaft being provided between said heads with a generally rectangular enlargement having transversely oblique wrapper engaging faces.

1,400,203. CATALYZER. ARTHUR A. BACKHAUS, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed June 15, 1918. Serial No. 240,222. 4 Claims. (Cl. 23—28.)

1. A catalyzer comprising an inert carrier containing a finely divided highly porous catalytic metal free from metallic oxids.



1,400,204. CATALYZER AND CATALYZER-APPARATUS. ARTHUR A. BACKHAUS, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed June 15, 1918. Serial No. 240,224. 10 Claims. (Cl. 23—28.)

8. A catalyzer consisting of a thin metal body whose outside portions are of the same metal and are voluminous and integral with said body.

1,400,205. METHOD OF MAKING ALDEHYDES AND SEPARATING THE SAME FROM THE OTHER PRODUCTS FORMED. ARTHUR A. BACKHAUS, Baltimore, and FRED B. ARENTZ, Curtis Bay, Md., assignors to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed June 15, 1918. Serial No. 240,225. 6 Claims. (Cl. 23—24.)

1. The process which comprises passing vapors of alcohol over a catalytic agent, thus forming acetaldehyde, then separating the resulting aldehyde and hydrogen by passing the vapors through a scrubbing tower containing acetic acid and forming acetic acid from the aldehyde thus

solved in the acetic acid by subjecting the solution to heated air under pressure.

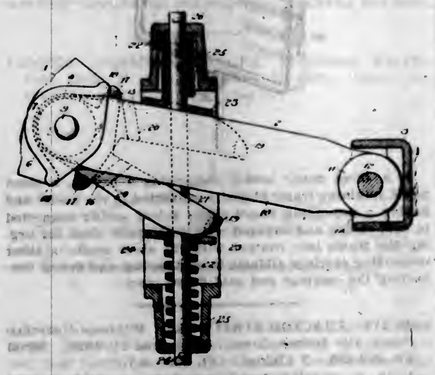
1,400,206. WEATHER-STRIPPING. ELWIN HARRIS BERG, Eveleth, Minn. Filed Dec. 3, 1920. Serial No. 428,020. 3 Claims. (Cl. 20—69.)

1. The combination with a window jamb and sash, of a metal weather stripping consisting of a body portion having a hump engaging the side of the sash and provided with jamb connecting means at one side of the hump, and means at the opposite free side of the hump having sliding engagement with one face of the sash whereby to shift the body portion with the sash when the latter shrinks from the jamb and thus maintain uniform contact between the hump of the body and the side of the sash, said sash having along its side a vertical slot forming relatively sharp edges along its opposite sides engaged by the hump of the body at opposite sides of its center.

1,400,207. GREASE-GUN. BERTRAND C. BLIVEN, San Francisco, Calif. Filed Feb. 26, 1921. Serial No. 448,155. 4 Claims. (Cl. 221—78.)

1. A grease gun comprising a cylinder, a plunger in said cylinder, caps at the ends of said cylinder, a grease expelling spout attached to one of said caps, a partition within the cylinder at a point spaced from but adjacent to one end therein, said partition having an opening extending therethrough, a valve extending through the other cap and movable into and out of said opening to regulate the flow of air through the opening, said valve having a passage extending therethrough and opening at one end into the cylinder and at its other end at the outer end of the valve and means for providing for connection of a compressed air hose to the outer end of the valves so as to inject air into the cylinder.

1,400,208. INSTRUMENT-BOARD LAMP. CARL BRAMMING, Chicago, Ill., assignor to Accessories Manufacturing Company, a Corporation of Illinois. Filed Feb. 14, 1921. Serial No. 444,758. 9 Claims. (Cl. 240—7.)

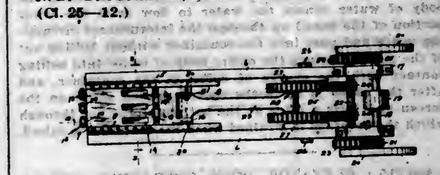


1. An instrument board lamp comprising, in combination, a lamp, a shield for said lamp having a plurality of apertures, a reflector in said shield, and means for adjusting said reflector to vary the direction of the rays emitted from said apertures.

1,400,209. SERVER FOR DINING-TABLES. MARVEL R. BRUMBAUGH, Des Moines, Iowa. Filed Feb. 23, 1921. Serial No. 447,094. 3 Claims. (Cl. 45—26.)

1. A server for dining tables and the like, comprising a pedestal composed of a post and a base, said post being formed with a vertical bore extending entirely therethrough, a tubular bearing mounted in said bore, a table adapted to receive and support articles of food and the like, a spindle fixed to and projecting downwardly from said table and adapted to enter said tubular bearing, bearing balls in said bearing in contact with said spindle, and fastening means on said spindle at the lower end of said bearing, said base being adapted to be placed over and secured to the lower end of said post and being recessed to receive and cover the lower ends of the bearing and spindle.

1,400,210. DRAFT APPLIANCE FOR RAILWAY-CARS. HARRY C. RUHOUP, Chicago, Ill., assignor to The McConway & Torley Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 19, 1920. Serial No. 397,235. 14 Claims. (Cl. 213—42.)



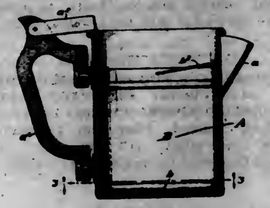
1. In a draft appliance for railway cars, the combination with a coupler head having a rearwardly opening socket, of a coupler stem extending into said socket and pivotally connected to said head, said stem being adapted to be pivotally connected to a railway car and being provided with vertically spaced arms forming a slot open through opposite sides from the forward end of said stem rearwardly, a plurality of oppositely disposed spring means for centralizing said coupler stem with respect to said car and for centralizing said coupler head with respect to said stem, a lever device disposed between said arms and adapted to extend into said socket and between said oppositely disposed spring means and to shift laterally so as to emerge from said slot when the coupler head is rotated with respect to said stem, and means for securing said lever device in said socket, said spring means being adapted noncoincidently to be energized by lateral swinging movements of said stem and being adapted noncoincidently to actuate said lever device to centralize said head with respect to said stem.

1,400,211. APPARATUS FOR OFFENSE OR DEFENSE AGAINST SUBMERGED OR PARTIALLY SUBMERGED OBSTRUCTIONS. CHARLES DENNISTON BURNEY, Alresford, England. Filed Sept. 18, 1917. Serial No. 192,018. 29 Claims. (Cl. 114—235.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A body for submergence in water to which it has relative movement, a retention line attached to said body and means provided on the body whereby the latter is deflected both sidewise and in a vertical sense so as to maintain a desired position relatively to the retention line.

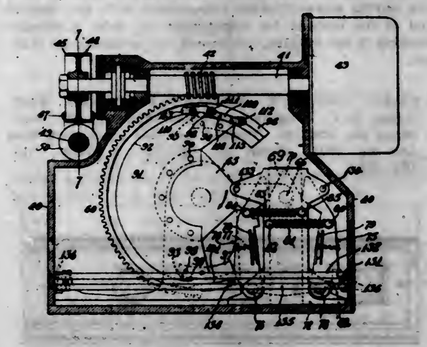
1,400,212. FUEL-PRESS. CHARLES H. DAVIS, Valley City, N. D. Filed June 21, 1920. Serial No. 390,316. 1 Claim. (Cl. 25—12.)

In a fuel press, the combination with a die-block having a die seat, of a bushing in the die seat with its delivery end free and extended outward thereof, said delivery end of the bushing being tapered and longitudinally split, a nut having screw-threaded engagement with the tapered end of the bushing for contracting the same, a plunger working in the bushing, and means for operating the plunger.



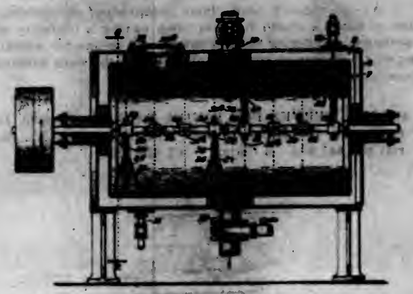
1,400,213. NUT-LOCK. WILLIAM F. FARNSWORTH, Washington, D. C. Original application filed Nov. 27, 1920. Serial No. 426,709. Divided and this application filed Jan. 24, 1921. Serial No. 439,711. 1 Claim. (Cl. 151—84.)

The combination with a nut locking structure adapted to hold a row of the nuts against turning upon their co-



spective bolts comprising a face plate traversed by one of said bolts and held by the nut thereon, a lock bar having an opening formed in a portion thereof, and a projecting element carried by the face plate for engaging in said opening to hold the lock bar in position to engage the sides of a plurality of said nuts.

1,400,214. DEVICE FOR MAKING COFFEE, TEA, OR SIMILAR BEVERAGES. HUBERT GALT, Lake Forest, Ill. Filed Dec. 29, 1919. Serial No. 347,957. 1 Claim. (Cl. 53—3.)



A pot for making coffee comprising an outer vessel, provided with a fluid outlet near its top, an inner removable container having an imperforate open-end shell of slightly less length than the outer vessel and sufficiently smaller in external diameter than the internal diameter of the outer vessel to form an intermediate circulating space through which the boiling water may rise from the lower portion of the outer vessel and pass into the upper part of the container without overflowing the pot, and a screen at the lower end of the container forming the support for the coffee-grounds and spaced slightly above the bottom of the outer vessel when the container is in its lower position in the vessel, the parts being constructed so that when the container is down in said position the boiling action of the body of water causes the water to flow from the lower portion of the vessel up through the intermediate circulating space and pass into the container without boiling out of the pot and brings the entire body of water into boiling contact with the charge of coffee in the container, and after the coffee is made the cooked ground settle on the screen and form a filter at the bottom of the pot through which the beverage is strained when the container is raised.

1,400,215. ELEVATOR-DOOR-OPERATING DEVICE. LUTHER E. GROAT and FREDERICK F. BRUSH, Los Angeles, Calif., assignors to Elevator Safety Appliance Company, a Corporation of California. Filed May 26, 1919. Serial No. 299,979. 11 Claims. (Cl. 187—52.)

1. An elevator door operating mechanism comprising a frame, a motor, a main shaft turning in bearings in said frame, means connecting said motor to said shaft, a crank on said shaft, a cross-head sliding in said frame, a crank pin block carried on said crank and sliding in said cross-head at right angles to the line of motion of said cross-head, and means by which said cross-head opens and closes the elevator door.

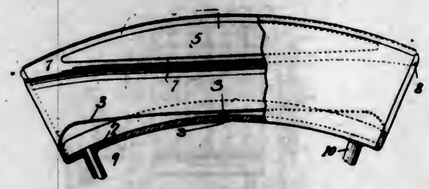
1,400,216. APPARATUS FOR MANUFACTURING SHORTENING MATERIAL. VALENTINE HECHLER, Chicago, Ill., assignor to Wilson & Co., Inc., Chicago, Ill., a Corporation of New York. Filed Apr. 23, 1919. Serial No. 292,000. 11 Claims. (Cl. 259—109.)

1. In an apparatus of the character set forth, in combination, a container for the material, a rotatably mounted member in said container, a series of propeller devices arranged at different points on said member, and a series of bow-shaped devices on said member closely adjacent the sides of said propeller devices.

1,400,217. MUSIC-HOLDER FOR BAND USE. THOMAS P. HORGAN, Jr., Orangeburg, S. C. Filed Apr. 23, 1921. Serial No. 463,785. 4 Claims. (Cl. 45—61.)

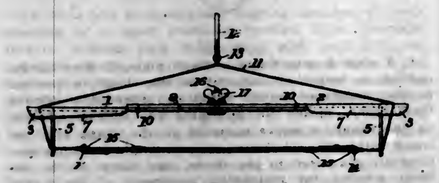
4. A sheet music holder comprising a casing, a sheet music retaining frame hingedly connected to the holder and having a depending finger piece, a leaf spring connected to said casing and engaged with said finger piece for urging the frame into contact with the sheet music, a sheet supporting carriage slidable in said casing, and means connecting the carriage and said finger piece.

1,400,218. TRACTOR STRUCTURE. WILLIAM GARFIELD HOWE, Des Moines, Iowa. Filed June 21, 1920. Serial No. 390,636. 3 Claims. (Cl. 305—4.)



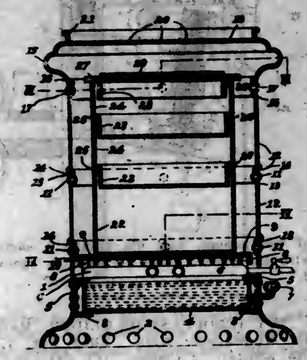
1. In a creeping tread structure, a rigid upright horisontally elongated frame, a circumferential track thereon, slightly deeper at its central portion than at its side edges, inwardly opening channels at the sides of said track, an endless tread device comprising pivoted sections, bearings on the respective sections, spindles

mounted in said bearings having their ends received in the channels at the sides of the track, and rollers on the central portions of the respective spindles, shaped to fit



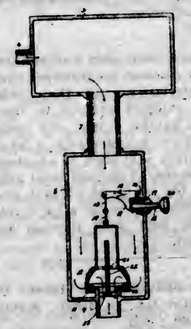
the track whereby the endless tread device may travel in a rigid track, and the weight of the device tends to keep the rollers centered with relation to the track.

1,400,219. EXPANSIBLE CORE. ANDREW HUETTER, Dayton, Ohio. Filed Apr. 26, 1921. Serial No. 464,671. 8 Claims. (Cl. 18—46.)



1. An expansible core for tires and the like comprising an arcuate hollow body of flexible but inextensible material having therein a reëntrant fold terminating in a tubular passage extending from end to end of the body in a substantially straight line and means for expanding said body.

1,400,220. GARMENT-HANGER. THEODORE KAUFER, New York, N. Y. Filed May 2, 1921. Serial No. 466,115. 5 Claims. (Cl. 211—13.)

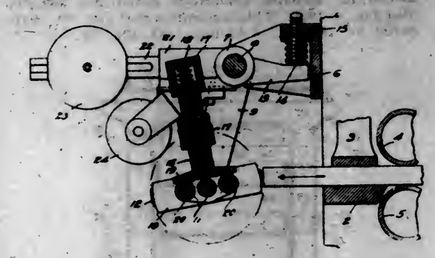


1. In a garment hanger, the combination with a sheet metal shoulder member having depending portions cut and bent therefrom near its ends, of a flexible collar supporting member engaging said depending portions and extending across between them for supporting other garments below the shoulder member, said flexible member also extending above the shoulder member, and means for supporting the hanger from the upwardly extending portion of the flexible member.

1,400,221. COOKING-STOVE. THEODORE KAUFER, New York, N. Y., assignor to Kaufer Manufacturing Company, Inc., New York, N. Y., a Corporation of New York. Reflled for forfeited application Serial No. 269,570, filed Jan. 4, 1919. This application filed July 30, 1921. Serial No. 489,926. 3 Claims. (Cl. 126—39.)

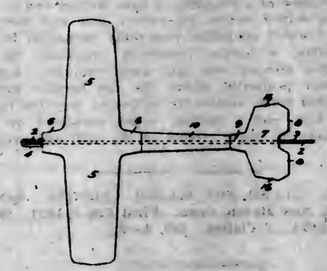
1. In a cooking stove, the combination with an outer shell composed of a ring-shaped base section and a separable ring-shaped section superposed upon said base section, of a water container removably supported in said base section, a burner removably supported in the base section directly over said water container, lugs on said burner projecting above the top surface thereof, a perforated frame removably supported over the burner on said lugs, and a cooking vessel supported on said frame inside the upper section of the shell and over the burner.

1,400,222. FLUSH FOR WATER-CLOSETS. EDWARD LEVINE, New Haven, Conn. Filed Feb. 3, 1921. Serial No. 442,021. 2 Claims. (Cl. 4—5.)



1. A flush for water-closets comprising a valve-chamber provided at its lower end with an outlet, a valve adapted to close said outlet, a vertically-arranged pin mounted in the outlet adapted to guide the said valve to its seat, means including a push-pin for lifting said valve, a header connected with said valve-chamber and adapted to be coupled with a water supply pipe.

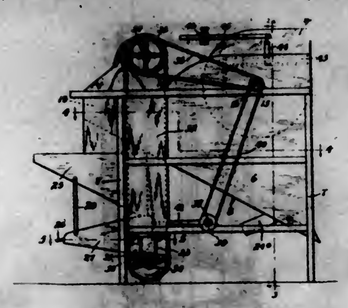
1,400,223. LUMBER AND TIMBER TRADE-MARKING DEVICE. JOSEPH G. MCDONOUGH, Eau Claire, Wis. Filed Sept. 15, 1917, Serial No. 191,540. Renewed May 23, 1921. Serial No. 471,544. 34 Claims. (Cl. 101—35.)



1. The combination, with a means for feeding lumber or timber, of a die mounted to revolve on a horizontal

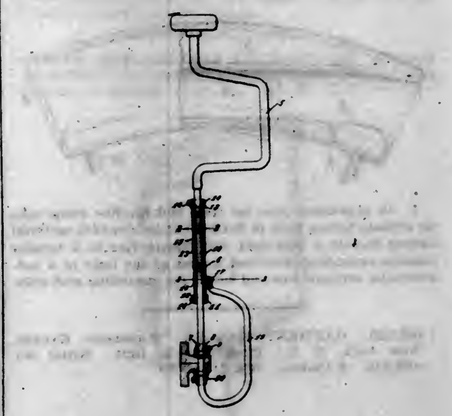
axis and arranged transversely of the lumber and in the path thereof for applying an identifying mark to an end

surface of the lumber, said die having a surface for contact with the lumber after the marking operation is completed.



1,400,224. TOY AEROPLANE OR GLIDER. MATHEW R. MCINNIS, Minneapolis, Minn. Filed Nov. 7, 1919. Serial No. 336,241. 3 Claims. (Cl. 244—12.)

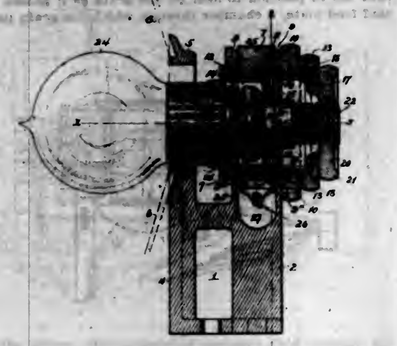
1. A toy aeroplane comprising a stick having a weighted forward end and a gummed longitudinal surface, wings of light flexible material having their middle portions mounted on said gummed surface in the rear of said weight, said stick having a rear end projecting beyond the rear wing to form a finger grip, a hand grip having a slot therein wherein said stick is adapted to slide, and a propelling band mounted on said hand grip and forming a loop to receive the rear end of said stick, said band being put under tension when the stick is retracted in said slot and projecting said stick through said slot when the band is released.



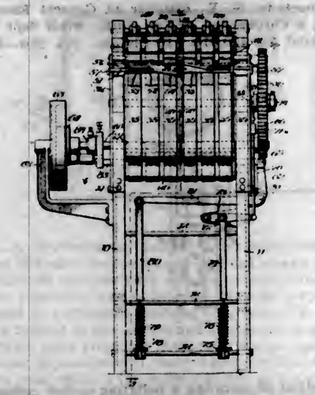
1,400,225. GRAIN-SEPARATOR. HENRY H. MEYER, Red Wing, Minn. Filed Jan. 16, 1920. Serial No. 351,891. 1 Claim. (Cl. 130—17.)

A grain cleaner having in combination, a casing having an inclined bottom and having an upwardly inclined trough extending therethrough and provided with a discharge chute at its lower end projecting out of said casing, discharge chutes at each side of said trough at its lower end oppositely directed to the said chute and adapted to discharge beneath the casing, a fan for drawing air upwardly through said trough and discharging the same at the top of the casing, a hopper at the upper end of said trough provided with feeding means leading into the trough, a primary material hopper disposed beneath the upper end of said casing and said first mentioned hopper for receiving the grain and material mixed therewith, a shoe provided with an inclined scalping means beneath the primary hopper and receiving therefrom and discharging the scalped material at its lower side, a chute beneath said shoe discharging laterally of the casing, and

an elevating means at one side of the casing receiving from said last mentioned chute and discharging into the hopper at the upper end of said trough.



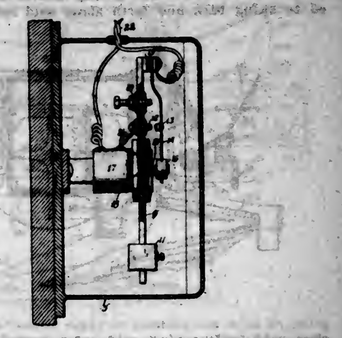
1,400,226. WRENCH. HORACE R. MILAN, Columbia, Tenn. Filed Mar. 1, 1921. Serial No. 448,787. 5 Claims. (Cl. 81—55.)



1. A wrench comprising a shank and an offset handle portion, a socket at one end of the shank, a tubular member supported on the shank and adapted to revolve thereabout, means for adjusting the tubular member on the shank, a sleeve mounted on the shank and disposed within the tubular member, a socket carrying arm pivotally connected to the sleeve, and means in the tubular member for restricting movement of the sleeve and socket carrying arm.

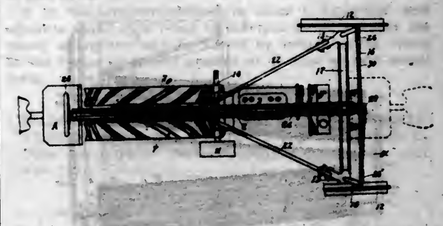
1,400,227. LAMP-FOCUSING DEVICE. JUDD L. MINICK, Altoona, Pa. Filed Feb. 19, 1920. Serial No. 359,950. 7 Claims. (Cl. 240—44.)

2. In focusing means, the combination with a support, of a sleeve having an eccentric bore and having relatively movable parts, revolubly mounted on said support, a cylinder revolubly mounted in the eccentric bore of said sleeve and having relatively-movable portions, means for holding a lamp support in said cylinder, and a friction clamp embracing said sleeve for clamping the parts in adjusted position.



1,400,228. LEAF STEMMING AND BOOKING MACHINE. JOSEPH F. MOELLER, Chicago, Ill. Filed Oct. 4, 1918. Serial No. 256,872. 15 Claims. (Cl. 131—57.)

12. In a leaf stemming and booking machine, the combination of a main frame, a booking drum journaled therein, booking belts coöperating with said drum, an apron frame hinged at its lower end to said main frame and supporting a portion of said belts, and means for securing said apron frame in upright position against said main frame comprising a pair of spring-pressed locking bolts slidably mounted on said apron frame, a turn-button pivoted on said apron frame between the inner ends of said bolts, links connecting the inner ends of said bolts to said turn-button, and keepers adjustably secured to said main frame and formed with holes to receive the outer ends of said locking bolts.



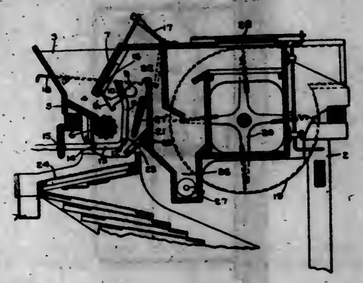
1,400,229. ELECTRIC-CIRCUIT CONTROL. HOWARD J. MURRAY, Brooklyn, N. Y. Filed July 15, 1919. Serial No. 311,067. 10 Claims. (Cl. 175—355.)

1. In a device of the class described, a support which may be subject to movement in space, a rocking member pivotally mounted on said support for oscillatory movement about an axis fixed relative to the support, a relatively fixed contact carried by said rocking member and bodily movable therewith, a second contact supported by

said member to move bodily therewith and additionally movable under the force of its inertia into position to affect its circuit closing relation with said fixed contact and means acting on the movable contact for affecting its circuit closing relation with the fixed contact.

1,400,230. TRACTOR. HAROLD NILSON and LEONARD NILSON, Wayzata, Minn. Filed Oct. 20, 1918. Serial No. 260,202. 15 Claims. (Cl. 180—54.)

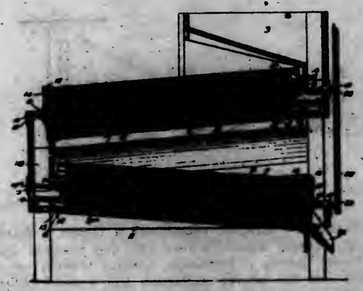
1. A traction machine comprising a frame, a forward axle and guiding wheels, a rear axle and traction wheel, said frame having a horizontal pivotal bearing on said forward axle for lateral oscillation and a non-oscillating bearing on said rear axle, a source of motive power carried by the lower portion of said frame below said horizontal pivotal bearing and having driving connections with said traction wheel, the lower portion of said frame swinging toward the higher side of the machine to counteract the tendency to tip toward the lower side when traveling on a side hill.



1,400,231. ART OF COMPOUNDING RUBBER. WILLIAM G. O'BRIEN, Akron, Ohio. Filed May 22, 1919. Serial No. 299,011. 7 Claims. (Cl. 106—23.)

1. In the process of incorporating glue into a rubber compound, the improvement which consists in working the rubber to plasticize the same in the presence of glue containing water insufficient in amount to plasticize it at ordinary temperatures but sufficient to plasticize it in the working operation.

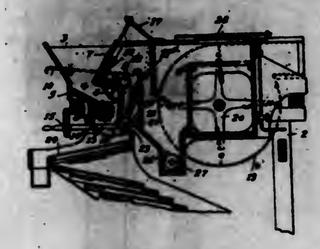
1,400,232. FEED-HOPPER FOR GRAIN-CLEANING MACHINERY. RICHARD L. OWENS, Minneapolis, Minn. Filed Dec. 24, 1917. Serial No. 208,577. 3 Claims. (Cl. 83—44.)



1. The combination, with a feed hopper having a discharge throat and an inclined feed plate in the bottom

thereof, of a feed roll mounted to form a continuation of the surface of said feed plate and extending slightly above the same, a plurality of gates hinged to the wall of said hopper above said roll and having their lower ends adapted to swing back and forth above said roll to open or

close said feed opening, said gates normally falling by gravity into said feed opening and mechanism engaging said gates for supporting them in an open or partially open position and comprising means for allowing said gates to move away from said feed opening under pressure of the grain flowing through said opening.



1,400,233. WILD-OATS SEPARATOR. RICHARD L. OWENS, Minneapolis, Minn. Filed Mar. 14, 1918. Serial No. 222,889. 5 Claims. (Cl. 130—16.)

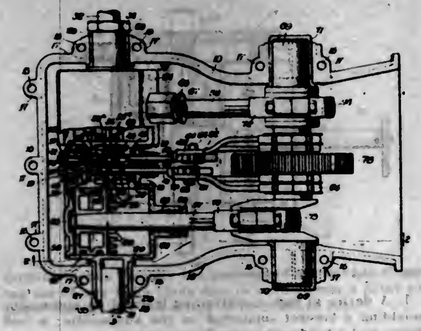
2. An apparatus for separating oats from other grain comprising a frame, a revolving cylindrical sieve therein composed of wire mesh having a series of flat separating surfaces and a series of inwardly projecting ledges between said surfaces extending from end to end of said sieve, said wire mesh being folded or crimped longitudinally at regular intervals between said flattened surfaces to form said inwardly projecting ledges, the walls of each ledge being pressed into parallel relation, the mixture being delivered to one end of the sieve and said ledges elevating it as the sieve revolves and the mixture flowing over said ledges on the upside of the sieve and dropping vertically upon said flattened surfaces, the slender oats passing through the meshes while the plumper grains rebound or lodge therein.

1,400,234. FEED-HOPPER FOR GRAIN-CLEANING MACHINES. RICHARD L. OWENS, Minneapolis, Minn. Original application filed Feb. 24, 1917, Serial No. 208,577. Divided and this application filed Feb. 21, 1919. Serial No. 278,446. 5 Claims. (Cl. 83—44.)

1. The combination, with a feed hopper having an inclined feed plate arranged below the bottom of the hopper and forming with the hopper wall a side opening discharge throat, of a force-feed roll located below the edge of said feed plate, an adjustable gate arranged above said roll in position to bear on the grain as it passes over said feed plate, a chamber through which the grain passes

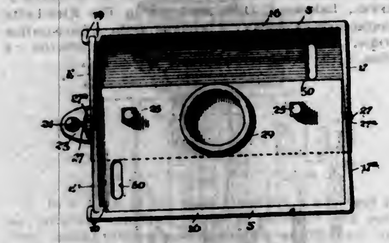
as it falls from said feed roll, an air regulating valve arranged in said chamber, and a fan and fan-trunk connected to said chamber above said feed roll and regulating valve, for drawing a current of air through said chamber and through the grain as it falls from said feed roll.

1,400,235. METHOD OF AND MEANS FOR PRODUCING ALTERNATING CURRENTS. JOHN H. PAYNE, Jr., Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 14, 1916. Serial No. 120,070. 10 Claims. (Cl. 250—36.)



1. The method of operating a radiating system comprising a self-excited electron discharge device which consists in causing said device to produce two separate currents, one of radio frequency and one of audio frequency, causing the two currents to interact to produce radio frequency currents having an audible group frequency equal to that of the audio frequency currents produced and utilizing the currents thus produced for effecting a useful radiation of energy.

1,400,236. PRESSURE-FLUID MOTOR. JOHN EDWARD PFEIFFER, Chicago, Ill. Filed May 29, 1918. Serial No. 237,209. 5 Claims. (Cl. 121—63.)

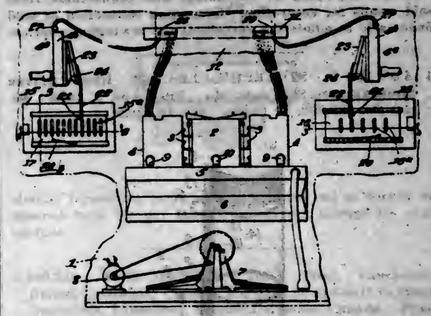


1. A motor comprising a crank shaft, an oscillating cylinder having a piston and a direct connection between the piston and a crank of the crank shaft, a stationary pressure fluid chest supported independently of the cylinder and provided with a circular socket opening into the chest, the cylinder having an external cylindrical boss mounted to oscillate in the socket and provided with an inlet port, a slide valve mounted in the chest in coöperative relation

with the inlet port and working in the general direction of the reciprocating movement of the piston, and valve ac-

tuating means, the passage of pressure fluid through the inlet port being controlled by the joint movements of the cylinder and the valve.

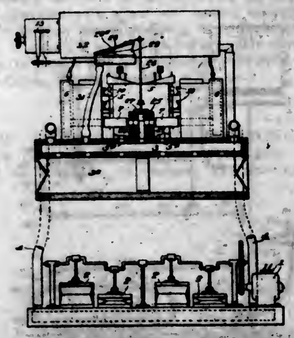
1,400,237. LOCOMOTIVE-JOURNAL LUBRICATOR. JAMES G. B. PROUDFOOT, Grafton, W. Va. Filed Jan. 26, 1921. Serial No. 440,069. 8 Claims. (Cl. 64—35.)



8. A lubricator for journal boxes comprising side sections including bottom panels and end panels arranged in overlapped relation with respect to each other, end sections removably associated with the side sections and arranged in overlapped relation with respect to each other, slots formed in the bottom and side panels and in the end sections, bolts extending through said slots, means for preventing displacement of the end sections from the side sections comprising, a lug secured to one of the side sections, a locking finger pivoted to one of the side panels, and a bolt extending through said lug and finger, and a follower within the frame.

1,400,238. THERMOSTATIC DEVICE. HENRY E. REEVE, Brooklyn, N. Y. Filed July 8, 1921. Serial No. 483,160. 21 Claims. (Cl. 297—15.)

19. In a thermostatic device, two relatively fixed supports, a laterally warping thermostatic element supported by said supports, and a spring bearing laterally against said thermostatic element near one end of said element.



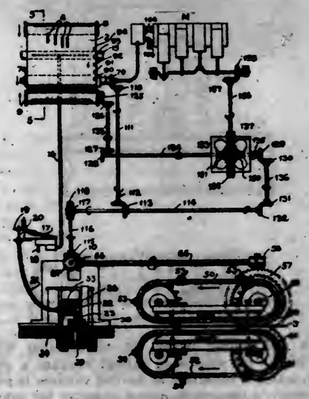
1,400,239. SWELL FOR AUTOMATIC ORGANS. CHARLES C. RUSSELL, Chicago, Ill. Filed Apr. 5, 1920. Serial No. 371,282. 2 Claims. (Cl. 84—84.)

1. In an automatic organ in combination with an outer casing, tone-producing devices inclosed within the casing; pneumatically-operated playing devices within the casing for operating said tone-producing means; a note sheet for selectively controlling the playing devices; the casing having a plurality of sound exits and separate shutter means for variably closing said exits respectively; motor pneumatics in the casing and connections therefrom respectively for operating said separate shutters, and separate note-sheet-controlled ducts in the tracker for controlling said motor pneumatics respectively; whereby the sound emergence may be varied by being limited to either or both of said exits.

2. In the structure defined in claim 1, foregoing, said separate sound exits being of different areas, whereby the sound emergence may be varied by being limited either to the lesser or to the greater or to sum of said sound exits.

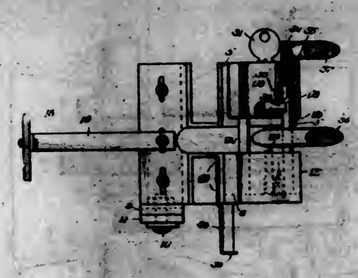
1,400,240. AUTOMATIC CUT-OUT VALVE FOR SELF-PLAYING ORGANS. CHARLES C. RUSSELL, Chicago, Ill. Filed Apr. 5, 1920. Serial No. 371,283. 3 Claims. (Cl. 84—122.)

1. In a self-playing organ, in combination with the pumping means for producing partial vacuum, a receiving bellows in which a condition of partial vacuum is produced by the pumper, a pneumatic action chamber for controlling the playing; a conduit from the receiver to the pneumatic action chamber; a valve which controls the air connection with the pneumatic action chamber conduit mounted for movement to closed position in the direction of suction from the receiver; a suction-operated pneumatic operatively connected with the valve for positively closing it by the collapse of the pneumatic, and positively opening it by the expansion of the pneumatic; a spring which tends



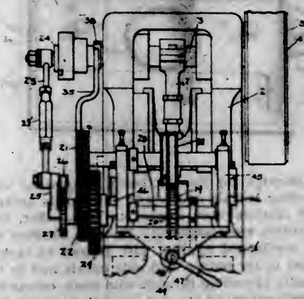
to expand the pneumatic and open the valve against the suction; note-sheet-operating mechanism for winding and re-winding the note-sheet; means for reversing said mechanism from playing to rewinding, and connections from said means for controlling the suction connection of said pneumatic to admit the suction at the rewinding position.

1,400,241. STOVEPIPE-CLEANER. HENRY OLIVER SHOLDERBRAND, St. Louis, Mo. Filed Apr. 9, 1919. Serial No. 288,892. 1 Claim. (Cl. 15—242.)



In combination with a stove pipe having an aperture leading to the interior thereof, and a longitudinal guideway extending along the pipe wall formed by creasing the pipe wall at one side of the aperture concavely outwardly and the pipe wall at the other side of the aperture concavely inwardly; a cleaning element formed by extending a shaft of heavy wire through the aperture and then coiling the interior end portion thereof inside the pipe in the form of two spaced soot scraping rings connected by a link of the same wire, and disposing the outer end portion of the wire shaft along said guide-way to form a handle for manipulating the inner soot scraping rings.

1,400,242. NOTE-SHEET-PERFORATING MACHINE. CHARLES F. STODDARD, New York, N. Y. Filed Apr. 26, 1917. Serial No. 164,625. 37 Claims. (Cl. 164—114.)

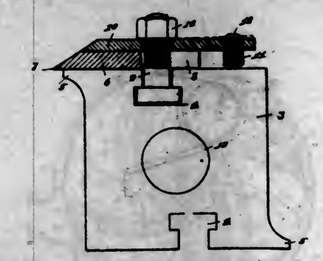


1. A note sheet perforating machine comprising, in combination, perforating mechanism; selecting mechanism including a pattern; feeding means for the pattern having operative connection with the perforating mechanism; speed controlling means for said feeding means independent of the entire selecting mechanism other than the pattern governed conjointly by said pattern and perforating mechanism.

1,400,243. LOCKING DEVICE FOR AUTOMOBILES. FELIX G. SIWUCKI, Chicago, Ill. Filed Feb. 18, 1921. Serial No. 446,009. 2 Claims. (Cl. 70—126.)

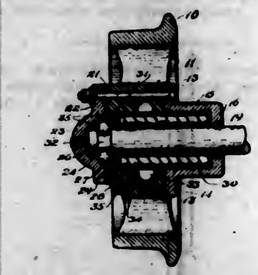
1. A device to lock a controlling lever of an automobile providing a bracket supported on the automobile; a lock casing and a bolt guide spaced apart on the bracket to admit a lever therebetween; two spaced-apart lock bolts arranged to enter the lock casing, carried by said guide; a cross member connecting the outer ends of said bolts; a spring pressed latch within the lock casing engaging one of said bolts and arranged to be withdrawn by a key and a spring to return said lock bolts to unlocked position when released by the key.

1,400,244. MACHINE FOR MAKING NUTS. WILLIAM J. SLEFFEL, Lakewood, Ohio, assignor to The Kirk-Latty Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 26, 1919. Serial No. 299,753. 4 Claims. (Cl. 10—76.)



1. In a machine of the character described, the combination of punching means, means for feeding a prepared bar of stock through said punching means in synchronism therewith, and other means adapted to engage and lock said feeding means against movement during the operation of said punching means.

1,400,245. CUTTER-HEAD. CHRISTIAN P. SMITH, South Bend, Ind.; Arthur L. Jones administrator of said Christian P. Smith, deceased. Filed Nov. 5, 1919. Serial No. 335,909. 3 Claims. (Cl. 144—225.)

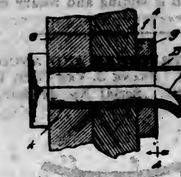


1. The combination with a cutter head having a flat knife blade receiving surface for the reception of a knife blade, of a flexible clamping bar having its under face flat and its rear edge extending beyond the rear edge of the knife blade and disposed on said knife blade, a holding down bolt carried by the cutter head and spaced from its edges and passing through a notch in the knife blade and through an aperture in the flexible bar at a point spaced from its edges and an adjusting screw threaded through

the flexible clamping bar adjacent its rear edge and rearwardly disposed in relation to the holding down bolt and

forming means whereby the pressure of the flexible clamping bar on the knife blade may be varied from a point adjacent the holding down bolt to its forward edge.

1,400,246. CAR-WHEEL. LEONARD P. SOUTH, Louisville, Ky. Filed Oct. 12, 1921. Serial No. 507,209. 3 Claims. (Cl. 295—47.)



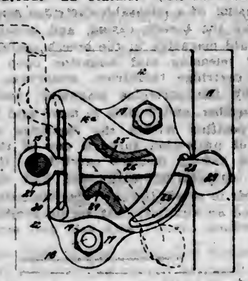
1. In a wheel of the class described, a hub body having an inwardly extending flange at its outer end, said hub body being further provided with an internal annular groove intermediate its ends and having port communications with the exterior of the hub body, an inner hub end secured to said hub body and having an inwardly extending flange at its inner end, a shaft passing through said hub body and inner hub end, and a roller bearing surrounding said shaft between the annular flanges of the hub body and hub end.

1,400,247. PROCESS OF PRODUCING CATALYZERS. JOHN A. STEFFENS, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Dec. 24, 1918. Serial No. 268,185. 2 Claims. (Cl. 23—28.)

2. The process of making a catalyst comprising precipitating the salt of a catalytically active metal with ammonia, allowing the ammonium salt formed to remain in the precipitate, drying and igniting to form an oxid, and reducing the latter at a temperature within the range of about 250 to 350° C.

1,400,248. BOLT. THOMAS D. THOMAS, Youngstown, Ohio, assignor of one-third to Walter D. McKay and one-third to Thomas L. Thomas. Filed Feb. 19, 1921. Serial No. 446,411. 4 Claims. (Cl. 85—5.)

1. A bolt or pin formed in two parts, the shank or stem of one part being substantially semi-circular in cross-section, except that its inner end is enlarged into substantially circular formation, the enlarged portion curving inwardly and merging into the flat face of the semi-circular portion of the shank; the other part being of



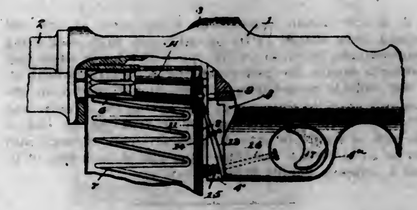
similar formation, except that its inner end is curved or tapered from its flat surface outwardly toward its oval surface.

1,400,249. SAW-HANDLE. JOHN TOSS, Vancouver, British Columbia, Canada, assignor of one-half to Isaac Gustafson, Vancouver, British Columbia, Canada. Filed Feb. 14, 1921. Serial No. 444,792. 2 Claims. (Cl. 145—111.)

2. A saw handle comprising, a bar eyed at one end formed block shaped at its opposite end, said block being longitudinally grooved on its upper and lower edges and having a square aperture extending vertically through it, a bar slidably mounted in said aperture threaded on one end and provided with a nut and having its opposite end curved to form a guard disposed in front of the end of the saw, a rigid pin extending transversely through said bar so as to form a saw-connecting pin on each side of it, and a gripping handle fitted in said eye.

1,400,250. SILO-DOOR-FASTENING DEVICE. FRANK J. VAN COTT, Unadilla, N. Y. Filed July 31, 1916. Serial No. 112,432. 21 Claims. (Cl. 20—1.4.)

5. In a device of the character described adapted to be used in combination with a closure member for silos or the like, comprising a retainer member fixed to the closure member having portions forming spaced guides



and portions forming fulcrums, a locking belt arranged in position to coact with said guides and fulcrums, said means pivotally and slidably connected with said locking belt for imparting to it sliding and rotary movement.

1,400,251. SILO STRUCTURE AND ANCHORING SYSTEM THEREFOR. FRANK J. VAN COTT, Unadilla, N. Y. Filed Mar. 5, 1921. Serial No. 449,907. 12 Claims. (Cl. 20—1.4.)

1. The combination of a silo, a door frame, a plurality of vertical staves having co-acting tongues and grooves on their adjacent edges, an anchoring system for preventing the twisting of the silo comprising a member extended from the outer to the inner surface of the silo wall and diagonally through the tongue and groove of the adjacent staves.

1,400,252. AUTOMATICALLY-RELEASABLE MAGAZINE FOR MACHINE-RIFLES. LOWREY A. WEED, Brooklyn, N. Y., assignor to The Secretary of War, trustee. Filed Nov. 3, 1919. Serial No. 335,515. 2 Claims. (Cl. 42—18.) (Filed under the act of Mar. 3, 1883. 22 Stat. L., 625.)

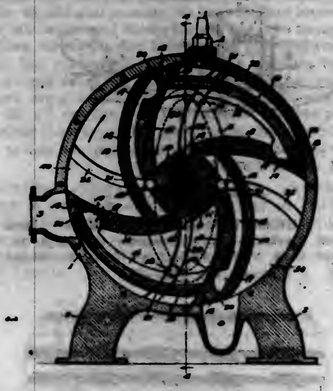
1. In an automatic firearm, the combination, with the breech casing, of a releasable cartridge magazine normally carried by the breech casing, and means for normally locking said magazine in the breech casing and for automatically releasing said magazine upon withdrawal of the last cartridge therefrom, comprising a leaf spring carried by the cartridge magazine, and supporting a locking member, and flexible to move said locking member from a position within the cartridge magazine to a position of projection through one of the walls thereof, and a locking member carried by the firearm and normally coöperating with said first mentioned locking member to retain the cartridge magazine in the breech casing, and an auxiliary leaf spring flexible into and out of longitudinal contact with said first mentioned spring.

1,400,253. SPRING. ALBERT G. WICKER, Cincinnati, Ohio. Filed June 15, 1921. Serial No. 477,808. 7 Claims. (Cl. 267—58.)

2. In a spring, the combination of a resilient core member adapted to expand and contract, and a resilient coil member wrapped around the core with the ends of the coil member extended for connection to the objects to

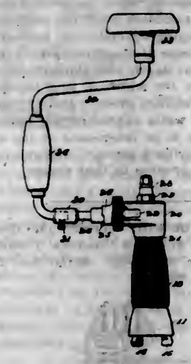
be spring-faced, and means on the core to prevent relative lengthwise movement of the coil and core.

1,400,254. ELEVATOR-OILING MECHANISM. GEORGE P. YOUNG, Cincinnati, Ohio, assignor to The Warner Elevator Manufacturing Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 29, 1920. Serial No. 369,471. 3 Claims. (Cl. 74—86.)



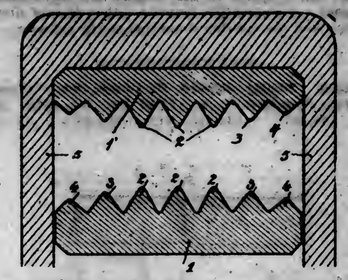
1. In an apparatus for elevator lubrication, the combination of an elevator car guide rail having an oil duct therethrough and tributary channels from the oil duct for distributing oil to the bearing surfaces of the rail, a stationary oil feed reservoir located at an accessible elevation from said duct, a conduit connecting said reservoir and duct, an elevator car having a shoe engaged with said rail and wiper carried by said car engaging said rail bearing surfaces.

1,400,255. ROTARY INTERNAL-COMBUSTION MOTOR. HENRY D. ANDERSON, Filer, Idaho. Filed July 16, 1920. Serial No. 396,678. 3 Claims. (Cl. 123—17.)



1. In a rotary engine, a casing, a rotor mounted in a chamber in such casing, said rotor having an expansion chamber and the casing having inlet and exhaust ports with which such chamber may communicate, a piston having a pressure-receiving surface that lies toward the casing wall and in the form of a lever pivotally connected at one point of its length with the rotor, said piston swinging inward under pressure, and means forming a thrust support for the piston at another point in its length, and causing the piston at such point to travel in a path between the rotor axis and the chamber wall, and

at a changing distance therefrom, the point of pivotal connection of the piston and the rotor being in advance, in

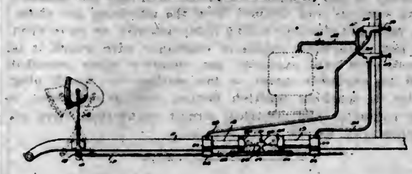


the direction of rotor rotation of the point where the piston is acted on by said thrust support.

1,400,256. RATCHET-WRENCH. WILBUR L. BEATY, South Butte, Mont. Filed Oct. 16, 1919. Serial No. 331,013. 1 Claim. (Cl. 81—60.)

A wrench comprising a smooth bored stock having longitudinal slots in its walls and provided at one end with an enlarged open-ended head and a reduced shank at its opposite end, a boss projecting from the extremity of said reduced shank, a star shaped head slidably mounted in the stock and having extended threaded portions projecting through the slots in the stock, three resilient jaws integral with and extending from said head through the open-ended enlarged head of the stock with flat inner surfaces and having their outer surfaces bearing against said stock head, an interiorly threaded sleeve rotatably mounted on the stock and engaging the threaded projections of the slidably mounted head, said sleeve bearing at one end against the said enlarged head of the stock, a working head fitted rotatably on the reduced shank of the stock and arranged to hold the sleeve against the enlarged head of the stock and prevent endwise movement of the sleeve, means for operating said working head, and means engaging said boss to retain the working head on the reduced end of the stock.

1,400,257. STONE-CRUSHER. POUL BRUNGAARD, Dalby, Sweden. Filed Dec. 11, 1920. Serial No. 429,004. 4 Claims. (Cl. 83—53.)



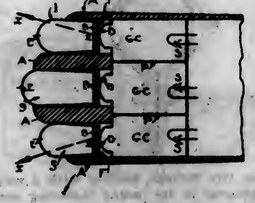
1. Improvement in stone crushers having two crushing jaws movable in relation to each other and side members which together with the jaws form a crushing chamber, said jaws being at the working surfaces provided with ridges of such a height that the free space between the tops of the ridges on the opposite working surfaces of the coacting crushing jaws is less at the middle of the same and that said space is gradually increasing toward the outer parts adjacent to the side members.

1,400,258. CORE FOR TIRE-CASINGS. JOHN B. BINNS, Akron, Ohio, assignor of one-fifth to Stephen J. Taylor, one-fifth to Earl Wissinger, Cuyahoga Falls, Ohio, one-fifth to Frank Nolte, Akron, Ohio, and one-fifth to Superior Rubber Mold & Equipment Company, Cuyahoga Falls, Ohio, a Corporation of Ohio. Filed Mar. 18, 1921. Serial No. 453,215. 6 Claims. (Cl. 18—45.)

1. A core for tire casings, formed with a series of circumferential grooves in its casing receiving surface, and means for admitting a fluid to said grooves.

1,400,259. AUTOMOBILE-HEADLIGHT. FRANK B. BLACK, Liscomb, Iowa. Filed Oct. 11, 1920. Serial No. 416,174. 2 Claims. (Cl. 240—61.)

1. Vehicle head lamp tilting mechanism comprising a pair of cylinders, reciprocating pistons arranged in said cylinders, means for connecting said pistons to the lamps of the vehicle, and control means comprising a pair of valve chambers, each of said valve chambers being provided with an inlet opening connected to a source of compressed gas and an exhaust opening, and being further



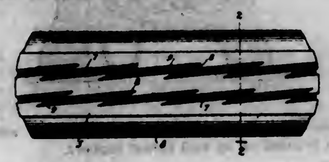
provided with an opening communicating with one of said cylinders arranged intermediate said first mentioned openings, a valve arranged in each of said valve chambers adapted to be moved to the ends of the valve chambers to permit communication between either of said first two openings and the opening connected to the cylinder.

1,400,260. SASH. ROBERT H. BLISS and GRAYDON C. BLISS, Syracuse, N. Y. Filed Dec. 30, 1919. Serial No. 348,367. 7 Claims. (Cl. 189—36.)

1. A sash comprising intersecting mullions, a first mullion having a notch in one edge, and a second mullion having a portion adapted to fit in said notch, the first mullion having a bendable tongue adjacent the notch, the free end of the tongue forming one side of the notch, said tongue being adapted to be bent laterally to provide space additional to the notch to permit the insertion of the second mullion into the notch, and to be moved into its original position after said second mullion has been placed in said notch, with its free end engaging said second mullion, and said tongue and first mullion having portions interlocking when the tongue is in its original position, for the purpose set forth.

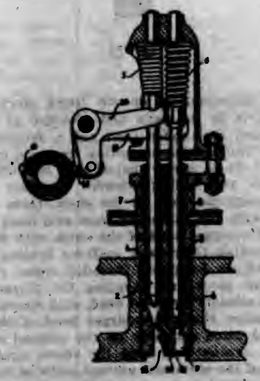
1,400,261. AERONAUTICAL APPLIANCE FOR TRANSPORTING AND FIRING EXPLOSIVES. WILLIAM RUSHTON BOWKER, Coronado, Calif. Filed Jan. 6, 1921. Serial No. 435,446. 9 Claims. (Cl. 244—1.)

1. The combination in an aeronautical appliance of a transporting air-craft to which is affixed a multiple torpedo device consisting of an efficient shaped receptacle containing a plurality of recesses, the said recesses being adapted to receive a detachable explosive container; a plurality of gas explosive chambers each said gas chamber being separate and distinct from the adjoining gas chamber, each gas chamber acting independently, so as to eject the said detachable explosive container with which it is alined, each said explosive gas chamber being provided with an explosive agent, a gas sealing cap, spark plug device, a sparking ignition device, conducting wires, a time contactor and electrical circuit connecting wires all substantially as set forth.



1,400,262. FLYING-MACHINE. GIANNI CAPRONI, Milan, Italy. Filed Sept. 4, 1919. Serial No. 321,670. 1 Claim. (Cl. 244—2.)

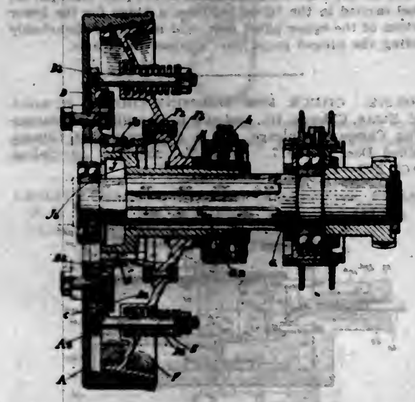
In an aeroplane of the biplane type, a front cell having prolonged uprights, three floats mounted underneath the lower plane, the middle float extending longitudinally beneath the aeroplane, the side floats being smaller in size and arranged at a level above that of the middle float, inclined wings arranged between the middle float and the side floats, and inclined wings arranged between



the outer side of the said side floats and one end of the prolonged uprights of the cell.

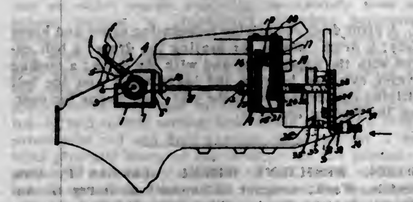
1,400,263. TREAD FOR VEHICLE-TIRES. FRED B. CARLISLE, Davisville, R. I., assignor to Joseph M. Gilbert, New York, N. Y. Filed June 16, 1917. Serial No. 175,083. 4 Claims. (Cl. 152—14.)

1. A tire having a tread provided with circumferentially extending grooved portions which taken as a whole form a zigzag depression parallel with the circumferential center line of the tire, said grooves being constituted of a series of relatively narrow inclined grooves, substantially straight throughout their entire length, each of which approaches parallelism with the peripheral center line of the tire, diverging nevertheless, but only slightly, therefrom and of a series of short transverse indentations of approximately equal depth and approximately equal in major length to twice the width of said inclined grooves and connecting said inclined grooves end to end and causing the formation of walls approximately equal in width to that of the grooves to be interposed at the overlapping end of each of the inclined grooves without interrupting the continuity of the grooves in that region.



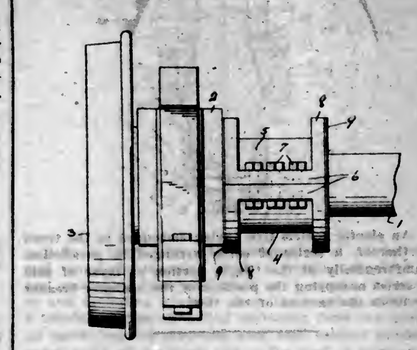
1,400,264. INJECTOR FOR INTERNAL-COMBUSTION ENGINES. LOUIS AUGUSTE CHARLES, Levallois-Perret, France. Filed Apr. 26, 1919. Serial No. 293,040. 1 Claim. (Cl. 123—33.)

Injecting apparatus for internal combustion engines comprising a passage for the compressed air, a needle forming a valve in this passage, a convergent divergent



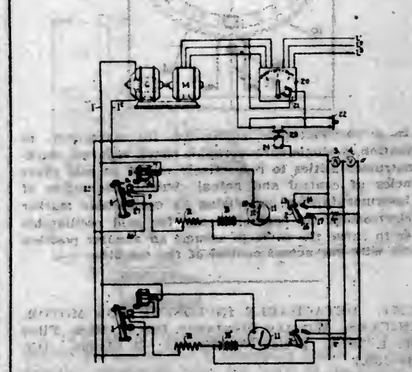
air passage of continuously varying cross section arranged below the needle and emptying directly into the motor, a passage for the non-compressed fuel, a needle forming a valve in said fuel passage, an intermediate reservoir below the last mentioned needle for the fuel, two passages establishing communication between the intermediate reservoir and the convergent divergent air passage respectively above and below the narrowest cross section, the two passages being parallel and inclined in a direction reverse to the air current, and two cams of variable profile controlling the two needles distributing the air and fuel.

1,400,265. CLUTCH FOR POWER TRANSMISSION. LOUIS COATALEN and HERBERT CHARLES MACLEOD STEVENS, Wolverhampton, England, assignors of one-half to Sunbeam Motor Car Company, Limited, Wolverhampton, England. Filed June 21, 1920. Serial No. 390,601. 3 Claims. (Cl. 192—53.)



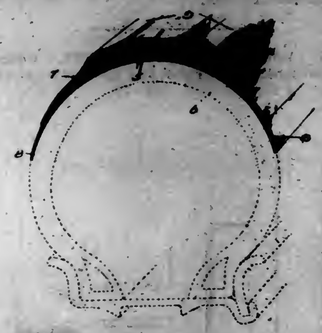
3. In combination, a shaft, a non-sliding member encircling the axis of the shaft, a sliding sleeve splined to the shaft and having a detachable splined connection with the non-sliding member, a friction clutch member slidably mounted on the sleeve and having splines to be engaged by the splines of the said sleeve when in either retracted or advanced position, springs for pressing the friction clutch member in contact with the non-sliding member, a ball race mounted on the non-sliding member, and a ring with anti-friction balls between it and the ball race, and bolts connected with the ring and the springs, substantially as described.

1,400,266. STARTER FOR AUTOMOBILE-ENGINES. JOHN F. COLLINS, Philadelphia, Pa. Filed July 30, 1920. Serial No. 400,062. 5 Claims. (Cl. 74—55.)



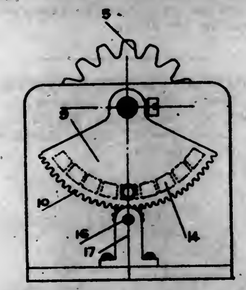
1. In an automobile engine starter, a sprocket wheel, a friction clutch mechanism carried by said sprocket wheel, a shaft upon which said clutch mechanism is mounted, means moving said shaft lengthwise in one direction by the initial rotation of the sprocket wheel, a spring for moving said shaft in the reverse direction when released, means carried by said shaft for engagement with the engine shaft, a train of gearing in which said sprocket wheel is included, and means for manually actuating said gearing in one direction.

1,400,267. LOCOMOTIVE ATTACHMENT. ROBERT G. COX, Savannah, Ga. Filed Aug. 10, 1921. Serial No. 491,216. 4 Claims. (Cl. 105—79.)



1. In a lateral take up device of the character described, the combination with a locomotive axle, of a take up device reversibly secured to the axle and wear plates on opposite ends of the device.

1,400,268. BATTERY-CHARGING SYSTEM. WILLIAM L. CULLY, New York, N. Y., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Jan. 9, 1920. Serial No. 350,287. 9 Claims. (Cl. 171—314.)

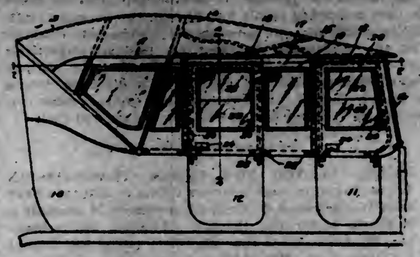


1. In a battery charging system, the combination with a motor generator set and control means therefor, of separately operable means to connect a battery to said motor generator set for charging, the former means being directly controlled by the latter means to arrest operation of said motor generator set upon operation of said latter means to disconnect the battery.

1,400,269. BREAKER-STRIP FOR TIRES. ROMANUS DARROW, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Dec. 26, 1917. Serial No. 208,888. 10 Claims. (Cl. 152—18.)

1. An elastic vehicle tire having embedded in the tread area thereof, a series of cords arranged in parallelism circumferentially of the tire, a portion or layer of said cord series occupying the position of the ordinary breaker strip upon the carcass of the tire.

1,400,270. RECORDING DEVICE FOR SIGNAL SYSTEMS. PETER PAYNE DRAN, New York, N. Y. Filed June 30, 1916. Serial No. 106,779. 8 Claims. (Cl. 234—26.5.)

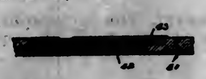


1. In a chronographic mechanism for machinery, in combination, a single chronographic chart, separate marking instrumentalities to respectively record on said chart exigencies of control and actual control, the latter of said instrumentalities comprising an oscillatable marker and electromagnetic control means for said oscillatable marker to cause the same to assume an angular position variable with the actual control of the machine.

1,400,271. DETACHABLE INCLOSURE FOR MOTOR-VEHICLES. WILLIAM DICKINSON, Detroit, Mich. Filed Mar. 1, 1919. Serial No. 280,081. 3 Claims. (Cl. 296—139.)

1. A filler member for an automobile top having side curtains, comprising a body plate of substantially triangular form rolled over at its shorter sides to fit the front bow of the top for rigidly supporting the body plate beneath the forward corner of the top, said body plate having a depending flange along its longer side following the general direction of the side of the automobile and against which the forward side curtains are adapted to seat for sealing the curtains against the top.

2. A side curtain for vehicles comprising a curtain section having an opening therein, inner and outer frame sections clamped against opposite sides of the curtain



section at the edge of the opening, a two-part transparent panel carried in the frame sections, a hinge for the lower portion of the upper panel part, and means for detachably holding the hinged panel part against the frame.

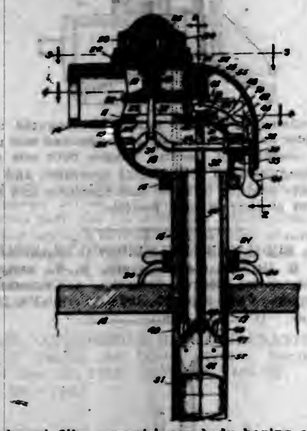
1,400,272. CHUCK FOR MACHINE-TOOLS. RUSSELL E. ELLIS, Chicago, Ill., assignor to Hamilin Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 20, 1917. Serial No. 208,013. 19 Claims. (Cl. 279—122.)

1. The combination in apparatus of the class described, of a hollow body, a tubular jaw holder slidably mounted in said body, radially movable jaws slidably mounted in said jaw holder, an abutment and means for effecting an inward movement of said jaws to grip the work and a simultaneous longitudinal movement of said jaw holder to position said work against said abutment.

1,400,273. PRINT-DRIER. BARNEY P. ENRIGHT, Perry, Okla. Filed May 20, 1921. Serial No. 471,231. 2 Claims. (Cl. 34—4.)

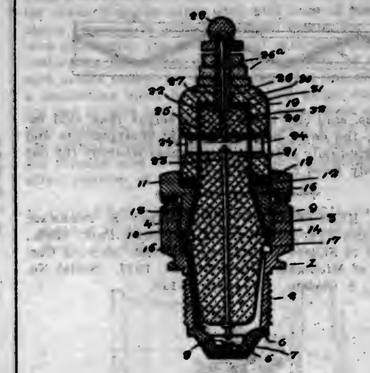
1. A print drier comprising coöperating upper and lower rollers; a drum; means for heating the drum; a belt engaged with the upper roller and with the drum; a feeding conveyer extended between the lower roller and the belt in driving engagement with the belt; and means for operating the feeding conveyer.

1,400,274. RESILIENT WHEEL. LANIOUS P. EBB, Seattle, Wash., assignor of one half to Harry G. Anderson, Seattle, Wash. Filed July 31, 1919. Serial No. 314,536. 4 Claims. (Cl. 152—42.)



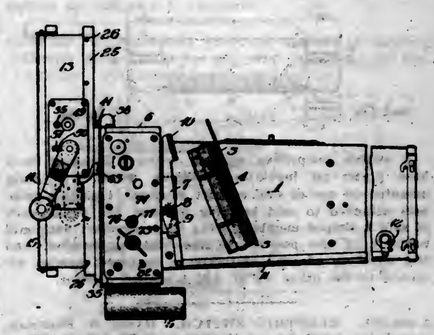
1. A wheel comprising a hub including inner and outer plates and an intermediate web defining two radially facing channels, yielding annular pouches therein, a rim in

two parts connected and spaced to slidably embrace the outer edge of said intermediate web, said parts having



seats for the pouches, and torsion elements secured to and partly encircling the edge of said web and also secured to the rim.

1,400,275. BARREL-FILLER. CHARLES FISK, Flushing, N. Y. Filed Dec. 30, 1919. Serial No. 348,364. 5 Claims. (Cl. 226—127.)



1. A barrel filler comprising a body having a laterally extending section and provided with an inlet, a valve-seat and an outlet nozzle extending downwardly from said lateral section, a crank-shaft extending horizontally through the length of said body and of said lateral section and above said nozzle, a self-closing valve within said body adapted to said seat and operatively associated with the crank of said shaft, a float in said nozzle having a rod extended therefrom up through said nozzle and the top of said lateral section and having thereon a stop to arrest said rod and float against undue descent, a float-lever pivotally mounted intermediate its end portions on the top of and closely adjacent to said lateral section and having on its inner end a foot freely resting upon the upper end of said float-rod, and a lever secured intermediate its ends upon the outer end of said shaft and having a hook adapted to be releasably engaged with the outer free end of said float-lever, for holding said valve in its open position.

1,400,276. SPARK-PLUG. HENRY LEE FLOOD, Ponca City, Okla. Filed Mar. 21, 1919, Serial No. 283,966. Renewed Aug. 30, 1921. Serial No. 497,047. 4 Claims. (Cl. 123—169.)

1. In a spark plug, the combination of an interiorly and exteriorly threaded shell, a bushing threaded into and removable from said shell, an insulating body fixed in and extending inwardly from the bushing and having a tubular portion extending outwardly from the bushing, an insulating cap disposed over said tubular portion, a spark point at the inner end of the shell, a wire extending through the insulating body and having its inner end opposed to said point, a threaded spindle disposed in the tubular portion of the insulating body and the cap and containing a wire opposed to the outer end of the first-named wire, and a cap engaging said spindle and carrying the second-named wire.

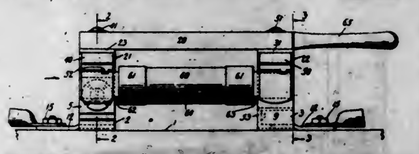
1,400,277. AVIATOR'S CAMERA. WILLIAM F. FOLMER, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 3, 1919. Serial No. 280,258. 14 Claims. (Cl. 95—23.)

1. In a camera, the combination with a camera body, a shutter mechanism and a detachable holder for sensitive material coöperating with the body, of means for automatically locking the shutter mechanism when the holder is detached from the body.

1,400,278. REINFORCING-BAR. HERMANN FOUGNER, New York, N. Y. Filed Mar. 15, 1921. Serial No. 452,524. 1 Claim. (Cl. 72—111.)

A reinforcing bar having straight longitudinal oppositely-disposed enlargements forming a plurality of troughs

therein, the outer edges of the oppositely-disposed enlargements lying in the same horizontal plane, and continuous transversely extending bonding ribs located in



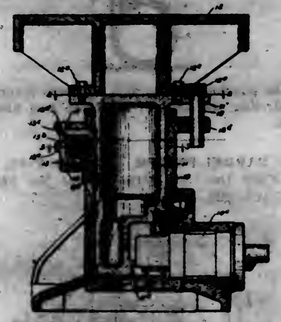
said troughs, said ribs being of less height than said enlargements, the outer portions of said enlargements and ribs being gradually reduced in thickness whereby the bar may be easily freed from the rolls.

1,400,279. ELECTRIC SWITCH. HARRY S. FREEMAN, Detroit, and FREDRICK ZENKER, Highland Park, Mich., assignors to Square D Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 24, 1917. Serial No. 198,256. 8 Claims. (Cl. 200—114).

1. In a switch, in combination, a bridge, clip contacts mounted thereon having open parallel jaws, a cartridge fuse having flattened terminals that are held in frictional engagement with said contacts by passing the flattened terminals between the said open parallel jaws, a base and contacts fixed thereon, comprising jaws adapted to embrace the jaws of the clip contacts of said bridge with the interposed flattened terminal of the fuse.

1,400,280. ELECTRIC SWITCH. HARRY S. FREEMAN, Detroit, and FREDRICK ZENKER, Highland Park, Mich., assignors to Square D Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 25, 1917. Serial No. 198,382. 1 Claim. (Cl. 200—114.)

A switch comprising contact members mounted on a base plate, an insulating bridging member pivotally mounted on one of said contact members, L-shaped members attached to said bridging member, one leg of each of said L-shaped members being in engagement with said contacts in one position of the bridging member, and clip members adapted to receive a flattened member attached to the other leg of said L-shaped member.

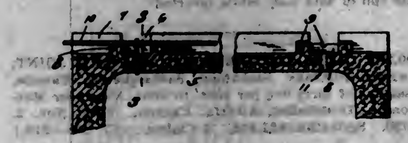


1,400,281. ELECTRIC SWITCH. HARRY S. FREEMAN, Detroit, and FREDRICK ZENKER, Highland Park, Mich., assignors to Square D Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 29, 1917. Serial No. 198,918. 3 Claims. (Cl. 200—114.)

1. In an electric switch, the combination with a flat terminal fuse member, a base member and spaced contact members mounted thereon one of which comprises a U-shaped member, the outer ends of which are bent inwardly over and downwardly to form spaced double-wall resilient legs that are upstanding from the base, of a carrier comprising a pair of spaced contact members each having a pair of resilient jaw-members that are severally adapted to receive between said jaw-members in sliding engagement the flat terminal member, one of said carrier

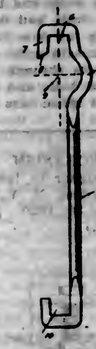
contact members with the interposed flat terminal member being received in sliding engagement in said U-shaped contact member mounted on said base.

1,400,282. MOLDING-MACHINE. PHILETUS W. GATES, Chicago, Ill., assignor to Hanna Engineering Works, Chicago, Ill., a Corporation of Illinois. Filed Feb. 18, 1920. Serial No. 359,512. 4 Claims. (Cl. 74—86.)



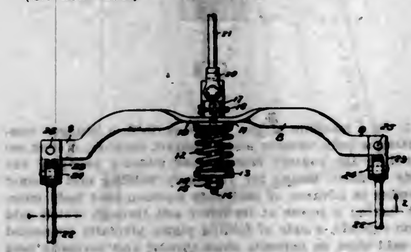
1. A cylinder, a plunger removably mounted therein, said cylinder having a plurality of flanges and said plunger having a plurality of coacting flanges, both sets of said flanges being provided with aligning apertures, and centering members adapted to enter said apertures and thereby center said plunger in said position.

1,400,283. SUBMARINE TELEPHONIC TRANSMITTER. HENRY B. GILSON, New Rochelle, N. Y., assignor to The Mechanical Rubber Company, a Corporation of New Jersey. Filed Sept. 25, 1918. Serial No. 255,568. 2 Claims. (Cl. 179—138.)



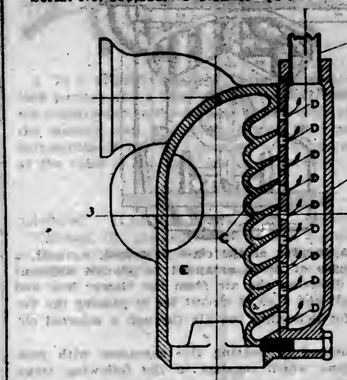
1. In a sound-box, in combination, a casing, a vibratory diaphragm, and a resilient support for said diaphragm attached thereto on a circle whose diameter is substantially two thirds that of the diaphragm.

1,400,284. BUILDING CONSTRUCTION. JOHN MELVIN HAHN, Kirklin, Ind. Filed Mar. 30, 1921. Serial No. 456,899. 4 Claims. (Cl. 72—40.)



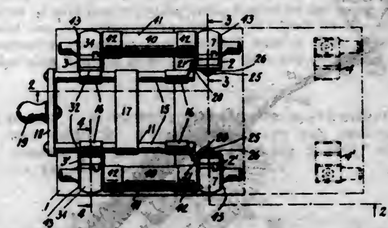
1. In a wall construction, building blocks having grooves formed in the upper surfaces thereof, binding rods supported in the grooves, means having connection with the binding rods and passing through openings in the blocks for securing the binding rods to the blocks, and means within the grooves for supporting the binding rods in spaced relation with the bases of the grooves.

1,400,285. WRENCH. WILLIAM ELIJAH HART, Bowden, Okla. Filed Mar. 10, 1921. Serial No. 451,280. 1 Claim. (Cl. 81—119.)



A wrench, comprising a bar having at one end portion an outwardly curved part and a rectangular jaw beyond the curved part, the tip of the bar which forms one side of the jaw having a beveled end and being of substantially the same length as the width of the jaw, and the center of the said curved part being substantially in line with the center of the jaw and at a distance of about twice the width of the jaw from the bottom thereof.

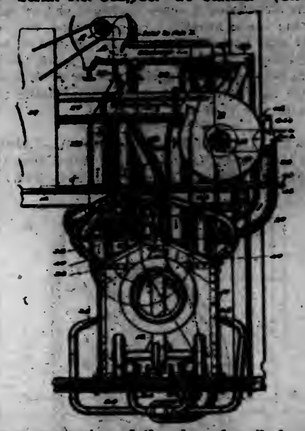
1,400,286. AUTOMOBILE BRAKE MECHANISM. SAMUEL D. HELLER and LENTON HUDSON, Pontiac, Mich. Filed Nov. 15, 1920. Serial No. 424,261. 7 Claims. (Cl. 188—204.)



5. An automobile brake mechanism comprising an equalizing bar having a vertically disposed relatively thin central bearing plate and lateral extensions emanating therefrom of approximately the same thickness, said extensions being formed by twisting said bar to place the bodies of said extensions in a plane perpendicular to a plane coincident with said plate, the ends of said bar being rearwardly disposed with relation to said plate; a plurality of universally pivoted yokes operatively mounted at extremities of said lateral extensions for connecting the same with pull rods of brake mechanisms disposed in paired relation; means for connecting said plate with the draw bar of a brake mechanism for cushioning the strain of said mechanism on said plate, said means embodying a screw-threaded end of said bolt; a connecting block having a tapped socket for receiving the end of said bolt to permit of adjustment of said bolt with reference to said block and said plate for varying the normal tension of said spring; and a block pin extending through said bolt and block for maintaining the operative relation of said bolt and block.

1,400,287. EXHAUST-HEATED OIL-VAPORIZER. GEORGE M. HOLLEY, Detroit, Mich. Filed Dec. 13, 1920. Serial No. 429,365. 8 Claims. (Cl. 257—241.)

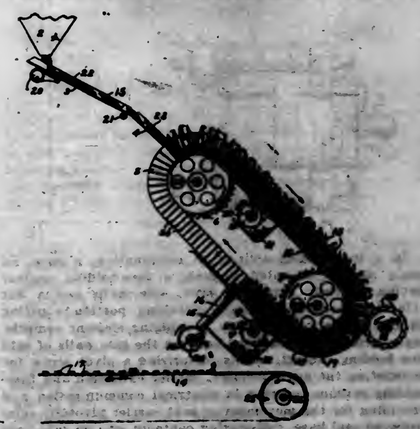
1. A vaporizer for liquid fuel consisting of a heating pipe adjacent to and surrounding a labyrinth through which the liquid fuel passes and a plurality of outlets from said labyrinth graduated and arranged so as to remove the fuel as it is vaporized.



1,400,288. ELECTRICAL SWITCH. BAYSON D. HORTON, Detroit, Mich. Filed Nov. 10, 1917. Serial No. 201,220. 1 Claim. (Cl. 200—114.)

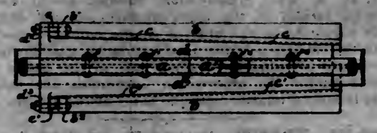
In a fuse-holding switch, in combination, a base, an angle member mounted thereon, a fuse-holding contact having laterally extending jaws, side walls and a flat attaching portion, the said attaching portion abutting an arm of the angle member, a bridging element comprising a metal extension fitted between the side walls of said fuse-holding contact, means comprising a pivot screw for associating the angle member, carrier extension and fuse-holding contact together in electrical communication and providing for the movement of said carrier pivotally relatively to said base, coöperating contacts, one on said base and one on said bridging element near the free end

thereof, and a second fuse-holding contact carried by said bridging element in electrical communication with the last said contact.



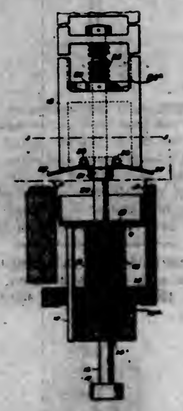
1,400,289. METHOD AND APPARATUS FOR DUSTING ARTICLES. Dwight B. Humphrey, Akron, Ohio, assignor to The Goodyear Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Dec. 8, 1919. Serial No. 342,736. 26 Claims. (Cl. 91—69.)

1. In an apparatus of the class described, a vault, a blower, a series of ducts arranged to provide different circuits for directing the air from the blower into and from the vault and a short circuit for by-passing the air, and means for deflecting the air through a selected circuit.



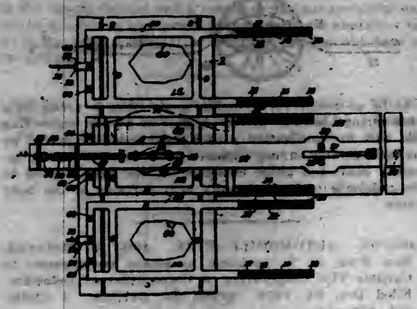
25. The method of coating tire carcasses with powdered soapstone which consists in the following steps, 1st, introducing the tires into a closable chamber, 2nd, releasing powder ladened streams of air under pressure, simultaneously against different portions of the surface of the tire whereby a coating of powdered soapstone is formed thereon, and 3rd, exhausting the floating particles of powder from the chamber.

1,400,290. BEAN-SNIPPER. Nicholas A. Johannes, Port Washington, Wis. Filed June 21, 1919. Serial No. 305,824. 26 Claims. (Cl. 146—11.)



1. In a device for removing the ends of bodies, means for removing one end of a body while in a predetermined position, means for inverting said body, means for positively moving said body transversely of its direction of travel during inversion, and means for removing the opposite end of said body while inverted.

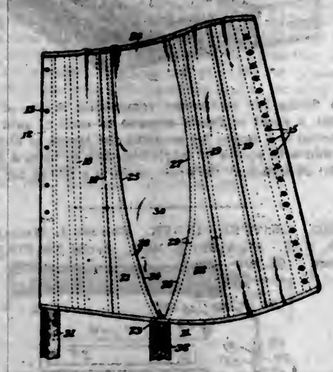
1,400,291. BASE-SUPPORTED RAILWAY-RAIL JOINT. Arthur Johnson, Saskatoon, Saskatchewan, Canada, assignor of forty-five per cent. to John Alexander MacDonald, Drumheller, Alberta, Canada. Filed Nov. 2, 1920. Serial No. 421,418. 3 Claims. (Cl. 238—210.)



1. In a rail joint, a base plate having a recess with longitudinally converging walls and bolt lugs, a pair of splice bars engaging the rails and flaring outwardly at their lower ends over the rail base into said recess and formed to wedge between said walls and said rails and having bolt lugs, and bolts through said bars and rail held by suitable nuts and bolts and nuts longitudinally drawing and holding said splice bars in said recess.

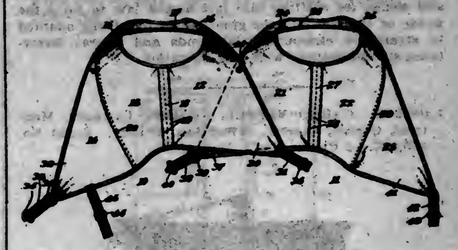
1,400,292. FOLDING MECHANISM. Frank M. Joslin, Amsterdam, N. Y., assignor to Inman Manufacturing Company, Inc., Amsterdam, N. Y., a Corporation of New York. Filed Mar. 29, 1920. Serial No. 369,491. 3 Claims. (Cl. 92—47.)

1. In a machine of the kind described, a plunger comprising a body member and a contact member, a stem secured to the contact member and slidably engaging the body member, means for yieldingly holding said contact member in advance of said body member, said body member having a recess at its lower end through which said stem extends, a pair of folding plates pivotally connected to said stem on opposite sides thereof and normally held in yielding engagement with opposite sides of the front face of said body member when said contact member occupies its normal position in front of the body member, said plates being shaped to enter the recess of said body member upon relative movement of said body member and contact member.



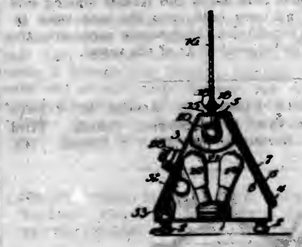
1,400,293. EMBROIDERY-FRAME. William Koelbl, White Plains, N. Y. Filed July 23, 1920. Serial No. 396,837. 11 Claims. (Cl. 112—89.)

1. The combination with a support, of a plurality of frames having pieces of cloth bearing similar patterns mounted thereon, means for guiding said frames successively along the support, and means arranged above the support and frames for positioning the cloth in each frame in turn to accurately correspond with the positions of the other pieces of cloth in the other frames to insure the same arrangement of the pattern in each frame for stitching in an embroidery machine.



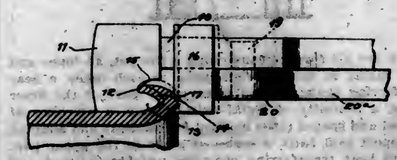
11. The combination with a support, of a frame having members adapter to clamp a piece of cloth bearing a design to be embroidered between them, a positioning member arranged above said support and hinged to swing toward and away therefrom, means on said positioning member for locating the design accurately in the frame to insure the proper stitching thereof in an embroidery machine, means for guiding the frame below said positioning member on the support, a latch for locking the clamping members of the frame together, an operating arm extending from said latch, and a slide on the positioning member to releasably engage said arm to support said latch in unlocking position.

1,400,294. APPAREL-CORSET. Daniel Kops, New York, N. Y. Filed Nov. 16, 1920. Serial No. 424,340. 2 Claims. (Cl. 2—73.)



1. An apparel corset comprising corset body halves each having depending skirts, and a side portion made of component parts each extending from the upper edge of the garment to the lower edge of the skirt and formed and connected to provide a circumferential concave section for fitting over the hip bone of the wearer to relieve the pressure otherwise placed thereon in the use of the garment.

1,400,295. BRASSIÈRE. Waldemar Kops, New York, N. Y. Filed Nov. 17, 1920. Serial No. 424,613. 5 Claims. (Cl. 2—73.)



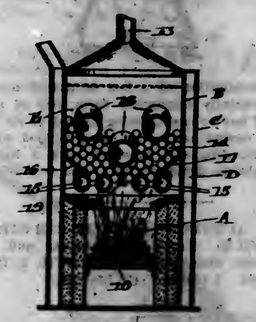
1. In a brassière, garment members each comprising a back portion and a front portion, the extremities of which are constructed to extend around the sides of the body of the wearer, and adjustable devices for connecting the extremities of the said members of the garment together at the sides of the waistline of the wearer.

1,400,296. ILLUMINATED SIGN. Isidor J. Kusel, Chicago, Ill., assignor to Stronghart Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 6, 1916. Serial No. 89,307. 2 Claims. (Cl. 40—130.)

1. The combination of a box or casing made of elongated substantially triangular form, one of the inclined sides of said box or casing being hinged at its upper edge, said box or casing having its top provided with a longitudinally extending slot provided with a light pervious sign and lighting devices within said box or casing.

1,400,297. AUTOMOBILE-WHEEL-RIM-STRAIGHTENING DEVICE. Paul R. La Brant and Adolph C. Nordhaugen, Stanley, N. D. Filed Feb. 2, 1921. Serial No. 441,894. 1 Claim. (Cl. 81—15.)

In a portable tool for straightening the flanges of rims of automobile wheels, a shank, a stationary jaw carried by the shank and having a groove formed therein and provided at one edge of the jaw with a tongue correspond-

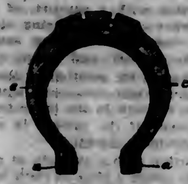


ing to the proper shaping of the hand-receiving undercurface of the flange, said tongue and groove being longitudinally arcuately curved to conform to the curvature of the rim, the wall of the groove opposing said tongue being inclined toward the base of said tongue, a shiftable jaw slidably mounted upon the base of said shank and grooved to engage the outer face of the flange to force the flange into the groove on the stationary jaw and into engagement with said tongue to be formed by the latter, and means for shifting said last named jaw to force the flange of the rim into the groove, said tool being adapted to straighten circumferential bends and lateral distortions simultaneously with one operation.

1,400,298. CARGO VESSEL. WALTER LAMBERT, Montreal, Quebec, Canada. Filed Jan. 6, 1921. Serial No. 435,807. 2 Claims. (Cl. 214—16.)

1. In a cargo vessel, a hull having side walls converging from a point intermediate of their height and flaring at their upper ends and terminating in a downwardly turned lip, transverse bulk heads and frames bracing said sides and leaving an open hold from the said sides inwardly and means for driving the floatable cargo over the flaring sides movable longitudinally of the vessel.

1,400,299. HOT-AIR FURNACE. ALFRED BUCHANNAN MCADAM, Moose Jaw, Saskatchewan, Canada. Filed May 13, 1921. Serial No. 469,278. 2 Claims. (Cl. 126—99.)

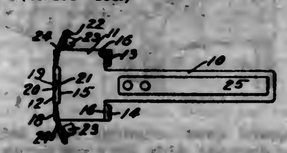


1. A hot air furnace comprising a fire pot, an inner and outer casing in spaced relationship to each other, a heat transferring chamber within the upper part of the inner casing, a plurality of metal balls therein, a plurality of parallel and spaced pipes inclined horizontally and adapted to support said balls, a series of pipes in the upper part of said heat transferring chamber suitably inclined and extending from one side of the casing to the other in staggered relationship to one another, a chimney leading from said inner casing, and a transversely extending central conduit in said inner casing.

1,400,300. TRAILER FOR VEHICLES. HARRY B. MCCAMY, Mount Pleasant, Iowa. Filed Dec. 8, 1920. Serial No. 427,723. 3 Claims. (Cl. 280—106.5.)

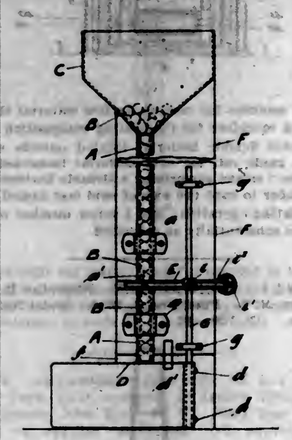
1. In a trailer for vehicles, comprising a crank axle with springs secured thereto, a pair of wheels supporting said axle in combination with a body frame supported by the springs and having opposite portions of the sides upwardly bent, and guide members for the axle secured to the underside of the upwardly bent portions of the body frame.

1,400,301. AUTOMOBILE-TIRE. JOHN S. MCCLUNG, New York, N. Y., assignor, by mesne assignments, to Carlisle Tire Corporation, a Corporation of Delaware. Filed Dec. 24, 1919. Serial No. 347,224. 1 Claim. (Cl. 152—13.)



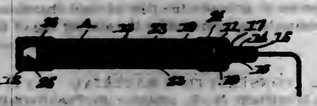
In a tire casing of the type comprising two annular bead members and continuous strands of cord wound spirally about the same, that improvement which consists in the employment of solid braided cord impregnated with rubber having an inner core comprising unvulcanized rubber.

1,400,302. FILLING FOR MATTRESSES. FREDERICK MAUBENNE, Collingswood, N. J., assignor to Henry Wilhelm Company, Pittsburgh, Pa. Filed May 27, 1920. Serial No. 384,561. 2 Claims. (Cl. 10—10.)



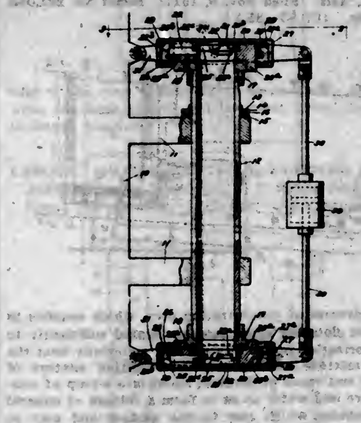
1. A filling for mattresses comprising layers of filling material, a sheet of fabric secured to each of said layers of material and means for securing the layers of filling material and said sheets of fabric together to form a bulk of material of sufficient thickness to form a filling for a mattress.

1,400,303. GRIPPER-FINGER. EDWARD L. MEGILL, New York, N. Y. Filed May 6, 1920. Serial No. 379,248. 9 Claims. (Cl. 101—408.)



1. The combination with a press gripper, of a gripper finger having a unitary base provided with stationary angularly projecting abutments spaced in the direction of the length of the finger a distance at least equal to the width of the gripper to thereby enable engagement of the same flatwise over the gripper substantially at any point in the length thereof and a bowed spring supported by one of the abutments and projecting beyond said abutment toward the other abutment to yieldingly engage the edge of the gripper.

1,400,304. MACHINE FOR FILLING PILL-BOXES WITH A REGULAR QUANTITY OF PILLS. ROBERT SYDNEY MERCER, Blackburn, England. Filed Aug. 27, 1920. Serial No. 406,471. 2 Claims. (Cl. 226—2.)



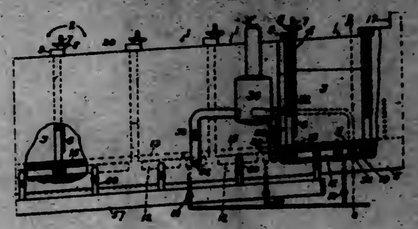
1. Apparatus for delivering regular quantities of articles, comprising a tube having an upper portion and a lower portion separated from one another by a small space, a receptacle for supplying such portions with the articles, a frame for carrying the tube and receptacle, a rod rotatably mounted in bearings on such frame, an upper cut-off comprising an arm fixed on the rod and adapted to be interposed between the two portions of the tube, a lower cut-off comprising a plate fixed on the rod and arranged to be moved across the lower end of the tube, means for limiting the movement of the plate in either direction and a spring for normally causing the plate to lie across the lower end of the tube and the upper arm to lie away from the tube.

1,400,305. ELECTRIC HAIR-CURLER. MARIE MILLER, Ottawa, Ontario, Canada. Filed Mar. 22, 1920. Serial No. 367,790. 2 Claims. (Cl. 219—24.)

1. A hair curler of the class described comprising a cylindrical casing open at one end and closed at the other end, a resilient member, a pair of concentrically arranged caps between which a portion of the resilient member is frictionally retained, the ends of the resilient member extending longitudinally of the casing but on opposite sides thereof, a cap for the open end of the casing designed to secure the free end of the resilient member to the casing, and a heating element within the casing.

1,400,306. CHUCK FOR MACHINE-TOOLS. EDWIN P. MILLER, Chicago, Ill., assignor to Hamilton Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 26, 1917. Serial No. 208,906. 7 Claims. (Cl. 279—122.)

1. The combination in a device of the class described, of a long tubular body member, bearing members engaging said body member between its ends for supporting the same, a plurality of radially movable jaws mounted at each end of said body member, jaw actuating members mounted outwardly of said jaws, and means for effecting relative movement of said jaw actuating members with respect to said body member for actuating said jaws.



1,400,307. FEED HOLDER AND TROUGH. ERNEST H. MITTMAN, Muscatine, Iowa. Filed June 12, 1920. Serial No. 388,555. 2 Claims. (Cl. 119—53.)

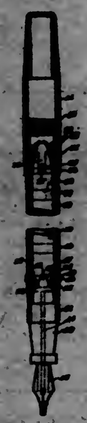
1. A device of the class described having a rear wall and side walls extending therefrom, said rear wall extending inwardly to form a trough in combination with the side

walls, a rod joining the side walls adjacent the open ends of at the front, a wall connected by said rod and extending downwardly and inwardly toward the rear wall, a gate pivoted on said rod, lever means extending from the gate to the fourth mentioned wall, said fourth mentioned wall terminating short of the inwardly extending portion of the first wall to provide a gap, and a valve governing the said gap mounted by the fourth mentioned wall on the interior thereof.

1,400,208. ORE CONCENTRATION. DAVID D. MOFFAT, Hayden, Ariz. Filed Nov. 9, 1917. Serial No. 201,643. 8 Claims. (Cl. 23—95.)

1. The process of concentrating ores, which consists in distributing flotation agent into air heated sufficiently to cause vaporization of such agent, and materially heat the resulting mixture and forcing the resulting mixture of heated air and vapor of flotation agent into a pulp of comminuted ore and water, so as to form a column of mineral bearing bubbles which rise to the surface and may be floated off.

1,400,209. EGG-BEATER. GEORGE D. MUNSING, New York, N. Y. Filed Oct. 20, 1920. Serial No. 418,288. 1 Claim. (Cl. 259—113.)



An agitating device of the class described, comprising a cylinder, an agitator operating in said cylinder and having an operating rod projecting upwardly therefrom, a guide member for said rod having parallel side arms engaging said cylinder at their lower ends and having a transverse upper connecting member perforated to guide said rod, the upper portion of one of said side arms being offset to provide a hand grip, as described.

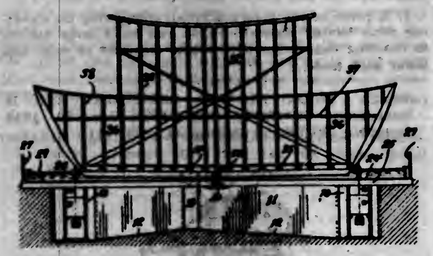
1,400,[illegible]. CASTING MACHINE. HENRY M. HANSMAN, Lexington, Ky. Filed [illegible], 1921. Serial No. [illegible]. 8 Claims. (Cl. [illegible])

1. In a machine for casting flexible material the combination of a container for the casting composition; a guide roll for said flexible material located outside said container; a guide roll for said material immersed in said composition; means comprising a rockable horizontally disposed member to exert the axis of said last named roll during the casting operation; and a screw member to actuate said means substantially as described.

1,400,211. FOUNTAIN-PEN. NICHOLAS B. PAHOFF, Brooklyn, N. Y. Filed Dec. 7, 1920. Serial No. 428,940. 1 Claim. (Cl. 120—46.)

In a fountain pen, a reservoir, means for contracting the discharge end of said reservoir to prevent a flow of fluid therefrom, and means for contracting the rear end of said reservoir to promote the flow of fluid therefrom, both of said means being operated by the closing cap of the pen.

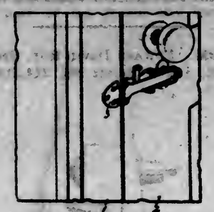
1,400,212. CONSTRUCTION MATERIAL. RAY P. PEREY, Upper Montclair, N. J., assignor to The Barrett Company, a Corporation of New Jersey. Filed Sept. 2, 1920. Serial No. 407,969. 14 Claims. (Cl. 154—81.)



1. The process which comprises forming sheets containing fibrous material and waterproofing material so that the fibers lie in one general direction, plying a plurality of such sheets together so that fibers in one sheet are at an angle to those in an adjacent sheet, and heating and pressing the same.

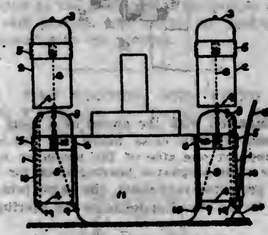
1,400,213. APPARATUS FOR DETERMINING THE AMOUNT OF HEAT IN THE AIR. CARL HEINRICH PAUTZ, Rheydt, Germany. Filed Feb. 20, 1914. Serial No. 819,389. 1 Claim. (Cl. 73—24.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

In apparatus for determining the amount of heat in the air, a wet-bulb thermometer having a scale graduated in heat units in a given amount of air and including those in the moisture in such air.



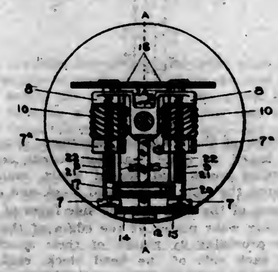
1,400,314. AMUSEMENT DEVICE. LE ROY RAYMOND, Ocean Park, Calif., assignor to Arnold Neble and William Densel, New York, N. Y. Filed May 26, 1920. Serial No. 384,503. 6 Claims. (Cl. 46—71.)

1. In an amusement device the combination of a shallow tank, a vessel pivoted therein, said vessel being in the form of a houseboat and having substantially its entire body projecting above the said tank, anchors located below the said tank, a rocking member mounted on the said vessel and connected to the said anchors and means on said vessel for actuating said rocking member to oscillate the said vessel on its pivot.



1,400,315. SAFETY DOOR-FASTENER. JAMES M. REED, Brooklyn, N. Y. Filed May 21, 1920. Serial No. 383,216. 4 Claims. (Cl. 292—278.)

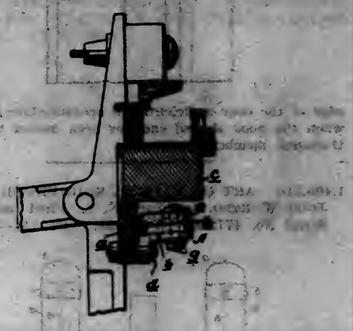
1. A door fastener comprising a tongue having a hook at one end, means for pivotally connecting said tongue to the door jamb, said means being arranged at the end opposite to said hook, a spring acting on said tongue for normally holding the tongue against said jamb, and a U-shaped member pivotally mounted on the door adjacent the jamb, the pivotal mounting of said U-shaped member being spaced from the door a sufficient distance to allow one end of the U-shaped member to overlap the



edge of the door sufficiently to accommodate said tongue when the hook shaped end has been moved through the U-shaped member.

1,400,316. ART OF RAISING SUBMERGED VESSELS. JESSE W. RENO, New York, N. Y. Filed June 15, 1921. Serial No. 477,663. 5 Claims. (Cl. 114—52.)

1. In the art of raising submerged sunken vessels by vertical pontoons, containing air, adapted to raise a sunken vessel, a vertical double tandem pontoon, comprised of several comparatively short-length hollow cylinders, with an open lower end and a closed upper end, flexibly connected together, one substantially over the other, the vertical double tandem pontoon being adapted to be attached to the said vessel and by the buoyant force of air raise the vessel from off of the bed of the sea.



1,400,317. CHANGE-SPEED GEARING. JOHN BOYNS ROWE and ARTHUR GARFIELD BARRATT, Johannesburg, Transvaal, South Africa. Filed June 16, 1920. Serial No. 389,427. 3 Claims. (Cl. 74—34.)

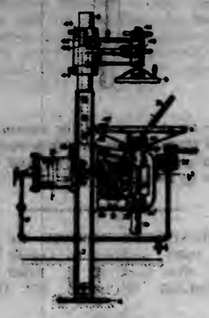
1. A change speed gearing comprising a driving shaft, a driven shaft, a worm wheel fast on the driven shaft, a worm shaft and a friction wheel shaft geared together arranged at right angles to the driving shaft in bearings carried thereby, a worm on the worm shaft in gear with the said worm wheel, the pitch of the worm being such that when unrestrained it will be rotated idly as it is

carried around the worm wheel by rotation of the driving shaft, a friction wheel mounted on the said friction-wheel shaft, and a stationary member arranged to provide a path on which the said friction wheel can roll.

1,400,318. LOOM. Edward David Roy, Greenville, S. C. Filed Mar. 25, 1918. Serial No. 224,510. 2 Claims. (Cl. 139—18.)

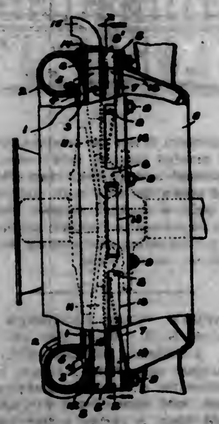
1. In combination with the sword of a loom having a bearing formed therein close below the lay-beam and adapted to support one side of the protector rock-shaft, an adjustable oil-impregnated bearing-block for the other side of said protector rock-shaft, the same being detachably secured to the sword opposite to the bearing therein.

1,400,319. HEADBLOCK FOR PRESSERS. Edward Carl Rudoll, Rice Lake, Wis. Filed July 19, 1920. Serial No. 397,203. 1 Claim. (Cl. 100—14.)



A head block of the character described, comprising a supporting board or plate, parallel boards secured to said supporting board and spaced apart, metal strips secured around the ends of the head block and embedded in the surfaces of the ends and the side faces of the head block providing wear plates at the edges of the grooves, said boards providing by reason of their spacing three grooves on each side of the head block, each of said grooves having a pair of walls at right angles to each other, and a third inclined wall, whereby said grooves are narrowest at their entrances and of greatest width at their inner portions, the grooves midway the ends of the boards being adapted for use in connection with a single wire bale tie and the end grooves for double wire bale tie.

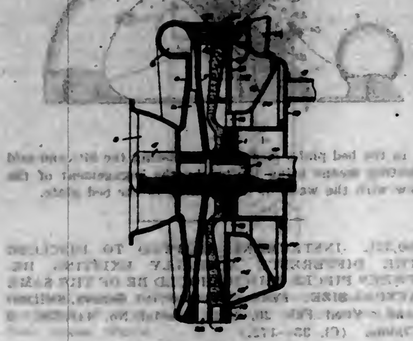
1,400,320. ROLLER CHAIN. Hermann B. Ryan, Milford, Conn., assignor to Gf N Gn Chain Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 19, 1918. Serial No. 250,418. 13 Claims. (Cl. 152—14.)



1. In a chain of the class described, the combination of a side-link, and a cross-link having means adapted to engage said side-link and having locking means adapted to engage said side-link by a movement transverse to the direction of the cross-chain.

1,400,321. PRESS FOR SQUEEZING SAND IN FLASKS. Charles F. Schultis, Cleveland, Ohio, assignor of one-half to William J. Schoemberger, Cleveland, Ohio. Filed July 2, 1920. Serial No. 393,492. 9 Claims. (Cl. 22—43.)

1. A press of the type described, comprising an elevating table having separate pistons and hand lever devices in coacting connection with toggle members to raise and lower said table.

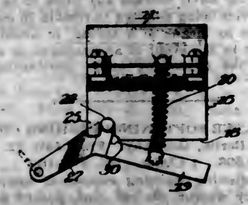


1,400,322. TURBO-BLOWER ASSEMBLY. Earl H. Sherbondy, Cleveland, Ohio. Filed Apr. 30, 1918. Serial No. 231,765. 2 Claims. (Cl. 230—11.)

1. In a turbo-blower assembly, a turbine casing, a blower casing, means engaging with each casing to hold

the two casings spaced apart so as to leave an air space therebetween, and an annular plate, carried by said means and extending into said air space.

1,400,323. TURBO-COMPRESSOR CASING. Earl H. Sherbondy, Cleveland, Ohio. Filed Aug. 1, 1918. Serial No. 247,845. 5 Claims. (Cl. 230—11.)



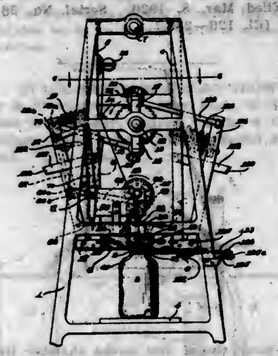
1. In combination with a gas engine turbine, a peripherally supported baffle in the path of the exhaust from said turbine, said baffle being free to flex along its body without transmitting the distortion substantially to the support of said baffle.

1,400,324. WAX FLOWERS AND PROCESS OF MAKING THEM. Louis D. Singer, Harrodsburg, Ky. Filed June 28, 1920. Serial No. 392,381. 1 Claim. (Cl. 41—13.)

A process for producing wax flowers and the like which consists in subjecting a flower of crape or other suitable paper to a series of treatments, each consisting in immersing the flower in a melted wax bath; then removing the article and cooling it until the coating is completely dried, each successive bath being of a temperature lower than its predecessor.

1,400,325. CUT-OUT FOR EXHAUST-PIPES. Samuel P. Smoke, Chicago, Ill. Filed Jan. 12, 1920. Serial No. 350,792. 3 Claims. (Cl. 251—19.)

1. In a device of the class described, a body providing a channel from its interior to its exterior, a plate serving to close the exterior end of said channel, connections by which the plate may be opened, and two pivot points upon which said plate moves in succession when being opened or closed.

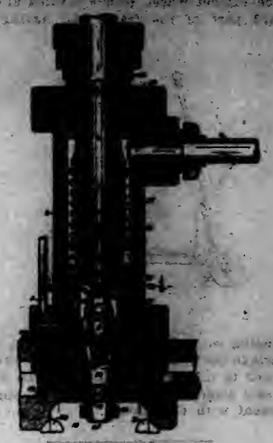


1,400,326. CHILD'S VEHICLE. Carmelo Sollima, Paris, France, assignor to Camillo Pignatosa, Rome, Italy. Filed Jan. 20, 1921. Serial No. 438,716. 2 Claims. (Cl. 280—87.)

1. In a child's vehicle, a frame, an axle, wheels on the axle, a ratchet wheel fixedly secured to the axle and having on each face ratchet teeth extending in the same direction, drums loosely mounted on the axle on opposite sides of the ratchet wheel, pedals pivoted at one end to the forward part of the frame and having their free

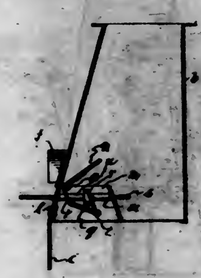
ends extending over the axle, a pinion on each drum, spring pawls in the drums and engaging the ratchet wheel, racks pivoted to the free ends of the pedals and meshing with the said pinions, and means for holding the racks in engagement with the pinions.

1,400,327. BAG CLOSING AND TYING MACHINE. Charles F. Sparks, St. Louis, Mo. Filed Oct. 28, 1920. Serial No. 419,151. 44 Claims. (Cl. 226—27.)



1. In a machine for closing and tying bags or the like, the combination of means for holding the neck of the bag, a needle, means for reciprocating the same, loop mechanism for forming a loop of the tying cord around and extending from the neck of the bag with one of the cords of the loop disposed across and on one side of the path in which the needle reciprocates, and the other cord of the loop disposed across and on the other side of said path, said needle having means for catching a part of the tying cord beyond the loop, and to pull the loop tight in the return movement.

1,400,328. INTERNAL-COMBUSTION ENGINE. Carl G. Strabo, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Nov. 14, 1918. Serial No. 262,803. 10 Claims. (Cl. 123—33.)



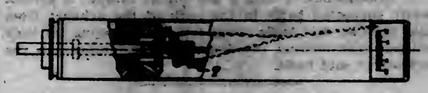
1. In combination, an engine cylinder having a combustion zone, means providing a mixing chamber constantly communicating with said zone through a restricted

orifice, means for restrictively admitting air directly to said chamber, an oil well, means for admitting oil to said

well, and means for restrictively delivering oil from said well to said chamber past said air admission means.

1,400,329. FIREPLACE. JAMES H. STITES, Detroit, Mich. Filed Mar. 8, 1920. Serial No. 364,147. 2 Claims. (Cl. 126—288.)

1. A fire-place throat and smoke chamber lining comprising a main metal inclosure having dimensions at the bottom approximating the horizontal cross section of the fire-place back of the opening and tapering toward the top of approximate the dimensions of the flue opening, a subordinate inclosure secured in the main inclosure at the front and bottom to form the fire-place throat, the remainder of the main inclosure thereby forming the smoke chamber, and a damper supported in the subordinate inclosure to regulate the opening through said throat.



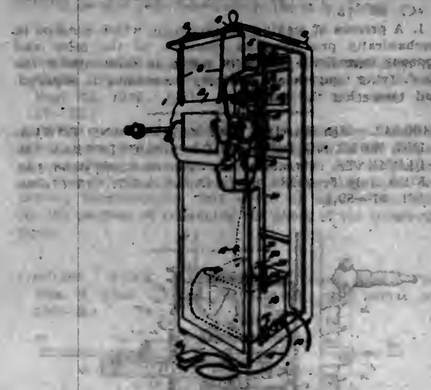
1,400,330. PLANE. EUGENE J. SWEENEY, Rockford, Ill. Filed May 3, 1921. Serial No. 466,443. 4 Claims. (Cl. 145—5.)

3. A plane, including a stock, a frog integral with the stock, a bit, a cushioning bed plate interposed between the frog and bit and supporting the bit, said bed plate having an opening therein, said bit having a series of openings therein appreciably smaller than the opening in the bed plate, a shaving breaker super-imposed on the bit and having an opening therein registering with the opening in the bed plate and selectively with one of the openings in the bit, a screw passed through said registering openings in the shaving breaker and bit and extending into the open-

ing in the bed plate, means for adjusting the bit, and said adjusting means being limited by the engagement of the screw with the walls of the opening in the bed plate.

1,400,331. INSTRUMENT ADAPTED TO DISCLOSE THE DIFFERENCE ACTUALLY EXISTING BETWEEN PIECES WHICH SHOULD BE OF THE SAME ACTUAL SIZE. FERNAND TURRETTINI, Geneva, Switzerland. Filed Feb. 26, 1921. Serial No. 448,236. 3 Claims. (Cl. 33—172.)

2. In a needle indicator and in combination a body member, a measuring anvil adapted to slide within said body member, a spring for acting upon said anvil, a knife rigidly connected to said anvil, a rocking lever having two arms of unequal length, the longer one being adapted for serving as an index, a second knife, means for adjusting said second knife, a plate having a groove being adapted to receive the edge of the knife rigidly connected to the anvil, a second plate fixed upon said first plate, the apex of the groove in said first plate being in the plane passing through the bottom surface of said second plate and through the edge of said adjustable knife, the edges of both knives being directed one against the other, said edges being adapted to be separated from one another when the anvil touches any piece to be measured, the rocking device being adapted to remain in contact with the knife edges by means of a spring, to avoid damaging the instrument in the event of an excessive or abrupt displacement of the measuring anvil, substantially as described.



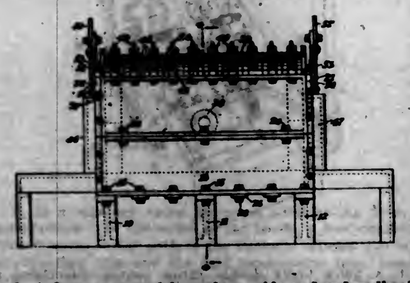
1,400,332. WATER-SOFTENING WASHING COMPOUND. OTTO VOLS, Berlin, Germany. Filed July 22, 1919. Serial No. 312,506. 1 Claim. (Cl. 87—16.)

A water softening washing compound comprising approximately, by weight, 50 per cent. potato flour, 8 per cent. chalk, 10 per cent. powdered kaolin, 26 per cent. caustic soda, 16 per cent. powdered borax and 16 per cent. calcinated soda.

1,400,333. FLUOROSCOPIC X-RAY SYSTEM. HARRY F. WAITE, New York, N. Y. Filed Nov. 20, 1920. Serial No. 426,296. 1 Claim. (Cl. 250—84.)

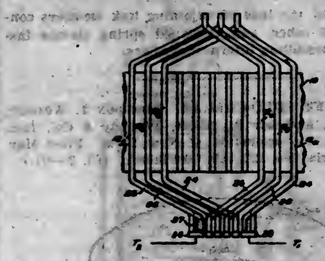
In a device of the class described, an X-ray tube and means for movably supporting the same, a source of electricity for said tube, means for connecting the cathode of the tube to the said source of electricity and an adjustable means for connecting the anode of the tube to the source of electricity composed of a fixed rod with a slid-

ably mounted, pivoted and laterally extending means so that when the device is in use the anode and source of



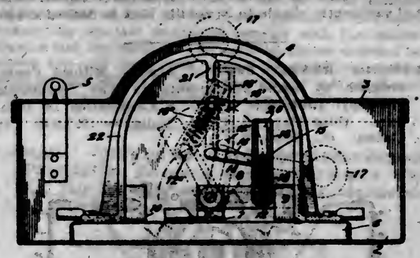
electrical supply will always be properly connected by a conductor of large capacity which will overcome or reduce corona effects.

1,400,334. GUARD FOR TELEPHONE-TRANSMITTERS AND THE LIKE. GLADYS H. WEINRICH, Chicago, Ill. Filed Mar. 10, 1921. Serial No. 451,230. 3 Claims. (Cl. 179—185.)



3. As a new article of manufacture, a sanitary guard for the mouthpiece of a transmitter or the like comprising a conical section having its edge portion flanged backward and crimped and adapted to engage the edge portion of a telephone transmitter mouthpiece, and a flat section adapted to set over said conical section and having its edge portion flanged backward and crimped and adapted to engage the edge portion of the conical section, substantially as described.

1,400,335. FURNACE. JOSEPH T. WENSIULIS, New York, N. Y., assignor to Columbia Machine Works & Malleable Iron Co., Brooklyn, N. Y., a Corporation of New York. Filed July 3, 1920. Serial No. 393,970. 6 Claims. (Cl. 263—40.)

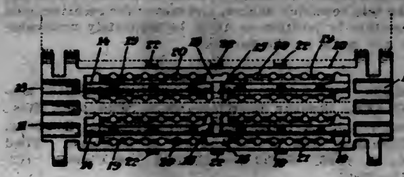


1. A furnace comprising a base, side and end walls rising therefrom, and a multiple section top, each section of the top consisting of an arched body portion having integral retaining and supporting flanges at the ends thereof, a lining extending between and held in position by the said retaining flanges, and means for securing each top section in position so as to be separately removable from the walls of the furnace.

1,400,336. WINDING FOR DYNAMO-ELECTRIC MACHINES. ROBERT B. WILLIAMSON, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Dec. 1, 1916. Serial No. 135,082. 10 Claims. (Cl. 171—206.)

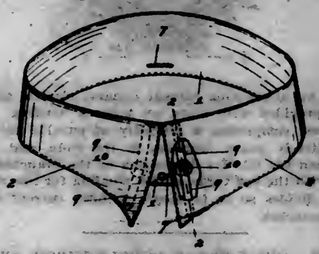
4. In an alternating current dynamo electric machine, a core provided with slots, an induced winding, having end turns, comprising a plurality of parallel connected comparatively heavy branches in the slots, and means, other than the relative disposition of the branches, associated with the end turns of said winding for insuring the current divides so as to secure uniform current density in the branches.

1,400,337. QUICK-BREAK DOUBLE-THROW SWITCH. ARTHUR R. WOOLPOLE, Jr., New York, N. Y., assignor to Square D Company, Detroit, Mich., a Corporation of Michigan. Filed July 10, 1918. Serial No. 244,179. 5 Claims. (Cl. 200—73.)



1. A quick break double throw switch comprising cooperating stationary and movable contacts, a cross head attached to said movable contacts, an operating member, a link intermediate said operating member and cross-head, and a cam member for tilting said link.

1,400,338. CARRIER FOR CARD-MATCH MACHINES. JACOB P. WRIGHT, Barberton, and CHARLES F. WRIGHT, Akron, Ohio, assignors to The Diamond Match Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 9, 1921. Serial No. 460,123. 3 Claims. (Cl. 144—85.)



3. A match-card carrier embodying hingedly-connected link members, whereof each member comprises toothed end portions, a central bar, two side bars and two bars intermediate the central bar and the respective side bars, all said bars being in spaced parallel relation to each other and connecting said end portions, said central bar

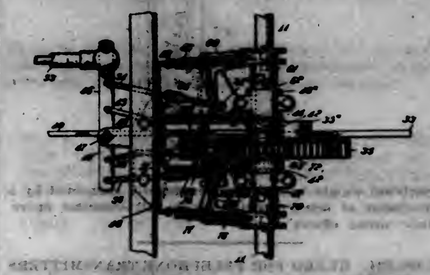
having angular extensions connecting the said intermediate bars, rocker-lugs on the outer faces of the side bars

so disposed that the lugs of adjoining link members contact with each other, and U-shaped spring clamps fastened to and straddling intermediate bars.

1,400,339. SOFT FOLD-COLLAR. SHELDON T. WRIGHT, Troy, N. Y., assignor to Cluett, Peabody & Co., Inc., Troy, N. Y., a Corporation of New York. Filed Mar. 4, 1918. Serial No. 220,119. 6 Claims. (Cl. 2—91.)

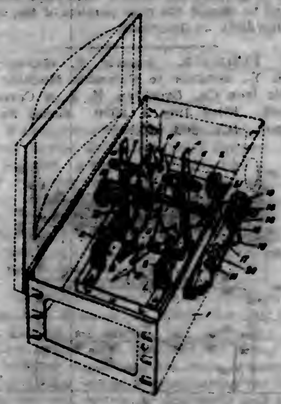
1. The combination with a fold-collar having a band and a soft folded-over top, of supporting members for the ends of the folded-over top, said supporting members being made of inelastic material relatively stiff as compared with the material of which the folded-over top is made, and sufficiently pliable to be readily bent to desired shape.

1,400,340. BRAKE. FRANK G. ALDOUS, Milford, Conn., assignor, by mesne assignments, to The Locomobile Company, Bridgeport, Conn., a Corporation of Delaware. Filed Mar. 12, 1918. Serial No. 221,941. 18 Claims. (Cl. 188—75.)



1. In a brake-mechanism, the combination of a brake-drum, a pair of oppositely disposed brake-shoes coöperating therewith, a pair of brake-shoe carrying levers, a support on which said levers are fulcrumed, a brake-lever connecting rod supported by said support, a pair of brake-lever carrying abutments mounted on said support, one to slide lengthwise of said rod, brake-shoe releasing means urging said levers toward said abutments, and brake-shoe applying means including coöperating inclined planes to move said rod and one of said abutments relatively to the other thereby to carry said brake-levers toward each other and said brake-shoes toward said brake-drum.

1,400,341. PROCESS OF MANUFACTURING OLEOMARGARIN. WILLIAM T. ASHER, Cleveland, N. J. Filed Aug. 24, 1920. Serial No. 405,714. 7 Claims. (Cl. 99—13.)

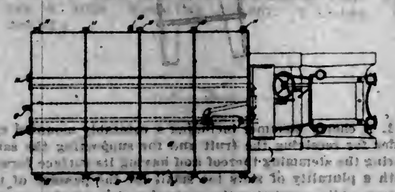


1. A process of making oleomargarin, which consists in mechanically producing an emulsion of the fatty and aqueous ingredients which is stable at substantially the emulsifying temperature, whereby no chilling is required, and tempering the same.

1,400,342. MECHANISM FOR RAISING AND LOWERING WORKING DEVICES OF AGRICULTURAL IMPLEMENTS. CHARLES ALLEN BACON, South Bend, Ind. Filed July 5, 1918. Serial No. 243,327. 15 Claims. (Cl. 97—39.)

1. The combination in an agricultural machine including a frame and a working device or tool, a wheel for supporting the frame, means operatively connected with the working device or tool for raising or lowering the same, comprising a gear, means operatively connecting said gear with said supporting wheel comprising double clutch mechanism for positively connecting said gear with said driving wheel to lift the working device or tool and to positively connect said gear with said driving wheel to drive said gear in the reverse direction to force said working device or tool downwardly, and means to render each of said clutch mechanisms inoperative when said working device or tool is at the limits of its movement in both raised and lowered positions.

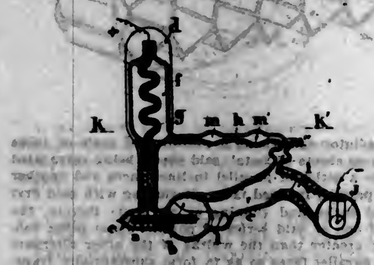
1,400,343. QUICK-BREAK DOUBLE-THROW SWITCH. ALBERT P. BALL, Royal Oak, Mich., assignor to Square D Company, Detroit, Mich., a Corporation of Michigan. Filed June 17, 1918. Serial No. 240,276. 18 Claims. (Cl. 200—73.)



1. A quick break double throw switch comprising a plurality of stationary and movable contacts, said movable

contacts [illegible] a yoke rigidly connected [illegible] operating member, and resilient means connecting the operating member to a point on said yoke intermediate the ends thereof.

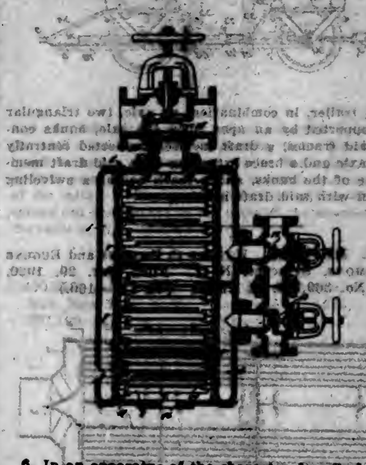
1,400,344. EMBALMING PROCESS FOR DEODORIZATION. THORNTON B. BARKER, New York, N. Y. Filed Sept. 22, 1919. Serial No. 325,751. 2 Claims. (Cl. 27—22.)



1. The process of [illegible] comprises, first, the injection into the body [illegible] gas for the purpose of neutralising any [illegible] which may be present, and then injecting into the body a preserving liquid containing formaldehyde, this order of application being for the purpose of enhancing the effect of the preserving liquid.

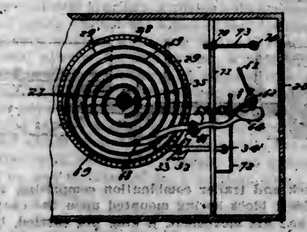
1,400,345. TANK. ALFRED DAVIS, Casper, Wyo. Filed Feb. 6, 1920. Serial No. 356,684. 1 Claim. (Cl. 280—5.)

The combination with the chassis of an automobile truck, of a tank supported thereon and comprising a deep center section including a bottom and vertical side and end walls, a pair of shallow lateral sections each including an inclined bottom wall extending laterally from the side of the tank and secured at its inner end to the vertical side wall of the tank, and a common flat top for said center section and said lateral sections resting upon the vertical wall of the center section and secured thereto and secured along its marginal edges to the outer ends of the inclined walls of said lateral sections whereby the portions of the top which project beyond the center section, the vertical side walls and the inclined bottom walls of the lateral sections are organized to form a truss so that the flat top common to the sections of the tank constitutes a loading bed for the truck.



1,400,346. MERCURY-VAPOR LAMP. MARIE JOSEPH CORNU, Paris, France. Filed Feb. 28, 1916. Serial No. 81,721. 6 Claims. (Cl. 176—42.)

3. In a mercury vapor lamp, an illuminating tube, a compression tube connected to the anode, a semi-capillary tube inserted in the path of the mercury between the said illuminating tube and the said compression tube, means assuring the electric connection between the two parts,



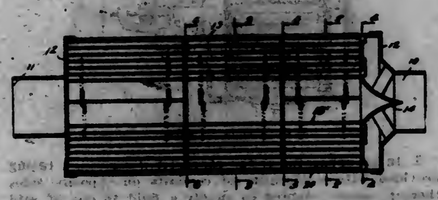
and striking tube, a capillary tube connection the said arc striking tube to the intermediate tube, small condensing chambers provided in the connecting tube, heating means provided in the arc-striking tube.

1,400,347. FEED-WATER HEATER, CONDENSER, AND THE LIKE. HOWARD C. DAVIS, Elizabeth, N. J., assignor to American Marine Equipment Corporation, a Corporation of Delaware. Filed Mar. 5, 1920. Serial No. 363,280. 6 Claims. (Cl. 257—200.)

6. In an apparatus of the character described, a casing provided with a plurality of conduits on opposite sides thereof, means adapted to supply a fluid to one of said conduits and means adapted to remove the fluid from another of said conduits, a plurality of coil units disposed within said casing, certain of said units connecting the conduit to which the fluid is adapted to be supplied with another of said conduits, and certain of said units connecting the last mentioned conduit with the conduit from which the fluid is to be removed, pistons disposed between the coil units, and means for supplying another fluid to the interior of the casing at one portion thereof and for removing it therefrom at another portion.

1,400,348. COIN-CONTROLLED LIQUID-DISPENSING APPARATUS. FRANCESCO DONZEL, Bell Center, Wis. Filed July 29, 1919. Serial No. 314,023. 18 Claims. (Cl. 194—30.)

1. A coin controlled vending mechanism for determining the throw of a liquid dispensing pump, having a governor member movable with and proportionately to the throw of the pump and provided with trip elements, a coin advancing plunger having a limited forward move-

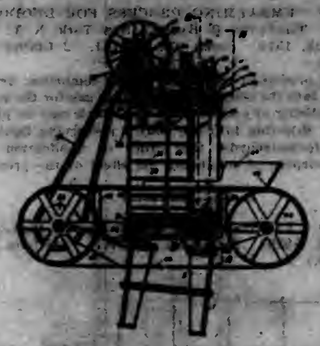


ment, a coin releasing trip member actuable by said trip elements, and a coin actuated resting device for disposing said trip member in the path of one of said trip elements.

1,400,349. TRAILER. Leander A. Dow, Seattle, Wash., assignor to Pacific Car & Foundry Co., Seattle, Wash., a Corporation of Washington. Filed Sept. 22, 1920. Serial No. 411,891. 6 Claims. (Cl. 280—33.)

1. In a trailer, in combination, an axle, two triangular frames supported by an apex upon the axle, bunks connecting said frames, a draft member connected centrally with the axle and a brace extending from said draft member to one of the bunks, and a reach having a swiveling connection with said draft member.

1,400,350. MUFFLER. Howard C. Emmons and Eugene E. Emmons, Syracuse, N. Y. Filed Mar. 29, 1920. Serial No. 369,732. 1 Claim. (Cl. 137—160.)

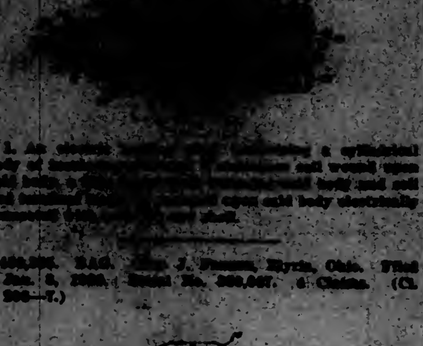


A muffler, including a body portion, inlet and exhaust pipes connected to said body portion, a plate positioned adjacent the inlet end of the muffler, and provided with a centrally disposed cone shaped projection extending toward and in alinement with the inlet pipe, and adapted to deflect gases radially outward, said plate being formed with radially disposed curved slots, and vanes attached to said plate adjacent each of said slots for imparting a whirling motion to fluid passing through said slots.

1,400,351. TWO-WHEELED TRAILER. Frank T. Falco, Seattle, Wash., assignor to Pacific Car & Foundry Co., Seattle, Wash., a Corporation of Washington. Filed Mar. 31, 1919. Serial No. 286,516. 3 Claims. (Cl. 288—33.1.)

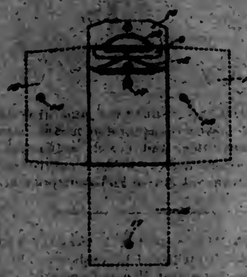
1. A truck and trailer combination comprising a truck having a draft block spring mounted upon the chassis to have fore and aft movement, a king pin carried, by and depending from below said draft block, a horizontal draft pin carried by the lower end of the king pin, a trailer having a rigid tongue adapted to pass under the truck chassis and of a length equal to half the gage of the truck wheels and provided with ears adapted to engage with said draft pin.

1,400,352. CHERRY-STEMMER. Clarence E. Foote, Oakland, Calif., assignor of one-half to Arthur U. Hanson, Oakland, Calif. Filed Aug. 9, 1921. Serial No. 490,597. 5 Claims. (Cl. 146—3.)



1. A cherry stemmer including a rotatably mounted cylinder for receiving the fruit and for supporting the same during the stemming thereof and having its surface formed with a plurality of slots too small for the passage of the cherry while permitting the projection through them of the stems, pairs of intergeared rollers mounted exteriorly of the cylinder adjacent to the slots, means for rotating the cylinder, means for continually rotating the pairs of rollers during the rotation of the cylinder whereby the same grip the stems projecting through the slots and pull the same from the cherries.

1,400,353. AUTOMOBILE-RADIATOR. Joe Fradus, Newark, N. J., assignor to Samuel Schniper, New York, N. Y. Filed Nov. 25, 1919. Serial No. 340,553. 2 Claims. (Cl. 257—130.)



1. A radiator comprising a plurality of rows of tubes formed from sheets of metal, said sheets being corrugated to provide a series of parallel inclined faces and another series of parallel inclined faces alternating with said first mentioned series and running at an angle thereto, the widths of one of said series of parallel faces being substantially greater than the widths of the other alternate series of parallel faces so as to form substantially trapezoidal air openings when said sheets are placed together, said sheets being indented at the upper and lower ends thereof to form offset portions whereby two such complementary sheets unite at their lower and upper ends to form a close fit and inclose between the faces thereof a tortuous channel for the liquid to be cooled.

1. A [illegible] comprising a cylindrical body of [illegible] and wound upon said body, [illegible] upon said body electrically connected with [illegible] and shaft.

1,400,354. BAG. [illegible] J. Powers, Hyrtle, Ohio. Filed Jan. 5, 1920. Serial No. 350,047. 6 Claims. (Cl. 206—7.)

1. A bag having a closure flap provided with spaced openings intermediate of its ends and in the said flap, an inverted V-shaped stiff strip arranged beneath the flap and having at the junction of its members openings registering with the openings of the flap, and a cord secured in the apexture of the stiff strip and passed through the openings of the flap to form a handle.

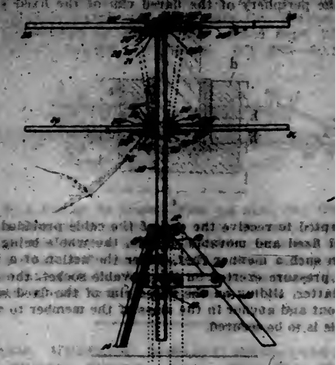
1,400,356. TEST-GLASS FOR HEMOGLOBINOMETERS. Karl Fuchs, Asbury, N. J. Filed June 6, 1920. Serial No. 387,389. 3 Claims. (Cl. 88—14.)

1. As a new article of manufacture, a test glass for hemoglobinometers of the character described consisting of two prisms formed from one piece of ruby glass of wedge shape.

1,400,397. CABLE SECURING DEVICE PARTICULARLY APPLICABLE TO THE FIXATION OF ELECTRIC CABLES ON CARBON-BRUSHES. Rodrigo Guinea, Lavallois-Perret, Seine, Assignor to Societe Anonyme La Carbone, Lavallois-Perret, Seine, France. Filed May 14, 1921. Serial No. 469,748. 1 Claim. (Cl. 171—328.)

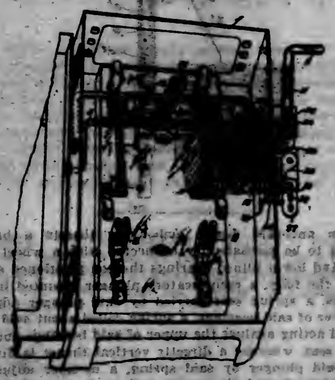
A cable securing device particularly applicable to the fixation of electric cables on carbon brushes comprising:

and adapted to receive the [illegible] the said head and [illegible] head in such a manner that [illegible] of the latter, acting on the [illegible] upward out and under in the [illegible] the cable is to be secured.



1,400,398. ANTI-SKID DEVICE. William J. [illegible] man, New York, N. Y. Filed June 27, 1921. Serial No. 487,168. 2 Claims. (Cl. 301—41.)

1. An anti-skid device embodying [illegible] adapted to be permanently connected with a wheel felly, upper and lower alined bearings thereon positioned at one side of the felly, a reciprocatory plunger mounted in said bearings, a spring seat carried by said plunger adjacent the lower of said bearings, a spring coiled about said plunger and acting against the upper of said bearings and said spring seat, whereby a directly vertical thrust is directed upon said plunger by said spring, a member adjustably mounted upon said plunger and adapted to engage one of said bearings, whereby the extent of movement of said plunger by said spring may be regulated, a slide mounted upon said bracket and adapted to be engaged by said member, and a cam rotatably mounted in said bracket and cooperating with said slide, whereby said plunger may be raised to, and maintained in, a position where it will not engage the road.

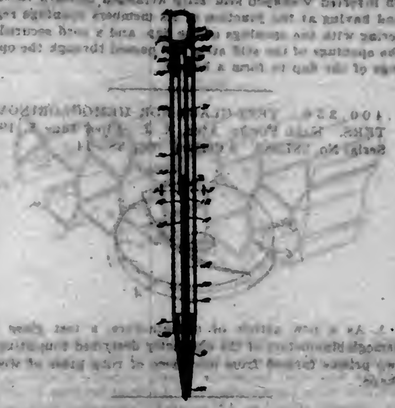


1,400,399. CLOTHES-DRIER. Charles W. Hagenman, Champaign, Ill. Filed May 2, 1918. Serial No. 232,026. 2 Claims. (Cl. 68—24.)

1. In a clothes drier the combination with a vertical standard of a clothes bar head mounted on said standard, the said head comprising a metallic disk provided with an

ing a plurality of radial slots in the body portion of the said head and extending thence outwardly and downwardly into the said peripheral depending flange thereon, and clothes bars loosely supported in the said radial slots of the head and bearing against said central depending flange.

1,400,360. QUICK-BREAK DOUBLE-THROW SWITCH. Bayson D. Hoxton, Detroit, Mich. Filed June 17, 1918. Serial No. 240,231. 15 Claims. (Cl. 200—73.)

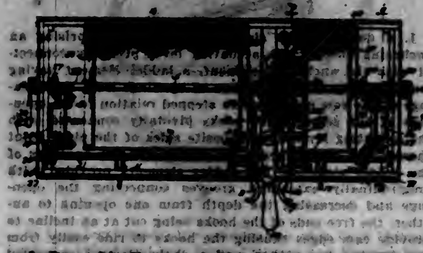


1. A quick break double throw switch comprising stationary and movable contacts, an operating member, resilient means connecting said operating member and movable contacts, and means for intermittently positively connecting said operating member and movable contacts, comprising an individually adjustable member for each throw.

1,400,361. TRANSMISSION MECHANISM FOR MACHINE-TOOLS. Howard W. Hoyt, Cincinnati, Ohio, assignor to The G. A. Gray Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Nov. 6, 1919. Serial No. 335,977. 26 Claims. (Cl. 90—58.)

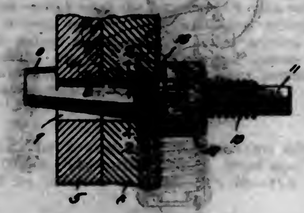
2. In a machine tool, a traversing tool supporting member, a tool holder translatable upon said tool supporting

shafts for respectively connecting and disconnecting the same with said power transmission means, means for actuating said controller, and clutch actuating means for each clutch coöperating with said controlled actuating means for simultaneous clutch and controller actuation.



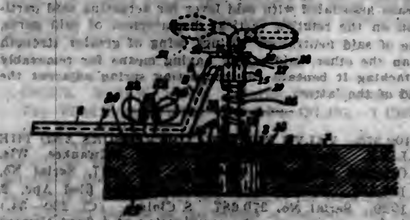
1,400,362. PENCIL. Charles R. Keeran and Michael M. Kaufmann, Chicago, Ill., assignors, by mesne assignments, to Autopoint Pencil Company, Chicago, Ill., a Corporation of Illinois. Filed June 9, 1919. Serial No. 302,737. 3 Claims. (Cl. 120—28.)

1. A pencil having within its body lead propelling mechanism, and exteriorly of its body a rotatable actuating means thereon including a collar and sleeve arranged end to end, the former stationary and the latter rotatable with respect to the body, the adjacent ends of the collar and sleeve being formed with transverse walls each having a central aperture, one such wall being flanged to lie within the aperture of the other, and having its inner periphery polygonal in character, and a tube extending



through the outermost wall having the polygon aperture therein, the tube being extended within the pencil to maintain operative relation with the propelling mechanism, substantially as described.

1,400,363. COMPUTING-MACHINE. Millard B. Kennard and Virgil C. Sampson, Corpus, S. D. Filed Sept. 23, 1920. Serial No. 412,782. 8 Claims. (Cl. 235—60.)

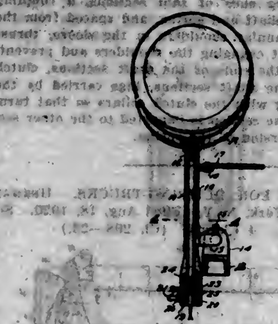


1. In combination, a spiral scale, an indicator therefor, a coöperating spiral scale, an indicator therefor, means to adjust each indicator independently to any desired point on its scale, and means to cause corresponding relative movement between the two scales and their respective indicators.

1,400,364. TOE-BOLT. Frank C. Knapik, Baltimore, Md. Filed Jan. 20, 1920. Serial No. 352,860. 1 Claim. (Cl. 85—9.)

A bolt comprising a shank and a head on one end thereof, said head projecting from one side of the shank only and its width not exceeding the diameter of the shank, the shank being inclined to its longitudinal axis on one side to obtain a taper in the direction of the head, and said head projecting from that side of the shank which is diametrically opposite the inclined side.

1,400,365. VALVE-GRINDING DEVICE. Clarence C. Lott, New York, N. Y. Filed Dec. 20, 1920. Serial No. 432,710. 2 Claims. (Cl. 51—68.)



1. In a valve grinding device of the character described, the combination with a bracket having a bearing

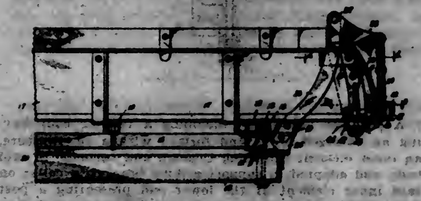
shaft journaled in said bearings, resilient means for preventing one end of the shaft into engagement with a valve, and a projection on the shaft to engage the upper end of the bearing for limiting the movement of the shaft under the influence of the resilient means, said projection being adapted to move on said bearing as the shaft is rotated during the grinding operation and a fixed cam on said bracket over which the projection is engaged by said projection during a part of its revolution for disengaging

---

1,400,366. HEADLIGHT. Harold Richard Lott, Toledo, Ohio. Filed Jan. 6, 1920. Serial No. 349,764. 1 Claim. (Cl. 240—61.)

A post for headlights, including a tubular body having an enlarged lower end formed with a counter-bore, an inner element extending through and turnable in said body and adapted to support a lamp bracket, a collar on said inner element at the lower end presenting a post fitting said counter-bore, a torsion spring surrounding said inner element in said counter-bore and connected at its ends respectively with said body and said collar, an arm on said collar adapted to be connected with operating means, and a stop on said body to limit the turning of said arm.

1,400,367. FURNACE AND METHOD OF CONVEYING MATERIALS THERETHROUGH. Harry P. McCann, Lakewood, Ohio. Filed Sept. 10, 1919. Serial No. 323,038. 17 Claims. (Cl. 263—6.)

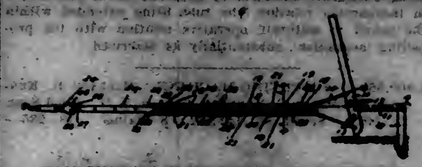


1. In a furnace heated by gases of combustion, a heating chamber having a hearth having a longitudinal slot therein, and a work-moving member dispersed in said slot, said slot being wider than said work-moving member forming clearance spaces between said work-moving member and the walls of said slot, and a flue in said hearth connected to said slot for conducting the waste gases of combustion away from it.

1,400,368. SHOCK-ABSORBING TYPE CONSTRUCTION. [illegible] Nov. 2, 1920. Serial No. [illegible] 9 Claims. (Cl. 64—66.)

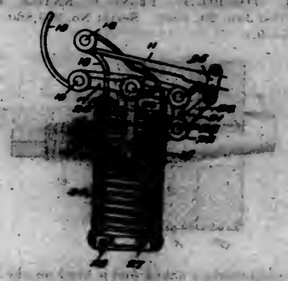
4. A device of the character stated, comprising a shaft formed in two sections, said sections capable of limited independent turning movement, a coiled torsion spring around the meeting ends of said sections, a coupling sleeve around the shaft and spring, and spaced from the spring, internal annular shoulders in the sleeve, thrust collars on the shaft engaging the shoulders and preventing separation of the ends of the shaft sections, clutch collars keyed to the shaft sections, lugs carried by the sleeve and coacting with the clutch collars so that turning movement of one section is imparted to the other section against the torsion of the spring.

1,400,369. GATE FOR DUMPING-TRUCKS. HERMAN MECKING, New York, N. Y. Filed Aug. 18, 1920. Serial No. 404,400. 4 Claims. (Cl. 298—23.)



1. A dumping truck, comprising a truck frame, a bracket attached to the said truck frame, a body mounted to swing on the said bracket and having a discharge opening, a gate hung at its upper end on the said bracket and normally closing the said discharge opening, trunnions rotatably journaled on the sides of the said gate at the lower free end thereof, and hooks adapted to be engaged by the said friction rollers to lock the gate in closed position, the said hooks being fixed on the said body on opposite sides of the said dumping opening.

1,400,370. HAIR-WAVING APPARATUS. CHARLES NESSLER, New York, N. Y., assignor to Nestle Patent Holding Co. Inc., New York, N. Y., a Corporation of New York. Filed Apr. 16, 1918. Serial No. 228,671. 23 Claims. (Cl. 132—35.)



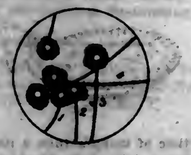
1. A hair waving apparatus comprising a plurality of hair-engaging devices, jointed elements operatively connected with said devices and said connecting means being constructed and arranged to permit the placing of said hair-engaging devices in the hair in laterally spaced apart relation and said connecting means being operable to permit said devices to be individually moved endwise.

1,400,371. TRANSMISSION AND PURLING DEVICE. [illegible] Nov. 4, 1919. Serial No. [illegible] 7 Claims. (Cl. 66—82.)

1. A device of the character described comprising an anchoring element, an actuating lever pivotally connected with the anchoring element, a ladder element having longitudinally [illegible] of openings with the openings of one row [illegible] in staggered relation to the openings of the second row, hooks pivotally connected with the detenting lever upon opposite sides of the pivot point thereof and [illegible] hooks, the openings of the ladder elements, said ladder elements provided with longitudinally extending grooves connecting the openings and decreasing the depth from one opening to another, the free ends of the hooks being cut at an incline to provide cam edges causing the hooks to ride easily from one opening to another, and a chain element connected with the ladder element.

1,400,372. VEHICLE. RICHARD T. NEWTON, Nutley, N. J. Filed Nov. 4, 1914. Serial No. 870,315. 7 Claims. (Cl. 267—17.)

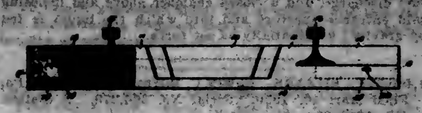
4. For use with a vehicle having a body part and a leaf spring associated with the running gear, said body part and spring being separated and apertured at their adjacent ends, a self-contained shock-eliminator attachment adapted to be interposed between said body and spring when separated, comprising a casing, means for securing the same to one of said parts at its apertured point, two oppositely acting neutralizer coil springs in the casing, a partition between the coil springs, a lever jointed to the other of said parts and to the casing, and means associated with said lever for actuating said partition on the relative vertical displacement of said parts, one of said neutralizer springs being of greater strength than the other, said casing having means for removably attaching it beneath the supporting spring adjacent the end of the latter.



1,400,373. VALVE FOR AIR-COMPRESSORS AND THE LIKE. RALPH VOLNEY HUNTINGTON, Milwaukee, Wis. Original application filed Aug. 31, 1917, Serial No. 189,467. Divided and this application filed Apr. 2, 1920. Serial No. 370,687. 8 Claims. (Cl. 230—24.)

1. In a compressor, the combination of a fixed element having a cylindrical bore formed therein said bore being in communication with the compressor cylinder; a valve seating fitting within the bore, said seating having at least one annular channel therein with a valve port around said opening; a plate valve overlying the opening; a spring bearing against said plate; and means for holding said valve and spring in position.

6. In a compressor, the combination of a fixed element having a cylindrical bore formed therein and likewise having an intake or suction port; a combined suction and discharge port in communication with the compressor cylinder; and a discharge port, all of said ports opening into the cylindrical bore aforesaid; a cylindrical shaped valve structure composed of three parts, the central part being wedge shaped in cross section and all of said parts being provided with flow slots, the slots in the central wedge shaped part being in communication with the combined suction and discharge port; plate valves interposed between adjacent faces of said central member and the outer parts and resting upon the seats formed upon said central wedge shaped member; a bow shaped spring resting on each valve; and removable plates secured in place adjacent the ends of said valves and springs whereby the valves and springs will be properly positioned and held against displacement.

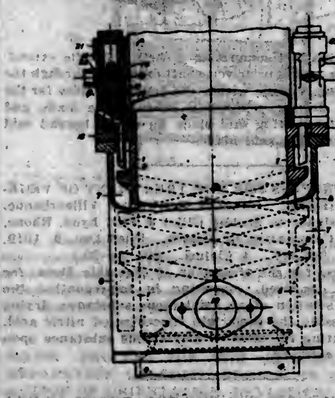


1,400,374. RICE FOR MANUFACTURING SOY. MANJIRO ONIKI, Fukuoka-Ken, Japan. Filed Apr. 18, 1918. Serial No. 229,339. 1 Claim. (Cl. 99—11.)

The process of preparing a food composition consisting in culturing aspergillus oulkli upon a grain medium, nourishing the same; adding thereto a mixture of steamed beans and roasted wheat; then forming the same into soy, separating the liquid from the residue, and subsequently sterilizing and clarifying the same.

1,400,375. RAILWAY-TIE. MARINO PACE, Homer City, Pa. Filed Sept. 1, 1921. Serial No. 497,491. 1 Claim. (Cl. 238—34.)

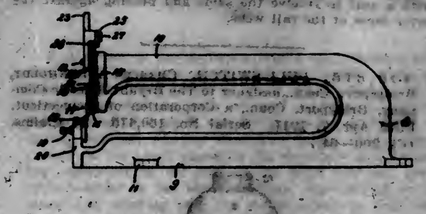
A railway tie comprising a body member having rail seats and an elevated intermediate portion with the terminals thereof overhanging the inner portion of the rail seats and adapted to bear against the webs and over the adjacent portion of the flanges of the rails, the outer portions of said body having longitudinally directed upwardly opening guideways with the inner ends extending into the outer portion of the rail seats, holding members engaging in said guideways and extending at their inner



ends beneath the outer portion of the rail flanges and each with a seat to receive the same and bearing against the outer faces of the rail webs.

1,400,376. PULL-SWITCH. CHARLES A. REINHOLDT, Bridgeport, Conn., assignor to The Bryant Electric Company, Bridgport, Conn., a Corporation of Connecticut. Filed Apr. 7, 1917. Serial No. 160,475. 20 Claims. (Cl. 200—64.)

1. In an electric switch, a rotary switch bar, an insulating base having bosses forming detents, switch contacts arranged on said base and shaped to form detents spaced from said bosses, cams on said switch bar, and a rotary lifting cam member coöperating with said cams on the switch bar to lift the same over said detents.



1,400,377. VAPORIZER. PERCY OCTAVIUS ROWLANDS, Liverpool, England. Filed Apr. 9, 1919. Serial No. 288,875. 6 Claims. (Cl. 48—102.)

4. In a liquid fuel vaporiser of the character described having a vaporizing conduit to which the liquid fuel is delivered adapted to have created within it a pressure less than that of the atmosphere by a pump or engine to be fed by the vapor produced; a liquid fuel supply conduit, a surplus liquid fuel discharge, the entrance aperture to

the liquid fuel supply normally being maintained above the discharge jets, and below the level of the vaporizer liquid fuel discharge, and a closed chamber above and inclosing said entrance aperture and into which the liquid is fed by gravity; substantially as set forth.

1,400,378. SHEARS. EDWIN C. ROTH, Philadelphia, Pa. Filed Mar. 16, 1920. Serial No. 366,270. 3 Claims. (Cl. 164—60.)

1. A shear including a head; a pinion rotatably secured to the end of said head; a cutting wheel connected directly in front of and to the pinion; a gear wheel in mesh with said pinion and rotatably in the plane of said pinion and supported by said end of the head; a swinging hand lever positioned in front of said end of the head; and a pawl carried by said hand lever and having a portion adapted to mesh with the teeth of said gear wheel during the movement of the hand lever in one direction to effect rotation of said gear wheel, said pawl having a portion adapted to effect an operative disengagement with said gear wheel during a movement of the hand lever in an opposite direction; substantially as described.

1,400,379. MOTOR-DRIVEN ANIMAL-SKINNING KNIFE. HERMAN H. SCHLEICHER, Milwaukee, Wis. Filed Apr. 15, 1921. Serial No. 461,718. 3 Claims. (Cl. 17—13.)

2. A skinning tool comprising a shell, a handle extending therefrom, a motor driven shaft extending through the shell, a housing, a blade within the housing, guides for the blade and a driving connection between the blade and motor shaft for moving said blade forwardly beyond said shell and retracting said blade.

1,400,380. PROCESS FOR THE TREATMENT OF VEGETABLE FIBERS. CHARLES SCHWALBE, Villeurbanne, France, assignor to Société Gillet & Fils, Lyon, Rhone, France, a Corporation of France. Filed Dec. 9, 1919. Serial No. 344,577. 4 Claims. (Cl. 8—20.)

3. A process for the treatment of vegetable fibers, for the purpose described, consisting in impregnating the fiber with a solution of an amylaceous substance, drying the fiber, passing the same into concentrated nitric acid, and precipitating the nitrated amylaceous substance upon the fiber by washing.

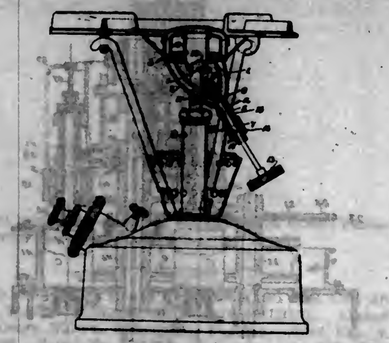
1,400,381. PROCESS FOR THE TREATMENT OF VEGETABLE FIBERS. CHARLES SCHWALBE, Villeurbanne, France, assignor to Société Gillet & Fils, Lyon, Rhone, France, a Corporation of France. Filed Dec. 9, 1919. Serial No. 345,578. 4 Claims. (Cl. 8—20.)

A process for the treatment of vegetable fibers, with a view to imparting to them the character of wool, both

preparatory or in the course of combing and spinning, or carding and spinning, or spinning alone, and likewise subsequently, said process consisting in acting upon the fiber previous to spinning under the hydrolysis of proteic substances by the action of strong mineral acids thereon.

1,400,382. FOLDING DRAWING-KNIFE. CHARLES BERTRAND SIMMONS, Bristol, Conn., assignor to Israel S. Bailey, Southington, Conn. Filed June 27, 1921. Serial No. 480,724. 3 Claims. (Cl. 145—26.)

3. In combination in a drawing knife, a blade having at each end a plate-like head and a blade shank intermediate said head and the blade body, a handle structure comprising a handle body and a handle shank structure, said handle shank structure being composed of two similar pieces of sheet metal positioned in opposition one to the other, said pieces having the outer ends connected with the handle body, the inner ends of said pieces being in the form of ears that are positioned in spaced relation to receive therebetween said head, said ears having notches in the peripheral edges, and a leaf spring secured by one end to said blade shank, extended over said head, and provided at each side edge with a laterally extending catch lug for engaging with said notches, whereby the latch operates to simultaneously make locking engagement individually with the two sheet metal pieces of the handle structure.



1,400,383. PIE CRIMPER AND CUTTER. ROBERT H. F. SPAGEN, Madisonville, Ohio. Filed Apr. 18, 1921. Serial No. 462,296. 3 Claims. (Cl. 107—40.)

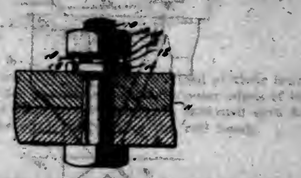
1. As an article of manufacture, a pie crimper comprising a base having a right angle extension provided with an arcuate cutting edge, a socket on the base for the reception of a handle, and an arcuate shaped pie crimping surface secured to the under face of the base conforming to the arcuate cutting edge of the extension and offset a short distance therefrom, whereby the pie crust may be crimped and the superfluous dough removed from around the edge of the pie plate as the crimper is moved step by step around the edge of the pie.

1,400,384. VAPOR-STOVE. RICHARD HENRY STRETTON, Birmingham, England, assignor of one-half to Kynoch Limited, Birmingham, England. Filed June 21, 1920. Serial No. 390,565. 6 Claims. (Cl. 158—32.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

3. In oil and spirit vapor stoves, the combination with a vaporizer having two tubes extending downwardly and terminating vapor tubes arranged between and at right angles to the two fuel tubes, an inclined tubular body closed between and terminating said lower ends of the vapor tubes said lower ends being situated outside the plane of the fuel tubes, a vapor jet carried by the upper end of the tubular body and being similarly inclined, a burner, a filling tube carried by the vaporizer having its lower end inclined similarly to the tubular body, a stem contained within the tubular body, a needle valve carried by the stem and adapted to enter the bore of the vapor jet, and means for propelling and repelling the stem.

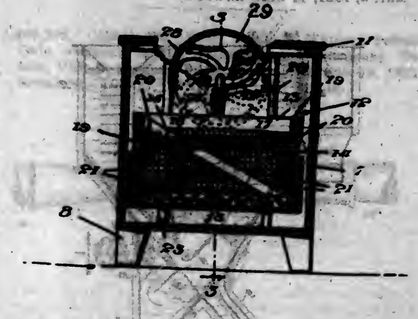
1,400,385. ADJUSTABLE WAGON-SKEIN. PAUL SCHWARZ, Manville, Wyo. Filed Mar. 28, 1921. Serial No. 456,235. 7 Claims. (Cl. 301—135.)

1. In an adjustable wagon skein, a body adapted to be attached to the axle tree, a frame carried by said axle tree, and means for increasing or diminishing the diameter of said frame.



1,400,386. MUSICAL TOY. EMANUEL STAGEL, Baltimore, Md. Filed Mar. 17, 1921. Serial No. 452,970. 4 Claims. (Cl. 46—46.)

1. A musical toy having a rotary carrier, a knocker or tongue loosely suspended from the carrier and a series of



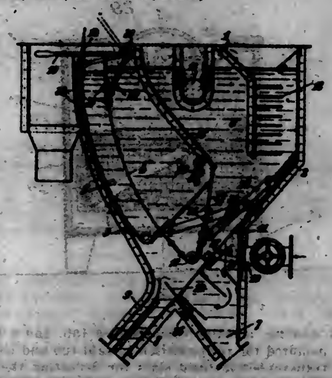
sounding or resetting elements arranged in the path of movement of said knocker or tongue, the outside substantially semicircular upper wall of each of said sounding elements being inclined, in a ball-shaped housing of reticulated material.

1,400,387. NUT-LOCK. ARTHUR H. DIXON, Cadillac, Mich. Filed Oct. 4, 1919. Serial No. 328,505. 2 Claims. (Cl. 151—19.)

1. A nut lock including a bolt and a nut, a pair of washers engaged on the bolt, one of the washers having diametrically opposite pairs of recesses in the wall of its opening, the other washer being engaged by the nut and having tongues engaged in one pair of said recesses, the outer end wall of each of the said other recesses being inclined longitudinally of the axis of the central opening of the washer, the sides of the last-named washer being arranged to be bent outwardly of the nut, and a wedge key in each of the second pair of recesses and having a longitudinal knife edge on its exposed face, said wedge key having its inclined face slidably engaged with the outer wall of the recess and movable by compression between the first washer and nut to dispose the knife edge in biting engagement with and transversely of the threads of the nut.

1,400,388. WASHING-MACHINE. LAWSON J. RUSSEY, Pittsburg, Kans. Filed May 17, 1921. Serial No. 470,273. 2 Claims. (Cl. 68—37.)

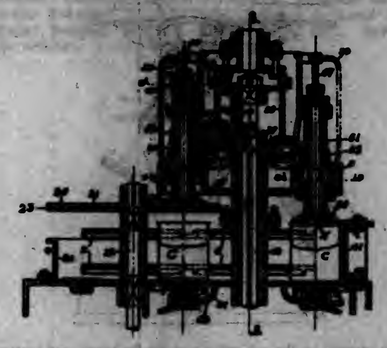
1. A washing machine comprising a tub, and a clothes basket mounted for reciprocation in said tub and having a set of transversely-inclined slats for deflecting the water during the reciprocation of the basket for agitating the water and clothes within the basket.



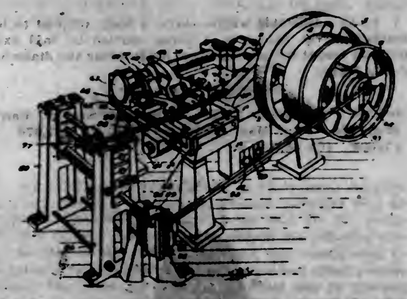
1,400,389. PROCESS FOR THE CLASSIFYING AND SEPARATION OF SOLID BODIES BY COMBINED ACTION OF ORIENTATION, DEVIATION, AND DERIVATION. ERNEST EMILE TROMBE, Puteaux, France. Filed Nov. 21, 1917. Serial No. 203,237. 1 Claim. (Cl. 83—62.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

A process of the character described which includes the following steps: first, supplying the material into a substantially still classifying medium; second, obstructing the

downward movement of the material by an inclined surface; third, subjecting the material as it passes off the said surface to the action of an upwardly moving current traveling at an angle to the said surface whereby the position in which particles of a certain shape are presented to the upwardly moving current is altered; fourth, providing a downwardly extending outlet for the material which is able to pass through the upwardly moving current without being deviated thereby; fifth, providing an upwardly extending outlet for the material which is freely carried along by the upwardly moving current; and sixth, providing an auxiliary downwardly extending outlet for the material which is unable to pass through the upwardly moving current when presented in one position to the said current but is able to pass therethrough when presented in another position to said current.



1,400,390. APPARATUS FOR THE CLASSIFYING AND SEPARATION OF SOLID BODIES BY COMBINED ACTION OF ORIENTATION, DEVIATION, AND DERIVATION. René Emile Trotteur, Puteaux, France. Filed Nov. 21, 1917. Serial No. 208,278. 5 Claims. (Cl. 83—82.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

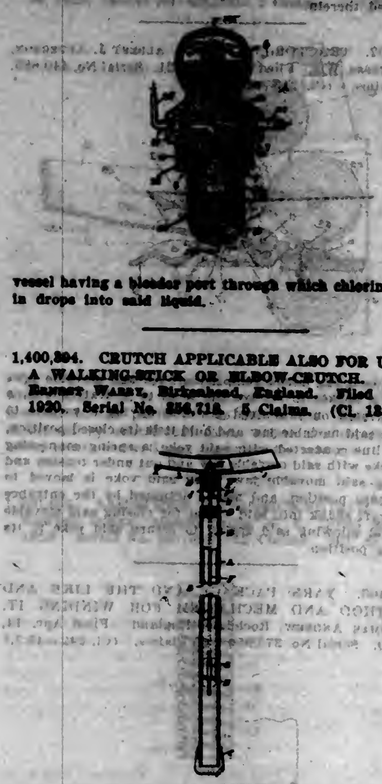


1. Apparatus of the character described comprising, a vessel, means for supplying a classifying medium to the upper part thereof, means for depositing in the medium material to be classified, a downwardly extending surface adapted to interrupt the downward movement of the material, a partition arranged adjacent the side of the vessel opposite said surface for forming a channel between said partition and said side of the vessel, a downwardly extending outlet from said vessel, a downwardly extending outlet from said channel, an outlet at the top of said channel, and means for supplying a classifying medium to the lower portion of the vessel to ascend in said channel, whereby the material is classified and different parts thereof ejected from said various outlets.

1,400,391. CAN HEADING AND SEALING MACHINE. Hudson Bowne, Seattle, Wash., assignor to Seattle-Astoria Iron Works, Seattle, Wash., a Corporation of Washington. Filed Oct. 22, 1919. Serial No. 332,210. 5 Claims. (Cl. 113—14.)

1. In a can heading mechanism, in combination, a continuously rotative can feeding mechanism, a cap feeding mechanism synchronously rotated with said can feeding mechanism and carrying the caps in positions alined with and above the open ends of the cans, a second can receiving and feeding mechanism rotated synchronously with and receiving the cans from the first named can feeding mechanism, cap carriers similarly rotated and means for operating said cap carriers to first supportingly engage the caps carried by the cap feeding mechanism, carry said caps to the can placing position and then place the caps upon the cans.

1,400,392. SPIKE-MAKING MACHINE. Isaiah C. Van Fossen, Pueblo, Colo., assignor of one-half to Harry A. Deuel, Pueblo, Colo. Filed June 12, 1919. Serial No. 303,616. 7 Claims. (Cl. 10—57.)



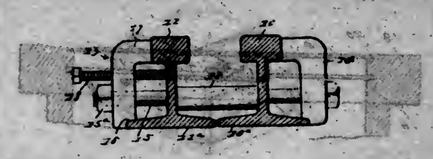
1. In a spike making machine, a gripping lever, a heading lever, a pointing lever, a kicking bar lever, and separate cam devices for actuating said respective levers.

1,400,393. APPARATUS FOR CHLORIN CONTROL. James W. Van Meter, San Francisco, Calif. Filed Apr. 11, 1921. Serial No. 460,522. 5 Claims. (Cl. 210—28.)

1. An apparatus for chlorin control, comprising a chamber adapted to contain a liquid, a transparent vessel below said chamber and adapted to be fed with liquid therefrom,

a receiving vessel within said transparent vessel, means for supplying chlorin to said latter vessel, said latter vessel having a bleeder port through which chlorin exudes in drops into said liquid.

1,400,394. CRUTCH APPLICABLE ALSO FOR USE AS A WALKING-STICK OR ELBOW-CRUTCH. Albert Ernest Warry, Birkenhead, England. Filed Feb. 6, 1920. Serial No. 356,718. 5 Claims. (Cl. 135—50.)



5. A crutch comprising in combination tubular lengths adapted to telescope, a head member turnable independently of the tube lengths, a locking device for locking the telescoping sections together by turning the head member a laterally projecting tubular part on the said head member, a telescopic extension on the said tubular part, a longitudinal slot in the said telescopic extension, and a rod forming part of the locking device the upper end of which rod passes through the said slot and has a nut or head at the top for keeping the extension of the tubular head extended or contracted when the tubular lengths of the crutch are locked together by the locking device.

1,400,395. COMPOSITION OF MATTER. Marcel Weinberg, Brooklyn, N. Y. Filed May 18, 1921. Serial No. 470,655. 5 Claims. (Cl. 134—39.)

3. A composition of matter for preventing the formation of rust, which comprises ordinary soap, sodium carbonate, glycerin, and formaldehyde.

1,400,396. TRACK-CLAMP. Jack Whitaker, Fort Dodge, Iowa. Filed Sept. 8, 1921. Serial No. 499,218. 1 Claim. (Cl. 238—21.)

A track clamp for securing track and guard rails in their proper relative positions, having a spacing sleeve interposed between the webs of said rails, jaws having upwardly projecting inner ends adapted to engage the inner edges of the rail heads, said jaws having vertical bearings upon the head and foot or base members respectively of said rails, and a bolt transversely connecting the jaws and extending through the rail webs and said spacing sleeve, the jaws being provided at their lower ends with seats for engagement with the outer edges of the rail feet and at their upper ends with inturned ears for contact with the outer surfaces of the rail heads.

1,400,397. SHUTTLE TENSION. Gottlieb D. Wilms and John H. Strecks, Paterson, N. J. Filed Sept. 2, 1921. Serial No. 496,855. 2 Claims. (Cl. 139—37.)

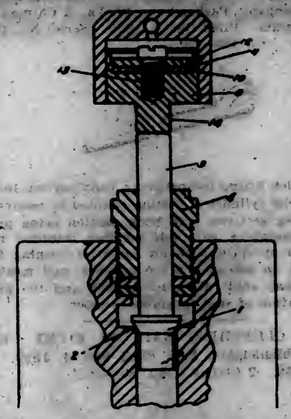
1. In combination, a supporting structure including the shuttle body, a spindle supported at it send portions in said structure, a plate movable longitudinally of and in said structure and arranged in a plane crossing the axis of the spindle and adapted to bear against one end of a package arranged on the spindle, said spindle being removable from said structure transversely of itself and in a definite plane and the plate having a lateral notch opposite the spindle and registering with the plane in which the spindle is thus removable, and spring means for holding the plate against the package.

1,400,398. CHAIN WRENCH. Clyde S. Wright, Toledo, Ohio, assignor to The National Supply Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 19, 1921. Serial No. 446,427. 8 Claims. (Cl. 81—66.)

5. In a wrench, a jaw having its gripping face provided with a toothed portion at both sides of its transverse center, an operating member loosely seated on the face of the jaw opposite the toothed face, and having a fulcrum on the first face between each toothed face and the said transverse center, and a flexible gripping member adapted to have its ends attached to the operating member and to grip an object in contact with the gripping face of the jaw.

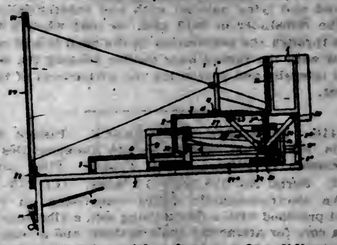
1,400,399. CISTERN-TOP. Oscar H. Yaeche, Aurora, Ill. Filed Mar. 22, 1921. Serial No. 454,538. 2 Claims. (Cl. 94—35.)

1. A manhole or cistern cover having a plurality of bolts for extension beyond the periphery of the cover to engage sockets in the wall of the manhole, a lever



having connection with said locking ring or handle, and a lever having an operating ring or handle, and a bar adapted to engage said bolts for actuating the same, said

consequent upon decrease and increase of temperature, and the compensating resistance being composed of a wire-metal which is variable in consequence of decrease and increase of temperature to maintain, throughout a

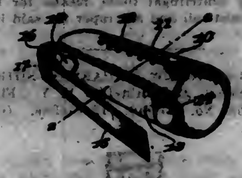


given temperature range, a substantially constant ratio between the amount of the ohmic resistance of the magnetising coil and the amount of the ohmic resistance of the compensating resistance.

1,400,411. FLUID-VALVE. Howard Pearson Booth, Montreal, Quebec, Canada. Filed Mar. 29, 1919. Serial No. 286,187. 1 Claim. (Cl. 138—16.)

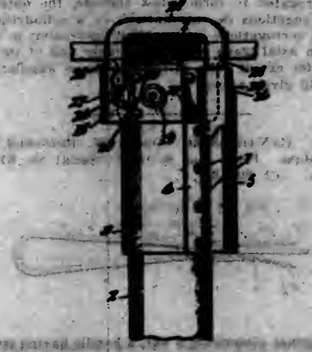
In fluid valves, a casing forming a terminal in a compressed air line of piping and communicating constantly with recesses in one wall forming plunger chambers, plungers operating in said chambers and having stems in continuous engagement with the stems of valves governing the operation of the hydraulic press.

1,400,412. COPYING AND ENLARGING CAMERA. Burt A. Baigger, East Cleveland, Ohio, assignor of one-half to Fred R. Bill, Cleveland, Ohio. Filed Dec. 13, 1920. Serial No. 430,294. 8 Claims. (Cl. 88—24.)



1. The combination with a frame, and a sliding camera and lens carrier mounted thereon, of a cam on the frame, and a toggle one arm of which is connected to the camera, and the other to the lens carrier, the joint of the toggle arms being provided with means to cause the same to follow the cam.

1,400,413. MEAT-[illegible]. Jesse R. Burgess, Independence, Kans. Filed Nov. 12, 1921. Serial No. 514,508. 4 Claims. (Cl. 17—37.)



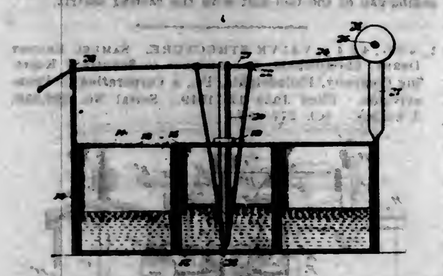
4. In a meat tenderizer, the combination with a knife body having an enlarged head portion and a handle, of removable knives having openings therein for securing the said knives to the face of the knife body, a cleaner bar positioned between the knives and supported in the ends of the body, and an adjustable flat spring removed from the cutting edges of the knives, said spring being secured to and overlying the top of the body bearing against the ends of the cleaner bar.

1,400,414. ONION-WEEDER. Charles Butler, Independence, Kans. Filed Oct. 10, 1921. Serial No. 506,677. 1 Claim. (Cl. 55—45.)

An onion weeder comprising a thumb stall, and a strip of metal bent intermediate its length to form a pair of divergent arms of approximately equal length connected by a curved bight portion, one of the arms being secured to the stall and extending longitudinally toward the open end thereof, the other arm and the bight portion having lower continuous cutting edges.

1,400,415. AUTOMOBILE-LOCK. Charles Fredrick Callahan, Memphis, Tenn. Filed Feb. 9, 1920. Serial No. 357,435. 2 Claims. (Cl. 70—139.)

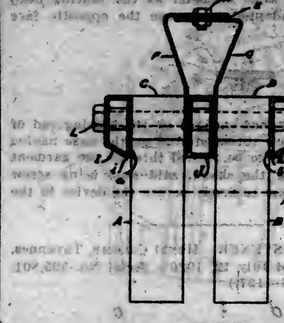
2. In combination with a steering column and a wheel carried thereby, of a device for locking said wheel including a sheet metal frame bent to provide a cylindrical body portion embracing the steering column, radial arms formed



in one piece with the body and extending therefrom, the body being split at one side and having its ends spaced apart, a V-shaped part fitted between the split portion of said body and connected to the ends thereof for contracting the body about said part, a housing carried by said arms, a shackle member fitted in said housing and slidable and rotatable therein, a striker coming upward from said housing and adapted to receive one portion of said shackle member, and locking means for holding the shackle member in the striker coming, substantially as described.

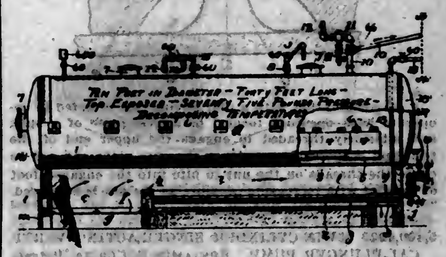
1,400,416. STAMPING-DIES. Lloyd R. Cameron, Somerville, Mass., assignor to Alfred F. Murphy, Boston, Mass. Filed May 16, 1919. Serial No. 297,645. 2 Claims. (Cl. 113—49.)

1. A self-contained die unit adapted for removable assemblage in a stamping press, comprising a pair of oblong die blocks having mating faces bearing the die impression to be produced and adapted to be opened to permit insertion of work therebetween from one end to a point adjacent the opposite end, said blocks equipped with spring means to hold them normally apart, and with means for holding them aligned with respect to each other located at, and limited to, the end portions thereof opposite the end from which the work is inserted.



1,400,417. DYEING-MACHINE. Frederick Carter, St. Agathe des Monts, Quebec, Canada. Filed Feb. 28, 1921. Serial No. 447,382. 5 Claims. (Cl. 8—19.)

1. A dyeing machine comprising a receptacle, a T-shaped member supported above and extending into the receptacle and guides positioned at each end of the T-shaped member, whereby the material to be dyed may be guided through said receptacle.

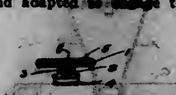


1,400,418. ELECTRODE-HOLDER. Herman August Carey, Duluth, Minn. Filed June 25, 1920. Serial No. 391,672. 8 Claims. (Cl. 204—64.)

1. In a mechanism of the kind described, a heat insulating block, an electrode and means for holding the heat insulating block and the electrode removably in position such means being adapted to release the electrode upon

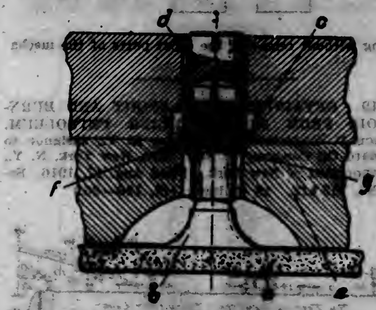
loosening without releasing the other parts of the mechanism.

1,400,419. OBTAINING MOTOR-SPIRIT AND BURNING-OIL FROM HIGHER-BOILING PETROLEUM. Horace P. Chamberlain, Buffalo, N. Y., assignor to Standard Oil Company of New York, New York, N. Y., a Corporation of New York. Filed Aug. 17, 1916. Serial No. 115,612. 18 Claims. (Cl. 196—35.)



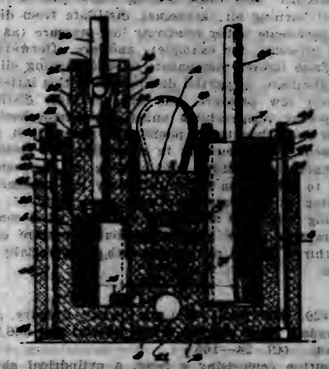
1. In the art of obtaining products from petroleum, wherein hydrocarbons boiling above 518° F. are collected in admixture with those boiling below 518° F., in the form of burning oil (kerosene) distillate from distilling crude pertoleum under relatively low pressure (as atmospheric pressure, for example), and are afterward separated from lighter components of said burning oil (kerosene) distillate, by partial distillation of this latter under relatively low pressure, and are yet later distilled at decomposing temperatures under superatmospheric pressure of more than thirty pounds per square inch, the improvement which consists in subjecting the residual oil from partially distilling said burning oil (kerosene) distillate to distillation under relatively low pressure, with collection of distillate that boils above 518° F., and in distilling this last mentioned distillate at decomposing temperatures under superatmospheric pressure of more than thirty pounds per square inch, substantially as described.

1,400,420. BUTTON. Walter Colley, Calgary, Alberta, Canada. Filed Feb. 21, 1920. Serial No. 360,280. 1 Claim. (Cl. 24—105.)



A button comprising a head, a cylindrical shank on said head having its end enlarged and of annular shape to provide a bearing face adapted to engage a garment, said shank being disposable in a button hole and maintained therein by said end and said head, said end serv-

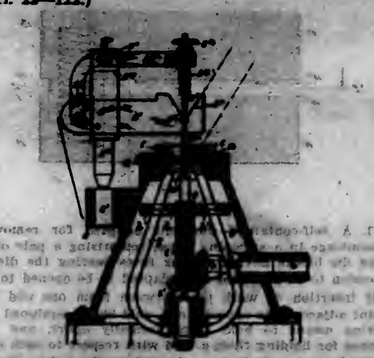
ing to equate apart portions of a garment such being of a diameter greater than the diameter of the shank, said shank having a screw threaded bore, an annular base of substantially the same diameter as the bearing head of the shank and adapted to engage the opposite face



of the garment from that engaged by the bearing end of the shank, and a screw threaded stud on the base having a pointed end adapted to be pushed through the garment and into the bore of the shank, said stud being screw threaded into said bore to firmly secure the device to the garment.

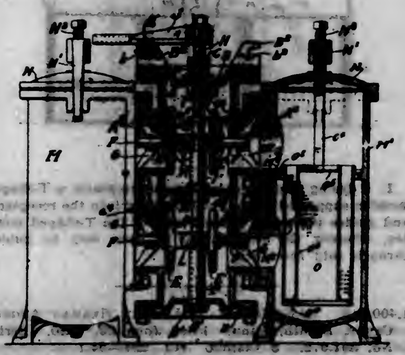
1,400,421. DIAL-FASTENER. Henri Colomb, Tavannes, Switzerland. Filed July 12, 1920. Serial No. 395,801. 4 Claims. (Cl. 58—127.)

4. A combination with a dial having feet adapted to operate with openings formed in a base plate of a watch part interiorly threaded to engage the upper end of the feet, and coöperating means on the base plate and nut to cause the threads on the nut to bite into the engaged foot of the dial with increasing pressure as the nut is advanced.



1,400,422. TWIN-CYLINDER SINGLE-ACTING VERTICAL-PLUNGER PUMP. Benjamin F. Curtis, Potean, Okla., assignor to Curtis Porcelain Pump Company, a Corporation of Oklahoma. Filed Sept. 3, 1920. Serial No. 407,946. 4 Claims. (Cl. 103—77.)

4. A pump comprising a body formed from a single block of vitreous material having inwardly extending spaced cylindrical bores formed therein in longitudinal alinement, the cylindrical bores terminating short of the



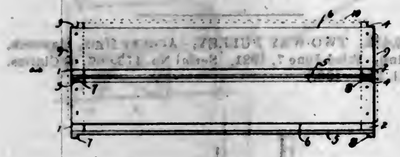
leave and of the block a pair of centrally disposed upper posed, transversely extending ways formed in the body intermediate the cylindrical bores, one of said ways being disposed adjacent to the upper ends of the cylindrical bores and constituting the discharge outlet, the other way being disposed adjacent to the lower ends of the bores and constituting the inlet, suitably long vitreous pistons reciprocably mounted in the cylindrical bores, discharge and inlet chambers communicating with each other and with the upper and lower ways, discharge and inlet valves arranged in said chambers, and inwardly extending ways communicating with the transversely extending ways and with the chambers.

1,400,423. APPARATUS FOR MAKING DOPS TO HOLD PRECIOUS STONES DURING GRINDING OR POLISHING. William J. Davids, Amsterdam, Netherlands. Filed Dec. 17, 1920. Serial No. 431,463. 5 Claims. (Cl. 23—122.)

1. Dop-casting apparatus consisting of a setting-tool unit which is formed with a gaging-gap whose shape is a replica or counterpart of the transverse sectional shape of the dop-casting matrix, and is provided with means for adjusting it close relatively to the said gaging gap, and a casting-mold unit embodying means which when the setting-tool unit is applied to the mold registers the gaging-gap of the tool-unit with the casting matrix.

1,400,424. VALVE STRUCTURE. Samuel Ernest Dumry, Philadelphia, Pa., assignor to Schutte & Koerting Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 11, 1919. Serial No. 303,350. 3 Claims. (Cl. 277—18.)

1. In combination with two chambers, one having an inlet and the other an outlet passage for fluids, and each

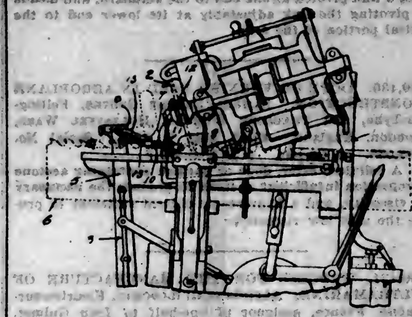


chamber having an additional oppositely disposed partial valve seat, valves movable in each chamber for coöperating with said valve seats, each pair of valves being connected together so as to move simultaneously to close one and open the other valve seat, means for supporting said valves in alinement with the valve seats, a rotatable shaft extending through the two chambers of the casing and means actuated by said shaft for simultaneously actuating the two pairs of connected valves in the same direction.

1,400,425. CONTAINER-OPENER. Frank Dobrick, Cleveland, Ohio. Filed June 24, 1918. Serial No. 241,963. 1 Claim. (Cl. 220—68.)

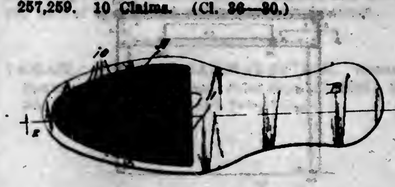
An opener for receptacles having separable sections, including a lever having inwardly extending side flanges, a bracket on one of the sections having arms, between which said lever is disposed, a pivot pin passing through said arms and flanges, said lever having a free end spaced from the receptacle and its other end extending inwardly as a crank and reinforced by said flanges, the other section having a flange resting on said crank, a spring to hold the crank against the flange mounted on said pivot pin and protected by the lever flanges, and said free end of the lever being positioned so that the hand may hold the box and a finger thereof employed to urge the said free end toward the box.

1,400,426. DESERT-TRAY. Cosmo O. Mason, Watsonville, Calif. Filed Sept. 4, 1921. Serial No. 494,697. 1 Claim. (Cl. 217—18.)



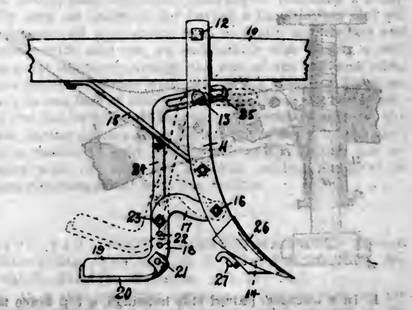
A berry tray comprising end pieces having oppositely directed rabbets formed therein and in their upper edges, side and bottom slats arranged on said end pieces to space the same, and means arranged at each end of and upon said bottom slats to engage corresponding rabbets in a tray placed therebelow, whereby the one tray may slide freely on the tray below.

1,400,427. SAW-FILING-MACHINE ATTACHMENT. Lyman M. Walton, Indianapolis, Ind. Filed Jan. 10, 1920. Serial No. 350,615. 2 Claims. (Cl. 76—77.)



1. In combination, a band saw filing machine having front and rear feeding mechanisms including oscillating

levers, bodies movable to said levers, feeth engaging elements on said bodies, and means carried by said bodies



and adapted to engage the teeth of the saw and move the latter in case the teeth engaging elements ride over broken teeth.

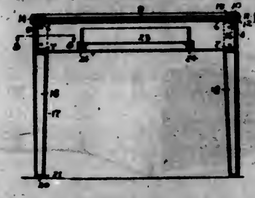
1,400,428. FABRIC BACKING FOR COMPOSITION SOLES. Conroy B. Greenough, deceased, by Hollis B. Greenough, administratrix, Malden, Mass., assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 7, 1918. Serial No. 257,259. 10 Claims. (Cl. 36—30.)

1. A shoe sole comprising a body formed of vulcanized material and a cord fabric backing counterwunk in the surface of the sole and incorporated therein by vulcanization, said backing having an exposed surface flush with the surface of the sole.

1,400,429. PLOW. Daniel W. Gage, Pritchett, Tex. Filed June 28, 1920. Serial No. 392,721. 1 Claim. (Cl. 97—28.)

In a plow including a shovel supporting standard, an arm formed with an upper substantially horizontal forwardly extending portion pivoted at its forward end to the standard, a lower substantially horizontal rearwardly

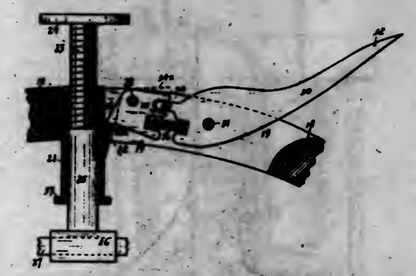
extending portion carrying a wearing shoe, a substantially vertical portion between the upper and lower portions, a link pivoted at one end to the standard, and means for pivoting the link adjustably at its lower end to the vertical portion of the arm.



1,400,430. DOPE OR VARNISH USED IN AEROPLANE CONSTRUCTION. SAMUEL BARBER GROVES, Felling-on-Tyne, and THEODORE WILLIAM HOLZAPFEL WARD, London, England. Filed Aug. 2, 1918. Serial No. 248,085. 2 Claims. (Cl. 134—79.)

1. A cellulose ester, dope or varnish containing acetone in proportion insufficient of itself to produce the necessary low viscosity, and a hygroscopic chlorid sufficient to produce the said low viscosity.

1,400,431. PROCESS FOR THE MANUFACTURE OF ULTRAMARINE. ALPHONSE GUILLOCHIN, Fleurieu-sur-Saône, France, assignor of one-half to Jean Guimet, Fleurieu-sur-Saône, France. Filed May 7, 1920. Serial No. 379,571. 5 Claims. (Cl. 134—77.)



1. In the manufacture of ultramarine blue or green, the step of heating a mixture of clay, sulfur, and alkaline metal sulfite.

1,400,432. TABLE. GEORGE F. HAHN, Cleveland, Ohio. Filed Mar. 15, 1920. Serial No. 365,716. 2 Claims. (Cl. 45—81.)

1. A table, comprising a rectangular metal frame, legs at each corner of said rectangular frame, and a flat metal top having a narrow raised border and narrow wooden strips folded and confined wholly within said raised border and adapted to be seated upon and united with said frame.

1,400,433. WRINGER. HANS HANSEN, Kansas City, Mo. Filed May 19, 1921. Serial No. 470,896. 4 Claims. (Cl. 68—32.)

1. In a wringer, paired side housings, a top brace member connecting said housings, said brace member having a vertical shaft bearing centrally arranged therein and a vertical slot at one side of said bearing and connected therewith; a bushing slidably mounted within said shaft bearing, a flanged head at the base of said bushing and below said top brace member, a slide catch on said bushing arranged within said vertical slot; a pair of wringer rolls arranged one above the other within said housings, the upper roll being vertically adjustable; a spring bar above and spanning the bearings of said upper roll, a pin rigid with said spring bar at the center thereof and upwardly extended within said bushing; a dog pivotally mounted within said vertical slot and in locking engagement with the side catch on said bushing; and lever means pivotally mounted within said vertical slot and in operative engagement with said dog.

1,400,434. WHEEL. THOMAS C. HARVEY, Carrollton, Miss. Filed Apr. 23, 1920. Serial No. 376,106. 2 Claims. (Cl. 305—5.)

1. A traction device having a driving gear, a wheel provided with a rim thereon to be driven by said gear, a turnable rim-engaging element disposed diametrically opposite to said gear, a shaft on which said gear is fixed, a shaft on which said element is journaled, a stationary supporting member, bearing means extending from the supporting member for the first shaft, and bearing arms extending from the supporting member to mount the second shaft, a plate on which the rim rotates, and means securing one of the arms to the plate.

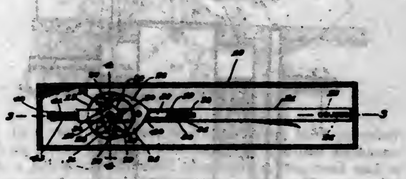
1,400,435. TWO-WAY PULLEY. AUGUST HEIL, Hancock, Minn. Filed June 7, 1921. Serial No. 475,666. 3 Claims. (Cl. 254—190.)

1. The combination with a supporting wall having an opening therein, a plate secured over said opening and having slots arranged in planes at right angles to each other with their inner ends intersecting; combined guards and supports carried by said plate at opposite sides of said slots, one guard on one face of said plate and the other on its opposed face and sheaves journaled in said supports with their peripheries extending adjacent said slots.

1,400,436. INDICATOR. FREDERICK R. HEIL and ALOISIUS J. ROESCHE, Rochester, N. Y. Filed Mar. 6, 1920. Serial No. 363,742. 2 Claims. (Cl. 33—172.)

2. In an indicator, the combination of a dial, a contact lever of the second class mounted to swing at one end of said dial, an indicating lever of the third class mounted to swing near the other end of said dial, a lever of the second class to transmit the movement of the contact lever in one direction to the indicating lever, a compound lever including the last named lever for transmitting the movement of the contact lever in the other direction to the indicating lever, said indicating lever normally standing at zero and moving in but one direction therefrom for the movement of the contact lever in either direction from normal, a cover for said dial, a part of said compound lever being mounted on said cover.

1,400,437. SADIRON. ELMER HYDELL, College Hill, Pa., assignor of one-half to Cyrus B. Ruble, Rochester, Pa. Filed Mar. 24, 1921. Serial No. 455,278. 3 Claims. (Cl. 219—25.)

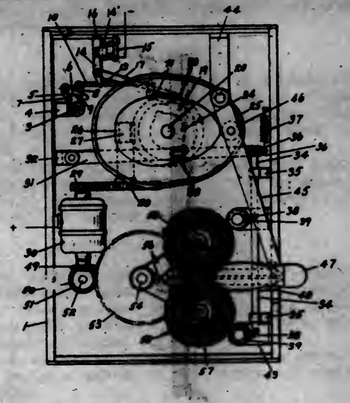


1. A sad-iron structure including iron and stand adapted to be connected in series with a source of electric current, a heating element within the iron, and a make-and-break device in the line of current flow opened by the seating of the iron in the stand, whereby flow from the source of current through iron and stand is cut off, and closed by the removal of the iron from such seating, whereby the flow from the source of current through iron and stand is established.

1,400,438. CHANGEABLE SIGN. HARRY JAQUETTE, Philadelphia, Pa. Filed Aug. 10, 1920. Serial No. 402,578. 2 Claims. (Cl. 40—140.)

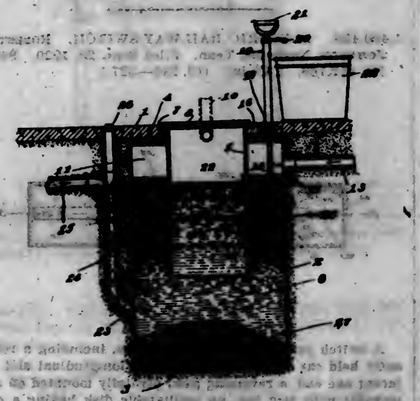
1. A sign structure of the character described including strip plates mounted one above another, said plates adjacent one edge having a double fold providing a groove and a channel separated by a partition, the opposite edge portions of said plates being resilient, one of said latter edge portions extending into the channel of an adjacent plate and being free to flex between the partition and the opposite wall of the channel, substantially as described.

1,400,439. ELECTRIC RAILWAY-SWITCH. ROBERT L. JOHNSON, Nashville, Tenn. Filed Sept. 23, 1920. Serial No. 412,169. 1 Claim. (Cl. 246—327.)



A switch point operating mechanism, including a resiliently held car operated bar having a longitudinal slot adjacent one end, a reversing pawl pivotally mounted on and movable with said bar, an oscillatable disk having a central pivot disposed through the slot of the bar and being operatively connected with the switch point, a block secured to one face of the disk and straddling the bar to permit the bar to slide thereunder, the opposite sides of the block having notches for alternate engagement by the pawl and a resiliently held plunger carried by the bar for engaging with the pawl for yieldably holding the pawl in alternate engagement with the notches.

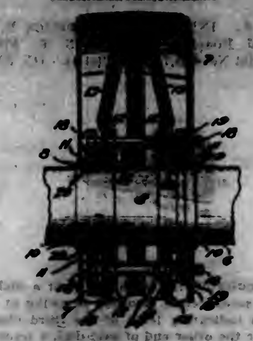
1,400,440. SHOE-POLISHING MACHINE. JOSEPH HENRY KARP, New York, N. Y. Filed Dec. 10, 1919. Serial No. 343,775. 6 Claims. (Cl. 15—82.)



3. In a shoe polishing machine, a foot support, an upstanding spindle, a pair of brushes, arms pivoted to the upstanding spindle and carrying the brushes and means associated with the arms for impelling the brushes toward one another, in combination with an electric motor, operative connections between the motor and the brushes for

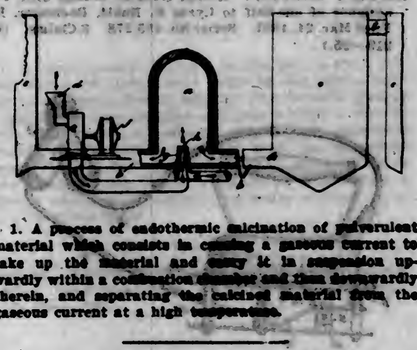
supporting bolts to the trunnions, and adjustable operative connections between the clutch and the foot support

for reciprocating the latter to and fro between the rotating brushes.



1,400,441. OIL-SEPARATOR TRAP. EDWARD C. KELLY, Boston, Mass. Filed June 17, 1920. Serial No. 389,561. 6 Claims. (Cl. 210—61.)

1. An oil separator having in combination, a closed fluid container, an open ended casing extending downwardly into said container, said casing having a cross sectional area of sufficient extent to permit the ready passage of clean-cut oils therethrough, a removable cover for the outer end of said casing, and means for discharging mingled oil and water directly into the space between said container and casing, and at a point substantially above the lower end of said casing.



1,400,442. WHEEL-HUB. PATRICK J. KILCULLEN, Philadelphia, Pa. Filed Feb. 2, 1920. Serial No. 355,888. 2 Claims. (Cl. 64—17.)

1. A hub of the character described including two spaced split collars for surrounding a shaft said bearing parts provided with a surface tapering to the axis of the shaft; members coacting with the tapered surfaces of said collars; and clamping bolts movable in the direction of the length of the shaft whereby said collars may be drawn tightened, said members all the while maintaining their relative positions along said tapered surfaces of the collars and shaft.

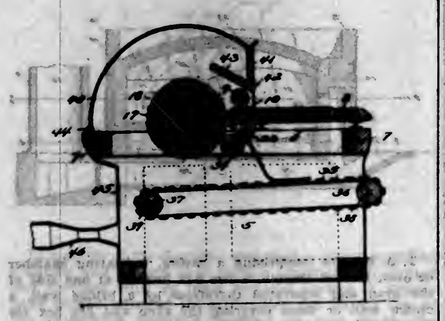
clamp the latter to the shaft, said collars having connecting portions spaced apart serving as means of connection to the peripheral part of a rotatable member; substantially as described.

1,400,443. CALCINING. CHARLES ARTHUR KING, Leeds, and WILLIAM STEPHEN RAWSON, London, England. Filed Sept. 3, 1918. Serial No. 252,437. 3 Claims. (Cl. 75—17.)

1. A process of endothermic calcination of pulverulent material which consists in causing a gaseous current to take up the material and carry it in suspension upwardly within a combustion chamber and then downwardly therein, and separating the calcined material from the gaseous current at a high temperature.

1,400,444. AIR-MOISTENING DEVICE. WILLIAM B. KRAKLAU and CHRIST BERTSCHENEIDER, St. Paul, Minn. Filed Apr. 4, 1921. Serial No. 458,428. 2 Claims. (Cl. 237—78.)

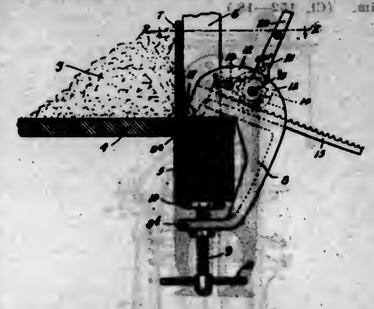
1. An air moistening device in connection with a hot water radiator, comprising a liquid container to float controlled water inlet having a discharge opening into the liquid container and in open communication with the interior of the radiator, a pipe in open communication with the interior of the container and extending



horizontally into the interior of the radiator, and a float cut off valve between said float controlled water inlet and the radiator.

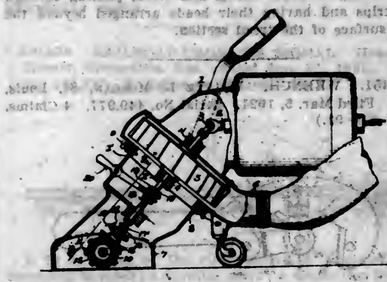
1,400,445. TENT-ROPE TIGHTENER. JOHN V. LOFQUIST, St. Paul, Minn. Filed Feb. 28, 1921. Serial No. 448,567. 3 Claims. (Cl. 135—15.)

1. A tent rope holding and stretching device comprising a journal bearing, a shaft journaled in the bearing and having at one end a handle by which to rotate it and at the other end being offset to form a crank and terminating in a means adapted to have the rope attached to it, said crank serving as a winding drum for a portion of the attached rope, and means for securing the bearing to the ground.



1,400,446. MACHINE FOR TREATING BLANKETS. JOHN MCCREARY and EDWARD J. MCCREARY, Cohoes, N. Y. Filed July 17, 1920. Serial No. 396,975. 6 Claims. (Cl. 26—4.)

2. In a blanket napping machine, the combination with a brush cylinder and means for feeding a blanket or fabric thereto, of an adjustable curved rigid pressure bar depending in advance of the cylinder and between the feed rolls and the cylinder.



1,400,447. GRAIN-DOOR-FORCING DEVICE. WILLIAM H. MCGANN, Minneapolis, Minn. Filed Aug. 30, 1920. Serial No. 407,052. 6 Claims. (Cl. 254—84.)

1. A grain door forcing device comprising a clamp having means for rigidly securing the same to a side sill and floor structure of a box car with its upper portion exposed in the door opening, a thrust plunger mounted on the upper portion of said clamp for movement therethrough against a grain door applied in the door opening, and a manually operated power multiplying device applied to

said clamp and operative on said plunger to force the same against a grain door.

1,400,448. VACUUM-CLEANER. EDWIN B. MALLENTHIN, Waukesha, Wis. Filed Feb. 10, 1921. Serial No. 443,943. 2 Claims. (Cl. 15—60.)

2. In a vacuum cleaner having a hollow head provided with an intake neck and a tangentially disposed discharge pipe, a motor driven shaft journaled in the head and a fan mounted on the shaft; the combination of a detachable suction shell having a throat secured to the head neck, a drive shaft journaled in the shell coupling, means for connecting the drive shaft and motor driven shaft, revoluble brushes mounted in the shell, and a gear connection between the brushes and drive shaft.

1,400,449. WATER-TROUGH. ALFRED N. MENARD, Sallx, Iowa. Filed Mar. 23, 1921. Serial No. 454,648. 5 Claims. (Cl. 119—73.)

1. In a water trough structure, the combination of a main tank, a secondary trough supplied with water from the main tank, a heater under said trough for heating it, and a pipe for the flow of water from the tank adjacent to said heater under said trough and back into said tank.

1,400,450. ARMORED PNEUMATIC TIRE. Juan Bautista Morells and Caro Bautista Morells, Barcelona, Spain. Filed Aug. 28, 1919. Serial No. 320,486. 1 Claim. (Cl. 152—18.)

A tire casing made up of fabric sections cemented together, an armor section secured to the fabric section and comprising two fabric strips with a metallic armor section secured between them, cementitious material securing said strips of the armor section to each other and to the armor, and a tread section made up of a fabric strip having a rubber lining, and rivets passing through the strips and having their heads arranged beyond the outer surface of the tread section.

1,400,451. WRENCH. Walter L. Morgan, St. Louis, Mo. Filed Mar. 5, 1921. Serial No. 449,977. 4 Claims. (Cl. 81—91.)

1. A wrench comprising a handle, an outer jaw, a toothed shank pivotally connecting the outer jaw with the handle, a rotatable toothed jaw engaging the teeth of the shrank, means for holding the teeth in engagement and a link pivotally connecting the rotatable jaw with the handle, whereby the latter may be moved longitudinally of the shank.

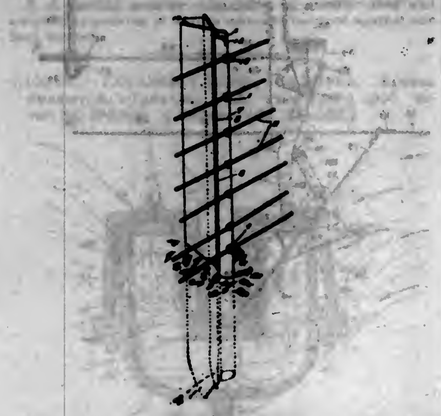
1,400,452. TUBE CONSTRUCTION. John F. Muldoon, Melrose, Mass. Filed Dec. 13, 1919. Serial No. 344,680. 2 Claims. (Cl. 152—13.)

1. A tube structure comprising an inner spirally-wound fabric layer having spaced-apart convolutions, an outer spirally-wound fabric layer having spaced-apart convolutions disposed over the spaces between and overlapping the convolutions of said inner layer, and a resilient rubber tubular body structure intimately united with said fabric layers and separating and yieldingly uniting both fabric layers and also yieldingly uniting the convolutions of each fabric layer.

1,400,453. TIRE-SPREADING TOOL. Roy C. Norton, Los Angeles, Calif., assignor of one-half to William E. Nation, Los Angeles, Calif. Filed Mar. 31, 1921. Serial No. 457,185. 4 Claims. (Cl. 152—27.)

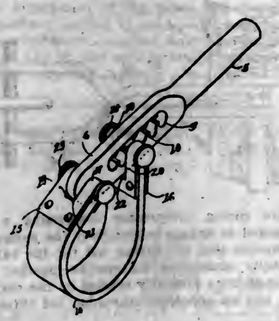
1. A tire spreading tool comprising an extensible body portion curved to fit over a tire, a hook arranged on one end thereof, a substantially straight arm extending from the opposite end of the body portion, and an auxiliary hook carried by said tool movable with respect to body portion.

1,400,454. FURNACE. Horace H. Penn, Chattanooga, Tenn. Filed Apr. 12, 1920. Serial No. 373,447. 4 Claims. (Cl. 263—15.)



1. A furnace comprising a casing, a heating chamber or oven located therein, a fire box located at one side of the oven and separated therefrom by a bridge wall, a crown wall or dome covering the oven and fire box for directing the products of combustion from the latter across the bridge wall into the former, fresh air passages opening through the top of the bridge wall and a plurality of passages connecting with the oven through the side walls in a plane below the fresh air inlets for conducting the gases to the atmosphere.

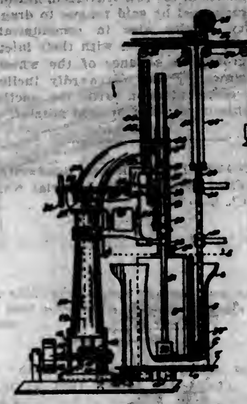
1,400,455. FENCEPOST. Edwin T. Peterson, Gowrie, Iowa. Filed May 17, 1920. Serial No. 382,009. 1 Claim. (Cl. 189—22.)



A fence post formed from a substantially rectangular sheet of metal which is centrally bulged to provide a cross sectionally round nose portion, the metal at the inner ends of the nose portion being brought into contacting engagement and riveted and from thence extended at opposite outer angles to provide the sides of the post, said

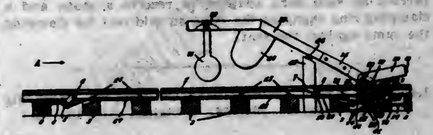
sides having their lower ends extended beyond the nose and the said extensions being V-shaped in side elevation

to provide prongs which are designed to be forced into the ground and to direct the lower portion of the nose also into the ground.



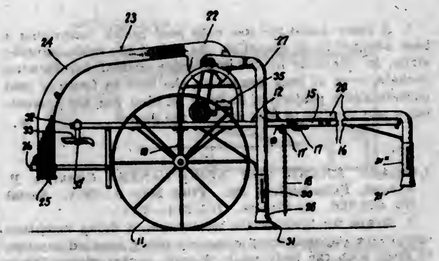
1,400,456. GREASE-CUP WRENCH. George W. Petrak, Marcellus, Wash. Filed Feb. 12, 1921. Serial No. 444,476. 1 Claim. (Cl. 81—64.)

In a device of the character described, a shank including a handle and a main body portion longitudinally slotted and provided with an inner serrated surface, a flexible band slotted adjacent its extremities and having one of the extremities pivotally mounted on said shank, the other extremity of said band being carried within the slotted portion and adjustable thereon, and reinforcing strips having cut-away portions therein adapted to register with the slots of said band to allow freedom of movement of said shank therein.



1,400,457. MACHINE FOR MAKING REINFORCED-CONCRETE PIPE. Burrows J. Primmer and Joseph L. Halstead, Los Angeles, Calif. Filed Mar. 16, 1920. Serial No. 366,841. 6 Claims. (Cl. 25—37.)

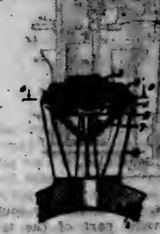
1. The combination in an apparatus for molding cement structures, of a rotatable mold, means for introducing plastic material to said mold during rotation of the same, tubular telescopic means for introducing and reinforcing wire into the mold chamber subsequent to the introduction of the plastic material, means for subsequently tamping the plastic material, means actuated by the up-strokes of the tamping means for elevating a part of the telescopic



wire introducing means, and means for counterbalancing the weight of the movable part of the telescopic wire introducing means.

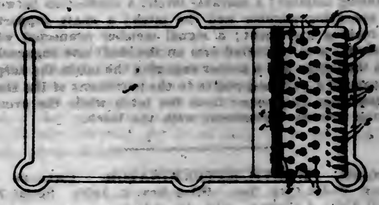
1,400,458. RAILROAD-CROSSING SIGNAL. Horace J. Ridout, Floresville, Tex. Filed Jan. 31, 1921. Serial No. 441,327. 5 Claims. (Cl. 246—299.)

1. In a device of the class described, a car-actuated operating member; a movable latch; a connection between the operating member and the latch; a shaft supported for rocking movement; a signal member connected with the shaft; a car-actuated arm on the shaft and engageable with the latch; and a keeper engaging the latch, the keeper comprising a part responsive to the movement of the shaft to disengage the keeper from the latch while the arm is moving toward engagement with the latch.



1,400,459. WEEVIL-EXTERMINATOR. Charles C. Roe, Wolfe City, Tex. Filed Nov. 2, 1920. Serial No. 421,320. 4 Claims. (Cl. 43—140.)

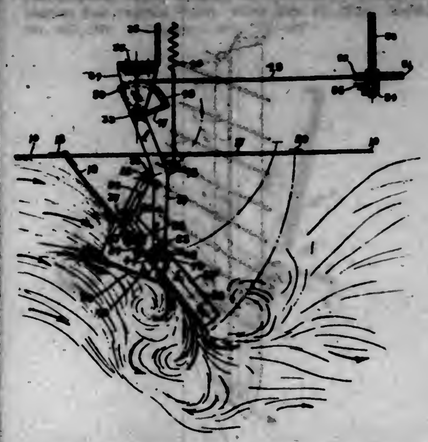
1. An apparatus for the purpose indicated having a supporting frame and wheels for supporting the frame



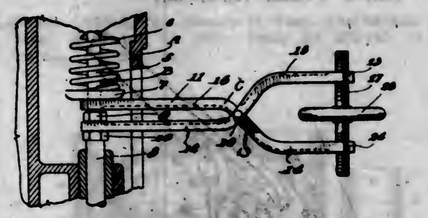
ing standing projects with an outer and outlying guiding finger having at its outwardly extending margin an attaching device having a main nozzle supported by said projection over the tops of the plants in the row traversed, flexible pendant agitators also supported by said tongue to drag upon the plants, auxiliary nozzles also in communication with the suction device and disposed with their inlet ends adjacent to the ground in advance of the wheels of said frame, and downwardly and rearwardly inclined receptacles also in communication with the suction device to receive the objects ejected by said nozzles.

1,400,460. RING-SETTING. Ernst Rosenthal, Brooklyn, N. Y. Filed [illegible], 1921. Serial No. 440,956. 6 Claims. (Cl. 63—26.)

1. A ring setting comprising a plurality of prongs, a plurality of bars connected with said prongs, a ridge seat carried by said bars adapted to receive a stone and a clamping ring engaging the stone on said seat for clamping the same against the seat.



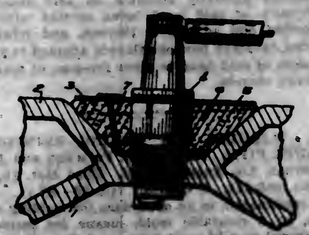
1,400,461. GAME. Tony Sicard, Gallatin, Pa. Filed July 6, 1920. Serial No. 394,154. 2 Claims. (Cl. 46—41.)



1. A game board for use with pool tables comprising a base adapted to be placed on one end of the table, parallel strips on the base at the rear edge thereof for forming pockets, rows of pegs located on the base in front of said pockets and a projection in front of each peg for preventing a ball coming to rest against the peg.

1,400,462. BRAKE FOR AEROPLANES. Charles P. Salomé, Philadelphia, Pa. Filed May 2, 1921. Serial No. 466,256. 21 Claims. (Cl. 244—29.)

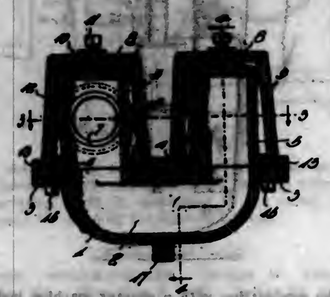
1. Means for braking the momentum of flying machines comprising opposed wing-planes normally adapted to close in flush with the body walls thereof, pocket planes interconnected with said wing-planes, means for simultaneously moving the wing-planes outwardly in opposed forwardly-inclined relation relative to the body of the machine and simultaneously outwardly swinging the pocket planes into rearwardly inclined relation with respect to the wing planes.



1,400,463. VALVE-LIFTER. Telford Sandefur, Roanoke, Va. Filed Mar. 9, 1920. Serial No. 362,396. 6 Claims. (Cl. 29—66.2.)

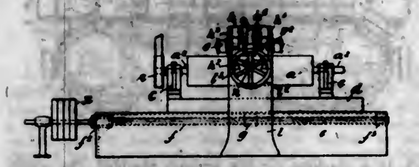
3. A valve spring compressor comprising a pair of shanks arranged to engage respectively the spring seat of a valve structure and the lifting rod for the valve stem, means pivotally connecting the shanks together intermediate their ends, nuts pivotally carried by the rear ends of the shanks, and an oppositely threaded rod threaded into said nuts.

1,400,464. SPARK-PLUG PACKING. Roy R. Seneca and Lawrence T. White, Pasadena, Calif. Filed Jan. 18, 1921. Serial No. 438,185. 7 Claims. (Cl. 123—193.)



4. The combination with a cylinder head having a recess and a spark plug extending through said cylinder head

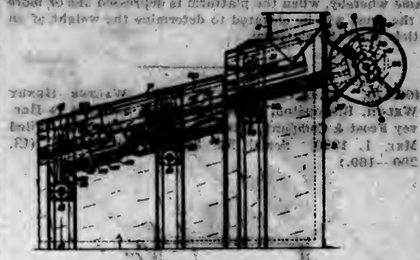
and the head of said [illegible] of a packing member received over said plug and shaped to fill radial clearance therebetween, said packing member being formed of fibrous material impregnated with oil.



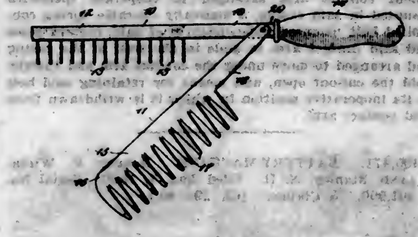
5. A packing member comprising an annular ring and an annular packing of fibrous material received against one face thereof.

1,400,465. EXPANSION-JOINT FOR PIPES. Samuel Sheriff, [illegible], N. Y. Filed July 6, 1920. Serial No. [illegible]. [illegible] (Cl. [illegible].)

4. An expansion joint for pipes comprising a body having a passage therethrough, at the opposite ends of which are seats, tubular members, closed at their tops and rotatably mounted on the seats, said members including means for attachment of the pipes, cup-shaped housings for the members carried by said body, being provided in their tops with screw-threaded holes, spring metal disks arranged on top of said members, and set-screws passing through said holes and engaging said disks.



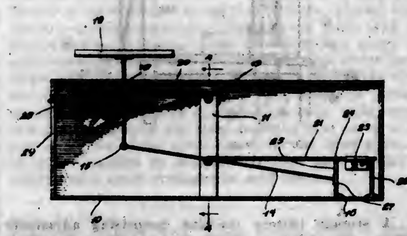
1,400,466. GRINDING-MACHINE. Frank Stache, Birmingham, England. Filed June 5, 1920. Serial No. 386,813. 3 Claims. (Cl. 51—95.)



1. In a grinding machine, the combination of a support movable on a bed for the longitudinal movement of the roll or work, means for revolving the roll or work upon the support, a bracket spanning the work and adapted to carry the grinding wheel, said bracket being slidably fitted to supports on said bed, means for moving the bracket in its supports for grinding cut, and means for revolving the grinding wheel, substantially as described.

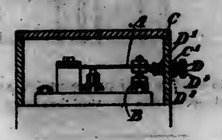
1,400,467. SEPARATOR. Thomas J. Stubenvath, Wellesley, Mass., assignor to Stuntevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 10, 1917. Serial No. 201,206. 4 Claims. (Cl. 20—56.)

1. A separator comprising, in combination, a casing, a pair of inclined screens for grading materials mounted thereon, beds of said screens having a pair of longitudinal bars between the sides thereof and a bracket bridging said bars between the screens, a pair of eccentrics, and rods extending from said eccentrics to said brackets to reciprocate said screens.



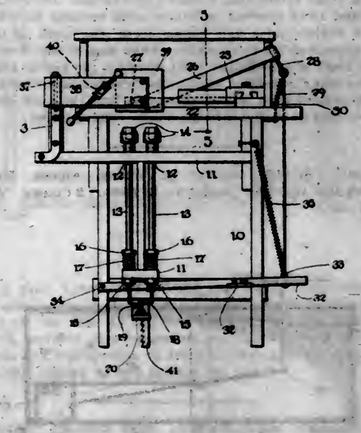
1,400,468. COMB. Violet V. Warner, New York, N. Y. Filed Apr. 12, 1921. Serial No. 460,611. 6 Claims. (Cl. 132—14.)

5. A comb comprising a solid comb-member including a body and teeth thereon, a hollow comb-member including spaced flexible sides and hollow teeth, the teeth of said solid comb-member being shorter than and of like number to the teeth of said hollow comb-member, the hollow comb-member being connected to the other comb-member for pivotal movement with respect thereto so that the solid comb-member may be moved into the hollow comb-member.



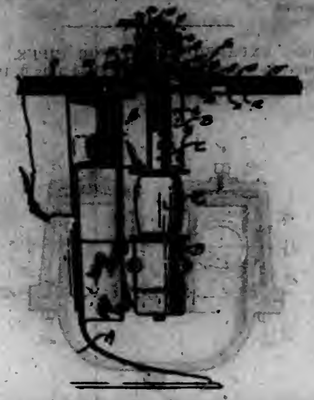
1,400,469. SCALE. Albert E. Weiss, Alpena, Mich. Filed Apr. 10, 1920. Serial No. 372,855. 2 Claims. (Cl. 265—48.)

1. A scale embodying a horizontally pivoted frame, said frame including a transverse pivot bar, a plurality of longitudinally extending spaced arms each having one of its ends pivotally secured to the bar and capable of independ-



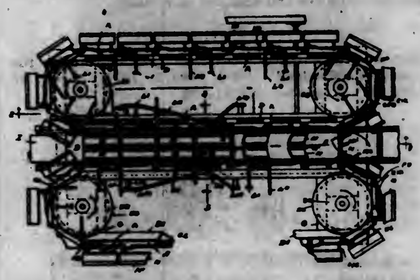
and movement, a weight mounted to the free end of each of the arms, each of said weights being of the same weight, a platform connected to the frame and means carried by the frame whereby, when the platform is depressed one or more of the arms will be deflected to determine the weight of an article upon the platform.

1,400,470. ELECTRICAL CUT-OUT. WALTER HENRY WELCH, Bishopston, Bristol, England, assignor to Harvey Frost & Company, Limited, London, England. Filed Mar. 1, 1920. Serial No. 362,177. 1 Claim. (Cl. 200—169.)



The combination of a casing, a respectively-operable electrical cut-out comprising a contact piece and a resilient contact arm arranged to coöperate therewith mounted in said casing, a manually operable spring controlled bolt mounted independently of said contact piece and said contact arm to slide in the wall of the casing and arranged to move under the contact arm and thereby hold the cut-out open, and means for retaining said bolt in its inoperative position in which it is withdrawn from said contact arm.

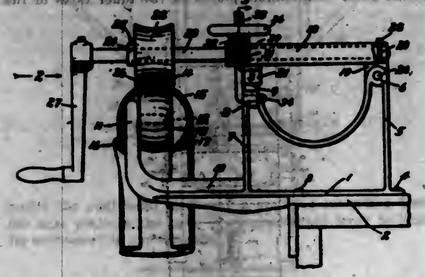
1,400,471. BATTERY-MACHINE. ROBERT F. WHEELAND, Stanley, N. D. Filed Aug. 7, 1920. Serial No. 401,990. 5 Claims. (Cl. 29—89.)



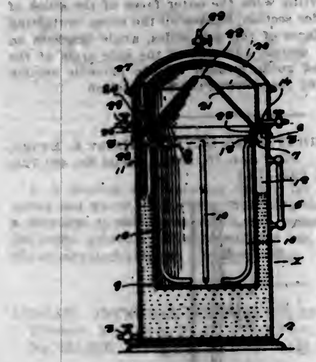
1. A storage battery machine comprising adjustable binding post receiving members, a separator gage, a cutting element, an adjustable stop for positioning the separators with respect to the cutting element and means whereby groups of separators and battery plates may be pressed together to facilitate their insertion in a battery jar.

1,400,472. ADJUSTABLE GUIDE-COLLAR FOR SHAPING-MACHINES. WILLIAM R. WRIGHT, Lenton, Tenn. Filed Feb. 21, 1921. Serial No. 445,606. 9 Claims. (Cl. 144—248.)

1. The combination with a shaping machine including a cutter, of a work table, a disk adjustably mounted for eccentric movement in said work supporting table with respect to said cutter, and a work guide collar eccentrically mounted in said disk.



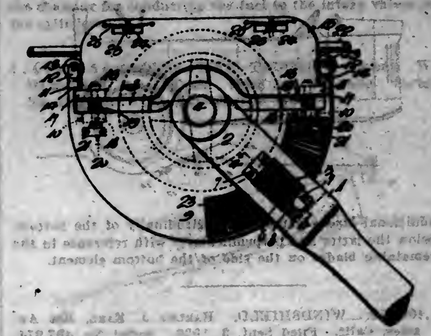
1,400,473. AUTOMATIC TILE-CUTTER. NOEL C. WHITNEY, Terre Haute, Ind. Filed May 4, 1921. Serial No. 466,771. 43 Claims. (Cl. 25—1.)



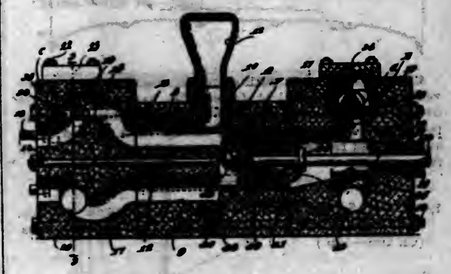
1. In a machine for the purpose specified, the combination of a pair of endless carriers, arranged side by side with their inner runs parallel; a series of supporting members mounted on said carriers, the said members when on the adjacent runs of the carrier supporting the material being operated upon; and a series of cutting devices mounted on the carriers and adapted to operate upon the material supported by the said members during the travel thereof, substantially as described.

1,400,474. TREAD-ROLLER. PAUL H. WILKINSON, San Bernardino, Calif. Filed Aug. 9, 1919. Serial No. 316,449. 6 Claims. (Cl. 154—10.)

1. A tread roller comprising a base, a pedestal extending upwardly from the rear end of the base, a second pedestal extending upwardly from the forward end of the base, an arm extending forwardly from the lower end of the second pedestal, a head extending upwardly from the forward end of the arm, a crown roller supported by the head, an operating shaft bearing pivotally connected to the first pedestal and adapted to rest upon the second pedestal, means for removably connecting the forward end of the shaft bearing to the second pedestal, an operating shaft mounted in the shaft bearing, a concave roller upon the operating shaft in opposition to the crown roller, and means for rotating the operating shaft.



1,400,475. STEAM-COOKER. GEORGE W. ATKINSON, Louisa, Ky. Filed Feb. 3, 1921. Serial No. 442,171. 2 Claims. (Cl. 53—2.)

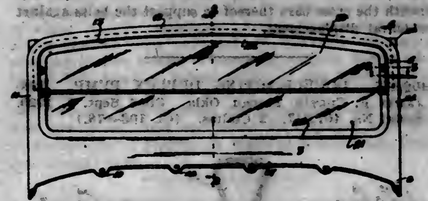


1. A steam cooker comprising a boiler having at its upper end an inwardly directed annular flange on the inner edge of which is an inwardly-inclined annular skirt, a can removably arranged in the boiler and having an inwardly-inclined annular upper portion seated in said skirt of the boiler and also having means to conduct steam from the steam space of the boiler to the lower portion of the interior of the can, and a condenser head having an inwardly-inclined flange removably seated in said annular portion of the can and also having a water jacket and an interior cone and valved outlet for water of condensation.

1,400,476. TROLLEY-HARP ATTACHMENT. JAMES C. COOPER, Sr., Altoona, Pa., assignor of one-half to Harry M. Wharton, Altoona, Pa. Filed Sept. 1, 1921. Serial No. 497,558. 5 Claims. (Cl. 191—78.)

1. The combination with a trolley pole harp, a trolley wheel and an axle supporting the wheel between the arms of the harp, of a frame having a lower section having side walls loosely suspended from said axle between said wheel and the arms of said harp, an upper frame section having side walls upon opposite sides of said wheel, coöperating means carried by said frame sections for limiting upward movement of the upper section, cross bars carried by the side walls of said frame sections, holes extending upwardly through said cross bars, springs upon said bolts between said cross bars to yieldably retain the upper frame section in a raised position, and blocks releasably secured between the walls of the lower frame section and beneath the cross bars thereof to support the belts against accidental displacement.

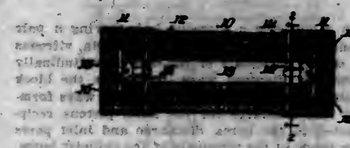
1,400,477. DOUBLE-ACTING DUPLEX PUMP. BENJAMIN F. CURTIS, Poteau, Okla. Filed Sept. 8, 1920. Serial No. 407,947. 2 Claims. (Cl. 103—78.)



1. A pump comprising a vitreous body having a pair of longitudinally extending cylinder bores therein, vitreous heads fitted on the terminals of the body, longitudinally extending centrally disposed ways, formed in the block and heads intermediate the cylinder bores, the ways forming the inlet and discharge for the fluid, pistons reciprocably mounted in the bores, discharge and inlet ports formed in the heads at the terminals of the cylinder bores, laterally projecting ways connecting the ports with the longitudinally extending ways, and with the ports, the ports communicating with the sides and tops of the heads, detachable plates fitted over said ports, depending stems carried by the cover plates for the discharge ports, a slidably mounted valve arranged on each stem, spring means coiled around the stem engaging said valve, a leaf spring carried by the cover plates for the inlet ports, inlet valves carried by said leaf springs, and annular resilient valve seats arranged in said ports.

1,400,478. SKID FOR MOTOR-VEHICLES. JOSEPH DESCHAMPS, Chesterfield, Va. Filed May 28, 1921. Serial No. 473,518. 1 Claim. (Cl. 288—14.)

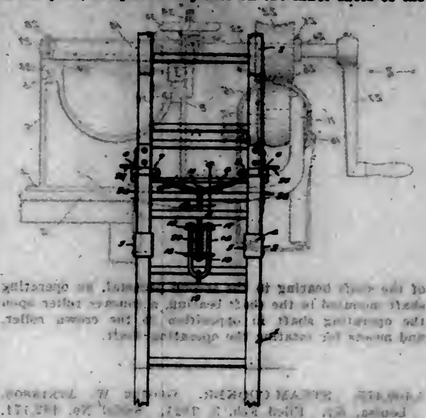
A skid for a motor vehicle, comprising a channel element having a bottom beveled at one end on the underside thereof, a cleat carried by the upper side of said bottom



ment the entrance end thereof, additional elements spaced apart on the upper surface of the fabric, lateral extending transversely of the lower surface of the fabric, said additional blades extending longitudinally of the bottom, below the latter and perpendicularly with reference to the remaining blades on the side of the bottom element.

1,400,479. WINDSHIELD. HARLEY J. EARL, Los Angeles, Calif. Filed Sept. 8, 1920. Serial No. 407,974. 4 Claims. (Cl. 296—84.)

1. The combination with a stream line cowl for a motor vehicle, of a windshield frame, the base of which fits over the cowl so that the lines of the windshield form interrupted continuations of the stream lines of said hood, and a glazed frame adjustably arranged in said windshield frame.



1,400,480. SAFETY-FUSE. ALFRED L. HUDNICK, Chicago, Ill. Filed Mar. 7, 1918. Serial No. 220,961. 5 Claims. (Cl. 200—119.)

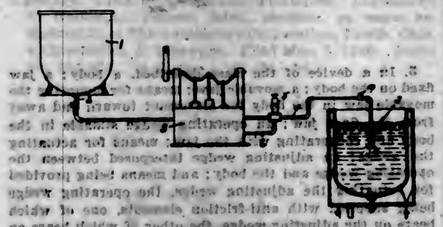
1. A safety fuse having in combination, a closed casing, a fusible element therein electrically connected to parts exterior of the casing, and deflecting means contained within said casing and adapted to deflect any axially entering element from axial penetration of the fuse.

1,400,481. LADDER. EDWARD FRANCIS EVANS, Phoenix, Ariz. Filed Nov. 2, 1920. Serial No. 421,642. 2 Claims. (Cl. 228—60.)

A ladder comprising a fixed section and a movable section which contacts with and is slidable on the fixed section, a yoke surrounding the sections and hingedly connected to the fixed section, a rod pivotally connected to the inner ends of the yoke, a bolt member having a hooked end engaging the rod, a U-shaped element supported on one of the rounds of the fixed section, spaced plates on the arms of the U-shaped member, removable means for retaining the plates thereon, bolt receiving openings through both of the plates, a bolt on the bolt receiving ends of the inside plate, a spring surrounding the bolt and contacting with both of the plates, shoes journaled on the outer member of the yoke, compressible plates on the inner faces of the

shoes and contacting with the outer faces of the stiles of the movable ladder section, flanges on the shoes contacting with the outer faces of the said stiles, angle brackets on the fixed ladder section adjacent to the side arms of the yoke, and a fixed guide member on the movable section partly surrounding the stiles of the fixed section.

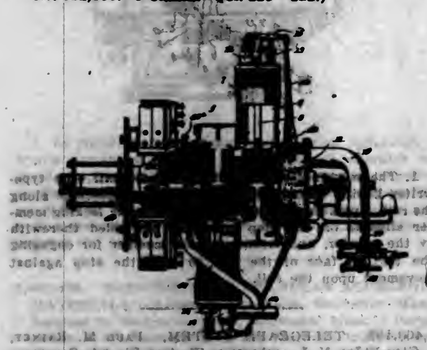
1,400,482. ANTIRATTLING DEVICE. HARRY E. EWING, Smithfield, Pa. Filed Apr. 15, 1921. Serial No. 461,728. 2 Claims. (Cl. 292—76.)



1. A device of the class described comprising a base member having a rightangularly extending projection, a spring strip secured to the outer end of said projection, the free end of said strip being of curved shape and a strip of non-metallic material located on the operative face of the spring strip.

1,400,483. LEVER-LOCK FOR END-GATES. CARL FREDERICK FERR, Arlington, Kans. Filed Aug. 30, 1919. Serial No. 319,894. 1 Claim. (Cl. 292—40.)

The combination with a hinged member, of a base plate secured thereto, a substantially triangular member pivotally mounted upon the base plate, oppositely disposed spring actuated latches pivotally connected to the opposite corners of the triangular member for engagement with stationary keepers, an additional latch pivotally mounted to the other corner of the triangular member for engagement with a stationary keeper, a guide lug extending from

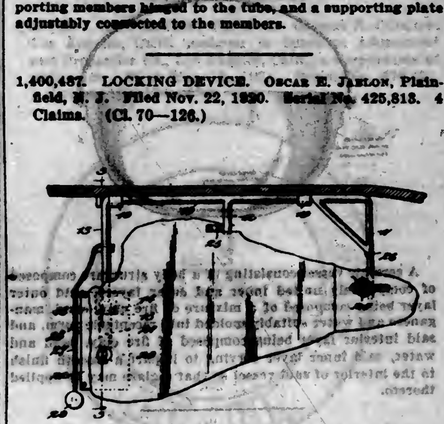


the base plate for the passage of the additional latch, an operating lever extending from the triangular member opposite the additional latch and a stop lug extending from the base plate in the path of the operating lever to limit its movement in one direction.

1,400,484. PROCESS OF TREATING SUBSTANCES. BENJAMIN A. GOULD, Toronto, Ontario, Canada, assignor to Merrell-Soule Company, Syracuse, N. Y., a Corporation of New York. Filed Mar. 6, 1920. Serial No. 363,757. 14 Claims. (Cl. 99—11.)

4. A process of combining butter fat with skim milk solids and water, comprising atomizing the butter fat into a solution of skim milk solids and water by forcing the fat under pressure not substantially less than 700 lbs. to the square inch through a minute orifice.

1,400,485. INTERNAL-COMBUSTION ENGINE. JOHN W. HUDSON, Brooklyn, N. Y. Filed Sept. 3, 1919. Serial No. 321,880. 9 Claims. (Cl. 123—122.)



1. The combination with an internal combustion engine, including a crank case and crank shaft, the former having radial cylinders provided with reciprocating pistons, operatively connected with the crank shaft, a rectifying chamber surrounding the cranks shaft, means for delivering fuel to the chamber, means in the chamber for breaking the fuel by impingement of the fuel against said means to disintegrate the fuel, and means between the cylinders and the chamber for conducting the fuel to the intake valves of the cylinders.

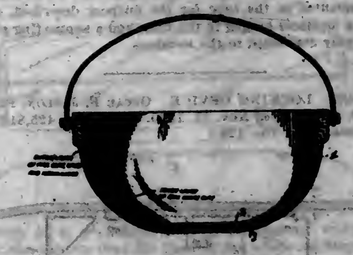
1,400,486. OPERATING-TROUGH. GEORGE W. HUBBRICH, Breda, Iowa. Filed Jan. 17, 1920. Serial No. 352,022. 3 Claims. (Cl. 128—103.)

1. An operating trough comprising a tube, a rod adjustably mounted in the tube for the purpose described, supporting members hinged to the tube, and a supporting plate adjustably connected to the members.

1,400,487. LOCKING DEVICE. OSCAR E. JARLON, Plainfield, N. J. Filed Nov. 22, 1920. Serial No. 425,813. 4 Claims. (Cl. 70—126.)

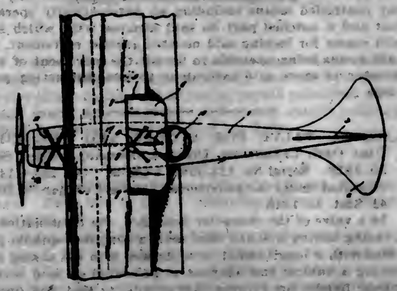
1. In a locking device as characterized, a movable member, obstructing extensions movable with said member, and key controlled means including an automatically operable bolt and a notched part on said member with which said bolt coacts for locking said member against movement, the said means being operable to permit the movement of said member to move said extensions to non-obstructing positions.

1,400,488. VALVE FOR MOTORS AND THE LIKE. CARL OTTO LAUBSCHER, Dresden, Germany. Filed Sept. 30, 1916. Serial No. 123,068. 1 Claim. (Cl. 251—141.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



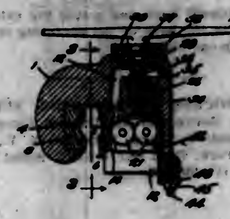
In a valve of the character described, the combination of a casing having a sharp edge seat, a threaded spindle provided with a longitudinal bore screwed into the casing and having a conical end adapted to be seated on said seat, a lateral handle for turning said spindle to seat and unseat said conical end, a spring secured at one end to the spindle and at the other end to the casing for automatically moving said valve from the open to the closed position, and

a flat spring secured to said spindle and having a projection adapted to snap into a notch in the casing when the



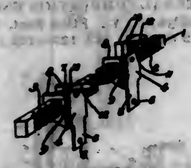
valve is moved into its open position, and a funnel at the open end of said spindle communicating with said longitudinal bore.

1,400,489. CERAMIC VESSEL. FREDERICK S. LOWRY, deceased, Roseville Ohio, by Mildred Lowry Hart, administratrix, Roseville, Ohio. Filed Mar. 1, 1919. Serial No. 280,067. 1 Claim. (Cl. 13—59.)



A ceramic vessel consisting of a body structure composed of concentrically united inner and outer layers, said outer layer being composed of a mixture of fire clay, sand, manganese and water suitably molded into receptacle form, and said interior layer being composed of fire clay, sand and water, said inner layer serving to impart a smooth finish to the interior of said vessel so that a glaze may be applied thereto.

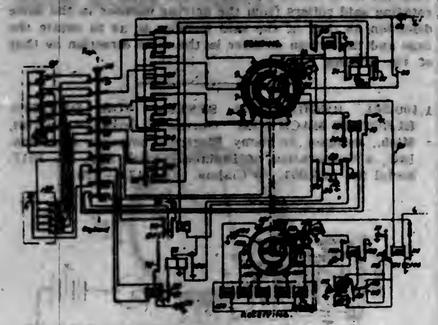
1,400,490. AEROPLANE. DAN MCGEE, Fort Worth, Tex. Filed Apr. 25, 1921. Serial No. 464,074. 1 Claim. (Cl. 244—29.)



An aeroplane comprising a fuselage having at its rear end a rigid stabilizer and a rigid vane, a wing fixed with respect to the fuselage and having a recess in the rear edge, a vertically swinging fin normally centrally hinged to the wing and movable in said recess and having a pendant arm on which is rearwardly directed handle, a frame superimposed on the forward portion of the fuselage, and a horizontally swinging rudder pivoted between the top of said frame and the fuselage and having a rearwardly directed handle; the said fuselage being also provided with a seat for an aviator, and the handles being arranged in close proximity to said seat.

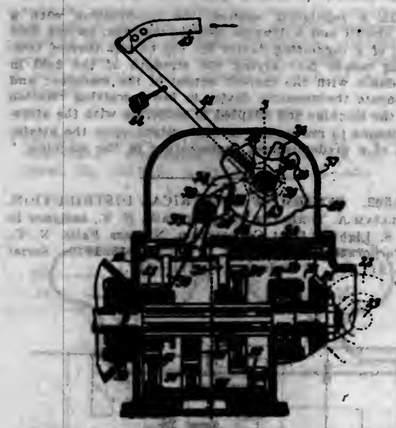
1,400,491. CLAMP. FRANKLIN M. MECHLING, Wichita, Kans. Filed Nov. 5, 1920. Serial No. 422,028. 5 Claims. (Cl. 24—126.)

5. In a device of the class described, a body; a jaw fixed on the body; a movable jaw; means for mounting the movable jaw in the body for movement toward and away from the fixed jaw; an operating wedge slidable in the body and coöperating with the jaw; means for actuating the wedge; an adjusting wedge interposed between the operating wedge and the body; and means being provided for actuating the adjusting wedge, the operating wedge being supplied with anti-friction elements, one of which bears on the adjusting wedge, the other of which bears on the movable jaw.



1,400,492. TABULATOR-STOP FOR TYPEWRITERS. WILLIAM MOLER, Oshkosh, Wis. Filed Oct. 15, 1920. Serial No. 417,066. 6 Claims. (Cl. 197—70.)

1. The combination with the tabulator rail of a typewriter having a toothed face, of a stop adjustable along the rail, a pointer projecting from the stop, a locking member slidable on the stop and held assembled therewith by the pointer, and means on said member for engaging the toothed face of the rail to hold the stop against movement upon the rail.

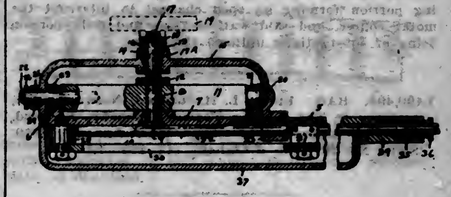


1,400,493. TELEGRAPH SYSTEM. PAUL M. RAINEY, Glen Ridge, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 6, 1918. Serial No. 216,168. 81 Claims. (Cl. 178—23.)

19. In a telegraph system, means to set up a group of selecting units of varying characteristics, means to transmit a starting unit and a group of selecting units, and

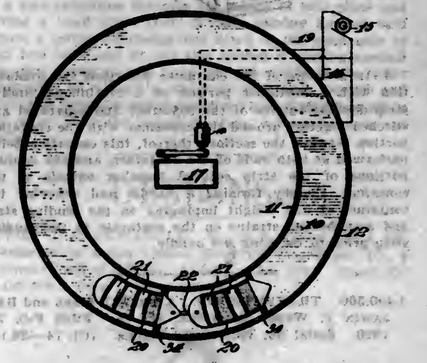
means whereby one unit of each group may determine the character of the starting unit of the succeeding group.

1,400,494. LINE-CONTROLLED TRACTOR. LLEWELLYN S. WOODHULL, Detroit, Mich., assignor, by mesne assignments, to The Automotive Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Mar. 6, 1919. Serial No. 281,084. 10 Claims. (Cl. 74—58.)



4. In speed changing power transmission apparatus, a driven element, a series of gears by means of which the speed of operation of the driven element may be increased or diminished, a cam for each of the gears continuously rotatable to cause sequential operation of the gears, and a line operated spring-returned lever for intermittently turning the cams.

1,400,495. TREATMENT OF GRANULAR ALUMINOUS MATERIALS. HARRY O. ANDERSON, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 30, 1921. Serial No. 457,006. 8 Claims. (Cl. 252.)



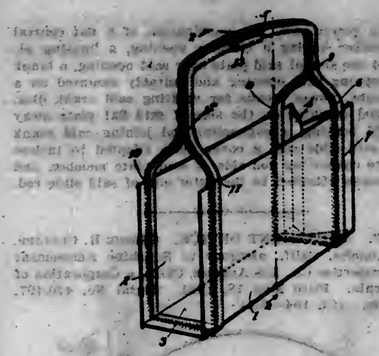
1. The method of treating crystalline aluminous material which comprises the step of subjecting such material in a suitable state of subdivision to the action of a silicate of an alkali metal.

1,400,496. POWER-SAW. JAMES D. BONNEVY, Portland, Oreg. Filed Aug. 7, 1920, Serial No. 401,856. Renewed Oct. 27, 1921. Serial No. 510,895. 2 Claims. (Cl. 143—68.)

1. In a power saw, the combination of a flat central plate member having a circular opening, a housing attached to one side of said plate over said opening, a crank disk occupying said opening and suitably mounted on a shaft means, power means for rotating said crank disk, a slide rod mounted on the side of said flat plate away from said housing, a connecting rod joining said crank disk to said slide rod, a cover plate adapted to inclose the entire connecting rod side of said plate member, and a saw means attached to the outer end of said slide rod.

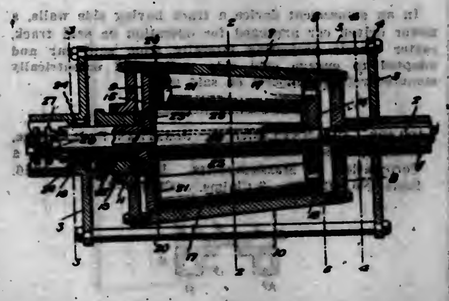
1,400,497. AMUSEMENT DEVICE. GEORGE R. CUDLIPP, Los Angeles, Calif., assignor to Sunshine Amusement and Properties Co., Los Angeles, Calif., a Corporation of California. Filed May 18, 1921. Serial No. 470,497. 1 Claim. (Cl. 104—53.)

In an amusement device a track having side walls, a motor driven car arranged for operation on said track, caster wheels projecting laterally from said car and adapted to engage said side walls, and eccentrically mounted rolling supports on said car.



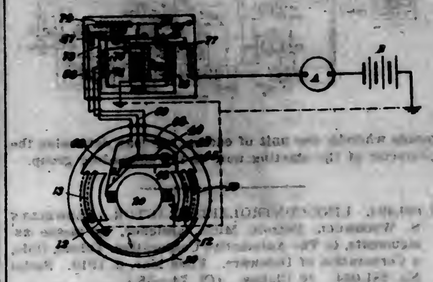
1,400,498. CHANNEL-BRICK. JONATHAN P. B. FISKE, Newton, Mass., assignor to Fiske & Company, Inc., a Corporation of Massachusetts. Filed July 3, 1916. Serial No. 108,160. 3 Claims. (Cl. 72—41.)

1. A channel brick of the kind described, adapted as a building unit for hollow twin wall structures, said brick comprising two cored wall sections, each section



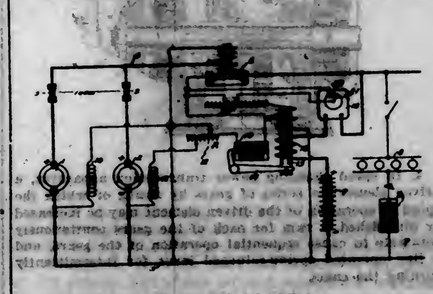
binding against outer and inner edges, the inner side being of substantially uniform thickness, each section forming a mortar mat and both sections being united by a horizontal body portion at one side of said vertical wall sections, the wall sections and uniting portion forming an open channel to interrupt the motar course, and said wall sections and body portion being of substantially uniform thickness.

1,400,499. BAG. Evelyn L. Henderson, Norwood, Ohio, assignor to The Kemper Thomas Company, Norwood, Ohio, a Corporation of Ohio. Filed June 27, 1919. Serial No. 307,148. 6 Claims. (Cl. 150—1.)



3. In a device of the character described the combination with a container portion of a continuous binding strip doubled outside of the container and separated and stitched together around the container with the container portion between the sections thereof, this operation being performed at both ends of the container, and the doubled portions of the strip secured together outside of the container, thereby forming a handle and relieving the container of any weight impinging on the binding strip and transferring strains on the container to the binding strip prior to reaching the handle.

1,400,500. TRANSMISSION. Andrew J. Earl and Benjamin F. Webb, Sisterville, W. Va. Filed Feb. 21, 1920. Serial No. 360,516. 6 Claims. (Cl. 74—26.)



1. An apparatus of the class described comprising a driven member and a driving member, a roller cage rotatably mounted on the driving member, a casing carrying the driven member and adapted to inclose the cage with the inner circumference of the casing and means for rotating said rollers from the driving member in the same direction as that of the said member so as to rotate the cage and the driven member in the same direction as that of the driving member.

1,400,501. REGULATING SYSTEM FOR DYNAMO-ELECTRIC MACHINES. Orrin F. Conklin, Detroit, Mich., assignor to Remy Electric Company, Anderson, Ind., a Corporation of Indiana. Filed Apr. 28, 1917. Serial No. 165,051. 5 Claims. (Cl. 171—239.)

1. In a regulating system, the combination with a work circuit and a dynamo electric machine, having field coils; of a regulating device for the output thereof comprising means for varying the strength of the field in accordance with the current output of the machine; and a separate thermostatic device in heat receiving relation with the machine and adapted to cooperate with the aforesaid means to reduce the current output upon the attainment of a predetermined temperature in the machine.

1,400,502. SYSTEM OF ELECTRICAL DISTRIBUTION. William A. Turbayne, Niagara Falls, N. Y., assignor to U. S. Light & Heat Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed Aug. 13, 1919. Serial No. 317,276. 3 Claims. (Cl. 171—313.)

1. In combination, a pair of variable speed generators, a pair of mains across which said generators are connected in parallel, each of said generators having a field winding, said field windings being connected to one of said mains, an adjustable resistance, the other terminals of said windings being connected together through said resistance, a variable resistance medium, means for controlling said medium, said windings being connected through said medium to the other of said mains.

1,400,503. FILM-CABINET. Clarence M. Gaskins, Jr., Baltimore, Md., assignor to Hall-Gaskins Mfg. Co., Inc., Baltimore, Md. Filed Jan. 13, 1917. Serial No. 142,289. 6 Claims. (Cl. 160—6.)

1. A film cabinet including a base comprising spaced standards, means connecting the standards intermediate their ends, a plurality of annular metallic members supported by the standards, disks of insulating material supported by said metallic members to provide a plurality of compartments, and a closure for each of said compartments.

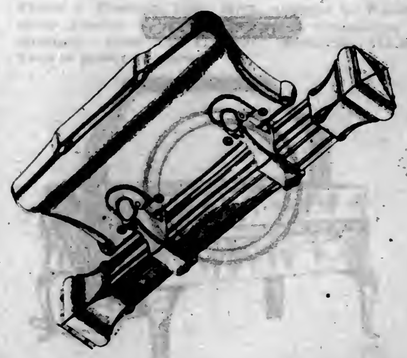
1,400,504. LIQUID-FUEL BURNER. Carl William Springston, Wellington, Kans. Filed Jan. 20, 1920. Serial No. 352,563. 1 Claim. (Cl. 158—63.)

A fluid fuel burner comprising an unjointed pipe, a nozzle, the pipe defining a single loop beginning beneath the nozzle and passing over the nozzle to beneath the nozzle, the nozzle mounted to one end of the pipe and directed to the top portion of the pipe, a perforated baffle mounted beneath the upper portion of the pipe and adapted to direct the flame from the nozzle to the side portions of the loop and a drip pan cooperating with the baffle to direct flame from the pan to said side portions.

1,400,505. BED-SPRING. Charles H. Gail, Cincinnati, Ohio, assignor to The Shott Manufacturing Company, Cincinnati, Ohio, a Corporation of Ohio. Filed June 21, 1920. Serial No. 390,312. 24 Claims. (Cl. 5—29.)

1. In an appliance of the character described, the combination of a substantially-rigid frame having side and end bars and an intermediate longitudinal bar between and spaced away from said side bars, a supporting structure having independent sections on opposite sides of said intermediate bar and fastened thereto and to the corresponding side-bars of the frame, and upright spiral-springs mounted on said supporting-structure, substantially as described.

REISSUES.



15,246. BOLT-LOCK. Ewing Munson, Scammon, Kans. Filed Dec. 24, 1920. Serial No. 433,055. Original No. 1,346,907, dated July 20, 1920, Serial No. 271,589, filed Jan. 17, 1919. 2 Claims. (Cl. 189—32.)

1. In a bolt lock, the combination with an angle plate, of a bolt extending through one flange of said plate and having a head other than circular bearing against said flange, a collar embracing and fitted to the sides only of said bolt head and at one side having a bearing against the other flange of said plate, the other side of the collar being clear of said plate, and a pin insertible through and removable from the collar and the head of said bolt while the collar is in the locked position, substantially as set forth.

DESIGNS.

59,946. CASKET-HANDLE. Frank B. Aston, Elgin, Ill., assignor to Aston Casket Hardware Co., Elgin, Ill., a Corporation of Illinois. Filed Jan. 15, 1921. Serial No. 437,599. Term of patent 7 years.

The ornamental design for a casket handle, as shown.

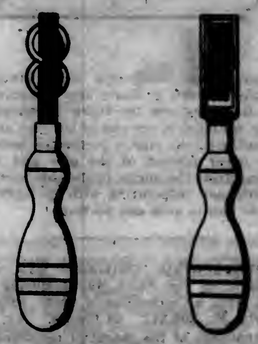
59,947. INSULATOR. Alexander O. Austin, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Aug. 12, 1918. Serial No. 249,553. Term of patent 14 years.

The ornamental design for an insulator, as shown.

59,948. FINGER-RING. Charles W. Bailey, Philadelphia, Pa. Filed June 11, 1921. Serial No. 476,955. Term of patent 7 years.

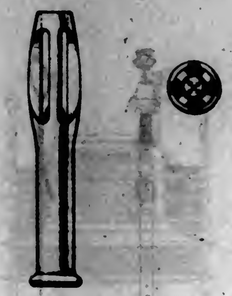
The ornamental design for a finger ring, as shown.

59,949. APPARATUS FOR HOUSING HOSE. Assignors to Baker, Hunt Wayne, Ind., assignor to Wayne Oil Tank and Pump Company, Fort Wayne, Ind., a Corporation of Indiana. Filed Dec. 20, 1920. Serial No. 432,126. Term of patent 14 years.



The ornamental design for an apparatus for housing hose as shown.

59,950. MEDICINAL TABLET. Alex Blackstone, Newark, N. J. Filed May 19, 1921. Serial No. 470,909. Term of patent 7 years.



The ornamental design for a medicinal tablet, as shown.

59,951. KNIFE-SHARPENER. Samuel Brook, New Bedford, Mass. Filed Jan. 10, 1921. Serial No. 436,874. Term of patent 3½ years.

The ornamental design for a knife sharpener, as shown.

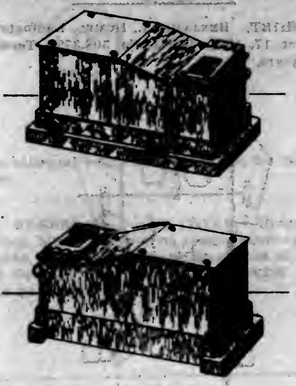
59,952. NOZZLE FOR SYRINGES. Henry L. Bower, East Orange, N. J. Filed July 14, 1921. Serial No. 484,776. Term of patent 14 years.

The ornamental design for a nozzle for syringes, as shown.

59,953. ALUMINUM ROASTER. Howard A. Church, Elkhart, Ind. Filed June 23, 1921. Serial No. 479,932. Term of patent 7 years.

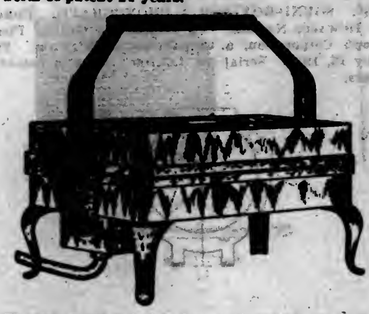
The ornamental design for an aluminum roaster, as shown.

59,954. KNOB FOR COOKING OR KITCHEN UTENSILS. George E. Curtiss, New Britain, Conn., assignor to Landers, Frary & Clark, New Britain, Conn., a Corporation of Connecticut. Filed Nov. 25, 1919. Serial No. 340,682. Term of patent 14 years.



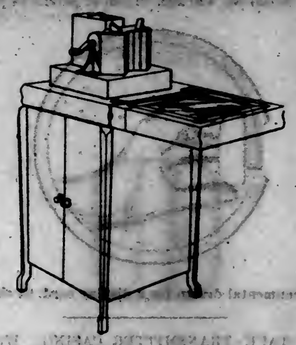
The ornamental design for a knob for cooking or kitchen utensils as shown.

59,955. DISPLAY-CARD. Charles Foster Farnham, Louisville, Ohio, assignor to American Stove Company, St. Louis, Mo., a Corporation of New Jersey. Filed Dec. 8, 1920. Serial No. 429,295. Term of patent 14 years.



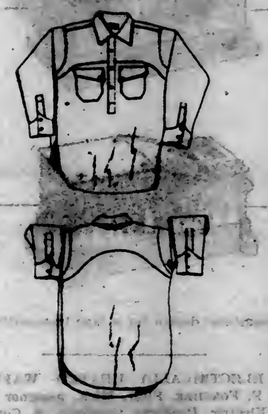
The ornamental design for a display card, as shown.

59,956. TAPE-TRANSMITTER CASING. William G. Plumartt, Rockville Center, N. Y. Filed July 23, 1921. Serial No. 487,202. Term of patent 3½ years.



The ornamental design for a tape transmitter casing, as shown.

59,957. ELECTRICALLY-HEATED WAFFLE-IRON. Frank F. Forshee, Flint, Mich., assignor to Westinghouse Electric Products Company, a Corporation of Michigan. Filed Feb. 11, 1921. Serial No. 444,298. Term of patent 14 years.



The ornamental design for an electrically heated waffle iron as shown.

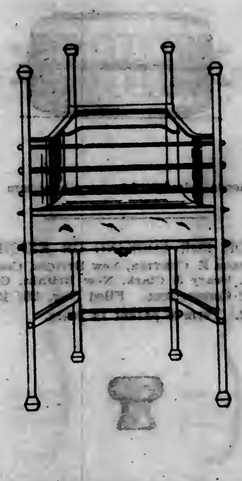
59,958. MOVING-PICTURE MACHINE. Frederick W. Hetzenberger, Dayton, Ohio. Filed Dec. 13, 1920. Serial No. 430,083. Term of patent 14 years.

The ornamental design for a moving picture machine, as shown.

59,959. SHIRT. Benjamin L. Homel, Ludington, Mich. Filed Oct. 17, 1921. Serial No. 508,879. Term of patent 14 years.

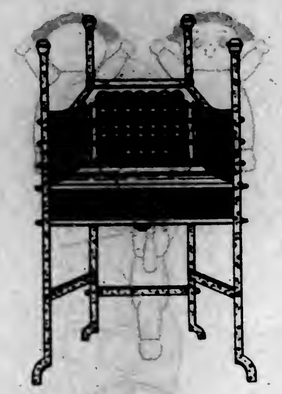
The ornamental design for a shirt as shown.

59,960. SOUND-BOX FOR A PHONOGRAPH. Edmond C. Howard, Norfolk, Va., assignor to Granby Phonograph Corporation, a Corporation of Virginia. Filed July 15, 1921. Serial No. 485,109. Term of patent 14 years.



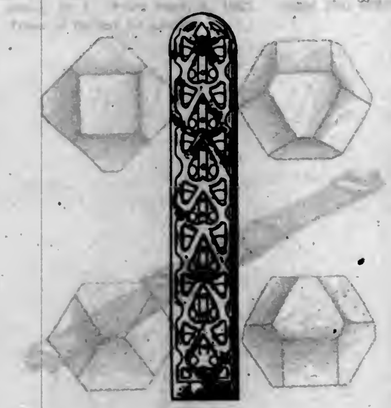
The ornamental design for a sound box for a phonograph, as shown.

59,961. BEDCOVER-RETAINER. Theodore S. Hermann, Spokane, Wash. Filed July 14, 1921. Serial No. 484,774. Term of patent 14 years.



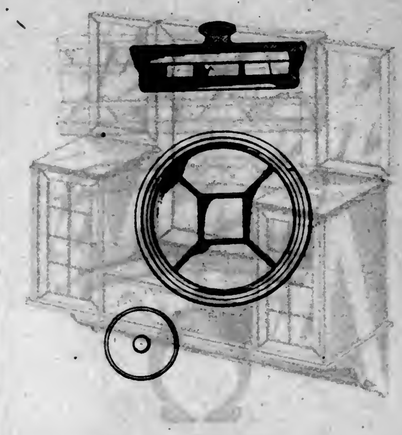
The ornamental design for a bedcover retainer as shown.

59,962. GAS-STOVE. Alfred H. Humphrey, New York, N. Y., assignor to General Gas Light Company, Kalamazoo, Mich. Filed Dec. 11, 1920. Serial No. 430,081. Term of patent 14 years.



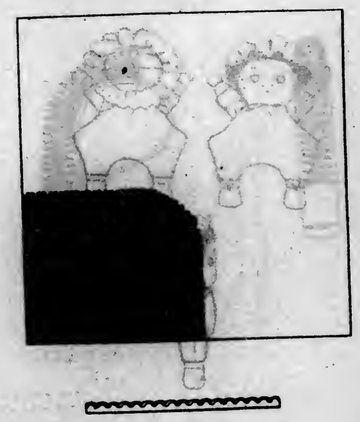
The ornamental design for a gas stove as shown.

59,963. GAS-STOVE. Alfred H. Humphrey, New York, N. Y., assignor to General Gas Light Company, Kalamazoo, Mich. Filed Dec. 11, 1920. Serial No. 430,082. Term of patent 14 years.



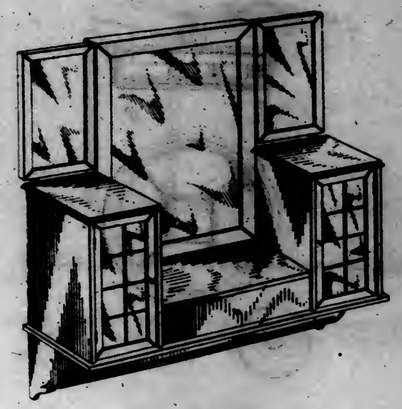
The ornamental design for a gas stove as shown.

59,964. RADIANT FOR GAS-STOVES. Alfred H. Humphrey, New York, N. Y. Filed Feb. 15, 1921. Serial No. 445,270. Term of patent 14 years.



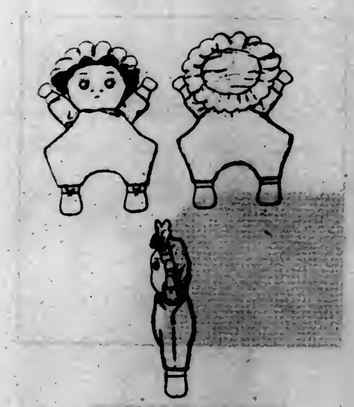
The ornamental design for a radiant for gas stoves, as shown.

59,965. RECEPTACLE FOR DENTISTS' USE. Spencer M. Hussey, Sidney Park, Pa., assignor to The Mysel Chemical Company, a Corporation of Delaware. Filed Jan. 7, 1921. Serial No. 435,751. Term of patent 14 years.



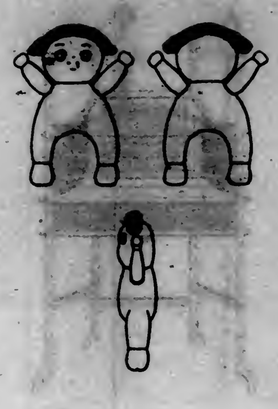
The ornamental design for a receptacle for dentists' use, as shown.

59,966. RUBBER MAT AND COVER. Henry Joseph, Grayling, Mich., assignor to Joseph Sanftary Products Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 16, 1920. Serial No. 423,195. Term of patent 14 years.



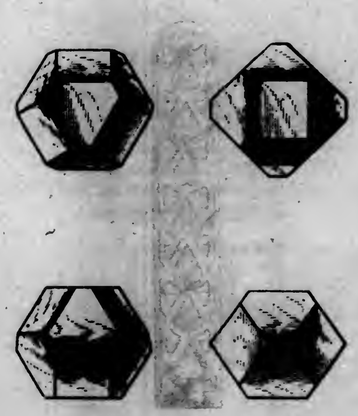
The ornamental design for a rubber mat and cover, as shown.

59,967. SHAVING-CABINET. Martin Jessel, Dallas, Tex. Filed Apr. 19, 1921. Serial No. 461,691. Term of patent 7 years.



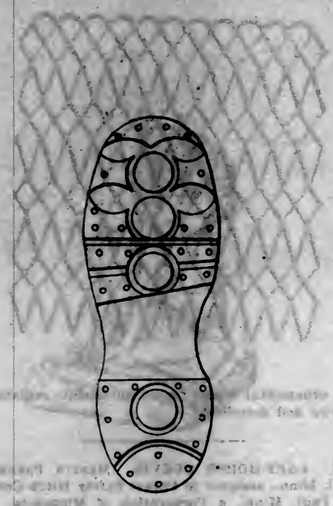
The ornamental design for a shaving cabinet as shown.

59,968. DOLL. Anna Keenan, Seattle, Wash. Filed Aug. 22, 1921. Serial No. 494,431. Term of patent 7 years.



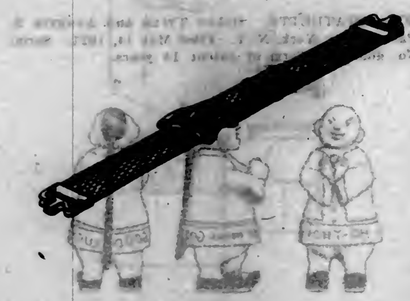
The ornamental design for a doll as shown.

59,969. DOLL. Anna Keenan, Seattle, Wash. Filed Sept. 17, 1921. Serial No. 501,461. Term of patent 7 years.



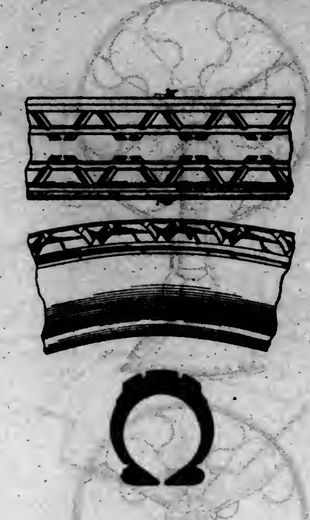
The ornamental design for a doll as shown.

59,970. DICE. Frank J. Knoefmakers, Chicago, Ill. Filed June 27, 1921. Serial No. 480,943. Term of patent 14 years.



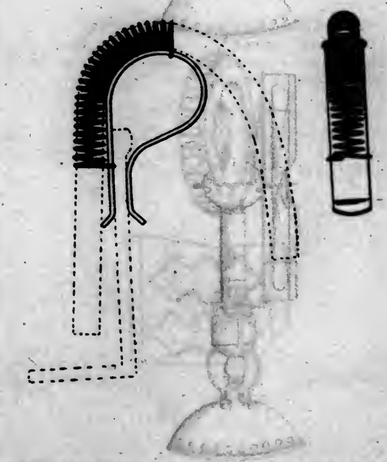
The ornamental design for dice, as shown.

59,971. SHOE-SOLE. Daniel T. Lego, Kansas City, Mo. Filed Aug. 23, 1920. Serial No. 405,512. Term of patent 14 years.



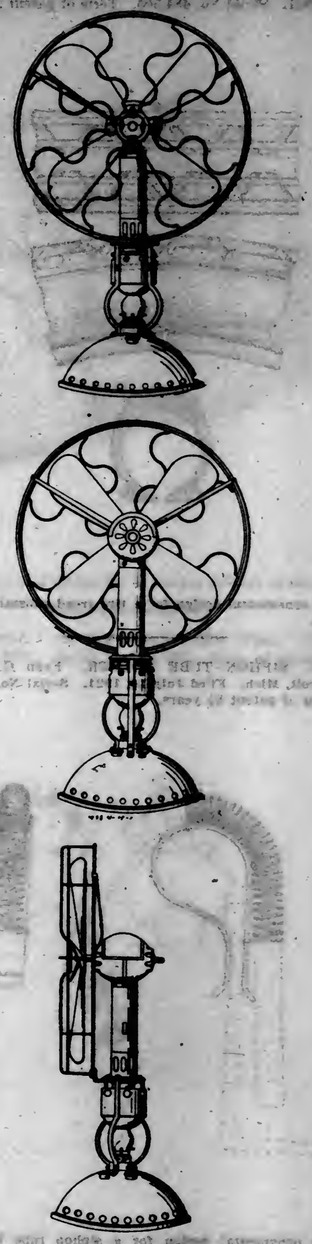
The ornamental design for a shoe sole as shown.

59,972. WATCH-BRACELET. Sigmund Ledberg, Providence, R. I. Filed Sept. 6, 1921. Serial No. 498,923. Term of patent 14 years.



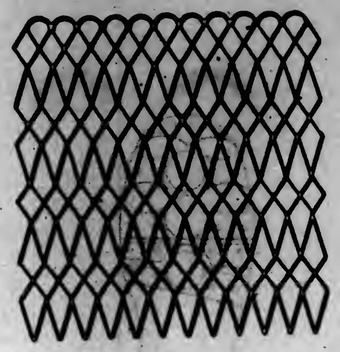
The ornamental design for a watch bracelet, as shown.

59,973. TIRE-TREAD. William W. McMahan, Trenton, N. J., assignor to Ajax Rubber Company, Inc., Millbrook, N. Y., a Corporation of New York. Filed July 13, 1921. Serial No. 484,505. Term of patent 14 years.



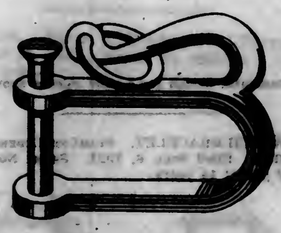
The ornamental design for a tire tread substantially as shown.

59,974. SIPHON-TUBE HOLDER. Fred G. Meyer, Detroit, Mich. Filed July 14, 1921. Serial No. 484,772. Term of patent 3½ years.



The ornamental design for a siphon tube holder as shown.

59,975. MOTOR-FAN. Thomas Manahan, San Leandro, Calif. Filed June 1, 1921. Serial No. 474,577. Term of patent 7 years.



The ornamental design for a motor fan, as shown.

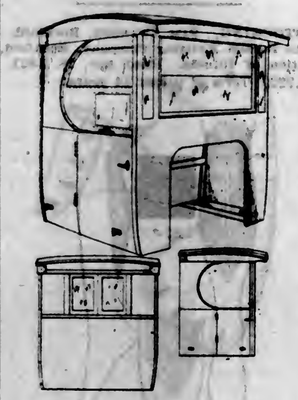
59,976. AUTOMOBILE-RADIATOR CORE. Assignor to Fedders Mfg. Co., Inc., Buffalo, N. Y. Filed Mar. 24, 1921. Serial No. 455,236. Term of patent 7 years.

The ornamental design for an automobile radiator core as shown and described.

59,977. LAZY-HORSE CLEVIS. Martin Parker, St. Paul, Minn., assignor to Parker Safety Hitch Company, St. Paul, Minn., a Corporation of Minnesota. Filed Jan. 22, 1921. Serial No. 439,300. Term of patent 7 years.

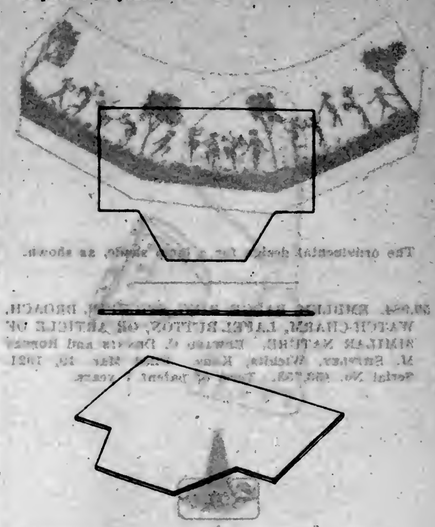
The ornamental design for a lazy horse clevis, as shown.

59,978. STATUETTE. Helen Tyler and Annette S. Pascal, New York, N. Y. Filed May 14, 1921. Serial No. 469,879. Term of patent 14 years.



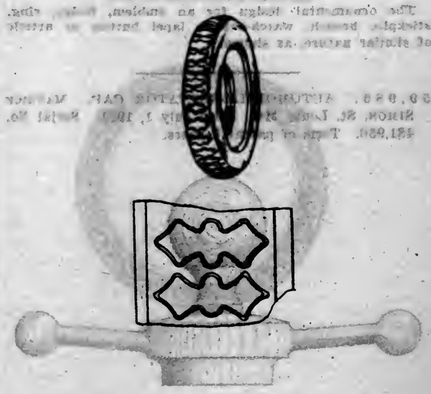
The ornamental design for a statuette substantially as shown.

59,979. LAMP-STAND. Herman [illegible] Parker, Buffalo, N. Y. Filed Mar. 21, 1921. Serial No. 454,966. Term of patent 7 years.



The ornamental design for a lamp stand as shown.

59,980. TRUCK-CAB. Frederick G. Proctor, Detroit, Mich., assignor to Proctor-Keefe Company, Detroit, Mich., a Copartnership comprising Frederick G. Proctor and Frank E. Keefe. Filed July 15, 1921. Serial No. 485,106. Term of patent 14 years.



The ornamental design for a truck cab, as shown.

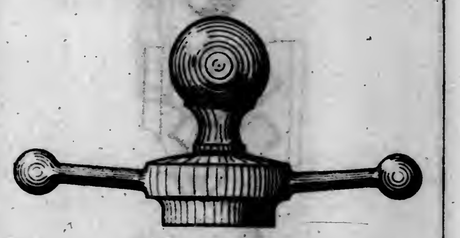
59,981. ROOFING-SHINGLE. Casper Russell, Port Jervis, N. Y., assignor to Charles H. Russell, Port Jervis, N. Y. Filed Dec. 14, 1920. Serial No. 430,761. Term of patent 14 years.

The ornamental design for a roofing shingle, as shown.

59,982. TIRE. Louis B. F. Schoenfeldt, Holyoke, Mass. Filed Sept. 25, 1920. Serial No. 412,881. Term of patent 14 years.

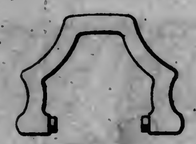
The ornamental design for a tire as shown.

59,983. LAMP-SHADE. RAMON HERBERT SCOTTSON, Atlantic City, N. J. Filed July 30, 1920. Serial No. 400,249. Term of patent 3½ years.



The ornamental design for a lamp shade, as shown.

59,984. EMBLEM, BADGE, RING, STICKPIN, BROACH, WATCH-CHARM, LAPEL-BUTTON, OR ARTICLE OF SIMILAR NATURE. EDWARD C. DENNIS and ROBERT M. SHIPLEY, Wichita, Kans. Filed Mar. 19, 1921. Serial No. 453,753. Term of patent 7 years.



The ornamental design for an emblem, badge, ring, stickpin, broach, watch-charm, lapel button or article of similar nature, as shown.

59,985. AUTOMOBILE-RADIATOR CAP. MAURICE SIMON, St. Louis, Mo. Filed July 1, 1921. Serial No. 481,956. Term of patent 7 years.

The ornamental design for an automobile radiator cap, as shown.

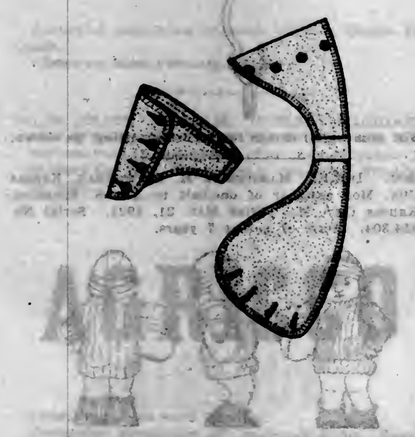
59,986. PENDANT WATCH-BOW. SAMUEL SPERBER, New York, N. Y. Filed June 11, 1921. Serial No. 476,966. Term of patent 3½ years.

The ornamental design for a pendant watch bow, as shown.

59,987. AUTO-RADIATOR CAP. LLOYD RAYMOND STEELE, Auburn, N. Y. Filed May 6, 1921. Serial No. 467,282. Term of patent 3½ years.

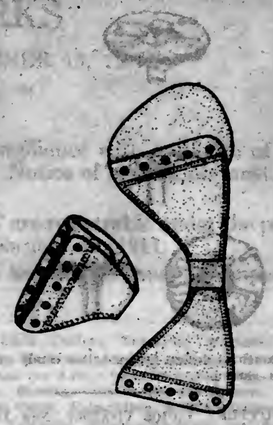
The ornamental design for an auto radiator cap as shown.

59,988. STOCKING. SAM SWANSON, Rockford, Ill., assignor to Burson Knitting Company, Rockford, Ill., a Corporation of Illinois. Filed Apr. 28, 1921. Serial No. 465,222. Term of patent 14 years.



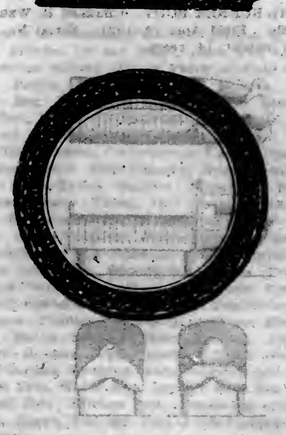
The ornamental design for a stocking, as shown.

59,989. PHONOGRAPH. WILLIAM H. THOMSEN, Plymouth, Wis. Filed Mar. 26, 1921. Serial No. 455,655. Term of patent 14 years.



The ornamental design for a phonograph, substantially as shown and described.

59,990. FOOT-BAND. CHARLES TWAMLEY, Jefferson City, Mo. Filed Jan. 10, 1921. Serial No. 436,964. Term of patent 14 years.



The ornamental design for a foot band, as shown.

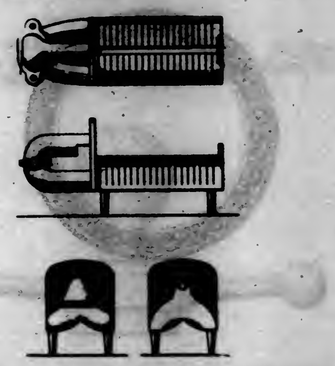
59,991. FOOT-BAND. CHARLES TWAMLEY, Jefferson City, Mo. Filed Jan. 10, 1921. Serial No. 436,965. Term of patent 14 years.

The ornamental design for a foot-band, as shown.

59,992. RING FOR LIGHTING FIXTURES. ALBERT ULLMAN, Cleveland, Ohio, assignor to Scott-Ullman Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 11, 1921. Serial No. 460,503. Term of patent 3½ years.

The ornamental design for a ring for lighting fixtures, as shown.

59,993. EDIBLE CANDY OR CAKE CONFECTION. RUDOLPH VRBAN, Chicago, Ill. Filed May 7, 1921. Serial No. 467,575. Term of patent 14 years.



The ornamental design for an edible candy or cake confection, as shown.

59,994. BOTTLE. VICTOR VIVAUDOU, New York, N. Y. Filed Apr. 11, 1921. Serial No. 460,513. Term of patent 14 years.

The ornamental design for a bottle, as shown.

59,995. OIL-BURNER BODY. CHARLES B. WEBB, Cleveland, Ohio. Filed Apr. 19, 1921. Serial No. 462,709. Term of patent 14 years.

The ornamental design for an oil burner body, as shown.

59,996. CHARM. EDWARD L. WEBB, Providence, R. I., assignor to Potter & Sullivan Company, Providence, R. I., a Corporation of Rhode Island. Filed Apr. 15, 1921. Serial No. 461,704. Term of patent 7 years.

The ornamental design for a charm, as shown.

59,997. PRECIOUS, SEMIPRECIOUS, OR SYNTHETIC STONE. EDWARD L. WEBB, Providence, R. I. Filed May 20, 1921. Serial No. 471,258. Term of patent 7 years.

The ornamental design for a precious, semiprecious or synthetic stone, as shown.

59,998. CURTAIN-FITTING. ERNEST LODGE WILSON, Ashton, Preston, England, assignor of one-half to Harold George Wilson, London, England. Filed Sept. 26, 1919. Serial No. 526,000. Term of patent 7 years.

The ornamental design for a curtain fitting, as shown.

59,999. DOLL. MARGUERITE M. ZIMMERMAN, Kansas City, Mo., assignor of one-half to Ada S. Simmons, Kansas City, Mo. Filed Mar. 21, 1921. Serial No. 454,304. Term of patent 7 years.

The ornamental design for a doll, as shown.

TRADE-MARKS

OFFICIAL GAZETTE, DECEMBER 13, 1921.

[PUBLISHED DECEMBER 13, 1921.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of [illegible] each notice of opposition.

Ser. No. 122,906. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) NEUSS, HESSLEIN & CO., INC., New York, N. Y. Filed Aug. 22, 1919.

Particular description of goods.—Woven Cotton Piece Goods.

Claims use since February, 1913.

Ser. No. 125,073. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) A/S. LANDBRUGSMASKIN-KOMPAGNIET (THE AGRICULTURAL-MACHINERY CO. LTD.,) Copenhagen, Denmark. Filed Nov. 19, 1919.

AGRICCO

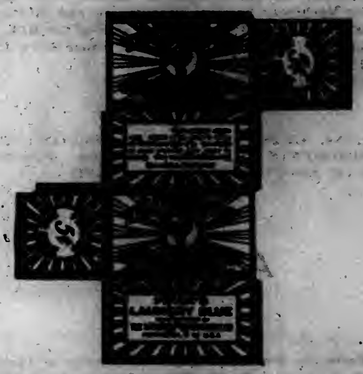
Consisting of the word "Agricco."

Particular description of goods.—Tractors, Reapers, Binders, Mowing-Machines, Plows, Rakes, Harrows, Cultivators, Stalk-Cutters, Threshing-Machines, Planters, Haystacking-Machines, Milking-Machines, Listers, Drilling-Machines for Agricultural Purposes, Diggers, Manure-Spreaders, Bindings-Cutters, Straw-Presses, Chaff-Cutters, Hoists-Gears, Hoists-Hoes, Milling-Machines for Agricultural Purposes, Sorting-Machines for Sorting and Winnowing Grain and Seed, Triers, Grain Rolling-Mills, Harvesting-Machines, Explosion-Motors, Wind-Motors; Dairy-Machines—Namely, Pasteurizers and Heaters for Milk, Churns and Butter-Workers, Coolers for Milk, Separators and Clarifiers, Milk-Pumps; Circular Saws, Pumps, and Lawn-Mowers.

Claims use since Apr. 15, 1919.

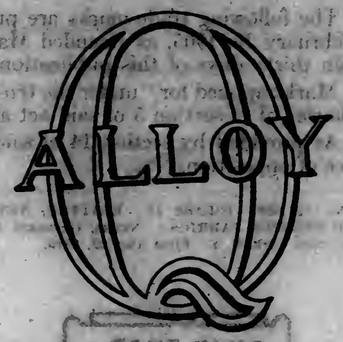
Ser. No. 125,585. (CLASS 27. HOROLOGICAL INSTRUMENTS.) SOCIÉTÉ FRANÇAISE D'OBSERVERIE D'ART, Paris, France. Filed Dec. 4, 1919.

Particular description of goods.—Articles of Tableware, Cutlery, Articles for the Toilet, Desk, and Library, and Miscellaneous Notions, All or Partly of Gold or Silver—Namely, Boxes, Baskets, Dishes, Bottles, Cups and Saucers; Egg, Fruit, and Dessert Cups; Knives, Forks, and Ladles; Mounted Glassware; Tea, Coffee, Chocolate, Milk, and Flower Pots; Kettles, Flasks, Decanters, Cruets, Trays, Pans, Centerpieces, Candlesticks, Chandeliers, Sauce-Boats, Soup-Tureens, Sugar-Bowls, Mirrors, Cups for Night-Tables, Napkins, Plate-Mats, Desk-Lamps, Atomizers, Flower-Vases, Ice-Cream Freezers, Night-Tables; Receptacles for Water, Milk, and Chocolate; Brushes, Coffee-Strainers, Napkin-Rings, Pepper-Casters, Salt-Sprinklers, Salt-Shakers, Sugar-Sprinklers, Nail-Polishers, Inkstands, Whet-Nets, Graters, Pepper-Grinders, Paper-Cutters, Frankpapers, Penholders, Bouquet-Holders, Tidbit-Holders, Glass-Holders, Tea-Holders, Asparagus-Holders, Holders for Dental Articles, Electric-Lamp Holders, Match-Holders, Menu-Holders, Ash-Holders, Chocolate-Holders, Knife-Holders, Toilet Sets, Infants' Sets of Pins and Teething-Rings, Smoking Sets, Beer Sets, Breakfast Sets, Water Sets, Liqueur Sets, Tea Sets, Wine Sets, Desk Sets; Kitchen Sets (Consisting of Receptacles for Salt, Sugar, and the Like;) Champagne-Cases, and Cornucopias.



Claims use since July 28, 1919.

Ser. No. 127,183. (CLASS 43. THREAD AND YARN.) RANKIN MILLS INC., Gastonia, N. C. Filed Jan. 15, 1920.



Particular description of goods.—Cotton Yarns.
Claims use since Jan. 1, 1920.

Ser. No. 132,065. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE STANDARD ULTRAMARINE CO., Huntington, W. Va. Filed May 5, 1920.

ADVANCE
CARBURIZER

No claim being made to the word "Carburizer" apart from the mark as shown.
Particular description of goods.—Surface-Hardening Powders for Steel.
Claims use since July 1, 1921.

Ser. No. 151,956. (CLASS 37. PAPER AND STATIONERY.) JORDAN MARSH COMPANY, Boston, Mass. Filed Aug. 20, 1921.

"Avona"

Particular description of goods.—Fountain-Pens and Lead-Pencils.
Claims use since June 20, 1920.

Ser. No. 152,001. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) GEORGIA CHEMICAL, Birmingham, Ala. Filed Aug. 22, 1921.

STANG-RICH

Particular description of goods.—Hair-Growers, Hair-Dressing Oils, and Perfumes.
Claims use since May 25, 1921.

Ser. No. 152,064. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CHERAMY, INCORPORATED, New York, N. Y. Filed Aug. 23, 1921.

CHARMIDES

Particular description of goods.—Brilliantine, Face-Powder, Face-Cream, Toilet Water, Perfume, Sachet and Talcum Powder, Rouge.
Claims use since July 15, 1921.

Ser. No. 152,081. (CLASS 12. CONSTRUCTION MATERIALS.) MORWIN PRODUCTS CO., Inc., New York, N. Y. Filed Aug. 23, 1921.

KEMISOL

Particular description of goods.—Waterproofing Compound for Use in Connection with Stone, Brick, Cement, Concrete, and the Like.
Claims use since on or about Mar. 1, 1920.

Ser. No. 152,082. (CLASS 12. CONSTRUCTION MATERIALS.) MORWIN PRODUCTS CO., Inc., New York, N. Y. Filed Aug. 23, 1921.

PETROFLUID

Particular description of goods.—Waterproofing Compound for Use in Connection with Stone, Brick, Cement, Concrete, and the Like.
Claims use since on or about July 1, 1916.

Ser. No. 152,087. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) EDWARD L. MITTELSTADT, New York, N. Y. Filed Aug. 23, 1921.

Parfums Desirée

No claim being made to the word "Parfums" apart from the mark as shown.
Particular description of goods.—Perfume Extracts and Toilet Waters.
Claims use since July 5, 1921.

Ser. No. 152,199. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) THE PERMANENT WAVE MACHINE AND SUPPLY CORPORATION, New York, N. Y. Filed Aug. 24, 1921.

KEEN

Particular description of goods.—Electrical Hair-Waving Appliances.
Claims use since July 1, 1920.

Ser. No. 152,202. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) WALTER S. CHABAK, New York, N. Y. Filed Aug. 24, 1921.

VIGORUB

Particular description of goods.—A Lotion for External Use on the Face and Body and for a Liniment for the Treatment and Relief of Muscular Pains, Rheumatism, Stiff Joints and Muscles.
Claims use since Mar. 1, 1921.

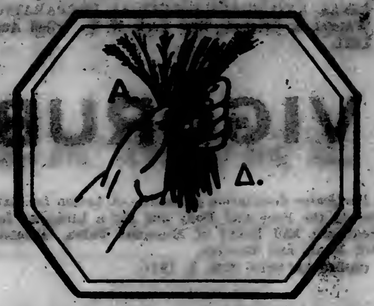
Ser. No. 152,243. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) REED BYRON, New York, N. Y. Filed Aug. 27, 1921.

HUJARVIS

Particular description of goods.—All Kinds of Perfumes.
Claims use since November, 1920.

Ser. No. 152,325. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) GENERAL ELECTRIC COMPANY, Schenectady, N. Y. Filed Aug. 29, 1921.

PLIOTRON



Particular description of goods.—Vacuum-Tubes.
Claims use since February, 1918.

Ser. No. 152,363. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) Hanson & Co, New York, N. Y. Filed Aug. 29, 1921.

YEASTONE

Consisting of the word mark.
Particular description of goods.—Extract of Yeast for Medicinal Purposes.
Claims use since Feb. 28, 1921.

Ser. No. 152,364. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ALEXANDRA C. DOUROPOULOS, Arlington, Mass. Filed Aug. 30, 1921.

Particular description of goods.—Medicinal Preparation for Diabetes.
Claims use since July 1, 1921.

Ser. No. 152,376. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MERCK & CO., Rahway, N. J. Filed Aug. 30, 1921.

PEROXOIDS

Particular description of goods.—Tablets for Preparing Hydrogen-Peroxid Solution.
Claims use since Aug. 13, 1921.

Ser. No. 152,377. (CLASS 12. CONSTRUCTION MATERIALS.) MORENE PRODUCTS CO., INC., New York, N. Y. Filed Aug. 30, 1921.

MORENE

Particular description of goods.—A Waterproofing Compound for Use in Connection with Stone, Brick, Cement, Concrete, and the Like.
Claims use since on or about July 1, 1916.

Ser. No. 152,436. (CLASS 3. BAGGAGE, HORSE EQUIPMENTS, AND SADDLERY, AND POCKETBOOKS.) Hanson & Platt, New York, N. Y. Filed Aug. 31, 1921.

AMBASSADOR

Particular description of goods.—Writing-Cases.
Claims use since June 4, 1921.

Ser. No. 152,537. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ERNEST M. BOGAERT, San Jacinto, Calif. Filed Sept. 3, 1921.

OBECA

Particular description of goods.—Face-Cream.
Claims use since June 1, 1920.

Ser. No. 152,563. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) R. H. Buttercup & Co., St. Louis, Mo. Filed Sept. 3, 1921.

HEADINE

Particular description of goods.—A Medicinal Preparation Used for the Relief of Headache, Neuralgia, Fever, Pain, and Influenza.
Claims use since 1895.

Ser. No. 152,709. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) HARRY COOK, London, England. Filed Sept. 8, 1921.

DRYDO

Particular description of goods.—Powder for Destroying Beetles and Cockroaches.
Claims use since Nov. 26, 1920.

Ser. No. 152,702. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) HOPE COMPANY, Providence, R. I. Filed Sept. 8, 1921.

Particular description of goods.—White and Bleached Cotton Goods in the Piece.
Claims use since on or before Apr. 1, 1921.

Ser. No. 152,772. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SANOZYM INCORPORATED, New York, N. Y. Filed Sept. 9, 1921.

SANOZYM

Particular description of goods.—A Dentifrice in the Form of a Paste, a Wash, or a Powder.
Claims use since Aug. 20, 1921.

Ser. No. 152,821. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) Y. H. WATTS & CO. INC., Trenton, N. J. Filed Sept. 10, 1921.

HYD--REX

Particular description of goods.—A Compound for Treating Cholera in Fowls.
Claims use since June 1, 1921.

Ser. No. 152,822. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) Y. H. WATTS & CO.-INC., Trenton, N. J. Filed Sept. 10, 1921.

KUR-HO

Particular description of goods.—Liquid Compound for Treating Hog-Cholera.
Claims use since June 1, 1921.

Ser. No. 152,855. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MERRIMAC DRUG COMPANY, Inc., New York, N. Y. Filed Sept. 12, 1921.

IDIPO

Particular description of goods.—Antiseptics.
Claims use since on or about July 15, 1921.

Ser. No. 152,883. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) CORBETT BROTHERS CO., Paterson, N. J., and New York, N. Y. Filed Sept. 13, 1921.

Particular description of goods.—Ribbons in the Piece.
Claims use since June 2, 1921.

Ser. No. 152,892. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) INTERNATIONAL CONSOLIDATED CHEMICAL CORPORATION, INC., New York, N. Y. Filed Sept. 13, 1921.

ANTOX OTOL

Particular description of goods.—Medicinal Preparation for Intestinal Toxemia.
Claims use since June 20, 1921.

Ser. No. 152,939. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) INTERNATIONAL COMMERCIAL CHEMICAL CORPORATION, INC., New York, N. Y. Filed Sept. 13, 1921.

ANTOMOL

Particular description of goods.—Medicinal Preparation for Intestinal Tremnia.
Claims use since June 20, 1921.

Ser. No. 152,941. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE ZEETA COMPANY, New York, N. Y. Filed Sept. 14, 1921.

ZEETA

Particular description of goods.—Powdered Deodorant.
Claims use since July 30, 1921.

Ser. No. 153,006. (CLASS 28. JEWELRY AND PRECIOUS-METAL WARE.) MATHAUM BROS., INC., New York, N. Y. Filed Sept. 19, 1921.

Anniversary

Particular description of goods.—Pearls.
Claims use since Aug. 1, 1921.

Particular description of goods.—Wall-Paint.
Claims use since Mar. 25, 1921.

Ser. No. 154,133. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) FORSTMANN & HUFFMANN COMPANY, Passaic, N. J. Filed Oct. 15, 1921.

Spongeen

Particular description of goods.—Woolen Piece Goods.
Claims use since Sept. 25, 1921.

Ser. No. 154,134. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) FORSTMANN & HUFFMANN COMPANY, Passaic, N. J. Filed Oct. 15, 1921.

Selena

Particular description of goods.—Woolen Piece Goods.
Claims use since Sept. 15, 1921.

Ser. No. 154,135. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) FORSTMANN & HUFFMANN COMPANY, Passaic, N. J. Filed Oct. 15, 1921.

Juina

Particular description of goods.—Woolen Piece Goods.
Claims use since Sept. 15, 1921.

Ser. No. 154,126. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) FORSTMANN & HUFFMANN COMPANY, Passaic, N. J. Filed Oct. 15, 1921.

Hera

Particular description of goods.—Woolen Piece Goods.
Claims use since Sept. 15, 1921.

Ser. No. 154,127. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) FORSTMANN & HUFFMANN COMPANY, Passaic, N. J. Filed Oct. 15, 1921.

Valetta

Particular description of goods.—Woolen Piece Goods.
Claims use since Sept. 15, 1921.

Ser. No. 154,128. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) FORSTMANN & HUFFMANN COMPANY, Passaic, N. J. Filed Oct. 15, 1921.

Oriona

Particular description of goods.—Woolen Piece Goods.
Claims use since Sept. 15, 1921.

Ser. No. 154,151. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) H. R. MALLINSON & CO. INC., New York, N. Y. Filed Oct. 15, 1921.

DOVE DOWN

Particular description of goods.—Silk Piece Goods.
Claims use since March, 1919.

Ser. No. 154,177. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) CALIFORNIA COTTON MILLS COMPANY, Oakland, Calif. Filed Oct. 17, 1921.

GOLDEN WEST

Particular description of goods.—Burlap.
Claims use since Jan. 10, 1912.

Ser. No. 154,191. (CLASS 12. CONSTRUCTION MATERIALS.) G. F. HORTON, Houston, TEX. Filed Oct. 17, 1921.

FILLRITE

Particular description of goods.—An Asphalt Preparation Used in Making Expansion-Joints in Concrete Roadways, Walks, and other Concrete Structures.
Claims use since about July 1, 1921.

DECISIONS
OF THE
COMMISSIONER OF PATENTS
AND OF
UNITED STATES COURTS IN PATENT CASES.

DECISIONS OF THE U. S. COURTS.

U. S. Circuit Court of Appeals—Sixth Circuit.

TROY WAGON WORKS v. OHIO TRAILER CO.

Decided July 27, 1921.

[274 Fed. Rep., 612.]

1. PATENTS—DEVICE HELD NOT AN INVENTION.
A device to steer an automobile-trailer by means of a draft-bar attached to a truck pulling a trailer *Held* too closely allied in art to the steering-gear of an automobile to be patentable.

2. SAME—EXTENSION REARWARD AND DOWNWARD OF DRAFT BAR HELD NOT NEW AND NOVEL IN ART.
Extension rearward and downward of a draft-bar, used in the steering apparatus of a trailer pulled behind a truck or automobile, is not new or novel in the art, so as to be patentable.

3. WITNESSES—OFFICIAL OF CORPORATION WHICH IS A PARTY TO THE SUIT IS COMPETENT WITNESS.
That a witness is secretary and treasurer of corporation which is a party to the suit does not disqualify him as a witness.

4. APPEAL AND ERROR—OBJECTION TO TESTIMONY OF WITNESS, BECAUSE TESTIMONY IN ANOTHER SUIT WAS DIFFERENT, DISREGARDED, WHERE RECORD DOES NOT SHOW CROSS-EXAMINATION.
If testimony of a witness in another suit was different from his testimony in the present suit, such inconsistency should be brought into the record by cross-examination, and in the absence thereof the objection will be disregarded on appeal.

5. PATENTS—IMPROVEMENT IN MACHINERY, OBVIOUS TO ONE SKILLED IN MECHANICAL WORK, IS NOT PATENTABLE.
Where an improvement in machinery was made by one skilled in mechanical work and was obvious to any person so skilled, the improvement is not patentable.

6. SAME—DEVICE HELD NOT PATENTABLE.
Reversible trucks or dump-wagons, with a pivoted draft-bar at each end, which is connected to the wheels for steering purposes, and which may be locked to the wagon bed or frame in a central position when the truck is being drawn from the opposite end, are not patentable merely because of an automatic locking device to keep the apparatus out of operation at certain times.

7. SAME—AUTOMATIC LOCKING-STEERING DEVICE HELD NOT TO BE AN INVENTION.
Where similar steering devices had been invented prior to the addition of an automatic lock, the addition of the lock does not constitute an invention; the mere adaptation of an old element to a specific use not being an invention, unless the combination produces a new result or an old result in a new and materially better way.

8. SAME—DEVICE HELD NOT TO BE AN INVENTION.
The combination of an automatic lock, which is in itself new and novel, with other locking devices, to keep the locking-gear out of operation, does not amount to an invention sufficient for patent, covering the combination with any and all forms of automatic locks, although the new device in itself may be patentable.

9. SAME—NO. 1,214,037, FOR IMPROVEMENT IN STEERING MECHANISM ADAPTED TO TRAILER-TRUCKS, HELD VOID FOR LACK OF INVENTION.
The Hudson patent, No. 1,214,037, claims 1, 2, 3, and 4, for steering device for trailers, *Held* invalid for lack of invention.

10. SAME—NO. 1,117,816, CLAIMS 6, 7, AND 8, HELD INVALID.
The Eccard and Smith patent, No. 1,117,816, claims 6, 7, and 8, for an improvement in reversible trucks or dump-wagons, *Held* invalid.

11. SAME—NO. 1,117,816, CLAIM 9, HELD VALID, BUT NOT INFRINGED.
The Eccard and Smith patent, No. 1,117,816, claim 9, for an improvement in reversible trucks or dump-wagons, *Held* valid, but not infringed.

APPEAL from the District Court of the United States for the Eastern Division of the Northern District of Ohio; D. C. Westenhaver, Judge.

Suit by the Troy Wagon Works Company against the Ohio Trailer Company. From decree for defendant, plaintiff appeals. Affirmed.

Mr. H. A. Toulmin (*Mr. H. A. Toulmin, Jr.*, on the brief) for the appellant.

Mr. Lincoln B. Smith (*Mr. G. E. Dunston*, and *Messrs. Miller, Chindahl & Parker* and *Mr. C. Paul Parker* on the brief) for appellee.

Before KNAPPEN, DENISON, and DONAHUE, Circuit Judges.

DONAHUE, *Cir. J.*:

This is an appeal from a decree of the United States District Court, Northern District of Ohio, Eastern Division, finding and adjudging Patent No. 1,214,037, issued to W. R. Hudson, January 30, 1917, and now owned by appellant, null and void for want of invention; that claims 6, 7, and 8 of Letters Patent No. 1,117,816, issued to John F. Eccard and Jacob Smith, November 17, 1914, are invalid; and that claim 9 of this patent is valid, but not infringed.

The Hudson patent, No. 1,314,037, relates to improvements in the steering mechanism particularly adapted for trailer-trucks, and this suit involves

all the claims of that patent, which claims are printed in the margin.[1]

It is unnecessary in this case to repeat what was said in the opinion in the recent case of *Troy Wagon Works Co.* v. *Ohio Trailer Co.* (No. 2482) (272 Fed., 850) in reference to the old and well-known elements entering into the steering mechanism of appellant's present construction. It is sufficient to say that for the reasons stated and citations given in that opinion, claims 1, 2, 3, and 4 of the Hudson patent in suit cover nothing that is new or novel in the art, nor do they cover a combination of old elements that produce a new result or an old result in a new and materially better way.

[1] Counsel for appellant insists, however, that the prior patent art, cited by appellee, relates solely to automobile construction, and has no relation or application whatever to trailer-trucks, for the reason that the steering mechanism of an automobile is controlled by the steering-wheel operated by the driver of an automobile, while the steering of the trailer-truck is wholly mechanical. It is clearly evident, however, that automobile construction, if not in the same art, is at least in a closely-allied art. The steering mechanism of the automobile is readily adaptable to a trailer-truck, the only difference being that in the automobile the force necessary to operate the mechanism is applied by the driver through the steering-column, and in the trailer-truck this force is applied through the draft-bar from the automobile or automobile-truck to which this draft-bar is attached, the direction and course of which is controlled by a driver through and by the same steering mechanism operated by a steering-column, instead of a draft-bar.

Undoubtedly the substitution of a draft-bar that will approximate as nearly as possible the same constant, immediate and efficient control of the steering mechanism of a trailer-truck as a steering-wheel of an automobile operated by a skilful and intelligent driver, involves problems in mechanical engineering and mechanical skill, not presented by motor-car construction. However, regardless of that fact, the adaptation of the steering mechanism of an automobile to a trailer-truck, and the control of that steering mechanism by a draft-bar connecting with the steering mechanism and attached to a motor-truck, instead of by a steering-wheel in the hands of an operator, is at least analogous, if not the same art.

Even if this conclusion were not the only logical one to be drawn from the evidence in this record relating to the similarity between the steering mechanism of an automobile and the steering mechanism of a trailer-truck, wholly apart from the means of controlling that mechanism either by a steering-wheel or by a draft-bar, nevertheless such conclusion is fully supported by the evidence of Mr. Ferris that will be considered more at length later in this opinion, in reference to the application of the knowledge he had acquired by his prior automobile experience, to the design of defendant's draft-bar in December, 1916. For this reason we cannot concur in the claim of counsel for the appellant that the prior patent automobile art, in so far, at least, as it relates to steering mechanism, has no application to the present suit.

[2] It is contended, however, that the draft-bar, described in this patent and covered by claims 5 and 6, is new and novel in the art, in that it projects rearwardly and downwardly, so that its rear end will lie in substantially the same horizontal plane as the free ends of the steering-arms, to each of which free ends it is attached by separate steering connections having ball-and-socket joints.

The rearward extension of the draft-bar and its connection with the steering-arms to the rear of the axle, instead of in front of it, present no new or novel feature; therefore claim 5 is invalid. (Eccard and Smith, No. 1,117,944; Brown, No. 41,476; Hendrickson, No. 1,109,752; Mason, No. 681,237.) The novelty, if any, in the Hudson draw-bar, must therefore consist in its downward extension to the same horizontal plane as the free ends of the steering arms, as described in claim 6.

It is the claim of the appellant that the invention consists in this specific type of draw-bar combined with numerous other elements as stated in claims 5 and 6. The appellee admits that—

> There is an obvious advantage in so arranging the primary steering element that its directive force will be exerted on a horizontal line with the steering arm.

But it is claimed that this was accomplished by Dehn (German patent, 228,185), by bringing the steering-arm up to a level with the draft-bar; by Robin (British patent, 5,988), by means of a downwardly-projecting part, either a part of or operatively connected with the draft-bar or other primary steering element; in Eccard and Smith, 1,117,944, where the draft-bar is free to move up and down in the rectangular frame built upon a tie rod connecting the two steering arms, and therefore exerts its effective directing force upon the tie rod in the same horizontal plane as the free ends of the steering arm; that the precise form shown by Hudson is found in Souther, No. 320,011, and Hendrickson, No. 1,109,752; and that the precise equivalent of the Hudson device is shown in Geiger, Eccard and Southerland, No. 903,185, and in Chrestenson, No. 1,068,737, where a downwardly-projecting member attached to the draft-bar in front of the axle brings the effective steering portion of the draft-bar into substantially the same horizontal plane as the free ends of the steering-arm.

By the downward projection of this draft-bar to the rear of the axle Hudson accomplishes the same thing that Dehn accomplished by bringing the steering-arms up to a level with the draft-bar, that Robin and Mason accomplished by means of a downward projection operatively connected with the draft-bar, that Hendrickson accomplished by a downwardly-extending bolt from the rearwardly-extending arm portion of the draft-bar, and that Geiger *et al.* and Chrestenson accomplished by a downwardly-projecting member attached to the draft-bar in front of the axle, so that the directive force of the primary steering element would be exerted in a horizontal plane with the free end of the steering-arm. Therefore it would appear that the Hudson method is no more than a clear equivalent of other well-known methods of construction disclosed by the prior art, to accomplish the same result.

The trial court, however, did not base its conclusion as to the invalidity of this patent solely upon the prior art, although it did hold that—

> The prior automobile art shows all drag links lying substantially in a horizontal plane and connections with the steering member made in that plane.

In that connection the trial court further held that—

> The desirability, if not necessity, for having the drag links horizontal, and the connection made in that plane, would be obvious, if not thus fully disclosed. The mechanical expedient of bending downward the rear end of the draw-bar sufficiently to make such a connection is a matter of skill, obvious to any automobile engineer, and does not amount to invention.

This finding of the trial court seems to be fully sustained by the evidence of the witness Ferris, who testified that, when he designed the defendant's trailer in 1916, he had not at that time seen the Troy Wagon Works trailer, and had not seen the patent to Hudson, or any representation of the Troy trailer made in accordance with that patent. He further testified in the same connection that the standard type of drag-link, which the defendant bought upon the open market, could not be used in any other position than in a horizontal plane with the free ends of the steering-arms. This not only sustains the trial court in its findings that—

> the prior automobile art shows all drag-links lying substantially in a horizontal plane and connections with the steering members made in that plane,

but it also tends to show the necessity of bringing the portion of the draft-bar to which these drag-links were attached, by bending, projection, or otherwise, down to the level of the plane of the end of the steering-arm, which fact was apparent to Ferris by reason of his former automobile experience.

[3, 4] It is insisted, however, by counsel for appellant that the testimony of Ferris should have been wholly disregarded by the court for the reason that Ferris is secretary and treasurer of the Ohio Trailer Company; that the statement made by Ferris is self-serving, and not corroborated by any other evidence, and directly contradicted by Ferris himself in his testimony given in a former suit between these parties in relation to the same trailer. The fact that Ferris occupies an official position with the appellee does not disqualify him as a witness, nor require the court to disbelieve his testimony. If he testified differently in another suit, that fact should have been brought into this record by cross-examination, or in some other way, for counsel had no right to rely upon the recollection of the court as to the evidence in another case, nor expect either the trial court or this court to examine the record in the other case in order to determine whether the witness had in his testimony in this case contradicted statements made by him as a witness in that case. Not only that, but the witness had a right to have his attention called to these facts and explain any discrepancy between his testimony in the other and in this case, if it were possible for him to do so. Counsel for plaintiff in error, however, did not cross-examine this witness, nor does this record show that the witness ever testified in any other case. Therefore these objections to his testimony must be wholly disregarded.

It does appear, however, that the witness is corroborated by the blueprint dated December 20, 1916, and the photographs, 4 and 5, which photographs show a portion of defendant's old factory vacated by defendant in 1917. This evidence of the drawing by Ferris of defendant's draft-bar in 1916 is not offered to show anticipation in the prior art, of the Hudson patent, but rather for the purpose of showing that what is now claimed to be invention amounts to no more than the ordinary exercise of mechanical skill in meeting the obvious necessity.

[5] It is insisted, however, on the part of counsel for appellant that Ferris testified that this was obvious to him, because of his previous automobile experience as an automobile engineer; that by "experience" the witness clearly meant "experimentation," to ascertain how to make a draw bar that could work with such links; and that therefore the downward extension of this draw-bar involves invention and is patentable. In reply to this it is sufficient to say that experience in a particular trade, profession, or calling does not necessarily mean experimentation with the particular thing under consideration. On the contrary, the language used by the witness is not subject to any construction other

[1] 1. In a vehicle of the character described, a main frame, an axle located below said frame carrying wheels swivelly connected with said axle, springs for supporting said frame from said axle and wheels, a draft bar pivotally connected with said frame, and steering connections from said draft bar to said wheels, said steering connections having ball and socket joints.

2. In a vehicle of the character described, a main frame, an axle and carrying wheels, springs for supporting said frame from said axle and wheels, a draft bar pivotally connected to said frame, steering rods connecting the inner end of said draft bar with said wheels, said connections consisting of ball and socket joints.

3. In a vehicle of the character described, a main frame, an axle, and carrying wheels, springs for supporting said frame from said axle and wheels, a draft bar pivotally connected to said frame, an arm extending from each of said wheels, and a rod connecting each of said arms with the inner end of said draft bar, the connections between each of said rods with said bar and arm consisting of a ball and socket joint.

4. In a vehicle of the character described, a main frame, an axle and carrying wheels, springs for supporting said frame from said axle and wheels, a draft bar pivotally connected with said frame, arms extending from each of said wheels, steering rods, socket members on the respective ends of each of said rods, balls on said arms and draft bar extending into said socket members, and means for adjusting said socket members.

5. In a vehicle of the character described, a main frame, an axle located below said frame, carrying wheels swivelly connected with said axle, springs for supporting said frame from said axle and wheels, a draft bar pivotally connected with said frame having a rearwardly extending portion, and steering rods connecting the rear end of said draft bar with said wheels, said connection comprising ball and socket joints.

6. In a vehicle of the character described, a main frame, an axle located below said frame, carrying wheels swivelly connected with said axle, arms connected to said carrying wheels, springs for supporting said frame from said axle and wheels, a draft bar pivotally connected with said frame, said draft bar projecting rearwardly and downwardly so that its rear end will lie in substantially the same horizontal plane as the free ends of said arms, and steering connections from the rear end of said draft bar to the free ends of said arms, said steering connections having ball and socket joints.

than that from his experience in that line of work the thing was obvious to him without any experimentation whatever. The term "obvious," as here used, does not mean that the thing must be obvious to men wholly unlearned and wholly inexperienced in the particular art to which the claimed invention pertains. What might be an obvious conclusion to a lawyer might not be obvious to a layman, and what "passeth the understanding of a lawyer" might be perfectly obvious to a mechanical engineer. Therefore, if this claimed invention was obvious to a mechanical engineer, or a skilled workman familiar with automobile and trailer-truck construction, it is clearly within the meaning of the settled rule that the obvious is not invention.

[6] The Eccard and Smith patent, No. 1,117,816, relates to improvements in reversible trucks or dump-wagons of the type which employ a pivoted draft-bar at each end thereof, which draft-bar is connected to the wheels for steering purposes, and also may be locked to the wagon bed or frame in a central position when the truck is being drawn from the opposite end. Claims 6, 7, and 8 are relied upon by the appellant. These claims are similar in their nature; claim 8 being, perhaps, a little more comprehensive than either of the other two. This claim reads as follows:

> 8. In a vehicle of the character described, a main frame, a draft bar pivotally connected to said main frame at its rear end, an automatic latch for locking said draft bar to said frame near its front end in a central position with respect to said main frame, said draft bar having connections with the steering wheels of said vehicle, and means for holding said latch in inoperative position to permit said draft bar to steer said wheels.

There are other claims describing this automatic locking device in detail, but it is not seriously contended that the automatic locking device used by the defendant is an infringement of appellant's automatic locking device, separate and apart from the combination in which it is found. On the contrary, it is the specific claim of the appellant that the invention lies in the combination and not in the lock *per se*, and that therefore the introduction of any automatic locking device into this combination described in the specifications and claims, coördinating in like manner as appellant's automatic lock with the other elements of the combination, would constitute infringement.

In reply to this it is insisted upon the part of the appellee that there is nothing new or novel in appellant's combination, for the reason that automatic locks for locking the draft-bar of vehicles of the character named in the patent in suit and other wheeled vehicles of a similar nature are old in the prior patent art. In support of this contention a large number of patents relied upon by appellee are cited. The steering mechanism of a trailer-truck or dump-wagon, that is associated in this combination with appellant's automatic locking device, is admittedly old in the art. Nor is there anything new or novel in the idea of locking the rear draft-bar to the wagon bed or frame in a central position when the truck or wagon is being drawn from the opposite end. On the contrary, this is absolutely essential to its successful operation. (Nelson, 708,709; Geiger, Eccard and Southerland, 903,185; Christenson, 1,088,787.)

However, in these patents no automatic lock is used; but the locking is accomplished, as stated in the application for this patent, by the insertion of a pin or other means through suitable apertures through the draft-bar and some parts connected with the vehicle body.

Souther, 207,468, relates to a reversible trailer-truck for street-cars. It appears from the evidence of the expert witness Browne, and also from an examination of this patent itself, that it contains fundamentally the same character of locking mechanism used by the defendant, which consists of two latches, which coöperate directly with a hump or boss on the draw-bar. Souther has two pivoted latches, which, when released by pressure of the foot of the driver, permits the drawbar to swing free, but when it comes back to a central position it is again automatically locked.

The expert witness called on behalf of the appellant testifies in reference to this patent that the action is automatic in closing, but there are no means for holding the lock out of operation except the foot of the motorman; that, because this feature is lacking, Souther's automatic lock would not be suited for use in a trailer. It is clear, however, that the idea of the automatic lock as applied to the steering mechanism of a trailer-truck is fully disclosed by Souther, and that the mechanical means for holding this lock out of operation was not used, because an operator was always present on these trailers, and for that reason no such device was necessary. Therefore the most that Eccard and Smith could claim over Souther is this means for holding the automatic locking device out of operation when it is desired that the draft bar should swing free, but this is also old in the art.

In reference to this, the expert witness Browne testifies:

> But it was old in the art for quite analogous purposes to make provision for doing just that thing; that is, for locking the latch or locking bolt in its unlocked position, something of the sort seen in doors, such as the door in my own office building, which has a spring lock to-day; but there is a little catch on the lock, which I move by hand, so as to hold that spring lock out of action.

In the Eccard and Smith patent it is also necessary for the operator to use his hands in placing the means provided for fastening their automatic lock in such position that it will not function.

Knupfer, 410,692, is for a seed-drilling machine, having an automatic locking device, which consists of a bolt actuated by a spring, which corresponds with a notch carried by the draw-bar, so that when the spring-bolt is free to move, and the notch is brought into register with the bolt, the tongue or draw-bar will be automatically locked in central position. It is also provided with means for holding this automatic locking device out of operation. While this machine is being used in the field in the drilling of grain, it is desirable that the tongue or draft-bar should swing freely, and therefore the lock is not released or used in the actual operation of the machine, except in turning a corner, or in moving

the machine on the road, or from one field to another. It then becomes necessary that the tongue should be so locked to the body as to provide a steering means other than the mere draft. To that end the automatic locking device is released, and functions as in Eccard and Smith, to lock the tongue or draft-bar in rigid relation to the frame or body.

Hurd, No. 283,712, relates to the running-gear for wagons which may be steered either by the link connections between tongue or draft-bar and swivelly-mounted wheels, or by the old-fashioned fifth-wheel construction. The steering mechanism includes an automatic lock that operates to fasten the two plates of the fifth-wheel together while the wagon is being steered by the tongue or draft-bar, imparting directive motion to the swivel-wheels through the link connection. When the operator desires to make a more abrupt turn than possible in this way, he can release this automatic lock by a foot-treadle, thereby permitting the fifth-wheel construction to operate. After the turn, and when the tongue or draft bar swings into central position, and the driver removes his foot from the treadle-lever, the automatic lock again functions to unite the upper and lower part of the fifth-wheel. There is also provision in this patent for automatically locking the tongue as it passes over the beveled surfaces of the front locking-bar.

Heisey, 67,430; Eustis, 837,242; Ruffner, 154,915; Sattley, 629,875, and Goodhue, 1,068,334, relate to agricultural implements. Each of them contains an automatic locking device. No means are provided in either of these patents for holding the automatic locking mechanism out of operation, for the reason, as explained by appellant's expert witness Wagner, that

> the time during which the locking mechanism is thrown out of commission is relatively short,

and perhaps for the further reason that an operator is always present who can, by the means provided, release the automatic locking device and hold it out of operative engagement with the frame or body of the vehicle for the short time required to accomplish the purpose of its release.

It is insisted, however, on the part of the appellant, that all these patents are in a remote art, and have no application or analogy to trailer-trucks. The Eccard and Smith patent, however, is not confined to trailer-trucks, but to reversible trucks or dump-wagons of the type which employ a pivoted draft-bar at each end thereof, which draft-bar is connected to the wheels for steering purposes and also may be locked to the wagon bed or frame in central position when the truck is being drawn from the opposite end. Later in the description in the patent the following statement appears:

> In reversible vehicles of this character, either motor trailer or horse-drawn trucks or dump wagons.

This language would seem to be sufficiently broad to include all forms of vehicle construction where the tongue or draft-bar is required to swing free for one purpose of its operation, and to be locked or fastened to the frame or body of the vehicle for the accomplishment of another purpose.

In any event, it is clear that Souther and Hurd are within the identical art, although Hurd is not of the reversible type, or of a type that requires the rear wheels to be rigidly locked to the frame or body of the vehicle when drawn from the opposite end. Nevertheless the Hurd invention relates to substantially the same problem in the same art as Eccard and Smith. It is also apparent that agricultural implements, including a frame mounted upon wheels, with tongue or draft-bar connected with and used as part of its steering mechanism, if not in the same art, are at least in such a closely-allied art that prior patents in relation thereto must necessarily be held as anticipatory of similar inventions in relation to reversible vehicles described in Eccard and Smith, whether motor-drawn or horse-drawn trucks or dump-wagons.

[7] It is further insisted, however, that, even though these patents were in the same or an analogous art, they have no application, for the reason that the automatic locks shown in the earlier patents are not found in the same combination as in Eccard and Smith, and that the Eccard and Smith patent is for a combination, and not for an automatic lock *per se*. The mere adaptation of an old element to a specific use is not invention, unless the combination of such old elements produce "a new result, or an old result in a new and materially better way." (*Frey et al.* v. *Marvel Auto Supply Co.*, (C. C. A. 6,) 236 Fed., 916; 150 C. C. A., 178.) It is clear from the evidence in this case that the automatic locking device of Eccard and Smith functions in identically the same way as the automatic locking devices in the prior patent art, and that the other elements of this combination produce no new or different result in combination with this automatic locking device than produced by these elements when locked by any other means. It necessarily follows that the combination of an automatic lock with the old steering elements of vehicles of the character described in this patent does not constitute invention. (*Heald* v. *Rice*, 104 U. S., 737–755; 26 L. Ed., 910; *Huebner-Toledo Breweries Co.* v. *Mathews*, 253 *Fed.*, 435–447; 165 C. C. A., 177; *Turner* v. *Lauter Piano Co.*, 248 Fed., 930; 161 C. C. A., 48; *Robinson* v. *Fabric Co.*, (D. C.,) 248 Fed., 526; *Overweight Counter-balance Elevator Co.* v. *Machine Co.*, 102 Fed., 957; 43 C. C. A., 80; *Self Scaling Can Co.* v. *Hocker*, (C. C.,) 136 Fed., 418; *Warren Webster & Co.* v. *Dunham*, 181 Fed., 836; 104 C. C. A., 346.)

[8] It is further insisted that the patent prior art has no application, for the reason that no means are provided for holding the automatic lock shown therein out of operation other than by the hand or foot of the operator.

[9–11] Knupfer, however, does show such means; but aside from that, it is not only common knowledge, but shown in this record by the uncontradicted evidence of the expert witness Browne, that—

> It was old in the art for quite analogous purposes for making provisions for doing just that thing, that is for locking the latch or locking the bolt in its unlocked position. Warns, 991,199.

Therefore, even if Knupfer were to be entirely disregarded, the combination of these old elements including adequate means for holding the automatic locking device out of operative engagement, does not amount to invention, even though that means may be in and of itself new and novel, and entitled to separate and distinct patent protection or protection in combination with these old elements as to that peculiar or novel means employed for that purpose but certainly not as a monopoly covering such combination with any and all forms of automatic locks.

For the reasons above stated, the decree of the district court as to both patents is affirmed.

ADJUDICATED PATENTS.

(U. S. C. C. A. N. Y.) The Wilson patent, No. 43,090, design for doll, *Held* infringed. *Wilson v. Heber Bros.*, 275 Fed. Rep., 346.

(U. S. D. C. N. Y.) The Cohn design patent, No. 54,714, for design for frame for shades for electric lights, *Held* valid and infringed. *Robert Findlay Mfg. Co. v. Hygrade Lighting Fixture Corporation*, 275 Fed. Rep., 362.

(U. S. C. C. A. Wis.) The Secor patent, No. 812,871, for special regulator for explosive-engines, *Held* not infringed and claim 17 invalid. *Advance Rumley Co. v. John Lauson Mfg. Co.*, 275 Fed. Rep., 249.

Interference Notices.

Department of the Interior,
United States Patent Office,
Washington, D. C., December 7, 1921.

Perfection Mfg. Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Haskins Bros. & Company, corner of Prospect and Grand streets, Sioux City, Iowa, for registration of a trade-mark and trade-mark registered August 22, 1916, No. 112,216, to Perfection Mfg. Co., 434 Lafayette Building, Philadelphia, Pa., and a notice of such declaration sent by registered mail to Perfection Mfg. Co. at the new address having been returned by the post-office undeliverable, notice is hereby given that unless said Perfection Mfg. Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

Department of the Interior,
United States Patent Office,
Washington, D. C., December 10, 1921.

The Parker Supply Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of the Massasoit Manufacturing Company, 186 Pocasset Street, Fall River, Mass., for registration of a trade-mark and trade-mark registered August 8, 1911, No. 83,004, to the Parker Supply Co., 250 Devonshire Street, Boston, Mass., and because of prima facie evidence in the record to the effect that the Parker Supply Co. is no longer in existence notice is hereby given that unless said the Parker Supply Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

Adverse Decisions in Interference.

Patent No. 1,298,441.

On November 18, 1921, a decision was rendered that Sidney A. Beyland was not the first inventor of the subject-matter covered by claims 6, 7, and 18 of his Patent No. 1,298,441, subject, "Telephone system," and no appeal having been taken within the time allowed such decision has become final.

Patent No. 1,363,484.

On November 15, 1921, a decision was rendered that Arthur Roemer was not the first inventor of the subject-matter covered by claims 1, 2, 3, 4, and 5 of his Patent No. 1,363,484, subject, "Spring-motor construction," and no appeal having been taken within the time allowed such decision has become final.

Patent No. 1,369,854.

On September 10, 1921, a decision was rendered that Arthur C. Thompson and Winfield S. Robinett were not the first inventors of the subject-matter covered by claim 4 of their Patent No. 1,369,854, subject, "Thermostat-valve," and no appeal having been taken within the time allowed such decision has become final.

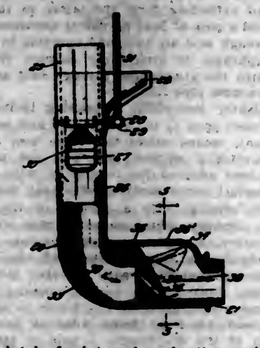
Briefs in Appealed Cases.

All briefs filed in this Office should have conspicuously printed thereon a statement designating the particular tribunal of the Patent Office to which the brief is addressed.

NOTICE—DESIGN PATENTS.

When an application for a design patent is found allowable, the patent will be granted for the term asked in the application papers unless specific request has been made for notice prior to allowance so that the term may be extended. Hereafter the Office will delay allowance and notify the applicant ONLY in cases where a specific request is filed.

Condition of Applications Under Examination at Close of Business December 10, 1921.



Room No.	Divisions, Examiners, and subjects of inventions. (Oldest new case, Nov. 15; oldest amended, Feb. 12.)	Oldest new application and oldest application of which action by Primary Examiner is next in order. New.	Amended.	No. of applications awaiting action.
314	1. LOEFFLER, F. A., Cleaner Operators; Fences; Gates; Harrows and Diggers; Plows; Planting; Seeding; Unloaders.	July 14	July 8	707
130	2. BALDWIN, M., Bee Culture; Dairy; Medicines; Preparation; Preserving; Presses; Tents, Canopies, Umbrellas, and Cases; Threshing Tools, Flails and Floors.	Feb. 3	Apr. 8	1,726
173	3. RICH, WM. J., Electric Heating and Welding; Electric Motive Power; Electric Railways; Electric Signaling; Metallurgical Apparatus; Metallurgy; Metal Treatment; Plastic Molding; Riveting; Metal-Working Line Implements; Railway Mail Delivery; Traversing Horse.	Apr. 21	Feb. 21	941
284	4. MERRITT, A. D., Conveyors; Conveyor, Fluid-Current; Conveyor, Power-Driven; Elevating and Conveying; Material or Article Handling; Pushing and Pulling Implements; Railway Mail Delivery; Traversing Horse.	Jan. 28	July 6	1,738
147	5. MACNAB, J. F., Book-Making; Books, Strips and Leaves; Harvesters; Jewelry; Manifolding; Music; Printed Matter; Tying Cords or Straps.	Feb. 18	Mar. 24	941
218	6. LEWERS, A. M., Blasting and Dynamite; Chemistry; Explosive, Pyrotechnic and Match Compositions; Fertilizers; Mineral Oils; Oils, Fats, and Gums; Plastic Compositions; Preservation.	May 9	July 13	1,009
213	7. JARBOE, C. O., Cans and Tops; Closing; Fastening; Hardware; Plastic Sheet Inserting Devices; Stoppers.	Apr. 15 Aug. 31	July 15 Nov. 15	2,044 694
133	8. CLIFT, J. W., Beds; Chairs and Seats; Tables; Supports.	Jan. 10	Sept. 15	1,045
221	9. TRYON, P. M., Air and Gas Pumps; Hydraulic Motors; Injectors and Ejectors; Motors, Fluid; Motors, Fluid-Current; Pumps.	May 16	Oct. 4	1,116
205	10. MITCHELL, T. H., Land Vehicles; Land Vehicles, Animal Draft Appliances; Land-Vehicles—Bodies and Tops; Land-Vehicles, Dumping; Land-Vehicles, Wheel Substitutes; Motor Vehicles; Motor Vehicles, Steering; Sleds; Snow and Land Vehicles; Stands; Trucks and Supports.	Aug. 11	July 27	466
154	11. ARMSTRONG, H. C., Boot and Shoe Making; Boots, Shoes, and Leggings; Buckles; Eyelet and Rivet Setting; Harness; Leather Manufactures; Metal Working and Shaping; Whips and Whip Apparatus.	May 20 Jan. 5	Sept. 9 Oct. 14	1,095 1,618
222	12. PIERCE, F. T., Molding Machines.			
220	13. NIXON, G., Bolt, Nail, Nut, Rivet, and Screw Making; Chain, Staple, and Horseshoe Making; Driven, Handled, and Screw-Threaded Fastenings; Gear Cutting, Milling, and Planing; Metal Working; Metal Forging and Welding; Metal Rolling; Metal Tools and Implements, Making; Metal Working; Needle and Pin Making; Turning.	Feb. 25	Sept. 16	951
223	14. BRUMBAUGH, N. J., Compound Tools; Cutting and Punching Sheets and Bars; Farriery; Metal-Bending; Sheet-Metal Ware, Making; Tools; Wire Fabrics and Structures; Wire-Working.	Nov. 13	Mar. 30	1,795
208	15. REDROW, W. L., Bread, Pastry, and Confection Making; Glass; Laminated Fabrics and Analogous Manufactures; Paper-Making and Fiber Liberation; Plastic Block and Earthenware Apparatus; Plastics.	Dec. 15 Apr. 5	Mar. 3 July 11	1,788 1,109
112	16. BACKUS, C. D., Radiant Energy; Telegraphy; Telephony.			
207	17. RAFTER, G. S., Coating, Label Printing and Paper Bleaching; Nut and Bolt Locks; Ornamentation; Paper Manufactures; Printing; Type Casting; Sheet Material Associating or Folding; Sheet Feeding or Delivering; Type Setting.	Jan. 15	Feb. 16	1,906
220	18. PORTER, M. E., Liquid Heaters and Vaporizers; Motors, Expansible Chamber Type; Power Plants; Speed Responsive Devices; Steam and Vacuum Pumps.	Jan. 17	May 4	1,027
236	19. GLASCOCK, R. B., Automatic Temperature and Humidity Regulation; Furnaces; Heating Systems; Stoves and Furnaces; Domestic Cooking Vessels; Thermostats and Humidistats.	June 2	July 14	1,613
179	20. WRIGHT, H., Artificial Body Members; Miscellaneous Hardware; Closure-Fasteners; Cutlery; Dentistry; Locks and Latches; Safes; Undertaking.	Apr. 5	July 19	711
212	21. THURBER, W. L., Brakes and Gins; Carding; Cloth-Finishing; Continuous-Strip Feeding; Cordage; Felt and Fur; Knitting and Netting; Silk; Spinning; Weaving; Winding and Reeling.	June 26	Sept. 24	551
249	22. COLWELL, J. H., Ammunition and Explosive Devices; Ammunition and Explosive Charge Making.	Jan. 21	July 21	827
217	23. GROESBECK, W. D., Acoustics; Coin-Handling; Horology; Recorders; Registers; Sound Recording and Reproducing; Time-Controlling Mechanism.	Feb. 24 Sept. 12	July 7 Sept. 10	1,126 304
144	24. DARBY, J. J., Apparel; Apparel Apparatus; Garment Supporters; Sewing-Machines.	May 4	June 27	832
315	25. LIGHTFOOT, J. H., Agitating; Brushmaking; Centrifugal Bowl Separators; Mills; Threshing; Vegetable Cutters and Crushers; Gas Separation.	May 5	July 22	1,614
105	26. HODGES, J. S., Electricity, Generation; Motive Power; Prime Mover Dynamo Plants.	Feb. 12	May 20	1,642
314	27. ANDERSON, L. S., Abrading; Brushing and Scrubbing; Laundry; Washing Apparatus.	Apr. 6	Sept. 19	785
226	28. BENSON, A. R., Internal-Combustion Engines.	May 28	Sept. 20	1,400
147	29. MORRIS, B. N., Boring and Drilling; Button Making; Chucks or Sockets; Coopering; Tool Handle Fastenings; Wirestergart-Machines; Wood-Sawing; Wood-Turning; Woodworking; Woodworking-Tools.			
153	30. SULLIVAN, M. R., Illuminating-Burners; Illumination; Liquid and Gaseous Fuel Burners; Typewriting Machines.	Jan. 5	Feb. 21	2,026
173	31. HOLMES, W. N., Alcohol; Ammonia, Water, and Wood Distillation; Charcoal and Coke; Fuel and Igniting Devices; Gas, Heating and Illuminating; Hides, Skins, and Leather; Hydraulic Cement and Lime; Mineral Oils; Oils, Fats, and Gums; Sugar and Salt.	Feb. 12 June 10	Sept. 20 July 8	991 724
278	32. BANCROFT, J. F., Gas and Liquid Contact Apparatus; Heat Exchange.			
70	33. COWLES, W. A., Bridges; Hydraulic and Earth Engineering; Masonry and Concrete Structures; Metallic Building Structures; Roads and Pavements; Roofs.	Aug. 29	Oct. 11	315
304	34. SIMPSON, G. R., Electricity-Transmission to Vehicles; Pneumatic Despatch; Railways; Railway Rolling-Stock; Railway Switches and Signals; Railways, Surface Track; Railway Wheels and Axles; Snow Service; Track-Sanders; Vehicle-Fenders.	Sept. 20	Sept. 8	731
52	35. REYNOLDS, E. C., Buckles, Buttons, Clasps, Etc.; Card, Picture, and Sign Exhibiting; Signals and Indicators; Toilet.	July 15	June 24	1,545
204	36. MORTON, G. L., Automatic Weighers; Driers; Geometrical Instruments; Measuring Instruments; Force Measuring.	Mar. 17 June 13	Mar. 10 June 17	1,022 1,209
107	37. TAYLOR, E. C., Electricity, Circuit Makers and Breakers.			
278	38. IDE, G. R., Animal Husbandry; Earth Boring; Fishing, Trapping, and Vermin Destroying; Mining, Quarrying, and Ice-Harvesting; Stationery; Stone-Working; Wells.	Nov. 10	M[illegible]	2,076
220	39. COWLES, A. W., Fluid Pressure Regulators; Joint Packings; Multiple Valves; Pipe-to-Pipe Joints; Pipe Joints or Couplings; Red Joints or Couplings; Valved Pipe Joints or Couplings; Valves; Water Distribution.	Jan. 10	Apr. 7	2,461
273	40. OBERLIN, J. J., Baggage; Bottles and Jars; Check-Controlled Apparatus; Chairs, Leather, and Rubber Receptacles; Deposit and Collection Receptacles; Metallic Receptacles; Package and Article Carriers; Paper Receptacles; Special Receptacles and Packages; Wooden Receptacles.	June 16	July 15	883
125	41. BROWN, J. L., Land Vehicles, Wheels and Axles; Resilient Tires and Wheels.	Jan. 17	Jan. 18	1,614
114	42. CUTTING, H. O., Electrical Conduits and Hangers; Electric Signaling; Electric Lamps.	Jan. 31	Feb. 26	1,731
202	43. HOPKINS, F. L., Baths and Closets; Dispensing; Liquid Separation or Purification; Pumping and Closing Portable Fire Extinguishers; Sewerage; Sewerage Traps and Seepage; Tanks and Reservoirs.	Mar. 5	Oct. 6	841
230	44. SHAFFER, C. H., Air-Guns, Compressed-Air Guns; Railway Draft Appliances; Refrigeration Ships.	May 21 Apr. 22	Aug. 1 June 20	1,196 1,203
370	45. GILES, A. H., Journal-Bearings; Pulleys, and Shafting; Lubrication; Motors; Spring Devices.	Mar. 18	July 11	1,215
232	46. WOLCOTT, C. L., Curtains, Screens, and Screens; Electrical Appliances; Fire-Escapes; Ladders; Fluid Sprinkling, Spraying, and Distributing; Power Pipe and Hydrant; Weather Buildings; Sanitation.			
264	47. BARKER, E., Brakes; Clutches and Power Stop Control; Elevators; Fluid Pressure Brake and Analogous Systems.	Jan. 4	Feb. 13	1,064
113	48. ROBERTS, O. E., Electricity, Condensers; Electricity, General Applications.	June 23	Sept. 21	4,281

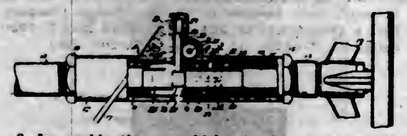
	Trade-Marks.	Nov. 28	Nov. 28	393
	Designs.			
	Labels and Prints.			

Total number of applications awaiting action, excluding Trade-Mark division, 89,195; Trade-Mark division, 6,563.

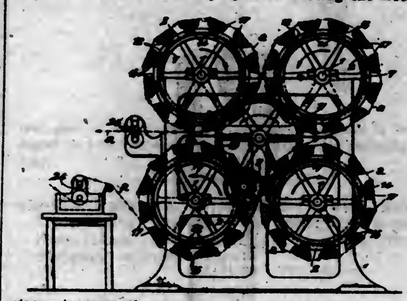
PATENTS



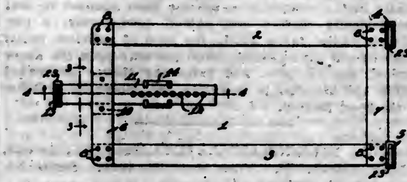
GRANTED DECEMBER 20, 1921.

1,400,506. AIR-REGULATING DEVICE FOR INTERNAL-COMBUSTION ENGINES. RICHARD ABRAM, Riverside, Ill. Filed July 2, 1919. Serial No. 308,643. 3 Claims. (Cl. 277—65.)

3. An air intake for internal combustion engines having in combinative association, a conduit, for connection at its discharge end to the inspiration port of an engine; a gravity operable valve in said conduit adapted to be opened by the incoming air; and a port through said valve, the axis of which is at an angle to the normal path of the air and which approaches parallelism with said path as it is moved toward open position.



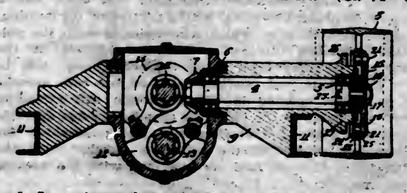
1,400,507. LOCK FOR MOTOR-DRIVEN VEHICLES. CHARLES N. ADDIS, Downers Grove, Ill., assignor of one-half to John Skworchinsky, Chicago, Ill. Filed Nov. 26, 1919. Serial No. 340,783. 5 Claims. (Cl. 70—90.)



2. In combination, a vehicle steering shaft formed of two independent axial sections, a shiftable element operatively connecting said shaft sections, means for shifting said element to disconnect said shaft sections, and means for locking said element in inoperative position, said element having an opening adapted for engagement by said locking means when said element is in operative position for locking said shaft against rotation.

1,400,508. MACHINE FOR DRYING STRIPS. ERNST AMMANN-HABERSTICH, Basel, Switzerland. Filed Feb. 15, 1918. Serial No. 217,360. 5 Claims. (Cl. 34—48.)

5. A machine or drying strips, comprising a reel, rollers arranged nearly tangentially to the reel, endless metallic straps, one half of each such strap acting as a support for the strips to be wound on the reel, guides for the strap-halves acting as supports, rollers provided on the metallic straps and coöperating with said guides in order to reduce the friction of the metallic straps in the said guides and means for rotating the reel and imparting a movement to said rollers arranged nearly tangentially on the reel, for the purpose of causing the metallic straps to move the strips in a transverse direction while they are wound on the reel.



1,400,509. TRUNK-DOLLY. MARCUS O. ANTHONY, New York, N. Y., and GEORGE LEDERMAN, Cleveland, Ohio; said Lederman assignor to said Anthony. Filed June 4, 1920. Serial No. 386,500. 3 Claims. (Cl. 280—35.)

1. A trunk dolly adapted to be secured to the bottom of a trunk and comprising a rectangular frame having a fixed abutment projecting upwardly from one end thereof, a wheel pivotally supporting each corner of said frame, a movable abutment mounted at the opposite end of said frame and adapted to coöperate with said fixed abutment to clamp said frame to said trunk, and means for retaining said movable abutment in adjusted position.

1,400,510. POWER-PULLEY MOUNTING FOR TRANSMISSION MECHANISM. AXEL HJ. ASPROOTH, Rockford, Ill., assignor to Cotta Transmission Company, Rockford, Ill., a Corporation of Illinois. Filed Aug. 4, 1919. Serial No. 315,099. 6 Claims. (Cl. 74—7.)

1. In a transmission mechanism, the combination of a frame, a power pulley shaft journaled therein, a power pulley detachably mounted on the end of said shaft, and

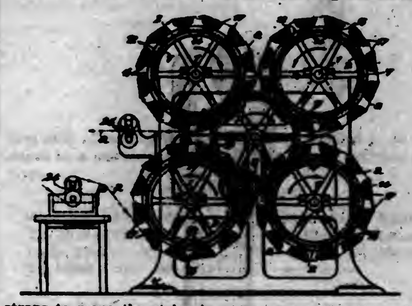
PATENTS

GRANTED DECEMBER 20, 1921.

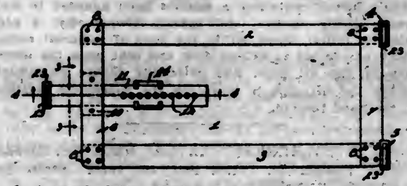
1,400,506. AIR-REGULATING DEVICE FOR INTERNAL-COMBUSTION ENGINES. RICHARD ABRAM, Riverside, Ill. Filed July 3, 1919. Serial No. 308,643. 3 Claims. (Cl. 277—66.)

3. An air intake for internal combustion engines having in combinative association, a conduit, for connection at its discharge end to the inspiration port of an engine; a gravity operable valve in said conduit adapted to be opened by the incoming air; and a port through said valve, the axis of which is at an angle to the normal path of the air and which approaches parallelism with said path as it is moved toward open position.



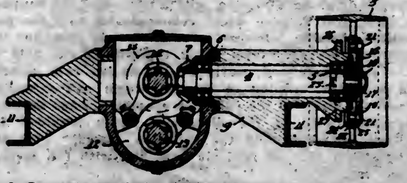
1,400,507. LOCK FOR MOTOR-DRIVEN VEHICLES. CHARLES N. ADDIS, Downers Grove, Ill., assignor of one-half to John Skworchinsky, Chicago, Ill. Filed Nov. 26, 1919. Serial No. 340,783. 5 Claims. (Cl. 70—90.)

2. In combination, a vehicle steering shaft formed of two independent axial sections, a shiftable element operatively connecting said shaft sections, means for shifting said element to disconnect said shaft sections, and means for locking said element in inoperative position, said element having an opening adapted for engagement by said locking means when said element is in operative position for locking said shaft against rotation.



1,400,508. MACHINE FOR DRYING STRIPS. ERNST AMMANN-HABERSTICH, Basel, Switzerland. Filed Feb. 15, 1918. Serial No. 217,300½. 5 Claims. (Cl. 34—48.)

5. A machine or drying strips, comprising a reel, rollers arranged nearly tangentially to the reel, endless metallic straps, one half of each such strap acting as a support for the strips to be wound on the reel, guides for the strap-halves acting as supports, rollers provided on the metallic straps and coöperating with said guides in order to reduce the friction of the metallic straps in the said guides and means for rotating the reel and imparting a movement to said rollers arranged nearly tangentially on the reel, for the purpose of causing the metallic



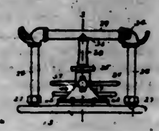
straps to move the strips in a transverse direction while they are wound on the reel.

1,400,509. TRUNK-DOLLY. MARCUS O. ANTHONY, New York, N. Y., and GEORGE LEDERMAN, Cleveland, Ohio; said Lederman assignor to said Anthony. Filed June 4, 1920. Serial No. 386,500. 3 Claims. (Cl. 280—35.)

1. A trunk dolly adapted to be secured to the bottom of a trunk and comprising a rectangular frame having a fixed abutment projecting upwardly from one end thereof, a wheel pivotally supporting each corner of said frame, a movable abutment mounted at the opposite end of said frame and adapted to coöperate with said fixed abutment to clamp said frame to said trunk, and means for retaining said movable abutment in adjusted position.

1,400,510. POWER-PULLEY MOUNTING FOR TRANSMISSION MECHANISM. AXEL HJ. ASPROOTH, Rockford, Ill., assignor to Cotta Transmission Company, Rockford, Ill., a Corporation of Illinois. Filed Aug. 4, 1919. Serial No. 315,099. 6 Claims. (Cl. 74—7.)

1. In a transmission mechanism, the combination of a frame, a power pulley shaft journaled therein, a power pulley detachably mounted on the end of said shaft, and



means for fixedly connecting the power pulley to and supporting it from the frame structure in such position that the pulley circumscribes said end of the power pulley shaft and constitutes a stationary guard therefor.

1,400,511. DEFLECTOR FOR FILL-PIPES. LINNAEUS E. BARNS, Fort Wayne, Ind., assignor to Wayne Oil Tank and Pump Company, Fort Wayne, Ind., a Corporation of Indiana. Filed Jan. 3, 1920. Serial No. 349,330. 1 Claim. (Cl. 137—21.)

In combination with a fill pipe adapted to discharge upwardly into a container, a tubular hood adapted to seat concentrically thereon and extend downwardly, a plurality of radial vanes within the hood of sufficient radial width at the top to extend over and seat upon the upper curb of the fill pipe, and extending thence downward within the fill pipe to maintain the concentric relation of the hood thereto.

1,400,512. MILKING APPARATUS. MERRITT C. BARDEN, West Pawlet, Vt. Filed Feb. 19, 1921. Serial No. 446,269. 7 Claims. (Cl. 31—90.)

1. A pulsator comprising a housing which includes a pulsation chamber having means adapted for connection with a conduit communicating with a vacuum pipe line, and means adapted for connection with an air and vacuum conduit communicating with teat cups, and a flexible diaphragm forming, with a portion of the housing, a diaphragm chamber which communicates with the pulsation chamber through a restricted by-pass in the housing, the diaphragm being exposed at one side to the atmosphere and provided with an air tube secured in a central opening in the diaphragm and extending from the latter to the pulsation chamber, means operable by movements of the diaphragm being provided for alternately connecting the pulsation chamber with the atmosphere through said air tube, and with the vacuum pipe line.

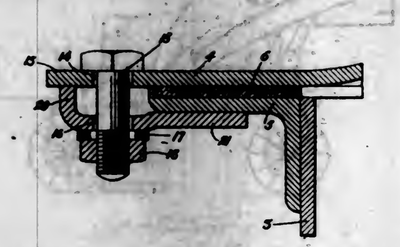
2. A pulsator substantially as specified by Claim 1, the said air tube being adapted to conform to movements of the diaphragm.

3. A pulsator substantially as specified by claim 1, said air tube being composed of a rigid section attached to the diaphragm and a flexible section interposed between the rigid section and the pulsation chamber and adapted to conform to movements of the diaphragm.

4. A pulsator comprising a housing which includes a pulsation chamber having means adapted for connection with a conduit communicating with a vacuum pipe line, and means adapted for connection with an air and vacuum conduit communicating with teat cups, a flexible diaphragm forming, with a portion of the housing, a diaphragm chamber which communicates with the pulsation chamber through a restricted by-pass in the housing, the diaphragm being exposed at one side to the atmosphere and provided with an air tube secured in a central opening in the diaphragm and extending from the latter to the pulsation chamber, and a pair of floating valves connected by a stem passing through said air tube and operable by movements of the diaphragm to alternately connect the pulsation chamber with the atmosphere through said air tube, and with the vacuum pipe line.

5. A pulsator comprising a housing including a pulsation chamber open to the atmosphere and provided with a valve seat, means above the valve seat adapted for connection with a vacuum pipe line and means below the valve seat adapted for connection with an air and vacuum conduit communicating with teat cups, a flexible diaphragm forming, with a portion of the housing, a diaphragm chamber which communicates with the pulsation chamber through a restricted by-pass in the housing, the diaphragm being exposed at one side to the atmosphere and provided with a valve seat and with an air tube secured in a central opening in the diaphragm and extending from the latter to the pulsation chamber, said air tube being adapted to conform to movements of the diaphragm, a pair of stem-connected floating valves, one adapted to coöperate with the diaphragm valve seat and the other with the pulsation chamber valve seat; the arrangement being such that when air is exhausted from the pulsation chamber through the pipe line, the diaphragm is flexed in one direction to shut off the valve chamber from the pipe line and admit air under atmospheric pressure through the diaphragm opening and air tube to the pulsation chamber, and is subsequently flexed in the opposite direction to connect the pulsation chamber with the pipe line and exclude air from the pulsation chamber.

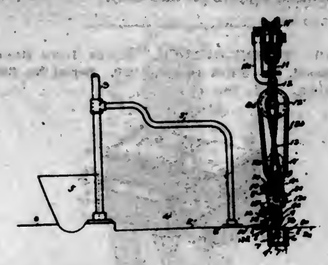
1,400,513. ELECTRIC BATTERY. RAYMOND C. BENNER, Fremont, Ohio, assignor to National Carbon Company, Inc., a Corporation of New York. Filed May 5, 1920. Serial No. 379,123. 11 Claims. (Cl. 204—38.)



1. In a dry cell of the kind described, the combination of a depolarizing mix, a zinc electrode, and spacing means adjacent the mix and zinc electrode having passages therein for conveying liquid to moisten the mix.

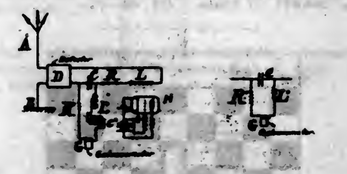
1,400,514. TRACTION-LUG. JOHN A. BUNTZ, Harrisburg, Pa., assignor of one-half to Walter S. Schell and one-half to Bessie M. Buntz, Harrisburg, Pa. Filed Apr. 27, 1921. Serial No. 464,945. 7 Claims. (Cl. 301—44.)

7. The combination with a vehicle wheel, of a series of lugs interlocking with one another, each lug of the series comprising a main portion provided with arms oppositely disposed and at right angles to said main portion, each arm being provided with recesses and a tongue by means of which they are secured to the rim of the wheel and to each other, supplemental lugs comprising a base portion which is provided with a recess to receive a projection on the main portion of the main lug, triangular shaped teeth provided on the base of said supplemental lug and extending beyond the main lug and on each side of the main portion thereof.



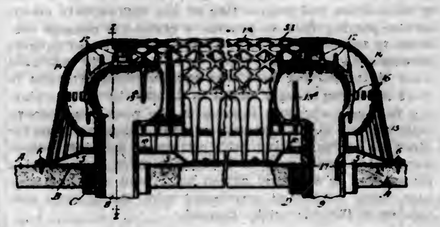
1,400,515. TRANSFORMER-COVER CONSTRUCTION. ROBERT V. BINGAY, Pittsburgh, Pa., assignor to Pittsburgh Transformer Company, a Corporation of Pennsylvania. Filed Oct. 17, 1919. Serial No. 331,321. 2 Claims. (Cl. 220—55.)

1. The combination with a tank having a flange, of a cover having an edge overhanging said flange, a series of bolts passing through said edge, and a series of complementary clamping lugs carried thereby, the opposite ends of which lugs are adapted to exert upward pressure upon the under side of said flange and the under side of the overhanging cover respectively.



1,400,516. LITTER-COLLECTOR. ALFRED L. BISHMAN, Syracuse, N. Y. Filed Dec. 6, 1920. Serial No. 428,602. 2 Claims. (Cl. 119—15.)

1. In a litter collector, an elongated tray having a clear open top, the top edges along the opposite sides being provided with outwardly facing flanges, the flange at one side being in a higher plane than the flange at the opposite side, and the top edges of the ends of the tray rolled into beads which are disposed flush with said flanges, an I-bolt carried by one of the flanges, and similar lifting rods pivoted to the opposite ends of the tray, the



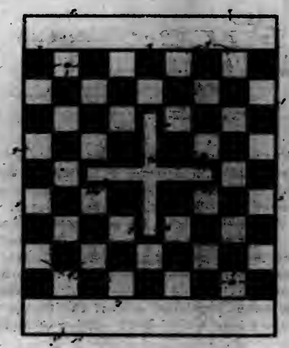
free ends of said rods comprising loops adapted to be engaged by a carrier mechanism for lifting and carrying the tray.

1,400,517. RECORDING APPARATUS FOR RADIOTELEGRAPHIC SIGNALS. ANDRÉ EUGÈNE BLONDEL, Paris, France. Filed Apr. 26, 1919. Serial No. 293,003. 2 Claims. (Cl. 250—8.)

1. Recording apparatus for radiotelegraphic signals comprising in combination a detector receiving the action of the aerial, an electric circuit of low resistance connected to the detector, a vibrating galvanometer, an electrically tuned circuit comprising the galvanometer connected to the said circuit of low resistance, the frequency of the galvanometer itself being adjusted so that each symbol recorded comprises a sufficient number of oscillations sufficiently close together and the electrical damping being, on the other hand, regulated so that the tuning may be attained at the end of a very small number of oscillations.

1,400,518. AUTOMOBILE-HEATER. THOMAS BOVEY, Chicago, Ill. Filed Oct. 17, 1919. Serial No. 331,378. 9 Claims. (Cl. 257—136.)

3. A horizontally extending heater comprising a tubular body having an intake pipe at one end and an outlet pipe at the other end, a cool air chamber extending longitudinally under said body and having an air inlet thimble and a discharge thimble depending therefrom, through which the intake-pipe and the outlet-pipe of said body extend, said pipes being spaced apart from said thimbles and said



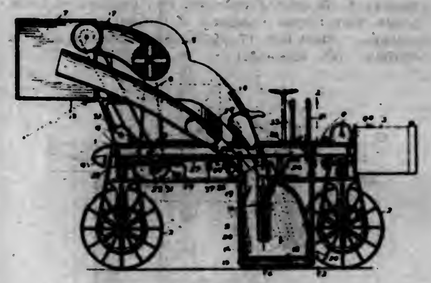
outlet pipe having a longitudinal passage therein that connects said chamber with the base of the outlet pipe, and a suitable support for said body.

1,400,519. TICKET-HOLDER. Elmer John Buckbee, Highwood, Ill. Filed July 2, 1920. Serial No. 395,727. 4 Claims. (Cl. 24—17.)

1. In a check holder, the combination with a hollow base-plate, of spring-tensioned U-shaped loops normally held within and at one end of said base-plate and adapted to yieldingly clamp one end of a pack of checks against said base-plate leaving the other end of said pack free.

1,400,520. GAME APPARATUS. George Herman Bugenhagen, Minot, N. D. Filed July 16, 1920. Serial No. 396,677. 1 Claim. (Cl. 46—64.)

A game board comprising a board having a playing field provided therein, said playing field being formed with a pair of straight continuous ways positioned perpendicular to each other, and intersecting at the approximate center of the playing field to provide a cruciform passage centered in the playing field and with a plurality of squares arranged about the ways and extending to the marginal lines of the playing field, said squares being arranged in rows extending at right angles to the direction of the playing field and alternate squares in the rows being identically colored to provide ways extending diagonally to the direction of the playing field, certain of said last named ways being continuous and the remainder thereof being interrupted by said first named ways, said cruciform passage being colored to correspond with the squares contiguous to the extremities thereof.

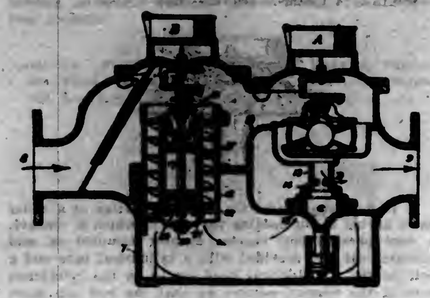


1,400,521. PAPER-ROLL HOLDER AND CUTTER. Elvah O. Bulman, Grand Rapids, Mich. Filed Mar. 28, 1921. Serial No. 456,100. 2 Claims. (Cl. 211—82.)

1. In a device of the character described; a support carrying a pivot pin; a cutter comprising a cutting bar and a supporting arm therefor having integral spaced-apart portions parallelly disposed and provided with aligned orifices therethrough rockably bearing on the pivot pin and having also an integral bight portion between said parallelly disposed portions provided with an aperture

and a rock member at one side thereof; a spring-pressed plunger slidable and swingable in a bearing on the support and having spaced-apart lugs between which said rock-member bears.

1,400,522. COTTON-HARVESTER. Burrell Cannon, Longview, Tex. Filed July 29, 1920. Serial No. 399,819. 5 Claims. (Cl. 56—30.)



1. In a cotton harvester, a fan, a scoop, gathering devices, and means for setting said devices in operative position to be drawn along a row of plants, said devices including a pipe connected to said fan to direct a blast of air outwardly from said fan across the row to said scoop.

1,400,523. FLUID-METER. Horace Chessman, Edgewood Park, Pa., assignor to Pittsburgh Meter Company, East Pittsburgh, Pa., a Corporation of Pennsylvania. Original application filed Nov. 17, 1916, Serial No. 133,577. Divided and this application filed Dec. 20, 1917. Serial No. 208,004. 1 Claim. (Cl. 73—37.)

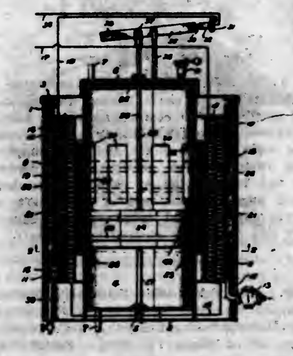
A metering device comprising in combination a casing through which the fluid to be measured flows, means in the casing for operating the meter, said means being actuated by the flow of fluid through said casing, a bearing for said means, and means cooperating with the operating means and spaced away therefrom to entrap a relatively stagnant body of fluid therebetween subject to the

impact of the fluid flowing through the casing, the space being so formed as to translate the impact pressure into

a pressure against the operating means in a direction opposite to the flow of fluid which acts to relieve the pressure on the bearing.

1,400,524. SPARK-PLUG. Grover Christern, New York, N. Y., assignor to Eureka Spark Plug Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 21, 1920. Serial No. 353,074. 3 Claims. (Cl. 123—169.)

1. A spark plug provided with a bushing, an insulating core in said bushing, a disk forming an electrode and means for supporting the same below said core, a surrounding electrode secured to the bushing, a projection on the disk and a projection on the bushing which is engaged thereby and means for turning the disk whereby the projections may be engaged or disengaged, as desired.



1,400,525. SPARK-PLUG. Grover Christern, New York, N. Y. Filed Nov. 17, 1919, Serial No. 338,607. Renewed June 7, 1921. Serial No. 475,831. 2 Claims. (Cl. 123—169.)

1. An article of the class described comprising a spark plug having a fixed electrode, a movable electrode having an end adapted to be brought into contact with the fixed electrode and rotated while in contact therewith to clean the same, a disk fixed to the upper end of said electrode having a plurality of recesses of varying depths, and a projection on the plug adapted to be brought to

rest in any one of said recesses by rotation of the movable electrode.

1,400,526. ELECTRIC WATER-HEATER. Herbert W. Christian, Detroit, Mich. Filed Sept. 7, 1920. Serial No. 408,606. 15 Claims. (Cl. 219—39.)

1. A water heating apparatus comprising an electric heating element, means to maintain a film of water about said heating element, and means actuated by a predetermined quantity of heated water to control the operation of said electric heating element.

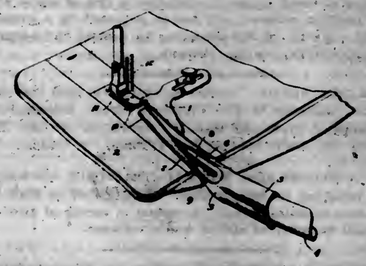
1,400,527. ALLOY. Alvah W. Clement, East Cleveland, Ohio, assignor to The Cleveland Brass Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 21, 1917. Serial No. 182,005. 7 Claims. (Cl. 75—1.)

1. A metallic alloy which is substantially non-warping and resistant to deterioration when heated to high temperature containing iron, chromium in excess of 10% and a small quantity of silicon and aluminum.

1,400,528. CAP. John Patrick Cook, London, Ontario, Canada. Filed July 21, 1919. Serial No. 312,851. 5 Claims. (Cl. 2—106.)

1. A cap comprising a band divided at the front, a top, the front part of the top from a similar point at each

side extending down further than the rear portion a distance approximately equal to the width of the band, a peak secured to the lower edge of the front part of the top, the band being secured to the outer surface of the

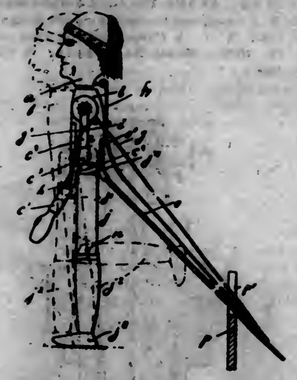


back part of the top and having free ends adapted to overlie the front part of the top next to the peak, one of the free ends formed with openings and the other end being provided with a hook for adjustably securing the band ends together.

1,400,529. PILE FABRIC FRAME. PERCIVAL W. COVELAND, Clark Mills, N. Y., assignor to The Hind & Harrison Plush Co., Clark Mills, N. Y., a Corporation. Filed May 7, 1918. Serial No. 233,037. 9 Claims. (Cl. 206—89.)

1. In a frame for storing and transporting pile fabric the combination of a shaft having angular-shaped ends, two end members each comprising a hub portion, an inwardly extending socket slidingly and removably fitting over the ends of said shaft and hook-supporting arms radiating from the hub portion, a set screw threaded through the hub portion of each end member with its inner end engaging the end of the shaft within the socket whereby the end members are adjustably, non-rotatably and removably secured to the shaft.

1,400,530. STRIP-FOLDER FOR SEWING-MACHINES. ALBERT H. DE VOE, Westfield, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Sept. 11, 1919. Serial No. 323,162. 9 Claims. (Cl. 112—147.)



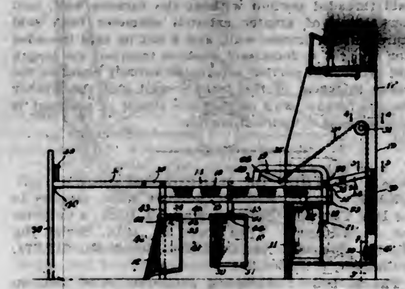
8. In a strip-folder, in combination, means for doubling a strip, and independently acting means for folding the marginal portions of the doubled strip into overlapping relationship.

1,400,531. STAYBOLT STRUCTURE. ETHAN I. DODDS, Central Valley, N. Y., assignor to Flannery Bolt Company, Pittsburgh, Pa. Filed Jan. 22, 1921. Serial No. 439,153. 4 Claims. (Cl. 85—15.)

1. In a staybolt structure, the combination of a boiler sheet having a bolt opening the wall of which is concave, a semi-spherical bolt bearing member mounted on said concave seat and provided with a cylindrical bore and a bolt having a cylindrical head seated in the cylindrical bore of the bearing member so that the bolt can move longitudinally therein.

1,400,532. MARIONETTE. MATHURIN M. DONDO, New York, N. Y. Filed Sept. 10, 1920. Serial No. 409,383. 2 Claims. (Cl. 46—40.)

1. In a marionette, a pair of arms capable of universal movements at the shoulders and elbow portions, and means for operating said arms, each of said means including a rigid member extending rearwardly of the arm, a link at one end connected to said member and at the opposite end to the lower part of the arm and a guide for said link on the upper part of said arm.



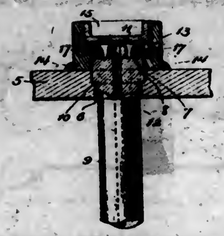
1,400,533. SPRINKLER. OSCAR F. ENGEL, Hartford, Conn. Filed May 25, 1920. Serial No. 384,017. 1 Claim. (Cl. 299—19.)

A sprinkler of the class described comprising a hollow body having its upper end open and provided adjacent thereto with a rubbered portion forming a seat, a laterally extending hollow supply nipple formed on and communicating with said body at its lower end, a semi-

spherical cap removably fitted in said seat of the body, means for removably fastening said cap to said body, and said cap having a plurality of offset circumferentially extending perforated portions formed therein, for the purpose specified.

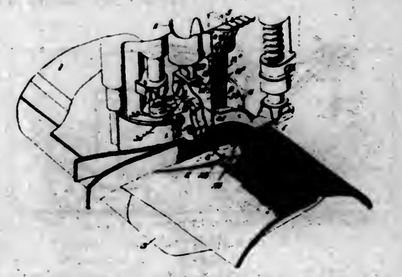
1,400,534. FOLDING BED. ALBERT ERNEST, Paxton, Ill. Filed Feb. 28, 1916. Serial No. 80,819. 13 Claims. (Cl. 5—13.)

1. A folding bed comprising, in combination, a frame, a bed movable relatively to said frame, and a receptacle and a pivotal connection between parts rigidly connected with said receptacle and said bed respectively, and a second pivotal connection between said receptacle and said bed whereby said receptacle is maintained in substantially horizontal position.



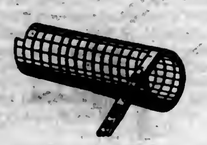
1,400,535. STAYBOLT STRUCTURE. JOHN ROGERS FLANNERY, Pittsburgh, Pa., and ETHAN I. DODDS, Central Valley, N. Y., assignors to Flannery Bolt Company, Pittsburgh, Pa. Filed Jan. 27, 1921. Serial No. 440,421. 3 Claims. (Cl. 85—1.5.)

1. In a stay bolt structure, the combination of a boiler sheet having a bolt opening, a bearing member welded to said sheet within the opening and provided with a cylindrical bore and a bolt having a cylindrical head mounted in said bore and movable longitudinally therein.



1,400,536. STAYBOLT STRUCTURE. JOHN ROGERS FLANNERY, Pittsburgh, Pa., and ETHAN I. DODDS, Central Valley, N. Y., assignors to Flannery Bolt Company, Pittsburgh, Pa. Filed Jan. 27, 1921. Serial No. 440,422. 3 Claims. (Cl. 85—1.5.)

1. In staybolt construction, the combination of a boiler sheet having an opening for a staybolt and a counterbored seat for the head of the bolt, a bolt having a tell-tale extending longitudinally through the same and provided with a head seated in the counterbored seat in the sheet

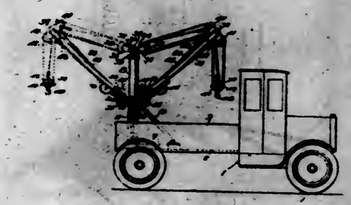


and a sleeve surrounding the head and welded to the latter, the sleeve also being secured to the boiler sheet.

1,400,537. PRESSER-FOOT FOR SEWING-MACHINES. GEORGE S. GATCHELL, Roselle Park, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Oct. 27, 1917. Serial No. 198,776. 28 Claims. (Cl. 112—235.)

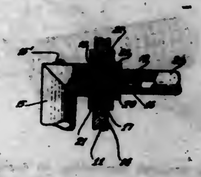
1. In a sewing machine, the combination with covering stitch-forming mechanism and a trimmer, of presser mechanism including spaced toe-portions between which upturned marginal portions of material are adapted to pass to the trimmer, said toe-portions being formed with upwardly diverging and rearwardly and upwardly inclined guiding surfaces adapted to elevate and straighten curled or wrinkled edge-portions of the material as they pass into the space between the presser-toes.

1,400,538. BELT-MAKING PROCESS. CHARLES C. GATES, Denver, Colo. Filed Oct. 8, 1918. Serial No. 256,640. 8 Claims. (Cl. 154—4.)



4. A belt-making process consisting in forming a cylindrical belt member from superposed layers of rubberized material, vulcanizing the said member, rotating the member and cutting a spiral kerf therethrough during the rotary movement thereof.

1,400,539. ENDLESS BELT. CHARLES C. GATES, Denver, Colo. Filed Mar. 12, 1919. Serial No. 282,626. 9 Claims. (Cl. 74—62.)

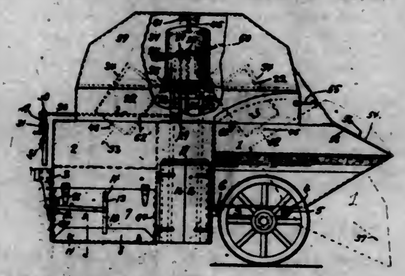


9. An endless vulcanized belt having rubberized cord embedded therein and lying substantially parallel with the length of the belt, the sides and the inner surface of the belt being composed of rubberized woven fabric whose warp and woof form oblique angles to the length of the belt.

1,400,540. TOWING-DERRICK. ALBERT GLOOR, Chicago, Ill., assignor to Sauger Derrick Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 20, 1921. Serial No. 438,731. 8 Claims. (Cl. 212—58.)

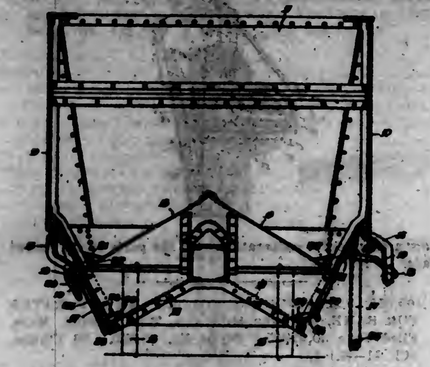
1. A derrick of the kind described, a fixed standard, a collar rotatable thereon between the ends thereof, a boom pivoted at one end to the collar, a cable connecting the free end of the boom to the top of the standard, a winding drum on the boom for said cable for lifting and lowering the boom, a second winding drum on the boom, a cable leading from the second drum to the free end of the boom and adapted to hang from the free end of the boom for connection to an object to be acted upon, and means for locking the collar against rotation on the standard.

1,400,541. WATER-HEATER. CHARLES C. HANSEN, New York, N. Y., assignor to Thermal Appliance Company, Inc., Elizabethport, N. J., a Corporation of New Jersey. Filed Oct. 8, 1920. Serial No. 415,479. 6 Claims. (Cl. 285—30.)



3. In combination with a furnace having a wall containing spaced apertures, a water heater comprising a heating pipe lying within the furnace and having a middle portion extending parallel to the wall of said furnace, and free end portions extending transversely to said wall and inlet and outlet water connections in the form of studs extending from said end portions of the heating pipe, one of said studs having a cylindrical portion extending through one of said apertures in the furnace wall and of less diameter than said aperture, said stud of less diameter than said end portions of the heating pipe, and a threaded portion extending from said cylindrical portion and of less diameter than said cylindrical portion, a washer on said cylindrical portion within the furnace wall, a washer on said threaded portion without the furnace wall, said washers being of greater external diameter than said aperture in the furnace wall, and a nut on said threaded portion adapted to force said washers together, the length of said cylindrical portion being substantially equal to the combined thickness of the furnace wall and the washer within the furnace wall so that the thrust of said nut is taken upon said cylindrical portion.

1,400,542. METHOD OF MAKING POTASSIUM CARBONATE. IRA F. HARLOW, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed June 16, 1916, Serial No. 103,976. Renewed Nov. 3, 1921. Serial No. 512,574. 18 Claims. (Cl. 23—23.)

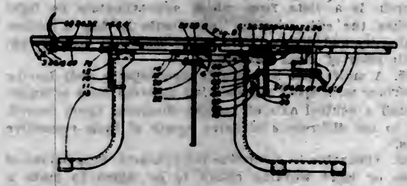


1. The method of extracting potassium salts from an alkaline bittern of the character described, which consists in mixing the same with tri-hydrate magnesium carbonate; subjecting such mixture to the action of carbon dioxid, at a temperature at which the double salt, potassium-magnesium carbonate is precipitated; without formation of any magnesium chlorid separating out such salt; decomposing the same into insoluable magnesium carbonate and soluble potassium carbonate; and then separating such resulting carbonates.

1,400,543. REFUSE-VEHICLE. WILLIAM W. HARRIS, New York, N. Y. Filed Jan. 20, 1917. Serial No. 145,446. 27 Claims. (Cl. 214—67.)

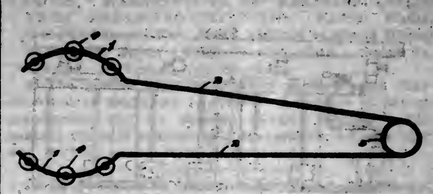
1. The combination with a vehicle frame, of a plurality of compartments, a carrier for conveying a receptacle thereon, means for discharging at will into any one of said compartments the contents of the receptacle when said carrier reaches a predetermined stage, means for mounting said carrier on said vehicle frame, means for mounting one of said compartments in fixed relation to said vehicle frame and means for mounting another of said compartments in pivotal relation on said vehicle frame, said pivotal mounting means being separate from said carrier and said fixed compartment mounting means.

1,400,544. DUMP-CAR-DOOR-OPERATING MECHANISM. HARRY S. HAAS, Chicago, Ill. Filed Sept. 21, 1918. Serial No. 254,626. 21 Claims. (Cl. 105—290.)



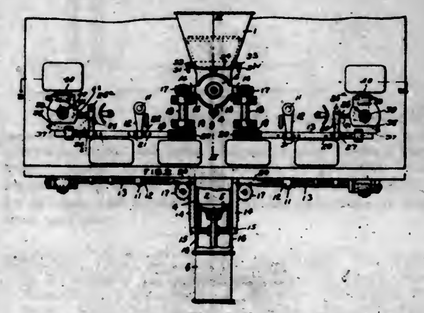
17. A dump car provided with a plurality of swinging doors, and means mounted upon one of said doors for engaging the adjacent door whereby the latter door is closed by the operation of the former door.

1,400,545. NUT-LOCK. PETER HLEB, Elizabeth, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed May 31, 1919. Serial No. 300,995. 2 Claims. (Cl. 151—21.)



1. A nut comprising a substantially circular washer portion and a superposed auxiliary portion formed of resilient material and in one piece with the washer portion, both portions provided with threaded apertures slightly out of axial alinement, the aperture in the washer portion being located eccentrically thereof.

1,400,546. OSTEOPATHIC-TREATMENT TABLE. EDWARD D. HOLME, St. Joseph, Mo. Filed Nov. 15, 1920. Serial No. 424,122. 6 Claims. (Cl. 128—74.)

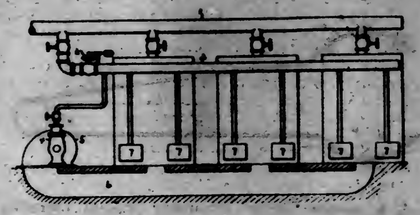


6. In an osteopathic treatment table; a pair of leg supports for supporting the legs of a person; mounting means whereby the inner ends of said leg supports are oscillatably supported for independent oscillation; springs whereby said leg supports are independently assisted in their upward oscillation; spring adjusting means whereby the tensions of said springs are separably adjusted; and securing means whereby said leg supports are independently secured at various angles of inclination.

1,400,547. APPARATUS FOR MASSAGE AND THERAPEUTIC GYMNASTIC TREATMENT. CARL G. HEMSTROM, Washington, D. C. Filed May 7, 1921. Serial No. 467,541. 3 Claims. (Cl. 128—57.)

1. A massage device comprising opposed oppositely bowed frames substantially conforming in curvature to the transverse curvature of a human limb and adapted to receive a limb therebetween, similarly curved rows of parallel massaging rollers carried by said frames and adapted to be rolled around the limb, and means whereby said frames may be held closed around the limb and jointly moved to operate said rollers.

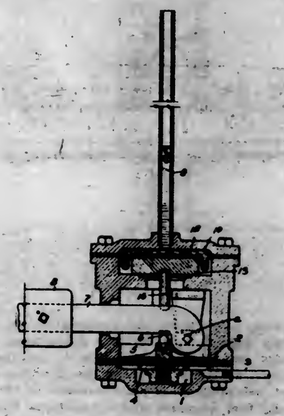
1,400,548. STOKING MECHANISM. JOHN M. HOPWOOD, Dormont, Pa. Filed Feb. 20, 1918. Serial No. 218,269. 10 Claims. (Cl. 110—47.)



1. In a stoking mechanism the combination of means for feeding fuel into a furnace, fuel supporting means having members movable longitudinally to advance the fuel in a direction at a right angle to the direction of the feed of fuel, an ash supporting plate movable in the same direction as the fuel supports and connections from the fuel feeding means to the movable members of the fuel supporting means and to the ash plate and adapted to reciprocate the fuel supporting means and the ash plate simultaneously.

2. In a stoking mechanism the combination of a reciprocating plunger for feeding fuel into a furnace, fuel supporting means having members movable longitudinally in a direction to advance the fuel at an angle to the movement of the plunger, a movable ash plate means for adjusting the angular position of the ash plate and means operative by the plunger for reciprocating the movable fuel supporting means and the ash plates without changing the angular position of the ash plate.

1,400,549. COMBUSTION-REGULATING MEANS. JOHN M. HOPWOOD, Dormont, Pa. Filed Oct. 4, 1919. Serial No. 328,563. 2 Claims. (Cl. 236—14.)

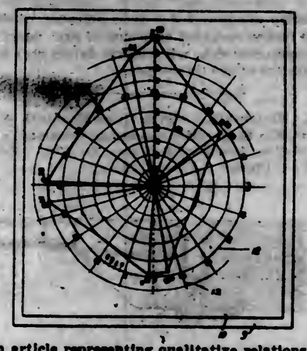


2. The combination of a battery of steam generators, a header connected to such battery, means for maintaining a

constant pressure of steam in said header, means for controlling the rate of combustion of fuel in the furnaces of

said battery, motors for operating said controlling means and connections from said header to the motors of the combustion controlling means.

1,400,550. METHOD AND MEANS FOR CONTROLLING AND REGULATING. John M. Horwood, Pittsburgh, Pa. Filed July 2, 1920. Serial No. 398,550. 3 Claims. (Cl. 137—157.)



1. The method of operating a controlling mechanism embodying a movable member which consists in applying a variable pressure to one side of the movable member, applying to the opposite side of the movable member the pressure of a liquid column variable in height and by a movement of the movable member due to a change in the variable pressure, varying the height of the liquid column thereby restoring equilibrium between the pressures acting oppositely on the movable member.

1,400,551. OSCILLATING VALVE FOR PNEUMATIC MOTORS. Henry S. Hornbeck, Union Hill, N. J. Filed July 30, 1920. Serial No. 400,204. 1 Claim. (Cl. 230—36.)

In a valve for pneumatic motors, the combination of a concentric ported face and a movable valve member concentric with the ported face, supported on an axis concentric with the ported face and having formed in its inner face a channel for cooperation with the ports of the ported face.

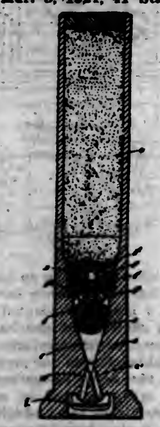
1,400,552. COMPOUNDING COLORS AND APPARATUS FOR SAME. Arthur Howland, West Newton, Mass. Filed June 30, 1915. Serial No. 37,260. 36 Claims. (Cl. 41—6.)

2. An article representing qualitative relations of colors to each other, comprising a structure and spots thereon representing color: those of said spots whose colors differ in luminosity being arranged at directions and distances from each other which when projected upon a scale of luminosity are directly proportional to the differences in quantity of ingredient whites in the grays respectively equaling them in luminosity.

23. The art of color synthesis from a plurality of ingredients differing in hue from the color which is to be made, comprising the associating and spinning of said ingredients together, with a space left between them wherein is a vista from which approximately no light reaches the eye, whereby ingredients having a higher luminosity and diverse hue may be used in a desired synthetic color of lower luminosity.

26. A multi-color icenograph comprising a body having a surface with spots representing different hues arranged around a neutral axis at angular distances apart according to the differences of valve length of their respective hues.

33. Apparatus to determine the synthetic proportions of three or more working colors to be mixed to make a desired color; said working colors being of differing luminosity, of great strength, and of hues widely separated from each other; comprising in combination said working colors and a chart having fixed upon it spots indicating by their respective positions the hues and strengths and indicia associated therewith indicating the luminosities of said working colors relative to each other according to scales of color qualities; whereby ingredients of any required one of a multiplicity of other colors are computable from the chart by measure and by application of

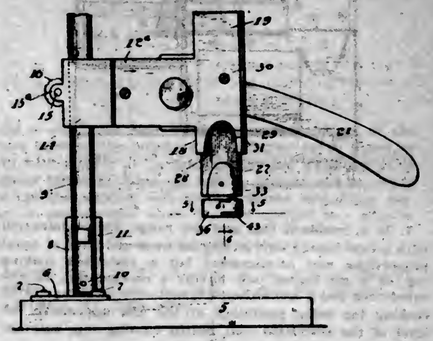


mathematical keys, and said required color is producible from said working colors by mixing them or some of them together as ingredients in proportions thus computed.

1,400,553. MIXING DEVICE. Charles Robert Jenks and Roy O. Young, Cleveland, Ohio. Filed July 16, 1921. Serial No. 485,381. 8 Claims. (Cl. 259—114.)

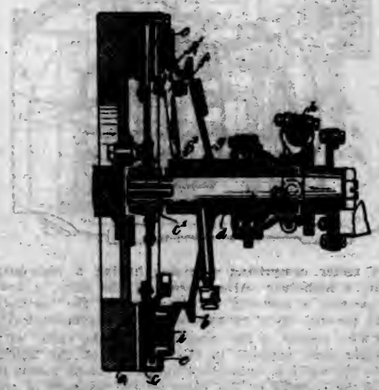
1. In a mixing device the combination of a casing, a valve movably mounted therein, a reaction turbine rotatably mounted in said casing, a delivery tube connected to said casing, a drive shaft attached to said turbine, and extending below said tube, a propeller stirrer mounted on said shaft, and automatic valve opening means carried by said shaft and adapted to open said valve to operate said turbine by contact with the bottom of the receptacle to be filled.

1,400,554. VENT-SEALING PERCUSSION-PRIMER. Frederick Geoffrey Lees Johnson, Westminster, England, assignor to Vickers Limited, Westminster, England. Filed May 14, 1919. Serial No. 297,151. 2 Claims. (Cl. 102—43.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. In a vent sealing percussion primer, a primer body provided with a flash passage and a conical chamber forming a seating, a magazine charge, a member closing the end of the magazine chamber and provided with a passage leading from the conical chamber to the magazine chamber, a small detonating charge placed within the said passage and separated from but communicating with the magazine charge, and a sealing pellet at the rear end of the said passage which pellet is adapted to be driven into the conical seating by the pressure due to ignition of the said detonating charge in front, for the purpose specified.

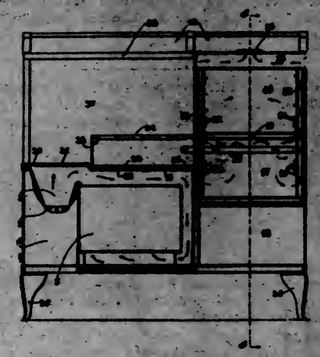
1,400,555. MANUFACTURE OF PARANITROANILIN FROM PARANITROACETANILID. Kaichi Kasai, O-Muta, Fukuoka Ken, Japan, assignor to Mitsui Mining Co., Tokyo, Japan. Filed Feb. 11, 1919. Serial No. 276,881. 2 Claims. (Cl. 23—24.)



1. The process of manufacturing paranitranilin characterised by subjecting to pressure a mixture of paranitracetanilid and an aqueous alkaline solution, while heating the said mixture to a temperature between 120° and 130° C., substantially as described.

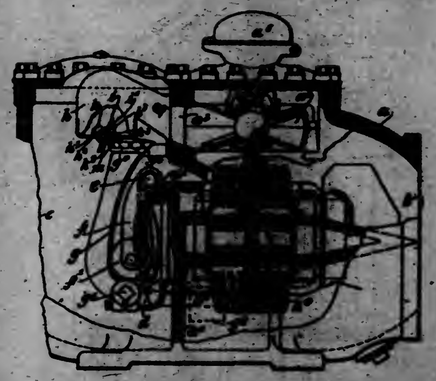
1,400,556. HAND-PRESS AND BOTTLE-CAPPING APPARATUS. Andrew Kaus, Chicago, Ill. Filed Feb. 21, 1921. Serial No. 446,626. 9 Claims. (Cl. 226—84.)

1. A capping machine comprising a standard, a carrier mounted thereon, a capping plunger reciprocable in said carrier having a rack upon one edge, a gear meshing with said rack and having an extension, an operating lever separate from said gear having a portion extended beyond its fulcrum, and means connecting the extensions of said lever and gear.



1,400,557. CLUTCH. August H. Leipert, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed May 21, 1920. Serial No. 383,124. 2 Claims. (Cl. 192—52.)

1. A clutch comprising a driving member, a friction clutch element, a shaft supporting it, the proximate faces

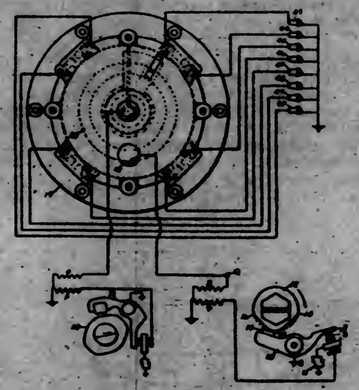


of the driving member and friction clutch element being in planes at right angles to the axis of the shaft, a plate movable to press all of said elements into driving engagement, said plate having its face inclined to the axis of the shaft to effect the surface engagement of said members throughout gradually, and means to manually slip plate thereby.

1,400,556. COMBINATION COAL AND GAS RANGE. Silas McClure, Beaver Dam, Wis. Filed Jan. 18, 1921. Serial No. 436,991. 3 Claims. (Cl. 126—36.)

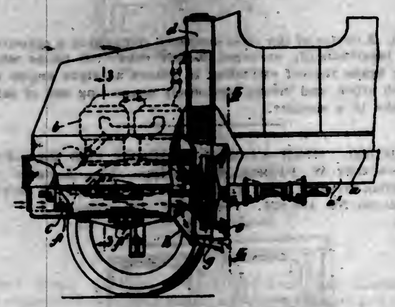
1. In a combined coal and gas range, the combination with a coal heated unit having an oven and flues of usual proportions and arrangement but a restricted cooking top, of a gas heated unit having a cooking top, an elevated oven and a broiler beneath said oven, said gas heated cooking top being positioned at the side and above the level of the restricted coal heated cooking top, substantially as described.

1,400,559. WATER-METER. William L. Madden, New York, N. Y., assignor to Neptune Meter Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 28, 1920. Serial No. 413,268. 6 Claims. (Cl. 73—63.)



1. A meter comprising a casing having a high-duty passage, a high-duty valve to control the same, a low-duty passage, a butterfly valve to control the low-duty passage pivoted upon an axis which is unsymmetrically placed with respect to the exposed area of the valve, with the larger area opposed to the pressure of the liquid, whereby the valve is maintained normally closed, means to prevent the opening of the valve by the pressure of the liquid, and means actuated by the movement of the high-duty valve in one direction to open the low-duty valve.

1,400,560. PISTON-PACKING. Lewis C. Masselam, Walpole, Mass., assignor to Universal Metal Piston Ring Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 27, 1919. Serial No. 333,897. 6 Claims. (Cl. 74—568.)



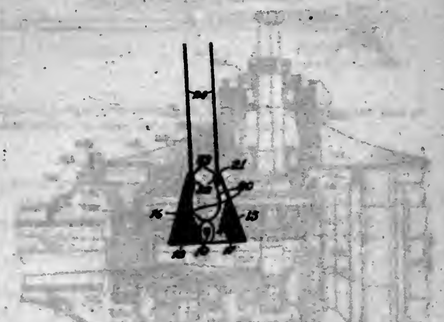
1. In combination with an integrally formed piston having a peripheral groove provided with radial walls, a packing within said groove comprising a packing ring, a resilient ring engaging the inner peripheral surface of said packing ring, and yielding means disposed between said second ring and a radial wall of said groove, said means being constructed and arranged to urge said resilient ring into engagement with the opposite radial wall.

1,400,561. IGNITION SYSTEM. Carl T. Mason, East Orange, N. J., and William J. Hart, Mount Vernon, N. Y., assignors to Splitdorf Electrical Company, Newark, N. J. Filed Oct. 16, 1917. Serial No. 196,894. 2 Claims. (Cl. 123—148.)

1. A distributer block for use in an ignition system for eight cylinder 45 degree four cycle internal combustion engines, and with a generator adapted to be driven at twice engine crank shaft speed and having a source of magnetic flux, a generating coil, a rotating element adapted to direct the flux through said coil in combination with means to produce two current impulses spaced 45 and 135 degrees apart when referred to said engine crank shaft, said distributer block being adapted to be attached to said engine and having terminals spaced 22½ and 67½ degrees with means for connection to sparking devices in said engine cylinders, a distributer finger inside said block geared to be driven by said engine at one half crank shaft speed, an annular ring in said distributer block with means for connecting a terminal of the generating coil thereto, a brush carried by said finger in rotating contact with said ring and a second brush in electrical contact with the first for contacting with said block terminals as the finger rotates, a terminal on said block adapted to be connected to an auxiliary generator, a third brush associated with the distributing finger in running contact with the last mentioned terminal, a distributing contact connected to said third brush and adapted to conduct sparking current to said distributer block terminals when said auxiliary generator is operated in the manner described.

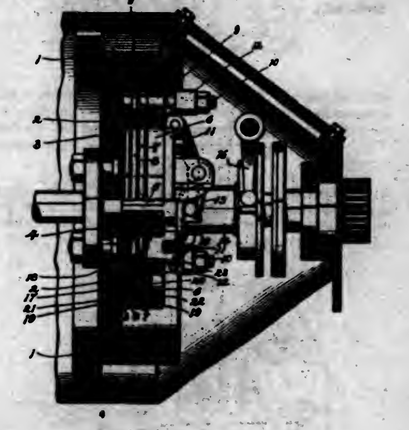
1,400,562. COOLING SYSTEM FOR MOTOR-VEHICLES. Alfred F. Masury, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed July 10, 1920. Serial No. 395,860. 3 Claims. (Cl. 122—171.)

1. In a motor vehicle in combination with the side frame member of the chassis, a bottom pan open at the front end below the side frame member and in line with the lower crank case and open at the rear end in line with the lower crank case to give free flow of air in a straight line over the lower crank case.



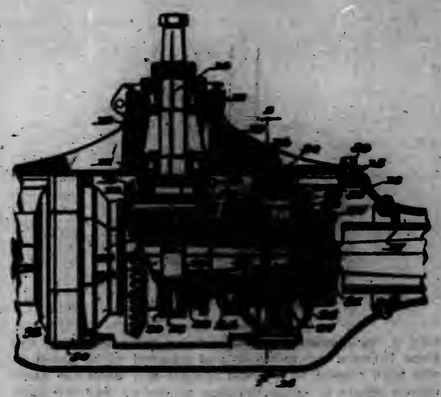
1,400,563. CUSHIONED CONNECTION FOR VEHICLE CONSTRUCTION. Alfred F. Masury and August H. Leipert, New York, N. Y. Filed Jan. 19, 1921. Serial No. 438,269. 5 Claims. (Cl. 267—30.)

1. In combination with two metallic parts of a motor vehicle, a yielding non-metallic connection therebetween, comprising a cushioned non-metallic block, a metallic seat for the block secured fixedly to one of said parts and a second metallic seat independent of the first named seat secured fixedly to the other of said parts, and means independent of one of said parts to hold the block on said seats against displacement.



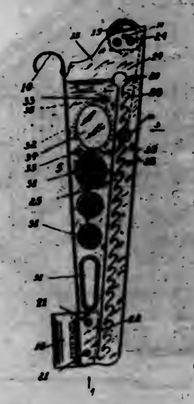
1,400,564. SIGN-HOLDER. Myer Metzger, Chicago, Ill. Filed Dec. 23, 1918. Serial No. 267,895. 4 Claims. (Cl. 40—146.)

1. A device of the character described embodying a supporting base, said base embodying two members, one of the members constituting an upright, means pivotally connecting said members whereby the said upright may be caused to assume any desired angle with respect to a supporting surface, and a sign holder flexibly connected with the upright and adapted to receive and removably



hold a sign, said sign holder being independent of the pivot between the members and adapted to be flexed at will with respect to the said upright and while the parts remain intact to cause the sign to assume and maintain an upright position with respect to the supporting surface in any position which the said upright may assume.

1,400,565. CLUTCH. Samuel M. D. Miller, Detroit, Mich. Filed Sept. 3, 1918. Serial No. 252,389. 7 Claims. (Cl. 192—107.)

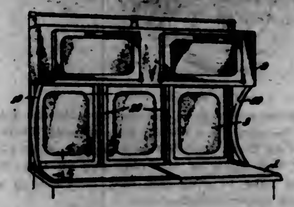


1. In a multiple disk clutch, the combination with a plurality of metal disks, of a facing for certain of said disks to oppose the metallic surface of other of said disks, comprising an annular piece of woven fabrci of a single thickness blanked from fabric having transverse and longitudinal fibers, whereby the fibers of the annular piece will extend transversely of the axis thereof, and means for securing said annular piece upon the plane face of the metallic disk.

1,400,568. MOTOR-VEHICLE. Alfred Moorhouse, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Detroit. Filed July 14, 1920. Serial No. 396,170. 3 Claims. (Cl. 74—60.)

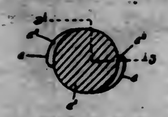
2. In a vehicle axle, the combination with the differential gearing including a driven bevel gear having an extension, of a driven axle section, and planetary gearing means between said differential gearing and said axle section and having a bearing on said extension.

1,400,567. CURTAIN ATTACHMENT FOR WINDSHIELDS. Louis K. Mulford, Denver, Colo. Filed Feb. 24, 1919. Serial No. 278,087. 4 Claims. (Cl. 296—95.)



1. The combination with a window member, of shade roller brackets, mounted at the top of the upper member thereof and extending rearwardly therefrom, a shade mounted in the bracket and having a rod in the lower end thereof, the brackets also having downwardly inclined recesses to receive the extremities of the rod to hold the shade in adjusted position.

1,400,568. ANIMAL-POKE. Oscar M. Owens, Homer, Ga. Filed Nov. 6, 1920. Serial No. 422,594. 4 Claims. (Cl. 119—107.)

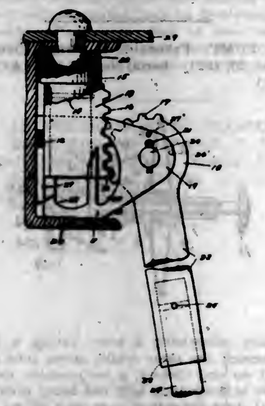


1. A device of the class described comprising a plurality of longitudinally arranged loosely connected hooks with the beaks thereof extending in planes at right angles to each other, and means for loosely connecting one of said hooks to a support.

1,400,569. HIGH-CLOSET BRACKET FOR RANGES. Stanley W. Fiddick, Beaver Dam, Wis., assignor to Silas McClure, Beaver Dam, Wis. Filed Jan. 21, 1921. Serial No. 438,826. 16 Claims. (Cl. 126—16.)

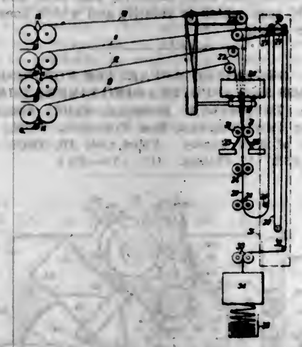
1. In stove and range construction, a bracket adapted to be arranged between the high closet and the stove or range, the body of the bracket being channel shaped, and the channel facing rearwardly and having the inner wall thereof of less height than the outer wall, and a holding strip secured to the bracket and overlying the said wall to clamp the splasher back to the said wall.

1,400,570. REINFORCE-BAR. Edward J. Paquin, Cincinnati, Ohio, assignor to The Pollak Steel Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Sept. 30, 1921. Serial No. 504,506. 3 Claims. (Cl. 72—111.)



1. A reinforcing bar for concrete comprising a body having a substantially spheroidal or spherical form in cross section, and lugs extending circumferentially of the body and each extending gradually outward from the body at one end and terminating abruptly at its other end.

1,400,571. UNIVERSAL RIVET HOLDER-ON JAM. John H. Schmidt and Louis Ahlers, Harriman, Pa. Filed July 20, 1920. Serial No. 397,708. 3 Claims. (Cl. 78—83.5.)



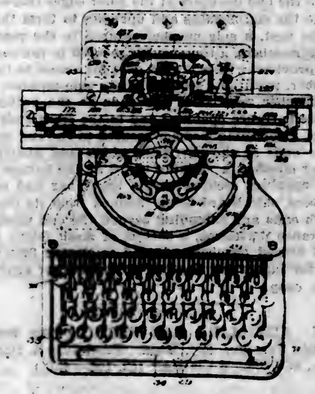
1. A holder-on jam comprising a supporting frame, a head movable through said frame, said head being shaped and proportioned to receive a die, a rack-bar for said head,

a member provided with a segmental toothed portion member for cooperatively engaging said rack-bar pivoted to said

frame, means arranged between said frame and member for supporting said member in inoperative position and an operating handle connected to said member.

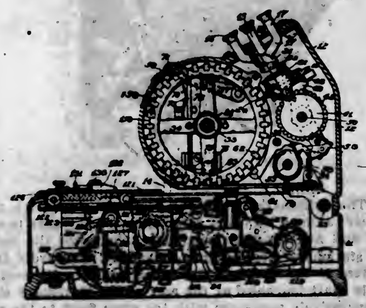
1,400,572. MULTIPLE-PLY WEB FOR TYPEWRITERS. Jesse A. B. Smith, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Original application filed July 20, 1918, Serial No. 245,810. Divided and this application filed Jan. 17, 1920. Serial No. 352,202. 9 Claims. (Cl. 270—4.)

1. The combination with means for assembling a multiplicity of plies of web in superposed relation, of means for applying padding adhesive material to the edges of only the interior plies, to cause all of the plies to adhere together when assembled.



1,400,573. SUCTION LIFTING IMPLEMENT. William Staples, Philadelphia, Pa. Filed Jan. 6, 1921. Serial No. 435,400. 7 Claims. (Cl. 294—64.)

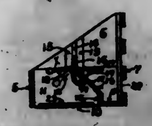
1. A suction lifting implement comprising a handle member, a suction cup applied to one end of said member, a screw member for securing said cup to said handle member, said screw having a duct or passage longitudinally



therethrough, and releasable means for engaging the end of said screw to close said duct or passage.

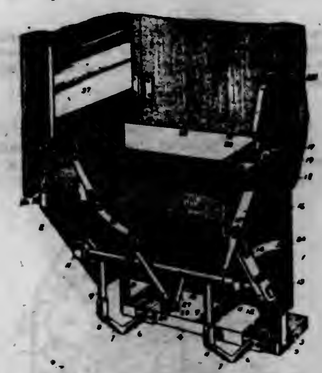
1,400,574. CHECK-WRITER. Herbert H. Steele, Pittsford, N. Y., assignor to Todd Protectograph Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Apr. 11, 1919. Serial No. 289,389. 23 Claims. (Cl. 197—6.5.)

1. In a machine of the class described, the combination with a plurality of sets of type, of an impression member for each set and means for selectively actuating the impression members.



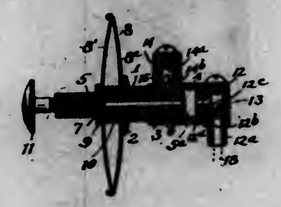
1,400,575. CHECK-WRITER. Herbert H. Steele, Pittsford, N. Y., assignor to Todd Protectograph Company, Rochester, N. Y., a Corporation of New York. Filed Apr. 21, 1919. Serial No. 291,617. 28 Claims. (Cl. 101—97.)

1. In a machine of the class described, the combination with a series of adjustable type carriers, each provided



with type forms to print all of the words used in writing amounts, of a key board common to the type carriers, and means controlled by the key board for setting the type carriers to print different amounts.

1,400,576. NEST. EMIL F. STENEMAN, Arcadia, Wis. Filed June 27, 1921. Serial No. 480,623. 3 Claims. (Cl. 119—49.)

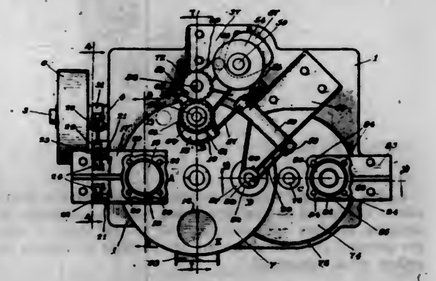


1. The combination in a nest, of end members having their top edges inclined toward the rear and provided with entrance apertures at their lower front corners, uprights secured to the end members at the front edges thereof, bars secured to the end members and uprights to form the front side of the nest, a side member secured to the rear edges of the end members, a top member secured to the end members and provided with a hinged part for access to the nesting chamber, partitions secured to the side member, a connecting member secured to the ends at the bottom rear edge of the entrance openings and to the front ends of the partitions, a retaining member secured to the end members and front ends of the partitions above and abutting the connecting member, a running board at the bottom of the entrance openings secured to the lower bar and connecting members, said board being inclined from its center toward both ends and extending beyond the end members to form entrance platforms, a bottom of mesh fabric for the nest, and hinged members adapted to engage fasteners in the wall for supporting the nest with its front against the wall of a coop.

1,400,577. AUXILIARY CAR-STEP. PETER SWANSON and AXEL CARLSON, Ely, Minn. Filed July 8, 1921. Serial No. 483,168. 4 Claims. (Cl. 105—430.)

4. The combination with the vestibule steps of a railway car having a trap door controlling the entrance to said steps and an adjustable auxiliary step below the lowermost stationary step, of arms extending rearwardly from and fixed to the auxiliary step, a horisontally disposed rotatable shaft journaled at the rear of the stationary steps and operatively connected with the arms fixed to the auxiliary step, a lever fixed to said shaft and extending upwardly therefrom, an operating lever pivotally mounted to the floor of the vestibule and extending therewithin, the lower end of which is pivotally connected with the lever fixed to the shaft, and levers coöperatively connecting the rotatable shaft with the trap door whereby the latter is simultaneously operated with the auxiliary step.

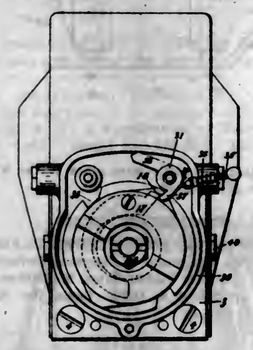
1,400,578. PUMP. FREDERICK D. SWEET, Cleveland, Ohio. Filed Mar. 25, 1921. Serial No. 455,444. 4 Claims. (Cl. 103—10.)



1. A pump comprising a body having a longitudinal opening through the same which opens into an enlarged chamber at an end thereof, a reciprocable rod extending through the said opening, said rod being provided with a longitudinal duct extending part way of its length and communicating with the said chamber, said duct having an opening to the outer surface of the rod at one end of the duct, a casing having a movable wall, the opening in the duct communicating with the interior of the casing, a liquid inlet and a liquid outlet communicating with the said chamber in the body and valvular means controlling both inlet and outlet.

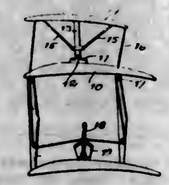
1,400,579. WATERPROOFING SUBSTANCE FOR FIBROUS MATERIAL. ALFRED O. TATE, New York, N. Y. Filed Jan. 24, 1920. Serial No. 353,901. 3 Claims. (Cl. 134—12.)

3. A waterproofing composition for fibrous material comprising an aluminum soap, albumen, zinc oxid, and a solvent for said soap which is volatile and which does not of itself stain fabric.



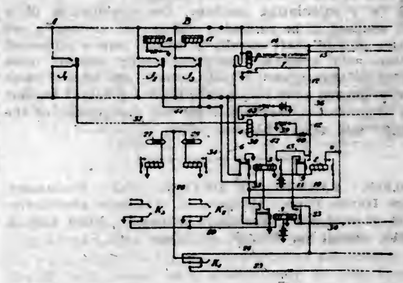
1,400,580. ORGANIZED APPARATUS FOR GROOVING CAN ENDS AND APPLYING RING-LINERS THERETO. IVAN D. THORNBURGH, Berkeley, Calif., assignor to American Can Company, San Francisco, Calif., a Corporation of New Jersey. Filed Oct. 10, 1918. Serial No. 257,636. 17 Claims. (Cl. 113—80.)

1. In an apparatus for the described purpose, the same comprising means for receiving and positioning straight flanged can ends at a forming station and transferring the same to an assembling station, mechanism situated at the forming station for circumferentially grooving the wall connection between the straight flange and the body



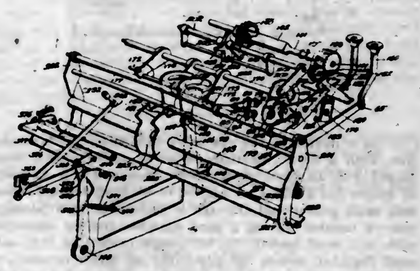
member of a can end positioned at said station, means for positioning a gasket ring liner at the assembling station and in axial alinement with a grooved can end there positioned, mechanism at said station for assembling the can end and gasket liner by distorting the inner peripheral edge portion of the liner to pass the overhang of the groove formed in the can end in order to seat within the groove, and devices for ejecting the gasket lined end.

1,400,581. AUTOMATIC IMPULSE STARTING APPARATUS. HENRY TIEDEMANN, Newark, N. J., assignor to Splitdorf Electrical Company, Newark, N. J. Filed Jan. 22, 1919. Serial No. 272,529. 16 Claims. (Cl. 123—140.)



1. In a device of the class described, the combination with the rotor of a magneto having a driven member attached thereto, of a driving member for actuating the same, accelerating means associated with said driven member and connecting the same to said driving member, devices in proximity to said driven member for restraining the same, means for holding said devices in nonrestraining position, means carried by said driving member for throwing said devices to restraining position and means for releasing said devices to permit the accelerating means to actuate the rotor.

1,400,582. AEROPLANE. WILLIAM TILSON, Herrin, Ill. Filed Apr. 16, 1921. Serial No. 462,011. 2 Claims. (Cl. 244—12.)



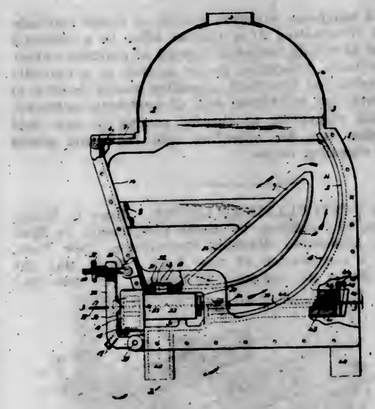
1. In an aeroplane, the combination with a fixed main supporting plane thereof, of a pivotal support extending longitudinally of the main plane, vertical uprights carried by the pivotal support, an auxiliary supporting plane secured to said uprights and normally having the same angle of incidence as the main plane, and means for shifting said auxiliary plane upon the mountings thereof to increase the angle of incidence.

1,400,583. TELEPHONE SYSTEM. JOHN F. TOOMEY, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Apr. 18, 1918. Serial No. 229,368. 4 Claims. (Cl. 179—48.)

1. In a telephone exchange system, a trunk transmission line terminating at a central office in a plurality of sets of switching terminals located at different switchboard positions, indicating means located at a plurality of said switching terminals, signaling means located at one of said last mentioned sets of switching terminals, and means responsive to current coming in over said transmission line for operating said indicating means and said signaling means.

1,400,584. CALCULATING-MACHINE. JOHN C. WAHL, Chicago, Ill., assignor, by mesne assignments, to Remington Accounting Machine Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 20, 1917. Serial No. 156,009. 40 Claims. (Cl. 235—78.)

1. In a calculating machine, the combination of a series of adding keys, a series of actuators each controlled by one of said adding keys, a differential member operated directly by said actuating members, a universal bar controlled directly by each of said actuating members, and full stroke mechanism comprising coöperating parts, one of which is carried directly by each of said actuating devices.

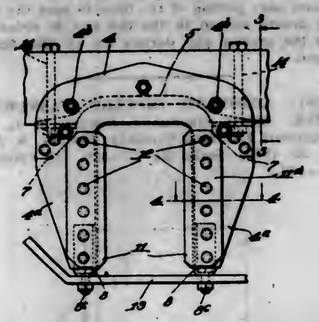


10. In a calculating machine, the combination of a movable platen, a set of tabulator keys adapted to tabulate said platen in either direction and thereby locate any position determined by the particular tabulator key operated, means to rotate said platen step by step, and

means common to all of said tabulator keys to operate said rotating means upon the operation of any of said tabulator keys whether said tabulator sets said platen toward the right or toward the left.

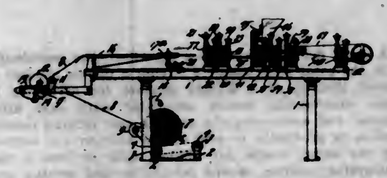
15. In a calculating machine, the combination of a movable master group consisting of a master wheel and a universal member, a stationary rack attached to the framework of the machine, a set of numeral keys, and means to definitely aline said master group by engagement of said universal member with said rack upon the operation of any of said numeral keys.

32. In a calculating machine, the combination of a shaft adapted to be rotated a differential amount, a set of arms on said shaft spirally arranged, rollers supported between said arms and two differently shaped cams adapted to engage each of said rollers, one of said cams being so shaped as to rotate said shaft a different amount from the rotation resulting from the engagement of the other of said cams with said roller.



1,400,585. SAND-BLAST DEVICE. Fred Washburn, New Haven, Conn.; Margaret A. Washburn administratrix of said Fred Washburn, deceased. Filed July 2, 1919. Serial No. 308,229. 6 Claims. (Cl. 51—8.)

1. In a device of the character described, the combination with a frame partitioned so as to provide a sand pocket and an open passageway upon one side thereof; of means for guiding an article to be sand treated below said sand pocket and through a portion of said passageway; a member having a sand chamber therein connected with said sand pocket; an air nozzle projecting into said sand chamber, means for admitting air under pressure to said air nozzle and through said sand chamber to said guiding means, whereby said sand is moved from said sand chamber through said guiding means, and open passageway and into said sand pocket.

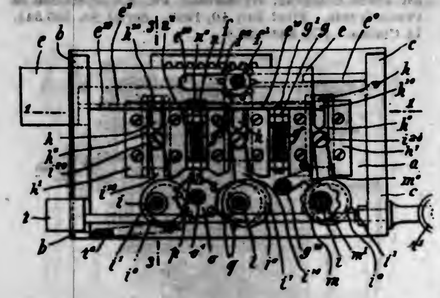


1,400,586. TRUCK-PEDESTAL. Joseph B. Weaver and Peter Parks, Chicago, Ill., assignors to The Pullman Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 10, 1920. Serial No. 429,669. 8 Claims. (Cl. 105—224.)

1. In a truck construction, a pedestal comprising a front suspension plate having an upstanding connection arch adapted for connection to the truck wheel piece and depending jaw portions, a relatively thinner rear guide plate having an upstanding arch portion and depending jaw portions, spacer members connecting said plates and

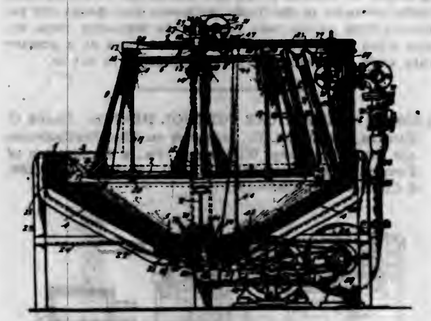
means connecting the suspension plate to the wheel piece to support the guide plate.

1,400,587. MACHINE FOR MAKING PAPER BAGS. Leslie Walter Welaford, Melbourne, Victoria, Australia, assignor to James Clason Gates, Melbourne, Victoria, Australia. Filed July 8, 1920. Serial No. 394,651. 5 Claims. (Cl. 93—14.)



1. A machine of the class described comprising in combination a supporting belt, a paper roll, guide rollers, a pasting roller, a templet, adjustable guiding rollers, drawing-in rollers, rollers adapted to part the bag blank and crease the same, parting knives mounted on the last-named rollers, a flexible rod having a projection thereon, a hook, a guide tongue, a supporting plate, creasing and folding rollers, a paste roller associated therewith, a paste box, folding rollers in advance of the first-named folding rollers, a hook having a bifurcated end, folding rollers in advance of the second-named folding rollers, a belt, a knotted endless cord, and finishing rollers, the various rollers being arranged in pairs one above the other with the several pairs disposed in line along the length of the machine.

1,400,588. LOCK. Albert Winkelmann, Paris, France. Filed June 14, 1920. Serial No. 389,053. 7 Claims. (Cl. 70—60.)



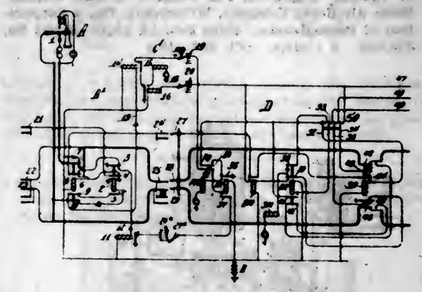
1. In a combination lock, the combination of a reciprocating bolt, means for retracting and projecting said bolt, a plurality of independently movable slides each having spaced abutments with a clearance passage between them, the abutments being adapted normally to block retraction of the bolt and movable to a position between the ends of the path of travel of the slides to release the bolt, a

separate manually rotatable means for operating each slide, and a connection between each rotatable means and

its slide constructed and arranged to positively move the slides into and out of the bolt dogging position.

1,400,589. BLACKLEADING-MACHINE. William M. Wood, New Brighton, N. Y., assignor to R. Hoe and Co., New York, N. Y., a Corporation of New York. Filed May 18, 1917. Serial No. 169,891. 36 Claims. (Cl. 91—7.5.)

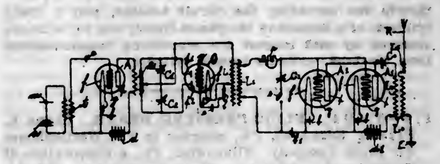
13. In a black leading machine, the combination of a rotary case carrier, means for holding a case thereon, means for supplying black lead solution to the face of the case, and means for continuously rotating the carrier past the solution-supplying means.



16. In a black leading machine, the combination with a case carrier, of means for supporting a case thereon, means for supplying black lead solution to the face of the case, means for evening the lead solution, and means for removing surplus solution from the face of the case while it is on the carrier.

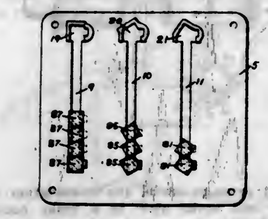
24. In a black leading machine, the combination of a case carrier, solution applying means, a shaft on which the carrier is supported, a driving shaft, a controller for effecting driving connection between the shafts, and a stop for holding the controller in operative position.

35. In a black leading machine, the combination of a case carrier, means for carrying a case on the carrier in an angular position, nozzles angularly arranged adjacent the carrier for supplying black lead solution to the face of the case, and means for driving the carrier.



1,400,590. SELECTIVE TELEPHONE SYSTEM. Alfred H. Dyson, Chicago, Ill., assignor, by mesne assignments, to Kellogg Switchboard & Supply Company, a Corporation of Illinois. Filed Nov. 29, 1907. Serial No. 404,203. 86 Claims. (Cl. 179—27.)

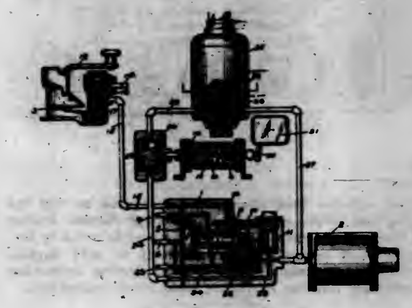
2. A semi-automatic telephone system including telephone lines, a main exchange in which a portion of said lines terminate, a branch exchange in which a portion of said lines terminate, trunk lines interconnecting said exchanges, means for automatically connecting a calling line of said branch exchange over an idle one of said trunks with said main exchange, impulse controlling mechanism at said main exchange for transmitting di-



rective currents back over said same trunk to link the calling line to the called line, means for thereon freeing the trunk while leaving the connection of subscribers continuing, and means used alternatively to said impulse controlling mechanism and said trunk freeing mechanism to manually link the connected trunk to the called line.

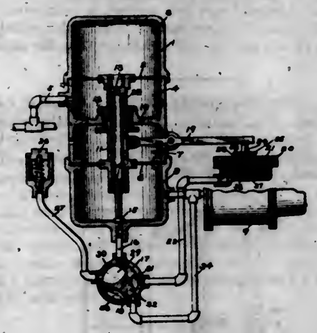
1,400,591. ELECTRICAL WAVE TRANSMISSION. Cornelius D. Ehret, Philadelphia, Pa. Filed Mar. 12, 1919. Serial No. 282,166. 4 Claims. (Cl. 179—171.)

4. Thermionic oscillation-producing means comprising a source of current representing sound waves, anodes connected to the different terminals of said source, grid structure, electron-emitting means, a connection from said electron-emitting means to a point intermediate said terminals of said source, and means coupling the anode and grid circuits.



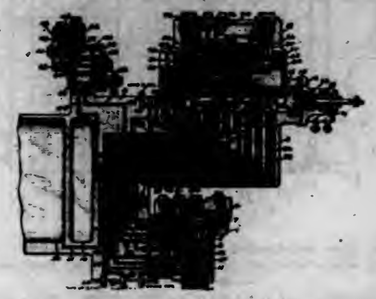
1,400,592. STAFF-EXCHANGE BOX. Clyde C. Farmer, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed May 12, 1920. Serial No. 380,858. 18 Claims. (Cl. 246—19.)

1. A staff exchange box provided with a plurality of staff receptacles, each adapted to contain a plurality of staffs of a different type and each receptacle having a



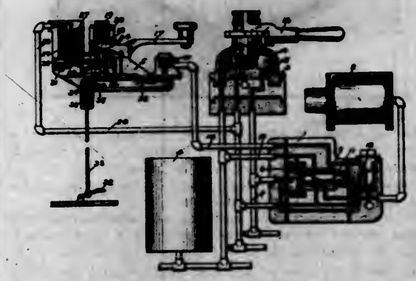
staff receiving opening shaped to permit the insertion of one type of staff and prevent the insertion of other types.

1,400,593. SAFETY CAR-CONTROL DEVICE. CLYDE C. FARMER, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Feb. 14, 1920. Serial No. 358,605. 3 Claims. (Cl. 303—19.)



1. In a safety car control apparatus, the combination with a car motor circuit breaker, a cylinder, a piston therein for operating the circuit breaker, and a brake cylinder, of a magnet in the power circuit and valve means operated by said magnet for controlling communication from the brake cylinder to said cylinder.

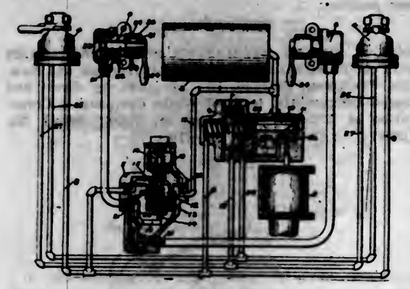
1,400,594. FLUID-PRESSURE BRAKE. CLYDE C. FARMER, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed June 30, 1920. Serial No. 392,965. 10 Claims. (Cl. 303—59.)



1. In a fluid pressure brake, the combination with a brake cylinder and brake pipe, of a brake controlling valve device subject to the pressures of the brake cylinder and brake pipe and means for compensating brake cylinder pressure on said valve device retained in the brake cylinder.

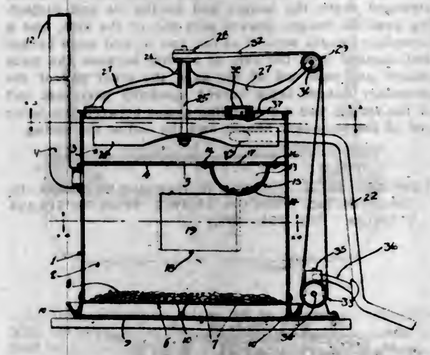
1,400,595. LOAD BRAKE EQUIPMENT. CLYDE C. FARMER, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed July 10, 1920. Serial No. 395,841. 14 Claims. (Cl. 303—23.)

1. In a fluid pressure brake, the combination with a plurality of brake cylinders and means for connecting one or more brake cylinders into service according as the car is empty or loaded, of a valve device for retaining fluid under pressure in the brake cylinders and means for releasing fluid at one rate through the retaining valve device when one brake cylinder is cut in and at a greater rate when a plurality of brake cylinders are cut in.



1,400,596. SAFETY CAR-CONTROL DEVICE. CLYDE C. FARMER, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed July 27, 1920. Serial No. 399,250. 6 Claims. (Cl. 303—19.)

1. In a safety car control equipment, the combination with a controller handle and means for effecting an application of the brakes, of a device tending to operate said means and held inoperative by said handle, and means operated upon applying the brakes for also holding said device inoperative independently of said handle.



1,400,597. FLUID-PRESSURE BRAKE. CLYDE C. FARMER, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Aug. 7, 1920. Serial No. 401,897. 7 Claims. (Cl. 303—69.)

7. In a fluid pressure brake, the combination with a brake pipe, an emergency valve device operated upon a reduction in brake pipe pressure for effecting an application of the brakes, and a brake valve device for controlling the brakes, of a main reservoir, a main reservoir supply pipe connected to said brake valve device, the emergency valve device being operative in release position to supply fluid from the main reservoir to said supply pipe and in emergency position to cut off the supply and a release

valve mechanism for supplying fluid from the main reservoir to the brake pipe to effect the release of the brakes when the emergency valve device is in emergency position.

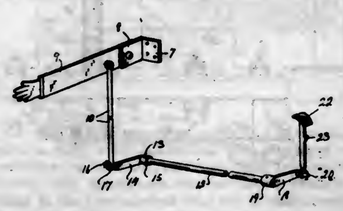
1,400,598. APPARATUS FOR PRODUCING NOXIOUS GASES AND METHOD OF ASPHYXIATING OBNOXIOUS ANIMALS. GATES M. FOWLER, Los Angeles, Calif. Filed Mar. 23, 1920. Serial No. 367,988. 6 Claims. (Cl. 43—129.)

1. In an apparatus for producing noxious gases, a container having a combustion chamber adapted to hold fuel, a tube connected with the container, means in the container to expel the gases of combustion into the tube, an internal combustion motor operatively connected with the gas-expelling means, and a tube connecting the motor exhaust with the first named tube.

5. The method of asphyxiating obnoxious animals, which consists in burning fuel in an inclosed chamber to produce carbon dioxid gas, vaporizing sulfur with the heat from the burning fuel, mixing the sulfur vapor with some of the carbon dioxid gas to form carbon disulfid gas, and injecting the disulfid gas into the cavities occupied by the animal.

1,400,599. ROLLER-BEARING. GEORGE A. GABRIEL and JOHN T. SKILLINS, Westbrook, Me., assignors to Dana Cotton Harvester Company, Westbrook, Me., a Corporation of Maine. Filed Oct. 11, 1918. Serial No. 257,712. 1 Claim. (Cl. 64—59.)

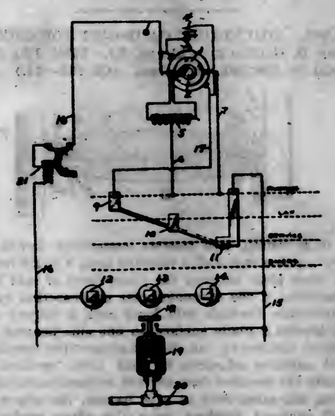
A ball bearing having two opposing conical faces, each face having a shallow groove of greater radius of transverse curvature than the balls forming a ball race, balls running therein, the balls contacting with opposing points in said grooves on a line substantially parallel with the axis of rotation of the bearing, the surfaces of the grooves at the points of contact being at right angles to said axis of rotation and a cage for holding the balls together



consisting of a thin ring having openings slightly larger than the ball and retaining projections on one side of the ring only, the retaining projections alternating on opposite sides of the ring with the entire series of balls.

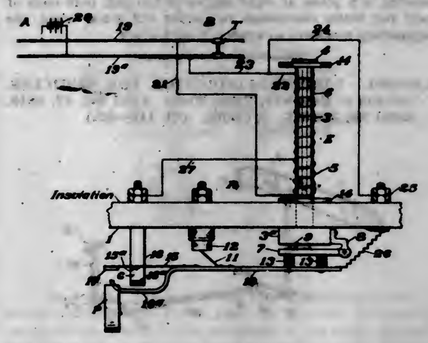
1,400,600. ADJUSTABLE HAND-GRIP FOR CRUTCHES. JOHN B. GLOWACKI, Chicago, Ill. Filed July 3, 1920. Serial No. 393,791. 6 Claims. (Cl. 135—54.)

6. In a crutch, two wooden supporting members each having a plane face and a rounded face, a hand rest forming a cross piece between the plane faces of said supporting members, a rod of noncircular cross-section extending longitudinally through said hand rest, a fixture of sheet metal having a plane surface on one side bearing against the plane surface of one of said supporting members and curved surfaces adjacent to said plane surfaces partly inclosing the rounded face of said supporting member and forming the other side of said fixture, the edges of said curved surfaces farthest from the plane surface being separated, said fixture having a socket upstanding from the plane side, one portion of said socket being noncircular, said socket being opposite the space between the said curved surfaces, a thread on said rod, a threaded sleeve inside the socket and coöperating with the threads on said rod and a noncircular flange on said sleeve coöperating with the noncircular portion of said socket to prevent relative rotation of said socket and sleeve, a fixture and sleeve at the other end of said rod, a thread on the last-named end of said rod coöperating therewith, the last-named fixture sleeve and thread being like the corresponding parts on the first-named end of the rod except that the thread is oppositely directed whereby rotation of the hand rest will draw the supporting members toward each other, one end of said rod being pointed and the other end having a bearing in a plane at right angles to the rod, both ends of said rod being sharpened to indent the wood when the supporting members so approach each other.



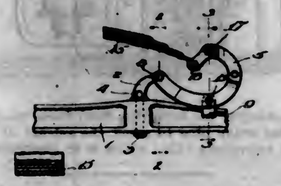
1,400,601. DIRECTION-INDICATOR FOR VEHICLES. THOMAS F. GOODWIN, Yelm, Wash. Filed Oct. 27, 1919. Serial No. 333,577. 1 Claim. (Cl. 116—52.)

A mechanism signal device for vehicles comprising a bracket secured upon and extending laterally from one side



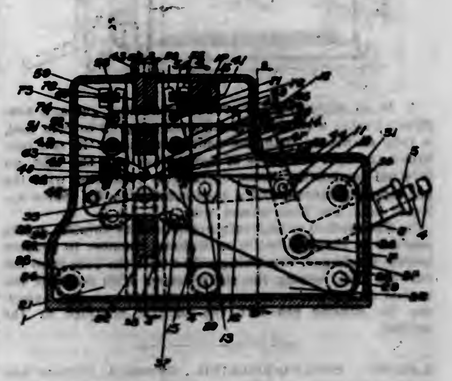
of a vehicle, a signal blade pivoted upon said bracket, a rock-shaft journaled longitudinally of the vehicle and provided at its ends with oppositely extending crank arms, a link pivotally connected with one crank and pivotally connected with the blade between the pivot and free end thereof, and a slidably mounted foot pedal pivotally connected with the other crank arm.

1,400,602. ELECTROPNEUMATIC BRAKE. JOHN B. GROSSWENDT, Wilkinsburg, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Oct. 22, 1919. Serial No. 332,385. 8 Claims. (Cl. 303—20.)



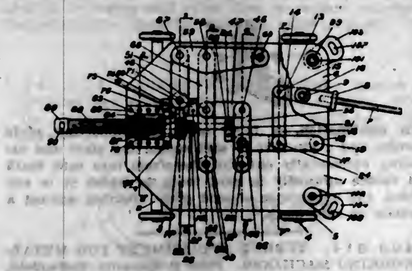
1. In an electro-pneumatic brake system, the combination with a plurality of magnets on each vehicle for controlling the brakes and adapted to operate at different voltages, of a train wire for supplying current to said magnets, a three wire generator system for impressing two different voltages on said train wire, and an additional generator element for impressing a third voltage on said train wire.

1,400,603. ELECTRICAL RELAY. CLINTON O. HARRINGTON, Edgewood borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Jan. 31, 1920. Serial No. 355,499. 14 Claims. (Cl. 175—335.)



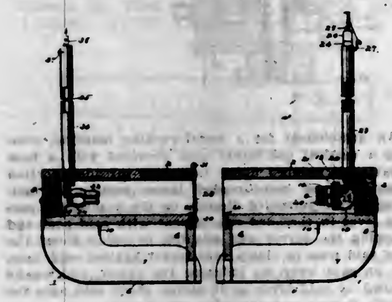
1. In combination, a relay having an energizing winding, a circuit for said winding including a resistance, a shunt around said resistance, and means for closing said shunt when the armature of the relay reaches almost the fully opened position, but for preventing said shunt from opening until the armature reaches almost its fully closed position.

1,400,604. SPRING MECHANISM FOR FRONT AXLES FOR AUTOMOBILES. HERBERT H. HOWARD and SAMUEL FURNISS, Chicago, Ill., assignors, by direct and mesne assignments, to Steel Wings Company, a Corporation of Illinois. Filed Nov. 26, 1920. Serial No. 426,474. 1 Claim. (Cl. 267—19.)



In combination, an axle, a main hanger projecting upwardly from the axle near one end of the latter, a spring arranged above the hanger and having its end projecting past the hanger toward said end of the axle, and a secondary hanger secured at one end to said main hanger and engaged with the axle at a point between the main hanger and said end of the axle, the other end of the secondary hanger being curved upwardly past said end of the spring, and a suspending means between the latter end of the secondary hanger and the end of the spring.

1,400,605. JACK. CHARLES H. HOWLAND-SHERMAN, Indianapolis, Ind. Filed Oct. 21, 1920. Serial No. 418,454. 8 Claims. (Cl. 254—108.)

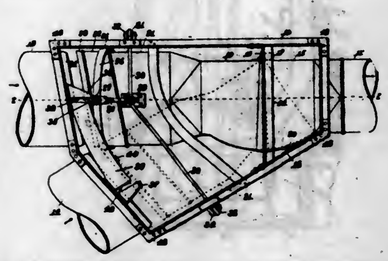


1. Combined in a jack a frame; a manually operable power-crank, pivoted in said frame; and inter-articulated dual sets of traction-levers, adapted to be actuated by said power-crank, substantially as described.

1,400,606. MECHANICAL PULLER. CHARLES H. HOWLAND-SHERMAN, Indianapolis, Ind. Filed Oct. 21, 1920. Serial No. 418,456. 6 Claims. (Cl. 254—1.)

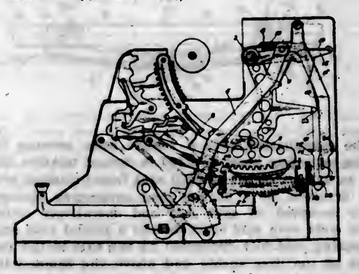
1. The combination in a mechanical puller of a tractor-lever mechanism, with a tractor-screw mechanism adapted to be actuated by said tractor-lever mechanism, substantially as described.

1,400,607. GUARD FOR X-RAY TUBES. GEORGE C. JOHNSTON, Pittsburgh, Pa., and LESLIE S. UPHOFF, Schenectady, N. Y. Filed Aug. 21, 1916. Serial No. 319,036. 7 Claims. (Cl. 250—84.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



1. The combination, with an X-ray tube-stand, provided with the usual X-ray tube, of grounded metallic guards for said tube, carrying a pair of insulating members encircling said tube.

1,400,608. SPEED-CONTROL DEVICE FOR MOTOR-VEHICLES. JOHN EUGENE JORDAN, Seattle, Wash. Filed May 24, 1920. Serial No. 383,984. 1 Claim. (Cl. 175—355.)

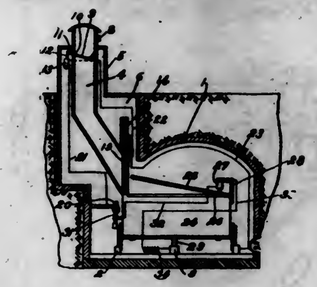


In a speed control device for motor vehicles, the combination with an ignition circuit including the sparking means in the vehicle engine, of a circuit closing device comprising a shaft adapted to be driven in accordance with the speed of the vehicle, a non-conductive plate fixed to the shaft, arms pivotally mounted on said plate, a contact collar fixed on the shaft, yieldable means of different strengths mounted on the plate engageable with the arms to normally retain the same in circuit closing contact with the contact collar, but yieldable under centrifugal pressure to permit the arms to disengage the collar at different speeds of the shaft, other collars fixed on the shaft and insulated therefrom, means electrically connecting one of said insulated collars with the contact collar, a brush for the latter insulated collar, having electrical connection with one terminal of said ignition circuit, brushes for the other insulated collars and switch controlled means individually connecting the latter collars with the other terminal of the ignition circuit.

1,400,609. PIPE-SWITCH. HARRY W. KNOWLTON and WILMER A. NEWTON, Lowell, Mass., assignors to Knowlton & Newton Co., Inc., Lowell, Mass., a Corporation of Massachusetts. Filed Jan. 10, 1921. Serial No. 436,400. 8 Claims. (Cl. 193—44.)

1. The combination of a delivery pipe; an oscillating compartment communicating continuously therewith and provided at its opposite end with a tubular extension; two supply pipes with either of which said extension is adapted to be alined; and a cylindrical member slidable endwise of said extension and adapted to make a tight connection with either of said supply pipes.

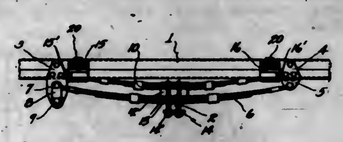
1,400,610. ADDING AND RECORDING MACHINE. HARRY LANDSIEDEL, Cincinnati, Ohio, assignor to The Dalton Adding Machine Company, Cincinnati, Ohio, a Corporation of Ohio. Filed May 12, 1919, Serial No. 296,323. Renewed Dec. 24, 1920. Serial No. 433,052. 25 Claims. (Cl. 235—60.)



1. An adding and recording machine, comprising type-carriers, a rock shaft controlling the operation of said type-carriers, springs for actuating said type-carriers respectively, and mechanism for energizing springs corresponding to the type-carriers that are to be operated as an incident to operation of said rock shaft.

10. In an adding machine, the combination with adding wheels, racks for actuating said wheels, and springs for

actuating said racks in one direction, of a tensioning member in connection with each of said springs, an actuator for actuating said tensioning members to energize said springs selectively, and means for selectively connecting the tensioning members with said actuator.

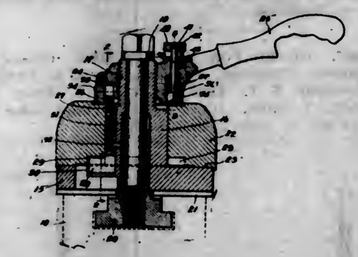


21. In an adding machine, adding wheels, a series of racks for actuating said wheels, a rock shaft controlling the operation of said racks, springs for actuating said racks selectively, and mechanism for energizing said springs corresponding to the racks that are to be operated as an incident to the turning of said rock shaft in one direction.

1,400,611. MAIL-COLLECTING APPARATUS. EMILE J. LEGER, Moncton, New Brunswick, Canada. Filed Dec. 10, 1920. Serial No. 429,798. 3 Claims. (Cl. 214—39.)

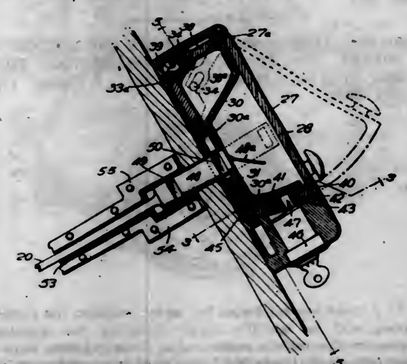
1. The combination with a receiving box having an outlet opening in the bottom thereof, of a door normally closing said opening, a normally opened trap between the ends of the box, an automatically operated car movable below and past the outlet end of the box, and means controlled by the car for automatically opening the door and closing the trap simultaneously.

1,400,612. VEHICLE-SPRING. NELS E. LIEBERG, Seattle, Wash. Filed Mar. 31, 1921. Serial No. 457,233. 1 Claim. (Cl. 267—45.)



The combination with a vehicle body member having spring mounting brackets fixed in spaced relation thereon and an axle extended beneath said frame member between said brackets, of a normal load supporting spring centrally mounted on said axle and operatively connected at its ends with said brackets and a second load supporting spring centrally supported by the axle in the vertical plane of the first spring and above the same, with its opposite ends normally free, and brackets fixed to the body member overlying the free ends of the latter spring and having horizontal, downwardly facing shoulders for engaging the said free ends when said body is depressed by loads greater than normal and having vertical flanges engageably extending from said horizontal flanges for abutment by the ends of said second spring to prevent longitudinal movement of the body beyond a certain degree.

1,400,613. FALSE TOOTH AND SUPPORTING MEANS THEREFOR. NICHOLAS R. LOUBIE, Gloucester, Mass. Filed Feb. 14, 1920. Serial No. 358,650. 1 Claim. (Cl. 32—12.)



In combination, a false tooth, a supporting plate therefor and a pin fast to said supporting plate and extending horizontally outward therefrom into said tooth and thence upwardly in said tooth in which it is embedded, the upper edge of said plate abutting against a shoulder on said tooth.

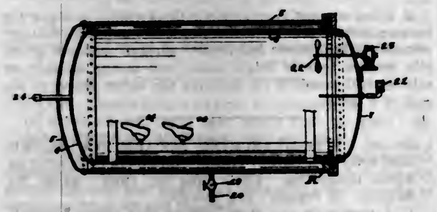
1,400,614. TURRET ATTACHMENT FOR METAL-WORKING MACHINES. FRED P. LOVEJOY, Springfield, Vt. Filed Nov. 6, 1919. Serial No. 336,070. 17 Claims. (Cl. 29—49.)

1. An attachment for a metal-working machine, comprising a vertical non-rotary post provided with a base and having a reduced upper externally-threaded portion and an enlarged non-threaded lower portion, a tool-carrying turret journaled directly on the unthreaded portion, a lever in threaded engagement with said post and overlapping the turret and adapted to swing about the axis of said post to clamp said turret against said base, means on said lever for indexing the turret, and means controlled by said lever as it moves about said axis for positively locking and unlocking said turret.

1,400,615. LOCKING-VALVE. FREDERICK J. MCCALMONT, De Smet, S. D. Filed Sept. 25, 1920. Serial No. 412,720. 11 Claims. (Cl. 251—6.)

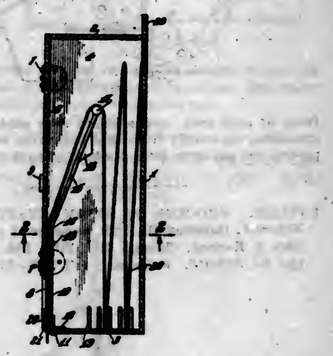
1. In a locking valve the combination with a valve embodying an operating stem adapted when shifted in one direction to close the valve, of a casing having one open side and a shiftable cover, said valve stem extending within said casing and being shiftable therein and a member connected with said cover to be shifted thereby and adapted to engage said valve stem to prevent movement thereof in either direction when the cover is closed.

1,400,616. ABDOMINAL RETRACTOR. HARVEY B. MCCROBY and WESLEY PEARSON, Saginaw, Mich. Filed Jan. 10, 1921. Serial No. 436,287. 6 Claims. (Cl. 128—20.)



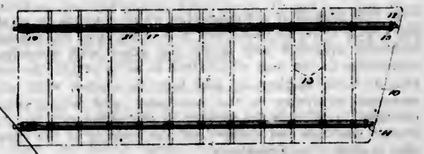
1. The combination of a generally elliptical frame provided with a series of holes, and a series of retracting hooks slidably mounted in said holes and comprising threaded stems and nuts thereon and retracting fingers at the inner ends of the stems.

1,400,617. FOLDING SQUARE. JOHN MCFADDEN, South Chicago, Ill. Filed May 25, 1920. Serial No. 384,066. 1 Claim. (Cl. 33—117.)



A folding square comprising a main member having a slot formed in one end portion, an auxiliary member having an extension at right angles thereto and arranged in said slot, said main member and extension provided with tapering holes adapted to be placed in alinement when the members are disposed at right angles to each other, a pivot pin connecting the main member and extension, a frusto-conical ferrule in said tapering holes and provided with a threaded bore, a cap screw threaded in said threaded bore to draw the ferrule in tight engagement with the holes, said main member recessed to receive the head of said ferrule.

1,400,618. METHOD OF VULCANIZING RUBBER. WILLIAM M. MACKINTOSH, Springfield township, Summit county, Ohio, assignor to The Kelly-Springfield Tire Company, Akron, Ohio, a Corporation of New Jersey. Filed Aug. 6, 1920. Serial No. 401,617. 4 Claims. (Cl. 18—53.)

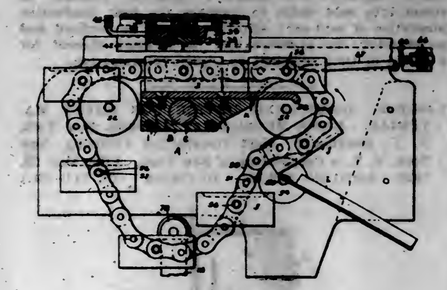


1. The process of vulcanizing articles composed wholly or in part of rubber which consists in confining the article within an inclosed space; heating air to a vulcanizing temperature; forcing the air so heated into said space under pressure; introducing a sufficient quantity of steam into said space to increase the heat conductive properties of said air; agitating the air so confined and maintaining the pressure and temperature thereof for a period of time sufficient to insure vulcanization.

1,400,619. DISPENSING DEVICE FOR SHEET MATERIAL. MOSES MITTELDORFER MARCUSE, New York, N. Y., assignor to West Disinfecting Company, New York, N. Y., a Corporation of New York. Filed Mar. 23, 1920. Serial No. 368,161. 10 Claims. (Cl. 211—31.)

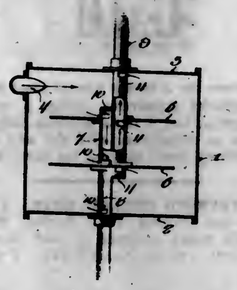
1. A dispenser for a folded web of sheet material comprising a material supporting casing, a cover movable relatively thereto, and a table mounted independently of the cover and so coöperating with the wall of said cover to form a delivery chute between the cover and the table.

1,400,620. TRUSSED HOLLOW SPAR. JAMES VICTOR MAXWELL and JOSEPH PAUL SEISER, White Plains, N. Y.; said Seiser assignor to said Maxwell. Filed Jan. 14, 1921. Serial No. 437,233. 2 Claims. (Cl. 244—31.)



1. In an aeroplane wing structure, the combination with the cross ribs, of lengthwise spars and truss means for the spars including truss connections extending therealong and strut members engaging the truss connections and adjustable on the spars to positions adjacent to the several cross ribs as described.

1,400,621. MECHANISM FOR FORMING GLASSWARE. WILLIAM J. MILLER, Swissvale, Pa. Filed Dec. 16, 1918. Serial No. 266,910. 25 Claims. (Cl. 49—37.)

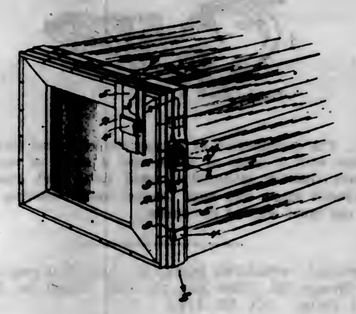


1. In a machine for manufacturing articles of glass, the combination of forming means, a carrier intermittently revolving in a vertical plane beneath said forming means, and a plurality of molds pivotally mounted on said carrier and adapted to be presented in turn to said forming means, the pivotal axes of said molds being above their centers of gravity whereby said molds normally retain their upright position.

24. The combination with a glass tank provided with a ring hole, of a glass forming machine supported at the

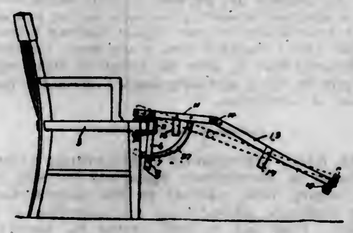
front of said tank, and a shield over said ring hole and extending forwardly from said tank over said machine to protect the gatherer from the heat of said ring hole.

1,400,622. PROCESS OF SEDIMENTATION. CARL H. NORDELL, Indianapolis, Ind., assignor of one-half to William J. Kenney, Chicago, Ill. Filed Feb. 16, 1920. Serial No. 359,012. 8 Claims. (Cl. 210—51.)



1. The method of sedimentation which consists in rotating a body of liquid in contact with a series of retardation members arranged one above the other and extending transverse to the axis of rotation so as to retard the motion of those portions of said body in contact with said members relatively to the remainder, and withdrawing clarified liquid from the vicinity of the under side of each of said members and sludge from the vicinity of the upper side of each of said members.

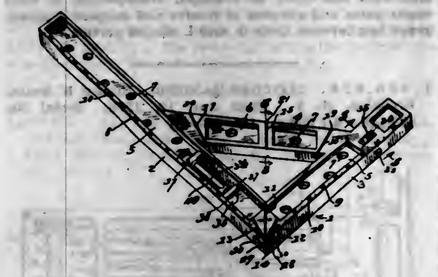
1,400,623. PROTECTING APPLIANCE FOR USE ON AUTOMOBILES. JOHN R. OSMER, Buffalo, N. Y. Filed Jan. 30, 1920. Serial No. 355,252. 6 Claims. (Cl. 180—90.)



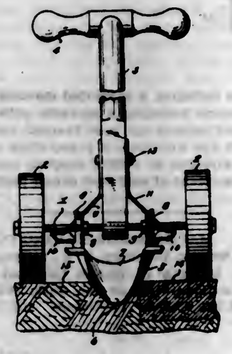
1. The combination with an automobile dash board, and a cowl fastened to the edge portion of the dash board, of a device for preventing the entrance of water through the joint between the dash board and the cowl, comprising a securing strip which conforms to the edge of the dash board and is secured thereon and overhangs the cowl, said strip having a longitudinal rib on its underside, and a yielding closure strip which is confined between said securing strip and the cowl and is pressed tightly against the surface of the cowl by said rib.

1,400,624. MEANS FOR METAL-STRAPPING AND SEALING CONTAINERS. IRVING B. PEARSON, New York, N. Y. Filed Mar. 30, 1921. Serial No. 457,130. 8 Claims. (Cl. 217—66.)

1. In a device for strapping and sealing containers, a pair of coupled alined overlying straps, the under strap being fastened to the wall of the container, and means for connecting and sealing the adjacent ends of the outermost strap.



1,400,625. LEG-SUPPORT. EDWARD RAWLINSON, Vallejo, Calif. Filed Feb. 14, 1921. Serial No. 444,969. 4 Claims. (Cl. 155—169.)

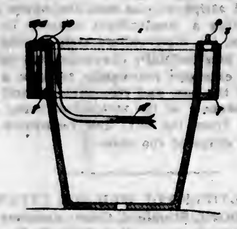


1. A leg support comprising a thigh frame, a lower leg frame pivotally connected thereto, a foot support pivotally secured to said lower leg frame, upright members pivotally secured to said thigh frame, and means slidable on said upright members for securing the entire device to the seat of a chair.

1,400,626. PIPE-MEASURING SQUARE FOR PLUMBERS AND STEAM-FITTERS. ALPHONSE C. RODRIGUEZ, Baton Rouge, La. Filed June 30, 1920. Serial No. 393,133. 11 Claims. (Cl. 33—89.)

1. A plumber's and steam fitter's pipe square comprising a body having arms extending at right angles to each other, one of the arms having a spirit level and the other arm provided with an adjusting device for adjusting the square, so that one arm may extend at an angle to a surface on which the corner of the square rests for leveling the first arm according to the bubble of the spirit level.

1,400,627. LAWN-EDGING MACHINE. CHARLES ROSEL, Newark, Ohio. Filed Sept. 27, 1920. Serial No. 413,134. 1 Claim. (Cl. 97—28.)



In a lawn edging tool, a wheeled axle, a handle projecting upwardly from said axle, a soil cutting scoop of sheet metal construction formed to include a substantially restricted forward portion and a relatively enlarged and laterally flaring rear portion, ears projecting upwardly from the edges of said scoop and apertured to receive said axle whereby said scoop will be pivotally carried by said axle in depending relation with respect thereto, and a fixed member extending upwardly from the rear portion of said scoop and having an adjustable connection with said handle, whereby the cutting positions of said scoop may be adjusted irrespective of movemet on the part of the handle.

1,400,628. SELF-IRRIGATING FLOWERPOT. ALFRED W. RUDOLPH, St. Louis, Mo. Filed June 12, 1920. Serial No. 388,576. 12 Claims. (Cl. 47—19.)

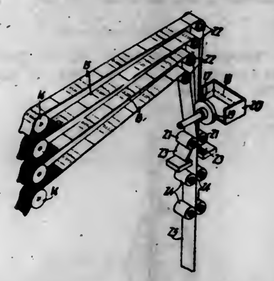
1. A flower pot comprising a water-holding chamber, an absorbent member extending from said chamber to the soil within the pot, and means for controlling the amount of water conveyed by said member.

10. An attachment for flower pots comprising a water-holding chamber formed in two or more sections, hooks secured to said sections for suspension thereof upon the rim of such pots, absorbent members disposed adjacent to the abutting ends of said sections and communicating with

the interior thereof adapted to equalize the amount of water therein, and a member adapted to convey the water from said chamber to the soil within the pot.

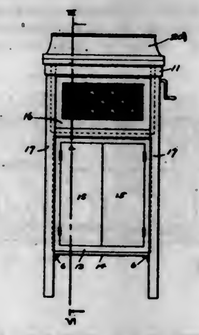
1,400,629. TROLLING-SPOON. EDGAR CHARLES SELLECK, San Francisco, Calif. Filed Feb. 19, 1920. Serial No. 359,792. 1 Claim. (Cl. 43—45.)

A trolling spoon, comprising a shank formed from a single piece of wire doubled upon itself to form a shank consisting of two members lying alongside each other, the ends of the wire being intermediate the end of one of the said members, said wire having at one end a loop and at the other an eye, and having adjacent to the eye an outwardly bent portion forming a loop, a spoon supported by said last named loop, a swivel supported by the eye, and hooks supported by the first named loop.



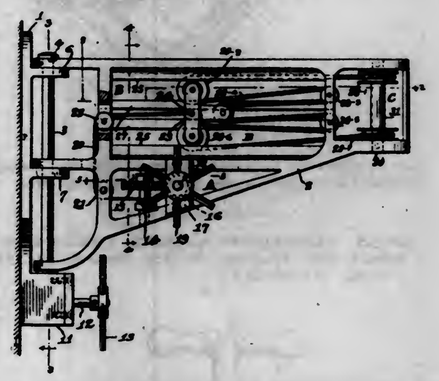
1,400,630. LICENSE-NUMBER CARRIER. KARL A. SMEBY and GAYLORD W. AKIN, Denver, Colo. Filed Sept. 29, 1919. Serial No. 327,130. 1 Claim. (Cl. 40—182.)

A license number carrier comprising a box having its front open and the marginal edge portions thereof formed with channels, one end of the box being open, and a cover plate having its longer side edges and one end edge



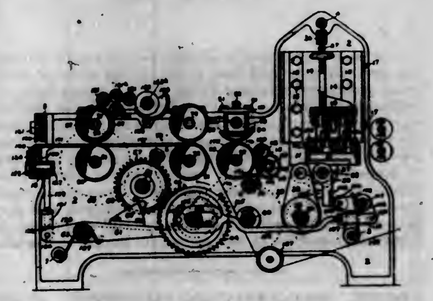
formed with flanges engaging in the channels, said cover including upper and lower and intermediate parallel longitudinally extending strips, a vertical strip connecting the longitudinal strips at one end, the upper and lower strips each having a longitudinal channel in its inner longitudinal face, the intermediate strip having its upper and lower faces longitudinally channeled, the said vertical end strip being extended rearwardly to form a cover for the open end of the box, and removable stencil plates engaged in the channels of the strips and being removable with the cover from the box, and removable from the channels of the strips of the cover.

1,400,631. MULTIPLE-PLY WEB FOR TYPEWRITERS. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed July 20, 1918. Serial No. 245,810. 5 Claims. (Cl. 283—62.)



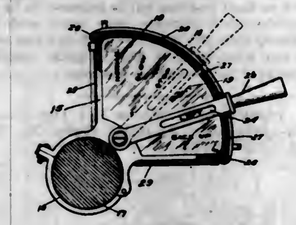
2. A new article of manufacture, consisting of a web having a succession of registering forms printed thereon and comprising plies whose edges are padded together to form a unitary composite web, said plies having differing characteristics, and said web forming a package having numerous layers in compact form for feeding into a typewriting machine, said plies being padded together by an adhesive material sufficiently elastic to permit the opening of the web from its compact condition and also to permit the web to pass readily around the rolls of the typewriting machine.

1,400,632. KNOCKDOWN CABINET FOR PHONOGRAPHS. CHARLES R. SOULE, San Francisco, Calif. Filed Apr. 20, 1920. Serial No. 375,254. 1 Claim. (Cl. 45—52.)



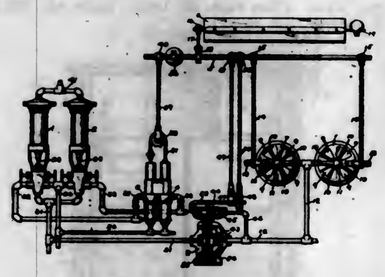
A knock down phonograph cabinet having legs adapted to be held in assembled relation at their bottoms by a bottom member, secured thereto, and at their tops by a cap member, adapted to rest upon said legs, and having depending battens adapted to engage the outer sides of said legs and prevent their spreading, means for spacing said legs, said legs being of L-shaped cross-section in their upper parts and adapted to receive and support a phonograph box between them in said L-shaped portion.

1,400,633. CLOTHES-HANGER. JOSEPH E. STAGL, Brooklyn, N. Y. Filed Apr. 12, 1920. Serial No. 373,446. 4 Claims. (Cl. 68—3.)



1. Apparatus including a supported movable bracket, an endless line, means including a movable pulley-block and fixedly arranged pulleys on said bracket for taking up and letting out the said line, a pulley-block on said line adapted to be attached to a fixed support, and means for effecting the movement of said first named pulley-block.

1,400,634. MACHINE FOR MAKING COIN-CARDS. HERBERT H. STEELE, Brooklyn, N. Y., assignor, by mesne assignments, to John H. Eggers Company, Inc., New York, N. Y., a Corporation of New York. Filed July 29, 1915. Serial No. 42,583. 11 Claims. (Cl. 93—1.)

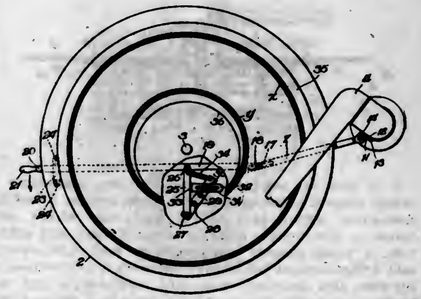


1. In a machine for making coin cards the combination with two side frames of the machine, a slide arranged for vertical movement between the frames and carrying a punch, a die bed fixed between the frames and provided with a die to coöperate with the punch, a pair of horizontally arranged paper feed rollers, adapted to feed two continuous webs of paper through the machine, a pair of glue-distributing rollers adapted to apply a coating of glue to the face of one web, cutting off elements adapted to sever both webs in uniform lengths, a main driving shaft operably connected to said slide and one of the cutting off elements and having a continuous rotary movement, and a mutilated gear transmission intermediate the said shaft and the paper feeding rollers adapted to arrest the motion of the two webs during the interval the punching and cutting off elements are active.

1,400,635. AUTOMOBILE TAIL-LAMP AND SIGNAL. CHARLES STERN and GEORGE F. EGAN, Jersey City, N. J. Filed May 7, 1918. Serial No. 233,091. 2 Claims. (Cl. 74—5.)

1. Operating mechanism for signals of the character described comprising an indicating member adapted to contain indicia showing the different conditions in the operaton of vehicles, an operating handle movable across said member to various positions with respect to the indicia, said operating handle provided with an overhanging portion extending about the edge of the indicating member, said edge of the member provided with a channel, and a cable lying in and guided by said channel and connected to the signal to be operated, said cable connected to the overhanging portion of the handle and shiftable back and forth thereby in its movement across said indicating member.

1,400,636. REGULATING APPARATUS FOR LIQUID-FUEL BURNERS. CARLTON D. STEWART, Berkeley, Calif., assignor to Associated Engineering and Supply Company, San Francisco, Calif., a Corporation of California. Filed Feb. 10, 1920. Serial No. 357,632. 7 Claims. (Cl. 158—45.5.)

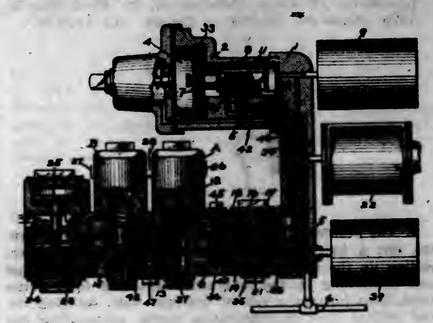


1. In a liquid fuel burning apparatus for a steam boiler, the combination with liquid fuel burners, of a pressure regulator for varying the pressure of liquid fuel supplied to the burners and a master controller governed by variations in steam boiler pressure for effecting the adjustment of said pressure regulator to thereby vary the pressure of liquid fuel supplied to the burners.

1,400,637. HAIR-WAVING PROCESS AND DEVICE. WILLIAM SELÁNYI, New York, N. Y., assignor of one-half to Carsten H. Kuehl, Hoboken, N. J. Filed June 2, 1920. Serial No. 385,981. 3 Claims. (Cl. 132—36.)

1. The process of waving hair, which comprises flattening out a hair strand within a flexible hair receiver, rolling up the flattened hair by starting at its free end and continuing in the lengthwise direction toward the head, thus forming a roll of flattened hair, covering the roll with a layer of evaporating media, surrounding the thus covered roll with a wetted cover, inclosing the roll within a receiver and heating the latter, thus creating vapor of the evaporative media and water vapor, and treating the hair roll to the desired degree.

1,400,638. AUTOMATIC PHONOGRAPH-STOP. CHARLES H. TAYLOR, Crosby, Minn. Filed May 17, 1920. Serial No. 381,847. 3 Claims. (Cl. 192—116.)

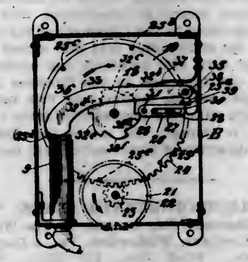


1. The combination with a sound reproducing machine including a turntable and a tone arm, the free end of the tone arm being arranged to be moved in one direction when the turntable is being rotated, of a lever fulcrumed on the casing of the sound reproducing machine, one end of the lever being arranged to extend beyond the outer edge of the turntable, means carried by said lever adjacent its outer end for frictionally engaging the turntable to prevent the rotation thereof, means for normally holding said first named means in engagement with the turntable, means operated by the movement of the tone arm in one direction for maintaining said first named means out of engagement with said turntable and operated by the movement of the tone arm in the direction opposite to that first mentioned for moving said first named means into engagement with said turntable, whereby the rotation of the latter is stopped, and means for effecting a reversal in the direction of movement of said tone arm.

1,400,639. ELECTROPNEUMATIC BRAKE. THOMAS H. THOMAS, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Jan. 14. 1921. Serial No. 437,130. 6 Claims. (Cl. 303—15.)

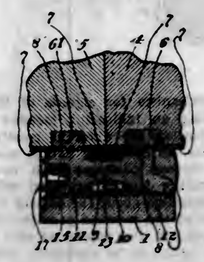
1. In an electro-pneumatic brake, the combination with a brake cylinder and auxiliary reservoir, of a piston de-

vice for controlling the exhaust from the brake cylinder and the supply of fluid from the auxiliary reservoir to the



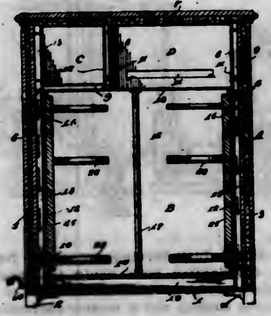
brake cylinder and a magnet operated valve for supplying fluid to said piston device for operating same.

1,400,640. BAG-LOCK. HUGO TUECKMANTEL and WILLIAM A. LOTZ, Newark, N. J., assignors to The R. Neumann Hardware Co., a Corporation of New Jersey. Filed Aug. 13, 1921. Serial No. 491,995. 8 Claims. (Cl. 70—2.)



2. A lock for bag-frames, and the like, comprising a casing adapted to be secured to a frame-section, a locking mechanism within said casing, guide-rods within said casing, a carrier-plate movably mounted upon said guide-rods, a bridge-element mounted upon said carrier-plate, said bridge-element being provided with a perforation, a key-post also mounted upon said carrier-plate and extending upwardly from said plate into and through the perforation in said bridge-element, and a stiffening element between said carrier-plate and the said bridge-element.

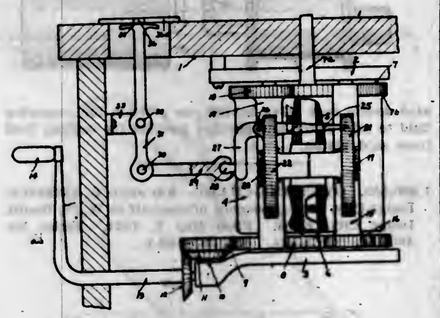
1,400,641. FILM-SHIFT LOCK FOR CAMERAS. PIETRO F. VALERIO, New York, N. Y. Filed June 30, 1919. Serial No. 307,648. 3 Claims. (Cl. 95—31.)



1. A film-camera comprising a film winding shaft; a lock-wheel geared to said shaft; said lock-wheel carrying locking detents angularly spaced to correspond to predetermined shifts of the film; a dead beat latch movable into and out of the path of said detents; a resiliently retracted catch operable to butt said latch out of the path of said detents and itself to replace said latch in said path of said detents; a cam operatively positioned to replace said latch in the path of said detents when said lock wheel shifts the angular space between adjacent detents; a shutter; manually operable shutter operating mechanism having a bias to normal position; and an operative connection between said shutter operating mechanism and said catch to move the same against its resilient retraction to release said latch upon the operation of said shutter operating mechanism and to permit the retraction of said catch upon the return to normal of said shutter operating mechanism whereby the film is normally locked in fixed position but is released to be shifted only a predetermined distance only after said shutter operating mechanism has been operated and has returned to normal and whereby said film is again locked after being shifted said predetermined distance.

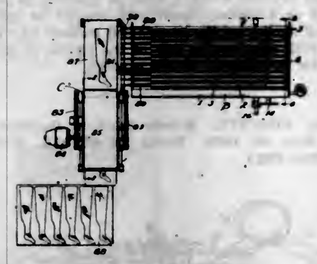
1,400,642. BORING-BAR. JACOB VAN DER VORN, Chicago, Ill. Filed July 3, 1919. Serial No. 308,551. 3 Claims. (Cl. 77—58.)

1. A boring-bar, comprising a substantially cylindrical body having a transverse slot therein, a pair of diametrically opposed cutters mounted in said slot, an adjusting screw having reversely disposed threads arranged contiguous to said cutters, and threaded blocks removably inserted in said cutters with only their surface adjacent the screw protruding, and said surfaces being threaded to coöperate with the screw.



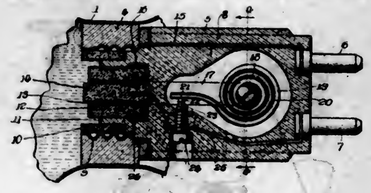
1,400,643. REFRIGERATOR. ELIAS VAN DYKE, Columbus, Ohio. Filed Sept. 13, 1919. Serial No. 323,462. 3 Claims. (Cl. 45—71.)

1. In a refrigerator, a cabinet including a base having upstanding insulated side walls, a shell having relatively



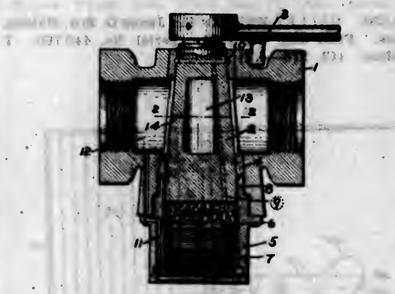
thin walls disposed within said cabinet and supported in spaced relationship from the walls thereof, whereby air circulating spaces will be produced around said shell, the said shell being further formed to include ice and food compartments, the said ice compartment being provided with apertured walls, whereby air circulation through and between said spaces and ice compartment will be provided, the said food compartment being entirely out of direct communication with said air circulating spaces, and a drain for said ice compartment.

1,400,644. INDICATING MECHANISM FOR SPRING-MOTORS. VINCENT V. VERSCHOTEN, Erie, Pa. Filed July 17, 1920. Serial No. 397,107. 6 Claims. (Cl. 116—124.)



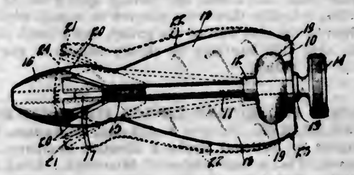
1. In an indicating mechanism for spring motors, the combination of a spring; a winding mechanism for winding said spring; a wheel connected with the winding mechanism; means driven by the spring; a wheel connected with the driven means; a lever mounted on one wheel; means on the other wheel acting on the lever with a movement of either wheel; and indicating devices actuated by the lever.

1,400,645. FEEDING MECHANISM FOR HOSIERY-PRESSES. CHARLES E. WARREAM, Cincinnati, Ohio, assignor to The American Laundry Machinery Company, Norwood, Ohio, a Corporation of Ohio. Filed May 27, 1918. Serial No. 236,816. 10 Claims. (Cl. 68—9.)



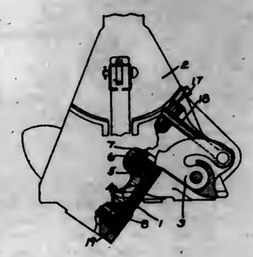
1. Apparatus of the class described, comprising a pressing machine, a feeding table, means for advancing stockings step by step along said table in the direction of its length, and means associated therewith for removing the stockings from the table and delivering them in a direction transverse to the length of said table to the pressing machine.

1,400,646. ELECTRIC STOPPER FOR FLUID-CONTAINERS. ERNEST CRESTON WEBSTER, Chicago, Ill. Filed Apr. 12, 1920. Serial No. 373,306. 9 Claims. (Cl. 219—40.)



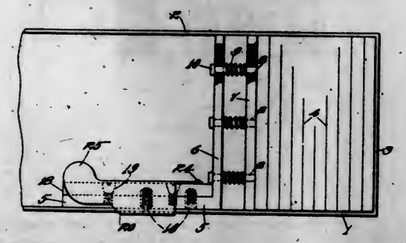
1. The combination with a container for liquid to be heated, of a stopper carrying at its inner end primarily insulated heating electrodes adapted to be connected by the liquid, a main circuit and a branch circuit both leading said electrodes, and means whereby heat exceeding a predetermined limit automatically interrupts one of the circuits.

1,400,647. LUBRICATING DEVICE. HENRY H. WESTINGHOUSE, New York, N. Y., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Sept. 20, 1919. Serial No. 325,132. 2 Claims. (Cl. 251—93.)



1. A plug cock comprising a body, a plug valve mounted in said body for controlling a fluid pressure conduit, a chamber at one end of the valve containing a lubricant, a movable member acting on said lubricant, and a passage for supplying fluid under pressure from the conduit to said member.

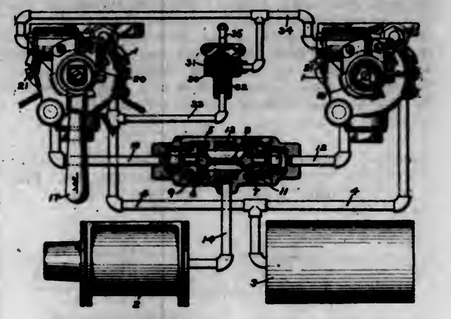
1,400,648. DILATOR. ROBERT H. WHITNEY, Jacksonville, Fla. Filed June 4, 1920. Serial No. 386,483. 7 Claims. (Cl. 128—341.)



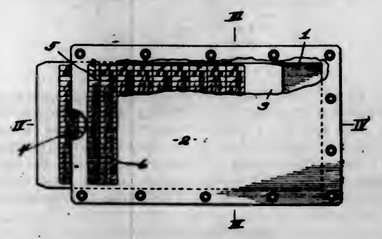
1. A dilator comprising a core, a plurality of segments pivoted on the core at one end, and forming a body of circular cross-section in closed position, and an expander having a tapered portion extending between the free ends of said segments, and another tapered portion forming the forward end of the dilator, substantially as set forth.

1,400,649. WEATHER-PROTECTOR FOR COUPLINGS. HARRY F. WOMRNLEY, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Dec. 6, 1918. Serial No. 265,574. 2 Claims. (Cl. 173—332.)

1. The combination with a coupler head having electric contacts and a projecting ledge and provided with a yielding pivoted lock for clamping counterpart coupler heads together, of a device for protecting the electric contacts from the weather and mounted in position between said ledge and said pivoted lock.



1,400,650. GALLEY END LOCK. JESSE G. ZIM, Malden, Mass. Filed Jan. 28, 1921. Serial No. 440,769. 7 Claims. (Cl. 276—43.)

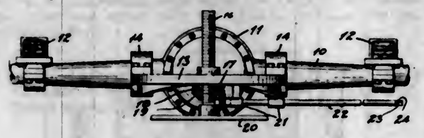


1. A galley end lock having a head which extends transversely of the galley, a type stop bar in front of said head and having loose connection with said head, whereby the stop bar is capable of a limited movement with relation to said head, springs between the said stop bar and head, whereby the stop bar is normally held spaced away from the said head, and a side bar having spring seated pins projecting laterally therefrom adapted to engage with perforations in the side wall of the galley, and a latch whereby the said side bar may be rigidly locked to the side wall of the galley.

1,400,651. PROTECTIVE DEVICE FOR FLUID-PRESSURE BRAKES. BURTON S. AIKMAN, Milwaukee, Wis., assignor to National Brake & Electric Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 8, 1921. Serial No. 450,554. 9 Claims. (Cl. 303—63.)

8. In a fluid pressure brake, the combination with a source of fluid under pressure and a brake valve device for applying and releasing the brakes, of a spring tending to shift the brake valve device to brake application position, a latch normally engaging the spring to prevent same from acting on the brake valve device, a piston operated upon a predetermined reduction in pressure of said source of pressure for releasing said latch, and a manually operated double beat valve having one position for supplying fluid to said piston and another position for venting fluid from said piston.

1,400,652. OVERTIME-CHART. RAYMOND T. ANDERSON, Dodge City, Kans., assignor of one-half to W. W. Smith, Dodge City, Kans. Filed May 2, 1921. Serial No. 466,114. 4 Claims. (Cl. 283—23.)

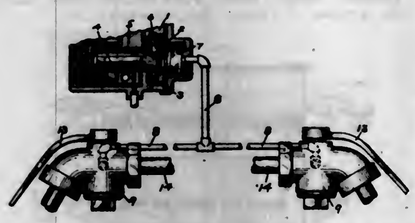


1. A chart comprising a member having a vertical column of figures beginning with ten and increasing by tens, and a second member adjustable laterally with respect to said column of figures; said second member having a horizontal row of figures running from 0 to 9 inclusive, and vertical underlying columns of figures representing hours and minutes which a train is expected to consume in travel at a certain speed with respect to the miles column of figures on the first-named member and the figures of such column plus any of the figures of the horizontal row on the said second member.

1,400,653. FORCEPS. ROBERT BARBOUR, Paterson, N. J. Filed Sept. 30, 1920. Serial No. 413,911. 5 Claims. (Cl. 128—322.)

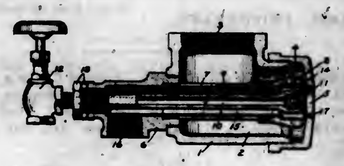
1. A pair of gripping forceps having means supplemental to its gripping jaws to releasably clamp and thereby hold thereon a ligature.

1,400,654. AUTOMOBILE-JACK. SAMUEL M. BIRGER, Brooklyn, N. Y. Filed July 8, 1920. Serial No. 394,775. 5 Claims. (Cl. 254—86.)



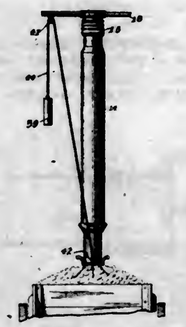
1. The combination with the axles of a vehicle, of lifting jacks permanently associated therewith, one of the jacks having a fixed relation with one of the axles and the jack having sliding relation with the other axle.

1,400,655. MITTEN. OTTO H. BOHNERT, Wauwatosa, Wis. Filed Jan. 21, 1918. Serial No. 212,871. 1 Claim. (Cl. 2—102.)



A mitten comprising a palm portion having a relatively short slit in line with the forefinger of the wearer, a back portion joined thereto along a gradually curving line, and an interior flap joined to the mitten along said gradually curving line and normally projecting from its attached curved edge between the slit and forefinger of the wearer toward the central portion of the mitten, whereby the curved attached end of the flap will automatically tend to keep said flap across said slit while allowing manipulation of its free end by the forefinger of the wearer.

1,400,656. LOAD-BRAKE DEVICE. GEORGE A. BOYDEN, Roland Park, Md., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Sept. 30, 1920. Serial No. 413,730. 5 Claims. (Cl. 303—23.)

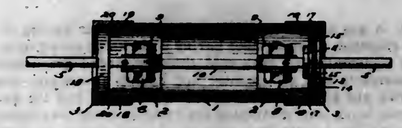


1. The combination with a valve device for adjusting empty and load brake apparatus for empty or load braking, of a brake pipe angle cock and means controlled by said angle cock for operating said valve device.

1,400,657. COMBINED OIL AND GAS BURNER. STUART B. BRODIE, Wilmerding, Pa. Filed June 6, 1918. Serial No. 238,571. 2 Claims. (Cl. 158—76.)

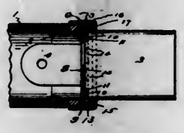
1. A gas burner comprising a body member having an air chamber, a cap member having a discharge outlet opening communicating with said chamber, and a gas nozzle mounted in said air chamber and having an annular gas outlet, the adjacent faces of the cap member and the gas nozzle being interconverging frustums of cones converging toward the longitudinal axis of the gas nozzle to form an annular air outlet, a sharp edge separating the annular air and gas outlets so that the air and gas outlets are in close proximity to each other and to the outlet opening in said cap member.

1,400,658. CONVEYER-CONDUIT. JOHN BROUGHTON BROWN, Wynne, Ark. Filed June 12, 1920. Serial No. 388,560. 5 Claims. (Cl. 193—40.)



1. In a conveyer conduit of the character described, an outer section, an inner section telescopically arranged within the outer section and having its outer wall spaced from the inner wall of the outer section, a circular series of anti-friction elements carried by the inner section adjacent its inner end, each of said anti-friction elements including a cage secured to the outer wall of the inner section and a ball bearing retained in the cage and operatively engaging the inner surface of the outer section, a circular series of anti-friction elements carried by the outer section adjacent its outer end, each of said anti-friction elements including a cage secured to the inner wall of the outer section and a ball bearing retained in said cage and operatively engaging the outer wall of the inner section, a loose ring arranged between the inner section and the outer section adjacent the inner end of the inner section and supported upon the cages of the first-named series of anti-friction elements, and means for preventing egress of air between the sections consisting of a divided and inverted frusto-conical flange secured to the outer end of the outer section and having a portion

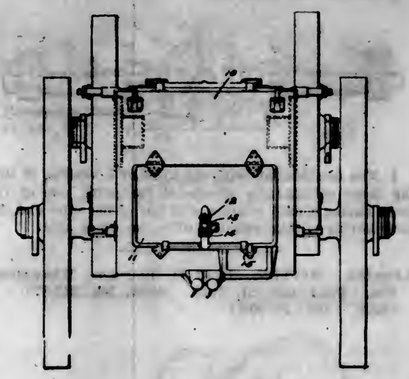
bearing against the outer wall of the inner section, and means for regulating the engagement of the flange with the outer wall of the inner section.



1,400,659. [WITHDRAWN.]

1,400,660. **RENEWABLE FUSE.** ROBERT C. COLE, Hartford, Conn., assignor to The Johns-Pratt Company, Hartford, Conn., a Corporation of Connecticut. Filed Sept. 3, 1919. Serial No. 321,241. 6 Claims. (Cl. 200—132.)

2. An inclosed fuse having an insulating casing, a metallic bushing screwed into one end of the casing, a conducting terminal plate with notched edges extending into said bushing, said notches in the terminal plate being outside of the end of the bushing, semi-circular cheek pieces fitting the notched portion of the terminal outside of and closing the outer end of said bushing, a washer movably fitted on the terminal outside of the cheek pieces, and a ferrule screwed on the bushing against said washer.

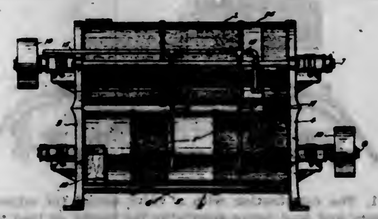


1,400,661. **INCLOSED FUSE.** ROBERT C. COLE, Hartford, Conn., assignor to The Johns-Pratt Company, Hartford, Conn., a Statute Corporation of Connecticut. Filed Apr. 2, 1920. Serial No. 370,637. 5 Claims. (Cl. 200—132.)

3. A fuse having an insulating casing, a metallic ferrule secured in one end of the casing, a cap screwed on the ferrule, a terminal extending through the ferrule and cap, a cap plate loosely fitting the terminal within the cap, a baffle plate secured tightly to the terminal within the end of the ferrule, and detachable semi-circular locking plates resting against the end of the ferrule between the cap plate and baffle plate, said locking plates closely fitting the terminal and loosely fitting the cap, and having grooves in the surfaces next to the cap plate.

1,400,662. **FASTENING DEVICE.** LOUIS B. CRAIG, Davenport, Iowa. Filed Nov. 3, 1920. Serial No. 421,606. 9 Claims. (Cl. 70—5.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

2. A fastening device including a bar adapted to be pivotally mounted, lugs formed on the bar and to overlie the edge of a door, a tongue extending laterally from the bar, said tongue having an eye, a turn button formed to pass through the eye when in one position, and having a wing fastened to overlie the tongue when the button is in any other position, and a resilient clasp pivotally secured to the tongue adapted to be folded down to embrace the button to hold the same with its wing in position overlying the tongue, the said clasp coöperating with the tongue to releasably retain the clasp in button embracing position.



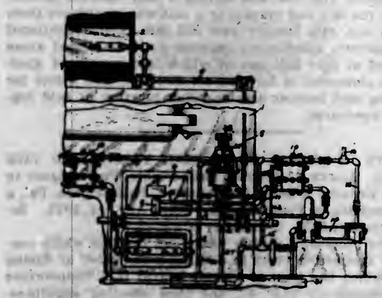
1,400,663. **TIE-HOLDER.** JAN CENOBY, Los Angeles, Calif. Filed Mar. 7, 1921. Serial No. 450,335. 10 Claims. (Cl. 2—84.)

1. A device of the class described combining a substantially T-shaped body with its shank formed to provide opposed cam projections yieldingly urged outwardly, a member hingedly connected to the shank and coöperating with the cam projections to yieldingly maintain said member in closed position toward the shank or in open position away from the shank, and means carried by said member and adapted to engage a collar button.

1,400,664. **GRAIN-WASHING MACHINE.** CHARLES DAWSON, Tacoma, Wash. Filed Oct. 18, 1920. Serial No. 417,766. 8 Claims. (Cl. 83—27.)

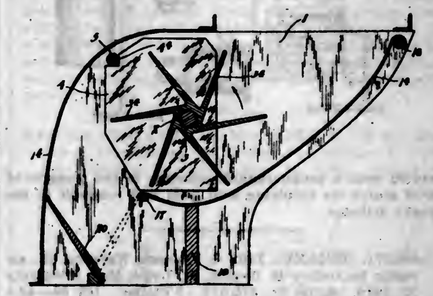
1. A grain washing and scouring device comprising, a cylinder having successively from its grain receiving end an imperforate peripheral belt, a perforate belt, a second imperforate belt and a wide perforate belt extending to the other end, deflectors mounted on the imperforate belts, means for advancing grain along the cylinder and means for delivering water into the cylinder through the imperforate belts.

1,400,665. **AUTOMOBILE WINDSHIELD-WIPER.** OSCAR A. DESICCO, San Francisco, Calif. Filed Apr. 25, 1921. Serial No. 464,192. 3 Claims. (Cl. 74—14.)



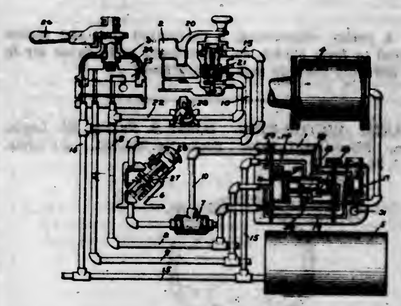
1. A device for wiping automobile windshields comprising a body member adapted to extend across the upper side of a windshield, a motor on the body, an endless belt on the body member, a slide member on the body adapted to support a wiping element, spring urged detents on said slide member, a member on the belt arranged to engage said detents so as to move said slide member, and means on the body to engage said detents and move the same out of engagement with said belt carried member.

1,400,666. **BUCKLE.** RAYMOND I. DOUGLAS, Attleboro, Mass. Filed Mar. 19, 1921. Serial No. 453,573. 5 Claims. (Cl. 40—142.)



1. In a buckle, a front having an opening, grooved guides on the rear of the front above and below the opening, letters, or the like having reduced ends forming guide flanges engaged in the grooves of the guides, and a U-shaped locking member having abutments at its free ends adapted to snap over the ends of the guides and formed to engage in and between the guides and to the rear of the letters to hold the latter immovable and against the outer walls of the grooves.

1,400,667. **LIQUID-FUEL-CONTROL SYSTEM.** SIDNEY G. DOWN, Berkeley, Calif., assignor to Associated Engineering and Supply Company, San Francisco, Calif., a Corporation of California. Filed July 5, 1919. Serial No. 306,776. 3 Claims. (Cl. 236—8.)

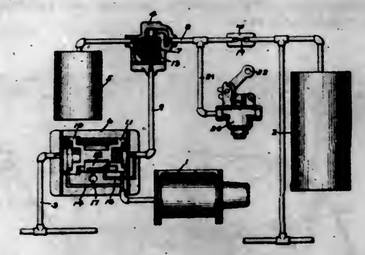


3. The combination with a steam boiler and furnace, of means for regulating the intensity of the fire in the furnace and the furnace draft, a piston normally subject on opposite sides to fluid pressure and operatively connected to said means, a valve for exhausting fluid under pressure from one side of said piston, and a thermostat, subject to the temperature of the steam in the boiler and operatively connected to said valve.

1,400,668. **FEEDING DEVICE.** EMIL R. DRAVER, Richmond, Ind. Filed Oct. 12, 1921. Serial No. 507,366. 6 Claims. (Cl. 83—44.)

1. A feeding device having in combination a casing, a shaft extending therethrough, a plurality of paddle wheels mounted in alinement on said shaft, and stationary plates supported on said shaft between adjacent wheels.

1,400,669. **SAFETY CAR-CONTROL DEVICE.** SAMUEL W. DUDLEY, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Feb. 5, 1919. Serial No. 275,231. 5 Claims. (Cl. 303—19.)

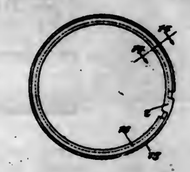


4. In a safety car control equipment, the combination with an emergency brake pipe, a straight air pipe, and a relay valve operated upon a reduction in pressure for venting fluid from the emergency brake pipe to effect an emergency application of the brakes, of a controller handle and a pilot valve operated upon release of the controller handle for venting fluid from said relay valve to the straight air pipe.

1,400,670. **FLUID-PRESSURE-BRAKE DEVICE.** SAMUEL W. DUDLEY, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed May 21, 1919. Serial No. 298,064. 4 Claims. (Cl. 303—68.)

1. In a direct acting brake system, the combination with a brake cylinder, a source of fluid under pressure, and a straight air pipe through which fluid is supplied to the

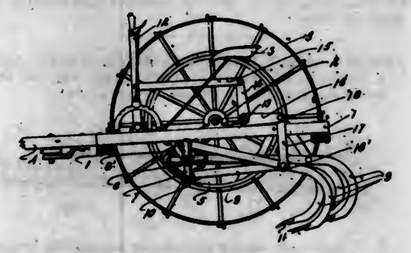
brake cylinder to effect an application of the brakes, of a reservoir normally charged from said source and means op-



erated upon a predetermined reduction in the pressure of said source for supplying fluid from said reservoir to the brake cylinder.

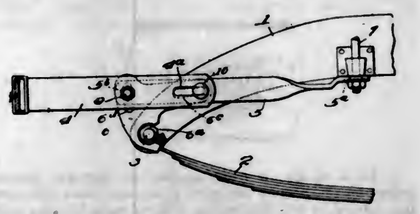
1,400,671. PULLEY. JOHN G. FISCHER, Waterloo, Ill., assignor to Andrew B. Remick, St. Louis, Mo. Filed July 22, 1919. Serial No. 312,511. 8 Claims. (Cl. 64—48.)

1. A pulley, comprising, a perforated rim, and spokes adapted to form blades, so constructed as to cause air to flow inwardly through said perforations.



1,400,672. PISTON-RING. HARRY S. FRANK, St. Louis, Mo. Filed Dec. 7, 1918. Serial No. 265,721. 5 Claims. (Cl. 74—109.)

4. A piston ring comprising a spiral, having an inner convolution and an outer convolution united by an integral connection, the juxtaposed faces of said convolutions being beveled and in contact with each other throughout their lengths.

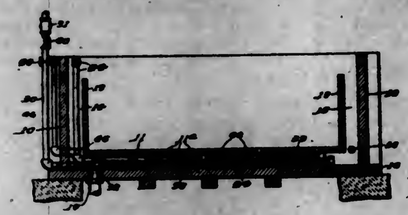


1,400,673. WEEDING IMPLEMENT. HERBERT L. GILLILAND, Harrington, Wash. Filed Jan. 15, 1921. Serial No. 437,559. 1 Claim. (Cl. 97—25.)

The combination in an implement as described comprising a frame and traction wheels each having an internal gear ring, of a crank shaft and pinions thereon engaging said gear rings, a series of bent hoe beams journaled to the crank shaft and each provided with a transversely extending chopping blade, a rock bar, an operating lever, an arm on the rock bar and a link connecting said arm and lever,

a series of rock arms on said bar corresponding with the hoe beams and a suspending link between each rock arm and its complementary hoe beam for the purpose described.

1,400,674. BUMPER. OSCAR H. GOBTS, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Oct. 15, 1921. Serial No. 507,926. 7 Claims. (Cl. 293—55.)

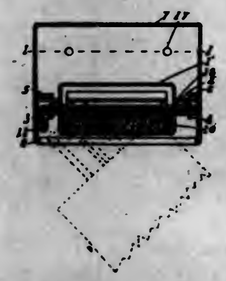


1. In an automobile having fore-and-aft extending side bars with shackle bolt connections to the vehicle supporting springs, in combination with such side bar, a bumper support comprising a bracket member adapted to be engaged with the shackle bolt; a link member having a hole for engagement with a remotely rearwardly situated bolt on the vehicle side bar and extending thence forwardly and lapping alongside the bracket member, said lapping members having at their lapped areas bolt apertures one of which is elongated in up-and-down direction; a bumper arm which extends rearwardly lapping the lapped area of said bracket and link and having a bolt hole for securement to the link and bracket by a bolt which connects them at their lap, said bumper arm and link having additional bolt apertures adapted to register at their lapped areas rearward of said bolt one of which last mentioned apertures is elongated in fore-and-aft direction, and a bolt for clamping said bumper arm and link together at said registered apertures.

1,400,675. PROCESS OF DYEING YARNS AND THE LIKE. JAMES A. GRUNDY, Philadelphia, Pa., assignor to John Bromley & Sons, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 11, 1921. Serial No. 491,343. 2 Claims. (Cl. 8—5.)

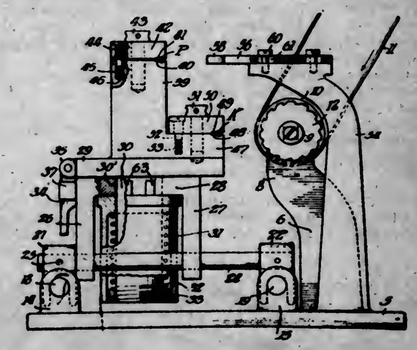
1. The process of dyeing yarns and the like which consists in supporting them in a suitable container of dyeing liquor which has been previously heated to a temperature of approximately 212° F., and then effecting simultaneously a uniform density of the dye liquor and a discharge of the same in the region of the suspended yarns, by utili-

sation of the expansive and propulsive forces of compressed air at a minimum pressure of approximately 20 lbs. to the



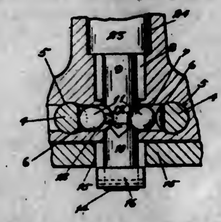
square inch above normal or atmospheric pressure, delivered within the body of dye liquor by means of suitably arranged piping.

1,400,676. BUSHING-REMOVER. PERRY G. GULLY, Rosalia, Wash. Filed Dec. 2, 1920. Serial No. 427,711. 3 Claims. (Cl. 29—33.2.)



1. In a bushing remover the combination of a driving shank and a driven bar having complementary co-acting beveled friction faces and coacting shoulders on said shank and bar forming a continuous annular bearing for engagement with the edge of a bushing as described.

1,400,677. TOILET-PAPER AND PAPER-TOWEL DISPENSER. NEWTON S. HILLYARD, St. Joseph, Mo. Filed July 27, 1920. Serial No. 399,292. 1 Claim. (Cl. 211—31.)



In a roll-paper dispenser, a bearing plate, a shaft, one end of said shaft being oscillatably mounted in a loose fitting aperture formed through said plate, a shaft stop formed of a portion of said shaft bent at practically a right angle thereto outside of said bearing plate with a return bent end formed on the free end of said shaft stop, another bearing plate provided with an aperture formed therethrough for the reception of the other end of said shaft said other bearing plate having an inclined slot formed therethrough the upper end of said slot terminating in said aperture and its lower end opening through the lower edge of said plate, a shaft retainer for retaining said other end of said shaft in its bearing aperture, a sleeve in which said retainer is slidably mounted for vertical movement, a slot closer formed on the lower end of said retainer for closing said inclined slot, an eye formed on the upper end of said shaft retainer whereby it is lifted for releasing the adjacent end of said shaft, and a paper holder secured on said shaft, said paper holder being adapted to have a roll of paper tightly fitted thereon, the whole forming ready means for detaching and lowering one end of said shaft and the thereon secured paper holder and whereby said shaft can easily and quickly be returned to normal position.

1,400,678. KEY-CUTTING MACHINE. ROLFE RAY HOLBROOK, New Orleans, La., assignor to William A. Lurie, New Orleans, La. Filed Nov. 15, 1920. Serial No. 424,014. 9 Claims. (Cl. 90—13.2.)

1. In a machine of the class described, the combination of a rotatable cutter, a key supporting structure, and means for clamping a blank on said structure, said structure being rotatable whereby to adjust said blank at a desired angle with reference to the cutter, said structure being shiftable to carry the blank into engagement with said cutter.

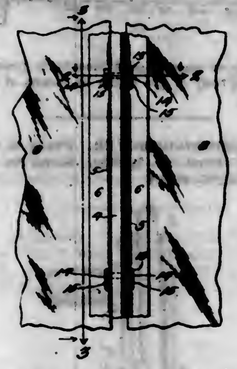
1,400,679. ROTATABLE LOCK AND INTERLOCK. GEORGE C. JENSEN, Oakland, Calif. Filed Aug. 20, 1918. Serial No. 250,656. 7 Claims. (Cl. 70—126.)

4. In combination, a pair of sliding gear-shifting rods having apertures at their adjacent sides opposite each other in neutral position, and a transversely disposed rotatable bolt, locking means interposed between the bolt and rods adapted in one position of the bolt to engage in the recesses of the rods to lock the same, and adapted in another position of the bolt to lock one only of said rods.

1,400,680. CURTAIN-WINDOW FOR VEHICLES. WILLIAM R. JOHNSTON, Chicago, Ill., assignor to Wm. R. Johnston Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 28, 1921. Serial No. 448,727. 6 Claims. (Cl. 296—145.)

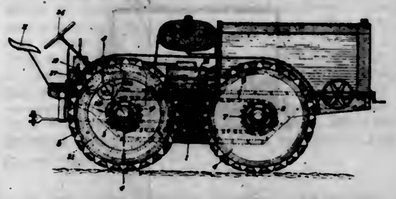
1. In a curtain-window, the combination of a frame, having an opening therein and provided with a rabbet in its inner periphery, inner and outer curtain-members between which the frame is disposed, each having an opening therein and the margin of its opening lapped over and secured to one of the faces of the rabbet, a transparent plate in said opening with its margin in said rabbet and lapping the inner portion of the frame, and a welt secured in the rabbet, the margin of the plate being disposed and secured between the welt and an integral portion of the frame.

1,400,681. TROLLEY-WHEEL. HERMAN M. KAUL, Cedarburg, Wis. Filed Jan. 12, 1921. Serial No. 436,828. 1 Claim. (Cl. 191—75.)



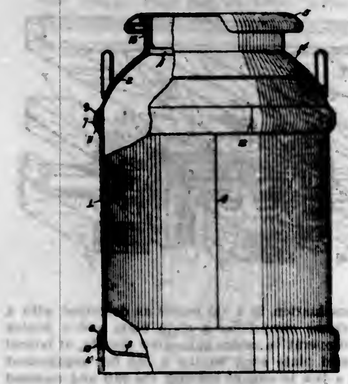
A trolley wheel having a running groove, spiral return grooves leading to the running groove, each spiral groove terminating in a circular groove, and conical extensions having their smaller ends communicating with said circular grooves.

1,400,682. CONCRETE-WALL MOLD. RICHARD C. KROGAN, South Bend, Ind. Filed Nov. 29, 1920. Serial No. 427,131. 3 Claims. (Cl. 25—131.)



1. A sectional wall forming mold comprising a pair of spaced mold sections, said mold sections having their inner faces provided with inwardly projecting window opening forming members adapted to engage opposite faces of a window frame, one end of each mold section being provided with vertically disposed column forming recesses and a substantially centrally disposed vertical removable strip interposed between the ends of the mold sections adjacent the column forming recesses and forming means for forming a vertically disposed recess in the end face of a column.

1,400,683. WINDOW-SASH. RICHARD C. KROGAN, South Bend, Ind. Filed Apr. 18, 1921. Serial No. 462,314. 5 Claims. (Cl. 189—78.)



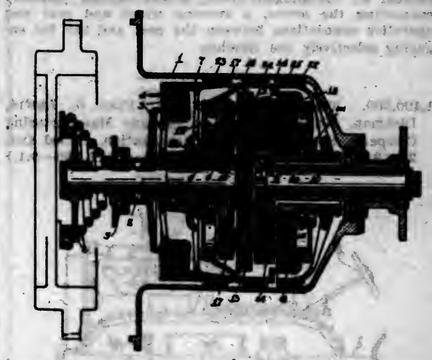
1. A window pane holding device comprising a member T-shaped in cross section, a U-shaped channel disposed on one of the flanges of said T-shaped member, outwardly extending flanges carried by the flanges of the U-shaped channel and disposed adjacent the flanges of the T-shaped member, said flanges of the U-shaped channel and the T-shaped member being adapted to receive therebetween adjacent edges of window panes, U-shaped clamping members having their transverse portions disposed in apertures of the T-shaped member and channel member, the arms of said U-shaped clamping members terminating in curved flexible members, said curved flexible members being adapted to be forced into engagement with the outwardly extending flanges of the channel member, thereby forcing said channel member inwardly.

1,400,684. TRACTOR. JOHN MINOR KROYER, Stockton, Calif. Filed Oct. 21, 1918. Serial No. 253,971. 5 Claims. (Cl. 180—17.)

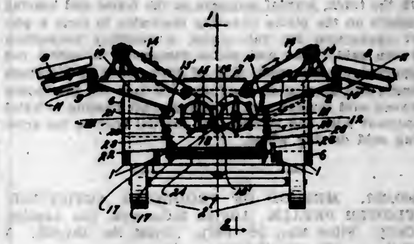
1. In a tractor, a propeller shaft, a pair of clutches thereon, the female members of the clutches being each connected in driving relation with a wheel on each side of the tractor, and the male members being both mounted in constant driving relation on the propeller shaft and arranged to normally engage the female clutch members, a common yoke between the male members of the clutches and bearing thereagainst, and a common means for moving said yoke in either direction to disengage the corresponding clutch.

1,400,685. CONTAINER. AUGUST M. KRUSE, Defiance, Ohio. Filed June 4, 1921. Serial No. 474,883. 3 Claims. (Cl. 220—66.)

2. A container of the class described having a cylindrical body member, a top member and a bottom member, each having an annularly offset inner edge portion for telescopically receiving the respective edge of the body member with the inner surfaces of the top and bottom members flush with the inner surface of the body member, the joints between the members being integral as by welding, a reinforcing band closely embracing the offset portion of the top member and having an internal recess receiving the same, and a bottom band closely embracing the offset portion of the bottom member and having an internal recess receiving the same, said bottom band extending below the bottom member to form a base support for the container.



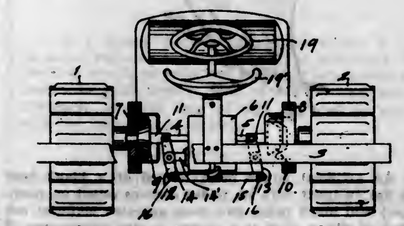
1,400,686. TERMINAL CONNECTION FOR ELECTRICAL HEATING UNITS. FRANK KUHN, JAY A. HAND, and JULES G. SPIEMS, Detroit, Mich., assignors to American Electrical Heater Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 14, 1918. Serial No. 262,441. 1 Claim. (Cl. 219—19.)



In an electrical heating unit the combination with an insulator, a resistor mounted thereon having a terminal portion extending therefrom, and clamping means for the outer end of said terminal portion, of a reinforcement formed of a strip mechanically connected to said insulator and clamping means, said strip being wrapped about said terminal portion.

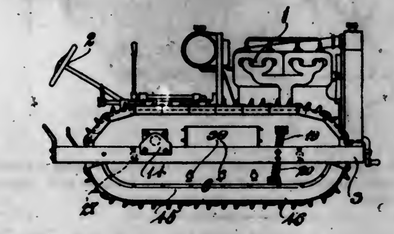
1,400,687. TRANSMISSION MECHANISM. CRAUS B. KURTZ, Lakewood, Ohio. Filed Apr. 29, 1918. Serial No. 231,290. 6 Claims. (Cl. 74—34.)

1. In transmission mechanism, the combination of an epicyclic gear train comprising co-axial driving and driven gears, mounted adjacent to each other, a thrust bearing mounted between said gears, a planet shaft mounted to revolve concentrically about the common axis of said gears, gears on said planet shaft in mesh with said driving and driven gears, all of said gears having helical teeth arranged to produce inward axial balancing thrusts through said driving and driven years against said thrust bearing.



1,400,688. FEEDER FOR GRAIN-SEPARATORS. WILLIAM CLYDE LEONARD, Lewiston, Idaho, assignor to The Leonard Roller Gear Drive Thresher Company, Lewiston, Idaho. Filed Jan. 18, 1921. Serial No. 438,128. 2 Claims. (Cl. 130—1.)

1. The combination in a feed mechanism with a pair of depressible, resiliently supported chutes, of a pair of distributing cylinders, a fixed board beneath each chute and a flexible wall connecting each wall with a respective chute, and a conveyer below the cylinders and supported from said boards.

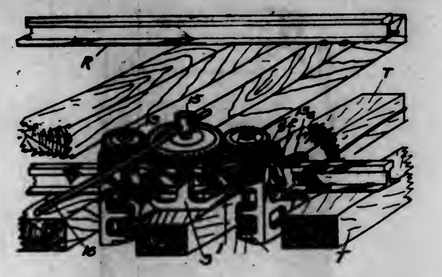


1,400,689. STEERING MECHANISM. FRED G. LEWIS, Spokane, Wash., assignor to Rhodes Harvester Company, Spokane, Wash. Filed June 23, 1919. Serial No. 306,047. 2 Claims. (Cl. 180—9.2.)

1. The combination with the sectional driving shaft, the driving traction members operated thereby and the

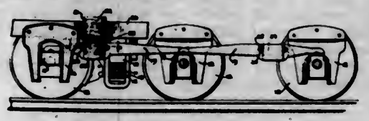
fixed clutch cups thereon, of slidable, non-rotatable cones on the shafts to co-act with the cups, clutch levers pivoted on the slidable cones, a steering bar pivotally connecting the levers, a steering wheel and post and operative connections between the post and bar for engaging selectively the clutches.

1,400,690. TRACTION-MACHINE. FRED G. LEWIS, Dishman, Wash., assignor to Spokane Manufacturing Company, Spokane, Wash., a Corporation. Filed Oct. 24, 1919. Serial No. 333,051. 5 Claims. (Cl. 180—9.1.)



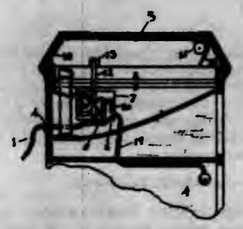
1. The combination with a main frame and supporting plates, of a driving wheel and an idler and a portable track thereon, traction wheels on said plates contacting with the track, journal members on the frame and bearing members on the plates co-acting therewith to form a pivotal connection for the plates, a resilient connection between said frame and plates comprising a spring rod supported at the outer side of each plate and springs thereon and an arm on the frame for each rod interposed between said springs, and a driving shaft passing in axial alinement with and through one journal bearing for actuating said driving wheel.

1,400,691. METHOD OF PRODUCING ARTIFICIAL-FLOWER PETALS. LOUISE MALSTROM, Los Angeles, Calif. Filed Mar. 22, 1921. Serial No. 454,331. 5 Claims. (Cl. 41—13.)



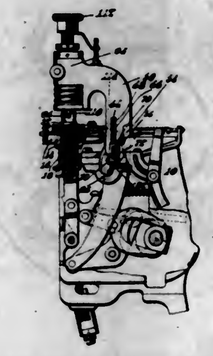
5. An artificial flower petal formed of a blank bent back flat on itself with its folded corners rolled on themselves; said blank being free from adhesive material but formed of ribbon sized to a degree to give permanence of roll to the rolled corners without the necessity of providing securing stitches in said roll.

1,400,692. TIE-PULLER. PETER MILLER, Springdale, Wash. Filed May 12, 1921. Serial No. 468,804. 3 Claims. (Cl. 254—43.)



1. The combination in a tie puller as described with a supporting frame comprising a main plate and a duplex capstan with operative cables supported therein, of lateral flanges on said plate each having a lug for engagement with a rail, a jaw to engage beneath the rail and recessed and notched as described, and a hooked detent pivoted on each flange to engage the rail head.

1,400,693. EQUALIZER FOR CAR-TRUCKS. PETER PARKE, Chicago, Ill., assignor to The Pullman Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 31, 1920. Serial No. 370,283. 5 Claims. (Cl. 105—196.)

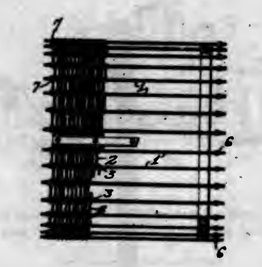


1. The combination with a truck frame, journal boxes, and wheels, of an equalizer bar spanning the space between adjacent boxes, and a spring disposed between the frame and bar, the lower bearing seat of the spring upon the bar being removable in a direction not necessitating any approach of said seat toward the frame whereby to facilitate the insertion and removal of the spring without additionally stressing the same.

1,400,694. PHONOGRAPH LIGHTING SYSTEM. ROSS M. G. PHILLIPS, New Haven, Conn., assignor to Perlie P. Fallon, New York, N. Y. Filed Nov. 2, 1920. Serial No. 421,260. 13 Claims. (Cl. 240—2.)

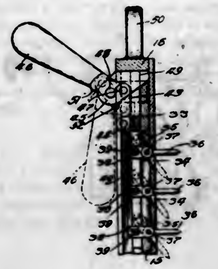
1. In a phonograph lighting system, circuit wires, a lamp, a second lamp, electric circuits for said lamps, means to open and close the circuit of the first named lamp and to open the circuit of the second named lamp, actuated by a lid operated lever and the circuit of the second lamp closed solely by manually rocking said lever.

1,400,695. HEEL-BUILDING MACHINE. JOSEPH H. POPE, Hamilton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 16, 1918. Serial No. 235,000. 20 Claims. (Cl. 1—33.)



1. In a heel building machine, the combination of a contractile heel form, mechanism for applying pressure to the heel in a direction normal to the planes of the lifts, automatic means for contracting the form upon the lateral surface of the heel to aline the lifts, and interdependent nailing mechanism and means for uninterruptedly maintaining the form in expanded condition until the operation of the pressure applying mechanism is started.

1,400,696. TOY. ALFRED B. ROSEBOOM, Chicago, Ill. Filed Dec. 29, 1920. Serial No. 433,799. 3 Claims. (Cl. 46—40.)

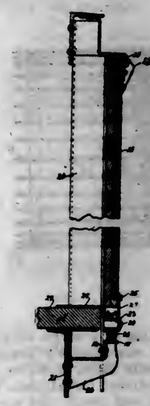


1. In the combination of a toy, a base, a standard, a figure designed to represent an aerial performer, slidably mounted on said standard, a second figure likewise designed to represent an aerial performer pivotally mounted on said standard near the upper end, means for shooting said first figure upwardly into contact with the pivotally mounted figure and means on said second figure designed to automatically grasp said second figure and hold it in raised position until released.

1,400,697. SCREEN FOR SAND, GRAVEL, &c. GEORGE A. SEIVOUR, Detroit, Mich. Filed June 9, 1917. Serial No. 173,844. 2 Claims. (Cl. 83—56.)

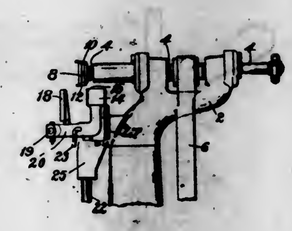
1. A screen consisting of a series of wire strands each having substantially equi-distantly spaced loops formed sequentially on opposite sides, a series of rods passing through the loop portions, the strands being positioned so that the loops on any single rod are formed on the same side of each strand, means individual to each rod for forcing the loops into engagement thereon, a form consisting of circular members on which the screen fabric rests, and means for fastening the ends of the strands together.

1,400,698. HOLDER FOR SLICING-MACHINES. EDWARD M. STILES, Mount Pleasant, Iowa, assignor to U. S. Slicing Machine Company, La Porte, Ind., a Corporation of Indiana. Filed July 2, 1918. Serial No. 243,022. 11 Claims. (Cl. 17—14.)



1. In a slicing machine, a support having a surface on which material to be sliced may be positioned so that one face of said material will extend at substantially right angles to said support, and means for engaging said angularly arranged face of said material to hold said material against said surface.

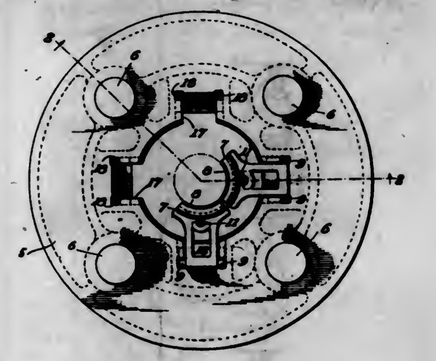
1,400,699. ROLLER-DOOR TRACK. ELLIS W. TEST, Michigan City, Ind. Filed June 20, 1919. Serial No. 305,496. 2 Claims. (Cl. 20—23.)



1. As an article of manufacture, a roller door track comprising a vertical attaching member, a generally horizontal roller guide bearing member and an outer depending

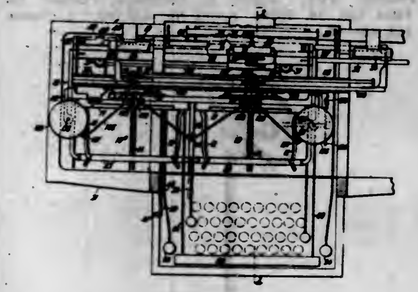
lip, a roller guide on said horizontal member, said guide being nearer the attaching member on the portion adapted

to be engaged by the door when closed than on the portion adapted to be engaged by the door when open.



1,400,700. HEEL-BREASTING MACHINE. GEORGE S. TOLMAN, Jr., Walpole, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 26, 1920. Serial No. 368,893. 13 Claims. (Cl. 12—47.)

1. In a machine for breasting Louis heels, the combination of a rotary cutter having a plurality of cutter blades, and means for supporting a shoe with its longitudinal median plane parallel to the axis of the cutter, said cutter having its cutting faces constructed and arranged at an obtuse angle to the breast face of the heel to cause the cutter to act upon said face with a clearing cut.



1,400,701. AUTOMATIC SLIP FOR WELL-BORING APPARATUS. WALTER G. VREELAND, Chattanooga, Tenn., assignor to Lucey Manufacturing Corporation, Chattanooga, Tenn., a Corporation of Tennessee. Filed July 30, 1917. Serial No. 183,532. 3 Claims. (Cl. 255—23.)

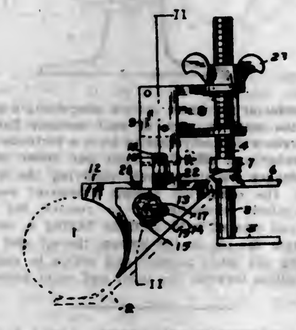
1. The combination with a rotary table, of a bushing carried by the table, slips slidably secured in the bushing and projecting into the bore thereof, and stops for limiting the downward movement of the slips in the

bushing, said stops being formed from said bushing in the form of prongs projecting inwardly and upwardly into the bore of the bushing.

1,400,702. TYPEWRITING-MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Original application filed Mar. 20, 1918, Serial No. 223,488. Divided and this application filed Dec. 13, 1919. Serial No. 344,686. 12 Claims. (Cl. 197—151.)

1. In a typewriting machine, the combination of two ribbon vibrators, arranged side by side transversely of the machine, each having an actuating lever, an actuating element, adapted to coöperate with either of said levers, and means for moving said levers and said ribbon vibrators sidewise to connect said levers one at a time with said actuating element and to concomitantly bring the ribbon vibrators to the printing point.

1,400,703. MACHINE FOR USE IN LASTING BOOTS AND SHOES. FRANK W. WARD, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 19, 1919. Serial No. 277,069. 32 Claims. (Cl. 12—2.)



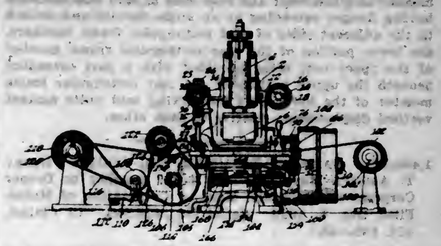
1. In a machine of the class described, fastening inserting means, a freely tiltable work support movable

toward and from the inserting means to present work thereto, and means movable relatively to said support

for clenching fastenings driven through work on said support.

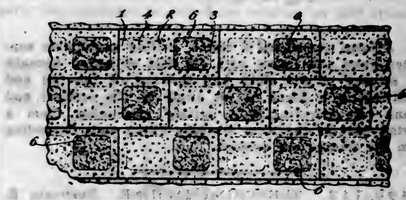
1,400,704. ATTACHMENT FOR PRINTING-PRESSES. CLYDE L. WELSH, Pittsburgh, Pa. Filed Oct. 30, 1920. Serial No. 420,849. 3 Claims. (Cl. 101—210.)

1. An attachment for the purpose set forth comprising a pair of confining blocks, one being adjustable against and supported from the other, an adjustable bracket provided with a depending bar arranged above said blocks, and a pivoted member carried by said bar and adapted to engage the blocks whereby the adjustable block will be shifted.



1,400,705. [WITHDRAWN.]

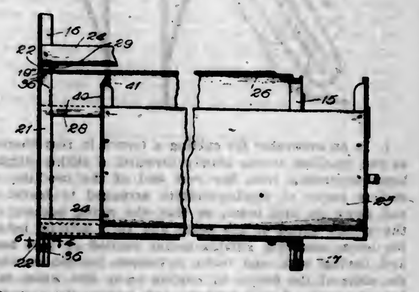
1,400,706. [WITHDRAWN.]



1,400,707. [WITHDRAWN.]

1,400,708. MARKING-MACHINE. HENRY W. WINTER, Methuen, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 2, 1915. Serial No. 18,768. 14 Claims. (Cl. 41—7.)

1. A marking machine, having, in combination, a drive shaft, a work table and die arranged for relative movement under the actuation of the shaft, means for feeding a strip of stamping medium between the table and die for engagement with the die, said feeding means including an intimity inoperative connecting shaft constructed and arranged to be moved automatically to associate the feeding means and the drive shaft operatively when the machine is set in operation, and gearing between the connecting shaft and the drive shaft and feeding means.

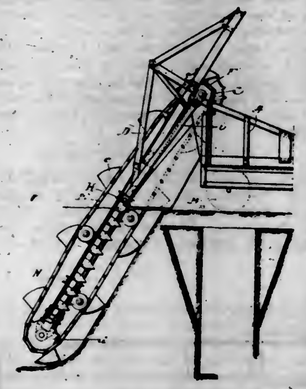


1,400,709. BUILDING-BLOCK. CHARLES C. WORTHINGTON, Dunnfield, N. J. Filed Feb. 6, 1918. Serial No. 215,721. 3 Claims. (Cl. 72—87.)

1. As a new article of manufacture, a building block comprising a rectangular body of stonelike material cast with horizontal rectangular cavities formed by a plurality of vertical cross walls, which are disposed perpendicular to the face of the block and also by vertical longitudinal back walls forming the backs of the cavities, one of said vertical walls being a partition wall between adjacent cavities, each of said walls being of uniform thickness and a fictile nailing material cast in position in each of said cavities to be exposed on the surface of the wall constructed of such blocks, substantially as and for the purposes set forth.

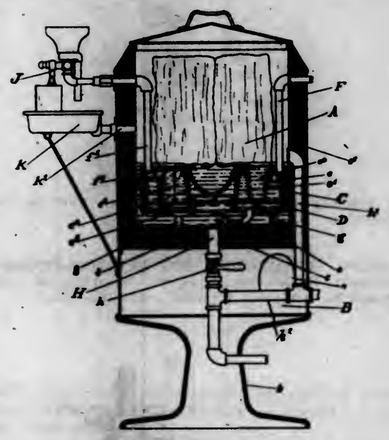
1,400,710. UNIT METAL TRANSFER-CABINET. PHILIP H. YAWMAN, Rochester, N. Y., assignor to Yawman & Erbe Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed June 12, 1918. Serial No. 239,541. 5 Claims. (Cl. 45—2.)

2. A cabinet comprising a pair of units stacked in vertical alinement, said units each comprising front and



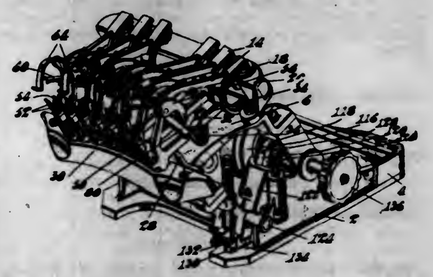
rear rectangular frame members, a top member provided with depending side members, the rear end of said top member and the front and rear ends of said side members having flanges extending at an angle thereto and welded to the adjacent sides of said rectangular frame members, the lower portion of the rear rectangular frame member of the upper unit being provided with a part extending beneath the upper portion of the rear rectangular frame member of the lower unit for locking said units against vertical displacement relative to each other.

1,400,711. SALVAGE-TRIMMER FOR LOOMS. HARRY T. ABBOTT, Mays Landing, N. J., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Dec. 7, 1920. Serial No. 428,846. 13 Claims. (Cl. 139—36.)



1. A loom comprising a frame, cutting mechanism supported from the frame with its field of action beneath the selvage of the cloth and forward of the fell and operating in a plane at an angle to the vertical and means for operating said cutting mechanism from a moving part of the loom whereby filling ends depending from the selvage are severed.

1,400,712. TRENCHING-MACHINE. FREDERIC E. BAGBY, Kenosha, Wis., assignor to Frederick C. Austin, Chicago, Ill. Filed Apr. 23, 1917. Serial No. 163,822. 4 Claims. (Cl. 37—24.)

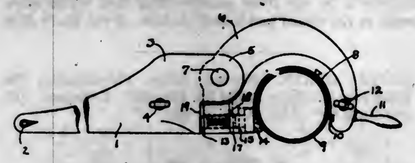


1. In an excavator for cutting a trench in rear thereof, as the machine moves slowly forward, a tilting digging beam depending from the rear end of the machine, an endless series of digging-buckets arranged to travel up and down on said beam, so that the rising buckets cut the trench ahead of the beam and then descend behind the beam, auxiliary cutting means carried on said beam and having back and forth movement thereon to slope the sides of the trench by cutting away dirt which falls into the path of said buckets, and devices for operating said auxiliary cutting means as a unit on said beam.

1,400,713. WATER-COOLER. WILLIAM B. BARLEY and JAMES C. CORBETT, Rochester, N. Y., assignors to Fearless Dishwasher Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Jan. 31, 1920. Serial No. 355,360. 6 Claims. (Cl. 62—43.)

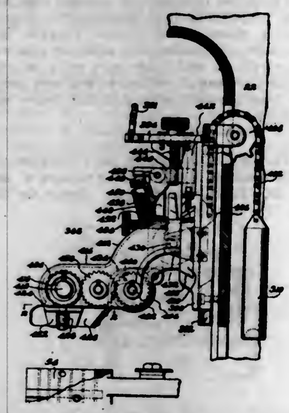
1. A conductor for water coolers comprising a plurality of separable sections, each of said sections having recesses therein which coöperate to form a tortuous passage for the water and affording outer and inner communicating passages for successively receiving the water to be cooled, the conductor having a central recess extending entirely therethrough to receive the cooling medium, and one of said sections having a recess extending from the top to the bottom thereof and entirely surrounding the inner passage and acting to receive the cooling medium between the inner and outer passages.

1,400,714. BUTTONING-MACHINE. LEWIS J. BARRONI, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 15, 1918. Serial No. 240,208. 101 Claims. (Cl. 12—1.)



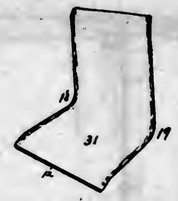
1. A buttoning machine having, in combination, means for relatively positioning a button and a buttonhole fly with the button in edgewise relation to a buttonhole in said fly when the work is initially presented to the machine, and means for engaging the buttonhole fly and forcing it over the head of the button.

17. In a buttoning machine, the combination with means for positioning a button, of buttonhole fly engaging members constructed and arranged to engage the material of the buttonhole fly substantially at the opposite ends of the buttonhole and to force the material over the head of the button, one of said members being constructed for yieldable sliding engagement with the work to resist the tendency of the other member to displace the work.



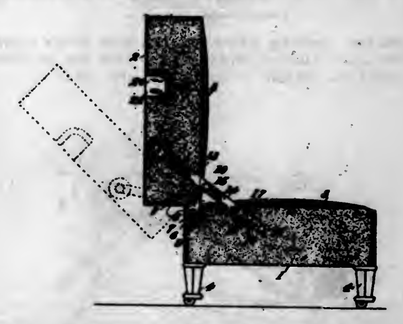
58. In a buttoning machine, the combination with button positioning means provided with a slot to receive the shank of a button, of means for guiding the button into said slot, said button positioning means and button guiding means being relatively movable lengthwise of said slot to cause the guiding means to be disposed in inoperative relation to the button positioning means.

1,400,715. BREAKOUT-TONGS. MARK BELCHER, West Columbia, Tex., assignor to Hughes Tool Company, Houston, Tex., a Corporation of Texas. Filed July 29, 1921. Serial No. 488,376. 6 Claims. (Cl. 81—91.)



1. In a pipe wrench, a handle, a head thereon, an arcuate jaw pivoted at one side of said head, the other side of said head having a shoulder, a second jaw slidable in the rear end of said arcuate jaw and bearing against said shoulder, and means to hold said slidable jaw in inoperative position, said slidable jaw being so arranged that the contact of said shoulder therewith will force it forwardly toward the work.

1,400,716. WORK-POSITIONING DEVICE. JOHN M. BENJAMIN, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 2, 1918. Serial No. 237,918. 31 Claims. (Cl. 1—32.)

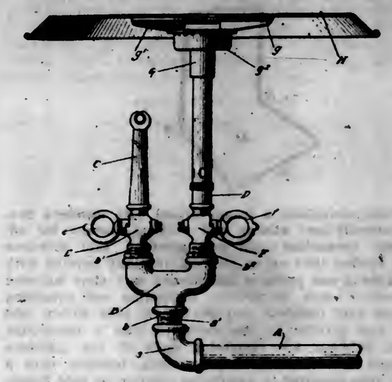


1. In a heeling machine, a work-positioning member having relatively movable arms and being itself movable from a work receiving position to the nailing position, means for moving the member to its receiving position, and means past which the arms travel in the movement of the work-positioning member for controlling their relative movement.

1,400,717. VENTILATED AUTOMOBILE-DRIVER'S SEAT. DAVID BENSON and GEORGE K. BAUCH, Des Moines, Iowa. Filed July 16, 1920. Serial No. 396,778. 1 Claim. (Cl. 155—5.)

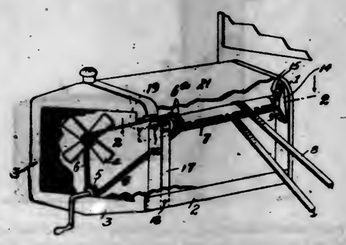
A seat comprising a frame formed with members having laterally-bent alining end portions, means for adjustably connecting said end portions, said members being further bent on an axis substantially parallel with said alining end portions and formed with slots adjacent the latter bends, a foldable connecting rod extending between said members and having its ends within said slots and pivoted to the members, and a connecting device between the remaining ends of the members arranged for longitudinal adjustment, together with a fabric tube mounted in embracing relation on said frame.

1,400,718. CONVERTIBLE CHAIR-BED. HENRY BITTEL, San Francisco, Calif. Filed July 20, 1921. Serial No. 486,008. 2 Claims. (Cl. 155—45.)



1. A convertible chair bed, comprising seat and back portions hinged together to permit the upward swinging of said back portion from a horizontal position, means consisting of a plurality of connected arms arranged in pairs at opposite ends of the back and pivotally connected therewith for coöperating with the seat to maintain the back in its angular adjusted position relatively to the seat, said arms adapted for swinging movement on their pivot and of pivotal movement relatively to each other to provide a pair of supporting legs for the back on the movement of the same to a substantially horizontal position, and a part at each end of the back for coöperating with the arms at their point of interconnection to hold the same relatively to the back.

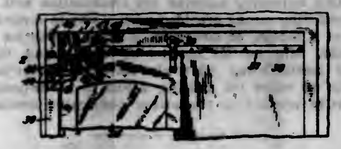
1,400,719. COMBINED GAS BURNER AND HEATER. LEO BLOOM, Brooklyn, N. Y. Filed Nov. 9, 1920. Serial No. 422,849. 2 Claims. (Cl. 126—254.)



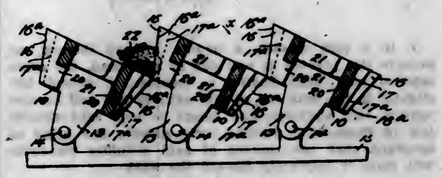
1. A device of the class described embodying an integral three way T-shaped union, the horizontal portion of which is formed, intermediate its ends, with a depending interiorly threaded leg adapted to screw onto a gas fixture and the opposite ends of which portion are formed with upstanding parallel, exteriorly threaded arms, an upstanding plug-valve casing screwed on to each arm and each cas-

ing having a male threaded portion at its top, a separately and independently operable plug valve in each casing for controlling the flow of gas therethrough, an upstanding burner tip screwed on to the male threaded portions of one

valve casing, an upstanding Bunsen tube screwed onto the male threaded portion of the other valve casing and extending upwardly beyond the top of the burner tip, a cooking burner mounted on the top of the Bunsen tube, and a pan supporting grid mounted on the cooking burner.



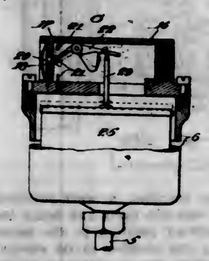
1,400,720. POWER ATTACHMENT FOR FORD CARS. ORAL ARVIL BLOOM, Oneida, Kans. Filed Feb. 15, 1921. Serial No. 445,126. 3 Claims. (Cl. 180—53.)



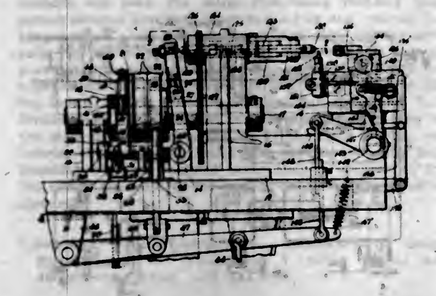
1. In an apparatus of the class described, the combination with a frame and a dash, of a bracket provided with a hollow apertured body and with outwardly-extending apertured feet, said bracket being substantially V-shaped, a filler block between the feet of the bracket, said filler block being substantially V-shaped, said filler block and bracket secured against the dash, a roller journaled at one end in the apertured body of the bracket, means supporting the other end of the roller upon the frame, means for rotating or driving the roller, and means for deriving power from the roller for driving an independent device or apparatus when the roller is rotated.

1,400,721. DOOR-OPENING DEVICE AND LOCK FOR ELEVATOR-DOORS. FRANZ A. BORDTCHER, Bergenfield, N. J. Filed Jan. 17, 1919. Serial No. 271,614. 13 Claims. (Cl. 187—49.)

1. In a device of the class described, a shaft door, means for normally locking the door in closed position, an elevator car, a controller for operating the car, and means, carried by the car, for operating the door locking means of the shaft door when the car is in position at the floor, said lock operating means embodying lock engaging means adapted to automatically engage the lock when the car arrives at the floor, a foot operated lever for operating said lock engaging means, and operative connections between the lever and the car controller for automatically precluding the operation of the lever while the controller is in a position to effect the operation of the car, and for automatically precluding the operation of the controller when the lever is in any other position than that which corresponds to the closed and locked position of the shaft door.

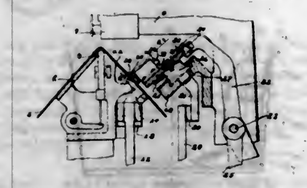


1,400,722. GRATE. LESTER BUDD, Philadelphia, Pa. Filed Jan. 9, 1920. Serial No. 350,368. 3 Claims. (Cl. 126—179.)



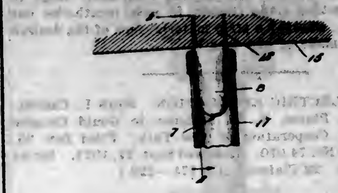
1. A grate including bars rockably mounted side by side and having projections on their sides spaced apart, certain of the projections being longer than others with the long projections of one bar opposed to the short projections of the adjacent bar, said projections having their opposite side surfaces converging downward so that upwardly tapering channels are provided between the opposed side walls of adjacent long projections and comparatively narrow upwardly tapering channels are formed between the side walls of the short projections and adjacent side walls of the longer projections, said grate bars being so arranged that the long projections of one bar extend into the spaces between the long projections of adjacent bars; substantially as described.

1,400,723. VACUUM FUEL-FEED DEVICE FOR INTERNAL-COMBUSTION ENGINES. CHARLES S. BURTON, Oak Park, Ill. Filed June 16, 1920. Serial No. 389,285. 4 Claims. (Cl. 103—3.)



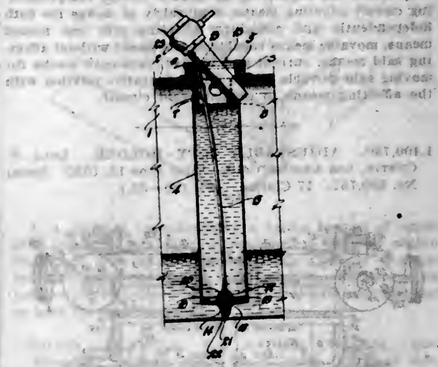
1. In a device for the purpose indicated, a conduit for connecting a main low level liquid supply tank with the carburetor to be supplied therefrom; a chamber comprised in said conduit; check valves in the conduit respectively antecedent and subsequent to the chamber, both opening for flow toward the carburetor; a pulsator communicating with the upper part of said chamber for alternately producing partial vacuum and pressure therein; an atmosphere vent means communicating with said chamber; a valve which controls said vent positioned with respect to its seat for being normally opened by the suction impulse and held closed by the pressure impulse of the pulsator; movable means for holding the valve closed against the suction pull tending to open it; a float in the chamber, and means operated by the rise of the float to a predetermined height for withdrawing said movable means from valve-holding position.

1,400,724. WIRE TWISTING AND BENDING MACHINE. JAMES A. BUTLER, Needham, Mass., assignor to Boston Piano Supply Company, Norwood, Mass., a Corporation of Massachusetts. Filed Jan. 29, 1918. Serial No. 214,316. 10 Claims. (Cl. 140—93.)



1. A machine for twisting wires comprising a wire twisting device having wire gripping jaws, normally disconnected automatic driving mechanism for said device, means to hold an article having extended wires, and related mechanisms arranged and acting to advance said holding means to said twisting device, and to connect said driving mechanism with the twisting device.

1,400,725. SIGNATURE-FEEDING MECHANISM FOR BOOK-STITCHING MACHINES. MARTIN CHRISTENSEN, Racine, Wis., assignor to Christensen Machine Co., Racine, Wis., a Corporation of Wisconsin. Filed Dec. 13, 1919. Serial No. 344,696. 7 Claims. (Cl. 198—183.)



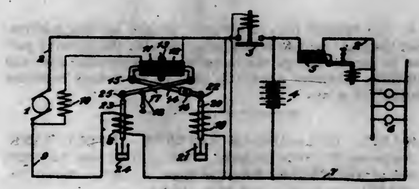
1. The combination with the signature holder of a book stitching machine, of signature feeding mechanism comprising a pair of devices adapted to engage the opposite sides of the signatures, means to move said devices simultaneously relative to said holder, and means to move one of said devices relative to the other for the purpose described.

1,400,726. CURTAIN-ROD BRACKET. MATTHEW D. CODDY, Auburn, R. I., assignor to James N. Henry, Providence, R. I. Filed Aug. 5, 1921. Serial No. 489,930. 4 Claims. (Cl. 156—22.)

4. In a bracket for curtain rods, an end housing portion, semi-tubular resilient wings integral with the housing portion to snugly engage the inner wall of a tubular rod, and attaching members upon the ends of the wings extended beyond the wings.

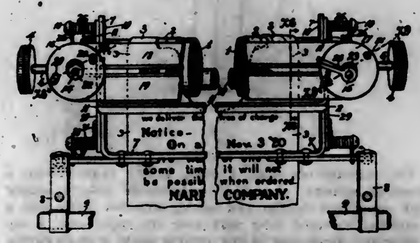
1,400,727. DETACHABLE RESERVE-SUPPLY TANK. AMBROSE W. CODD, Spokane, Wash. Filed Apr. 12, 1920, Serial No. 373,316. Renewed Sept. 1, 1921. Serial No. 497,674. 1 Claim. (Cl. 158—46.5.)

The combination with a main supply tank having a threaded opening, of a bodily removable reserve supply tank supported therein and having overflow ports and a somewhat enlarged filler port near its upper end, a cap closing the upper end of the reserve tank, a downwardly projecting nipple on the lower end of the reserve supply tank, and a valve seat in said nipple, a stem within the reserve tank having a screw threaded end adjacent to said nipple and said stem formed with a valve head to close the valve seat in the nipple, the upper end of said stem curved to provide handhold for manipulation of same and provide means whereby the cap may be readily removed from said stem.



1,400,728. SPACE-LINER FOR MATRICES. WALTER B. COZATT, San Francisco, Calif., assignor of one-half to James H. Brady, San Francisco, Calif. Filed Feb. 4, 1919. Serial No. 274,881. 2 Claims. (Cl. 199—63.)

1. A space liner for a matrix for casting strip material faces having a casting face forming at the edge of the



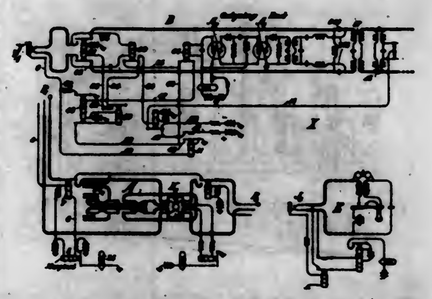
printing face of the rule produced by the matrix block an obtuse angle with a face thereof adapted to contact with another surface from a point beginning at the apex of said angle when in place in the matrix, the matrix being formed at one end with an opening sufficiently large to permit the casting made therein to pass lengthwise out of said matrix, whereby a strip material face of the desired form may be made of any length.

1,400,729. ELECTRIC REGULATION. JOHN L. CREVELING, White Plains, N. Y., assignor to Gould Coupler Company, a Corporation of New York. Filed Jan. 25, 1916, Serial No. 74,070. Renewed Sept. 21, 1921. Serial No. 502,180. 22 Claims. (Cl. 171—229.)

1. Means for regulating an electric circuit comprehending circuit affecting means, a plurality of means for both independently and conjointly affecting said last named means, movable means capable of movement without affecting said means, current and voltage responsive means for moving said movable means into cooperative relation with the affecting means to regulate said circuit.

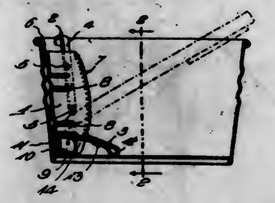
1,400,730. ADJUSTABLE COPY-HOLDER. LULA P. CURTIS, Los Angeles, Calif. Filed June 12, 1920. Serial No. 389,762. 17 Claims. (Cl. 120—32.)

13. In a copy holder, a frame, a feed roller in said frame, shutters pivotally connected to said frame and arranged parallel to said roller, a spring for normally holding said shutters in contact with said roller; said shutters being adapted to be moved away from said roller for the insertion of a copy between the roller and the shutters; a roller pivotally connected to said frame and yieldingly held in contact with said feed roller, disks on which said shutters are pivotally mounted, means for revolving said disks to move said shutters toward and from each other, and means for locking one of said disks from rotation to hold said shutters in a fixed position.



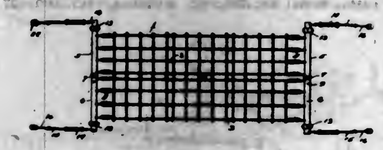
1,400,731. LATHE-CENTER. EUBLL H. DAVIS and RAYMOND D. BAKER, Chicago, Ill. Filed June 14, 1920. Serial No. 388,908. 4 Claims. (Cl. 82—33.)

1. A lathe center comprising, a carrying stem formed with an axial bore, a work engaging spindle having a shank portion extending into said bore and a ball bearing portion intermediate its length and of a frustoconical form the expansion of which is rearward, a ball race member associated with the forward end of the carrying stem,



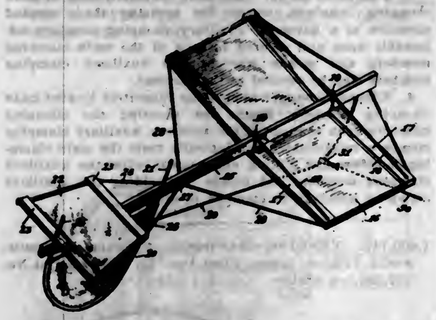
a series of interposed rolling members, and means for adjusting said ball race member in relation to said carrying stem, substantially as set forth.

1,400,732. SIGNALING SYSTEM. CHARLES S. DEMAREST, Brooklyn, N. Y., and JOHN DAVIDSON, Jr., Montclair, N. J., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed May 12, 1919. Serial No. 296,498. 10 Claims. (Cl. 179—4.)



1. A telephone exchange system comprising a trunk circuit extending from a first to a second switchboard, a link circuit at the first switchboard, a simplex circuit associated with said trunk, a polarized relay included in said simplex circuit and located at said second switchboard, signaling means controlled by said relay, and means in said trunk at said first switchboard responsive upon the connection of said link circuit to said trunk for applying to said simplex circuit direct current of a polarity suitable for operating said relay.

1,400,733. WASHTUB-PROTECTOR. ISHUM BOYD DORSEY, Eminence, Ky. Filed Dec. 2, 1920. Serial No. 427,889. 2 Claims. (Cl. 68—31.)

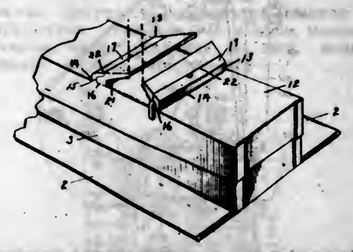


2. A device of the class described comprising a vertical wall adapted for disposition at the inner side of the wall of a wash tub, hooks on the upper edge of said wall adapted to engage the upper edge of the tub, the lower edge of said wall being bent upwardly substantially upon itself, a horizontal shelf having its inner edge bent downwardly and positioned between said upwardly bent end of said wall and the body of the latter, fasteners passing through said wall and said downwardly bent edge of said shelf, the outer edge of said shelf being folded downwardly and inwardly upon itself to provide a reinforcing bead, and means securing the folded edge of said shelf to the body of the latter.

1,400,734. FOLDING BED. EDWARD DERPS, Milwaukee, Oreg. Filed Dec. 9, 1919. Serial No. 343,675. 1 Claim. (Cl. 5—5.)

In a bed, the combination of a foldable bed bottom and foldable end bars, the latter comprising hingedly connected sections and bars extending across and bracing the hinged point, a leg pivotally secured to said end bar near each end thereof, each leg having the pivotal end thereof provided with a substantially right angular extension for engagement with the underside of said end bar to hold the leg in an upright position, an angular extending foot formed upon the lower end of each leg and extending in the same direction from the leg as the right angular extension above mentioned, and said angular extending foot provided with an inclined brace that is secured at its top end to the said leg for keeping the foot from bending upwardly.

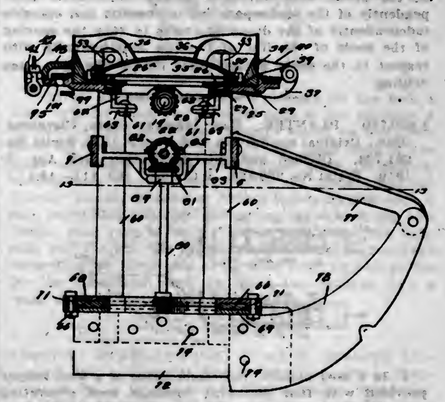
1,400,735. AEROPLANE-KITE. LAWRENCE R. EDDY, Elisabeth, N. J. Filed Mar. 7, 1921. Serial No. 450,207. 2 Claims. (Cl. 244—22.)



1. An aeroplane kite, comprising a longitudinal rib, a horizontal plane-body-portion secured at one end thereof, a tail-plane and a tail-fin mounted at the other end of said rib, said tail-fin embodying a bowed frame having its free ends engaged with the rib, and said tail-plane having its rear edges adjustably mounted upon one of said free ends of the tail-fin.

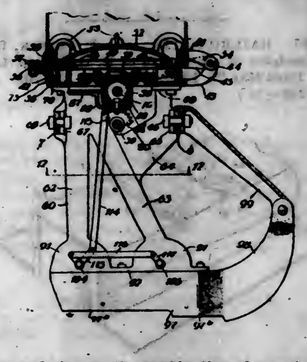
1,400,736. STAYBOLT STRUCTURE. JOHN ROGERS FLANNERY and EDWARD S. FITZ SIMMONS, Pittsburgh, Pa., assignors to Flannery Bolt Company, Pittsburgh, Pa. Filed Dec. 12, 1919. Serial No. 344,455. 2 Claims. (Cl. 85—1.5.)

1. In a staybolt structure, the combination of a boiler sheet having an opening provided with a threaded wall, an exteriorly threaded bearing sleeve or bushing passing through said opening, a staybolt having a head mounted in said sleeve or bushing, and a weld uniting the threaded exterior of the sleeve or bushing to the boiler sheet, whereby the boiler sheet and sleeve form a homogeneous structure and leakage past the threaded sleeve or bushing prevented.



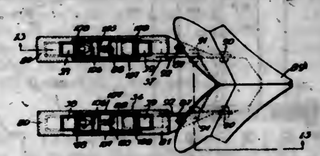
1,400,737. RAILROAD-TIE. VAL F. FRANCK, Louisville, Ky., assignor of one-half to E. H. Hinkebein, Louisville, Ky. Filed May 20, 1920. Serial No. 382,761. 4 Claims. (Cl. 238—73.)

1. A railroad tie comprising a casing formed of upper and lower box-like sections designed to fit, one within the other, filler means inclosed within the said sections, rail holding means on the upper section, and flanges on both sections arranged for mutual interlocking engagement to hold the sections together.



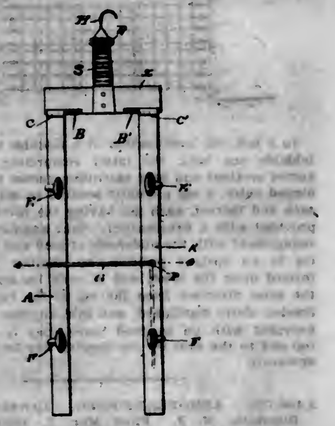
1,400,738. PLANTER. RAY S. GEER, Cleveland, Ohio. Filed Aug. 2, 1910, Serial No. 575,156. Renewed Mar. 11, 1921. Serial No. 451,480. 23 Claims. (Cl. 111—34.)

3. In a seed planter, the combination of a seed container, three or more conduits leading from the seed con-



tainer downward and adapted to deposit seeds in a definite spaced relation along two parallel lines spaced from each other to form a double row, dropping valves at the lower ends of the conduits adapted either to be actuated intermittently for hill planting or to be maintained inoperative in open position for drilling, means for intermittently operating said valves, means for separating seeds from the mass in the container and discharging one seed at a time into each conduit, means for operating the said seed separating and discharging means either intermittently for hill planting or continuously for drilling, and means for rendering the said discharging means inoperative with respect to all but one conduit on each of the said parallel lines when the seed separating means is operated continuously for drilling.

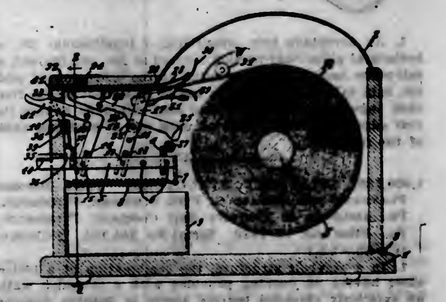
1,400,739. PLANTER. Ray S. Gehr, Cleveland, Ohio. Filed Nov. 9, 1918. Serial No. 261,794. 10 Claims. (Cl. 111—15.)



6. In a seed planter, the combination of a container for seeds, mechanism for separating individual seeds from the mass in the container and discharging them therefrom, a plurality of downwardly extending conduits arranged to receive the seeds discharged from the container and deposit them on the ground along two parallel lines spaced from each other to form a double row, dropping valves at the lower ends of the conduits adapted to simultaneously discharge the seeds from the conduits to effect hill planting, means for locking said valves open to effect drilling of the seeds, and adjustable means controllable independently of the seed-separating mechanism and operable independently of the dropping valves to vary the spacing of the seeds of one line of the row longitudinally with respect to the seeds of the other line of the row when drilling.

1,400,740. PLANTER. Ray Stewart Gehr, Cleveland, Ohio. Original application filed Nov. 9, 1918, Serial No. 261,794. Divided and this application filed Apr. 2, 1919. Serial No. 286,831. 9 Claims. (Cl. 111—14.)

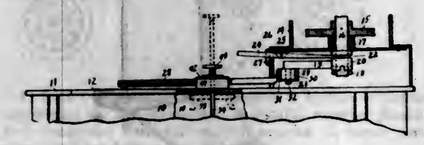
4. In a seed planter, the combination of a seed hopper provided with four discharge openings, seed separating means in the bottom of the hopper provided with two concentric series of individual seed cells, the cells of one series being arranged to advance successively to two of the said discharge openings while the cells of the other series are simultaneously advanced to the other two discharge openings, four conduits leading downward from said discharge openings and means for receiving seeds from the lower ends of said conduits and operable intermittently to simultaneously deposit on the ground four seeds in predetermined spaced relation to each other on two adjacent parallel lines.



1,400,741. DEVICE FOR HANGING AND PRESSING TROUSERS. John J. Getgey, Tulsa, Okla. Filed Nov. 3, 1919. Serial No. 335,265. 4 Claims. (Cl. 100—57.)

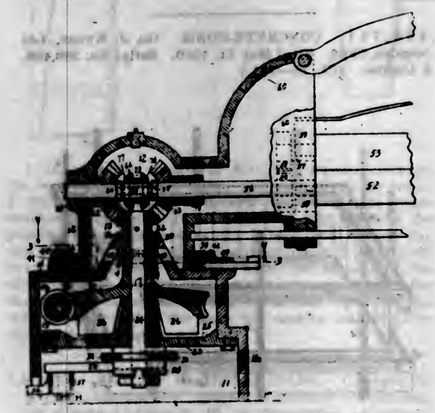
1. A garment hanger comprising oppositely located main clamping members, means for securing the clamping members to a garment, auxiliary clamping members adjustable upon and secured to each of the main clamping members and means whereby the auxiliary clamping members may be secured to the garment.

4. A trousers hanger comprising oppositely located main clamping members, means for securing the clamping members upon the legs of the trousers, auxiliary clamping members, means extending laterally from the main clamping members for sliding engagement with the auxiliary clamping members and means for holding the auxiliary clamping members in clamped position.



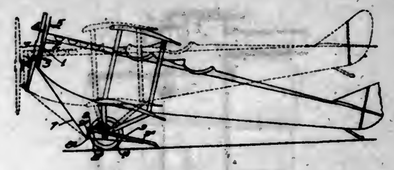
1,400,742. VENDING-MACHINE. Bernard F. Grumstrup, Clinton, Iowa. Filed Mar. 31, 1921. Serial No. 457,395. 6 Claims. (Cl. 211—33.)

1. In a vending machine a slide, yielding means for holding the slide normally projecting in one direction, an



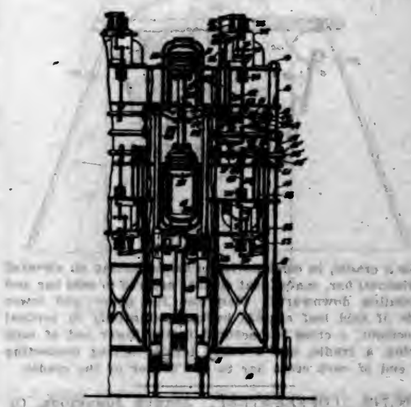
ejecting lever for shifting the slide, an ejecting lever operated by the slide, means carried by the ejecting lever for engaging and shifting a perforated strip, a stop lever having one arm normally supported by the ejecting lever, and coöperating means upon the stop and ejecting levers for shifting the stop lever during the movement of the perforated strip by the ejecting lever to limit the movement of said strip.

1,400,743. DRIVING MECHANISM FOR WASHING-MACHINES. Hans Hansen, Kansas City, Mo. Filed Apr. 18, 1921. Serial No. 462,288. 3 Claims. (Cl. 74—50.)



1. A driving mechanism for washing machines including a transmission case, a power driven vertical shaft mounted in bearings therein, a pin through the base of said shaft, a crank having a hub loosely sleeved upon said shaft above said pin; a rack bar pivotally connecting at its inner end to the outer element of said crank, a bearing support as a rest for the outer portion of said rack bar; clutch mechanism embodied with said crank, a lever pivoted to said case engaging said clutch mechanism, a hook on said case engageable with said lever to effect a tilting of the rack bar on said rest when said lever acts to raise said crank on said shaft for clutch disengagement.

1,400,744. GEAR TRANSMISSION FOR WASHING-MACHINES AND WRINGERS. Hans Hansen, Kansas City, Mo. Filed Apr. 18, 1921. Serial No. 462,289. 7 Claims. (Cl. 74—101.)

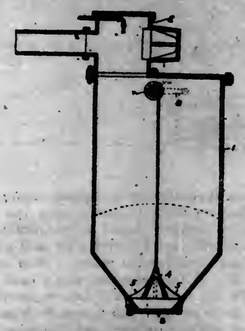


1. In gear transmissions, a stationary base housing substantially cylindrical in wall section, a top cover therefor and integral therewith, said cover having a level surface except at the center thereof where it is drawn upwardly to provide a vertical shaft bearing; a horizontal plate rigidly disposed at a spaced distance beneath said cover, a vertical shaft bearing therein, a shaft in said bearings and an oil tight chamber included between said cover and plate.

1,400,745. AEROPLANE-ENGINE-STARTING APPARATUS. Ben Harris, San Diego, Calif. Filed Nov. 26, 1920. Serial No. 426,211. 6 Claims. (Cl. 244—51.)

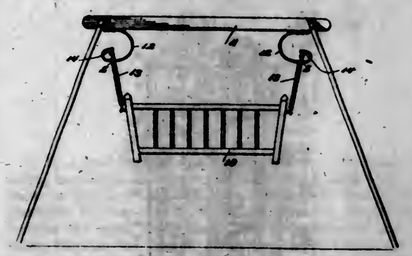
1. A starting apparatus for aeroplane engines, including a lever member revolubly mounted upon the main shaft of the engine, a ratchet wheel in connection with the main shaft, a ratchet pawl mounted on said lever member adapted to engage said ratchet wheel, a lever supported on a supporting axle of the aeroplane and a cable connecting said lever with the lever on said axle supporting member whereby said lever member will be revolved, carrying with it the shaft of the engine with the lowering of the rear end of the aeroplane.

1,400,746. INTERNAL-COMBUSTION-ENGINE CONSTRUCTION. Frederik Van Rossen Hoogendijk, Berkeley, Calif. Filed Mar. 20, 1919. Serial No. 283,319. 4 Claims. (Cl. 123—57.)



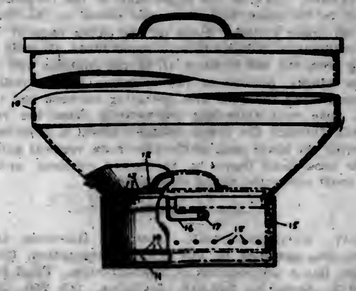
1. In an engine, a bed, lower columns on the bed, a lower cylinder block on the upper ends of the columns, a cylinder in the block, upper columns seated on the lower block, an upper cylinder block on the upper ends of the upper columns, a cylinder in said upper block, tie rods extending from the bed through all of the columns and the cylinder blocks, pistons in the cylinders having rods a yoke connecting the rods and operating between the two blocks, yoke rods extending downwardly from the yoke ends and through the lower cylinder block, a cross-head connecting the lower ends of the yoke rods, vertical guides for the cross-head borne by the lower columns, and a crank shaft connected to the cross-head.

1,400,747. STORAGE-TANK. John M. Horwood, Dormont, Pa., assignor to The Hagan Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 8, 1919. Serial No. 343,418. 5 Claims. (Cl. 259—39.)



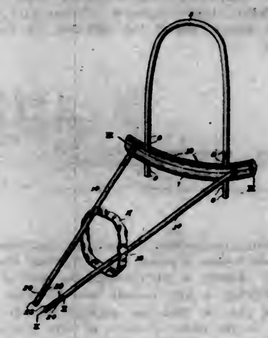
1. A tank for ashes, etc., provided with an outlet at its lower end, in combination with a door for such outlet,

means arranged within the tank and adapted to so control the movement of the material through the tank that the flow of material adjacent to the wall of the tank will be



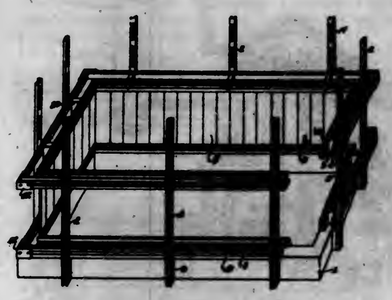
more rapid than the inner or central portions of the mass contained in the tank and means for raising and lowering the retarding means.

1,400,748. CRADLE. JULIUS JACOB, Columbia, S. C. Filed Dec. 10, 1920. Serial No. 429,713. 1 Claim. (Cl. 5—56.)



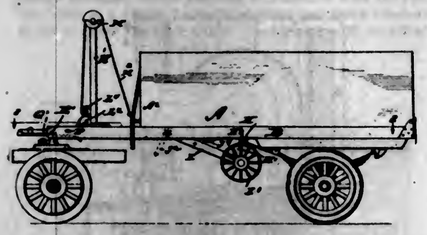
In a cradle, in combination, a frame having an elevated horisontal bar, spaced leaf springs secured to said bar and extending downwardly therefrom the upper and lower ends of said leaf springs being substantially in vertical alinement, a cross bar secured to the lower end of each spring, a cradle, and a coiled tension spring connecting an end of each cross bar to one corner of the cradle.

1,400,749. COFFEE-STEEP. ARTHUR JOHNSTONE, Ottumwa, Iowa. Filed Oct. 19, 1921. Serial No. 508,695. 2 Claims. (Cl. 53—3.)



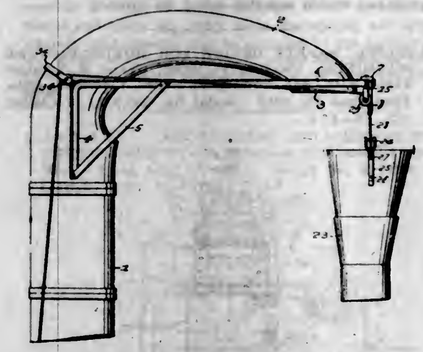
1. A coffee steep for brewing coffee consisting of a coffee strainer having a superincumbent hot water container and separated therefrom by detachable percolator, said coffee strainer having a perforated bottom and a percolator having a closed bottom and strainer located in its side walls positioned above said perforated bottom.

1,400,750. ANIMAL-WEANING DEVICE. WENCEL F. KOLARIK, Omega, Mich. Filed Feb. 17, 1921. Serial No. 445,835. 1 Claim. (Cl. 119—130.)



An animal weaning device comprising a throat bar, a neck yoke having its ends slidable through said throat bar, means to retain the yoke against sliding movement relative to the throat bar when in any of its adjusted positions, a pair of side prodding bars rigid with and projecting forwardly from said throat bar, said yoke being provided with a series of notches, said retaining means including a pair of sliding bolts carried by the throat bar and engageable in the notches of the yoke and a single spring for normally causing said bolts to engage in said notches.

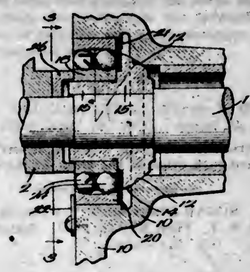
1,400,751. CONCRETE-FORM. IRA J. KUBET, Los Angeles, Calif. Filed May 11, 1920. Serial No. 380,490. 5 Claims. (Cl. 25—131.)



1. In a concrete form, the combination with uprights, of horisontally disposed frames connected to and supported by said uprights, each of said frames comprising two pairs of spaced channels, the members of each pair of channels being arranged back to back with the flanges vertically disposed, and one flange of the upper members of said pairs of channels being narrower than the other flange in order to permit the ready insertion or removal of panel members.

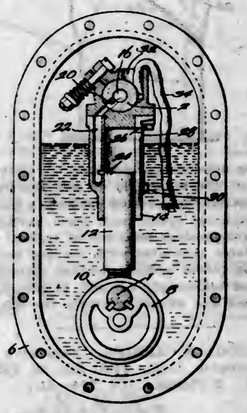
1,400,752. TRAILER. CHARLES H. LAND, Jr., Detroit, Mich., assignor of one-half to William H. Wilson, Detroit, Mich. Filed June 14, 1920. Serial No. 388,813. 13 Claims. (Cl. 280—33.1.)

1. In a traction machine, a tractor, a trailer, a folding supporting leg for the trailer, a slidable member detachably connected with the tractor adapted to throw said supporting leg into or out of action.



1,400,753. HANGER APPARATUS FOR BLOWER-PIPES WHEN FILLING SILOS. ARTHUR G. LORCK, Campbellsport, Wis. Filed May 20, 1921. Serial No. 471,286. 4 Claims. (Cl. 302—60.)

1. In a hanger apparatus for the purpose indicated, the combination with a blower having a discharge spout, a frame supported thereon and comprising side angle brackets, a bar connecting the ends of said brackets, depending flanges carried by the lateral end of said bar and having spring tensioned movable plates, a distributer having diametrically opposite loops for separating the movable plates from the flanges so as to connect with the flanges, and cables operatively connecting with the distributer for hoisting the same for causing said loops to engage the fasteners.

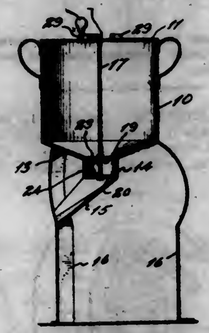


1,400,754. SEALED RADIUS-BEARING. CHARLES L. MCCUEN, Chicago, Ill., assignor to Resolute Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 11, 1920. Serial No. 416,048. 6 Claims. (Cl. 64—36.)

6. In combination, a receptacle to be sealed, a shaft and a radius bearing for the shaft in one wall of the receptacle, said radius bearing comprising an annular shoulder imperviously related to the walls of the receptacle, said shoulder being spherical and facing inward, a ring on the shaft making fluid-tight contact therewith and having a spherical surface making sealed contact with said shoulder, the ring having an integral sleeve in which the shaft is rotatable and a ball bearing having an inner and an outer ball race, the inner ball race being mounted

on said sleeve and the outer ball race being stationary and having its inner surface spherical and concentric with said shoulder.

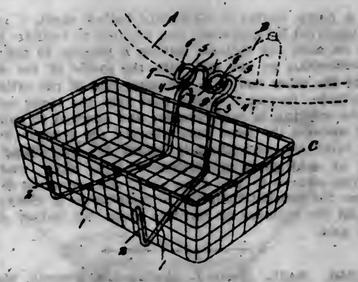
1,400,755. COMPRESSOR. CHARLES L. MCCUEN, Chicago, Ill., assignor to Resolute Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 11, 1920. Serial No. 416,049. 5 Claims. (Cl. 230—27.)



3. A pump having a stationary hollow shaft, a cylinder supported by said shaft and adapted to oscillate upon it as an axis, the cylinder having a passage in the side communicating at one end with the inside of the shaft and at the other end with the outer end of the cylinder, the cylinder having a second port near the inner end, a plunger working in said cylinder and adapted to momentarily uncover the outer port whereby the plunger serves as a valve for controlling it, means for controlling the other of said ports, a stationary drive shaft, and an eccentric secured to said drive shaft and connected to the plunger for causing thelatter to reciprocate in the cylinder and the cylinder to oscillate about the hollow shaft as an axis.

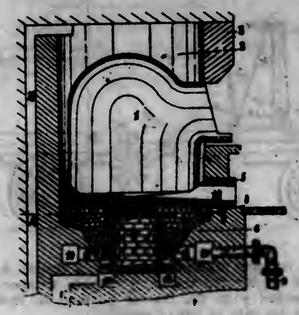
1,400,756. NAIL. FRED L. MACKENZIE, Beverly, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Oct. 14, 1914, Serial No. 866,675. Divided and this application filed Sept. 4, 1917. Serial No. 189,428. 3 Claims. (Cl. 85—28.)

1. A nail formed of sheet metal, having a shank and an unbalanced head lying in the plane of the shank, said



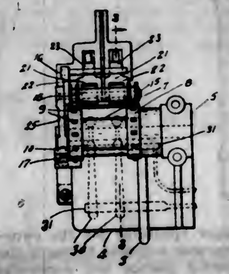
head having a depending projection on its under side at its extremity, the projection having a lower surface extending transversely of the nail shank and having faces inclined toward each other in the plane of the shank.

1,400,757. SUGAR-DISPENSER. WLADYSLAW MALUSZ, Harrison, N. J. Filed May 25, 1921. Serial No. 472,521. 1 Claim. (Cl. 221—108.)



A dispensing apparatus comprising, a reservoir, a discharge spout at the lower end of said reservoir, means holding the reservoir in elevated position, a plate at each end of the discharge spout, each plate having openings therein, the said openings being out of vertical alinement, coöperating plates associated with the first named plates the coöperating plates having openings therein arranged out of vertical alinement, a shaft supporting the coöperating plates and means to rotate the shaft.

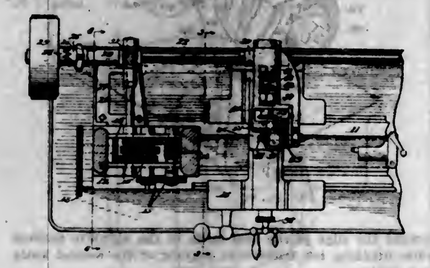
1,400,758. LUGGAGE-CARRIER. FREDERICK H. MANSFIELD, Washington, D. C. Filed Jan. 28, 1921. Serial No. 440,608. 3 Claims. (Cl. 224—41.)



1. A bicycle basket carrier formed with a central perpendicular upwardly opening loop portion adapted to engage beneath the handle bar extension, forwardly opening loops to engage the handle bar on each side of the extension, and arms depending from and projecting in advance of such forwardly opening loops.

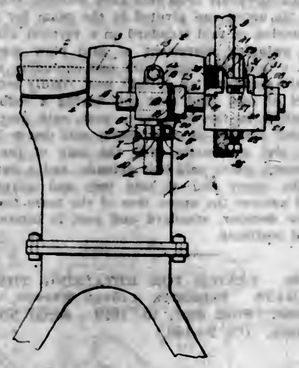
1,400,759. CRUCIBLE-FURNACE. MAURICE MAUBY, Liege, Belgium. Filed Oct. 27, 1919. Serial No. 333,726. 2 Claims. (Cl. 263—11.)

1. A crucible furnace comprising a gas burner arranged vertically and a readily removable slab of refractory material substantially closing the top of said burner and having a conically hollowed out upper surface adapted to support the crucible, said slab being provided with a passage leading from the apex of said conical surface for carrying away any molten material out of the furnace.



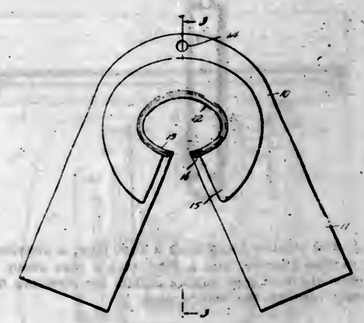
1,400,760. SAFETY DEVICE FOR MOVING-PICTURE MACHINES. CHARLES F. MEHL, HENRY B. LIEBLER, JABEZ NALL, and EDWARD J. NOBBE, Cleveland, Ohio. Filed June 18, 1919. Serial No. 305,203. 3 Claims. (Cl. 88—17.)

1. The combination with a moving picture machine and the motor and light circuit therefor, of a switch comprising movable members and a stationary member, a pair of levers pivotally mounted near the movable switch members and arranged to engage therewith, and a roller carried by each lever and adapted to rest against different portions of the film and support said levers in their upper position, the arrangement being such that on the breaking or splitting of any part of said film one or both levers will fall and open said switch members.



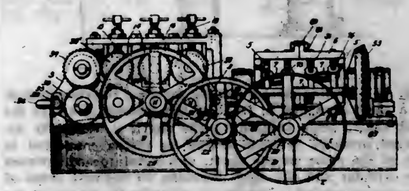
1,400,761. THREAD-MILLING MACHINE. ROBERT MILNE, Rockford, Ill., assignor to The Savage & Love Company, Rockford, Ill., a Corporation of Illinois. Filed Jan. 8, 1919. Serial No. 270,157. 3 Claims. (Cl. 10—154.)

1. In a machine of the character described, the combination with a bed, a carriage movable longitudinally thereon, and means for moving the carriage longitudinally, of means for driving said carriage-moving means and for automatically stopping the drive when the carriage has reached a predetermined point comprising a driving and a driven member adapted to be connected by a clutch, a clutch shifting lever, a lengthwise movable member substantially co-extensive with the length of travel of the cutter carriage, means adapted to normally hold the shifting lever in a clutch engaged position and being releasable so as to cause the clutch to be disengaged, said lengthwise



movable member and said clutch operating means being coöperatively arranged and constructed so that when said member is moved in either direction it will actuate said means and cause the clutch to be disengaged, and means whereby said member may be actuated by the carriage at any given point in its travel in either direction so as to automatically release or disengage the clutch at any given point.

1,400,762. TOOL-HOLDING ATTACHMENT FOR GRINDING-MACHINES. THOMAS B. MURPHY, Detroit, Mich. Filed Oct. 18, 1920. Serial No. 417,616. 7 Claims. (Cl. 51—217.)

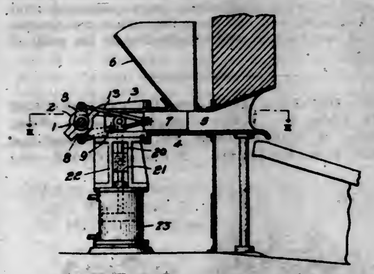


1. A device of the character described comprising a bearing bracket, a socket having a stem engaged by the bearing bracket, a shaft adjustably engaged by the socket, a block slidably fitting upon said shaft and held against rotation thereon, abutment collars carried by the shaft upon opposite sides of the block, said block having its upper face cut to provide a central seat and side seats upon opposite sides of the central seat, the side seats being cut at an incline and having longitudinally extending ribs providing abutment shoulders, a strip hingedly mounted in the central seat, a set-screw extending upwardly through the block and engaging the strip, threaded stems extending from the block from the forward end thereof and in front of said side seats, and abutment nuts screwed upon the threaded stems.

1,400,763. LAUNDRY-FORM. FRANK E. O'BRIEN, Troy, N. Y. Filed Apr. 19, 1920. Serial No. 374,963. 2 Claims. (Cl. 68—11.)

1. As a new article of manufacture, a collar form or shape comprising a flat metal plate having an opening therein and having a longitudinal recess communicating with said opening, and an upstanding flange constituting the wall of said opening and terminating at the walls of the recess.

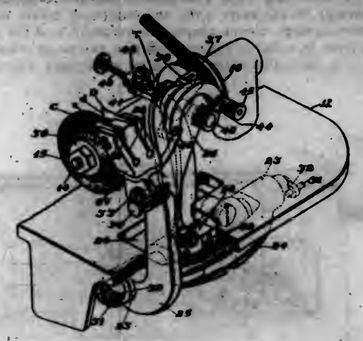
1,400,764. MACHINE FOR STRAIGHTENING BENT PIPES, RODS, &c. JAMES C. OLLARD, Tacoma, Wash. Filed Jan. 30, 1919, Serial No. 273,952. Renewed Jan. 31, 1920. Serial No. 355,410. 20 Claims. (Cl. 153—60.)



1. A pipe straightening machine comprising a series of pipe straightening rolls having their axes substantially at right angles with the axes of the pipe, provided with grooves to receive pipes of different sizes and grouped to act first upon the pipe to roughly straighten it, a movable frame, a second series of rolls mounted in said frame having their axes extending in approximately the same direction as the pipe and mounted to revolve thereabout, and means for adjusting the frame so that the rolls carried thereby will register with selected grooves of the first named rolls.

1,400,765. OIL-WELL CLEANER. MELLVILLE A. PALLETTE, Independence, Mo. Filed Mar. 28, 1921. Serial No. 456,267. 5 Claims. (Cl. 166—20.)

1. A well cleaner comprising a feed pipe, a distributer head carried thereby, and a fluid return pipe about the feed pipe, the feed pipe having outlets for directing fluid upwardly through the return pipe.



1,400,766. STOKING MECHANISM. THOMAS A. PEBBLES, Pittsburgh, Pa. Filed Mar. 18, 1920. Serial No. 366,798. 4 Claims. (Cl. 198—226.)

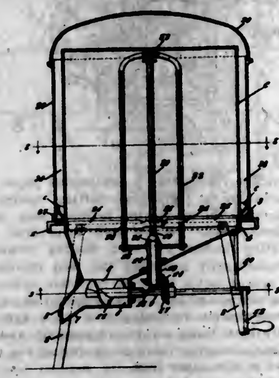
1. In a stoking mechanism for furnaces the combination of a shaft arranged in front of the furnace, bearings for said shaft, arms secured to the shaft, a vertically arranged pressure cylinder having its piston connected to one of the arms on the shaft, means interposed between the cylinder and the shaft bearings on opposite sides of the arm connected to the piston, whereby the thrust of the piston on the shaft may be transmitted to the cylinder, plungers for forcing fuel into the furnace and pitmen connecting the plungers to arms on the shaft.

1,400,767. ART OF GRINDING CUTTING EDGES. FREDERICK H. PERRY, Beverly, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 21, 1917. Serial No. 187,402. 22 Claims. (Cl. 51—100.)

1. The method of sharpening upon an abrasive surface one of a plurality of curved knives having cutting edges of different form, which consists in supporting one knife in a grinding position, holding the other knife at an angle to the first, and moving the knives together to

present the edge of the first knife to the abrasive surface while utilizing the transverse contour of the second knife as a guide.

1,400,768. REVERSIBLE PLOW. FRANK PIAC, Marinette, Wis. Filed Nov. 18, 1920. Serial No. 424,960. 1 Claim. (Cl. 97—21.)

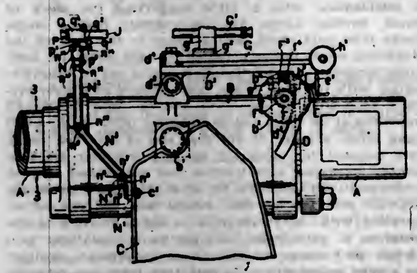


In a plow, the combination of a beam, an earth working plow member, an upright standard rigid with and extending upwardly from said plow member, said standard having its upper end pivoted in the beam for permitting axial turning of said standard on a vertical axis whereby lateral swinging movement of said plow member may be had, a land side rigid with and extending rearwardly from said standard, an upright post rigidly secured upon the heel of said land side and having a reduced upper end portion in the form of a bolt, said post engaging the under surface of said beam, said beam having an arcuate slot concentric with the axis of the standard and through which said bolt extends, and a nut threaded upon the upper end of said bolt and adapted to be screwed against the upper face of the beam for retaining the plow member, standard and post in laterally swung adjusted positions.

1,400,769. DEVICE FOR RETAINING THE SHAPE OF HATS. FREDERICK LIONEL RAPSON, Liverpool, England. Filed Sept. 16, 1919. Serial No. 324,148. 3 Claims. (Cl. 2—108.)

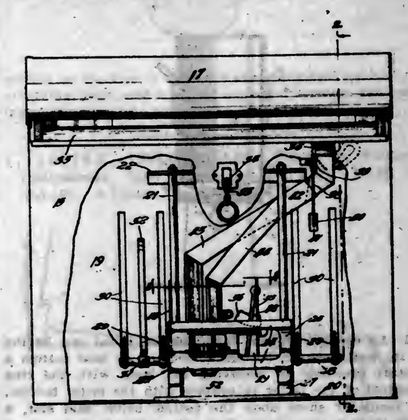
1. A device of the character described comprising a clip member shaped to fit transversely across and around a depression in the crown of a hat, as set forth, a pair of arms on each side of said clip member adapted to extend longitudinally along said depression and engage between them the depressed portion of the crown, as described, means on the clip member to engage in the material of the hat, and curved members arranged upon the ends of the said arms to retain the front and rear of the crown of the hat in position.

1,400,770. DISPENSING APPARATUS. JOHN R. SCALES, Indianapolis, and LORAIN M. WILSON, Bloomington, Ind. Filed Apr. 21, 1921. Serial No. 463,352. 12 Claims. (Cl. 221—102.)



1. In dispensing apparatus the combination with a hopper and expelling means mounted for movement within the hopper, of means for supporting an inverted container above the hopper, and means actuated by the operation of the expelling means for cutting material from the exposed surface of the contents of the inverted container and directing the same into the hopper.

1,400,771. DUPLICATING PROCESS. AISIK SCHAPIRO, Berlin, Germany. Filed May 21, 1919. Serial No. 298,812. 1 Claim. (Cl. 101—149.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



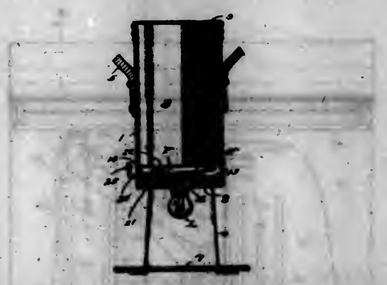
The process which consists in printing fatty colors from hectographic layers containing glycol.

1,400,772. APPARATUS FOR TESTING THE SIGHTING DEVICE OF ORDNANCE. FRIEDRICH SCHLETH, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Sept. 8, 1920. Serial No. 408,997. 11 Claims. (Cl. 33—46.)

1. An arrangement for testing the sighting apparatus of ordnance having a gun barrel, a gun carriage and sighting telescope said arrangement comprising an auxiliary telescope, means for mounting said auxiliary telescope on said gun carriage for angular adjustment to position its optical axis parallel with the longitudinal axis of the gun barrel and adjacent the sighting line of the sighting telescope when the latter is similarly adjusted.

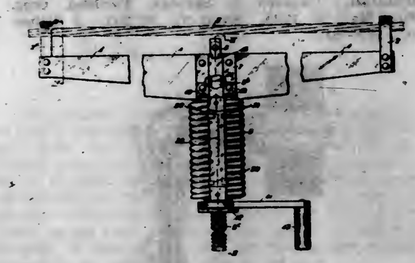
1,400,773. COIN-OPERATED VENDING-MACHINE. EDWARD SCHULTZ, Maywood, Ill., assignor, by mesne assignments, to Mrs. E. A. Laughery, Chicago, Ill. Filed Dec. 26, 1919. Serial No. 347,351. 13 Claims. (Cl. 194—98.)

1. In a machine of the kind described, the combination of a movable carriage, a plurality of independent latch members, each adapted to check movement of the carriage, means connecting the several latch members, and adjustable relative to them all, adapted in different positions of adjustment to restrain operation of all the latch members, and coin mechanism adapted to cooperate with any one or more of said latch members to thereby restrain operation of all of them with initial movement of the carriage, substantially as described.



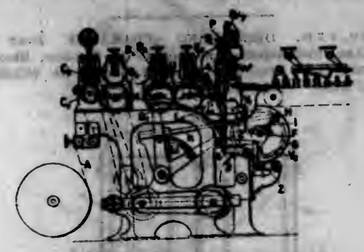
1,400,774. PORTABLE POWER-OPERATED TOOL-HOLDER. CHARLES C. SEABORN, Portland, Oreg. Filed Mar. 20, 1920. Serial No. 367,341. 3 Claims. (Cl. 279—81.)

1. In a portable power operated device, a bearing, a driven shaft rotatably carried by the bearing, the bearing



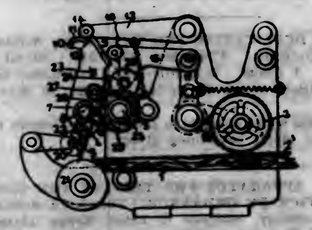
having an enlarged bore therein, a cylindrical block rotatably mounted in the bore and secured to said shaft, a rotatable ring carried by the block, the block being arranged to receive a tool spindle, a dog arranged to engage the tool spindle, and means for actuating the dog by said ring.

1,400,775. ELECTRIC LANTERN. JEROME W. SMITH, Walla Walla, Wash. Filed Feb. 17, 1920. Serial No. 359,456. 4 Claims. (Cl. 240—8.5.)



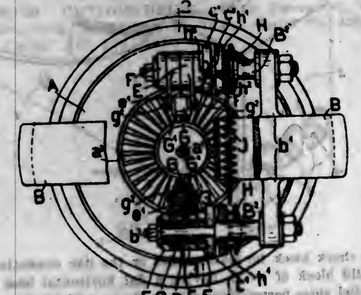
1. An electric lantern comprising a metal can having in its wall near its bottom a slot and in said bottom a central aperture for receiving the lamp with the ring terminal of the latter in contact with the metal bottom, an insulator sheet upon the bottom below said slot, a plug through the center of the sheet for making contact with the axial terminal of said lamp, a metal ring on the sheet, a battery in the can with its poles respectively connected with said plug and ring, and a switch lever for controlling the circuit from the ring to the can, the handle of the lever projecting through said slot.

1,400,776. DEFLECTION-DYNAMOMETER. TEMPLE C. SMITH, East Orange, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Apr. 11, 1919. Serial No. 289,393. 4 Claims. (Cl. 265—1.)



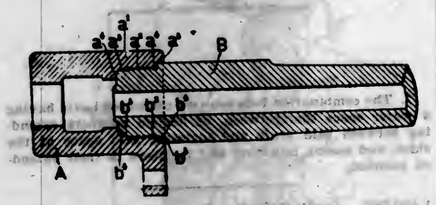
1. A tension dynamometer comprising a member for engaging one side of the strand at a plurality of points and a second member for engaging the opposite side of the strand at an intermediate point, means for preventing rotation of the second member relatively to the first, a tension spring affixed to the first of said members, a threaded connecting device between said spring and said second member, a lever device for operating said connecting device, and means for indicating the extent of the relative movement of said members.

1,400,777. PAPER-CUTTING DEVICE. Gesse Spitzer, Leipzig-Gohlis, Germany. Filed July 8, 1920. Serial No. 394,842. 4 Claims. (Cl. 164—49.)



1. In a machine for cutting a continuous paper or the like web, including a transverse cutting device intermittently operated in vertically reciprocating manner, means for feeding the web to said transverse cutting device, actuating means for said feeding means, and means for momentarily arresting the feed movement of said feeding means twice for each complete operation of said actuating means and for feedingly operating said feeding means immediately following each such arrest the different operations being so interdependent and timed that the cutting operation takes place during the momentary stoppages in the paper feed.

1,400,778. SHEET-FEEDING DEVICE. Georg Spitzer, Leipzig, Germany. Filed Nov. 10, 1920. Serial No. 423,063. 3 Claims. (Cl. 271—38.)



2. In a sheet feeding device of the character set forth, in combination with a table supporting the stack of sheets, friction means for consecutively feeding single sheets from said stack, and a feeler in the path of the advancing sheet, means actuated by said feeler for positively throwing said friction feed means out of operative contact with the sheet stack, comprising a rock lever pivotally supporting at its lower end the said feeler and presenting at its upper end an irregular roller track, a bell crank lever, a roller at the free end of this bell crank lever adapted for actuation by said irregular track, a member journaling said friction feed means and adapted to be positively operated by said bell crank lever for throwing said friction feed means into and out of cooperation with the sheet stack in timed relation to the operation of said feeler, and means for retaining said friction feed means in the raised inoperative position for a brief period after the said rock lever has returned into its position of rest, comprising a second roller on said bell crank lever and a continuously operable cam adapted to coact with said second roller in timed relation to the movement of said rock lever.

1,400,779. BRUSH ARRANGEMENT FOR DISK-SHAPED COMMUTATORS. HERMANN SUNDHAUSSEN, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Jan. 15, 1921. Serial No. 437,606. 4 Claims. (Cl. 171—324.)

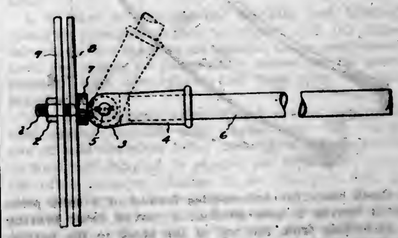
1. An arrangement of the class described in combination with a motor and a disk-shaped commutator comprising a pair of arms secured to the motor, a pair of pivot bars projecting therefrom, brush holders mounted on said pivot bars, brushes pivotally supported by said holders, said holders being disposed at right angles to the commutator axis and on opposite side thereof and spring means connecting said holders, said spring tending to rock said brushes toward said commutator.

1,400,780. COMPOSITE GUN-BARREL ASSEMBLED BY ROTARY MOTION OF ITS COMPONENT PARTS. JOHN VOLLMER, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Nov. 19, 1920. Serial No. 425,107. 3 Claims. (Cl. 89—16.)

1. A composite gun barrel assembled by rotary motion of its component parts, characterised by the fact that at least one of the two parts to be assembled is coated on its bearing surfaces with a thin coating of metal.

1,400,781. SHOE FOR FURNITURE-LEGS. CHARLES B. WAGNER, Jr., Burlington, Wis. Filed Jan. 28, 1921. Serial No. 440,726. 2 Claims. (Cl. 16—421.)

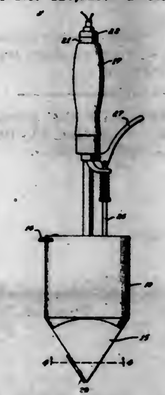
2. The combination with a furniture leg, of an attaching plate secured against the lower end of the leg and having openings therethrough, an open-ended casing provided at its upper end with lugs passing through the openings in the attching plate and bearing upon the upper side of said plate, an inwardly projecting stop flange at the lower end of the casing, a shoe loosely fitted in the lower end of the casing and having an annular shoulder adapted to rest on said stop flange, an elastic washer



resting on the shoe, a similar washer disposed against the attaching plate, and a spring arranged between and bearing against the two washers.

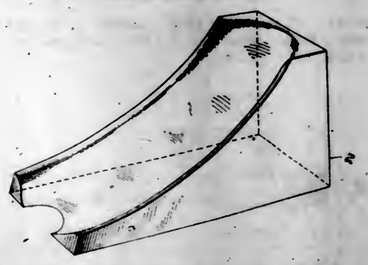
1,400,782. INSECT-KILLER. FRANK W. WALLACE, Chattanooga Tenn. Filed Mar. 24, 1921. Serial No. 455,189. 5 Claims. (Cl. 43—135.)

1. The combination of a supporting body including a handle at its rear end, a striker pivoted to the front end of said body, a guide on said body, actuating means including a flexible plunger mounted to slide forward for actuating said striker, abutments on said body and plunger to interlock for holding said plunger retracted, a spring for forcing said plunger forward when said abutments are unlocked, and a trigger pivotally mounted on said body and having its upper end portion extending between and laterally of said body and plunger, said trigger being normally inclined to the length of said plunger so that its actuating manipulation forces said plunger away from said body and thereby unlocks said abutments.



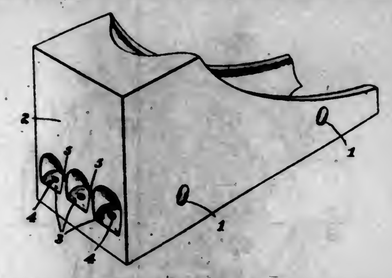
1,400,783. PLATE-PULLER. ALBERT J. ABERNATHY, Seattle, Wash. Filed Sept. 2, 1919. Serial No. 321,257. 1 Claim. (Cl. 29—84.)

A plate tightener of the class described comprising a shank provided at one end with a bifurcated head portion having a circularly rounded end surface and at its opposite



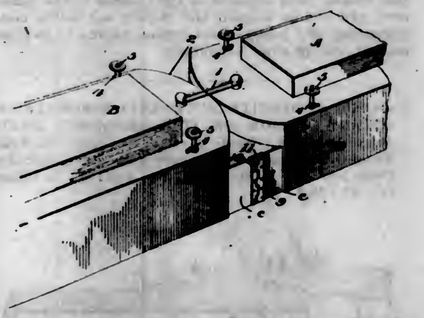
end having a socket therein an actuating lever applied to said socket, a screw threaded bolt having its head pivotally mounted between said bifurcation eccentrically with respect to said rounded surface, said bolt being insertible through alined holes in plates to be tightened together; a nut adjustable on said bolt after insertion for holding the outer end thereof against egress from said plates and whereby when said lever is actuated the eccentric action of said head will urge said plates together.

1,400,784. SOLDERING-IRON. CHARLES B. ARCHER, Chapman, Ala., assignor, by mesne assignments, to Norman F. McGowin, Chapman, Ala. Filed Oct. 19, 1920. Serial No. 417,929. 1 Claim. (Cl. 219—27.)



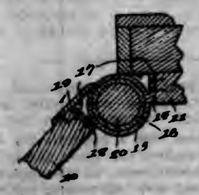
A soldering iron comprising a hollow member closed at each end and provided with a filling opening at one end and a soldering point at its opposite end and defining a solder container, said soldering point having a discharge opening therein, a handle secured to the hollow member, a valve for controlling the discharge opening, a valve stem extending from the valve, a spring actuated operating lever secured to the handle and connected to the valve stem for operating said valve and a heating element within the hollow member.

1,400,785. CHOCK-BLOCK FOR AUTOMOBILES. FRED ARN, Chattanooga, Tenn., assignor to J. M. Card Lumber Co., Chattanooga, Tenn., a Corporation of Tennessee. Filed Aug. 23, 1919. Serial No. 319,362. 1 Claim. (Cl. 188—32.)



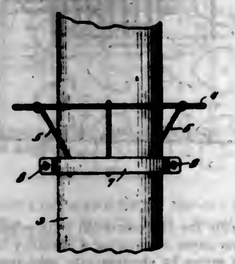
A chock block for automobiles formed of a solid piece of wood having a base portion, a curved front bearing face extending from the top of the block to the bottom supporting face of the base portion and a rearwardly extended heel inclining in one plane downwardly and backwardly from the upper to the lower face of the block, substantially as described.

1,400,786. CHOCK-BLOCK. FRED ARN, Chattanooga, Tenn., assignor to J. M. Card Lumber Co., Chattanooga, Tenn., a Corporation of Tennessee. Filed Aug. 9, 1920. Serial No. 402,126. 1 Claim. (Cl. 188—32.)



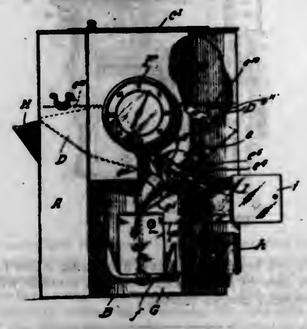
A chock block for automobiles or the like consisting of a solid block of wood, having a flat horizontal base and parallel sides perpendicular to the base, said block having in its parallel sides a plurality of nail openings inclining inwardly, downwardly and rearwardly, the said block having a curved front face adapted to bear upon the tire of the automobile, substantially as described.

1,400,787. BOAT. CARL J. EAMS, St. Louis, Mo. Filed Jan. 24, 1921. Serial No. 439,421. 7 Claims. (Cl. 114—77.)



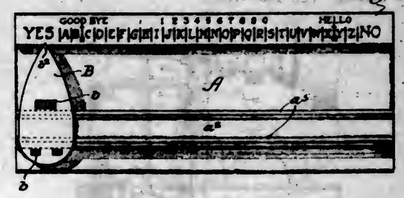
1. The combination between two connected boats having a water space therebetween, of flexible members extending between said boats and inclosing said space at the sides, and means retaining said members in their extended position.

1,400,788. DOOR-HINGE. FREDERICK J. W. BARROW, Chicago, Ill. Filed May 14, 1921. Serial No. 469,429. 3 Claims. (Cl. 16—128.)



3. A hinge comprising a pair of attaching plates having matching knuckles adapted to receive a pintle, said knuckles being offset laterally with respect to the plates, each of said plates extending tangentially with respect to its knuckles and having a length from the front to the rear which is less than the diameter of the knuckles, to locate the knuckles partly opposite the face of the plate and partly projecting beyond the plate.

1,400,789. CLOTHES-DRIER. GUST BERGQUIST, Portland, Oreg. Filed Nov. 27, 1920. Serial No. 426,869. 1 Claim. (Cl. 126—241.)



A clothes drier including a resilient wire strand one end of which is enlarged to provide a tapering socket, said strand being flexed about a heating body but spaced therefrom and having its other end formed to complement the first said end to be sprung into the latter, supporting arms each of which has one end convoluted on said strand and the opposite end inclined inwardly toward the heating body and then deflected downwardly into parallelism with the latter, and semi-circular straps, embracing the deflected ends of the arms and equipped with bolts adjustable to relatively move the straps for clamping said arms snugly into engagement with the heating object.

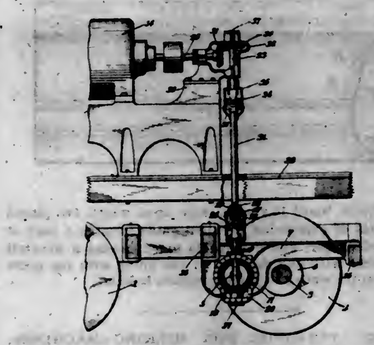
1,400,790. SUGAR DISPENSING AND WEIGHING CONTAINER. HARRY M. BIGELOW, Milwaukee, Wis. Filed Mar. 4, 1920. Serial No. 363,201. 2 Claims. (Cl. 265—68.)

1. A dispensing and weighing container provided with upper and lower compartments for storing sugars of different grades, a weighing scale attached to the outer side of the container, a pan depending from the scale, the container being recessed below the scale to permit the free movement of the pan of the scale, the upper compartment bing provided with an inclined plate forming the bottom thereof, a duct leading from the said plate and having its open end positioned to discharge sugar from the upper compartment directly into a bag placed in the pan of the scale and a gate near the end of the duct.

1,400,791. OUIJA-BOARD. HARRY M. BIGELOW, Milwaukee, Wis. Filed May 17, 1920. Serial No. 382,082. 5 Claims. (Cl. 46—41.)

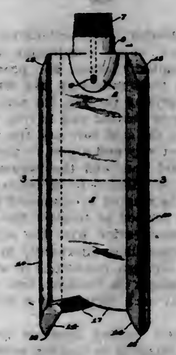
1. A ouija board having a table upon which are placed the indicia of expression, a raised guide forming a part of the board proper, and a movable index having a dovetail engagement with and directed by the guide with the point thereof in proximity to the expression indicia.

1,400,792. PULSATOR FOR MILKING-MACHINES. WILLIAM ABRAM BLACKMORE, Christchurch, New Zealand. Filed Nov. 24, 1916. Serial No. 133,102. 3 Claims. (Cl. 31—101.)



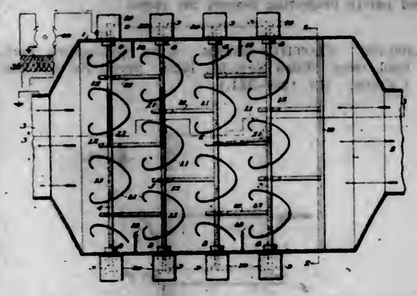
1. In a claw pulsator, the combination with a lower chamber maintained under continuous vacuum, of an upper chamber mounted thereon, and provided with four pulsation passages communicating one with each of the four teat-cups comprising the set, the said chamber being formed with a bore or seating and having four ports communicating between the said bore and the four said pulsation passages respectively and a port or ports communicating between the said bore and the vacuum of the lower chamber, and a rotor adapted to be received by said bore or seating, and to be rotated by means of a flexible shaft, said rotor being so formed as to place the said four ports alternately in communication with the said vacuum port or ports and the atmosphere alternately in such a manner as to produce four separate pulsations in which one of the said pulsation passages is brought into communication with the vacuum at each quarter of a revolution of the rotor.

2. A claw pulsator having separate and independent pulsation passages adapted to connect with the respective teat-cups and a chamber maintained under continuous vacuum, and means for successively connecting the pulsation passages with atmosphere and then with the vacuum chamber.



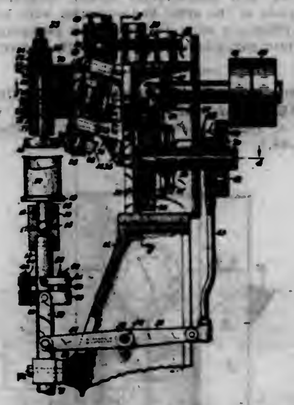
3. A claw pulsator comprising a casing, a partition in said casing dividing said casing into two chambers, one of said chambers being maintained under continuous vacuum and adapted to receive the milk from teat-cups, the other chamber adapted to be connected with pulsation chambers of the teat-cups and with the atmosphere, a rotor in the last mentioned chamber having ports formed therein and coöperating with ports formed in said partition, means for continuously rotating said rotor whereby said ports therein will be caused to actuate to successively connect each pulsation chamber with atmosphere and then with the vacuum chamber.

1,400,793. MEANS FOR DRIVING DYNAMOS FROM CAR-AXLES. WILLIAM F. BOUCHÉ, Lancaster, N. Y., assignor to Gould Coupler Company, a Corporation of New York. Filed July 14, 1919. Serial No. 310,710. 6 Claims. (Cl. 105—105.)



6. In an arrangement of the class described the combination of a car and its axle, a jack shaft normally parallel to the axle, a bearing for the jack shaft pivoted to swing about an axis at right angles to the shaft, another bearing for the jack shaft and means for moving it to adjust the position of the shaft with respect to the axle, said means including a screw threaded member and coöperating nut member, flexible means for driving the shaft from the axle, a dynamo and means for driving the dynamo from the jack shaft.

1,400,794. WELL-DRILLING BIT. OLIVER J. BOURGOIS, Covington, Okla. Filed Feb. 2, 1920. Serial No. 355,861. 2 Claims. (Cl. 255—61.)

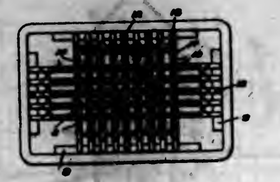


1. A drill bit comprising a flat elongated body having oppositely facing cutting edges at the bottom, said cutting edges being inclined downwardly from the longitudinal axis of the body to form a crotch, the ends of said body having extensions to form side wings which project laterally in opposite directions from the body, and project at the bottom below the plane of the aforesaid cutting edges, said projecting bottom portions of the wings having oppositely facing cutting edges which extend laterally with respect to and are in advance of the first-mentioned cutting edges, and form continuations thereof, and said projecting portions of the wings being beveled at the bottom in the direction of their outer edges to produce cutting points at the bottom thereof, and the aforesaid cutting edges of the wings extending downwardly from the first-mentioned cutting edges to the points.

1,400,795. APPARATUS FOR THE ELECTRICAL TREATMENT OF GASES. LEON BRADLEY, East Orange, N. J. Filed June 20, 1918. Serial No. 240,046. 15 Claims. (Cl. 183—7.)

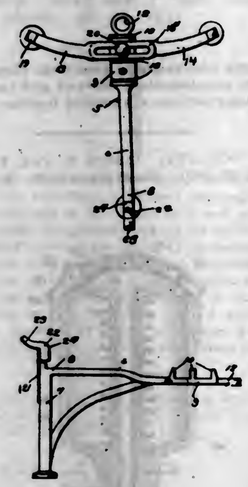
1. Apparatus for the electrical separation of suspended particles from gases comprising a plurality of treater units connected in series by electrostatic induction.

1,400,796. CAN-HEADING MACHINE. JULIUS BRENINGER, Fairfield, Conn., assignor to The Max Ams Machine Company, New York, N. Y., a Corporation of New York. Filed May 6, 1919, Serial No. 294,885. Renewed Sept. 26, 1921. Serial No. 503,470. 30 Claims. (Cl. 113—23.)



1. In a can heading machine, a seaming roller having an operative face of substantially conical contour with a spirally arranged groove therein.

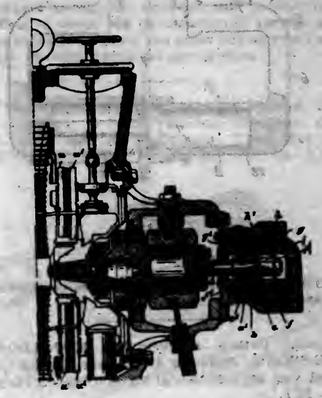
1,400,797. APPARATUS FOR WASHING AND STERILIZING BOTTLES. FREDERICK S. BURNHAM, Wellesley, Mass. Filed Dec. 19, 1916. Serial No. 137,863. 6 Claims. (Cl. 141—7.)



3. In a device of the character described, the combination of a container, distributing means for a washing or sterilizing fluid therein, said means comprising a plurality of movable nozzles, sets of movable members arranged transversely to each other and engaging said nozzles to move the same in different directions substantially at right angles to each other and to maintain the same in spaced

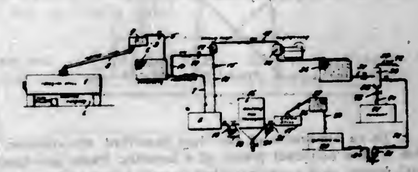
relationship, and means for simultaneously adjusting the members of either of said sets independently of those of

the other to simultaneously and proportionately vary the spacing of said nozzles.



1,400,798. CONTAINER-HOLDER. BROOKS BUTLER, Maple Valley, Wis. Filed May 20, 1921. Serial No. 471,062. 5 Claims. (Cl. 248—41.)

1. A container holder of the character described comprising supporting members, each of said members having a leg extending from one end, the opposite end of one of said members being enlarged and provided with a plurality of laterally extending channels, the opposite end portions of the remaining members being slotted and adapted to overlap each other substantially in parallel relation, said overlapping portions being disposed in one of said channels, and means for connecting said members to each other.

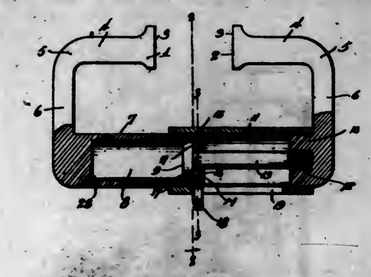


1,400,799. TURBINE. WILLIAM CHILTON, Loughborough, England, assignor of one-half to The Brush Electrical Engineering Company Limited, Loughborough, Leicestershire, England. Filed June 6, 1918. Serial No. 238,567. 4 Claims. (Cl. 253—16.5.)

1. In radial flow turbines of the Ljungstrom type the combination of an axial thrust stationary bearing for the end of the rotor shaft with labyrinth disks having grooves

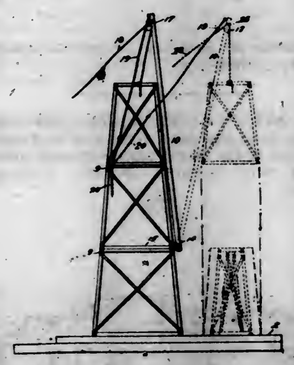
the cross section of which shows two parallel straight lines substantially as described.

1,400,800. ART OF CRACKING HYDROCARBONS. JOHN W. COAST, Jr., Tulsa, Okla., assignor to the Process Company, Tulsa, Okla., a Corporation of Maryland. Filed Sept. 27, 1917. Serial No. 193,473. 1 Claim. (Cl. 196—26.)



In the art of making gasolene, the method which comprises cracking and distilling hydrocarbons, subjecting the resultant distillate to a vacuum so as to withdraw the lightest and most volatile fractions in the form of gas, thereafter refining the distillate, and subsequently returning said gas to the refined distillate by commingling the gas with said distillate and maintaining the mixture under pressure so as to blend the refined hydrocarbons with the lighter and more volatile fractions.

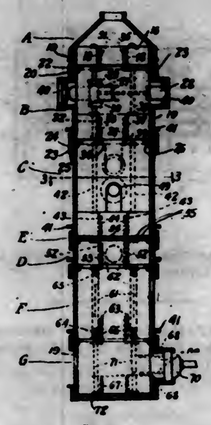
1,400,801. PNEUMATIC AND HYDRAULIC CLAMP. BENJAMIN P. COHEN, Augusta, Ga. Filed Nov. 1, 1919. Serial No. 334,956. 4 Claims. (Cl. 144—289.)



1. A clamp of the character specified comprising opposed jaws having adjustable telescopic sections, one of said sections comprising a cylinder and the other constituting piston means operable in the cylinder for extending or

contracting the jaws, said piston means including a steadying member having a slidable bearing against the wall of

the cylinder, and movable longitudinally thereof as the jaws are adjusted.



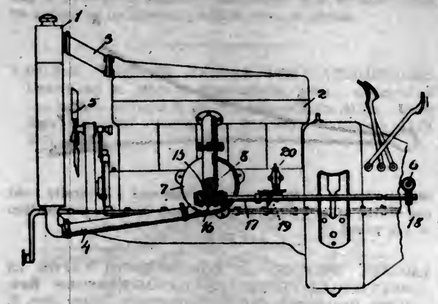
1,400,802. TRUCK-SUPPORTED KNOCKDOWN CIRCLE-SWING. WILLIAM A. COLGATE, Garden City, N. Y. Filed Aug. 26, 1920. Serial No. 406,066. 3 Claims. (Cl. 46—27.)

1. In an apparatus of the class described, the combination with a sectional tower, of a hoisting frame provided with hooks, said hooks attached to said tower and permitting the hoisting frame to be removed against the tower or swung, at its upper end, away from the tower, a pulley and a hoisting cable attached to the upper end of the hoisting frame, said cable adapted to be attached to a section of the tower for lifting and swinging the section through the hoisting frame for positioning the section, and anchoring or holding means attached to the frame and a portion of the tower.

1,400,803. ELECTRICAL APPARATUS. DAVID CONLAN, Jr., Brooklyn, N. Y. Filed Dec. 24, 1920. Serial No. 432,983. 7 Claims. (Cl. 173—334.)

1. A continuous electrical outlet comprising a sectional tubular casing, of short casing sections connected by means providing readily separable water-tight joints, insulating bases secured in said casing sections with their opposite ends exposed at the opposite ends of the respective sections, circuit-continuing connections extending through said bases and complementary connecting-in contacts and through-circuit terminals at the opposite exposed ends of the individual bases and in circuit with said through-connections, the water-tight connecting means of the casing

sections being constructed to enable the electrical engagement of the complementary contacts and terminals when adjacent casing sections are coupled together.

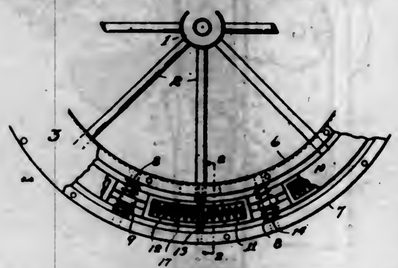


1,400,804. OIL-CUP. CLAUDE E. COX, Detroit, Mich. Filed Jan. 29, 1921. Serial No. 441,027. 6 Claims. (Cl. 184—88.)

6. The combination with an oil cup body having an internal standpipe rising above normal oil level, a spherically-domed head having an opening alining with said standpipe and another opening between the pipe-axis and the body-wall, and a parti-spherical cap pivoted to the dome at a point spaced from said openings to permit the cap to pivotally swing over, or away from, said openings.

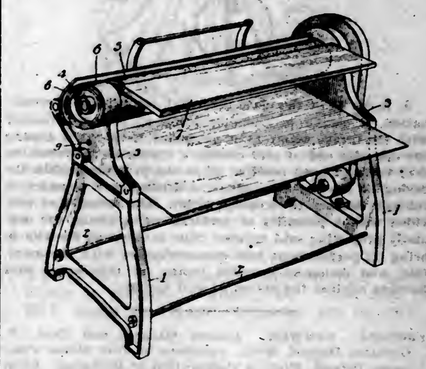
1,400,805. COOLING SYSTEM FOR AUTOMOBILE-ENGINES. RALPH F. CRAWFORD, Salina, Kans. Filed May 12, 1921. Serial No. 468,952. 2 Claims. (Cl. 123—175.)

1. The combination with an automobile having a circulatory thermo-siphon engine cooling system and a supplemental power take-off device including a pulley shaft, of a rotary pump interposed in said cooling system, and



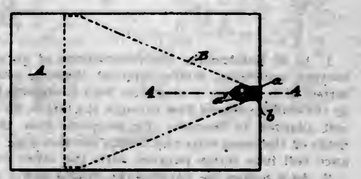
means including a worm gear for driving said pump from said pulley shaft.

1,400,806. SHOE-UPPER AND METHOD OF FINISHING THE EDGES THEREOF. DAN DANIELS, Haverhill, Mass., assignor to Louis H. Harriman, trustee, Haverhill, Mass. Filed Mar. 3, 1921. Serial No. 449,484. 7 Claims. (Cl. 36—45.)



1. The method of finishing the edges of shoe uppers which consists in attaching a galloon, having a corded edge, to the outer side of the upper by a row of stitches which pass through the galloon between its corded and its opposite edge and through the upper at an approximately uniform distance from the edge thereof, inwardly folding the edge portions of the upper with the galloon thereon, on a line directly beneath the corded edge of the galloon, placing a lining on the inwardly turned galloon and stitching them together by a line of stitches which pass through the galloon closely adjacent its corded edge.

1,400,807. VEHICLE-WHEEL. WILLIAM H. DUNDORE, Reading, Pa. Filed July 22, 1920. Serial No. 398,238. 2 Claims. (Cl. 152—37.)



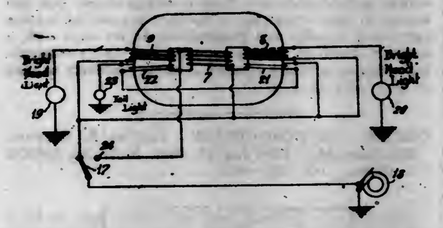
1. In a resilient vehicle wheel, the combination of a tire having a central annular opening, said tire being formed of an inner ring member, an outer ring member and two side, annular plates, with a hub having spokes, and an annular ring member carried by the outer ends of the spokes, said annular ring lying in the annular opening of the tire; a series of radially arranged springs carried by the said annular ring member and bearing against the surfaces of the inner and outer tire members; a series of circumferential springs alternately arranged and located within the said annular ring; flat members slidably located in the annular ring member and upon which the radially arranged springs are mounted, said annular ring having pockets to house the circumferential springs and rods passing through the inner and outer tire members and against which the circumferential springs bear.

1,400,808. IRONING-MACHINE. ALVA J. FISHER, Chicago, Ill., assignor to Hurley Machine Company, Chicago, Ill., a Corporation of Illinois. Filed May 24, 1920. Serial No. 383,649. 3 Claims. (Cl. 68—9.)

2. In an ironing machine, the combination of a frame having end bearing brackets, a main ironing roll mounted within said brackets and located therebetween, said roll having a shaft extending at one end beyond its bracket and freely exposed and unsupported at its outer end, a separate small roll on the extended end, and a coöperating swinging pressure element movable relatively to both of said rolls as a unit.

1,400,809. ENVELOP-OPENER. EDWARD R. FLEMING, Baltimore, Md. Filed Jan. 21, 1921. Serial No. 438,978. 1 Claim. (Cl. 229—85.)

An envelop opener combined with an envelop having an incision at one end thereof, said opener consisting of a body of thin material concealed within the envelop and having the form of an isosceles triangle one of the sides or base of which is shorter than its equal sides, the latter converging gradually toward one end of the envelop so as to provide acute cutting edges adapted to easily cut their way through the end of the envelop, and having at the apex of said converging sides a reduced extension protruding through said incision, said extension being turned back so as to overlie the end portion of the envelop and having its exposed surface colored unlike the color of the envelop, together with releasable means for securing said extension to the side of the envelop, whereby said exten-



sion is adapted to serve as a means for pulling the opener out of the envelop and to attract attention thereto by reason of the contrasting colors.

1,400,810. DEVICE FOR CONTROLLING THE SPEED OF AUTOMOBILE VEHICLES. ANTOINE GAILLARD, Marseille, France. Filed May 20, 1920. Serial No. 382,751. 6 Claims. (Cl. 48—180.)

6. A device of the class described, comprising in combination, a casing in communication at one end thereof with the intake manifold of an engine, a valve for closing the opposite end of said casing, a spring for maintaining said valve in open position when the pressure within the casing is substantially equal to atmospheric pressure, a tubular member telescoping within said casing and provided with a plurality of perforations, a spring for normally projecting said member from said casing thereby to bring its perforations into communication with the manifold, and manually operable means for telescoping said member against the action of said spring.

1,400,811. DIMMER. JOSEPH GALAMB and EARL P. OSWALD, Detroit, Mich., assignors to Ford Motor Company, Detroit, Mich., a Corporation of Michigan. Filed May 20, 1918. Serial No. 235,701. 9 Claims. (Cl. 171—97.)

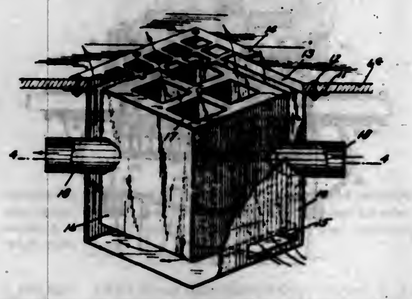
1. In an automobile, the combination of an alternating current generator, lamps supplied thereby, coils each in series with a lamp, a magnetic field energised in common by the coils to retard flow through the latter, an impedance coil adapted to increase the magnetic flow through the fields of the lamp coils and means for throwing the impedance coil into series parallel with the other coils.

2. As a means for varying the candle power of lighting systems for motor vehicles, and wherein the headlight candle power varies from that of the tail light, means for establishing a circuit with the two headlights in parallel with each other and with the tail light, and an impedance coil having a core carrying windings in series with the several lights, said core also carrying a winding adapted to be selectively introduced into said circuit in electrical advance of the individual lamp windings.

1,400,812. HAIR-CURLING DEVICE. JOSEPH GOLDSMITH, Jr., Chicago, Ill. Filed Dec. 22, 1920. Serial No. 432,406. 7 Claims. (Cl. 132—41.)

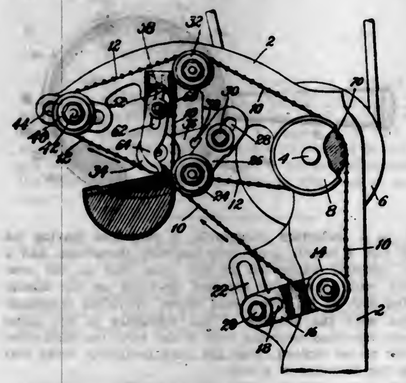
7. A device of the class described, comprising a hair curler having two flat resilient arms, a slidable guard member on one of said arms having a perforation, a pair of spaced-apart stops on said arm adapted to restrict sliding movement of the guard member and a laterally bent end on the other arm adapted to enter into the perforation in the guard.

1,400,813. PROCESS OF COMPRESSING VAPOR IN MULTISTAGE CENTRIFUGAL COMPRESSORS. BENJAMIN GRAEMIGER, Zurich, Switzerland. Filed Nov. 3, 1920. Serial No. 421,578. 4 Claims. (Cl. 230—6.)



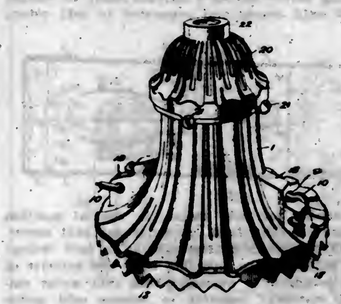
1. A process for compressing vapor in multi-stage centrifugal compressors, comprising introducing into the compressor behind at least one of the runner wheels such a quantity of a liquid of the same nature as the vapor as to obtain a compressed vapor that does not contain more than three per cent. by weight of liquid.

1,400,814. VENDING-MACHINE. ALBERT D. GROVER, New York, N. Y., assignor, by mesne assignments, to Automatic Corporation, a Corporation of New York. Original application filed May 11, 1915, Serial No. 27,302. Divided and this application filed Oct. 29, 1915. Serial No. 58,542. 21 Claims. (Cl. 211—8.)



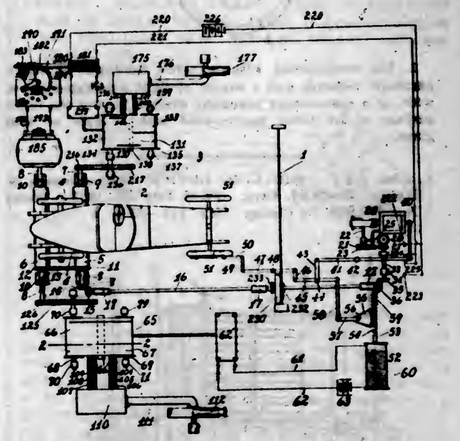
21. In a dispensing apparatus, the combination of a casing providing a container, for the articles to be dispensed, an operating member movable from a normal position, means operated by said member when moved from its normal position to eject an article from said container, a spring arranged to return said member to its normal position when moved therefrom and released, and a pneumatic cushion cushioning said member upon its return to its normal position by said spring.

1,400,815. HOT-AIR HEATER FOR AUTOMOBILES. BERNHARD E. HAGEN, Minneapolis, Minn., assignor of one-half to Willard E. Smith, Minneapolis, Minn. Filed July 22, 1919. Serial No. 312,536. 6 Claims. (Cl. 257—136.)



1. A hot air heater for automobiles comprising an outer box-like casing, an inner box-like shell spaced from the walls and bottom thereof, and having branch exhaust pipe connections extended through said outer casing, the said inner shell having angular vertical flues, and a grating applied at the top of said heater casing and adapted to cover the floor in the automobile.

1,400,816. LASTING-MACHINE. JOHN B. HADAWAY, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 13, 1918. Serial No. 239,760. 58 Claims. (Cl. 12—2.)

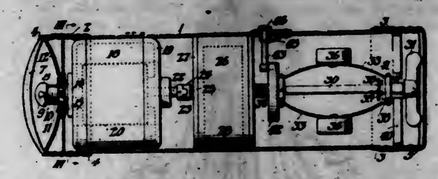


1. A lasting machine having, in combination, wiping means for overlaying the margin of a shoe upper upon the bottom of the sole, said wiping means being constructed and arranged for engagement with the overlaid margin throughout its width, and means for moving said wiping means uninterruptedly in a direction inwardly of and over the shoe bottom.

1,400,817. LIGHTING UNIT. CROMWELL A. B. HALVORSON, Jr., Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Mar. 12, 1921. Serial No. 451,665. 6 Claims. (Cl. 240—106.)

1. A light fixture comprising a light source, a body of insulating material formed with a bell shaped, open mouthed central chamber in which the light source is located, and a reflecting surface formed on said body at the edge of said chamber and located slightly above the light source whereby the rays reflected receive a wide downward spread.

1,400,818. THEATRICAL AUTOMOBILE RACE. ELMER H. HERBERT, Oakland, Calif. Filed Feb. 15, 1921. Serial No. 445,237. 7 Claims. (Cl. 46—70.)

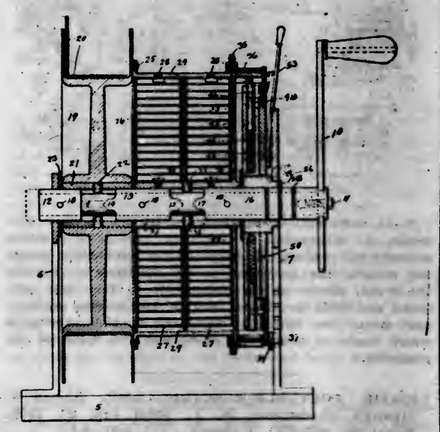


1. In combination, a screen, a moving picture projector, an automobile in front of said screen, means whereby the projector is driven by the automobile, means for turning the projector, means operated by turning the front wheels of the automobile to turn said projector and shift the picture back to their central position, and means for applying resistance to the automobile which tends to reduce its speed and the speed of the projector.

1,400,819. PORTABLE ELECTRIC LAMP. JOSEPH W. HIGGINS, Bordentown, N. J. Filed Jan. 26, 1920. Serial No. 353,973. 4 Claims. (Cl. 240—8.5.)

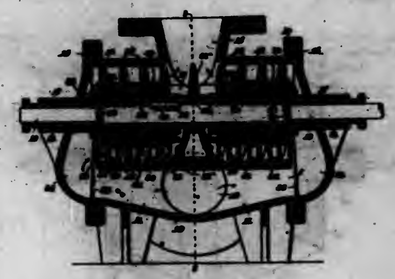
3. In a portable electric lamp, the combination with a cylindrical tubular casing; of a reflecting diaphragm

in coaxial relation with said casing; an incandescent lamp bulb, detachably mounted in coaxial position in said diaphragm and casing; an electric generator in said casing, having a rotor in coaxial relation therewith; a spring motor having a driving shaft in coaxial relation with said casing and connected to said rotor;



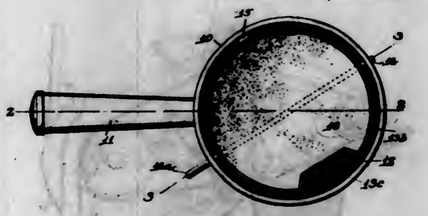
a winding handle for said motor, in coaxial position in said casing; a centrifugal governor for said motor, having a rotary arbor in coaxial position in said casing; and a push button device, operable from the exterior of said casing, arranged to normally hold said motor stationary, but manually movable to release said motor and thereby energize said lamp.

1,400,820. HEADLIGHT. PERCY JACKSON HIGGS, New York, N. Y. Filed Apr. 1, 1918. Serial No. 225,960. 3 Claims. (Cl. 240—48.4.)



1. The combination with a vehicle headlight having a parabolic reflector and a source of light associated therewith, of a transparent headlight window having the inner surface of its lower half coated with a layer of opal glass.

1,400,821. TROLLING DEVICE. CHRISTOPHER S. HURTT, Portland, Oreg. Filed July 26, 1920. Serial No. 398,858. 8 Claims. (Cl. 242—85.)

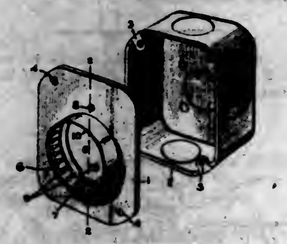


1. In a trolling device, the combination of a frame means, a shaft slidable into an in position, a neutral position and an out position on said frame, a fishing reel mounted on said shaft and having a means for rotatably engaging same in the in position only, a spiral spring mounted on said shaft, a sleeve on said shaft within said spring adapted to rotatably engage said shaft in either its in or out position, and a barrel containing said spring and forming a part of said reel.

1,400,822. PUMP. JUSTUS B. KINNEY, Allston, Mass. Filed Sept. 1, 1920. Serial No. 407,432. 7 Claims. (Cl. 253—181.)

1. In a machine of the class described, the combination of a casing having inlet and outlet openings; a revoluble shaft in said casing; a plurality of members having abutting hubs secured to and revoluble with said shaft on opposite sides of said outlet opening, each member having a plurality of helical blades extending to the wall of a cylindrical portion of said casing; and spiders surrounding said hubs and having separated radial arms fixedly secured in the cylindrical portion of said casing between said bladed members.

1,400,823. COLLECTION-RECEPTACLE. CHARLES J. KOSNIC, New Baltimore, Mich. Filed Feb. 21, 1921. Serial No. 446,851. 6 Claims. (Cl. 232—57.)



1. In a collection receptacle, a container having an open top, a handle projecting laterally therefrom, and a tray tiltingly supported in the open end of the container, said tray being recessed inwardly on the unsupported side of its pivot, said recess providing communication with the interior of the container in the plane of the collection-receiving face of the tray, the dimension of the recess inward from the tray periphery being less than the diameter of a coin.

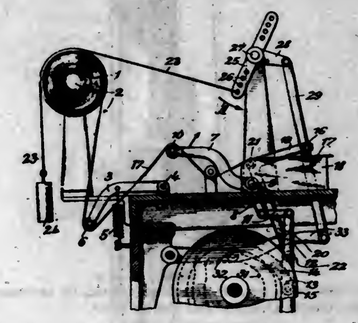
1,400,824. ELECTRICAL FITTING. HOMER G. KNOOHUIZEN, Englewood, N. J., assignor to General Electric Company, a Corporation of New York. Filed Oct. 18, 1920. Serial No. 417,642. 2 Claims. (Cl. 247—20.)

1. The combination of a metallic outlet box cover having an opening therein for electric conductors leading from the outlet box through the cover, a metallic ring

member provided with means for engaging and supporting an electric fixture shell located on the outside of said cover concentrically with the opening therein, said ring member being provided with a plurality of lugs integral

therewith projecting through said opening and secured to the inner side of said cover, whereby the ring member is secured in good mechanical and electrical connection with said cover.

1,400,825. LADY'S UNDERGARMENT. OLIVER A. LAU, Hamburg, Pa. Filed Apr. 11, 1921. Serial No. 460,324. 2 Claims. (Cl. 2—144.)



1. A ladies' undergarment including an integral body to envelop the bust, waist and hips and extending downwardly at the rear to the knees, the lower portion of the front of the garment being V-shaped with the apex terminating at the crotch, and inserts secured to the margin of said V-shaped portion and to the lateral margins of the downwardly extended portion at the rear to provide legs.

1,400,826. CLEANSING AND POLISHING COMPOSITION. ALBERT A. LECOMTE, Baltimore, Md. Filed May 12, 1921. Serial No. 469,040. 3 Claims. (Cl. 134—27.)

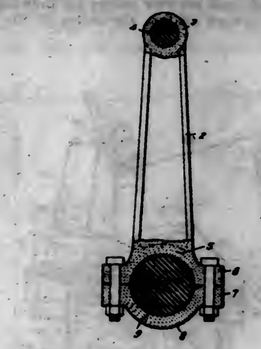
2. A cleansing and polishing composition comprising a petroleum oil, methyl alcohol, water, acetic acid, butter of antimony and oil of cajeput.

1,400,827. APPARATUS FOR UNWINDING PAPER STRIPS FROM ROLLS OF PAPER IN WRAPPING-MACHINES. RICHARD LEUMANN, Chailly-sur-Lausanne, Switzerland. Filed Apr. 7, 1921. Serial No. 459,255. 6 Claims. (Cl. 242—75.)

2. In an apparatus for unwinding the strip of paper from a roll of paper in wrapping machines, in combination, a brake band loaded at one end and coöperating with the roll of paper, drawing means for effecting the unwinding of the strip of paper, and a driving member operatively connected to the brake band and simultaneously actuated with said drawing means for drawing the brake band first forward against the action of the load

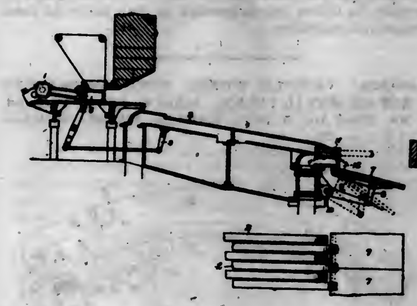
thereon and moving the roll of paper in the unwinding direction and then allowing the load on the brake band to produce its effects uncounteracted so that the brake band comes into operation.

1,400,828. VEHICLE-WHEEL WITH PERMANENT RIM OR METAL FELLY. JAMES C. LEWIS, Portland, Me. Filed Aug. 5, 1920. Serial No. 401,468. 9 Claims. (Cl. 301—23.)



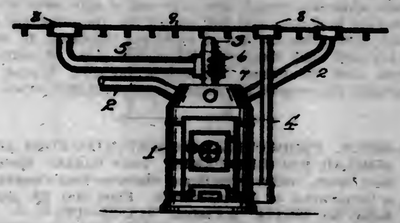
1. A vehicle wheel, a permanent rim encircling said wheel, a demountable rim encircling said permanent rim in contact therewith, said permanent rim being provided with an annular groove, a split locking ring located in said annular groove, a lug extending inwardly from each of the adjacent ends of said locking ring respectively, a pair of links, a pivot connecting one end of each link to one of said lugs, said links extending from said pivot beyond the other of said lugs, a second pivot on the opposite ends of said links, a lever pivoted intermediate its ends upon said second pivot, one end of said lever being adapted to engage said last named lug, the other end of said lever being adapted to be swung outwardly to contract said split ring until its median point of contact with said last-named lug passes inwardly beyond a straight line connecting the median lines of said pivots.

1,400,829. PRODUCTION OF CONNECTING-RODS AND SIMILAR MACHINE PARTS. JOHN OAKLEY, Springfield, Mass., assignor to Baush Machine Tool Company, a Corporation of Massachusetts. Filed May 29, 1920. Serial No. 385,174. 6 Claims. (Cl. 74—17.)



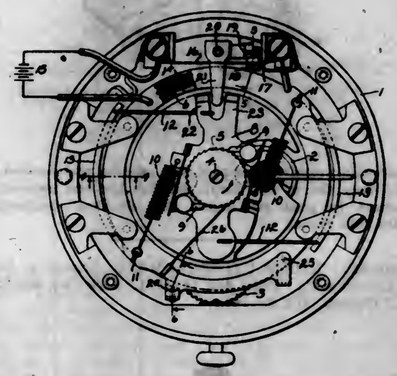
1. A connecting rod or the like made of an aluminum

alloy of the class described consisting mainly of aluminum so as to be approximately as light as this metal and



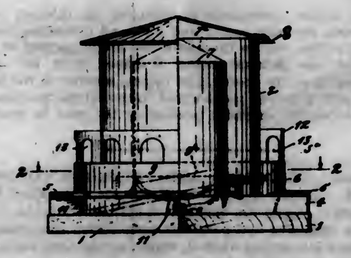
which has been worked and heat-treated to increase its density, tensile strength and elastic limit.

1,400,830. BOILER-FURNACE. THOMAS A. PEEBLES, Pittsburgh, Pa. Filed Aug. 28, 1917. Serial No. 188,654. Renewed July 10, 1920. Serial No. 395,379. 3 Claims. (Cl. 110—38.)



1. In a furnace the combination of fuel supporting members consisting of two series of longitudinal bars, means for reciprocating the bars of one series in unison and relative to the bars of the other series, an ash supporting member operatively associated with and adapted to be reciprocated by the movable series relative to the other bars, whereby the latter series of bars would operate to crowd the ashes across the supporting member in the same direction as the feed of fuel into the furnace.

1,400,831. HEATING SYSTEM. ELMER E. SCHELHAMER, Reading, Pa., assignor of one-fourth to Adam P. Hafer, Reading, Pa. Filed Sept. 6, 1921. Serial No. 498,705. 3 Claims. (Cl. 126—99.)

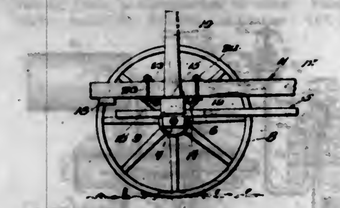


1. A house heating system comprising a furnace, a smoke flue leading therefrom, said flue having one or more perforations therein, a tube leading from an opening in the floor to a point in close proximity to the perforated smoke flue, a box inclosing the perforated portion of the smoke flue and the end of said tube, and a cold air inlet leading from an opening in the floor to a point below the furnace grate, the openings of both said tubes at the floor being provided with closures.

1,400,832. ELECTRIC CLOCK. LOUIS E. SHAW, East Orange, N. J. Filed Dec. 8, 1919. Serial No. 343,194. 16 Claims. (Cl. 58—41.)

16. In an electric clock, a movement having an escapement, electromagnetically-operative actuating mechanism therefor including an electromagnet and a spring adapted to be retensioned intermittently, an interwinding mechanism including a yieldable arm carried by an armature of the electromagnet for engagement with the escapement while the spring is being retensioned.

1,400,833. POULTRY-FEED APPARATUS. FRED T. SKUSE, Kirkland, Wash. Filed Feb. 18, 1921. Serial No. 446,078. 7 Claims. (Cl. 119—55.)

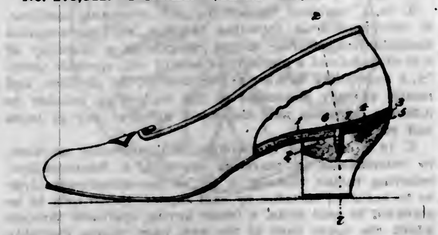


1. A base, tiltable members mounted on the base, platforms secured to said tiltable members whereby depression of the platforms will cause said members to tilt, and a reservoir having an open lower end resting upon said tiltable members and adapted to be elevated by the tilting of said members.

1,400,834. HAYRACK-FASTENER. HOWARD A. SMITH, Montgomery, Iowa. Filed Sept. 8, 1919. Serial No. 322,272. 2 Claims. (Cl. 296—9.)

1. A device of the class described including a sheet metal inverted U-shaped member, upwardly inclined arms

extending from the terminals of the sides of said member and having their upper extremities curved outwardly and

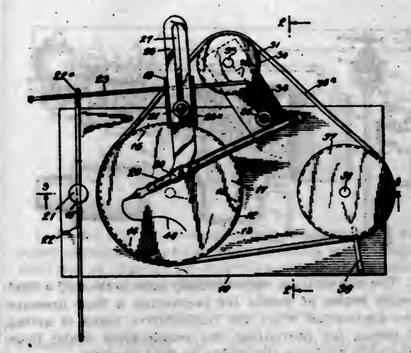


downwardly, and clamping members seating in the concavities of said curved extremities.

1,400,835. AUTOMATIC SAFETY-GUARD. LINTON GREGORY STABLES, Los Angeles, Calif. Filed July 26, 1920. Serial No. 398,870. 5 Claims. (Cl. 74—105.)

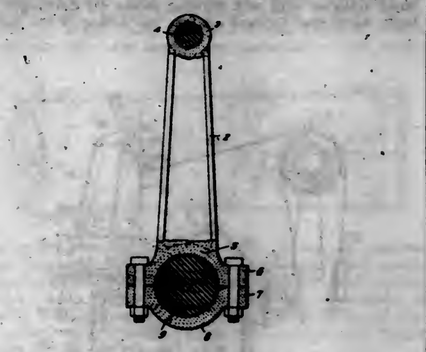
1. In an automatic safety guard in combination, a machine tool having a releasing mechanism and adapted to be released to travel through a certain cycle of operation, a guard element pivotally mounted upon the tool and adapted to swing into and out of operative position with each cycle of the tool, a locking means mounted upon the pivotal mounting of said guard, means mounted upon the releasing mechanism of said tool adapted to engage the locking means whereby the tool releasing mechanism can be operated only when the guard element is fully in operative position.

1,400,836. BOOT AND SHOE. WILLIAM FREDERICK STEPHAN, JOHN A. STEPHAN, and FREDERICK DANIEL STEPHAN, Shelbyville, Ind. Filed July 5, 1917. Serial No. 178,841. 4 Claims. (Cl. 36—42.)



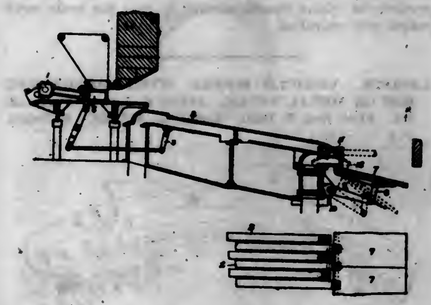
1. A shoe having on its heel seat a metallic plate provided on its edge with a depending flange and secured to the heel for the purpose described, said depending flange tapering from the back of the heel toward the forward edge of the plate.

1,400,837. PRESSED-STEEL WHEEL. JOSEPH G. SWAIN, Akron, Ohio, assignor, by mesne assignments, to The Firestone Steel Products Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 15, 1918. Serial No. 222,617. 2 Claims. (Cl. 301—64.)



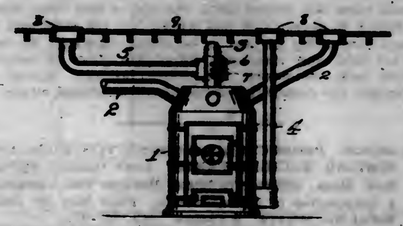
2. In a wheel structure, the combination with the hub and the rim, of a sheet metal disk secured to the hub, its middle portion extending forwardly and being formed with a concave portion and its outer portion being reversely bent to form a tapering flange, a tapered surface on the underside of said rim adapted to seat on said flange, the portion at the hub and the concave portion being on opposite sides of the median line of the wheel, and releasable means to hold the rim on the flange.

1,400,838. DEVICE FOR MAKING DESIGNS. WALTER M. TIETZ, Newark, N. J. Filed Dec. 1, 1919. Serial No. 341,689. 1 Claim. (Cl. 33—27.)



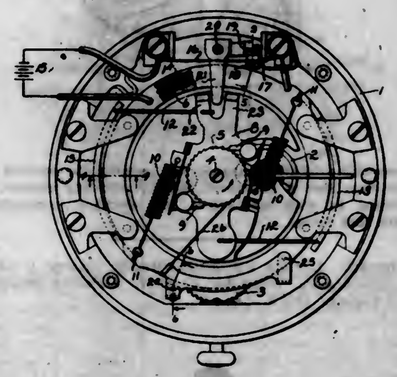
In a device for marking designs having a circular disk adapted to be manually revolved for rotatably carrying a writing surface element, a fixed apertured post adjacent to the disk, a bar slidably adjustable in the aperture of the post tangentially with relation to the disk and said bar having on one of its ends an eye, a rod slidably movable in the eye of the bar and pivotally connected to the disk, and a strip having on one of its ends a partial band for removably holding a marking implement in movable contact with the writing surface element and the strip

alloy of the class described consisting mainly of aluminum so as to be approximately as light as this metal and



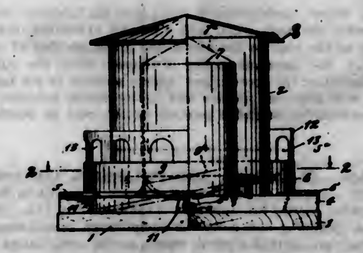
which has been worked and heat-treated to increase its density, tensile strength and elastic limit.

1,400,830. BOILER-FURNACE. THOMAS A. PEEBLES, Pittsburgh, Pa. Filed Aug. 28, 1917. Serial No. 188,654. Renewed July 10, 1920. Serial No. 395,379. 3 Claims. (Cl. 110—38.)



1. In a furnace the combination of fuel supporting members consisting of two series of longitudinal bars, means for reciprocating the bars of one series in unison and relative to the bars of the other series, an ash supporting member operatively associated with and adapted to be reciprocated by the movable series relative to the other bars, whereby the latter series of bars would operate to crowd the ashes across the supporting member in the same direction as the feed of fuel into the furnace.

1,400,831. HEATING SYSTEM. ELMER E. SCHELLHAMER, Reading, Pa., assignor of one-fourth to Adam P. Hafer, Reading, Pa. Filed Sept. 6, 1921. Serial No. 498,705. 3 Claims. (Cl. 126—99.)

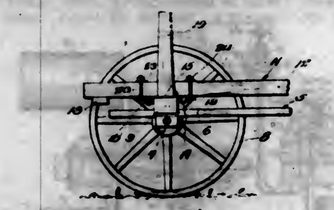


1. A house heating system comprising a furnace, a smoke flue leading therefrom, said flue having one or more perforations therein, a tube leading from an opening in the floor to a point in close proximity to the perforated smoke flue, a box inclosing the perforated portion of the smoke flue and the end of said tube, and a cold air inlet leading from an opening in the floor to a point below the furnace grate, the openings of both said tubes at the floor being provided with closures.

1,400,832. ELECTRIC CLOCK. LOUIS E. SHAW, East Orange, N. J. Filed Dec. 8, 1919. Serial No. 343,194. 16 Claims. (Cl. 58—41.)

16. In an electric clock, a movement having an escapement, electromagnetically-operative actuating mechanism therefor including an electromagnet and a spring adapted to be retensioned intermittently, an interwinding mechanism including a yieldable arm carried by an armature of the electromagnet for engagement with the escapement while the spring is being retensioned.

1,400,833. POULTRY-FEED APPARATUS. FRED T. SKUSE, Kirkland, Wash. Filed Feb. 18, 1921. Serial No. 446,078. 7 Claims. (Cl. 119—55.)

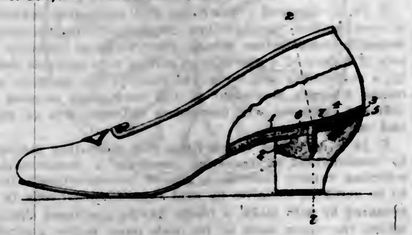


1. A base, tiltable members mounted on the base, platforms secured to said tiltable members whereby depression of the platforms will cause said members to tilt, and a reservoir having an open lower end resting upon said tiltable members and adapted to be elevated by the tilting of said members.

1,400,834. HAYRACK-FASTENER. HOWARD A. SMITH, Montgomery, Iowa. Filed Sept. 8, 1919. Serial No. 322,272. 2 Claims. (Cl. 298—9.)

1. A device of the class described including a sheet metal inverted U-shaped member, upwardly inclined arms

extending from the terminals of the sides of said member and having their upper extremities curved outwardly and

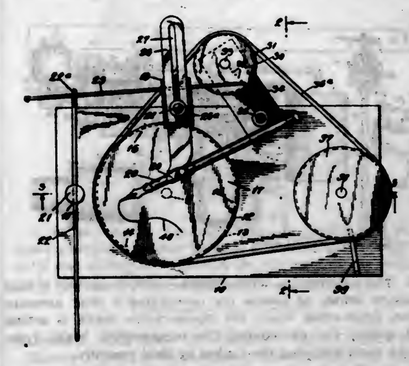


downwardly, and clamping members seating in the concavities of said curved extremities.

1,400,835. AUTOMATIC SAFETY-GUARD. LINTON GREGORY STABLES, Los Angeles, Calif. Filed July 26, 1920. Serial No. 398,870. 5 Claims. (Cl. 74—105.)

1. In an automatic safety guard in combination, a machine tool having a releasing mechanism and adapted to be released to travel through a certain cycle of operation, a guard element pivotally mounted upon the tool and adapted to swing into and out of operative position with each cycle of the tool, a locking means mounted upon the pivotal mounting of said guard, means mounted upon the releasing mechanism of said tool adapted to engage the locking means whereby the tool releasing mechanism can be operated only when the guard element is fully in operative position.

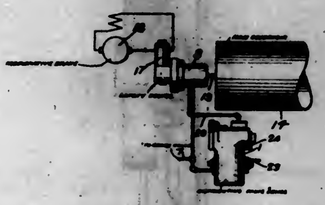
1,400,836. BOOT AND SHOE. WILLIAM FREDERICK STEPHAN, JOHN A. STEPHAN, and FREDERICK DANIEL STEPHAN, Shelbyville, Ind. Filed July 5, 1917. Serial No. 178,841. 4 Claims. (Cl. 36—42.)



1. A shoe having on its heel seat a metallic plate provided on its edge with a depending flange and secured to the heel for the purpose described, said depending flange tapering from the back of the heel toward the forward edge of the plate.

1,400,837. PRESSED-STEEL WHEEL. JOSEPH G. SWAIN, Akron, Ohio, assignor, by mesne assignments, to The Firestone Steel Products Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 15, 1918. Serial No. 222,617. 2 Claims. (Cl. 301—64.)

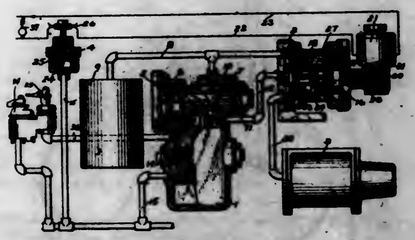
2. In a wheel structure, the combination with the hub and the rim, of a sheet metal disk secured to the hub, its middle portion extending forwardly and being formed with a concave portion and its outer portion being reversely bent to form a tapering flange, a tapered surface on the underside of said rim adapted to seat on said flange, the portion at the hub and the concave portion being on opposite sides of the median line of the wheel, and releasable means to hold the rim on the flange.



1,400,838. DEVICE FOR MAKING DESIGNS. WALTER M. TIETZ, Newark, N. J. Filed Dec. 1, 1919. Serial No. 341,689. 1 Claim. (Cl. 33—27.)

In a device for marking designs having a circular disk adapted to be manually revolved for rotatably carrying a writing surface element, a fixed apertured post adjacent to the disk, a bar slidably adjustable in the aperture of the post tangentially with relation to the disk and said bar having on one of its ends an eye, a rod slidably movable in the eye of the bar and pivotally connected to the disk, and a strip having on one of its ends a partial band for removably holding a marking implement in movable contact with the writing surface element and the strip

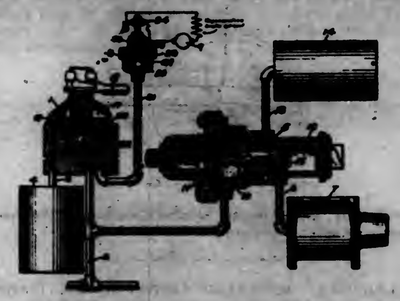
being adjustably mounted on the slidably movable rod to move to various positions relative to the center of the disk as well as to move with the slidable rod for causing the marking implement to move in different directions on the writing surface when the disk is revolved.



1,400,839. SAFETY DEVICE FOR REGENERATIVE BRAKES. WALTER V. TURNER, Wilkinsburg, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Mar. 31, 1916. Serial No. 87,885. 18 Claims. (Cl. 303—3.)

1. The combination with a regenerative brake and a normally operative fluid pressure brake, of means for automatically preventing a fluid pressure brake application when the regenerative brake is acting.

8. The combination with a regenerative brake, a main reservoir, and a distributing valve device for supplying fluid from the main reservoir for effecting an application of the brakes, of an electrically controlled valve device normally connecting the main reservoir to said distributing valve device and operated when the regenerative brake is in action for cutting off communication from the main reservoir.



1,400,840. REGENERATIVE BRAKE DEVICE. WALTER V. TURNER, Wilkinsburg, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Oct. 8, 1917. Serial No. 195,332. 3 Claims. (Cl. 303—3.)

1. The combination with a regenerative brake and a fluid pressure brake, of means for preventing a fluid pressure brake application when the regenerative brake is acting and means for preventing the regenerative brake from acting upon applying the brakes by fluid pressure.
